Transgress, v. a. [Lat. *transgredior*, from *trans*, and *gradior*, to step, to pass.] To pass over or beyond, as any limit. (R.) — To overpass, as any rule prescribed as the limit of duty; to break or violate, as a law, civil or moral. — *v. n.* To offend by violating a law; to sin.

Transgression, (-gresh'un,) n. [Lat. *transgressio*.] Act of passing over or beyond any law or rule of moral duty; the violation of a law or known principle of rectitude; breach of command. — Fault; offence; crime.

Transgressional, a. Relating to, or involving a transgression.

Transgressive, a. Faulty; culpable; apt to break laws.

Transgressively, adv. In a transgressive manner.

Transgress'or, n. One who breaks a law or violates a command; one who infringes any known rule or principle of rectitude; a sinner.

Tran'ship, Tran'shipment, see TRANS-SHIP.

Tran'siency, n. The quality of being transient.

Transient, (tran'shent,) a. [Lat. *transiens*, from *trans*, over, across, and *eo*, to go.] Passing over or by; passing; not stationary;—hence, of short duration; not permanent; not lasting or durable.—Hasty; momentary; imperfect.

Trans'iently, (-shent-,) adv. In a transient manner.

Trans'ientness, n. The state or quality of being transient.

Transire, n. [Lat., to pass through or across.] (*Eng. Law.*) A warrant for the custom-house to let goods pass; a permit.

Tran'sit, n. [Lat. *transitus*, from *transire*, to go over.]

A passage over or through. — A passing; conveyance; —An established line of conveyance or passage through a country.

(*Astron.*) The culmination or passage of any celestial body across the meridian of an observer. The determination of the exact times of such *T.* is one of the most important operations of practical astronomy. (See TRANSIT INSTRUMENT.) The term *T.* is also applied when Venus or Mercury, in their revolution round the sun, pass between the sun and the eye of the observer on the earth, and appear to move like black spots over the sun's disc. If this phenomenon be noted by different observers at points considerably distant from one another, it will not be of equal duration at all these points; and since the difference of time depends on the parallax of the planet, as well as of the sun, the latter can be estimated by means of the former. On June 3, 1769, a *T.* of Venus occurred, and was carefully observed. By the Royal Society of London it was observed at Hudson's Bay and Otaheite, by the French in California, by the Danish government in Lapland, and by the Swedish in Finland. The sun's parallax was determined with great exactness by these five observations. During the *T.* which took place in 1874, the fact that there is water in Venus was demonstrated.

—*v. a.* To pass or cross, as the meridian of the sun's disc.

Tran'sit, in New York, a village of Genesee co.

Tran'sit Circle, n. (*Astron.*) See TRANSIT INSTRUMENT.

Tran'sit Instrument, n. (*Astron.*) An instrument which serves to determine the instant of the passage of the celestial bodies across the plane of the meridian. It consists essentially of a telescope, the horizontal axis of which rests upon two pivots, supported by vertical pillars. The telescope is so placed that its optical axis may assume all possible directions in the plane of the meridian of the place where it is established. In the focus of the eye-piece is placed a system of three, five, or sometimes even seven vertical and equidistant wires or threads, generally crossed by two horizontal ones, between which it is convenient that the passage of objects over the vertical wires should be observed. The diaphragm to which the wires are attached is brought by means of adjusting screws to such a position that the middle vertical wire intersects the optical axis of the telescope, in which position it is permanently fixed. The middle wire thus becomes a visible representation of that part of the meridian to which the telescope is directed; and when a star is seen to cross this wire, it is in the act of culminating or passing the celestial meridian. The exact instant of the transit noted is on a clock or chronometer, which is an indispensable accompaniment of the instrument. — A *Transit circle* is a transit instrument to which a large circle is added for the purpose of noting primarily the altitude of the star with the greatest accuracy, as well as the time of its passage.

Tran'sit-duty, n. A duty on merchandise passing through a country.

Transition, (-sish'un,) n. [Fr.; Lat. *transitio*.] Passage from one place or state to another; change.

(*Mus.*) A change of key from major to minor, or the contrary; a change from one key to another.

(*Rhet.*) A passing from one subject to another.

(*Geol.*) A term formerly used to designate a series of rocks now referred to the Palaeozoic period.

Transitional, (-sish'un-al,) a. Containing or denoting transition.

Trans'itionary, a. Transitional.

Trans'itive, a. [Fr. *transitif*; Lat. *transitivus*, from *transire*, to pass over.] Having the power of passing. (R.) *T. verb.* (*Gram.*) The same as an active verb. See ACTIVE, and VERB.

Trans'itively, adv. In a transitive manner.

Trans'itiveness, n. The state or quality of being transitive.

Trans'itorily, adv. With short continuance.

Trans'itoriness, n. The state or quality of being transitory.

Trans'itory, a. [Fr. *transitoire*; Lat. *transitorius*, from *transire*, to pass over.] Continuing a short time; fleeting; speedily vanishing.

Transitory action, (Law.) An action, the cause of which might have arisen in one place or county as well as another. In general, all personal actions, whether *ex contractu*, or *ex delicto*. Such an action may, at common law, be brought in any county which the plaintiff elects; but, by statute, in many States of the U. States, provision is made limiting the right of the plaintiff in this respect to a county in which some one or more of the parties has his domicile.

Tran'sitn, (In,) [Lat., in the act of passage.] (*Law.*) Goods are said to be liable to *stoppage in transitu* when detained by one having a right to do so in their way to their destination; as by an unpaid vendor, in case of the vendee's insolvency. In international law, it is held that the property of belligerent parties cannot change its national character during the voyage from port to port, i. e. *in transitu*.

Translat'able, a. Capable of being translated.

Translate, v. a. [It. *tradurre*; Lat. *transferre*, *translatum*, from *trans*, and *ferre*, to bear.] To bear, carry, or remove from one place to another. — To transfer from one to another, as a disease.

—To change, as position, office, or condition; — hence, to remove, as by death. — To interpret; to render into another language; to express, as the sense of one language, in the words of another.

—To remove or convey to heaven, as a human being, without death. The patriarch Enoch was translated to heaven for his piety (*Gen.* v. 24), B. C. 3017; and the prophet Elijah was translated to heaven in a chariot of fire (*2 Kings* ii. 11), 895.

—*v. n.* To make a translation.

Transla'tion, n. [Fr.] The act of removing or conveying from one place to another. — The removal of a bishop from one see to another. — The removal of a person to heaven without subjecting him to death. — The act of turning into another language; interpretation. — That which is produced by turning into another language; a version.

(*Mech.*) The motion in virtue of which the several particles of a body describe equal and parallel right lines.

(*Med.*) A change in the seat of a disease; metastasis.

Translat'ive, a. Taken from others. (R.)

Translat'or, n. One who translates; one who renders into another language; one who expresses the sense of words in one language by equivalent words in another.

Translat'orship, n. The position or office of a translator.

Translat'ory, a. Serving to translate; transferring.

Translat'ress, n. A female translator.

Transloca'tion, n. [Lat. *trans*, across, and *locatio*, a placing.] Removing of things reciprocally to each other's places.

Translu'cence, Translu'cency, n. The state or quality of being translucent.

Translu'cent, a. [Lat. *translucens*, from *translucere*, to shine through.] Semi-transparent. The term is chiefly used in descriptive mineralogy as applied to minerals which admit of a passage of the rays of light, but through which objects cannot be definitely distinguished.

Translu'cently, adv. In a translucent manner.

Translu'cid, a. [Lat. *translucidus*.] Transparent; clear; translucent. (R.)

Transmarine, (-ma'reen-,) a. [Lat. *transmarinus*, *trans*, and *marinus*, marine, from *mare*, the sea.] Lying or being beyond the sea.

Trans'migrant, n. A person who transmigrates.

Trans'migrate, v. n. [Lat. *transmigrare*, from *trans*, and *migro*, to migrate.] To remove or pass from one country or jurisdiction to another for the purpose of residing in it, as men or families. — To pass from one body into another.

Transmigrat'ion, n. [Fr.; L. Lat. *transmigratio*.] The act of transmigrating.

(*Philos.*) The passing of the soul into another body; metempsychosis. This idea belongs to the oldest religions of India and Egypt. Pythagoras, who is said to have borrowed his notion from the Egyptians, held that after death men's souls passed into other bodies, of this or that kind, according to the life they had led. This is also a prominent feature in the systems of Brahminism and Buddhism, which represent the soul as passing after death into the body of a higher or lower animal, as a reward of virtue or a penalty for vice. Human life is regarded only as a link in a chain of conditions through which the soul passes in a long career of procession from God and return to him. A period of 12,000 divine years, each embracing 360 human years, is assigned as the period for transformation and purification, after which the soul receives its reward of being absorbed in the divine nature. Plato maintained the pre-existence of the soul before its appearance in man, and that of this prior state it retained some dim reminiscences. After death, according to its peculiar qualities, it seeks a new body suitable to it. Every soul, according to him, returns to its original source in 10,000 years. The idea of metempsychosis subsequently appears in the speculations of the Neo-Platonists, in the Cabala of the Jews, and even in the writings of Origen. In recent times, the theory was revived by Fourier.

Trans'migrator, n. One who transmigrates.

Transmi'gratory, a. Passing from one place, body, or state to another.

Transmissibil'ity, n. The quality of being transmissible.

Transmis'sible, a. That may be transmitted.

Transmission, (-mish'un,) n. [Fr. See TRANSMIT.] Act of transmitting; the state of being transmitted; act of sending from one place or person to another.

Transmis'sive, a. Transmitted; derived from one to another.

Transmit, v. a. [Lat. *transmittere*, from *trans*, over, across, and *mittere*, to send.] To send or convey across or over; to send from one person or place to another. — To suffer to pass through.

Transmit'tal, n. Transmission. (R.)

Transmit'tance, n. Transmission.

Transmit'ter, n. One who transmits.

Transmit'tible, a. That may be transmitted; transmissible.

Transmogrifica'tion, n. Transformation. (Colloq. and low.)

Transmog'rify, v. a. To transform; to change into a different shape. (Colloq.)

Transmutabil'ity, n. The quality of being transmutable.

Transmut'able, a. [Fr.] Capable of being trans-

mutated or changed into a different substance, or into something of a different form or nature.

Transmutableness, *n.* Transmutability.

Transmutably, *adv.* In a transmutable manner.

Transmutation, *n.* [Fr.; Lat. *transmutatio*.] The act of transmuting, or the state of being transmuted.

(Alchemy.) The pretended operation of changing the imperfect metals (as they were termed) into the two precious metals, gold and silver. See **ALCHEMY**.

(Geom.) TRANSFORMATION, *q. v.*

Transmute, *v. a.* [Lat. *transmutare*, from *trans*, over, across, and *mutare*, to change.] To change from one nature or substance into another.

Transmuter, *n.* One who transmutes.

Transmutual, *a.* Reciprocally mutual. (R.)

Transom, *n.* (Written also *transummer*, and *transumpt*.) [Lat. *transumere*.] (Arch.) An horizontal mullion or bar framed across a double-light window, door, &c., chiefly used in late Gothic architecture (Fig. 2521).

(Naut.) One of the beams bolted across the stern-post, to receive the after ends of the several decks, and to give form to the stern.

(Gun.) A piece of wood joining the cheeks of a gun-carriage.

(Surveying.) A piece of wood made to slide upon a surveyor's cross.

Transpadane, *a.* [Lat. *transpadanus*, from *trans*, across, and *Padus*, the Po.] Beyond the river Po.

Transparence, *n.* [Fr.] Transparency.

Transparency, *n.* The state or quality of being transparent; clearness.

—That state or property of a body by which it suffers rays of light to pass through it, so that the objects can be distinctly seen through it, as glass, water, or air. It is generally supposed to be a consequence of the homogeneity of the matter of which they are composed.

—A picture painted on semi-transparent materials, such as very thin cloth, silver, or tissue paper, &c., and illuminated by light placed at the back, so that it may be exhibited at night.

Transpar'ent, *a.* [Fr.; Lat. *trans*, and *pareo*, to appear.] Having the property of transmitting rays of light distinctly; pervious to light; pellucid; admitting the passage of light.

Transpar'ent Lake, in New York, between Hamilton and Herkimer cos., 7 m. long and 3 broad.

Transpar'ently, *adv.* Clearly; so as to be seen through.

Transpar'entness, *n.* Quality of being transparent.

Transpass'able, *a.* That may be crossed over. (R.)

Transpierce, *v. a.* [Fr. *transpercer*.] To pierce through; to penetrate; to permeate; to pass through.

Transpirable, *a.* [Fr.] Capable of being transpired, or of transpiring.

Transpiration, *n.* [Fr.; L. Lat. *transpiratio*.] The act or process of transpiring or passing off through the pores of the skin in the form of vapor; cutaneous exhalation.—The exhalation of watery vapor from the surface of the leaves of plants.

(Chem.) The diffusion of liquids, vapors, and gases through a capillary tube. The *T.* of liquids was first examined by Loiseville, but little was discovered beyond the fact that when different liquids were pressed through tubes of equal size, with identical forces, the times of the passage of similar quantities differed considerably, but no connection could be traced between these differences. Graham, however, subsequently made a series of experiments on the *T.* times of certain acids, salts, and other substances, in different stages of dilution. Thus nitric acid, with three equivalents of water, is found to have a lower rate of *T.* than when diluted more or less, and a certain steadiness was observed on each side of the maximum of retardation. With sulphuric acid the maximum of retardation occurred when one equivalent of water had been added, or, in other words, when the crystallizable hydrate had been formed. Acetic acid gradually rose until the bihydrate was formed, which is the characteristic hydrate of that acid. With hydrochloric acid the retardation seemed to take place when the dodecahydrate was reached. The *T.* time of ordinary alcohol reached its maximum at the hexahydrate. The different alcohols and ethers were also tried against each other, and their *T.* times were found to increase with their boiling-points. From these facts a distinct rotation appears to exist between the transpirability of liquids and their chemical compositions. Temperature has a great influence on the transpirability of fluids: for example, water at 113° Fahr. escapes through the same tube with 2½ times the rapidity that it does at 41° Fahr. The rates of *T.* are

entirely independent of their rates of diffusion. No connection has as yet been found between these differences or similarities. Thus the velocities of nitrogen, bioxide of nitrogen, and carbonic oxide, are equal. Equal weights of oxygen, air, nitrogen, and carbonic oxide, are transpired in given times. The velocity of hydrogen, a light gas, and the heavy vapors of ether are equal. The laws regulating the transmission of gases and vapors through capillaries have yet to be investigated.

Transpiratory, *a.* Relating to transpiration.

Transpire, *v. a.* [Fr. *transpirer*; L. Lat. *trans*, through, *spirare*, to breathe.] To emit through the pores of the skin; to send off in vapor.

—*v. n.* To be emitted through the pores of the skin; to exhale; to pass off in insensible perspiration.—To escape from secrecy; to become public.—To happen or come to pass.

Transplace, *v. a.* To remove; to put in a new place. (R.)

Transplant, *v. a.* [Fr. *transplanter*; Lat. *trans*, and *planto*, to plant.] To remove and plant in another place.—To remove and settle or establish for residence in another place; to remove.

Transplantation, *n.* [Fr.] Act of transplanting, or state of being transplanted.—Act of removing to another soil, as plants; conveyance from one to another.

Transplanter, *n.* A person who transplants.

Transplanting, *n.* (Hort. and Arboriculture.) The act of removing a plant or tree from one situation to another in such a manner that it may continue to grow. The operation is commonly performed in the winter season, or in autumn and spring, when plants are generally in a dormant state; and the great object of the planter is to lift as many of the roots as possible without injuring them, and to replace them in a new situation to which the tree is transplanted in such a manner as to facilitate their growth. With herbaceous plants and young trees this is comparatively a simple operation; but with large trees it is an operation of skill, care, and labor. When a large tree is to be transplanted, it should be considerably under the normal age of the species; and to prepare it for the change which it is to undergo, other trees, or objects of its own height with which it is surrounded, should be taken away a year or two previous to removal, in order to accustom it to the direct action of the light and air on every portion which is above ground. The next part of the operation is to dig a trench round the tree equidistant from the trunk, at the distance of 3, 6, 9, or 12 feet, according to its height, and to such a depth as to cut through all the horizontal roots. The tree may then be removed to its new situation, with or without the earth attached to that part of the roots which remain. The proper season for *T.* all ligneous deciduous plants, whether small or large, is early in autumn, after the leaves have dropped. In the cases of kitchen-garden plants and others of herbaceous habit, where it is done at any season, *T.* is most successful if carried out in showery weather. Evergreen trees may also be transplanted in the autumn, but with equal success in early summer after growth has commenced.

Transplen'dency, *n.* Supereminent or transcendent splendor.

Transplen'dent, *a.* Supereminently splendid.

Transplen'dently, *adv.* In a resplendent manner.

Transport, *v. a.* [Lat. *transportare*, from *trans*, and *portare*, to carry.] To carry or convey from one place to another; to remove from one place to another.—To carry into banishment, as a criminal.—To hurry or carry away by violence of passion; to ravish with pleasure; to bear away, as the soul in ecstasy.

—*n.* Transportation; carriage; conveyance.—A ship or vessel employed by government to carry soldiers, warlike stores, or provisions from one place to another.—A convict transported or sentenced to exile.—Rapture; ecstasy; ravishment.—Violence; violent manifestation, as of anger, rage, or fury.

Transportability, *n.* The state or quality of being transportable.

Transportable, *a.* [Fr.] That may be transported.

Transportation, *n.* [Fr.; L. Lat. *transportatio*.] Act of carrying or conveying from one place to another; conveyance.

(Eng. Law.) The act of sending a convicted criminal to another country, as a punishment. By statutes 4 and 6 of Geo. I. (1717-1719), the courts were allowed a discretionary power to order felons to be transported to America. The system of *T.* to the American colonies lasted till the commencement of the War of Independence, in 1775. Australia was afterwards determined upon as a place for *T.* At length, the reception of convicts becoming distasteful to the colonists, *T.* was abolished in 1853, and penal servitude substituted in its place.

Transport'edness, *n.* The state or condition of being transported.

Transport'er, *n.* One who transports or removes.

Transport'ing, *a.* Ravishing with delight; bearing away the soul in rapture; ecstatic.

Transport'ingly, *adv.* Ravishingly.

Transport-ship, *n.* Transport-vessel. A vessel used to convey soldiers, convicts, &c.; a transport.

Transpos'al, *n.* Transposition.

Transpos'e, *v. a.* [Fr. *transposer*; Lat. *transponere*, from *trans*, and *ponere*, to place, set.] To change, as the place or order of things, by putting each in the place of the other.

(Algebra.) To remove a term from one side of an equation to the other, without destroying the equality of the two members.

(Gram.) To change, as the natural order of words.

(Mus.) To change, as the key in music.

Transposition, *n.* [Fr., from L. Lat. *transpositio*.] The act of transposing, or the state of being transposed.

(Algebra.) The transposing of a term from one side of an equation to the other. It is in effect the adding of equal quantities to or subtracting equal quantities from each side of the equation, the sign of the quantity being changed from + to -, or from - to +. For example, if $a + x = c - d$, by transposing a we have $x = c - d - a$; or if $a + b = c - x$, by transposing x and $a + b$ we get $x = c - a - b$. The object of transposition generally is to bring all the unknown terms to one side of the equation for more conveniently finding their value with respect to the known terms.

(Gram.) A change in the natural order of words in a sentence.

(Mus.) A change in the composition either in the transcript or the performance by which the whole is removed into a higher or lower key or pitch.

Transpositional, *a.* Pertaining to transposition.

Transpositive, *a.* Belonging to, or consisting of transposition.—That may be transposed.

Transprint, *v. a.* To print in the wrong place.

Transshape, *v. a.* To change the shape of. (R.)

Trans-ship, *v. a.* To convey from one ship or vessel to another.

Trans-shipment, *n.* The act of trans-shipping.

Transubstantiate, *v. a.* [Lat. *transubstantiare*.] To change to another substance.

Transubstantiation, (*stān-shi-ā'shun*) *n.* Change of substance.

(Theol.) The doctrine held by the Roman Catholic Church that in the Eucharist the bread and wine are annihilated and replaced by the body and blood of Christ. See **REAL PRESENCE**.

Transudation, *n.* [It. *transudazione*.] Act of transuding; act or process of oozing through membranes, or of passing off through the pores of a substance.

Transudatory, *a.* Passing by transudation.

Transude, *v. n.* [Lat. *trans*, through, across, and *sudo*, to sweat.] To emit sweat or moisture through the pores or interstices; to pass or ooze through the pores or interstices of texture, as water or other fluid.

Transvec'tion, *n.* The act of carrying over.

Transver'sal, *a.* [Fr., from Lat. *trans*, and *verto*, to turn.] Running or lying across.

—*n.* (Geom.) A line (whether straight or curved) which traverses or intersects the three sides of a triangle.

Transver'sally, *adv.* Transversely.

Transverse, *a.* [Fr.; Lat. *transversus*.] Turned or directed across or athwart; lying or being across, or in a cross direction.

—*n.* That which crosses, or lies in a cross direction; a transverse axis.

—*v. a.* To change; to overturn. (R.)

Transversely, *adv.* In a cross direction.

Transylvania, (*trans-sil-va'ni-a*) [Ger. *Siebenbürgen*; anc. *Dacia Mediterranea*.] The most E. prov. of the Austrian empire, comprised between the 45th and 48th degs. N. Lat., and chiefly between the 22d and 26th degs. E. Lon.; having Hungary on the N. and W., and on the E. and S. Moldavia and Wallachia; area, 20,041 sq. m. Desc. The Carpathian Mountains surround it on the E., the S., and partly on the N., and as lateral chains, branching off from this, range across the country in every direction; the greatest part of it consists of al-

Fig. 2521. — TRANSM-WINDOW.

Fig. 2522. — COSTUME OF SZECLERS, (Transylvania.)

ternate mountains and valleys, with few extensive plains. *Rivers.* The principal are the Maros, the Sáros, and the Aluta; the Aranyos, the Lapos, the Sajo, and the two Kockels, are of inferior size. The banks of these rivers are densely wooded; and from this circumstance the province derives its name, which signifies a

forest region. *Prod.* Wheat, oats, barley, buckwheat, rye, pulse, potatoes, fruits, tobacco, flax, hemp, saffron, and wine. The rearing of horses and live-stock occupies a large share of attention, and buffaloes are employed for field labor. In the woods, great numbers of swine are fed, and game is abundant. *Min.* In the mountains are found marble, jasper, porphyry, slate, limestone, coal, sulphur, and petroleum. Rock-salt is found in many spots. There are, besides, mines of iron, copper, lead, silver, and even gold. In the mountains are also dug up precious stones, such as topazes, chrysolites, garnets, opals, &c. Mineral springs are numerous. *Manuf.* Woollen and cotton stuffs. The exports are timber, salt, metals, and a few manufactures. The imports are wool, cotton, skins, and a variety of manufactured articles from Vienna. The trade is mostly in the hands of Greeks and Armenians. The roads are almost impassable. *Rel.* The followers of the Greek Church, comprising the Wallachians, Greeks, and Bulgarians, are by far the most numerous; next come the Catholics, among whom are ranked the Hungarians and most of the Szeklers. Education has, as yet, made little progress in the country. There has been established, at Klausenburg, the cap. of *T.*, an academy, on a plan somewhat similar to the German universities. *T.* was colonized by German emigrants in 1143. John Zapolya, with the assistance of the Turks, made it an independent principality in 1540. The Turks made it tributary to them in 1552, and Leopold I. conquered it in 1687. The Porte was compelled to renounce its supremacy over it by the peace of Carlowitz, Jan. 26, 1699, when it was united to Austria. It was erected into a grand principality by the Empress Maria Theresa in 1765. *T.* sends deputies to the Hungarian diet, but has also a diet of her own.

Trap, *n.* [*A. S. treppe, trappe*; *Fr. trappe*.] Something that catches and retains. — An engine that shuts suddenly or with a spring, used for taking game or vermin. — An engine for catching trespassers on property. — An ambush; a stratagem; any device by which men or animals may be caught unawares. — A kind of play. — A contrivance applied to drains and *s'* pipes to prevent effluvia from passing the place where they are situated.

(*Geol.*) When Geology was first studied, a number of rocks were found to be similar in general appearance and composition, while all were remarkable for being spread out in tabular or flat masses, one such flat mass extending beyond another, so that there was a rough resemblance to stairs. These rocks were hence called by a Swedish author *trappa*, the Swedish word for steps or stairs, and the name *trap* has ever since been received in reference to these. They have long been recognized as belonging to the class seen in volcanic countries, and generally called *lava*, being, in fact, the melted material poured out from an active volcano in the state of a thick paste, and spreading itself over the surface adjacent. A succession of eruptions produces a series of steps; and where no volcano now exists, the old erupted lavas often remain. Of the various tabular erupted rocks thus named, *basalt* is the most distinctly an ancient lava, and is the most important. *Greenstone*, *whinstone*, *toadstone* (toddstein), and others, are names of varieties of basalt, and are also trap rocks.

— *a.* (*Geol.*) Belonging to trap rock.

— *v. a.* [*A. S. treppan*.] To catch in a trap; to ensnare; to take by stratagem. — To adorn; to dress with ornaments. (*R.*) See TRAPPINGS.

— *v. n.* To set a trap or traps; as, to trap beaver.

Trap, in *New Jersey*, a village of Monmouth co., 42 m. E. of Trenton.

Trapa, *n.* (*Bot.*) A genus of floating aquatic plants, order *Haloragaceae*, remarkable for their horned fruit and large amygdaloid edible seeds. *T. natans* is the *Marron d'eau*, or Water-chestnut, also called Jesuit's nut; *T. bicornis* is the Chinese ling; *T. bispinosa* is the *Singhara* nut of Cashmere.

Trapan, *n.* A stratagem; a snare.

Trapani, (*tra-pa'ne*) (anc. *Drepanum*), a fortified town of Sicily, in the Val di Mazzara, situate on a tongue of land projecting into the sea, 45 m. from Palermo. It is of importance as a naval and military position, and is one of the most important commercial towns in Sicily. *Pop.* 32,878.

Trapaner, *n.* One who insnares.

Trap-ball, *n.* A game played with a trap, a ball, and a small bat.

Trap-door, *n.* A door in a floor, which shuts close like a valve.

Trapes, *n. sing.* An idle, slatternly woman.

Trapézate, *a.* Quadrilateral; with the four sides unequal, and none of them perfectly parallel.

Trapeze, *n.* [*Fr.*] A trapezium.

Trapezian, *a.* (*Crystallography*.) Applied to crystals whose lateral planes are composed of trapeziums situated in two ranges between the bases.

Trapeziform, *a.* That has the form of a trapezium. **Trapezium**, *n.*; *pl.* TRAPEZIA, or TRAPEZIUMS. [*Lat.*, from *Gr. trapezion*, a small table or counter, from *trapeza*, a table.] (*Geom.*) A plane figure contained under four right lines, no two of which are parallel.

(*Anat.*) A bone of the wrist, so named from its shape. **Trapezohedral**, *a.* Belonging to, or shaped as a trapezohedron.

Trapezohedron, *n.* (*Crystallography*.) A solid bounded by 24 equal or similar trapezoidal planes.

Trapézoid, *n.* [*Gr. trapezion*, and *eidos*, form.] (*Geom.*) A plane four-sided figure having two of its opposite sides parallel.

Trapezoidal, *a.* Having the form of a trapezoid.

Trappe, in *Maryland*, a post-village of Talbot co., 9 m. S. of Easton; *pop.* abt. 300.

Trappe, in *Pennsylvania*, a post-village of Montgomery co., 10 m. W.N.W. of Norristown.

Trap'per, *n.* One employed in entrapping animals of any sort; — particularly, one who catches wild animals in traps, for their skins or fur.

Trap'ping, *p. a.* Setting traps for wild animals; ensnaring.

Trap'pings, *n. pl.* Ornaments of horse furniture. — Ornaments; dress; external and superficial decorations.

Trap'pists, *n. pl.* (*Ecc. Hist.*) The name of the most rigorous among the religious orders of the Roman Catholic Church. The first abbey of *La Trappe* in Normandy was founded by Rotron, count of Perche, in 1040. It was bestowed in 1636 on Arnaud Jean le Bouthillier de Rancé, who, after leading a most luxurious life, suddenly, in 1662, renounced the world, gave up his rich benefices, and retired to *La Trappe*. He established a new rule, which bound the community to strict silence, hard labor, and total abstinence from wine, eggs, fish, and all seasoning to their simple diet of bread and vegetables. Rancé died Oct. 27, 1700, and the abbey continued to flourish till the revolution of 1789, when it was suppressed. Some of the Trappists sought refuge in Switzerland, but returned to their dilapidated monastery on the restoration of the Bourbons in 1815. A new church and monastery were built, and consecrated with great pomp, Aug. 30, 1833. They have 3 houses in North America: *New Haven*, in the diocese of Louisville; *New Medleray*, in the diocese of Dubuque; and *Tracadie*, in the diocese of Arichat, Canada. There is also an order of Trappist nuns in France, founded in 1692.

Trap'py, **Trap'pean**, **Trap'pous**, *a.* Belonging to, or containing trap; of the nature of trap.

Trap-rock, *n.* (*Geol.*) See TRAP.

Trap-stair, *n.* A narrow staircase, or encased ladder, surmounted by a trap-door.

Trap-tufa, **Trap-tuff**, *n.* (*Geol.*) Volcanic tufa; volcanic grit.

Trash, *v. a.* To lop; to crop; to strip of leaves.

— *n.* Loppings of trees; any waste or worthless matter; unripe fruit or other matter improper for food, but eaten by children, &c. — The name given in the W. Indies to the waste leaves of the sugar-cane, and the stalks after the juice has been expressed.

Trash'ily, *adv.* In a trashy manner.

Trash'iness, *n.* The state or quality of being trashy.

Trash'y, *a.* Waste; rejected; worthless; useless.

Trasimenus Lacus. See PERUGIA, (LAKE OF).

Tras-os-Montes, (*-mon'tais*), a prov. of Portugal, having Spain on its N. and E., the prov. of Miho on the W., and Beira on the S.; *area*, 4,038 sq. m. It is generally mountainous, but the soil is fertile in the valleys. Cattle-rearing is an important branch of industry. *Cap.* Bragança. *Pop.* 379,779.

Trau, (*trou*), a town of Austrian Dalmatia, on the coast of the Adriatic, 10 m. from Spalatro; *pop.* 4,865.

Traumatic, *a.* [*From Gr. trauma*, a wound.] (*Med.*) Relating to wounds; hence, the *traumatic* balsams and ointments of old pharmacy.

Travail, *v. n.* [*Fr. travailler*; *It. travagliare*, to strain, endeavor.] To exert one's self beyond or above one's strength; to work or labor excessively; to labor with pain; to toil. — To suffer the pangs of childbirth; to be in parturition.

— *n.* Parturition. **Travancore**, (*trav-an-kor'*) the most S.W. prov. of British India, between Lat. 8° 10' and 10° 30' N., Lon. 76° 11' and 77° 35' E.; *area*, 4,722 sq. m. From the mountains that shut it in on the east, the country falls in a succession of terraces to the shore on the Indian Ocean. The principal products are timber, grain, sugar, salt, spices, drugs, and resins. *Pop.* 1,012,000.

Trave, **Travis**, *n.* [*Sp. traba*; *Fr. entraves*, from *Lat. trabs, trabis*, a beam.] A beam; a log or joist; a traverse; a cross-beam; a wooden frame to confine an unruly horse while shoeing.

Travel, *v. n.* [*A different orthography and application of travail.*] To make a toilsome or wearisome journey; to walk; to go or march on foot; to journey; to ride to a distant place in the same country, or to visit foreign states or kingdoms, either by sea or land. — To pass; to go; to move; to move, walk, or pass, as a beast, a horse, ox, or camel.

— *v. a.* To pass; to journey over.

— *n.* Act of travelling; labor; toil; travail; a passing on foot; a walking; journey; a passing or riding from place to place; a journeying to a distant country or countries; a tour, (often in the plural.)

— *pl.* An account of occurrences and observations made during a journey.

Travelled, *a.* Having made journeys; instructed by travels.

Travel'ler, (sometimes written TRAVELER), *n.* One who travels in any way; one who visits foreign countries. — In ships, a ring fitted so as to slip up or down a rope. — A person who travels for a merchant or mercantile company, to receive payment of goods, wares, &c., sold by his employer, or employers, to other merchants, and to take orders.

Traveller's Tree, *n.* (*Bot.*) *Ravenala speciosa*. See RAVENALA.

Travel'ling, *a.* Pertaining to travel.

— *n.* The act of one who travels; travel.

Travel-stained, *a.* Having the clothes soiled, &c., with the marks of travelling.

Travel'sable, *a.* That may be traversed or crossed. That may be traversed or denied. See TRAVERSE.

Traverse, *adv.* [*Fr. à travers*.] Athwart; crosswise. — *a.* [*Lat. transversus*.] Transverse; turned or directed across; lying across; being in a direction across something else.

— *n.* Anything laid or built across or in a transverse di-

rection; something that thwarts, crosses, or obstructs; a cross accident.

(*Fort.*) A trench with a little parapet for protecting men on the flank; also, a wall raised across a work.

(*Naut.*) The variation or alteration of a ship's course, occasioned by the shifting of the winds, currents, &c.; or it is a compound course consisting of several courses and distances.

(*Arch.*) The transverse piece in a timber roof; also, a gallery or loft of communication in a church or other large building.

(*Law*.) A plea contradicting some matter of fact alleged by the opposite party. In any stage of the pleadings, when either side traverses or denies the facts pleaded by his antagonist, he usually tenders an *issue*, as it is called, and puts himself upon the country, or refers the matter to the decision of a jury. A *T.* to a material point cannot be waived and another *T.* tendered by the other party. In criminal proceedings, *not guilty* is a general *T.*, which throws on the prosecutor the necessity of proving the material facts.

— *v. a.* To turn, lay, or place in a cross direction; to cross; to cross by way of opposition; to thwart; to obstruct.

— To wander over; to cross in travelling; to pass over and view; to survey carefully. — To turn and point in any direction, as a cannon. — To plane in a direction across the grain of the wood. — To deny what the opposite party has alleged.

— *v. n.* (*Man.*) To step or make the tread crosswise, as a horse, throwing the croup to one side and the head to another.

(*Fencing*.) To take an opposing posture, or to oppose a movement.

— To turn as on a pivot; to move round.

Traverse, in *Michigan*, a post-village, cap. of Grand Traverse co. *Pop.* (1897) 9,000.

Traverse, in *Minnesota*, a W. co., bordering on the Dakotas; *area*, 552 sq. m. Sioux Wood river and Lake Traverse bound it on the W. *Surface*, level; *soil*, fertile. *Products*. Wheat, oats, barley, hay, live stock, &c. *Cap.* Wheaton. *Pop.* (1895) 6,064.

Traverser, *n.* One who traverses or opposes a plea in law.

Traverse-sailing, *n.* (*Naut.*) Sailing on different courses in succession. The method of reducing such compound courses and distances into an equivalent single course and distance is called *resolving a traverse*. The reduction may be effected either by geometrical projection or trigonometrical computation; but it is generally performed with inspection by the aid of a traverse-table.

Traverse-table, *n.* (*Naut.*) The tabulated form in which the northings, southings, eastings, and westings are made on each individual course and distance in a traverse, for the purpose of finding readily the difference of latitude and departure made upon the whole — the difference between the sums of the northings and southings being the difference of latitude, and between the sums of the eastings and westings the departure.

Travertine, *n.* [*It. travertino*.] (*Min.*) A white concretionary limestone, usually hard and semi-crystalline, deposited from the water of springs holding carbonate of lime in solution.

Travesty, *a.* [*See the verb.*] Having an unusual dress; disguised by dress so as to be ridiculous. — Denoting a book or composition translated in a manner to make it burlesque.

— *n.* That which is disguised by dress. — A parody; a burlesque translation of a work.

— *v. a.* [*Fr. travestir* — *tra*, and *O. Fr. vestir* = *Fr. vêtir*.] To change the dress or garb of; to disguise. — To translate into such language as to make ridiculous or ludicrous; to burlesque; to parody.

Travis, *n.* A TRAVE, *q. v.*

Travis, in *Texas*, a central co.; *area*, 1,040 sq. m. *River*. It is traversed by the Colorado river. *Surface*, hilly; *soil*, fertile. *Cap.* Austin. *Pop.* (1897) 37,350.

Travnik, a town of European Turkey, cap. of the prov. of Bosnia, on the Sava river, 45 m. W.N.W. of Bosna-Serai. *Manuf.* Sword-blades.

Trawl, *n.* A trawl-net; a trail-net. — A line, sometimes a mile or more in length, with short lines and baited hooks suspended from it at frequent intervals, much used in fishing for cod, haddock, and mackerel.

— *v. n.* To fish with a trawl or drag-net.

Trawler, *n.* A fishing-vessel which trails or drags a net behind it. — A fisherman who fishes with a drag-net.

Trawling, *n.* A mode of fishing by a net called *trawl-net*, dragged along the bottom of the sea, behind a boat.

Tray, *n.* [*Same as TROUGH, q. v.*] A small trough or wooden vessel, sometimes scooped out of a piece of timber and made hollow, used for various domestic purposes; a sort of waiter, of wood or metal.

Traylorsville, in *Virginia*, a village of Henry co., 200 m. W.S.W. of Richmond.

Treacherous, (*trich'er-us*) *a.* Guilty of treachery; violating allegiance or faith pledged; faithless; traitorous to the state or sovereign; perfidious in private life; betraying a trust.

Treach'rously, *adv.* Faithlessly; perfidiously.

Treach'rousness, *n.* Quality of being treacherous.

Treach'ery, *n.* [*Fr. tricherie*; *Lat. trice*, hindrances, subterfuges, quirks, tricks.] Trickery; fraud; deception; violation of allegiance or of faith and confidence; perfidy; faithlessness.

Treacle, (*trē'kl*) *n.* [*Fr. thériaque*; *Lat. theriaca*; *Gr. thēriaka* — *thērion*, a wild beast.] (*Med.*) The same as theriaca or THERIAC, *q. v.*

— The spume of sugar in sugar refineries. — Also the uncrystallized sirup which drains from sugar as first prepared from cane-juice; molasses.

Tread, (*tréd*), *v. n.* [A. S. *tredan*, *getredan*, *betredan*.] To set or plant the foot; to walk or go; to walk with form or state. — To copulate, as fowls.

—*v. a.* To plant the foot on; to step or walk on; to press under the feet; to beat or press with the feet. — To walk upon in a formal or stately manner. — To crush under the foot; to trample in contempt or hatred, or to subdue. — To put in action by the feet, as a wheel.

—*n.* Act of treading; a step or stepping; footing; pressure with the foot; manner of stepping; gait. — The horizontal part of a step in a stair on which the foot is placed.

Treader, *n.* One who treads.

Treadha'ven Creek, in Maryland, flows into the estuary of Choptank River from Talbot co.

Treading, *n.* Act of one who treads; act of pressing with the foot; a stepping; a walking.

Treadle, **Tred'dle**, *n.* [From *tread*.] The part of a loom or other machine which is moved by the tread or foot.

Tread-mill, *n.* A mill worked by persons treading on steps fixed on the periphery of an horizontal wheel. It was chiefly used as a means of prison discipline, but is now generally abandoned in the U. States, from its injurious and depressing effect.

Tread-wheel, *n.* A wheel with steps placed horizontally on the exterior surface, by treading on which the wheel is turned.

Treason, (*tré'zn*), *n.* [Fr. *trahison*; Lat. *trado* — *trans*, over, and *do*, to give.] A betrayal or betraying; breach of fidelity or allegiance; treachery; disloyalty; an offence which immediately affects the safety of the state or of the sovereign.

(*Amer. Law*.) The Constitution of the U. States, art. 3, § 3, defines *T.* to consist only in levying war against the U. States, or in adhering to their enemies, giving them aid or comfort. This offence is punished with death.

Treasonable, *a.* Pertaining to treason; consisting of treason; involving the crime of treason, or partaking of its guilt.

Treasonableness, *n.* Quality of being treasonable.

Treasonably, *adv.* In a treasonable manner.

Treasure, (*tréz'h'yur*), *n.* [Fr. *trésor*; Lat. *thesaurus*; Gr. *thésauros*, from *tithēmi*, to put, set, or place, to deposit.] That which is deposited, laid up, or stored up; wealth accumulated; riches hoarded; particularly, a stock or store of money in reserve; a great quantity of anything collected for future use. — Something very much valued. — Great abundance.

—*v. a.* To deposit, lay up, hoard, or collect, as money or other things, for future use; to lay up, (usually with *up*;) as, to *treasure up* memories.

Treasure-house, *n.* A house or building where treasures and stores are kept.

Treasurer, *n.* [Fr. *trésorier*.] One who has the care of a treasure or treasury; one who has the charge of the money, funds, or revenues of a society, corporation, state, &c.

Treasress, (*tréz'h'ur-ess*), *n.* A female who has charge of a treasure.

Treasure-trove, *n.* Any money, treasure, &c., found in the earth or otherwise hidden, the owner of which is unknown. By the common law, he who finds such things hidden in the earth is not entitled to them, but they belong to the state. There is an exception to the general rule, that he who first finds a thing, whose owner is unknown, is entitled to keep it; and accordingly the exception is construed strictly, so that if the coin, &c., is not hidden in and covered by the earth, the finder, and not the state, is entitled to it.

Treasury, (*tréz'h'ur-y*), *n.* [Fr. *trésorerie*.] A place or building in which stores of wealth are deposited; — particularly, a place where the public revenues are deposited and kept, and where money is disbursed to defray the expenses of government.

— In the U. States, a department of government which has control over the management, collection, and expenditure of the public revenue. The officers consist of a secretary, who is the head of the department, two comptrollers, six auditors, a treasurer, a registrar, a commissioner of customs, a solicitor, an assistant secretary, and numerous subordinate clerks.

Treat, *v. a.* [Fr. *traiter*, to treat; Lat. *tractare*, to touch, from *trahere*, to draw.] To handle; to manage; to use. — To discourse on; to handle in a particular manner, in writing or speaking. — To entertain without expense to the guest; to give food or drink to, as a compliment or expression of regard. — To manage in the application of remedies, as a patient or a disease. — To subject to the action of.

—*v. n.* To handle in writing or speaking; to discourse; to make discussions. — To come to terms of accommodation. — To give gratuitous entertainment; to give food or drink as a compliment or expression of regard.

To *treat with*, to enter into negotiations with.

—*n.* An entertainment given as a compliment or expression of regard. — Something given for entertainment; as, a rich *treat*.

Treater, *n.* A person who treats; one who discourses on a subject; one who entertains.

Treatise, *n.* [Lat. *tractatus*, from *tractare*, to manage.] A written composition on a particular subject, in which the principles of it are discussed or explained; a formal essay; a dissertation; a tract.

Treatment, *n.* [Fr. *traitement*.] Act or manner of treating; management; manipulation; manner of mixing or combining, of decomposing and the like. — Usage; manner of using; entertainment; good or bad usage towards. — Manner of prescribing remedies to cure, as a disease; the manner of applying remedies to; as, the *treatment* of a patient. — Entertainment; treat. (*R.*)

Treaty (or **Petty's**) **Island**, vulgarly called

PADDY'S ISLAND, belonging to New Jersey, in the Delaware, opposite Philadelphia, 2 m. long.

Treaty, *n.* [Fr. *traité*; It. *trattato*.] Negotiation; act of treating for the adjustment of differences, or for forming an agreement.

(*International Law*.) An agreement of friendship, alliance, commerce, or navigation, entered into between two or more independent nations.

Treb'izond, (anc. *Trapezus*), a city and seaport of Asia Minor, cap. of a Turkish eyalet, on the S.E. coast of the Black Sea, 120 m. N.W. of Erzeroum; Lat. 40° 1' N., Lon. 39° 44' 52" E. The town is built on the slope of a hill declining to the sea, and backed by steep eminences rising behind. The walled city is solely inhabited by Mohammedans; the Christians live outside the walls, where are also most of the bazaars and khans. *T.* is the natural emporium of all the countries to the S.E. of the Black Sea, from Kherson on the E., to Amasia on the W. It was a flourishing city when it was reached by Xenophon and the Ten Thousand at the close of their memorable retreat. Alexis Comnenus made it the capital of an independent principality in 1204, known as the Empire of Trebizond; and it remained in the hands of his descendants till it was taken by the Turks in 1460. Pop. abt. 25,000.

Treble, (*tréb'l*), *a.* [Fr. *triple*; Lat. *triplex*, from *tres*, three, and *plexus*, from *plico*, to fold.] Threefold; triple. (*Mus.*) Acute; sharp in a threefold degree; pertaining to the highest or most acute of the parts of music.

—*n.* (*Mus.*) The highest or most acute of the parts in music; the part usually sung by women and boys, and played by violins, hautboys, flutes, and other acute instruments.

—*v. a.* To make threefold; to make thrice as much; to multiply by three.

—*v. n.* To become threefold.

Trebleness, *n.* The state or quality of being treble.

Trebley, *adv.* In a threefold manner or quantity.

Treb'chet, *n.* [Fr.] (*Mil.*) A warlike engine of the middle ages, used to throw stones, fiery material, and other projectiles employed in the attack and defence of fortified places, by means of counterpoise. At the long end of a lever was fixed a sling to hold the projectile; at the short end a heavy weight, which furnished the necessary moving force.

Tre-cent'o, *n.* [It.] A flourishing period of Italian art and literature, which dates from the birth of Dante, in 1265, to the death of Boccaccio, in 1375. These two authors, with Petrarch, are termed "the Triumvirate of the Tre-cento."

Treck'schuyt, *n.* [Dut., from *trekken*, to draw, and *schuit*, a boat.] A covered boat drawn by horses or cattle, and used for the conveyance of goods and passengers on the Dutch and Flemish canals, before the introduction of railways.

Tred'egar, a town of England, in Monmouthshire, 16 m. from Newport, known for its iron-works and coal-mines.

Tredille', *n.* A game at cards played by three persons.

Tredyffryn, in Pennsylvania, a township of Chester co., 18 m. W.N.W. of Philadelphia.

Tree, *n.* [A. S. *treow*, *treu*.] (*Bot.*) Any woody plant of perennial duration which rises from the ground with a trunk. To form a tree, the plant must acquire some considerable size, and be furnished with a trunk or single stem by which its branches or limbs may be supported. It differs from a shrub, which is a woody plant of smaller stature, in having a trunk; and it is the presence of this solid mass of wood which gives their especial utilitarian value to trees, furnishing, as many of them do, the timber which is applied to so many useful purposes. See AGE OF TREES, BOTANY, &c.

—Something resembling a tree, consisting of a stem or stalk and branches; as, a genealogical *tree*.

—*v. a.* To cause to ascend a tree.

Tree-fern, *n.* (*Bot.*) The name applied to those ferns which form erect trunks like the stem of a tree (Fig. 28). They chiefly belong to the genera *Cyathea*, *Alsophila*, and *Dicksonia*.

Tree-frog, **Tree-toad**, *n.* (*Zoöl.*) See HYLOIDE.

Tree-less, *a.* Without trees.

Tree-like, *a.* (*Bot.*) Applied to plants which resemble a tree, but are very small.

Tree-nail, (usually pron. *trun'nel*), *n.* (*Naut.*) A long cylindrical wooden pin, employed to fasten the planks of a ship's side and bottom to corresponding timbers.

Tree-of-Heaven, *n.* (*Bot.*) See AILANTHUS.

Tree-of-Life, (*Bot.*) *Arbor vitæ*. See THUJA.

Tree-paony, *n.* (*Bot.*) See RANUNCULACEÆ.

Tree-ship, *n.* The state or condition of a tree.

Trefle, *n.* [Fr., *tréfoil*.] (*Fort.*) A form of mine, so termed from the similarity of its figure to that of trefoil. The simple *trefle* has only two lodgments; the double *trefle*, four; and the triple one, six.

Tre'foil, *n.* [Fr. *tréfle*; Lat. *trifolium*, from *tres*, three, and *folium*, leaf.] (*Bot.*) See TRIFOLIUM.

(*Arch.*) An ornament consisting of three cusps, resembling the three-leaved clover (1, Fig. 2523.)

(*Her.*) A frequent charge, representing the clover-leaf, and always depicted as *shipped* or furnished with a stalk (2, Fig. 2523.)

Fig.—2523. TREFLOIL.
1, architecture; 2, heraldry.

Treichlersville, (*trik'lers-vill*), in Pennsylvania, a village of Lehigh co.

Trellage, (*trél'aj*), *n.* [Fr.] Same as TRELLIS.

Treille', *a.* (*Her.*) See LATTICE.

Treja, (*trai'ya*), a town of Central Italy, 8 m. from Macerata; pop. 8,616.

Trellis, *n.* [Fr. *treillis*, lattice-work, from Lat. *trichila*, a bower, arbor.] A structure or frame of cross-barred work, or lattice-work, used for supporting plants.

Trellised, (*-list*), *a.* Having a trellis or trellises.

Treman'do, **Trem'olo**. [It., trembling.] (*Mus.*) A direction for one of the graces of harmony, which consists in a reiteration of one note of the chord; this, however, applies more directly to the word *tremolo*, whilst the *tremando* is a general shake of the whole chord.

Tremandra'ceæ, *a. pl.* (*Bot.*) A small order of plants, alliance *Sapindales*. DIAG. Partially complete, symmetrical flowers, a valvate calyx, and 2-4-celled anthers, opening by pores. — They are slender, heath-like shrubs, natives of New Holland. Their properties are unknown; 3 genera, 13 species.

Tremble, (*trém'bl*), *v. n.* [Fr. *trembler*, from Lat. *tremo*, to tremble, quake.] To shake involuntarily, as with fear, cold, or weakness; to quake; to quiver; to shiver; to shudder. — To shake; to totter; — said of a thing. — To quaver; to shake, as sound.

—*n.* An involuntary quavering or shaking.

Trembler, *n.* One who trembles.

Trem'blingly, *adv.* In a trembling manner; with shivering or quaking.

Trem'bling-poplar, *n.* (*Bot.*) See POPLULS.

Tremella, *n.* [N. Lat. and It., from Lat. *tremere*, to tremble.] (*Bot.*) A genus of fungi, of the division *Hymenomyces*, soft and gelatinous, of no very determinate form, mostly growing on decaying wood.

Tremen'dous, *a.* [Lat. *tremendus*, from *tremo*, to tremble.] Such as may excite fear or terror; terrible; dreadful; violent; such as may astonish by its force and violence.

Tremen'dously, *adv.* In a manner to terrify or astonish.

Tremen'dousness, *n.* State or quality of being tremendous.

Trem'olite, *n.* (*Min.*) A variety of Hornblende, first found in the Tremola Valley, Switzerland.

Trem'olo, *n.* [It.] (*Mus.*) See TREMANDO.

Tremont, in Illinois, a post-village and township of Tazewell co., 57 m. N.E. of Springfield; pop. abt. 2,000.

Tremont, in Maine, a post-township of Hancock co.; pop. abt. 2,100.

Tremont, in Pennsylvania, a post-borough and township of Schuylkill co., 15 m. W.S.W. of Pottsville. Pop. (1897) 2,120.

Trem'or, *n.* [Lat., from *tremere*, to tremble.] An involuntary trembling; a shivering or shaking; a quivering or vibratory motion.

Trempealeau, (*trem-pa-lo'*) a river of Wisconsin, rises in Jackson co., and flows S.W. into the Mississippi, from Trempealeau co. — A W. co., bordering on Minnesota; area, 738 sq. m. *Rivers*. Mississippi, Black, Buffalo, and Trempealeau rivers, and Beaver Creek. *Surface*, undulating; *soil*, fertile. *Cap.* Whitehall. *Pop.* (1897) 21,963. — A post-village and township of the above county, on the Mississippi, 20 miles north-west of La Crosse.

Trem'ulous, *a.* [Lat. *tremulus*, from *tremere*, to tremble.] Trembling; affected with fear or timidity. (*R.*) — Shaking; shivering; quivering.

Trem'ulously, *adv.* In a tremulous manner.

Trem'ulousness, *n.* State of being tremulous.

Trench, *v. a.* [Fr. *trancher*, to cut, from Lat. *trans*, across, and *secare*, to cut.] To cut or dig, as a ditch, a channel for water, or a long hollow in the earth. — To intrench; to fortify by earth thrown up. — To cut or dig into pits or ditches; to furrow; to form with deep furrows by ploughing.

—*v. n.* To encroach; (with *on* or *upon*.)

—*n.* A long, narrow cut in the earth; a ditch.

(*Fort.*) [Fr. *tranchée*.] In the attack of a fortress, an excavation made for the purpose of covering the advance of the besiegers. They are from 6 to 10 feet wide, and abt. 3 feet deep, the earth taken out forming the parapet.

To *open the trenches*. (*Mil.*) To break ground for the purpose of carrying out approaches towards a besieged place.

Tren'chant, *a.* [Fr. *tranchant*, from *trancher*, to cut.] Cutting; sharp. — Severe; unparing.

Trench-cavalier', *n.* (*Fort.*) In the attack of a fortress, the high parapets of the single saps, which are pushed along the slope of the glacis; they should be raised high enough to command the salient places of arms.

Trench'er, *n.* [Fr. *tranchoir*, from *trancher*, to cut.] A wooden plate or platter. — The table; food; the pleasures of the table.

Trench'er-fly, *n.* One who haunts the tables of others; a parasite. (*R.*)

Trench'er-friend, *n.* A person who frequents the tables of others; a sponger.

Trench'er-man, *n.*; *pl.* TRENCHER-MEN. A feeder; a great eater.

Trench'er-mate, *n.* A table companion; a parasite.

Trench'-plow, **Trench'-plough**, *n.* A kind of plow for opening land to a greater depth than that of common furrows.

—*v. a.* To plow with deep furrows.

Trenck, FRIEDRICH VON DER, BARON, a Prussian officer, celebrated for his adventures and misfortunes, was b. in 1726, at Königsberg, and made such rapid progress in his studies, that, at the age of 17, he was presented to

the king, Frederick II., as a student who was well worthy the royal patronage. Frederick rapidly advanced him in the army, and manifested much regard for him; but the accomplishments of *T.* having won the heart of the Princess Amelia, the king's sister, his enemies took advantage of some letters that fell into their hands, and had him accused and arrested. He was imprisoned in the fortress of Glatz, but contrived to effect his escape. He then visited the north of Europe, Austria, and Italy. In 1758, he was seized at Dantzic, and was conveyed to Magdeburg, where, loaded with irons, he was for years incarcerated. On procuring his liberation, in 1763, he withdrew to Vienna, after which he went to Aix-la-Chapelle, where literature, politics, and commerce alternately occupied his attention. He next went to reside at his castle of Zwerbeck, in Hungary, and while there he published his own *Memoirs*, a book which was greedily read all over Europe. In 1791, he settled in France, joined the Jacobins, and in 1794 was charged with being a secret emissary of the King of Prussia, and b. by the guillotine.

Trend, *v. n.* To tend; to lie in any particular direction. — *v. a.* To bend; to cause to turn in any particular direction. (R.)

— *n.* Tendency; direction.

(*Naut.*) See ANCHOR.

Trendel, *n.* A weight, or post, in a mill.

Trender, *n.* One whose business is to cleanse wool.

Trendle, *n.* Anything turned round; a little wheel; a trundle.

Trent, a river of England, which, rising in the west of Staffordshire, flows north-east through Derbyshire and Nottinghamshire, and, parting Lincolnshire from the south of Yorkshire, joins the Ouse where it opens into the estuary of the Humber, after a course of 180 miles.

Trent, a city of Austria, in the Tyrol, on the Adige, not far from the border of Italy, 12 m. from Roveredo. It stands in a small but delightful valley among the Alps, and is enclosed by high walls. Its public buildings are the palace of the archbishop, and the cathedral, a Gothic structure, not remarkable for its vigor or beauty. *Pop.* 14,847. Here took place a celebrated council convoked by Pope Paul III., for the purpose of defining and illustrating the doctrines of the Church, condemning heresies, and reforming abuses that had crept into the Church, both in doctrine and discipline. It met in 1545, and was continued during twenty-five sessions to the year 1563, under the pontificates of Julius III. and Pius IV. It was intended to serve as a foil to Protestantism, by reforming the abuses of the Church, determining and establishing its doctrines, and conforming them to the spirit of the times. Hence the decrees of this council, together with the creed of Pope Pius IV., contain a complete summary of the doctrines of the Church. The decrees were subscribed by 255 of the clergy, including four legates, two cardinals, three patriarchs, twenty-five archbishops, and 168 bishops, and were confirmed by a Papal bull, dated 26th January, 1564. All the Roman Catholic states accepted the decrees of the council, and promulgated them in their territories, with the exception of France, which persisted in asserting its independence.

Trent, a river of prov. of Ontario, rises in Trent Lake, Northumberland co., Lat. 45° N., Lon. 78° W., and enters the Bay of Quinte, Lake Ontario, 10 m. N.E. of Newcastle, after a S.E. course of 100 m.

Trent, a river of *N. Carolina*, rises in Lenoir co., and flowing E., falls into the Neuse at Newbern.

Trental, *n.*; *pl.* TRENTALS. [Fr. *trente*, thirty; It. *trenta*; Lat. *triginta*.] An office for the dead in the Roman Catholic service, consisting of thirty masses rehearsed for thirty days successively after the party's death. — A dirge; an elegy.

Trenton, in prov. of Ontario, a town of Northumberland county, on the Bay of Quinte, 62 miles west of Kingston.

Trenton, in *Alabama*, a post-vill. of Jackson co., 177 m. N.E. of Tuscaloosa.

Trenton, in *Georgia*, a post-village, cap. of Dade co., 230 m. N.W. of Milledgeville.

Trenton, in *Illinois*, a village of Bureau co., 26 m. W. of Ottawa. — A post-town of Clinton co., 30 m. E. of St. Louis. — A village of Knox co., 90 m. N.N.W. of Springfield.

Trenton, in *Indiana*, a village of Blackford co., about 33 m. N. W. of Union City.

Trenton, in *Iowa*, a post-village and township of Henry co., 45 m. S.W. of Iowa City.

Trenton, in *Kentucky*, a post-village and township of Todd co., 190 m. S.W. of Frankfort.

Trenton, in *Louisiana*, a post-village of Ouachita parish, 2 m. N. of Monroe.

Trenton, in *Maine*, a village of Hancock co., 75 m. E. of Augusta.

Trenton, in *Michigan*, a post-village of Wayne co., 17 m. S. of Detroit.

Trenton, in *Minnesota*, a village of Carleton co., abt. 120 m. N.E. of St. Cloud. — A post-village of Freeborn co., abt. 40 m. S.S.W. of Faribault.

Trenton, in *Missouri*, a city, cap. of Grundy co., 150 m. N.W. of Jefferson City. *Pop.* (1897) 5,450.

Trenton, in *N. Carolina*, a post-village, cap. of Jones co., 100 m. S.E. of Raleigh.

Trenton, in *New Jersey*, a city, cap. of the State, and seat of justice of Mercer co., on the Delaware, 30 m. N.E. of Philadelphia; Lat. 40° 14' N., Lon. 74° 46' 30" W. It is regularly laid out and handsomely built, and contains numerous foundries, rolling-mills, manufactories of locomotives, paper, hardware, wire, &c. It was the scene of a battle, Dec. 26, 1777, in which Gen. Washington defeated the British and Hessians, taking 1,000 of the latter prisoners. *Pop.* (1895) 62,518.

Trenton, in *New York*, a post-township of Oneida co., 12 m. N. of Utica.

Trenton, in *Ohio*, a post-village of Butler county, 8 miles north-east of Hamilton. — A township of Delaware county. — A village of Jefferson county, 11 miles north-west of Wheeling, W. Virginia. — A village of Tuscarawas county, 98 miles east north-east of Columbus.

Trenton, in *Tennessee*, a post-town, cap. of Gibson co., 130 m. W. of Nashville.

Trenton, in *Virginia*, a village of Cumberland co., abt. 50 m. W. of Richmond.

Trenton, in *Wisconsin*, a township of Dodge county. — A post-village and township of Pierce county, 18 miles south-east of Prescott. — A township of Washington county.

Trenton Falls, in *New York*, a post-village of Oneida co., 15 m. N.E. of Utica, on West Canada Creek. It is noted for its beautiful falls, 6 in number, occupying at intervals a ravine 2 m. long, with an aggregate descent of 312 feet.

Trepan, *n.* [Fr.] (*Surg.*) See TREPPANNING.

— *v. a.* To perforate, as the skull, and take out a piece. — To lay a snare for; to take by stratagem; to ensnare; to catch.

Trepang, *n.* (*Zool.*) See HOLOTHURIA.

Trepanning, *n.* (*Surg.*) The operation of perforating the skull by means of a circular saw, when the head is so injured that it is necessary to remove a part of the bone. The instrument is called a *trepán* or *trepine* (Fig. 2524). The operation is not dangerous; but care requires to be taken not to injure the soft parts underneath. When the bone is nearly sawn through, the piece is then raised with the elevator, the projecting angles of the bone being afterwards removed with a saw, and all other irregularities of the cut surface destroyed. The cut edges of the bones afterwards throw out granulations, which become ossified; but there is always a small interval which does not ossify, in or about the centre.

Trepine, *n.* [Fr.] (*Surg.*) See TREPPANNING.

— *v. a.* To trepan; to perforate with a trephine.

Trepidation, *n.* [Fr.; Lat. *trepidatio*, from *trepidare*, to tremble.] An involuntary trembling; a quaking or quivering, particularly from fear or terror; a state of terror. — Hurry; confused haste. (R.)

Trescott, in *Maine*, a township of Washington co., on the Atlantic, 80 m. E. of Bangor.

Tres-Montes, a peninsula of Chili, W. of Patagonia, between the Chonos Archipelago and the Gulf of Penas.

Trespas, *v. n.* [O. Fr. *trespas*, from *tres*, Lat. *trans*, beyond, and *passer*, to pass.] To pass over the boundary line of another's land; to enter unlawfully upon the land of another. — To intrude; to go too far; to put to inconvenience by demand or importunity. — To commit any offence, or to do any act that injures or annoys another; to violate any rule of rectitude, to the injury of another; to transgress voluntarily any divine law or command; to violate any known rule of duty.

— *n.* Any injury or offence done to another. — Any voluntary transgression of the moral law; any violation of a known rule of duty.

(*Law.*) In its widest and most extensive sense, it signifies any transgression or offence against the law of nature, of society, or of the country in which we live, whether it relates to a man's person or his property; — hence, it includes beating any person, taking or detaining his goods; also, non-performance of promises or undertakings, and, in general, any misfeasance or act of one man whereby another is injuriously treated or damaged. Whenever the act itself is directly and immediately injurious to the person or property of another, and therefore necessarily accompanied with some force, an action of trespass *vi et armis* will lie; but if the injury is only consequential, a special action of trespass on the case may be brought. But in the more limited and usual sense, it signifies no more than an entry on another man's ground without lawful authority, and doing some damage, however inconsiderable, to his real property. The law regards every entry upon another's lands, unless by the owner's leave, or in some very particular cases, as an injury or wrong, for satisfaction of which an action of trespass will lie, but determines the quantum of that satisfaction by considering how far the offence was wilful or inadvertent, and by estimating the value of the actual damage sustained.

Trespasser, *n.* One who commits a trespass; one who enters upon another's land, or violates his rights. — A transgressor of the moral law; an offender; a sinner.

Tres-Pontes, in Brazil, a town of the prov. of Minas-Geraes, 25 m. E. of Lavras de Fumil; *pop.* 4,000.

Tress, *n.* [Fr. *trousse*; It. *treccia*, tress, from Gr. *tricha*, threefold, from the usual mode of braiding the hair.] A braid or knot of hair; a ringlet; a curl.

Tressed, (*trést*) *a.* Having tresses. — Curled; formed into ringlets.

Tressel, *n.* Same as TRESTLE, *q. v.*

Tressure, (*trësh'ur*) *n.* [Fr. *tresseur*, to twist.] (*Her.*) An ornamental frame or border around a bearing.

Tressured, *a.* That is surrounded with a tressure.

Tress'y, *a.* Abounding in tresses.

Trestle, (*trés'l*) *n.* [Fr. *tréteau*; L. Lat. *trestellus*, from Du. *driestal*, a tripod, from *drie*, three, and *stal*, stool.] A three-legged prop for supporting anything which requires to be placed horizontally. — The frame of a table; a movable form for supporting anything.

Trestle-board. A board on which architects, &c., draw designs; — so called because formerly placed on trestles. (*Worcester.*) — **Trestle-bridge**. A bridge supported by trestles. — **Trestle-trees**. (*Naut.*) Two bars of wood or iron at the mast-head, fitting on the shoulders of the mast, passing lengthwise of the ship, and holding up the cross-trees, on which and on the trestle-trees themselves the top is laid. — **Trestle-work**. A sort of staging for a support.

Tret, *n.* [Probably from Lat. *tritius*, *tero*, to wear.] (*Com.*) An allowance to purchasers of 4 pounds on every 104 of suttie weight, for waste matter, or for dust or sand which may be mixed with commodities.

Treuen, (*tri'én*) a town of Prussia, in Saxony, 9 miles from Plauen; *pop.* 5,812.

Treuenbrietzen, (*tri-en-breet'sen*) a town of Prussia, 22 m. from Potsdam; *pop.* 6,000.

Tre'vat, *n.* A weaver's instrument for severing the thread of the pile of velvet.

Treves, (*tráiv*) (Ger. *Trier*, anc. *Augusta Trevisorum*), the most ancient, and one of the most celebrated cities of Germany, in the centre of a large valley lying along the Moselle, 60 m. from Coblenz. The chief buildings are the Elector's palace, now turned into barracks, and the church of Notre Dame, built about 1240, and affording a good specimen of Gothic architecture. *Manuf.* Woollens, cotton, leather, &c. The archbishop of *T.* was, in virtue of his office as chancellor of Burgundy, one of the electors of the empire, a right which seems to have originated in the 12th or 13th century, and continued till the French Revolution. The ambition and talents of some of these episcopal rulers obtained for them great political weight in Germany. Since 1814, *T.* has belonged to Prussia.

Trevet, *n.* Anything that stands on three legs, as a stool.

Treviglio, (*tráiv-vel'yo*) a town of N. Italy, 20 m. from Milan; *pop.* 6,846.

Trevilian's Depot, in *Virginia*, a post-village of Louisa co., 67 m. N.W. of Richmond.

Treviso, (*tré-ve'so*) a town of N. Italy, on the Sile, 16 m. from Venice. *T.* is the cap. of a prov. of same name, and is surrounded by a wall of from 24 to 38 feet in height, and strengthened by numerous bastions. *Pop.* 28,684.

Trevi'so, (DUKE OF.) See MORTIER.

Trevorton, in *Pennsylvania*, a post-village of Northumberland co., abt. 10 m. S.E. of Sunbury.

Trévoux, (*tráiv-voó'*) a town of France, dept. Ain, on the Saône, 14 m. from Lyons; *pop.* 4,065.

Trexlerstown, in *Pennsylvania*, a post-village of Lehigh co., 80 m. W.S.W. of Allentown.

Trey, (*tráiv*) *n.* [Lat. *tres*.] A three at cards or dice.

Tri-, [Gr. *treis*; Lat. *tres*.] A prefix signifying three.

Tri'able, *a.* That may be tried; that may be subjected to trial or test.

Tri'ableness, *n.* The state or quality of being triable.

Trineconthe'dral, *a.* [Gr. *triaconta*, thirty, and *edra*, seat, base.] (*Min.*) Containing thirty sides.

Tri'ad, *n.* [Lat. *trias*, *triadis*; Gr. *trias*, *triados*, from *treis*, three.] The union of three; three united.

(*Mus.*) The chord of a note with its third and fifth, in which the octave is sometimes added; the common chord. — *Dwight.*

Triads of the Welsh bards, are poetical histories, in which the facts recorded are thrown into the form of triplets.

(*Chem.*) A molecule with a combining power of 3.

Triadelphia, in *Maryland*, a post-village of Howard co., 50 m. N.W. of Annapolis.

Triadelphia, in *W. Virginia*, a post-village of Ohio co., abt. 8 m. E. of Wheeling.

Triadelphia Iron-Works, in *Pennsylvania*, a village of Lancaster co.

Triadelphous, *a.* [Gr. *treis*, and *adelphos*, brother.] (*Bot.*) Applied to stamens whose filaments are united or arranged in three sets or parcels, as in the common St. John's-wort.

Tri'al, *n.* [From O. Fr. *triement*.] Act of trying; any effort or exertion of strength for the purpose of ascertaining its effect, or what can be done; examination by a test; experiment. — Suffering that puts strength, patience, or faith to test; afflictions or temptations that exercise and prove the graces or virtues of men. — Temptation; test of virtue; state of being tried.

(*Law.*) The examination of a cause in controversy between parties, before a proper tribunal. The term is most frequently applied to trial by jury, whether in a civil or criminal matter.

Tri'al'ity, *n.* Triad; three united. (R.)

Tri'alogne, (*-lög*) *n.* [Gr. *treis*, three, and *logos*, discourse.] A discourse of three persons.

Trian'dria, *n.* [Gr. *treis*, and *aner*, *andros*, a man.] (*Bot.*) The third class of plants in the Linnean system, characterized by having three stamens.

Tri'angle, *n.* [Fr., from Lat. *triangulum* — *tres*, and *angulus*, an angle.] (*Geom.*) A figure which has three sides, and consequently also three angles. *T.* are *rectilinear*, *spherical*, or *curvilinear*. *Rectilinear* or *plane T.* are bounded by straight lines; *spherical triangles* are formed on the surface of a sphere by the intersection of the planes of three great circles; *curvilinear T.* are those which are bounded by three curves of any kind whatever. *T.* receive other distinctive names from the relation of their sides and angles. A plane *T.* is said to be *equilateral* when its three sides are all equal; *isosceles*,

Fig. 2524. — TREPHINE.

when two only are equal; and *scalene*, when all three are unequal. It is called *right-angled* when one of its angles is a right angle; *oblique-angled*, when one of its angles is greater than a right angle; and *acute-angled*, when each of its angles is less than a right angle; lastly, two *T.* are said to be *similar* when their angles are respectively equal, each to each.

(*Astron.*) One of the 48 constellations of Hipparchus, situated in the northern hemisphere. The same name is also given to one of the 12 southern constellations formed by Bayer. There is also the *Little Triangle*, added by Hevelius, near the first named.

(*Mas.*) A small steel triangular instrument of percussion (Fig. 876), open at one of its angles. It is set in vibration by being struck with a short metal bar.

T. of forces. (*Statics.*) A theorem according to which three forces which, applied to the same point, produce equilibrium, are always parallel and proportional to the sides of a triangle, taken in order. The term *polygon of forces* is applied to the general theorem.

Tri'angle, in *New York*, a post-township of Broome co., 15 m. N. of Binghamton; pop. abt. 2,200.

Tri'angled, *a.* Having three angles: triangular.

Tri'angles, (*The*.) a group of islands in the Gulf of Mexico, off the E. coast of Yucatan.

Tri'angular, *a.* Having three angles; having the form of a triangle; relating to a triangle.

T. compasses. Compasses having three legs; two opening in the usual manner, and the third turning round an extension of the central pin of the other two, besides having a motion on the central joint of its own. The instrument is useful in the construction of maps and charts, as three points may be taken off at once.—*T. numbers.* (*Math.*) The series of numbers formed by the successive sums of the terms of an arithmetical progression, of which the common difference is 1. Thus:—Arithmetical progression . 1, 2, 3, 4, 5, 6, &c.
Triangular numbers . . . 1, 3, 6, 10, 15, 21, &c.

The general term of the series is $n \frac{1}{2} (n + 1)$.

Tri'angularity, *n.* The quality of being triangular.

Tri'angularly, *adv.* In a triangular manner.

Tri'angulate, *v. a.* To divide into triangular network by mensuration. — To make triangular.

Tri'angulation, *n.* [*Fr.*] (*Survey.*) The network of triangles with which the face of a country is covered in a trigonometrical survey.

Tri'anthema, *n.* (*Bot.*) The Horse-purslain, a genus of plants, order *Trianthema*.

Tri'archy, *n.* [*Gr.* *treis*, three, and *archē*, rule.] Government by three persons.

Tri'as, *n.* (*Geol.*) A system which derives its name—*Trias*, or triple system—from its being composed, in Germany, where it is very fully developed, of three main members; viz., the *Keuper*, the *Muschelkalk*, and the *Bunter Sandstein*. These, as far as they may be compared, are the equivalents of the upper New Red Sandstone. The *Trias* has been separated from the lower New Red or *PERMIAN*, because its flora and fauna are essentially *Mesozoic* and akin to those of the *oolite* and *chalk*, while those of the *Permian* are essentially *Paleozoic* in their fossils, and related to those of the coal-measures below. The *Flora* embraces equisetums, calamites, ferns, cycadaceous and coniferous plants; the *Fauna*, corals, star-fishes, shell-fish, crustaceans, reptiles, foot-prints of birds, and indications of marsupial mammals.

Tri'assic, *a.* Belonging to, or constituting *trias*.

Trib'asic, *a.* (*Chem.*) When an acid, on being brought in contact with a metallic oxide, exchanges three atoms of hydrogen for an equivalent amount of metal, it is termed a *tribasic acid*.

Trib'e, *n.* [*Fr.* *tribu*; *Lat.* *tribus*, from *tres*, three.] A family, race, or series of generations, descending from the same progenitor, and kept distinct, as in the case of the twelve tribes of Israel. — A nation of savages; a body of rude people united under one leader or government. — A division, class, or distinct portion of people, from whatever cause that distinction may have originated.

(*Nat. Hist.*) A number of things having certain characters or resemblances in common.

Tribe's Hill, in *New York*, a post-village of Montgomery co., 38 m. N.W. of Albany.

Trib'let, **Trib'olet**, *n.* A goldsmith's tool for making rings.

Tribom'eter, *n.* An apparatus for measuring the friction of metals.

Tri'brach, *n.* [*Gr.* *treis*, three, and *brachys*, short.] (*Prosody.*) A poetic foot of three short syllables.

Tribulation, (*lā'shun*.) *n.* [*Fr.*; *L.* *tribulatio*, from *tribulo*, *tribulatum*, to oppress, afflict, from *tribulum*, a thrashing instrument with sharp teeth, resembling a sledge.] Severe trouble or affliction; that which distresses life; vexation.

Tribu'nal, *n.* [*Lat.*, from *tribunus*, a tribune who administered justice.] The seat of a judge; the bench on which a judge and his associates sit for administering justice; more generally, a court of justice.

Trib'unnary, *a.* Relating to a tribune, or to tribunes.

Trib'unnate, *n.* See *TRIBUNESHIP*.

Tribune, (*trib'yum*.) *n.* [*Fr.* *tribun*; *Lat.* *tribunus*, from *tribus*, a tribe.] The chief of a tribe among the ancient Romans; afterward an officer or magistrate chosen by the people, to protect them from the oppression of the patricians or nobles, and to defend their liberties against any attempts that might be made upon them, by the senate and consuls.—A bench or elevated place, from which speeches were delivered to the people;—still used in this sense in the French legislative assemblies.

Tribuneship, *n.* The office of a tribune.

Tribunician, (*-ish'an*.) **Tribunitial**, (*-ish'al*.) *a.* Pertaining to tribunes; suiting a tribune.

Trib'utarily, *adv.* In a tributary manner.

Trib'utariness, *n.* The state or quality of being tributary.

Trib'utary, *a.* Paying tribute to another; subject; subordinate; paid in tribute; yielding supplies of anything.

—*n.* One that pays tribute, or a stated sum in acknowledgment of subjection.—An affluent; a stream which falls into another stream.

Tribute, (*trib'yūt*.) *n.* [*Fr.* *tribut*; *Lat.* *tributum*, from *tribuo*, to give, to bestow, from *tribus*, a tribe.] Something given or contributed; a grant.—An annual or stated sum of money or other valuable thing, paid by one prince or nation to another, either as an acknowledgment of submission, or as the price of peace and protection, or by virtue of some treaty.—A personal contribution.

Trib'uter, *n.* (*Mining.*) A miner who works a section of a lode, receiving a portion of the ore raised, or of its value.

Tri'ca, *n.* (*Bot.*) One of the names of the shield or reproductive organs of a lichen.

Tri'cala, or **Tri'khalia**, (*anc.* *Tricea*.) a town of European Turkey, in Thessaly, 32 m. from Larissa; pop. 12,000.

Tri'cap'sular, *a.* (*Bot.*) That has three capsules.

Trice, *n.* [*Fr.* *trois*, three.] A space of time during which one can say or tell three; a very short time; an instant; a moment.

—*v. a.* (*Naut.*) To haul or tie up by means of a rope.

Tricennial, (*-sen*.) *a.* [*Lat.* *tricennalis*, from *tricennium*—*triginta*, thirty, and *annus*, a year.] Belonging to the period of thirty years, or occurring once in that period.

Tricen'tenary, *n.* [*Lat.* *tres*, three, and *centum*, a hundred.] A period or space of three hundred years.

Triche'us, *n.* (*Zoöl.*) See *MORSE*.

Trichi'asis, *n.* [*Gr.*] (*Med.*) A disease of the eyelids, in which the eyelashes grow inwards and irritate the bulb of the eye.

Trichi'næ, *n. pl.* [*From Gr.* *thrix*, a hair.] (*Zoöl.*) A genus of minute nematoid worms, infesting, in the adult procreative state, the intestinal canal, and, in its larval state, the muscular tissue of man and certain mammals, especially the hog. The young trichinae, as they are seen in the human muscle, present the form of spirally-coiled worms, in the interior of small, globular, oval, or lemon-shaped cysts, which appear as minute specks scarcely visible to the naked eye. (Fig. 2525.) These cysts are more or less covered externally with calcareous matter, according to the length of time they have remained in a fixed position, and the degree of degeneration which their walls have undergone. The trichina measures, on an average, 1-75th of an inch in length, and 1-130th of an inch in breadth. The number of larval trichinae that may simultaneously exist in the muscles of a single man or animal is enormous. In a cat a single ounce of flesh was estimated to contain 325,000 trichinae; and if all the voluntary muscles of a human body of ordinary size were similarly affected, the number of worms would exceed 1,950 millions!

On the second day after their introduction, these intestinal trichinae attain their full sexual maturity; and about the sixth day the minute filaria-like embryos hatched within the oviducts of the female are excluded. They forthwith penetrate the mucous coats or walls of the intestine, enter the capillaries, are transported by the circulation to the whole muscular system, pierce and escape from the capillaries to penetrate that tissue, and within a fortnight attain the ordinary characters of *Trichina spiralis*, providing themselves by irritation of the sarcolemma with their adventitious cyst, which, at a later period, may become calcified. As the first introduction of *Trichina* is from eating meat, the animal matter in the garbage or offal commonly given to pigs occasions the frequency of their occurrence in that domestic animal. Where the custom may prevail of eating pork, or particular forms of pork, *e. g.* ham, bacon, sausages, &c., imperfectly cooked or raw, the *Trichina* in such meat are introduced in a state highly favorable for their development and procreation into the intestine, and thus is produced the painful and often fatal disease called *Trichiniasis*. Wholesome feeding of the pig with vegetable food, and thorough cooking of the pork, are the main preventives of *Trichiniasis*.

Trichini'asis, *n.* (*Med.*) See *TRICHINÆ*.

Trichi'lia, *n.* (*Bot.*) A genus of trees, order *Meliaceæ*. The juice of the bark of *T. emetica*, the Arabian Elcāja or Ecāja, is a purgative and a violent emetic. *T. moschata*, the Musk-wood, is remarkable for its musky odor.

Trichinopolis, (*trich-i-nop'o-le*.) a city and fortress of the S. of India, cap. of a district, on the Canvery, opposite the island of Seringham, famous for its magnificent Hindoo temples; *Lat.* 10° 50' N., *Lon.* 78° 50' E. *Pop.* 35,000.

Trichom'atose, *a.* (*Med.*) Applied to the hair when affected with *PILICA*, *q. v.*

Tri'chord, (*kórd*.) *n.* [*Gr.* *trichordon*—*treis*, and *chorde*, a string or cord.] (*Mus.*) An ancient instrument, or lyre, with three strings.

Trichos'tema, *n.* (*Bot.*) A genus of plants, order *Borraginacæ*. The Blue-curly, *T. dichotoma*, found on dry or rocky hills in the Northern and Middle States, is

Fig. 2525. — TRICHINA. Lying coiled up in muscle, the outside of the cyst supporting fatty tissue, vessels, &c. (Magnified.)

a foot high, branches opposite, leaves petiolate, flowers axillary and terminal, corolla purple, and stamens slender of a delicate purplish hue, gracefully bending from the lower lip of the corolla to the upper, forming a beautiful arch.

Tri'chromism, (*-kro-izm*.) *n.* [*Gr.* *treis*, and *chroma*, color.] (*Min.*) The property possessed by certain minerals of exhibiting, when viewed by transmitted light, different colors in three different directions.

Trick, *n.* [*Fr.* *tricher*; *It.* *treccare*; *Lat.* *tricolor*, to play tricks.] An entanglement; a fraudulent contrivance for an evil purpose, or an underhand scheme to impose upon the world; a hoax or cheating; a dexterous artifice; vicious practice; the sly dexterity or legerdemain of a juggler. — A parcel of cards falling to the winner at one turn or one round of play; as, to win the odd trick. — A particular practice, habit, or manner.

—*v. a.* To deceive; to impose on; to defraud; to cheat.

—*W. trecciar*, to furnish or harness, to trick out; *trec*, an implement, harness, gear.] To dress; to decorate; to set off; to adorn fantastically.—Often followed by *up*, *off*, or *out*.

—*v. n.* To practise trickery or fraud.

Trick'er, **Trick'ster**, *n.* One who tricks; a deceiver; a cheat. — A TRIGGER, *q. v.*

Trick'ery, *n.* The act of dressing up; artifice; stratagem.

Trick'ing, *n.* Act of one who tricks; cheating.—Dress; ornament; decoration.

Trick'ish, *a.* Full of tricks; artful in making bargains; given to deception and cheating; knavish.

Trick'ishly, *adv.* In a trickish manner; artfully; knavishly.

Trick'ishness, *n.* State or quality of being trickish.

Trick'le, *v. n.* To fall in drops; to rill in a slender stream; to flow in a small gentle stream.

Trick'ling, *n.* The act of flowing in a small gentle stream or in drops.

Trick-track, *n.* [*Fr.* *trictac*.] A game at table, resembling backgammon.

Trick'y, *a.* Trickish; practising tricks. (Colloq.)

Tric'linare, *a.* (*Min.*) Applied to crystals whose three axes are unequal and oblique to one another.

Triclin'ic, *a.* (*Crystall.*) Noting a system of crystallization such that the three axes of the crystals are unequal, and all their intersections are oblique, as in the oblique rhomboidal prism.

Triclin'ium, *n.* [*Lat.*] (*Roman Antiq.*) A room for the entertainment of guests, furnished on three sides with couches, the fourth side being left open for the attendance of the servants.

Trico'cus, *n.* [*Gr.* *trikokkos*, with three grains.] (*Bot.*) A fruit consisting of three cocci, or seeds with elastically dehiscing shells.

Tri'color, (*-kül'er*.) *n.* [*Fr.*, of three colors.] A flag having three colors in equal masses. The present European tricolor ensigns are: France—blue, white, red—divided vertically. Italy—green, white, red—divided vertically. Belgium—black, yellow, red—divided vertically. Holland—red, white, blue—divided horizontally.

Tri'colored, *a.* Having three colors.

Tri'corn, *a.* [*Lat.* *tres*, and *cornu*, a horn.] Three-horned.

Tricor'poral, **Tricor'porate**, *a.* [*Lat.* *tres*, and *corpus*, a body.] Having three bodies.

Tri'cuspid, *a.* [*Lat.* *tres*, and *cuspid*, a point.] Three-pointed.

T. valve. (*Anat.*) One of the valves of the heart, situated between the right auricle and ventricle, and so named from having a triangular shape.

Triens'pidate, *a.* Having three points.

Tridac'nidae, *n. pl.* (*Zoöl.*) A family of lamelli-branchiate molluscs, having the shell open, the valves equal, the foot small, and furnished with byssus.—*Tridacna gigas* (Fig. 2526) is remarkable for its great size, exceeding that of any other bivalve. The shell of a

Fig. 2526. — TRIDACNA GIGAS.

single specimen has been known to weigh more than 500 lbs. The valves are used as an ornament for grottoes and fountains. They are deeply furrowed and beautifully grooved. This great mollusc is a native of the East Indies, and is found in shallow water. It is used for food, and one suffices for a number of persons.

Tridac'tyl, **Tridac'tylous**, *a.* [*Gr.* *treis*, and *daktylos*, a finger.] Having three fingers or three toes.

Tri'dent, *n.* [*Fr.*; *Lat.* *tridens*] The three-pronged sceptre which the poets and painters of antiquity placed in the hand of Neptune, is so called by way of eminence.—Hence, any instrument in the form of a fork with three prongs.

Tri'dent, **Tri'dented**, *a.* Having three teeth or prongs.

Triden'tate, **Triden'tated**, *a.* (*Bot.*) Having three sharp teeth.

Tridiapa'son, *n.* (*Mus.*) A triple octave, or a twenty-second. — *Moore.*

Tridodecahedral, *a.* [*Gr. treis, dodeka, twelve, and hedra, a base.*] (*Crystall.*) Noting crystals which present three ranges of faces, placed one above another, each range consisting of twelve faces.

Triennial, *a.* [*Fr. triennal; Lat. triennium, the space of three years.*] Continuing three years; happening every three years.

Triennially, *adv.* Once in three years.

Tri'er, *n.* [*From try.*] One who tries; one who makes experiments; one who examines anything by a test or standard; one who tries judicially; one appointed to decide whether a challenge to a juror is just; a trior. — A test; that which tries or approves.

Triesch, (*treesh*), a town of Moravia, 6 m. from Iglau; pop. 5,600.

Trieste, (*tre-est'*), a large seaport of the Austrian dominions, the capital of a district in the Illyrian territory, near the N.W. extremity of the Adriatic Sea, and 72 m. from Venice; Lat. 45° 38' N., Lon. 13° 46' 5" E. It consists of an old town standing on a hill, with a castle on the top; the new town is on level ground, intersected by the Maria Theresa Canal, and built with neatness and regularity. It is the principal maritime city of the Austrian empire and the great emporium for its trade by the Adriatic. This trade was formerly, and even yet to a certain extent, conducted in barks of 20, 30, or 40 tons; but to accommodate the large steamers of our day, the new port, recently opened, was projected, at a cost of abt. \$7,300,000. It consists of 3 jetties, 700 ft. long by 300 ft. broad, thus converting the old harbor into 3 basins, with nearly 2 miles of quay. These basins have a depth of from 25 to 45 ft. *Manuf.* Ship-building, Sugar-refining, soap, leather, paper, &c. Triests is built on or near the site of the Roman colony of Tergeste; and there are some remains of the aqueduct which brought water to it from a distance of six miles. In 1797 and in 1805 it was taken by the French. *Pop.* (1897) 162,600. — The Gulf of T. forms the head of the Adriatic, and, at its entrance, has a length and breadth of 20 m. It contains the islands of Grado, &c., and receives the Isonzo, Stella, and other rivers.

Trifallow, *v. a.* Same as *TREFALLOW*, *q. v.*

Trifarious, *a.* [*Lat. trifarius, threefold.*] (*Bot.*) Arranged in three vertical rows.

Trifasciated, *a.* [*Lat. tres, and fuscia, a band.*] Surrounded by three bands.

Trifid, *a.* [*Lat. tres, and findo, fidi, to split.*] (*Bot.*) Applied to leaves divided into three segments by incisions extending about to the middle of the blade; three-cleft.

Trifle, *n.* A thing of no moment.

— *v. n.* To act or talk without weight or dignity; to act with levity; to talk with folly; to play the fool; to indulge in light amusements.

Trifler, *n.* One who trifles or acts with levity.

Trifling, *a.* Being of small value or importance; trivial.

— *n.* Employment about things of no importance.

Triflingly, *adv.* In a trifling manner.

Triflingness, *n.* Quality or state of being trifling.

Trifloral, **Triflorous**, *a.* Bearing three flowers.

Trifoliate, **Trifoliated**, *a.* [*Lat. tres, and folium, leaf.*] (*Bot.*) Applied to leaves which bear three leaflets from the same point, as in those of the clover.

Trifolium, *n.* [*Lat. tres, and folium, a leaf.*] (*Bot.*) A genus of plants, order *Fabaceae*, sub-order *Papilionaceae*, distinguished by their trifoliate leaves, with stipules adhering to the leaf-stalk, and commonly known as *Clovers* or *Trefoils*. There are numerous species, several of them natives of the U. States, and some of them important from an agricultural point of view. Of these the following may be mentioned: *T. pratense*, the Broad-leaved Red Clover, is extensively employed as a shifting crop, either by itself, or in mixtures which the farmer call *seeds*. Its arable form is much larger than the wilder varieties, the former being so much an induced plant that it has become difficult to make it hold to some lands so perfectly as it formerly did, in which cases the soil is described as clover-sick. *T. medium*, the Zigzag Clover, is a lover of sandy soils, whereas the *T. pratense* is not so well adapted for light land; and being a large species, it appears to have been introduced to cultivation as a good cropper where the commoner clover had failed. Its place is now generally supplied by *T. pratense perenne*, commonly called Cow-grass. *T. incarnatum*, the Carnation Clover, is an annual species, much used (especially in the early soils in the neighborhood of London) upon the white-crop stubble sown in autumn. Several varieties of its seed can be obtained. *T. repens*, the Creeping Trefoil, White Clover, or Shamrock, is a valuable feeding-plant in dry and thin soils; and in laying down permanent pastures, unless in strong land, it should be always pretty freely employed. Its spontaneous growth in the meadow is always hailed as a sign of an improved condition. A four-leaved shamrock is esteemed by superstitious persons as being lucky, perhaps upon the principle that it is thought to be fortunate to get anything rare; but in truth, four-leaved and even more-leaved clovers are not infrequently met with.

Triglyph, *n.* [*Gr. treis, and glyphē, a carving, carved work.*] (*Arch.*) An ornament consisting of a three-grooved tablet in the frieze of the Doric order, repeated at equal intervals.

Trigonal, **Trigonalous**, *a.* Triangular; having three angles or corners.

Trigonometric, **Trigonometrical**, *a.* Pertaining to, performed by, or according to, the rules of trigonometry.

Trigonometrically, *adv.* According to the rules or principles of trigonometry.

Trifo'rium, *n.* [*Lat.*] (*Arch.*) In Gothic architecture, an arched story between the pier arches and the clear-story of a building, (Fig. 2527.)

Triform, *a.* [*Lat. triformis.*] Having a triple form or shape.

Trifurcate, **Trifurcated**, *a.* Having three forks, prongs, or points; three-pronged.

Trig, *n.* A stone, wedge, or block, to stop a wheel, or to prevent a cask from rolling.

Trig'amist, *n.* One thrice married.

Trig'amous, *a.* [*Gr. treis, three, and gamos, marriage.*] (*Bot.*) Applied to plants containing three sorts of flowers in the same flower-head; i.e., males, females, and hermaphrodites.

Trig'amy, *n.* [*Gr. treis, three, and gamos, marriage.*] State of being married three times; or the state of having three husbands or three wives at the same time.

Trigeminous, (*jēm-*) *a.* [*Lat. tres, and geminus, twin-born.*] Three at a birth; threefold.

Trigg, in Kentucky, a S.W. co., bordering on Tennessee; area, 530 sq. m. *Rivers.* Cumberland, Little, and Tennessee. *Surface*, hilly; *soil*, generally fertile. *Min.* Iron, limestone, and stone-coal. *Cap.* Cadiz. *Pop.* abt. 13,000.

Trig'ger, *n.* [*Lat. traho, tractus.*] That which pulls or draws; the catch which, being pulled, disengages the cock of a gun-lock, and allows it to strike fire.

Trigonometry, *n.* [*Gr. trigōnos, a triangle, and metron, a measure.*] That branch of mathematics which treats of measuring triangles. The exact meaning of the term, however, has been much extended; so that it includes the determination of the situation and distance of all the points in a given space, in which the distance and situation of some points are given. A plane triangle consists of six parts: namely, three sides and three angles; the numerical value of any of these parts being given, and one of these three being a side, the value of any of the other three may be found by T. The science owes its origin to the Greek astronomers of Alexandria. From the time of Hipparchus, the solutions of the most useful cases of spherical triangles have been known, and fundamental formulæ are to be found in the *Analemma* of Ptolemy. The chords of the double arcs, however, were used by the Greeks in place of the sines, which were introduced by the Arabians, to whom the science is indebted for other improvements. *Tangents* were introduced by Regiomontanus, by means of which the calculations were greatly simplified. The present compact and elegant form in which the solutions appear is the result of the improvements introduced by modern analysis.

Trigram, *n.* [*Gr. treis, and gramma, a letter.*] A trigraph.

Trigrammatic, **Trigrammic**, *a.* Containing, or consisting of, three letters.

Trigraph, (*-graf-*) *n.* [*Gr. treis, and graphō.*] A name given to three letters having one sound, as *eau* in *beau*.

Trigynia, *n.* [*Gr. treis, and gynē, a woman.*] (*Bot.*) A name given by Linnaeus to those orders which have three pistils, or at least three styles.

Trihed'al, *a.* [*See TRIHEDRON.*] Having three equal sides.

Trihed'ron, *n.* [*Gr. treis, three, and hedra, side.*] (*Geom.*) A figure having three equal sides.

Trij'gous, *a.* [*Lat. tres, and jugum, a yoke.*] (*Bot.*) Applied to pinnate leaves whose petals bear three pairs of leaflets.

Trikeri, a town of European Turkey, in Thessaly, at the extremity of a peninsula in the Gulf of Volo; pop. 6,000.

Trilat'ral, *a.* [*Fr. from Lat. tres, and lateris, side, a side.*] Having three sides, as a triangle.

Trilat'erally, *adv.* With three sides.

Trilemma, *n.* A situation or difficulty in which there is a choice between three.

Triling'ual, **Triling'uar**, *a.* [*Lat. tres, and lingua, tongue, language.*] See *LINGUIST*. Consisting of three languages.

Trilit'eral, *a.* [*Lat. tres, and litera, letter.*] Consisting of three letters.

— *n.* A word consisting of three letters.

Trilithon, *n.* [*Gr. treis, and lithos, a stone.*] Three stones placed together like door-posts and a lintel.

Trill, *n.* [*It. trillo.*] (*Mus.*) A quaver; a shake of the voice in singing, or of the sound of an instrument.

— *v. a.* To utter with a quavering or tremulousness of voice.

— *v. n.* To shake or quaver; to play in tremulous vibrations of sound; to flow in a small stream, or in drops rapidly succeeding each other: to trickle.

Trillia'ceae, *n.* (*Bot.*) The Trillium or Paris family, an order of plants, class *Dictyogens*. They are unbranched herbaceous plants, with rhizomes or tuberous root-stocks. Leaves whorled, not articulated, net-veined. Flowers large, solitary, hermaphrodite; fruit succulent. There are four genera and thirty species, natives of temperate regions. They are said to have narcotic, acrid, and purgative properties.

Trilling, *n.* One of three children born at the same birth.

Tril'ion, *n.* In English notation, the product of a

Fig. 2527.

C, clear-story; T, triforium; P, pillars.

million multiplied by a million, and that product multiplied by a million. In French and American notation, the number represented by a unit with twelve ciphers annexed, being a million a million times repeated.

Tri'lobate, **Tri'lobed**, *a.* (*Bot.*) Divided into three lobes.

Tri'lobite, *n.* [*Gr. treis, three, and lobos, lobe.*] An extensive family of palæozoic crustaceans, deriving their name from the obvious three-lobed-like aspect of their bodies. The T. in numerous generic forms, as *asaphus* (Fig. 2528), *ampyx*, *calymene homolotus*, *ilænus*, &c., are especially characteristic of the Silurian system. About a dozen genera range through the Devonian epoch; only three or four appear in carboniferous strata; and not a single specimen has been found in later formations.

Trilocular, *a.* (*Bot.*) That has three cells, as a capsule. (*Asaphus candatus.*)

Trilogy, *n.* [*Gr. trilogia.*] (*Lit.*)

A series of three dramas, which, although each of them is in one sense complete, yet bear a mutual relation, and form parts of one historical and poetical picture. The *Agamemnon*, *Choephore*, and *Electra* of Æschylus, and the *Henry VI.* of Shakspeare, are examples of a *trilogy*.

Trim, *a.* [*A. S. trymian, getrymian.*] Set in order; dressed up; suitably adjusted; firm; compact; snug; nice; tight; neat; as, everything about the ship is *trim*, her dress is *trim*.

— *v. a.* To set in order; to prepare; to arrange; to adjust; to make right, that is, to put in due order for any purpose; as, to *trim* a ship, to *trim* a fire. — To dress; to put into a proper state, as the body; to decorate; to ornament; to invest with extra embellishments; as, a cap *trimmed* with ribbons. — To clip; to shave; to shear; to lop; to dock; to curtail; as, to *trim* a hedge, to *trim* the hair. — To supply with oil; as, to *trim* a lamp. — To dress, as timber; to make smooth; as, to *trim* a board.

(*Naut.*) To arrange in due order for working, as the sails of a ship. — To adjust, as the cargo of a ship, or the weight of persons or goods in a boat, so equally on each side of the centre and at each end, that she shall preserve her proper balance in the water and sail well; as, to *trim* ballast. — To reprove with some degree of acerbity; to snub. (Used colloquially.)

To *trim up*, to adjust in due order; to attire; as, to *trim up* a head-dress. — To *trim in*. (*Carp.*) To join by a tenon and mortise, as a piece of timber into other work.

— *v. n.* To fluctuate between parties, so as to appear to favor or countenance each; to balance; as, a *trimming* politician.

— *n.* Dress; gear; ornaments; as, a cavalcade in goodly *trim*. — State: condition; order; disposition; as, he was not in good *trim* to work.

(*Naut.*) The best disposition of a ship's proportion of ballast or cargo, arrangement of sails, and position of masts, as whether erect or raking, with a view to her sailing well. — In *ballast trim*. (*Naut.*) Having only ballast on board; — said of a ship.

Trim'ble, in Kentucky, a N. co., bordering on the Ohio river; area, 155 sq. m. *Surface*, hilly; *soil*, fertile; *Cap.* Bedford. *Pop.* (1897) 7,480.

Trimble, in Ohio, a post-village of Athens co. *Pop.* (1897) 510.

Trim'belle, in Wisconsin, a river which flows S. into the Mississippi river from Pierce co.

— A post-village of Pierce co., 12 m. E. of Prescott. *Pop.* (1897) about 140.

Trim'icrons, *a.* (*Bot.*) Having the parts in threes.

Trimest'er, *n.* [*Fr. trimestre.*] A period of three months.

Trimest'rial, *a.* Pertaining to or having reference to a term of three months; quarterly.

Trim'eter, *n.* [*Lat. trimetris; Gr. trimetros—tri, and metron, measure.*] (*Pros.*) A poetical division of verse, consisting of three measures.

Trim'eter, **Trimet'rical**, *a.* [*Fr. trimétrique, from Lat. trimetris.*] (*Pros.*) Containing, or consisting of, three poetical measures.

Trimet'ric, *a.* [*From Gr. tri, and metron, measure.*] (*Crystall.*) Having three unequal axes intersecting at right angles, as the rectangular and rhombic prisms.

Trim'ly, *adv.* In a trim or orderly manner; neatly; nicely.

Trim'mer, *n.* One who trims, fits, adapts, arranges, or decorates. — A time-server: one who fluctuates between two parties; also, a turn-coat.

(*Arch.*) A piece of timber inserted in a roof, floor, wooden partition, &c., to support the ends of any of the joists, rafters, &c.

Trim'ming, *n.* Act of one who trims or adjusts. — Necessary or ornamental appendages to anything; decorative accessories to an article of dress, as lace, ribbons, and the like; also, the concomitants served with a dish at table: as, the *trimmings* to a leg of mutton; — commonly used in the plural. — Act of rebuking or castigating; as, to give one a *trimming*. (*Colloq.*)

Trim'ness, *n.* State of being trim; state of being neat or spruce, and in good order; petty elegance; smartness; compactness.

Trimorphism, (*-morf-izm*) *n.* [*Gr. tri, and morphē, form.*] (*Crystall.*) The property of crystallizing in three different forms.

Trimûrti, *n.* [*From Sansk. tri, three, and mûrti,*

form.] (*Hind. Myth.*) The name of the Hindu Triad, or the gods *Brahma* (masculine), *Vishnu*, and *Siva*, when spoken of as an inseparable unity, though three in form. When represented, the *T.* appears as one body with three heads: in the middle, that of *Brahma*; at the right, that of *Vishnu*; and at the left, that of *Siva* (Fig. 247).

Tri'al, *a.* [Lat. *trinus*.] Threefold.

Trincomalee, *a.* a seaport-town of Ceylon, on the N.E. side of the island: Lat. $8^{\circ} 33' 6''$ N., Lon. $81^{\circ} 14' 6''$ E. The inner harbor is land-locked, and has water in many places sufficient to float the largest vessels close to the shore; but its peculiar superiority over all other harbors of India consists in its being accessible to all description of ships during the monsoons. *Pop.* abt. 20,000.

Trine, *a.* [Lat. *trinus*.] Threefold; trinal.

Triner'vate, **Tri'nerve**, **Tri'nerved**, *a.* [Fr. *trinervé*, from Lat. *tri*, and *nervus*, nerve.] (*Bot.*) Having three ribs or nerves extending unbranched from the base to the apex; — said of a leaf.

Tring, *a.* a town of England, in Hertfordshire, 32 m. from London; *pop.* 5,000.

Tringa, *n.* (*Zoöl.*) A genus of grallatorial birds, of the family *Scolopaciidae*, consisting of a large number of small birds which live on the shores of both salt and fresh water in all parts of the world. They are found more or less in flocks, and feed upon minute shell-fish and other small aquatic animals. Their wings are long and pointed, tail short, lower portion of tibiae naked, hindtoe very small, and the fore toes with a membranous margin. They are known under the general name of Sandpipers, and the popular names of Dunlins, Ox-birds, Robins, Snipe, &c.

Tringana, *a.* a town on the Gulf of Siam, on the E. side of the Malay peninsula. It is the residence of a rajah, and the capital of a state of the same name. *Pop.* 60,000.

Tringle, (*tring'gl*), *n.* [Fr., from L. Lat. *taringa*.] The curtain-rod of a bed.

(*Arch.*) A name common to certain little square members or ornaments, as regulets, listels, and plat-bands.

Trinidad, *a.* one of the largest of the British W. India islands, the most S. of the Windward group, off the N.E. coast of Venezuela, at the mouth of the Gulf of Paria, 50 m. long, and 30 m. in average breadth; Lat. of its N.E. extremity, $10^{\circ} 50'$ N., Lon. $60^{\circ} 54'$ W. *Rivers.* Caroni, Orupuche, and the Ortoire. *Surface*, diversified by mountains, plains, and swamps; *soil*, very fertile. *Climate*, in general, healthy. *Cap.* Port of Spain. *T.* was discovered by Columbus in July, 1498. It belonged successively to the Spaniards and French, and was finally taken by the British in 1797.

Trinidad, *a.* in California, a post-village and township of Klamath co., 270 m. N.N.W. of San Francisco.

Trinidad, (*tre-ne-da'da*), *a.* a town of Brazil, 19 m. N.E. of Rio de Janeiro; *pop.* abt. 5,000.

Trinidad, *a.* an island of Brazil, in the Atlantic; Lat. $20^{\circ} 31'$ S., Lon. $29^{\circ} 19'$ W.

Trinitarian, *a.* [Fr. *trinitaire*.] Pertaining or relating to the Trinity, or to the doctrine of the Trinity.

n. A believer in the doctrine of the Trinity; — opposed to unitarian.

Trinitarianism, *n.* (*Theol.*) The doctrine of Trinitarians.

Trinité, (*La*), (*tree-nee-ta'*) a town of Martinique, on the E. coast, 16 m. E. of St. Pierre; *pop.* 6,000.

Trinity, (*trin'e-tee*), *n.* (*Theol.*) The doctrine of the Trinity, received by the greater part of the Christian world, teaches that in the unity of the Godhead there are three persons, of one substance, power, and eternity, viz., — the Father, the Son, and the Holy Ghost. The word *Trinity* does not occur in the Scriptures, nor in the Apostles' Creed, nor yet in the Nicene Creed, but it is found in the Athanasian Creed.

Trinity, *a.* in California, a N.W. co.; *area*, 3,000 sq. m. It is traversed by Eel creek. *Surface*, mountainous in the E. and W.; *soil*, generally fertile. *Cap.* Weaver-ville. *Pop.* (1897) 3,917.

Trinity, *a.* in Louisiana, a post-village of Catahoula parish, 12 m. S. of Harrisburg.

Trinity, *a.* in Texas, a S.E. co.; *area*, 710 sq. m. *Rivers.* Neches and Trinity. *Surface*, undulating; *soil*, fertile. *Cap.* Groveton. *Pop.* (1897) 8,500.

Trinity River, *a.* in Texas, formed by the junction of the Elm and W. Forks, in Dallas co., flows into Galveston Bay, about 40 m. N. of Galveston city, after a S.E. course of 550 m., of which it is navigable 500 m. The Elm Fork rises in Cook co., and has a S.E. course of 150 m. The W. Fork rises in Archer co., and flows generally S.E. abt. 200 m. The valley of the Trinity is very fertile, and produces cotton, maize, rice, and sugar.

Trinity-Sunday, *n.* The Sunday next after Whitsunday; — so called on account of the feast which is held on that day in honor of the Holy Trinity.

Trink'et, *n.* [Originally *tricket*, a dim. of *trick*, to adorn.] A small ornament, as a jewel, a ring, a toy, &c.; — generally in the plural; as, she pawned her *trinkets*. — Tackling; tools; accessories of insignificant value; — commonly in the plural.

Trink'etry, *n.* Trinkets collectively considered; jewelry; bijouterie.

Trino, (*tre'*), *a.* a town of N. Italy, on the Po, 30 m. from Turin; *pop.* 8,976.

Trinoctial, (*noh't-shal*), *a.* [From Lat. *tri*, and *nox*, noctis, night.] Comprising the period of three nights.

Trino'id'al, *a.* [Lat. *tri*, and *nodus*, knot.] (*Bot.*) Three-knotted, as a stem.

Trino'mial, *a.* [Lat. *tres*, and *nomen*, a name.] (*Math.*) Noting an algebraical quantity or expression consisting of three terms, connected by the sign plus or minus; as, $a^3 + bc^2 - d^3$.

n. (*Math.*) An algebraical quantity consisting of three terms; — also, sometimes, written *trinomial*.

Tri'o, *n.* [Fr., from Lat. *tres*, *tria*.] Three united; three persons acting in combination; as, a *trio* of friends. (*Mus.*) A composition consisting of three parts, for voices or instruments.

Trioctah'e'dral, *a.* [Lat. *tri*, and Eng. *octahedral*.] (*Crystallog.*) Having three ranges of faces, one above another, each range presenting eight faces.

Tri'olet, *n.* [Fr.] A stanza of eight lines, in which the first line is thrice repeated.

Tri'ones, *n. pl.* [Lat.] (*Astron.*) The seven principal stars in the constellation Ursa Major, popularly called Charles's Wain; four of the stars being fancied to represent a wain or wagon, and the three others the oxen by which it is drawn.

Triost'enn, *n.* (*Bot.*) A genus of plants, order *Caprifoliaceae*. *T. perfoliatum*, the Fever-root, Fever-wort, or Horse-gentian, has a large and fleshy root, which is in much repute in medicine, having many of the properties of *ipeacacaula*.

Trip, *v. n.* (*imp.* and *pp.* TRIPPED, (*tript*)) [Dan. *trippe*; Ger. *trippeln*, to trip; Swed. *trippa*; D. *trippeln*.] To hop, skip, or dance through gladness; to run or step lightly or nimbly; to take short, quick, light steps; to skip; to caper; as, *tripping* the light, fantastic toe. — To strike the foot against something in walking or running, so as to make a false step; to stumble; to lose one's footing. — To make a short or sudden journey; to jaunt; to travel to a short distance. — To fail; to err; to be deficient; to be guilty of a blunder, misstep, or dereliction of duty, propriety, or morality; as, he found his memory *trip* and fail him.

v. a. To cause to stumble; to supplant; to cause to fall by striking the feet suddenly from under the person; — usually preceding *up*; as, to *trip up* an antagonist in wrestling. — Hence, to cause to fall by depriving of support; as, "to *trip* the course of law." (*Shaks.*) — To catch in a misstep, blunder, or dereliction; to convict; to bring home to; to detect; as, he was *tripped* in the fact.

(*Naut.*) To loose, as a ship's anchor, from the bottom by its cable.

n. Act of tripping; a stroke or catch by which a wrestler overthrows his antagonist. — A stumble by the loss of foothold, or the striking of the foot against an object; a stumble; a misstep. — Hence, a failure; a mistake; figuratively, a blunder; a slight error, digression, or dereliction, arising from haste or inconsideration.

"They who of each trip th' advantage take." — *Dryden*.

— A skip; a caper; a quick, light footstep. — A jaunt; an excursion; a short journey or voyage; as, to take a *trip* to Havana.

(*Naut.*) A single tack in plying to windward.

Triparted, *a.* (*Bot.*) Divided into three segments or lobes; tripartite.

(*Her.*) Presenting three parts or pieces.

Tripartient, (*-par'shent*), *a.* Dividing into three equal parts, as a number.

Tripartite, *a.* [Fr., from Lat. *tripartitus* — *tres*, three, and *partitus*, divided.] Divided into three parts; triparted. — Made by three parties; as, a *tripartite* treaty. — Possessing three corresponding parts or copies.

Tripartition, (*-tish'un*), *n.* [Fr., from Lat. *tri*, and *partitus*.] A division by three, or into three parts.

Tripe, *n.* [Fr.; W. *tripa*. Etymol. unknown.] Properly, the entrails, but in common usage, the large stomach, of ruminating animals dressed and prepared for food; as, a dish of *tripe* and onions. The parts used are the paunch, or rumen (*plain T.*), and the smaller reticulum (*honeycomb T.*).

Tripen'uate, **Tripin'uate**, *a.* [Fr. *tripenné*; Lat. *tri*, and *penna*, pinna, a feather.] (*Bot.*) Trebly pinnate.

Triper'sonal, *a.* [From Lat. *tri*, and *persona*, a person.] Consisting of three persons.

Triper'sonalist, *n.* (*Theol.*) Same as TRINITARIAN, *q. v.*

Tripet'aloid, *a.* [Gr. *tri*, three, *petalon*, leaf, and *eidos*, form.] (*Bot.*) Having the appearance of being furnished with three petals, as a flower.

Tripet'alons, *a.* [Fr. *tripétale*; Gr. *treis*, three, and *petalon*, leaf.] (*Bot.*) Three-petalled, as a plant.

Triph' thong, *n.* [Gr. *treis*, and *phthoggos*, a voice.] (*Gram.*) Same as TRIGRAPH, *q. v.*

Triphyline, (*treffy'-lin*), *n.* [Gr. *treis*, and *phylē*, a class.] (*Min.*) A triple phosphate of lithia, manganese, and iron, found commonly in coarsely granular crystalline masses of a greenish-gray color.

Triple, (*trē'pl*), *a.* [Fr., from Lat. *triplex*, *triplex* — *tres*, and *plico*, to fold.] Threefold; consisting of three united; multiplied by three; as, a *triple* head, a *triple* knot. — Treble; three times repeated; as, a *triple* proportion. — *Triple crown*. (*Eccles.*) Same as TIARA, *q. v.*

— *Triple ratio*. (*Math.*) A ratio which is equivalent to 3. — *Triple salt*. (*Chem.*) A tribasic salt. See TRIBASIC.

— *Triple stars*. Three stars in close proximity. (*Nichols.*)

— *Triple time*. (*Mus.*) That class of time in which each measure is divided into three equal parts.

v. a. (Usually written TREBLE.) To treble; to make threefold, or thrice as much or as many.

Triple Alliance. (*Hist.*) An alliance between the States-General and England, against France, for the protection of the Spanish Netherlands, was ratified Jan. 23, 1668. Sweden joined the league, April 25, and it then became known as the Triple Alliance. — Another, called the *Second Triple Alliance*, between England, France, and Holland, to oppose the designs of Cardinal Alberoni, the Spanish minister, was signed by the English and French, Nov. 28, 1716, and by the Dutch at the Hague, Jan. 4, 1717. — A Triple Alliance between Great Britain, Russia, and Austria, was concluded against France at St. Petersburg, Sep. 28, 1795.

Trip'let, *n.* [From *triple*.] A combination of three,

of a kind, or three united; as, a woman sometimes gives birth to *triplets*.

(*Poet.*) Three verses rhyming in unison.

— *pl.* (*Mus.*) Notes grouped together by threes, as in jigs.

(*Optics.*) An eye-piece of a microscope, which, when used, triples the power of the instrument.

Trip'lieate, *a.* [Lat. *tres*, and *plico*, to fold.] Threefold; tripled.

TriPLICATE ratio. (*Math.*) In two numbers or magnitudes, the same as the ratio of the first to their fourth proportional. It is equal to the cube of their ratio, or the ratio of their cubes, as in the case of numbers.

n. A third document or thing corresponding to two others of the same kind; as bills of lading drawn out in *triplicate*.

TriPLICATION, (*-kā'shun*), *n.* [Late Lat. *triplicatio*.] Act of trebling or making threefold, or adding three together.

Triplie'ity, *n.* [From Lat. *triplex*.] Trebleness; the state of being triple or threefold.

Trip'lite, *n.* [Gr. *treis*, and *lithos*, stone.] (*Min.*) A compound of phosphoric acid in combination with the protoxides of iron and manganese, which occurs of a pitch-black to a clove-brown color, in compact crystalline masses with a lamellar structure, and a cleavage in three directions at right angles to each other.

Trip'pod, *n.* [Gr. *treis*, and *pous*, *podos*, a foot.] (*Antiq.*) A vessel (Fig. 2529), table, seat, or instrument having three feet. It was from such a seat that the Pythian goddess rendered oracular answers at Delphi.

(*Surr.*) A three-footed stand for supporting a theodolite, &c.

Trip'ody, *n.* [Gr. *treis*, and *pous*, *podos*, a foot.] (*Pros.*) A series of three feet.

Tripoli, (*trip'o-le*), *a.* a country of N. Africa, and the most easterly of the Barbary states, extending along the S. shore of the Mediterranean, between Lon. 11° to 25° E., and Lat. 28° to 33° N.; being bounded on the S. by the Libyan Desert, E. by Egypt, and W. by Fezzan; estimated area 200,000 sq. m. The sea-board is about 1,000 m. in length; for 15 or 18 m. inland the country presents a perfect garden of fertility, but the country beyond is mostly a desert of sand. The products are cotton, silk, corn, tobacco, dates, figs, grapes, saffron, madder, castor-oil, senna, galls, other drugs, dye-woods, and fruits. Among the animals the horse takes the foremost place; next cattle, sheep, goats, camels, dogs, and poultry. Among the carnivora are wolves, foxes, hyenas, and jackals; and among the inoffensive are the gazelle, hare, ostrich, antelope, etc. Of the mineral kingdom salt seems to be the only article of consequence obtained. The manufactures are woollen and cotton fabrics, such as carpets, camlets, burnouses, sackings, leather ugets, earthenware, and potash. The principal trade is by caravan with central Africa, or by sea with Malta, Tunis, and the Levant. *T.*, since 1877, forms a province of the Ottoman Empire; the religion of the inhabitants is that of Mohammedanism. The knights of St. John of Jerusalem, to whom *T.* had been ceded by the Emperor Charles V., were expelled by Sultan Solymán, 1551; and the corsair Dragut, who was made the first governor, instituted a system of piracy which was continued for centuries. The capital was bombarded by a French fleet in 1683, and in 1804 by an American squadron under Commodore Preble; but it was only in 1806 that a British force visiting *T.* compelled the Bey to renounce piracy. *Estim. pop.* 1,200,000.

TRIPOLI, the cap. of the above state, a fortified city and important seaport on the W. coast of Africa, on a low rocky peninsula entering into the Mediterranean; Lat. $32^{\circ} 53' 56''$ N., Lon. $13^{\circ} 11'$ E. The harbor, defended by a mole, is both secure and protected. There is a magnificent triumphal arch, raised A. D. 164, to the honor of Aurelius Antoninus and Verus, but the modern town has little to distinguish it from Mohammedan cities in general. *Pop.* abt. 15,000.

Trip'oli, or **Tar'abloos**, (anc. *Tripolis*), a seaport of Syria, cap. of a pashalik of the same name, traversed by the small river Kadish, 15 m. from Beyrout; Lat. $34^{\circ} 26'$ N., Lon. $35^{\circ} 44'$ E. It stands at the foot of the branches of Mount Lebanon, and along the edge of a small triangular plain, which extends between them and the sea, and terminates in a flat promontory, on which is the place of anchorage. The plain is entirely covered with trees, chiefly mulberry, planted in regular order, and serving for the production of silk, which forms the staple of *T.* It is, however, very unhealthy. Silk is largely exported, both in a raw and manufactured state. *T.* was taken in 1108 by the Crusaders, who destroyed the rare and valuable library of Persiau and Arabic works, said to amount to 100,000 volumes. *Pop.* abt. 16,000.

Trip'oli, in Iowa, a post-village of Bremer co., abt. 14 m. N.E. of Waverly.

Trip'oli, **Trip'il**, *n.* (*Min.*) A silicious mineral originally brought from Tripoli, used in polishing metals, marble, glass, &c.

Tripolitza, (*tri-polit'sa*), (*Mod. Gr.*, three cities.) A town of Greece, under the Turkish rule capital of the Morea, now the chief town of the government of Mantinea, lies 22 m. S.W. of Argos, and 39 S.W. of Corinth, in a plain 3,000 feet above the sea. It derives its name from being near the sites of the three ancient cities — Tegea, Mantinea, and Pallantium. In 1821 it was stormed by the Greek insurgents; and in 1825 razed to the ground by the troops of Ibrahim Pasha; it has since, however, been rebuilt. *Pop.* 8,000.

Fig. 2529.
TRIPOLI.

Trip'per, *n.* One who, or that which, trips or supplants; one who skips or walks nimbly.

Tripping, *p. a.* Quick; nimble; sprightly on the feet; stepping lightly or quickly.

(*Her.*) A term analogous to *passant*, but applied to animals of the chase; — also written *trippant*.

n. Act of one who trips, capers, or walks nimbly. — A light dance or step.

(*Naut.*) Act of loosing an anchor from the ground by its cable or buoy-rope. — *Tripping-line*, a small rope serving to unring the lower top-gallant-yard arm, when in the act of striking it, or when lowering it on deck.

Trippingly, *adv.* In a tripping manner.

Tripsacum, *n.* (*Bot.*) A genus of plants, order *Graminaceæ*. *T. dactyloides*, the Sesame Grass, or Gama Grass, is a large, but coarse grass; stem slightly compressed, smooth, solid with pith, brown at the nodes, 4-5 ft. high; leaves nearly an inch broad, long, lanceo-linear, smooth beneath, roughest above. It is found throughout the U. States on river-banks and sea-shores.

Trip'shaft, *n.* (*Mach.*) A supplementary rock shaft, worked by hand, for starting a steam-engine.

Tripsis, *n.* [*Gr.*, from *tribein*, to rub.] Act or process of SHAMPOOING, *q. v.*

(*Med.*) Same as TRITURATION, *q. v.*

Triptole'mæa, *n.* (*Bot.*) A genus of plants, order *Fabaceæ*, composed of trees or woody climbers, with alternate pinnate leaves, common to the tropics of both hemispheres. The rose-wood of the cabinet-maker is said to be obtained of several species of this genus; but, according to Dr. Allemão of Rio de Janeiro, the greater part of the best kind of rosewood exported from Brazil, is the wood of *Dalbergia nigra*, while other qualities are the produce of species of *Macharion*.

Triptole'mus, (*Myth.*) The son of Celeus, king of Attica, by Neera. The goddess Ceres wished to make him immortal, but was prevented through the meddling curiosity of his mother. She, however, taught him agriculture, and rendered him serviceable to mankind by instructing him how to sow corn and make bread. She also gave him her chariot, drawn by two dragons, in which he travelled over the earth, and distributed corn to all the inhabitants of the world.

Trip'tote, *n.* [*Fr.*, from *Gr. treis*, and *ptotos*, falling.] (*Gram.*) A noun or denomination that has only three cases.

Triquetrons, (*-kwê'trûs*), *a.* [*Lat. triquetrus*.] Threesided, with plane or concave sides.

(*Bot.*) Trigonal; three-edged.

Tri-rectangular, *a.* [Prefix *tri*, and *rectangular*.] Having three right angles; as, a *tri-rectangular* triangle.

Tri'reme, *n.* [*Fr.*, from *Lat. tres*, and *remos*, an oar.] An ancient Greek and Roman vessel of war, having three banks of oars, invented by Ameinocles the Corinthian, B. C. 700. Other authorities say they were invented B. C. 703. They were first built by the Athenians at the instance of Themistocles, B. C. 481, and by the Romans B. C. 260.

Tri-rhomboid'al, *a.* [*tri* and *rhomboidal*.] Possessing three rhombic faces or sides.

Trisacramenta'rian, *n.* [*Fr. trisacramentaire*.] (*Ecol.*) A member of a certain religious sect who admit of three sacraments only.

Trisect, *v. a.* [*Lat. tres*, and *seco*, *sectum*, to cut.] To cut or divide into three equal parts.

Trisected, *p. a.* (*Bot.*) Cut or divided into three equal parts or segments; — said of leaves.

Trisection, (*-sêk'shun*), *n.* The cutting or separation of a thing into three equal parts; — especially, in geometry, the division of an angle into three equal sections.

Trise'rial, **Trise'riate**, *a.* [From *Lat. pref. tri*, and *series*.] (*Bot.*) Arranged in three rows, one beneath another.

Tris'mus, *n.* [*Gr. trismos*, gnashing of teeth.] (*Med.*) Spastic closure of the under jaw; — a partial tetanus.

Trisoctahedron, *n.* [*Gr. treis*, and *Eng. octahedron*.] (*Crystallog.*) A solid bounded by twenty-four equal faces.

Tris'past, **Tris'paston**, *n.* [*Gr. trispastos*, drawn threefold.] (*Mech.*) A machine with three pulleys acting in connection with each other for raising heavy weights.

Trispermious, *a.* [*Gr. treis*, and *sperma*, seed.] (*Bot.*) Three-seeded, as a capsule.

Tristan d'Acunha, (*tris-tan'da-koon'ya*), the chief of a group of three islands in the S. Atlantic, claimed by Great Britain, lying to the S.S.E. of St. Helena, and E.S.E. of the Cape of Good Hope, and named after their discoverer, a Portuguese navigator, in 1506. It lies in Lat. 37° 6' S., and Lon. 12° 2' W.; the other two are called *Nightingale* and *Inaccessible*. *T.* is 20 mi. in circumference, mountainous, and supplies water and fresh provisions to such ships as touch at its remote shores.

Triste, (*trêst*), *a.* [*Fr.*] Sad; gloomy; heavy; melancholy.

Triste, in Mexico, an island in the Gulf of Terminos, off the S.W. coast of Yucatan.

Triste, (*Gulf of*), an inlet of the Caribbean Sea, on the N. coast of Venezuela; Lat. 10° 30' N., Lon. between 67° 30' and 68° 30' W.

Trist'fully, *adv.* Sadly; gloomily; with melancholy.

Tristichous, (*trîs'tîk-ûs*), *a.* [*Gr. treis*, and *stichos*, a row.] (*Bot.*) In three longitudinal or perpendicular ranks.

Tristigmat'ic, **Tristig'matose**, (*-tôz*), *a.* [From *Lat. tres*, and *stigma*.] (*Bot.*) Having three stigmas, as a flower.

Trisulcate, *a.* Having three forks, tines, or prongs.

Trisyllab'ic, **Trisyllab'ical**, *a.* [From *Gr. treis*, and *syllabê*, syllable.] Pertaining to a trisyllable; consisting of three syllables; as, a *trisyllabic* root.

Trisyl'able, *n.* A word consisting of three syllables.

Trite, *a.* [*Lat. tritus*, from *tero*, *tritum*, to wear by

rubbing.] Stale; threadbare; worn out; hackneyed; used till so common as to have lost its originality and force; as, a *trite* subject, a *trite* citation, a *trite* proverb.

Trite'ly, *adv.* In a trite manner.

Trite'ness, *n.* Quality or state of being trite.

Triter'nate, *a.* (*Bot.*) Applied to compound leaves whose common petiole divides into three secondary petioles, which are each subdivided into three tertiary petioles, each of which bears three leaflets.

Tri'theists, *n. pl.* [From *Gr. treis*, and *theos*, God.] (*Ecol. Hist.*) A sect who taught that the Father, Son, and Holy Ghost were three co-equal distinct beings, united by a common will and purpose, arose in the 6th century. It separated into Cononites and Philopouists, so called from the names of the leaders.

Tri'ticum, *n.* [*Lat.*, wheat.] (*Bot.*) An important genus of the order *Graminaceæ*. *T. sativum*, and its varieties, is an annual cereal or corn grass, which supplies the inhabitants of many civilized countries with their most important article of food, known to everyone under the name of WHEAT, *q. v.* *T. repens*, the Creeping Couch, is also well known, but as one of the most troublesome weeds of the farm and garden. Its stem, abt. 2 feet high, and trailing at the lower joints, is extremely difficult to eradicate. *T. caninum*, the Dog's Couch-grass, differs from it mainly in the absence of the running underground stems (rhizomes). It has, however, the same pungent flavor which belongs to all the *Tri'tici*, due probably to the presence of some kind of essential oil, by virtue of which it would appear to be capable of exerting powerful emetic action, at least on dogs.

Tri'ton, (*Myth.*) A sea deity, son of Neptune, by Amphitrite, who could calm the sea and abate storms at pleasure. He is generally represented as blowing a shell; his body above the waist is like that of a man, and below, a dolphin. Many of the sea deities are called Tritons.

Fig. 2530. — TRITON.

(*Zoöl.*) See SALAMANDRIDE.

Tri'tone, *n.* [*Gr. tres*, and *tonos*, tone.] (*Mus.*) A sharp fourth. (*R.*)

Triturable, (*trî'tyûr-a-bl*), *a.* [*Fr.*] That may be triturated or reduced to a fine powder by pounding, rubbing, or grinding.

Triturate, *v. a.* [*Fr. triturer*, from *Lat. tero*, *tritrus*, to wear away by rubbing.] To rub; to crush; to pound. — To rub or grind to a very fine powder, and, properly, to a finer powder than that made by pulverization; to levigate.

Trituration, (*trî'tyû-râ-shun*), *n.* [*Fr.*] Act of triturating, or of reducing to a very fine powder by rubbing or grinding; levigation.

Triumph, (*trî'umf*), *n.* [*Lat. triumphus*.] (*Roman Hist.*) A public and solemn honor conferred by the ancient Romans on a victorious general, by giving him a magnificent entry into the city, is said to have originated in the reign of Romulus, B. C. 753—B. C. 715. The triumph of the consuls Valerius and Horatius, B. C. 449, refused by the senate, but granted by a vote of the people, was the first instance of a triumph without the authority of the senate. The triumph of Camillus, for the taking of Veii after a siege of 10 years, was celebrated with great pomp B. C. 395. There were two kinds of triumphs: the great, called the *triumph*; and the lesser, called the *ovation* (*q. v.*). — Hence, by implication, pomp with which a victory is publicly celebrated; joy or exultation over success. — State of being victorious; victory; conquest; as, he was a general who could boast of few triumphs. — Formerly, a card that could take all others; — now written *trump*, *q. v.*

v. n. [*Fr. triompher*.] To celebrate victory with pomp; to rejoice over victory; to exult in a success or advantage gained. — To prevail; to obtain victory, advantage, or success. — To boast insolently, as of an advantage gained over another.

"You that triumph thus upon my misery." — *Shaks.*

— To flourish; to succeed; to be prosperous.

Triumph'al, (*trî'ûmf'al*), *a.* [*Lat. triumphalis*.] Pertaining, or having reference, to triumph; serving to commemorate a triumph or victory; as, a *triumphal* arch.

Triumphant, (*-ûmf'ant*), *a.* Triumpling; rejoicing, as over victory. — Celebrating or commemorating victory; expressive of jubilation for success or advantage gained; as, a *triumphant* paean. — Victorious; graced with conquest; as, "Our faith triumphant o'er our fears." (*Longfellow*). — Used on an occasion of triumph; triumphal; as, "a *triumphant* chariot." — *South.*

Church triumphant, the church in heaven, enjoying a state of triumph over her enemies; — as opposed to *church militant*. See MILITANT.

Triumph'antly, *adv.* In a triumphant manner.

Tri'umper, *n.* One who triumphs, or rejoices over victory; a vanquisher.

Triumpho, (*tree-oom'fo*), in Brazil, a town of the prov. of São Pedro, 30 m. W. of Porto Alegre; pop. abt. 4,500.

Triumpho de la Cruz, (*kroos*), in S. America, a bay and group of islands on the N. coast of Honduras.

Trium'vir, *n.*; *Eng. pl.* TRIUMVIRS; *Lat. pl.* TRIUMVIRI [*Lat. tres*, three, and *vir*, a man, a male person.] Originally, one of a triumvirate. — One of three men united in office, and governing with equal powers.

Trium'virate, *n.* [*Fr. triumvirat*; *Lat. triumviratus*.] A coalition or association of three men, constituting a board for the management of some public business among the Romans, one of which, the *Triumviri capitales*, for inquiring into capital offences, was instituted about B. C. 292. Julius Caesar, Pompeius, and Crassus, formed a *T.* for carrying on the government, B. C. 60. Another was formed by Octavianus Caesar, Marcus Antonius, and Lepidus, and afterwards sanctioned by a *Senatus Consultum*, B. C. 43. At the expiration of five years it was prolonged for five years more, B. C. 38. Augustus deprived Lepidus of his power, B. C. 36. It legally expired on the last day of the year B. C. 33. — A *T.* was appointed at Rome, consisting of Mazzini, Armellini, and Saffi, with the entire executive power placed in their hands, Feb. 27, 1849.

— Hence, by implication, a junto, coalition, or association of three in office, government, or authority.

Triune, (*trî'yûn*), *a.* [*Lat. tres*, and *unus*.] Three in one; — an epithet applied to God, to indicate the unity of the Godhead in a trinity of persons.

Tri'unity, *n.* State or quality of being triune; trinity.

Triven'to, a town of S. Italy, 50 m. from Naples; pop. 4,611.

Trivet, *n.* [*Fr. trépied*, a tripod.] A three-legged stool or other support.

Triv'ial, *a.* [*Fr.*; *Lat. trivialis*, from *trivium*, a cross-road.] That may be picked up anywhere or everywhere; — hence, common; worthless; vulgar; ordinary. — Commonplace; hackneyed; trifling; inconsiderable; of little value or importance; as, a *trivial* affair, a *trivial* instance, a *trivial* fault.

Triv'iality, *n.* State or quality of being trivial; trivialness; want of importance. — That which is trivial; a bagatelle; a trifle.

Triv'ially, *adv.* In a trivial manner.

Triv'ialness, *n.* Same as TRIVIALITY, *q. v.*

Triv'oli, in Illinois, a post-village and township of Peoria co., 17 m. W. of Peoria.

Tri-weekly, *a.* Thrice weekly; happening or appearing three times a week; as, the *tri-weekly* issue of a journal.

Tro'ad, (*Geog.*) The plain around ancient Troy.

Tro'as, (*Anc. Geog.*) A maritime city of Mysia, in the N.W. part of Asia Minor, situated on the Ægean coast, at some distance S. of the supposed site of ancient Troy. *T.* was a Macedonian and Roman colony of much promise, and was called Alexandria Troas. The Turks call its ruins *Eski Stamboul*, "the old Constantinople." Its remains, in the centre of a forest of oaks, are still grand and imposing. *T.* was three times visited by St. Paul.

Troat, *v. n.* [From *throat*.] To cry, as a buck in rutting-time.

n. The cry or call of a buck in rutting-time.

Tro'car, **Tro'char**, *n.* [*Fr.*, from *Lat. tres*, three, and *quart*, a fourth. So called from its triangular point.] (*Surg.*) An instrument used in tapping for the dropsy.

Trochaic, (*-kâ'ik*), *n.* A trochaic verse or measure; a trochee.

Trochaic, **Trochaical**, (*-kâ'ik*), *a.* (*Poet.*) Consisting of, or pertaining to trochees; as, *trochaic* verse.

Trochan'ter, *n.* [*Gr.*, a runner.] (*Anat.*) A name given to two processes (*greater* and *less T.*) at the upper end of the thigh-bone; — so called because the muscles inserted into them are those chiefly concerned in the act of running.

Troche, (*trô'kê*), *n.* [From *Gr. trochos*, a runner.] (*Med.*) A small round lozenge or tablet, generally composed of sugar and mucilage, united with a small portion of more active remedies, intended to be allowed gradually to dissolve in the mouth.

Trochee, (*trô'kee*), *n.* [*Lat. trochæus*; *Gr. trochaïos*, from *trochos*, a running.] (*Pros.*) A rhythmical measure, consisting of two syllables, a long and a short; thus, — *v.*

Trochil'ic, *a.* Having reference to, or characterized by, rotary or circular motion.

Trochil'ies, *n. sing.* [*Lat. trochlea*, from *Gr. trochalos*, running.] The science of rotary motion.

Trochil'idæ, (*n. Zoöl.*) The Humming-birds, a family of insessorial birds, containing above 300 species, divided into about 75 genera or sub-genera. The *T.* include some of the smallest known birds, many of which are remarkable for the wonderful splendor of their plumage. In this one respect alone, neither pen nor pencil could convey any adequate idea of their dazzling lustre. They are active little birds, and from the structure of their frames, it is apparent that they were intended to pass most of their time upon the wing. Their food consists of small insects, and perhaps the nectareous juices of flowers, which their tongue is beautifully fashioned for obtaining. This organ is very long, and can be darted out of the bill to a considerable length, by a sudden motion, like that of a spring. Their feet are small, generally dark-colored. Their wings are very long and narrow, and they are, by means of the rapid motion given to them, able to balance themselves in the air, hovering round flowering shrubs and plants, probing their tubular nectaries, and at the same time emitting a pretty loud humming noise, caused by the concussion of their wings with the air; whence their English

Fig. 2531.
HUMMING-BIRD'S NEST.

name "humming-birds." The *T.* are very pugnacious little creatures, and defend their nests with the greatest courage against all intruders, even man himself. They are natives of America, and are found from one extent of the continent to the other, though in greatest number in the tropical parts, in the deltas, and along the banks of the great rivers both of the North and South. *Mellisuga humilis*, a species peculiar to the West Indies, has a very sweet note, and is perhaps the only species of the family that has a real song. The male bird of this variety is about $2\frac{1}{2}$ inches in length, and is exactly like an humble-bee when darting about in the air. The nests of the humming-birds (Fig. 2531) are wonderfully made, with cotton, wool, and twigs, beautifully interwoven with feathers, and lined with down; and almost all the species lay two eggs, which in some cases are extraordinarily small. The smallest species of all is the *Mellisuga minima*, which is only about one inch and a quarter in length, and which weighs but twenty grains.

Trochilus, *n.* (Zool.) The typical genus of the fam. TROCHILIDÆ, *q. v.*

(Arch.) Same as SCOTIA, *q. v.*

Troching, *n.* [From *Fr. trochet*, a cluster.] One of the small branches surmounting a buck's head.

Trochlea, *n.* [Lat., a pulley, from *Gr. trochalia*.] (Anat.) A cartilaginous loop, through which the tendon of the *trochlearis muscle* or oblique muscle of the eye passes on its way to the side of the organ, and so called from its answering the purpose of a pulley.

Trochoid, (trō'kōid.) *n.* [From *Gr. trochos*, a wheel, and *eidōs*, form.] (Geom.) A particular description of curve, generated by the motion of a wheel. See CYCLOID. (Anat.) An articulation in which one bone revolves upon another like a wheel upon its axle.

Trochometer, (-kōm'-) *n.* [Gr. *trochos*, wheel, and *metron*, measure.] A contrivance devised for the computation of a wheel's revolutions; an odometer.

Trod, *imp.* of TREAD, *q. v.*

Trod, Trodden, *pp.* of TREAD, *q. v.*

Trode, *old imp.* of TREAD, *q. v.*

Trogodyte, *n.* [Fr., from *Gr. troglē*, a hole, a cavern, and *dytēs*, one who enters, from *dūō*, to enter.] Among the ancients, one of a tribe of men who had their dwellings in subterranean caves;—certain remains of such caverns exist along the banks of the Nile, and in parts of Nubia, Arabia, and Syria.

Troglodytes, (trōg-lo-dī'tēz.) *n.* (Zool.) A genus of quadrumanous animals, including the Chimpanzee and Gorilla.—Also, a genus of insessorial birds,—the Wrens. See WREN.

Trogonidae, *n. pl.* (Zool.) The Trogon family, comprising scansorial birds with a broad short bill, the tip hooked and dentate, and the base surrounded by long stiff bristles, the wings short and rounded, tail elongated, legs small, tarsus short and hidden in the plumage. They live upon insects, build their nests in hollow trees, and are but little upon the wing. They are found on both continents; but N. America possesses only the Mexican trogon, *Trogon mexicanus*, abt. 11 inches long, color golden-green above; under parts carmine; forehead, chin, and side of the head black.

Troitzk, a fortified town of Asiatic Russia, govt. of Orenburg; Lat. $54^{\circ} 15' N.$, Lon. $55^{\circ} 30' E.$; pop. 6,000.

Troitzkoi-Monastere, (troits'ko-mōn-as-tēēr-ai.) a fortified town of Russia, 40 m. from Moscow; pop. 8,000.

Troja, (trō'ya,) a town of S. Italy, 15 m. from Foggia; pop. 6,000.

Troja, an island of the Mediterranean Sea, lying off the coast of Tuscany, and rising in the form of a cone; area, abt. 2 sq. m.

Trojan, *a.* (Geog.) Pertaining or having reference to ancient Troy, or its inhabitants; as, the Trojan war.

—*n.* (Geog.) A native or inhabitant of ancient Troy.

Troll, *v. a.* [Ger. *trollen*.] To roll; to move or turn in a circular direction; to drive about; to move volubly; as, to troll the tongue.—To circulate; to pass round about, as a measure or vessel of liquor; as, to troll the bowl.—To allure, in allusion to the practice of fishing with a baited trolling-line;—hence, to fish in, as water.—To sing the parts of in succession, as of a round, glee, and the like; as, "Will you troll the catch?"—*Shaks.*

—*v. n.* To roll; to go, move, or run round; as, "To troll it in a coach and six." (Swift).—To fish, as for pike, with a rod whose line runs on a wheel or pulley.

—*n.* A kind of reel over which a line (called a trolling-line) of great length is rolled, used in fishing for pike.—A catch; a round; a glee; any song, the parts of which are taken up in succession.

(Scand. Myth.) One of a race of beings engaged in a perpetual struggle with man, superior to man in strength and stature, but far beneath him in mind. Always outwitted, the *T.* embody the idea of unintellectual brute force, or mere awkward strength. This stupidity in the *T.* has by some been accounted for on the ground that they represent the old aboriginal races who retired into the mountainous fastnesses of the laud, and whose strength was exaggerated because the intercourse between the races was small. (Dasent, *Popular Tales from the Norse*, lviii.)

Troll'er, *n.* One who trolls.

Trolley, *n.* In England, a truck for carrying railway materials.

Trollius, *n.* (Bot.) A genus of plants, order Ranunculaceæ, represented in America by only one species, the American Globe-flower, *T. latus*, rare in swamps from Canada to Penn'a. It is about 1 foot high; leaves deeply cleft into 5 segments; sepals yellow; petals very small, orange-colored.

Troll'op, *n.* [From *trull*.] A stroller; a loiterer; a vagrant;—hence, a slut; a slattern; an unkempt, slipshod, untidy woman.

Trollope, FRANCES, an English novelist and miscellaneous writer, b. 1780. In 1829 she went to the United States, and on her return home, three years afterwards, published the result of her experiences in her first book, *Domestic Life of the Americans* (1832). This work, owing to the severity of its strictures, was much animadverted upon at the time in this country. Mrs. *T.*'s subsequent literary career was one of incessant activity, and, perhaps, the most successful of her many performances are *The Widow Barnaby* and the *Vicar of Wrexhill*. D. at Florence, 1863. Her eldest son, THOMAS ADOLPHUS, lived for many years in Italy, and became favorably known by his romances of Italian life such as *Marietta*; *Giulio Malatesta*; *La Beata*, &c. He is also the author of a *History of Florence*; *The Girlhood of Catherine de Medici*, and *A Decade of Italian Women*. His brother, ANTHONY, is well known as one of the most noted novelists of his day. His pictures of Irish life, and graphic delineations of the clerical element of English society, are well appreciated. *The Warden*; *Doctor Thorne*; *Barchester Towers*; *The Last Chronicle of Barset*; *Phineas Finn*; *Can You Forgive Her*; *Orley Farm*; *Framley Parsonage*; *The Prime Minister*; *The Way We Live Now*; *The Small House at Arlington*; *The Vicar of Bullhampton*; *The American Senator*; and *Life of Thackeray*, are among his many works. Born 1815; died December 6, 1882.

Trombidium, *n.* (Zool.) A genus of insects, family Acaridæ, including the little, square, velvet-red mite seen in spring in flower-beds; and the Harvest-bug, which derives its name from its attacking the laborers employed in the harvest. The wound it inflicts—how produced is not well understood—occasions insupportable irritation, which usually leads the victims to scratch themselves, and thus to increase the inflammation. The skin becomes swollen and red, and sometimes even purple; and the minute vesicles caused by these insects sometimes terminate in suppuration.

Trombone, *n.* [It., augmentative of *tromba*, a trumpet.] (*Mus.*) A brass musical wind-instrument, somewhat similar in form to the trumpet, but larger, and made with three sliding tubes, by means of which the intonation can be regulated, and the complete scale played. There are three sizes of *T.*, playing alto, tenor, and bass respectively.

Tromp, *n.* [Fr. *trombe*.] (*Metall.*) A blowing-machine used in furnaces.

Tromp, MARTEN HARPETZHOON VAN, a Dutch admiral, b. at Briel, 1597. He began to serve under his father in the navy at ten years of age, gradually rose to distinction, and in 1637 attained the rank of lieutenant-admiral; in which capacity he served against the Spaniards, and captured many of their ships. In Oct., 1639, he won a great victory over the Spanish fleet and captured thirteen galleons. He was engaged in the naval campaigns of 1640 and 1641; but his courage and abilities were most strikingly displayed in the war with England in 1652-53. He had Robert Blake for his adversary, and was defeated off Dover in March, 1652. In Nov. following, he, in his turn, defeated Blake, and sailed up the English Channel with a broom at his mast-head. Another engagement took place in the Channel, in Feb., 1653, when the Dutch lost many of their ships, but *T.* succeeded in saving the 300 merchant-ships he was conveying. After commanding in several other battles against the English, this great seaman fell in the engagement with Monk, 23d July, 1653.—His son, CORNELIUS VAN TROMP, b. 1629, rose also to eminence as a naval commander, and, on De Ruyter's death, was appointed lieutenant-admiral-general of the United Provinces. D. 1691.

Tromp'il, *n.* [O. Fr. *trompille*.] An opening in a tromp.

Tromma, *n.* (*Min.*) Native sesquicarbonate of soda; composed, when pure, of 37.8 soda, 40.2 carbonic acid, and 22 water = 100.

Troond, (St.) (*trawn*(g), a town of Belgian Limburg, 20 m. from Maestricht. *Manuf.* Tobacco, lace, &c. *Pop.* 10,474.

Troop, *n.* [Fr. *troupe*; It. *truppa*.] A crowd; a throng; a collection of people; a multitude; a company; as, while a man is rich he has troops of friends.—A body of soldiers; an army;—applied to infantry, it is now used in the plural; as, a fine body of troops.—Specifically, a company or small body of cavalry, light-horse, or dragoons, commanded by a captain; as, a troop of lancers.—A company of stage-players; a theatrical company; a troupe; as, a troop of strollers.—A particular kind of drum-beat.

—*v. n.* To collect or gather in numbers or multitudes; to move forward in crowds; as, volunteers, by thousands, trooped to the standard.—To march in line or in company; as, "I do not . . . troop to the throngs of military men."—*Shaks.*

Troop'-bird, **Troop'ial**, *n.* (Zool.) A name popularly applied to several species of birds belonging to several genera of the family Icteridæ, in some respects resembling the starlings of the Old World, and in others coming near the finches, from which they differ by having the bill larger, straight, the base without bristles, and the tip without a notch. The name is derived from their habit of associating in large troops. They are generally called Orioles in N. America, and a well-known species has been described under BALTIMORE BIRD, *q. v.*

Troop'er, *n.* (*Mil.*) A private in a regiment or body of cavalry; a horse-soldier.

Troost'site, *n.* (*Min.*) A variety of Willemite, containing 2 per cent. of carbonate of protoxide of manganese, and named after Dr. Troost, of Nashville College, Tenn. It is a ferruginous silicate of manganese, and is found at Stirling, in New Jersey.

Tropæolacæ, *n. pl.* (Bot.) A small order of plants, alliance Malvales.—*DIAG.* Free stamens; no disc; seeds

without albumen; and an amygdaloid embryo.—They are smooth trailing or twining herbs, chiefly natives of S. America, and generally acrid, pungent, and antiscorbutic. There are 4 genera and about 40 species.

Tropæolum, *n.* (Bot.) The typical genus of the order Tropæolacæ. *T. majus* is the showy Indian Cress or Garden Nasturtium, a well-known plant, with bright-yellow flowers and smooth peltate leaves. Its unripe fruit is frequently pickled and employed by housekeepers as a substitute for capers. Several beautiful species and varieties are now cultivated in borders.

Trope, *n.* [Fr.; Lat. *tropus*; Gr. *tropos*.] (*Rhet.*) A word turned or changed from its original signification to another; a change in the signification of a word, from a primary to a derivative sense; a word or expression used in a different sense from that which it properly signifies. See ALLEGORY, IRONY, METONYMY, SYNECDOCHE.

Tropez, (St.) (*trō'pai*), a seaport-town of France, dept. Var, 36 m. from Toulon; pop. 4,083.

Trophæ, (trō'fē) *n. pl.* [From *Gr. trophos*, a feeder.] (Zool.) In entomology, the parts of the mouth employed in manducation or deglutition.

Trophied, (trō'fid,) *a.* [From *trophy*.] Adorned with trophies.

Trophimus, a disciple of St. Paul, a Gentile, and an Ephesian by birth, who came to Corinth with the apostle, and accompanied him in his whole journey to Jerusalem, A. D. 58, (*Acts* xx. 4.)

Trophœnius. See AGAMEDES.

Trophy, (trō'fē) *n.* [Fr. *trophée*; Lat. *tropæum* = Gr. *tropæion*, a memorial of victory.] Among the ancients, a memorial erected on the site of a victory. It originally consisted of the arms or spoils of the vanquished, set up in some public place, or carried in triumphal procession;—hence, anything held and preserved as a memorial of victory, as arms, flags, eagles, and the like, taken from an enemy.

(Arch.) An architectural ornament, representing the trunk of a tree charged or encompassed with arms or military weapons, offensive and defensive;—hence, something which is a memorial of conquest or token of victory; as, "the trophy of my love's conquest." *Spenser*.

Trophy-mon'ey, *n.* In England, a duty formerly paid as an annual impost, by householders, for equipping the militia with the furniture of war.

Tropic, *n.* [Fr. *tropique*; Lat. *tropicus*, from *Gr. tropikos*, a turning back.] (*Astron.*) One of the two tropical circles, or parallels of declination, whose distances from the equator are each equal to $23\frac{1}{2}^{\circ}$ nearly. The N. one is called the *tropic of Cancer*, and the S. the *tropic of Capricorn*; and they are called *T.* because when the sun, in his journey N. or S., reaches either of them, he, as it were, turns back, and travels in an opposite direction in regard to N. and S.

(Geog.) One of two parallels of latitude, each at the same distance from the terrestrial equator as the celestial tropics are from the celestial equator; and they include that portion of the globe which is called the *torrid zone*.—*pl.* The countries lying between the tropics, or near them on either side.

Tropic, **Tropical**, *a.* Being within or between the tropics; pertaining or having reference to the tropics; as, *tropical heat*, *tropical winds*, *tropical latitudes*.—Incidental to the tropics; as, *tropical vegetation*, *tropical diseases*.

—[From *trope*.] Figurative; metaphorical; rhetorically diverted from its proper or original sense; as, a *tropical expression*.

Tropical year, the time between the sun's leaving a tropic and returning to it. Popularly, it denotes the time from the longest day in one year till the longest in the next.

Tropically, *adv.* In a tropical or figurative manner; by way of metaphor.

Tropic-bird, *n.* (Zool.) See PHÆTON.

Tropist, *n.* [From *trope*.] One who deals in tropes;—specifically, one who explains the Holy Scriptures by tropes and figurative expressions.

Tropologie, (-lōj'ik.) **Tropolog'ical**, *a.* Characterized or varied by tropes or metaphors.

Tropolog'ically, *adv.* In a tropological manner.

Tropologize, (-pōl'o-jīz.) *v. a.* To treat in a tropological manner, as a word; to change to a tropical or figurative sense.

Tropology, (-pōl'o-jē) *n.* [Gr. *tropos*, trope, and *logos*, discourse.] (*Rhet.*) A mode of speech characterized by the use of tropes, or involving change from the original import of the word.

Troppau, (trōp'pau,) a fortified town of Austrian Silesia, at the confluence of the Oppa and Mohe, 35 m. from Olmütz. Here the diplomatic congress, afterwards removed to Laybach, was held from the 20th of Oct. to the 20th of Nov., 1820.

Trot, *v. n.* [Ger. *trotten*, frequent. of *tretten*, to tread; Fr. *trotter*.] To move faster than in walking, and at less speed than in cantering or galloping, as a horse or other quadruped, by lifting one fore-foot and the hind-foot of the opposite side at the same time.—To move with speed or celerity; to run; as, it is time to trot towards home.

—*v. a.* To cause to run swiftly, but at a less speed than a canter or gallop, as a horse or other quadruped; as, I will trot my mare against yours for a stake.

To trot out, to lead or bring out, as a horse, to exhibit his action and running qualities; hence, by analogy, to produce, as for inspection. (*Colloq.*)

—*n.* That quick pace of a horse or other quadruped, other than a walk, a canter, or a gallop, when he lifts one fore foot and an off hind foot at the same time; as, to travel at a brisk trot.—In a ludicrous sense, a quick sort of

pace with a hobbling motion; as, to keep one on the trot.—A contemptuous term for an elderly woman; as, "Marry him to an old trot."—*Shaks.*

Troth, *n.* [A. S. *treowth*, what shows truth.] Faith; belief; fidelity; trust; as, to plight one's troth to a woman.—Veracity; truth; word; verity; as, "by my troth, thou'rt a good fellow."

Troth-plighted, *a.* Having one's plight or fidelity given or received.

Trotter, *n.* A beast which trots; specifically, a horse distinguished for his speed in trotting.—A sheep's foot;—sometimes applied, humorously, to the human foot.

Trotting, *n.* Act of running with a trot, said of a horse or other quadruped.—(*Sports.*) Performance or action of a horse, kept exclusively to trot in matches with others.

Troubadour, (*trōō'ba-dōōr*), *n.* See FRENCH LANGUAGE AND LITERATURE.

Trouble, (*trūb'l*), *v. a.* [Fr. *troubler*, from Lat. *turbula*—*turba*, an uproar, a mob.] To agitate; to disturb; to put into confusion; to disorder; as, "A woman moved is like a fountain troubled." (*Shaks.*)—To vex; to tease; to molest; to afflict; to grieve; to distress; to disturb; to perplex; to annoy; to fret; to worry; as, to be troubled in mind.—To busy; to cause to be much engaged or anxious; to give occasion for labor to; to be productive of inconvenience to;—used as a polite figure of speech; as, I am sorry to trouble you.—To sue for a debt;—colloquial and vulgar.

n. State of being troubled, disturbed, or agitated; vexation; commotion or confusion of mind; perturbation of spirits; perplexity; annoyance; affliction; calamity; molestation; inconvenience; as, domestic troubles are the bitterest troubles of any.—That which afflicts; that which causes disturbance, annoyance, or vexation.

pl. (Mining.) Faults or interruptions in the stratum.

Troubler, (*trūb'ler*), *n.* One who, or that which, troubles, molests, annoys, or disturbs.

Troublesome, (*trūb'l-sūm*), *a.* Causing trouble, agitation, vexation, disturbance, or inconvenience; burdensome; annoying; tiresome; wearisome; annoying; teasing; importunate; giving fret or worry to; as, a troublesome creditor.

Troublesomely, *adv.* In a troublesome manner.

Troublesomeness, *n.* Quality of being troublesome.

Troubling, (*trūb'ling*), *n.* Act of disturbing or putting in commotion; act of afflicting, annoying, or incommoding.

Troublous, (*trūb'lās*), *a.* Full of disturbance, agitation, or commotion; tumultuous; disorderly; as, a people's troublous cries. (*Spenser.*)—Full of affliction or trouble; agitated; full of perturbation or calamity; as, they lived in troublous times.

Trough, (*trauf*), *n.* [A. S. and Icel. *trog*.] Something hollow or hollowed out;—specifically, a vessel of wood, stone, or metal, in the form of a rectangular prism, open at the top, for holding water, &c.; as, a trough for horses to drink from;—also, the channel that conveys water, as in mills.—Hence, a channel or depression, long and narrow; as, the trough between two furrows.

Trough of the sea, the depression of surface between two high waves or combers; as, the ship labored in the trough of the sea.

Trounce, *v. a.* (*imp.* and *pp.* TROUNCED, (*trounst.*) To flagellate; to castigate; to punish, whip, or beat soundly; as, to trounce a school-boy.

Troup (*troop*), in *Georgia*, a W. co., bordering on Alabama; area, 493 sq. m. It is drained by the Chattahoochee river. Surface, diversified; soil, generally fertile. Cap. La Grange. Pop. (1897) 22,120.

Troupe (*trōōp*), *n.* [Fr., *troupe*.] A company, troop, or set of public performers, either in music or the drama; as, an operatic troupe.

Troupsburg, in *New York*, a post-town of Steuben co., 30 m. S.S.W. of Bath. Pop. (1897) 2,210.

Trousers, **Trow'sers**, *n. pl.* [From Fr. *trousse*, a truss, a bundle; *trouser*, to tuck, gird, or fasten up.] A loose garment, fastened up with braces or suspenders, extending from the waist to the knee, or to the ankle, and covering the lower limbs; pantaloons. (NOTE. This word is rarely used in the U. States, that of *pantaloons* (*pants*) being almost universal; while the latter, on the other hand, is esteemed vulgar in England.)

Trousseau, (*trōō'sō*), *n.* [Fr., from *trousse*, a bundle, a truss.] The outfit of a bride, including clothing, laces, jewelry, &c.

Trout, *a.* [A. S. *truht*; Fr. *truite*; Lat. *trutta* = Gr. *troktēs*, a gnawer.] (*Zoöl.*) See SALMO.

Trout-colored, **Trout-coloured**, (*-kūl'erd*), *a.* White; spotted with bay, black, or sorrel.

Trout Creek, in *Pennsylvania*, enters a branch of Sinnemahoning Creek, in Elk co.

Troutlet, **Troutling**, *n.* A small trout. (Colloq.)

Trout Run, in *Pennsylvania*, a post-village of Lycoming co., 15 m. N. of Williamsport.

Trouvère, (*trōō'vair*), *n.* [Fr., from *trouver*, to find.] Another form of the word *troubadour*, employed as a name to distinguish the vernacular poets of northern France from the Provencal troubadours. See FRENCH LANGUAGE AND LITERATURE.

Trover, *n.* [From Fr. *trouver*, It. *trovare*, to find.] (*Law.*) A species of action on the case (ACTION, *q. v.*) which is employed to try a disputed question of property in goods and chattels. The declaration in trover contained, previous to 1852, a formal allegation that the plaintiff lost, and the defendant found, the goods in question; but this legal fiction is now abolished, and the action is brought on a simple allegation that the defendant converted to his own use, or wrongfully deprived the plaintiff of the use and possession of, the plaintiff's goods. In this action the plaintiff recovers damages equal to the value of the thing converted, but

not the thing itself, which requires another form of action; detinue or replevin.

Trowbridge, (*trōū'brīj*), a town of England, in Wiltshire, near the river Wene, 10 m. from Bath. Manuf. Superfine broadcloth and kerseymeres. Pop. 13,000.

Trowbridge, in *Michigan*, a post-township of Allegan co., abt. 4 m. S. of Allegau; pop. abt. 1,300.

Trowel, *n.* [Fr. *truelle*; Lat. *trulla*, a dipper, dim. of *traa*, a ladle.] A flat metal tool used by masons, plasterers, and bricklayers, for lifting, spreading, and dressing mortar and plaster, and for cutting bricks so as to reduce them to the required shape and dimensions.—Also, a gardener's implement, having somewhat the shape of a mason's trowel, used in taking up plants, and for other purposes.

Trowelled, *a.* Prepared or mixed with a trowel.

Trow'sers, *n. pl.* Same as TROUSERS, *q. v.*

Troy, *TRŌJA*, (*trōj'a*, and *trōj*) The name of a district in the N.W. part of Mysia, in Asia Minor, and of a city situated in it. The latter was also called *Ilion*, and the former *Troas*, now the *Troad*. According to the account of Homer, the city was situated on ground rising above the plain formed by the rivers Scamander and Simois. On the S.E. was a hill, which was a spur of Mount Ida, and on which were the acropolis of the Trojans called *Pergamum*, the palaces of the king, and the temples of the gods. No such city as Troy, and no such people as the Trojans, were known in historic times. There have been various opinions respecting the site of the ancient city, and many efforts made to reconcile the present topography with the geographical statements made in the Homeric poems, but thus far with but little success. Attempts have also been made by chronologists to assign a date to the war of Troy, on a retrospective calculation from the opinion of Herodotus that Homer lived some four centuries before his own time, and that the Trojan war was, in the supposed age of Homer, a comparatively recent event. It must, however, be first proved that there was a single author named Homer, for the *Iliad*, or *Odyssey*, or for both (see EPIC; HOMERIC POEMS), and that there really was a historical Trojan war. On both of these points no evidence, apparently, is forthcoming. Of the author or authors of the *Iliad* we know nothing; and the tale which the Homeric poets have left to us of the struggle to avenge the wrongs and woes of Helen is essentially a story in which the main chain of causation is superhuman, in which the gods mingle visibly with men, and the heroes themselves are the sons or husbands of immortal beings. From this narrative, full of an astounding thaumaturgy, Thucydides, by rejecting all the incidents as utterly improbable, and substituting political motives adequate to explain the movements of the contending forces, has extracted or rather fabricated a story thoroughly probable in itself, but for which we have less historical evidence than for the story of Robinson Crusoe. We are not, perhaps, justified in maintaining the negative position, that no war actually took place in the Troad; but we have as little warrant for asserting that there was.

Troy, in *Alabama*, a post-village, cap. of Pike co., 50 m. S.E. of Montgomery.

Troy, in *Illinois*, a township of Will co.

—A post-village of Madison co., 22 m. S.E. of Alton.

Troy, in *Indiana*, a township of De Kalb county.—A township of Fountain county.—A post-village and township of Perry county, on the Ohio, 63 miles E. of Evansville.

Troy, in *Iowa*, a township of Clarke county.—A post-village of Davis county, 90 miles south-south-west of Iowa City.—A township of Iowa county.—A township of Monroe county.—A township of Wright county.

Troy, in *Kansas*, a post-village, cap. of Doniphan co., abt. 16 m. N. of Atchison.

Troy, in *Maine*, a post-township of Waldo co., 38 m. N.E. of Augusta.

Troy, in *Michigan*, a post-village and township of Oakland co., abt. 21 m. N. of Detroit.

Troy, in *Missouri*, a post-village, cap. of Lincoln co., 60 m. W.S.W. of St. Louis.

Troy, in *N. Carolina*, a post-village, cap. of Montgomery co., 80 m. W.S.W. of Raleigh.

Troy, in *New Hampshire*, a post-village and township of Cheshire co., 45 m. S.W. of Concord.

Troy, in *New Jersey*, a village of Morris co., 8 m. N.E. of Morristown.

Troy, in *New York*, a city, cap. of Rensselaer co., on the Hudson, at the head of steamboat navigation and tidal-water, 6 m. N. of Albany, and 151 m. N. of New York; Lat. 42° 44' N., Lon. 73° 40' W. It is regularly laid out, and handsomely built, partly on a level plain, and partly on an eminence which commands an extensive view. At T. is the principal outlet of the canals connecting the Hudson with Lakes Champlain, Ontario, and Erie; and it has railway connections with New York, Boston, and the north and west. The Union Depot, in the centre of the city, is one of the largest in the country, 60 trains arriving and departing daily. The iron furnaces and factories are among the largest E. of the Alleghenies, being furnished with the magnetic ores of Lake Champlain, and the hematitic ores of western Massachusetts. The coal is brought from Pennsylvania. The chief iron-works are those for bar-iron, railway-spikes, nails, locomotives, stoves, hot-air furnaces, hollow ware, machinery, agricultural implements, &c. Other important manufactures are those of railway cars, coaches, omnibuses, cotton and woollen goods, breweries, distilleries, flour, boots and shoes, shirts and collars—the latter employing 4,500 persons, with extensive machinery. There is also the largest manufactory of mathematical

instruments in the country. T. contains numerous churches and public schools, the celebrated female seminary founded by Mrs. Emma Willard, the Rensselaer Polytechnic Institution, (one of the finest of its kind in the country,) asylums, academies, &c.—*West Troy* stands on the opposite side of the Hudson, and has an extensive U. S. arsenal. Pop. of Troy (1880) 56,748; (1897) 62,500; of West Troy (1880), 8,820; (1897) 16,450.

Troy, in *Ohio*, a township of Ashland county.—A township of Athens county.—A township of Delaware county.—A township of Geauga county.—A post-village, capital of Miami county, 68 miles west of Columbus.—A township of Morrow county.—A township of Richland county.—A township of Wood county.

Troy, in *Pennsylvania*, a village of Allegheny co., 1 m. N. of Pittsburgh.—A postborough and township of Bradford co., 18 m. W. of Towanda.—A township of Crawford co.—A village of Jefferson co., 5 m. S. of Brookville.

Troy, in *Tennessee*, a post-village, former cap. of Obion co., 150 m. W. of Nashville.

Troy, in *Vermont*, a post-township of Orleans co., 50 m. N.E. of Montpelier.

Troy, in *Wisconsin*, a township of Sauk co.; pop. abt. 1,200.—A township of St. Croix co., 3 m. S. of Hudson; pop. abt. 700.—A post-village and township of Walworth co., 34 m. S.W. of Milwaukee.

Troy, **Troy-weight**, *n.* [Etymol. uncertain.] An English weight chiefly used in weighing gold, silver, diamonds, and other articles of jewelry. The pound troy contains 12 ounces or 5,760 grains—the pound avoirdupois containing 7,000 of such grains.

Troy Centre, in *Maine*, a post-village of Waldo co., 37 m. N.E. of Augusta.

Troy Centre, in *Wisconsin*, a post-village of Walworth co., 32 m. S.W. of Milwaukee.

Troyes, (*trōw*), a city of France, cap. of the dept. of the Aube, situate between two fine meadows on the Seine, 88 m. E.S.E. of Paris. Its chief edifices are its churches; in particular the cathedral, and the churches of St. Nicholas and St. Urbain. Manuf. Hosiery, cotton and woollen stuffs, and yarn. T. was the cap. of the old province of Champagne, and, in 1814, was the scene of hard contests between the Russians and the French. Pop. 36,276.

Troy Grove, in *Illinois*, a post-village and township of La Salle co., abt. 11 m. N. of La Salle.

Troy Lake, in *Wisconsin*, a village of Walworth co., 54 m. S.E. of Madison.

Troa'go, in *Michigan*, a village of Wayne co., 15 m. S.S.W. of Detroit.

Truant, *a.* [Fr. *truand*; L. Lat. *trutanus*, a vagabond.] Loitering; loafing; wandering from business; skirking duty; as, a truant disposition.

n. An idler; a loiterer; a loafer; especially, a boy who stays away from school without just reason; as, to play truant.

v. a. To idle away time; to loiter or wander away from business.

Truce, *n.* [A. S. *trywsian*, to give one's word; L. Lat. *truce*, *treuga*; Fr. *trêve*.] (*Mil.*) A covenant to preserve peace for a time, resting upon the mutual good faith of the commanders; a suspension of arms by agreement of the commanders on either side; a temporary cessation of hostilities, either for negotiation or other purpose; an armistice. See ARMISTICE.—Hence, temporary cessation or intermission of action, pain, or conflict; short quiet.

Flag of truce. (*Mil.*) See FLAG.—*Truce of God.* [Lat. *treaga Dei*.] (*Hist.*) A suspension of arms, which occasionally took place in the Middle Ages, putting a stop to private hostilities. The right to engage in these hostilities was jealously maintained by the inferior feudatories of the several monarchies of Europe. But it was restrained by the repeated promulgation of these truces, under the authority of the Church.

Truce-breaker, (*-brāk-*), *n.* [Truce and breaker.] The violator of a truce, covenant, or engagement.

Truck, *v. n.* [Fr. *troquer*; Sp. *trocar*; Fr. *troc*.] To traffic by exchange of commodities; to barter.

v. a. To give in exchange; to exchange; to barter; as, to truck looking-glasses for elephants' tusks.

n. Exchange of commodities; permutation; barter.—Small commodities suited to traffic by barter. (Colloq.)

Truck, *n.* A small wheel, as of a vehicle; a cylinder.—A two-wheeled vehicle for conveying merchandise or any heavy weight.

(*Mach.*) On railroads, a sort of platform (sometimes covered over), used for the conveyance of coaches, carriages, &c.

pl. (Mil.) In artillery service, small, thick, round wheels of wood or iron.—Also, round blocks of wood, hollowed out at the centre, in which the feet of a gun are placed when the ground is bad.

(*Naut.*) The small, circular wooden cap at the end of a mast, or of a flag-staff, containing one or more pulleys for the halyards to pass over.

Truckage, (*-aj*), *n.* Practice or custom of bartering goods; exchange of commodities.—Charge for carrying on a truck; freight.

Trucker, *n.* One who traffics by exchange of wares or commodities.

Truckle, (*trūk'l*), *n.* [dim. of truck.] A small wheel or castor.

v. a. To trundle; to roll or move upon truckles or castors.
v. n. To yield to another's terms in trucking or bartering; hence, to yield or bend obsequiously or complaisantly to the will of another; to creep; to submit.

Truckle-bed, *n.* A trundle-bed; a bed that runs on wheels, and may be pushed under another.

Truck'ler, *n.* One who truckles, or yields obsequiously to the will of another; a sycophant; a time-server.

Truck'man, *n.*; *pl.* TRUCKMEN. One who traffics by way of barter or exchange. — A truck-driver; one who carries goods on a truck.

Truck-system, *n.* An arrangement by which an employer pays his workmen in kind or in goods, instead of in money.

Truculence, Truculency, *n.* [Lat. *truculentia*.] Quality of being truculent; savageness or ferocity of manners or disposition.

Truculent, *a.* [Lat. *truculentus*.] Fierce; wild; savage; barbarous; as, a *truculent* Indian. — Of ferocious or terrible aspect or countenance. — Cruel; destructive; unsparing; as, a *truculent* pestilence.

Trudge, (*truj*), *v. n.* [Akin to *tread*, *q. v.*] To go on foot; to tramp; as, "I *trudged* to Rome upon my naked feet." (*Dryden*). — To travel or march heavily, or with labor; to move or jog along with wearisomeness; to march heavily on; as, he *trudged* it throughout the day.

True, *a.* (*comp.* TRUER; *superl.* TRUEST.) [A. S. *treowe*; Dan. *trouwe*.] Worthy of belief or confidence; conformable to fact; being in accordance with the actual state of things; veritable; not false, erroneous, or imaginary; — opposed to *false*; as, a *true* story, a *true* account. — Genuine; pure; real; actual; not pretended; not counterfeit, adulterated, or false; as, a *true* Christian. — Exact; in conformity to a rule, pattern, or example; right or just to precision; as, a *true* copy of the original. — Faithful; loyal; steady in adherence to friends, to promises, to one's sovereign or state, or the like; constant; not false, fickle, faithless, or perfidious; as, a man *true* to his country, an officer *true* to his charge, a wife *true* to her husband.

True bill, (*Law*). The formula by which the grand jury finds or approves a bill of indictment.

True-blue, *a.* Of tried and sterling honesty and fidelity; — a term derived from the *true* or *Coventry blue*, formerly famous for its constancy of color.

— *n.* A person of unswerving loyalty.

True-born, *a.* Of genuine birth; possessing native rights; as, a *true-born* American.

True-bred, *a.* Of a true, right, or genuine breed, or strain of blood; as, a *true-bred* game-cock. — Manifesting genuine breeding and education; as, a *true-bred* patrician.

True-hearted, *a.* Being of a loyal, faithful, and constant heart; honest; sincere; not false, perfidious, or deceitful; as, a *true-hearted* man.

True-love, (*-liv*), *n.* One truly loved or loving.

(*Bot.*) A popular name of *Paris quadrifolia*, which was once considered a powerful love-philiter.

True-love-knot, True-lover's-knot, (*-lūv'-nōt*), *n.* A knot consisting of lines drawn through and through one another, and united with many involutions; — considered as an emblem of interwoven affection.

True'ness, *n.* Quality of being true; faithfulness; constancy; sincerity; reality; genuineness; exactness.

Truffle, (*truf'l*), *n.* [Fr. *truffe*; It. *tartufo*, from Lat. *terra*, the earth, and *tuber*, a truffle.] The common name of *Tuber*, a genus of Fungi, order *Ascomycetes*. The species are subterranean, and dogs are trained to discover them by their smell. They are highly esteemed as seasoning or flavoring agents. The best are imported from France and Italy, preserved in oil. *Tuber aestivum*, *cibarium*, and *melanospermum*, are the species commonly used.

Truffled, *a.* Furnished, cooked, or stuffed with truffles; as, a *truffled* turkey.

Tru'ism, (*-izm*), *n.* [From *true*.] A palpable or self-evident truth.

Trujillo, or TAUXILLO, (*troo'-heel'yo*), in Peru, a town, cap. of the dept. of Libertad; Lat. 8° 7' 3" S., Lon. 79° 9' W. Pop. 10,000. — In Venezuela, a city of the dept. of Zulia, 90 m. S.W. of Barquisimeto; pop. abt. 4,500. — In Central America, a seaport-town of Honduras, on the Caribbean Sea; Lat. 15° 55' N., Lon. 85° 59' W. Pop. abt. 5,000.

Trull, *n.* [Ger. *trulle*.] A low vagrant strumpet.

Trullization, (*-zū'shun*), *n.* [From Lat. *trulla*, a trowel.] The laying of coats of mortar or plaster with a trowel.

Truly, *adv.* In a true manner; consonant with truth or actuality; in agreement or accordance with fact; not falsely or erroneously; as, I state the case *truly* to you. — Sincerely; faithfully; honestly; really; veritably; as, a *truly* attached couple, a *truly* loyal citizen. — Exactly; justly; precisely; as, to judge *truly* of one's own sentiments. — In fact; in deed; in reality; without fraud, fallacy, or deception; as, a *truly* pious mind.

Trumansburg, in New York, a post-village of Tompkins co., 11 m. N.W. of Ithaca.

Trumbull, JOHN, an American painter, son of Governor Jonathan Trumbull (said to have been the original "Brother Jonathan"), and brother of General Jonathan Trumbull, aid-de-camp to General Washington, B. in Lebanon, Connecticut, 1756, was educated at Harvard College, and devoted himself to painting. When the war of independence broke out, he joined the provincial army before Boston, and soon became colonel and aid-de-camp to Washington; but being offended with the action of Congress, respecting the date of his commission, he resigned, and resumed the palette. In 1780 he repaired to England for the purpose of studying painting under his countryman West. Suspected by the English government, he was arrested, but was liberated on condition of immediately quitting England. He subsequently lived, on two occasions, in London and Paris, and became, after his final return to his native country, president of the American Academy of Fine Arts. In 1817 he was employed by Congress to paint four large

national pictures for the Rotunda of the Capitol at Washington—the *Declaration of Independence*; *Surrender of Burgoyne*; the *Surrender of Cornwallis*; and the *Resignation of General Washington*, at Annapolis. These pictures, for which he received \$32,000, are chiefly valuable as collections of portraits. He afterwards completed a gallery of all his historical pictures, 57 in number, on a smaller scale, which became the property of Yale College, and has great historical value. D. in New York, 1843.

Trumbull, in Connecticut, a post-township of Fairfield co., 25 m. S.W. of New Haven.

Trumbull, in Ohio, a N.E. co., bordering on Pennsylvania; area, 625 sq. m. Rivers. Grand and Mahoning rivers. Surface, undulating; soil, fertile. Min. Iron and stone-coal. Cap. Warren. — A post-township of Ashtabula co.

Trumbull Long Hill, in Connecticut, a post-village of Fairfield co., 18 m. S.W. of New Haven.

Trump, *n.* [It. *tromba*.] (*Mus.*) A wind-instrument; a trumpet; — a word chiefly used scripturally and poetically; as, "When the archangel's *trump* shall blow." — [Contracted from *triumph*, *q. v.*] A winning card; one of the suits of cards which takes any of the other suits; as, spades are *trumps*. — A colloquialism for a genuine good fellow; an excellent person.

To put on, or upon, or to the trumps, to put to the last resort, shift, or expedient.

— *v. n.* In card-playing, to play a trump card when another suit has been led.

— *v. a.* To take with a trump card; to put a trump card upon in order to win; as, he *trumped* the last trick.

[From Fr. *tromper*.] To deviso; to fabricate; to forge; — preceding up; as, a *trumped* up story or allegation.

Trump'ery, *n.* [Fr. *trumperie*.] False show; worthless finery; tinsel; empty talk; trifles; useless matter; things worn out and cast aside.

— *a.* Trifling; worthless; gewgaw; as, a *trumpery* ring, a *trumpery* excuse.

Trumpet, *n.* [Fr. *trompette*; It. *tromba*, *trombetta*; Gael. *trombaid*.] (*Mus.*) An instrument of brass or other metal, which has been common in most nations under different forms from the remotest ages. The term, as at present used, is somewhat vague, it being employed not only to designate a special instrument, but in a generic manner as comprehending the whole family of brass instruments. The trumpet *par excellence*, however, consists of a tube eight feet long, expanding at the end at which the sound issues into a bell-like shape, and is doubled into a parabolic form. It is played by means of a mouth-piece nearly an inch in width. Its compass extends from G below the staff to E above.

(*Acoustics*.) An instrument used for the purpose of conveying articulate sounds to a great distance; as, a speaking-trumpet. — Also, an instrument for applying to the ear, in order to collect the sonorous waves of sound and deliver them more distinct. See EAR-TRUMPET.

(*Mil.*) A trumpeter. (*n.*)

— One who praises, or is the agent or instrument of propagating laudation.

To blow or sound one's own trumpet, to speak in self-praise; to boast. (*Colloq.*)

— *v. a.* To publish or proclaim by sound of trumpet. — Also, to sound the praises of; as, to *trumpet* a man's fame.

— *v. n.* To sound sonorously, or with a tone like that of a trumpet.

Trump'et-call, *n.* A call by the sound of the trumpet.

Trump'eter, *n.* One who sounds a trumpet. — One who proclaims, publishes, or denounces; as, "The clergy are spiritual *trumpeters* who sound alarms of damnation." — *South*.

(*Zool.*) See AGAMI.

Trump'et-fish, *n.* (*Zool.*) See CENTRISCUS.

Trump'et-flower, *n.* (*Bot.*) See BIGNONIA.

Trump'et-major, *n.* (*Mil.*) The chief trumpeter of a regimental band.

Trump'et-shaped, (*-shāpt*), *a.* (*Bot.*) Tubular, with one end dilated.

Trump'et-shell, *n.* (*Conch.*) See BUCCINA and WHELK.

Trump'et-tongued, (*-tungd*), *a.* Having a tongue loud or vociferous as a trumpet.

Trump'et-weed, *n.* (*Bot.*) See EUPATORIUM.

Trump'et-wood, *n.* (*Bot.*) Same as SNAKE-WOOD, *q. v.*

Trunc'al, *a.* Pertaining to the trunk or body.

Truncate, (*trunk'āt*), *v. a.* [Lat. *trunco*, *truncatus*.] To cut off; to lop; to maim.

— *a.* (*Bot.*) Noting an abrupt termination as if a piece had been lopped off, as in the leaf of the tulip-tree.

Truncated, *a.* Cut short; lopped off; maimed.

(*Min.*) Replaced by a plane equally inclined to the adjoining faces; as, a *truncated* edge.

(*Geom.*) Noting a pyramid, or cone, the top or vertex of which is cut off by a plane parallel to its base.

Truncation, (*-kū'shun*), *n.* [L. Lat. *truncatio*.] Act of truncating, or state of being truncated.

(*Crystall.*) That change in the geometrical form of a crystal, which is produced by the cutting off of an angle or edge, so as to leave a face more or less large in place of the edge or angle.

Truncheon, (*trun'shun*), *n.* [Fr. *tronçon*, from *tronc* = Lat. *truncus*.] A club; a cudgel; a short staff. — A baton, used by officers as a staff or symbol of command.

— Also, a policeman's club or staff. — A stout stem, as of a tree, with the branches lopped off, so as to produce rapid growth.

Trundle, (*trund'l*), *n.* Any round, rolling body, as a little wheel; a castor. — A small go-cart. — A rolling motion.

(*Mach.*) Same as LANTERN-PINION, *q. v.*

— *v. a.* To roll, as a thing mounted on small wheels; as, to *trundle* a gun-carriage. — To roll or cause to revolve; as, to *trundle* a hoop.

Trund'le, *v. n.* To roll, as a thing on little wheels. — To roll, as a hoop.

Trund'le-bed, *n.* Same as TRUCKLE-BED, *q. v.*

Trund'le-head, *n.* The wheel that causes the revolutions of a mill-stone. — *Trundle-head* of a capstan. (*Naut.*) The circular part at the top, with holes for the reception of the levers by which the apparatus is worked.

Trund'le-tail, *n.* A dog having a curled-up tail.

Trunk, (*trungk*), *n.* [Fr. *tronc*, from Lat. *truncus*.]

The woody stem, shaft, or body of trees, such as the oak, ash, and elm; the main part, without the branches; that part of a plant or shrub which, springing immediately from the root, ascends in a vertical position above the surface of the soil, and constitutes the principal bulk of the individual. — The body of an animal minus the limbs; the torso of a human figure. — The main body or bulk of anything; as, the *trunk* of an artery, as distinct from the branches or feeders. — The snout or proboscis of an elephant. — A covered sluice; a water-course made with planks. — A travelling-case, box, or chest; a portmanteau; as, a leathern *trunk*.

(*Arch.*) Same as SHAFT, *q. v.*

(*Zool.*) That segment of the body of an insect which is between the head and abdomen, and which supports the motory organs.

(*Mining*.) A cistern, pit, or gully in which ores are extracted from the slime in which they are deposited.

(*Mach.*) In marine steam-engines, a large pipe passing through the cylinder, and connecting with the piston; — used in driving a propeller.

— *v. n.* (*Mining*.) To extract ores from the slime, by means of a trunk.

Trunked, (*trunkt*), *a.* Having a trunk, as a tree.

Trunk'-engine, (*-en'jin*), *n.* (*Mach.*) A marine steam-engine with an horizontal cylinder, used for driving a propeller.

Trunk'-fish, *n.*

(*Zool.*) A family of fishes (*Ostracionidae*), belonging to the order *Plectognathes*. It comprises fishes which have the head and body covered with regular bony plates, soldered in such a manner as to form an inflexible shield, so that the mouth, tail, and fins are the only movable parts. The genus *Lactophrys* contains 2 or more species (Fig. 2532), from 4 to 14 inches long, which are found on the Atlantic coast of the U. States.

Fig. 2532. — TRUNK-FISH,
(*Lactophrys camelinus*.)

Trunk'ful, *n.*; *pl.* TRUNKFULS. So much as a trunk will hold; as, a *trunkful* of clothing.

Trunk'-hose, *n.* [*Trunk* and *hose*.] A kind of short, wide, puffed-out breeches gathered in above the knees, or immediately under them; — worn during the 16th century. (See Figs. 1062 and 1214.)

Trunk'-line, *n.* The main or chief line of a railroad, canal, or other mode of transit.

Trun'nel, *n.* Same as TREENAIL, *q. v.*

Trun'union, (*trūn'yūn*), *n.* [Fr. *tronçun*, probably from *tronçon*, a stump.] (*Gun.*) One of two knobs which project from the opposite sides of a gun, mortar, or howitzer, and serve to support the piece on the cheeks of the carriage.

Trun'union-plate, *n.* (*Gun.*) A covering-plate for the cheek of a gun-carriage, passing under the trun'union.

Tru'ro, a seaport-town of England, co. of Cornwall, at the junction of the rivers Allen and Kenwyn, 8 m. from Falmouth. It is in the centre of an important mining district, and exports chiefly smelted tin, and tin and copper ores. Pop. 12,000.

Truro, in Nova Scotia, a seaport-town, cap. of Colchester co., at the E. extremity of Mines Basin. Pop. 4,000.

Truro, in Illinois, a post-township of Knox co., abt. 12 m. E. of Knoxville.

Truro, in Massachusetts, a post-village and township of Barnstable co., 55 m. S.E. of Boston.

Truro, in Ohio, a twp. of Franklin co.

Trusion, (*tru'zhun*), *n.* Act of thrusting or pushing; pulsion.

Truss, *n.* [Fr. *trousse*, from Lat. *torqueo*, *tortus*, to twist.] That which is twisted, tied fast, or bound up; specifically, a bundle or small bale; as, a *truss* of hay or straw. — A stomacher or corset, worn by women; also, a kind of padded jacket, worn under armor.

(*Surg.*) An apparatus by which, in cases of rupture, the intestine is retained in the abdominal cavity. This is commonly effected by the aid of a steel spring resting upon a small pad or cushion, which is kept in its place by a proper bandage. See HERNIA.

(*Ship-building*.) A collection of timbers, or, preferably, iron plates, for giving an internal diagonal support to the ribs or side timbers.

(*Naut.*) A rope confining the middle of a lower yard to the mast.

(*Arch.*) The collection of timbers forming one of the principal supports to a roof, framed together for mutual support, and to prevent straining or distortion from the superincumbent weight. Diagrams of two of the simplest forms are given in Fig. 2274.

(*Engin.*) A triangular or polygonal frame, to which rigidity is given by staying and bracing, so that its figure shall be incapable of alteration by the turning of the bars around their joints.

— *v. a.* To bind, pack, or stow close; as, baggage *trussed*

into a little compass.—To skewer; as, to *truss* a fowl.—To strain, support, or keep tight, as a roof.—To hang;—generally before up; as, to *truss* up a spy.—To furnish with a truss or trusses; as, to *truss* a ruptured body.—To *truss* up. To make close, tight, or compact; as, to *truss* up the matter of a treatise.

Trussed-roof, n. (Arch.) The principal rafters of the beam at certain points where depression of the timber is likely to occur.

Trussing, n. (Arch. and Ship-building.) A mode of framing by means of a truss or trusses.

Trust, n. [Icel. *traust*; W. Fris. *trust*, confidence, reliance.] Confidence; security; faith; a reliance or resting of the mind on the integrity, fidelity, veracity, justice, good-feeling, sympathy, or other sound principle of another person.—He who, or that which, is the ground, object, or basis of confidence or reliance; as, a good wife is a man's surest *trust*.—That which is committed to one's care and good faith; charge received in confidence; deposit; as, to accept a sacred *trust*, to betray one's *trust*, &c.—Confident opinion of any event; assured prevision or anticipation; hope; belief; feeling of certainty; dependence upon something future or contingent, as if present, palpable, or actual.

"Sustained and soothed by an unfaltering *trust*."—Bryant.

—Credit given on promise or prospect of payment, actual or implied; delivery of goods or commodities without an immediate equivalent;—vulgarly, *tick*; as, to buy or sell articles on *trust*.

(Law.) A term commonly used to designate any equitable right or interest as distinguished from a legal one; properly, that class of equitable rights supposed to be founded in the confidence placed by one party in another, the name *trustee* denoting the person in whom confidence is placed, and the term *cestui que trust* signifying the person who trusts.—In other words, the party who enjoys a beneficial interest in the objects of which the trustee has the legal property. The courts consider a trust estate as equivalent to the legal ownership, governed by the same rules of property, and liable to every charge in equity which the other is subject to in law. The trustee is considered merely as the instrument of conveyance, and can in no shape affect the estate unless by alienation for a valuable consideration to a purchaser without notice. The estate of the trustee is at law subject to all the incidents which attend the ownership of land, and is usually called the trust estate, in contradistinction to the legal estate. Trusts are generally either to protect the interests of married women and children, by placing in the hands of trustees for them the legal rights which they would be incapable of exercising; or, to secure the rights of those in remainder, by severing from the usufruct of property for a life the power of disposing of the whole. Frequently, trusts involve the sale or purchase of lands or other property, the investment of funds, &c., in which cases the trustee has to exercise due caution, or he may be rendered liable for any loss that may arise. The duties of trustees are very various, and depend in great measure upon the nature of the particular trust.

—v. a. To place faith or confidence in; to repose belief or security in; to rely on; as, he is a man not to be *trusted*.—To believe; to credit; to give credence to.—To commit or confide to the care of; to entrust in reliance on one's honor and fidelity; as, to *trust* a lady in charge of a friend, to *trust* a parcel to a messenger.—To give credit to; to sell to on credit, or on a promise of future payment; as, he declines to *trust*, his rule being cash on delivery.—To risk or venture with some degree of confidence; as, he is fit to be *trusted* with his liberty.

—v. n. To be credulous; to believe in; to be won to confidence.

"Trust no future, however pleasant."—Longfellow.

—To be confident of something present or future; as, I *trust* to see you again to-morrow.—To sell, exchange, or allow to pass from one's possession, in consideration of a prospect of future payment or indemnification; as, I would *trust* him to the amount of thousands of dollars.

To *trust* in. To have confidence in; to rely on;—preceding in.

"The Lord is a buckler to all that *trust* in him."—2 Sam. xx. 11.

To *trust* to. To confide in; to depend on; as, I will *trust* to your honor.

—a. Held in trust; retained in behalf of another; as, *trust* money.

Trust-deed, n. A deed conveying property to a trustee, for some purpose assigned.

Trustee, n. (Law.) See TRUST.

Trustee process. (Law.) Same as GARNISHMENT, q. v.

Trusteeship, n. Office or functions of a trustee;—also, the state of being placed in the hands of a trustee.

Truster, n. One who trusts, or gives credit.

(Scots Law.) One who assigns a trust, in distinction from trustee.

Trustful, a. Full of trust.

Trustfully, adv. In a trustful manner.

Trustfulness, n. Quality of being trustful.

Trustily, adv. In a trusty or trustworthy manner.

Trustiness, n. Quality of being trusty.

Trustingly, adv. With trust or implicit confidence.

Trustless, a. Unworthy of trust.

Trustlessness, n. Unworthiness of trust.

Trustworthiness, n. Quality of being trustworthy.

Trustworthy, a. Trusty; deserving of trust or implicit confidence; as, a *trustworthy* servant.

Trusty, a. (comp. TRUSTIER; superl. TRUSTIEST.) That may be safely or implicitly trusted; that is justly entitled to confidence; that may be relied on; trustworthy; as, a *trusty* friend.—That will not fail in time of need; strong; firm; puissant; as, a *trusty* weapon.

Truth, n.; pl. TRUTHS. [A. S. *treowth*.] Quality of being true; as, (1.) Conformity to fact, reality, or actuality; absolute accordance with that which is, or has been, or shall be. (2.) Constancy; faithfulness; as, I believed in his *truth* till the last. (3.) Conformity to rule; exactness; in close analogy with some model or exemplar. (4.) Honesty; virtue; probity; as, "Malice bears down *truth*." (Shaks.) (5.) Purity, or exemption from falsehood; veracity; habitual disposition or practice to speak only what is true; as, "Ridicule is the test of *truth*." (Shaftesbury).—That which is true; that which is firm, established, fixed; that which is the proper object of belief; real state of things; verity; as, what is the *truth* of this matter?—Correct opinion; a true thing, statement, or proposition; real fact or just principle; as, the *truths* contained in Divine Writ.

In *truth*, in verity; in fact; actually.—Of a *truth*, necessarily true; verily; certainly.

Truthful, a. Adhering closely to the truth; conformable to truth; that may be relied on as true.

Truthfully, adv. In a truthful manner.

Truthfulness, n. Quality or state of being truthful.

Truthless, a. Lacking truth or veracity.

Truthlessness, n. State or quality of being truthless.

Truth-teller, n. One distinguished for veracity.

Truttaceous, (-tū'shūs, a.) [From L. Lat. *trutta* = Lat. *truttus*, a trout.] Pertaining, or relating, to fish of the trout kind.

Truxillo, TRUXILLO, (troo'-heel-yo'), a town of Spain, in Estremadura, 38 m. from Merida; pop. 6,092.

Truxillo, in South America. See TRUXILLO.

Truxton, in Illinois, a post-village of Bureau co., 70 m. W.S.W. of Chicago.

Truxton, in Missouri, a post-village of Lincoln co., abt. 65 m. N.W. of St. Louis.

Truxton, in New York, a post-village and township of Cortland co., 28 m. S. of Syracuse.

Try, v. n. (imp. and pp. TRIED, *trid*) To endeavor; to attempt; to essay; to make an effort; as, he *tries* hard to succeed.

—v. a. [A. S. *treawian*, *truwian*.] To make proof of; to put to the proof or test; to examine; to make experiment of.—To purify or assay, as metals; to refine, as fatty substances.—To put to the test; to show the truth or stability of, with a view to confidence in; to subject to crucial experiment; as, his patience was sorely *tried*.—To have knowledge by the aid of experience; as, he has not yet *tried* matrimony.—To essay; to undertake; to attempt; as, it is impossible to *try* to please everybody.—To examine judicially; to subject to the examination, and decision or sentence of a judicial process or tribunal; as, the cause was *tried* in court, he was *tried* for his life.

To *try* on, to invest one's self with, as a garment, with a view to judge of its fitness and suitability; as, to *try* on a coat.—To attempt; to essay; to seek to perform; as, it is of no use *trying* it on with him. (Colloq.)—To *try* out, to carry on exertions till a result is arrived at; as, "I'll *try* it out, and give no quarter." (Dryden).—To *try* the eyes, to strain or over-exert them.

—n. Act of trying; trial; attempt; experiment; essay.

Trygon, n. (Zool.) The Sting-ray, a genus of fishes, fam. *Raiidae*, distinguished by having the eyes on the upper (dorsal) aspect; the tail long and slender, without fins, and armed with a strong spine notched on both sides.

Try'ing, a. Adapted to try, as patience, endurance, or the sensibilities; severe; afflictive; crucial; as, a *trying* occasion.

Try'ou, in Prince Edward Island, a seaport town of Queen's county, on Northumberland Strait; Lat. 46° 17' N., Lon. 63° 38' W.

Try'-sail, n. (Naut.) A small gaff sail of strong canvas, set in bad weather.

Tryst, (trist, n.) [From A. S. *tryvisan*, to pledge one's faith.] An appointment to meet;—also, place of meeting; rendezvous; as, a lover's *tryst*. (Scot.)

—v. a. or n. To agree to meet, as another person.

Tsar, (zar, n.) [Russ.] Same as CZAR, q. v.

Tsari'na, Tsaritz'a, n. [Russ.] Same as CZARINA, q. v.

Tsarsko'selo. [Russ., imperial town.] A town of Russia, 13 m. S. of St. Petersburg. It is the residence and favorite resort of the imperial family.

Tset'sé, n. (Zool.) The *Glossinia morsitans*, a dipterous insect, described by Dr. Livingstone as a terrible pest of some parts of S. Africa. It is not much larger than the common house-fly, of a brown color, with four yellow bars across the abdomen. The wings project considerably beyond the abdomen. The proboscis is adapted for piercing the skin, and the fly lives by sucking blood. Its bite, harmless to man, is almost certain death to an ox, horse, or dog. Livingstone, in one of his journeys, lost 43 fine oxen by it.

Fig. 2533. — STING-RAY.
(*Trygon hastata*.)

Tsung-ming', an island near the coast of China, in the Eastern seas, near the mouth of the Yang-tse-kiang river. Ext. abt. 40 m. long and 15 broad. Lat. 31° 38' N., Lon. 120° 54' E.

Tsusiua, (soo-se-ma,) an island of Japan, in the Strait of Corea, 45 m. long, with a breadth of 12 m.; Lat. 34° 40' N., Lon. 129° 30' E.

Tu'am, an archiepiscopal town of Ireland, co. of Galway, 18 m. from Galway. Manuf. Linens and canvas. Pop. 8,000.

Tuariks, n. pl. See BERBERS.

Tub, n. [D. *tobbe*; Ger. *zuber*.] An open wooden vessel formed with staves, heading, and hoops, with two handles so as to be carried by two persons, used for various domestic purposes, as for washing, for making cheese, &c.; a kind of short, one-headed cask, or small circular vat.—Hence, the amount which a tub contains, regarded as a measure of quantity; as, a *tub* of butter.

(Mining) A east-iron cylinder put in the shaft instead of bricking, for the purpose of beating out the water and making it rise to a level. (Sometimes called *tubbing*.)

—v. a. (imp. and pp. TUBBED, *tūbd*.) To plant, set, or pack in a tub; as, to *tub* butter, to *tub* a plant.

Tu'bal, (Script.) a son of Japheth (Gen. x. 2), supposed to have been the progenitor of the Tubieni, who occupied the N.E. part of Asia Minor.

Tubal-Cain, (Script.) son of Lamech and Zillah, inventor of the art of forging metals. (Gen. iv. 22.)

Tub'bing, n. Materials for making tubs.

Tub'by, a. [From *tub*.] Lacking elasticity or fullness of sound, like a tub.

Tube, n. [Fr.; Lat. *tubus*.] A pipe, siphon, or other long hollow body, usually of a cylindrical form, and used for the conveyance of fluids, and for other purposes; a conduit; a sluice.

(Optics.) A telescope, or, more properly, that part of it into which the lenses are fitted, and by which they are directed and used.

(Nat. Hist.) A vessel of animal bodies or plants, which conveys a fluid or other substance.

(Bot.) That part of a monopetalous corolla formed by the union of the edges of the sepals or petals.

—v. a. To supply with a tube or tubes.

Tube'form, Tu'biform, a. [Lat. *tubus*, and *forma*, form.] Having the form of a tube; tubular.

Tu'ber, n. [Lat., from *tumere*, to swell.] (Bot.) A subterranean branch arrested in its growth, and excessively enlarged by the deposition of starch in its tissue. It has upon its surface a number of little buds, or eyes as they are commonly called, from which new plants are formed the succeeding year. The potato and Jerusalem artichoke are good illustrations of this peculiar modification of a stem.—Also a genus of Fungi. See TRUFFLE.

(Anat.) A knot or swelling.

Tubercle, (tū'ber-kl, n.) [Fr. *tubercule*; Lat. *tuberculum*, from *tuber*, a swelling.] (Anat.) A swelling, tumor, or pimple on animal bodies.

(Med.) A diseased deposit from the blood, which may take place in any of the tissues of the body, though it occurs most generally in the spongy texture of the lungs. Tuberculous matter is in the first instance deposited in a liquid form, of a pale yellow color, which after a time becomes coagulated, and eventually decomposed, and acting like a foreign body, induces a softening and ultimately an ulceration of the part, causing those suppurating cavities which form the pathological features of PHTHISIS, q. v.

(Bot.) A little knob, resembling a pimple, found on plants; a wart-like excrescence on the leaves of some lichens.

Tubercled, (tū'ber-kl, a.) Having tubercles; as, a *tubercled* lung.

Tuber'cular, a. Having little knobs or excrescences; tuberculated.—Tuberculose.

Tuber'culate, Tuber'culated, a. Same as TUBERCULAR.

Tu'bercule, n. (Bot.) A root composed of tubers.

Tuberculization, (-zā'shun, n.) (Med.) The development of tubercles; the condition of becoming affected with tubercles.

Tuber'culose, Tuber'culous, a. Affected by tubercles; tubercular.

Tuberiferous, a. [Lat. *tuber*, and *ferre*, to bear.] Bearing or yielding tubers.

Tu'be-rose, n. [Fr. *tubéreuse*.] (Bot.) See POLIANTHES.

Tu'berose, a. Tuberous.

Tuberos'ity, n. State of being tuberous.

(Anat.) A knob-like protuberance on a bone, having a rough, uneven surface, to which muscles and ligaments are attached.

Tu'berous, a. Covered with knobby or wart-like protuberances.

(Bot.) Resembling a tuber.

Tub'-fish, n. (Zool.) The Sapphirine Gurnard (*Tringla hirundo*), a fish distinguished by its large pectoral fins.

Tubie'ole, n. pl. (Zool.) See SERPULA.

Tubifera, n. pl. (Zool.) The name given by Lamarck to an order of the class *Polypi*, comprising those which are united upon a common substance fixed at its base, and whose surface is wholly or partially covered with retractile hollow tubes.

Tub'ing, n. Act of making tubes or pipes.—A length of tube; a set or series of tubes; material for making tubes.

Tübingen, (too'bing-en,) a town of Germany, in Württemberg, on the Neckar, 59 m. from Strasburg. It is the seat of a well-known university. Manuf. Woollen cloths and gunpowder. Pop. 8,286.

Tubipor'idæ, n. pl. (Zool.) See ALCYONACEA.

Tub'-man, n.; pl. TUB-MEN. An official belonging to the English Court of Exchequer.

Tu'bular, a. [Fr. *tubulaire*, from Lat. *tubulus*, dim.

of *tubus*, tube.] Tubiform; consisting of a pipe; fistular; as, a *tubular* calyx.

Tubular Bridge, *n.* (*Engineering*.) A bridge formed by a great tube or hollow beam, through the centre of which a roadway or railroad passes. The most remarkable bridge of this kind is the Britannia Bridge (Fig. 419), for although the bridge since carried across the St. Lawrence is of much greater total length, the width of each of its constituent spans is less. Notwithstanding the success of these structures, the tubular form has been to a great extent superseded by the *lattice bridge*, a kind of bridge patented in 1835 by the American engineer Ithiel Town, and since that time much used for spanning rivers of great breadth. This has arisen from the great saving in the material of which the sides are composed, as compared with the solid plated sides of the tube. The lattice-bridge derives its name from the peculiar formation of the bearing-beams, or girders, that run throughout its length from end to end, and form supports for the transverse beams on which the joists and flooring are laid that form the roadway. There are two trusses on either side of the roadway, which are firmly bolted together. The trusses are formed of planks or scantlings, about eight or nine inches in breadth, which are inclined diagonally to each other at an angle of rather more than 45°, like the laths which compose a piece of trellis-work, and fastened together by trenails of hard wood at every point where the planks cross each other.

Tubulate, *Tubulated*, *a.* Furnished with a tube.

Tubulation, *n.* Construction of a tube.

Tubulibranchiata, *n. pl.* (*Zool.*) An order of hermaphrodite gastropodous molluscs, comprehending those which have the shell in the form of a more or less irregular tube in which the branchiae are lodged.

Tubuliform, *a.* [*Lat. tubulus*, and *forma*, shape.] Like a small tube in form or shape.

Tubulose, *Tubulous*, *a.* [*Fr. tubuleux*.] Longitudinally hollow; having the form of a tube. — Containing small tubes; as, a *tubulous* compound flower. — (*Bot.*) Characterized by a campaniform border, with reflex segments, springing from a tube; — said of a floret.

Tubulure, *n.* (*Chem.*) A kind of tubular opening in a retort.

Tucano, in Brazil, a town of the prov. of Bahia, 8 m. from Itapicuru; *pop.* abt. 2,000.

Tuck, *v. a.* [*Sw. tocka*, to contract, to draw towards one.] To gather into a narrower compass; to press in or together; to fold under; to gather up; as, to *tuck* up an article of dress. — To inclose by pushing bed-clothes close around.

— *n.* A rapier; a long, narrow sword. — An horizontal plait or fold made in a garment to shorten it; as, to take in a *tuck*.

(*Naut.*) That part of a ship where the ends of the bottom parts are brought together under the stern.

Tuckahoe, (*tuk-a-ho'*) *n.* [*N. Amer. Ind.*, bread.] (*Bot.*) See *Jatropha* and *Pachyma*.

Tuckahoe, in *New Jersey*, a creek which rises in the W. border of Atlantic co. and flows S.E. into Great Egg Harbor Bay, between Atlantic and Cape May cos. — A post-village of Cape May co.

Tuckahoe, in *Virginia*, a township of Henrico county.

Tuckahoe River, in *Maryland*, rises in Queen Anne co., and flowing S., enters the Choptank River between Caroline and Talbot cos.

Tuckasa'ga, in *N. Carolina*, a village of Mecklenburg co., 169 m. W.S.W. of Raleigh.

Tuckasaw Creek, in *Georgia*, enters the Ocmulgee River from Pulaski co.

Tucker, *n.* [*From tuck*.] One who, or that which, tucks. — An ornament round the top of a woman's corset to shade the bosom.

Tucker, ST. GEORGE, an American lawyer and statesman, b. in the island of Bermuda, 1752, and sometimes distinguished by the title of "The American Blackstone," was a zealous promoter of the independence of the U. States, and bore a part in its accomplishment, not only with his pen, but with his sword. D. 1828.

Tucker, in *West Virginia*, a N.E. co., bordering on Maryland; *area*, 500 sq. m. It is drained by Cheat river. *Surface*, hilly; *soil*, fertile. *Cap.* Parsons. *Pop.* (1897) 6,640.

Tucker's Island, or **TUCKER'S BEACH**, in *New Jersey*, in Little Egg Harbor Bay.

Tuckerton, in *New Jersey*, a post-village and port of entry of Burlington co., on Little Egg Harbor Bay, 60 m. S.S.E. of Trenton.

Tuck-net, *n.* A small net used to take out fish from a larger one.

Tucson, in *Arizona*, a city, cap. of Pima co., about 175 m. S.S.E. of Prescott. *Pop.* (1897) 6,000.

Tucuman, or **SAN MIGUEL DE TUCUMAN**, (*too-koo-man'*) a town of the Argentine Republic, cap. of a dept. of same name, stands in a pleasant plain, and contains some fine churches and convents. Its principal trade is in oxen and mules. Here the independence of the Plata provinces was first promulgated, and, in 1816, the first congress of the republic was held. Lat. 26° 49' S., Lon. 64° 36' W. *Pop.* 10,000.

Tudela, (*too-da'la*) a city of Spain, in Navarre, at the confluence of the Queyles and the Ebro, 55 m. from Pampeluna; *pop.* 7,500.

Tudor, the name of one of the royal families of England allied to the race of Plantagenets. The line embraced five sovereigns, and commenced in 1485 with Henry Tudor, Earl of Richmond, the grandson of Sir Owen Tudor, a Welsh knight of distinction, by his wife, the widow of Henry V., and who, after the battle of Bosworth Field, was proclaimed king by the title

of Henry VII.; from him the crown descended to his son Henry VIII., whose son Edward VI. succeeded, and after him his two sisters Mary and Elizabeth; the Tudor dynasty expiring with the death of the latter in 1603, when the house of Stuart succeeded.

Tudor Architecture. That style of architecture which prevailed in England during the Tudor dynasty. The styles, however, to which this term is applied are many and widely different, including the Late Perpendicular Gothic, the Mixed or Elizabethan style, in which Italian details were introduced in buildings otherwise Gothic, and the Italian, as practised by Inigo Jones and

Fig. 2534. — GATEWAY IN THE TUDOR STYLE.
(End of the 15th century.)

his contemporaries. Some writers would divide the style thus denominated into *early* and *late* Tudor, the former term including the Late Perpendicular style, in which ornamental details were profusely introduced; while the latter is applied to those in which Italian details are introduced, and which are otherwise distinguished as *Elizabethan*. Among the most striking peculiarities of the *T. A.* may be mentioned the gate-houses (Fig. 2534); the numerous turrets and chimneys; the beautiful bay and oriel windows; the roofs, ceilings, and panelled wainscot round the internal walls.

Tue-iron, (*-i'urn*), *n.* Same as *TUYÈRE*.

— *pl.* A pair of blacksmith's tongs.

Tuesday, (*tūz'dy*), *n.* The third day of the week, was dedicated by the Saxons to their god *Tuisco*, respecting whose attributes little is known. The Romans held it sacred to Mars, and called it *Dies Martis*.

Tufa, **Tuff**, *n.* [*It. tufo*, porous ground.] (*Min.*) A name applied to certain porous loose rocks, sometimes consisting chiefly of calcareous matter deposited from water containing much carbonate of lime in solution, and sometimes of fine powdery volcanic dust cemented more or less completely by the infiltration of water, but generally loose and spongy. This dust consists of material erupted from volcanoes, and under the microscope has sometimes been found to contain large quantities of the silicious cases of infusoria. The first-named variety is called *calcareous tufa*, the last-named *volcanic tufa* or *tuff*. Volcanic tufa is the material under which Pompeii was buried. Similar materials have been deposited in places where there are no other indications of volcanic action, and occur among rocks of all ages. Calcareous tufa, when consolidated, passes into Travertine.

Tuft, *n.* [*Fr. touffe*.] A collection of small things in a knot or bunch; a flexible or waving cluster; as, a *tuft* of hair, grass, feathers, flowers, &c. — A clump; a cluster; a group; as, a *tuft* of trees.

(*Bot.*) A head of flowers, each elevated on a partial stalk, and all combining to form a dense, roundish mass.

— *v. a.* To separate or divide into tufts. — To furnish or adorn with tufts.

Tufted, *p. a.* Adorned with a tuft; as, a *tufted* cap. — Growing in tufts or clusters; as, a *tufted* grove.

Tuft-hunter, *n.* A toady; a parasite; a hanger-on.

Tuftonborough, in *New Hampshire*, a post-township of Carroll county, 45 miles N.N.E. of Concord.

Tufty, *a.* Adorned with tufts; growing in clusters; bushy.

Tug, *v. a.* (*imp.* and *pp.* *TUGGED*, (*tūgd*). [*A. S. teon*, pret. *tuge*.] To drag along with continued or persistent exertion; to haul along; to pull, drag, or draw with great effort; as, to *tug* at the oar.

— *v. n.* To draw or pull with laborious effort; as, to *tug* against the stream. — To labor; to strive; to struggle; to contend.

"They strenuously *tugged* for their liberty."—Howe.

— *n.* A drawing or hauling with force; a pull with strenuous effort. — A trace or drawing-strap of a harness.

(*Naut.*) A ship used for the purpose of towing other vessels; a *STEAM-TUG*, *q. v.*

— *pl.* (*Mining*.) Hoops of iron fastened to the covers to which the tackles are affixed.

Tugalo, in *S. Carolina*, a township of Oconee county.

Tugaloo River, rises in Jackson co., N. Carolina, and flowing generally S.E., unites with the Kiowee River near Andersonville, S. Carolina, to form the Savannah River.

Tugendbund, *n.* [*Ger.*, union of virtue.] (*Hist.*) A patriotic association formed in Prussia after the Treaty of Tilsit in 1807. Its object was to prepare the people

of that country, by moral instruction and discipline, for better times. It was abolished at the instigation of the French; but its spirit survived, and it had great effect in promoting the national war against Napoleon in 1813.

Tugger, *n.* One who, or that which, tugs.

Tug'gingly, *adv.* With laborious drawing or pulling.

Tug'-iron, (*-i'urn*), *n.* An iron on the shaft of a wagon, to which a tug or trace may be attached or made fast.

Tuition, (*-ish'un*), *n.* [*Sp. tuicion*; *Lat. tutio*.] Instruction; teaching; act or business of conveying or imparting knowledge of the various branches of learning; schooling. — Price, payment, or compensation charged or paid for instruction.

Tuitional, **Tuitional**, *a.* Relating to tuition.

Tula, or **TOULA**, (*too'la*), a town of Russia, cap. of govt. of same name, stands at the confluence of the Tulitza and the Upa, 106 m. from Moscow. It was founded in 1509, and is the seat of the imperial manufactory of arms, established by Peter I. in 1712. *Pop.* 60,000.

Tula, or **MONTEZUMA**, a river of Mexico, falls into the Tampico River near its mouth in the Gulf of Mexico, after a N.E. course of 200 m.

Tula, a town of Mexico, 40 m. N.N.W. of Mexico city.

Tula-metal, *n.* [*From Tula*, in Russia.] (*Metall.*)

An alloy or composition of silver, lead, and copper.

Tulare, in *California*, a S.E. co.; *area*, 5,592 sq. m. *Rivers*, Kern and King. *Lakes*, Kern and Tule. *Surface*, traversed on the E. by the Sierra Nevada, between which and the Coast Range is the fertile valley of San Joaquin. *Cap.* Visalia. *Pop.* (1897) 25,200.

Tule, in *California*, a lake of Tulare co., abt. 40 m. long and 22 m. broad.

Tulip, *n.* [*Fr. tulipe*; *D. tulpe*, from Turk. *tulban*, a turban.] (*Bot.*) The common name of *TULIPA*, *q. v.*

Tulipa, *n.* [*Lat.*] (*Bot.*) A genus of plants, order

Liliaceæ. The species are few, but the varieties are

endless, and are the beautiful bulbous plants called

Tulips. In the middle of the 17th century, there was

quite a mania for cultivating tulips in the Netherlands;

and most extravagant sums were given for bulbs of new

varieties. At the present time, Holland supplies Europe

and America with bulbs.

Tulipomania, *n.* A peculiar mania, or enthusiastic

passion, for the acquisition or cultivation of tulips.

Tulip-tree, *n.* (*Bot.*) See *LIRIODENDRON*.

Tullahoma, in *Tennessee*, a post-village of Coffee co.,

70 m. S.E. of Nashville.

Tullamore, a town of Ireland, in King's co., and

nearly divided in two portions by a river of the same

name, 50 m. from Dublin; *pop.* 5,200.

Tulle, (*te(r)l*), a town of France, cap. of the dept. of

Corrèze, on the Corrèze, 45 m. from Limoges. *Manuf.*

Woollen stuffs, paper, and lace (known as *point de Tulle*).

Pop. 13,073.

Tullus Hostilius, the third mythical king of Rome,

and successor of Numa. His reign was a series of wars

with Alba, the Veii, and the Sabines. The legend of the

famous combat between the Horatii and Curiatii forms

part of the story of the Alban war.

Tully, in *Missouri*, a village of Lewis co., 192 m. N.W.

of St. Louis.

Tully, in *New York*, a post-village and township of

Onondaga co., 20 m. S. of Syracuse.

Tully, in *Ohio*, a township of Marion co.

— A township of Van Wert co.

Tullytown, in *Pennsylvania*, a post-village of Bucks

co., abt. 6 m. S.W. of Trenton.

Tully Valley, in *New York*, a post-village of Onon-

daga co., 130 m. W. of Albany.

Tulma'ro, or **TULMERO**, a town of Venezuela, 50 miles

W.S.W. of Caracas; *pop.* abt. 9,000.

Tulpehoek'en, in *Pennsylvania*, a creek which rises

in Lebanon co., and flowing E.S.E., enters the Schuylkill

River near Reading. — A post-township of Berks co., 20

m. S.W. of Pottsville.

Tumble, (*tūm'bl*), *v. n.* [*A. S. tumbian*; *Fr. tomber*, to

fall, from *It. tombolare*, to fall topsy-turvy.] To roll, or

roll about by turning from one side to the other; as, to

tumble and toss about in bed, *tumbling* waves, &c. — To

fall or come down suddenly, violently, or precipitately;

to roll down; as, to *tumble* from a house-top. — To play

tricks of mountebankery by various librations, move-

ments, and contortions of the body; as, to *tumble* for a

livelihood.

To *tumble home*, to bend inward, as a ship's sides.

— *v. a.* To throw by chance or violence; to precipitate, or

throw down or headlong; to cause to fall, turn, or roll;

to turn over or throw about for examination or search-

ing; — sometimes with *over*; as, after *tumbling over*

everything he could not find what he wanted. — To

rumple; to disturb; to throw into disarrangement or

disorder; as, to *tumble* bed-clothes.

To *tumble down*, to throw or falling down negligently. —

To *tumble out*, to throw or roll out; as, to *tumble one's*

self out of bed, to *tumble out* baggage from a railroad car.

— *n.* A fall; a rolling over; act of tumbling.

Tumbler, *n.* One who tumbles; — also, one who makes

somersaults, or performs tricks of mountebankery. — A

large drinking-glass of a cylindrical form, or of the form

of the frustum of an inverted cone; — so named because

originally it was made with a pointed bottom, and could

not, therefore, be set on end without tumbling or fall-

ing over. — Also, the contents of such a glass; as, mix

me a *tumbler* of punch. — A sort of dog, so called from

his practice of tumbling before he attacks his game. —

A variety of the domestic pigeon, which is accustomed

to tumble or turn over during its flight.

Tumblerful, *n.*; *pl.* **TUMBLERFULS**. So much as a

tumbler will hold.

Tumbling-bay, *n.* A weir in a canal or water-course.

Tum'brei, Tum'bril, n. [Fr. *tombereau*, a dung-cart.] A dung cart. — A cucking-stool for scolds. — A sort of low carriage with two wheels.

— In England, a wicker cage for holding hay for sheep, etc. (*Mil.*) A two-wheeled covered cart, used for ammunition, miners' and pioneers' tools, &c.

Tumefaction. (*-fak'shun.*) *n.* [Fr.; see **TUMEFY**.] Act or process of swelling, or rising into a tumor. — A swelling; a tumor.

Tumefy, v. a. [Fr. *tuméfier*, from Lat. *tumeo*, to swell, and *facio*, to make.] To swell, or cause to swell; as, *tumefied* language.

— *v. n.* To swell; to rise in a tumor; as, a *tumefied* joint.

Tumid, a. [Fr. *tumide*; Lat. *tumidus*, from *tumeo*, to swell.] Protuberant; bulging; rising above the surface or level; as, *tumid* hills. (*Milton.*) — Being swelled, enlarged, or distended; as, *tumid* flesh. — Puffy; pompous; bombastic; turgid; euphuistic; swelling or inflated in sound, sense, or substance; as, a *tumid* style of diction.

Tumidity, Tumidness, n. [L. Lat. *tumiditas*.] State of being swelled, distended, dilated, or puffed up; turgidity.

Tumidly, adv. In a swelling or inflated manner.

Tumor, n. [Lat., from *tumeo*, to swell.] (*Surg.*) In its widest acceptation, a swelling of any kind on any part of the body; but usually restricted to a swelling of a permanent nature, while such as arise from inflammation and disappear along with the cause, are usually known as *tumefactions*. *T.* are commonly distinguished into *surcomatous*, or such as are firm and of a fleshy consistence; and *encysted*, consisting of a sac containing matter more or less pulpy or fluid. Of each of these, surgeons distinguish several kinds.

Tumored, (tū'merd.) a. Distended; swollen; inflated.

Tump, v. a. [W. *tump*, a hillock.] To lay or form a mass of earth round a plant. — To draw or drag, as an animal after it has been slaughtered. (*Local, U. States.*)

Tump-line, n. A band or strap fastened across a man's forehead to aid in his carrying a pack on his back. (*Local, U. States.*)

Tum-tum, n. A West Indian dish of boiled plantain beaten to a jelly.

Tumular, a. [From Lat. *tumulus*, a heap.] Formed in a heap; being in, or consisting of, a heap or hillock.

Tumult, n. [Fr. *tumulte*, from Lat. *tumultus*.] Violent agitation or commotion, with confusion of sounds; as, "What *tumult* 's in the heavens?" (*Shaks.*) — Commotion, agitation, or disturbance of a multitude, usually attended with great noise, uproar, and confusion of voices; popular ferment or turbulence. — High excitement; perturbation; bustle; stir; irregular or disordered motion; as, the *tumult* of the passions.

Tumultuary, a. Tumultuous; disorderly; confused; attended by riot; as, *tumultuary* agitation. — Restless; inquiet; perturbed; as, "Men without religion live always in a *tumultuary* state." — *Atterbury.*

Tumultuous, a. [Fr. *tumultueux*.] Full of tumult, bustle, or confusion; attended by riot or tumult; disorderly; as, a *tumultuous* flight. — Noisy; confused; irregular; full of boisterousness or agitation; as, a *tumultuous* meeting. — Disturbed; violently worked or moved. — Turbulent; violent; tending to sedition; as, a *tumultuous* appeal to the mob.

Tumultuously, adv. In a disorderly manner; with tumult or turbulence.

Tumultuousness, n. State of being tumultuous.

Tumulus, n. (*pl.* **TUMULI**. [Lat., from *tumeo*, to be swollen.] (*Archæol.*) A barrow, or artificial mound of earth, often covering an ancient tomb or sepulchre. The practice of rearing mounds of earth and stone over the resting-place of the dead may be traced to remote antiquity. It had doubtless its origin in the heaps of earth displaced by interment, which, in the case of the illustrious warrior or chief, it became the practice to raise into the size and form of the barrow, or *T.*, which is found all over northern Europe, from Great Britain and Ireland to Upsala in Sweden, and the steppes of the Ukraine. Sepulchral mounds of some sort seem, indeed, to have been erected among all the nations of Asia as well as of Europe, and they are found in numbers in North America. Some of the larger *T.*, barrows, are but partially artificial; natural mounds having been added to, or shaped into, the form which it was wished that they should take. See **MEGALITHIC MONUMENTS**.

Tun, n. [Fr. *tonne, tonneau*, a cask.] A large cask; an oblong vessel bulging in the middle, like a pipe, puncheon, or hoghead, girt with hoops, and used for stowing various kinds of merchandise for convenience of carriage, as brandy, oil, sugar, skins, &c. — In England, a liquid measure of capacity, containing 252 gallons, or 4 hogheads. — A proverbial term for a large quantity. — Also, a contemptuous appellation given to a drunkard. (*Com.*) Same as **TON**, *q. v.*

— *n. a.* To put into tuns or casks; as, to *tun* wine or oil.

Tunable, (tū'nū-bl.) a. That may be tuned or put in tune; — hence, harmonious; melodious; musical.

Tunableness, n. Quality of being tunable.

Tunably, adv. In a tunable or musical manner.

Tunamagout, in Pennsylvania, a village of McKean co., 220 m. N.W. of Harrisburg.

Tun-bellied, a. [*Tun* and *belly*.] Having a belly shaped like a tun; — hence, big-bellied.

Tunbridge, (tun'brij.) a town of England, co. of Kent, on the river Tun, 28 m. from London. *Manuf.* Toys and pottery. *Pop.* 5,000.

Tunbridge, in Illinois, a township of De Witt county.

Tunbridge, in Vermont, a post-township of Orange co., 28 m. S.E. of Montpelier.

Tunbridge Wells, a town of England, co. of Kent,

within 5 or 6 m. from the town of Tunbridge. *Manuf.* Toys and leather; — but its importance is derived from the mineral waters in the vicinity. *Pop.* 12,000.

Tune, n. [Fr. *ton*; Lat. *tonus* = Gr. *tonos*, a note of the voice.] Sound; note.

(*Mus.*) A short air or melody; a series of musical notes in some particular measure, and consisting of a single series, for one voice or instrument, the effect of which is *melody*; or, a union of two or more series or parts to be sung or played in concert, the effect of which is *harmony*; as, a lively *tune*, a psalm *tune*, &c. — Correct intonation in singing or playing; state of giving the proper application of sounds; harmonious sympathy or concordance; concert of the parts of an instrument with reference to the adjustment of due harmony; as, that pianoforte is out of *tune*. — Hence, by analogy, proper state for use or application; right disposition or tendency; order; concord; fit temper or humor; harmony of parts; as, he is not in good *tune* for his work.

— *v. u.* To put in tune; to harmonize to put into a state adapted to produce the proper sounds; as, to *tune* a violin. — Hence, to place in proper or suitable order or disposition. — To attune; to adapt in style of music; to give tone to. — To sing melodiously or harmoniously.

— *v. n.* To form accordant musical sounds. — To hum; to sing without articulating words.

Tuneful, a. Harmonious; melodious; musical.

Tunefully, adv. In a tuneful, or melodious manner.

Tuneless, a. Destitute of tune or melody.

Tuner, n. One who tunes; specifically, one whose business is to put musical instruments in proper tune.

Tungstate, n. [Fr.] (*Chem.*) See **TUNGSTEN**.

Tungsten, n. [Sw. and Dan. *tung*, heavy, and *sten*, stone.] (*Chem.*) *T.* is a metal found in small quantities in the form of an acid in *Scheelite* or tungstate of lime, and *Wolfram*, a tungstate of iron and manganese. The metal itself, which is of an iron-gray color, is procured from the tungstate of lime by a process interesting only to the scientific chemist. Its alloys are unimportant. Steel containing *T.* is said to have remarkable properties, but it is questionable whether they are due to the presence of this metal. It forms two oxides, a binoxide (WO_2), a heavy black powder, and the teroxide, or *Tungstic acid* (WO_3), its only important compound. This acid is readily procured in an impure condition, by heating *scheelite* or *wolfram* with hydrochloric acid, which dissolves the metals, leaving the tungstic acid behind as an insoluble residue. The anhydrous acid is of a beautiful lemon-yellow color, insoluble in water, but soluble in solutions of the alkalis, with which it forms soluble salts. The most important of these is the *tungstate of soda*, used as an antiseptic agent in starch. If hydrochloric acid is added to a mixture of tungstate of soda and glue, a compound of tungstic acid glue is obtained which at 30° to 40° is so elastic as to admit of being drawn out into very thin sheets. On cooling, this mass becomes solid and brittle, but on being heated it becomes again soft and plastic. This material has been successfully employed, instead of albumen, in calico printing, in order to fix the aniline colors upon cotton; the further applications of this substance are as tannin, but the resulting leather becomes as hard and stiff as a plank of wood. The preparation is recommended as a lute or cement. The *tungstate of lead* appears to offer decided advantages as a white pigment; in fact, if tungstic acid could be procured in sufficient quantities, we should have a number of valuable pigments from this source. The compounds of this metal, as a rule, are not poisonous; they resemble those of molybdenum very closely, and it is worthy of note that the atomic number and specific gravity of *T.* are nearly double those of molybdenum. — *At. weight* 183.6; *spec. grav.* 7.3; *Symbol* W (from the Latin name *Wolframium*, from the mineral *Wolfram*, in which *T.* was first found).

Tungstic Acid, n. (*Chem.*) See **TUNGSTEN**.

Tunguragua, (toon-goo-ru'gwa.) a volcano of Ecuador, 16,424 ft. high; Lat. $1^\circ 29' S.$, Lon. $79^\circ 20' W.$

Tungus'es, a wandering native race of Asiatic Russia, who cover nearly the whole S.E. portion of that vast territory. They are first found on the banks of the Yenisei, whence they extend all the way eastward to the Sea of Okhotsk.

Tunic, n. [Fr. *tunique*, from Lat. *tunica*.] (*Antiq.*) A garment worn by the Romans of both sexes under the toga and next to the skin. It was generally of wool of a white color, and reached below the knee.

(*Ecol.*) In the Roman Catholic Church, a long white under-garment worn by the clergy when officiating.

— A garment formerly worn under a coat of mail; hence, among the moderns, a loose-fitting jacket or body-coat; as, a soldier's *tunic*, a boy's *tunic*.

(*Bot.*) An integument, as of a seed.

(*Anat.*) A membrane that covers or composes some part or organ; as, the *tunic* of the eye.

Tunica, in Mississippi, a N.W. co., bordering on the Mississippi; area, 450 sq. m. *Rivers.* Coldwater and Tunica. *Surface, flat; soil,* generally fertile. *Cap.* Tunica. *Pop.* (1897) 14,100.

Tunicata, n. pl. (*Zoöl.*) A class of animals many of which are known as ascidians (*q. v.*) or sea-squirrels, and which are believed to be related, at a low level, with the vertebrates. Most

of them display vertebrate characteristics as larvæ, and some do so in adult life.

Tunicate, Tunicated, a. [Fr. *tunique*, from Lat. *tunicare*.] Covered with a tunic; coated with layers; as, a *tunicated* tuber.

Tunicle, (tū'ni-kl.) n. [Lat. *tunicula*, dim. of *tunica*.] A tunic, integument, or natural covering; as, distinct plants under one common *tunicle*.

Tuning, n. (*Mus.*) The art of adjusting the several sounds of a musical instrument, so as to produce as nearly as possible a correct scale, as well as that of making two or more instruments agree with each other, and thus enable them to be played in concert. All instruments are liable to change their tone; this, however, in some, such as the horn, flute, &c., is of little importance, as all the parts, if changed at all, change together, and the whole effect of temperature can be corrected by lengthening the pipe of which the instrument consists. Others, however, as violins, harps, drums, &c., require *T.* every time they are played; thus it is necessary for the performer to understand the art of *T.* himself. Organs, harmoniums, pianofortes, are extremely liable to alter their tone; wet, cold, heat, removing from one room to another, all these causes will tend to put them out of tune, more especially the latter instrument; and even if exposed to none of these evils, they will require *T.* at certain intervals, owing to the various parts being unconnected and subject to separate accident and unequal wear.

Tuning-fork, n. (*Mus.*) A steel instrument consisting of a handle and two prongs, which, when struck against the table, or some hard substance, produces a certain fixed note, by which the pitch of voices or instruments is determined. There are forks of various tones, but the A and C forks are most commonly used.

Tuning-hammer, Tuning-key, n. (*Mus.*) An implement for tuning pianofortes.

Tunis, a kingdom or regency of N. Africa, now under the armed protection of France, is principally between Lat. 33° and $37^\circ N.$, Lon. 9° and $11^\circ E.$; having S.E. the regency of Tripoli, N.W. Algeria, S. and W. the Desert of Sahara, and N. and E. the Mediterranean; area, roughly estimated at 50,000 sq. m. On the eastern coast are those deep indentations known as the Gulf of Gabes, or Little Syrte, and the Gulf of Hammamet; and on the N., the Gulf of T. and Bizerta. The N. portion of the country is mountainous and hilly, but all the S. part is a plain or level, and still (as in the time of the Romans, when it formed one of their granaries) extremely fertile. The principal river is the Majerdah, which, after a course of 140 m., falls into the Gulf of T. The minerals are silver, copper, lead, quicksilver, and salt. The vegetable products are wheat, maize, barley, millet, olives, dates, grapes, tobacco, hemp, indigo, cotton, saenna, and opium. Buffaloes, sheep, camels, horses, and oxen constitute the chief domestic animals; while the lion, panther, ounce, lynx, wild boar, wolf, and bison comprise the principal wild ones, or the carnivora. The commerce of *T.* is larger than that of all the other Barbary states, the exports and manufactures consisting of soap, morocco leather, shawls, red skull-caps or the fez; these, with wheat, wax, olives, dates, hides, alfa grass, and feathers, comprise the chief items of export and trade. The Bey of *T.*, though nominally the viceroy of the Sultan, is virtually the sovereign of the country, and the authority with whom all European states directly treat in their commercial relations with *T.*; his power is despotic, the Divan merely confirming what he decides to propose. The religion of the people is the Mohammedan, though the Tunisians are very tolerant in matters of faith. The chief towns are Tunis, the cap., Kairwan, Susa, Hammamet, Bizerta, Ilax, Gabes, Monastes, and Beja — This region, which in antiquity was the centre of the Carthaginian dominions, remained in the possession of the Romans from the destruction of Carthage to the beginning of the 5th century, when the Vandals settled themselves in Africa. In 690 it became subject to the Caliphs; conquered by Barbarossa in 1534, by the Emperor Charles V. in 1537, taken anew in 1570 by the Turks, it gradually regained independence. Became a French protectorate in 1881. *Pop.* (1897) 1,650,000.

TUNIS, the capital of the above state, and one of the chief cities in northern Africa, is situated on the western side of the gulf of that name, and lies in Lat. $36^\circ 48' N.$, Lon. $10^\circ 16' 20'' E.$, abt. 3 m. S.W. from the ruins of the ancient Carthage. The whole city is enclosed by a high wall, and on all the eminences without the walls are erected outworks or forts. In 1881 France sent an expedition to Tunis with the object of securing Algeria against incursions of Tunisian tribes, took possession of the whole country, and under form of a treaty, signed May 12, virtually reduced the Bey to a state of vassalage. Lake Tunis separates it from its port Goletta. Its *pop.*, larger, perhaps, than that of any other African city, Cairo excepted, is about 125,000, of whom about 30,000 are Jews.

TUNIS, (Bay of.) a deep indentation of the Mediterranean, comprehending a coast of 120 m., in the most interior part of which is the city of Tunis. It lies between capes Bon and Farina, and its entrance is 45 m. wide.

Tun'ja, in the Republic of Colombia, a town of the dept. of Boyaca, 70 m. N.N.E. of Bogotá. *Pop.* (1897) 9,600.

Tunkers, or DUNKERS, a religious denomination founded in 1708, in Schwartzsenu, Germany. The name *T.* (from the German *tauchen*, to dip) was originally given them as a nickname to distinguish them from the Mennonites. They are also called *Tumblers* from their mode of baptism, which is by putting the person while kneeling head first under water, so that the motion resembles the act of tumbling. They are also called *German Baptists*, while they themselves take the name of *Bre-*

Fig. 2535.

BOLTENIA PEDUNCULATA. (Reduced to 1-18th of its size.)

thren, in accordance with *Matt. xxiii. 8*: "All ye are brethren." Between 1719 and 1729 they all emigrated to America, to which country the denomination has since been confined. They have dispersed themselves through almost every State of the Union, and are most numerous in Pennsylvania, Maryland, Virginia, Ohio, and Indiana. Their church government is nearly the same as that of other Baptists, except in the choosing of their ministers. From the *T.*, as a sect, must be distinguished the *Seventh-Day T.*, also called the *German Seventh-Day Baptists*. They were established by Conrad Beissel, a native of Germany, who separated himself from the *T.* society at Mühlbach (Mill Creek), in Lancaster co., Pa., and went to a hermitage on the banks of the Cocalico, where he was joined by many of the society from Mill Creek, who settled around him in isolated cottages. In 1733 a monastic society was established, constituting, with the buildings subsequently erected by the community, the irregular inclosed village of Ephrata. The habit of the Capuchins or White Friars was adopted by both the brethren and sisters. Monastic names were given to all who entered the cloister. In 1740 there were 36 single brethren in the cloister and 35 sisters, and at one time the society, including the members living in the neighborhood, numbered nearly 300. After 1777 the society at Ephrata began to decline, and of the peculiar features of the early Seventh-Day *T.* few traces are now to be found there. Their principal settlement is now at Snowhill, on Antietam Creek, in Franklin co., Pa. See BAPTISTS.

Tunkhan'nock, in *Pennsylvania*, a creek which flows into the N. branch of the Susquehanna at Tunkhannock. — A post-borough, cap. of Wyoming co., 20 m. N.W. of Scranton; pop. abt. 2,000. — A mountain in the N.E. of Wyoming co.

Tunnage, *n.* An inelegant orthography of *TONNAGE*, *q. v.*
Tunnel, *n.* [Fr. *tunnel*, dim. of *toune*, a ton.] A tunnel; a tun-dish. — The opening in a chimney for the passage of smoke; a flue; a funnel; a smoke-stack.

(*Civ. Engin.*) A tubular opening, or an arched subterranean passage cut through a hill, a mountain, a rock, an eminence, or under a river or town, to carry a canal, road, railway, &c., in an advantageous and straight course. The construction of *T.* is by no means of recent origin, although it is only of late that they have become common. The outlet for the Lake Copais in Bœotia is one of the oldest monuments of the labor of man. The great *T.* in Samos, which was seven stadia long, was driven through a mountain 900 ft. high, for the purpose of serving as the bed of a channel to convey water from a natural source to the city of Samos. One of the most interesting works of this kind in modern times is the *T.* carried under the Thames, to connect the lower parts of London, lying on each side of the river, with one another by a convenient roadway, without involving the necessity of building a bridge, which in that spot would interfere with the navigation of the river. Its total length, between the shafts, is 1,200 feet; its total cost was \$2,273,570; and it was opened to the public in 1843. Tunnels of much greater length and difficulty have, however, since been constructed. More than one of these has been constructed under the Thames. Of these the Blackwall *T.*, opened to use May 22, 1897, is 6,200 feet long and 27 feet in internal diameter, being the largest subaqueous *T.* yet constructed. About half of it is lined with great iron plates, and it has a width sufficient for two carriage-ways and two foot-ways. The *T.* under the Severn is $4\frac{1}{2}$ miles long, and that under

to 1873, the delay largely due to lack of funds. These achievements have been much surpassed in more recent times, through the aid of more powerful explosives and more rapid processes of rock boring. The St. Gothard *T.* is 2 miles longer than the Mt. Cenis, yet it was completed in a much shorter time. The Arlberg *T.*, 638 miles in length, begun in 1880, was opened to travel in 1883. In 1893 was begun a still greater enterprise, the Simplon *T.*, the full length of which is to be $12\frac{1}{4}$ miles. These Alpine tunnels have been in a measure matched by several railroad tunnels in the United States, while that constructed for the Croton aqueduct is 33 miles in length, much of it driven through rock. All mining drifts are nearly tunnels, and some of these are of great length, the Sutro *T.*, in Nevada, being $4\frac{1}{2}$ miles long. Still another class of tunnels are those driven by Chicago under Lake Michigan to a distance of 4 miles from shore, to obtain a pure water supply. The greatest *T.* yet projected is that under the British channel from England to France. The project, however, seems to present no serious physical difficulties, though it has, up to this time, met with insurmountable political ones.

Tunnel City, in *Wis.*, a P.-V. of Monroe co.

Tunnel-net, *n.* A net having a wide mouth at one extremity, and a narrow one at the other.

Tunnel-pit, **Tunnel-shaft**, *n.* A shaft sunk from the surface to the level of a tunnel, for ventilation.

Tunnerton, in *W. Virginia*, a P.-V. of Preston co.

Tunny, *n.* [Fr. *thon*.] (*Zoöl.*) An acanthopterygious fish, family *Scombridae*. The *T.* of Europe has been known and celebrated from a very remote time, and at present forms a valuable source of profit to the inhabitants of the northern coasts of the Mediterranean. Though bearing a general resemblance to the Mackerel in form, it is a far larger and stouter fish, acquiring sometimes the size of 9 feet, and the weight of 500 pounds. The flesh is considered very delicious, though very solid food, as firm as sturgeon, but of a finer flavor. The American *T.*, or Horse-mackerel (*T. secundodorsalis*), found from New York to Nova Scotia, is from 9 to 12 feet long, and attains a weight of 1,000 pounds. It is not liked by fishermen on account of its injuring their nets; and its flesh, though possessing a fine mackerel taste, is rarely used, except for mackerel bait.

Tunstall, a town of England, in Staffordshire, 4 m. from Newcastle-under-Lyne. *Manuf.* Tiles and pottery. Pop. 10,000.

Tunungwant, or **TUNA**, in *New York*, a village of Cattaraugus co., 55 m. S.E. of Dunkirk.

Tunuyan, a river of the Argentine Republic, dept. of Mendoza, flows into the Guanacache Lagoon, after a N.E. course of 200 m.; Lat. 34° S., Lon. $66^{\circ} 30'$ W.

Tuolumne, a river of *California*, rises in Tuolumne co., and flowing S.W., enters San Joaquin River abt. 40 m. S.E. of Stockton. — A N. central co.; area, 2,000 sq. m. *Rivers*. Stanislaus, and Tuolumne, and the middle fork of Stanislaus River. *Surface*, mountainous in the E., and level and fertile in the W. *Min. Gold*. *Cap.* Sonora. Pop. (1897) about 6,500.

— A village of Stanislaus co., on the Tuolumne river, 7 m. from its mouth in the San Joaquin.

Tup, *n.* In England, a ram; a male sheep.

Tup, *v. n.* and *a.* [Ger. *tuppen*.] To butt with the head, as a ram. — To cover or copulate, as a ram.

Tupelo, *n.* (*Bot.*) The common name of *Nyssa*, a genus of trees, order *Alangiaceæ*, natives of N. America, chiefly of the southern parts of the U. States; having simple, alternate leaves, mostly entire; greenish, inconspicuous flowers at the extremity of long stalks; the fruit a drupe. *N. villosa* (Fig. 2537) attains a height of 60 to 70 feet. It is often called Black Gum-tree. *N. tomentosa*, the Large *T.*, is a lofty and beautiful tree, remarkable for the extraordinary enlargement of the base of the trunk, which is sometimes 8 or 9 feet in diameter, while at no great height the diameter diminishes to 15 or 20 inches. The fruit resembles a small olive, and is preserved in the same way by the French settlers in America. *N. condicans* or *capitata*, the Ogechee Lime or Sour Gum-tree, is a small tree, of which the fruit is very acid, and is used like that of the lime. The wood of all the species is soft, that of the Large *T.* remarkably so.

Tupiza, or **Tupiza**, a town of Bolivia, 140 m. S. of Chuquisaca; pop. abt. 6,000.

Tupunga'o Mountain, one of the Chilean Andes, 45 m. E. of Santiago, 15,000 ft. high; Lat. $33^{\circ} 10'$ S.

Turanian Family of Languages, (*tu-rai-ne-an*). (*Philology*.) One of the three great families of languages into which modern philology has divided all the spoken and dead dialects of the world. The term Turanian is used in opposition to *Aryan*, and refers to the nomadic races of Asia as opposed to the agricultural or Aryan races. The Turanian group of languages consists of two great divisions, the *northern* and the *southern*. The northern comprises five sections of dialects, — the Tungusic, Mongolic, Turkic, Finnic, and Samoidic. The southern, which occupies the south of Asia, comprises the Tamulic, or the languages of the Deccan; the Bhotija, or the dialects of Thibet and Bhootan; the Taic, or the dia-

lects of Siam; and the Malaic, or the Malay and Polynesian dialects.

Turbau, *n.* [Fr.; Pers. *dulband*; Turk. *tulban*; Hind., probably from *sarband* — *sar*, the head, and *band*, a bandage.] A head-dress worn by the Orientals, consisting of a cap, with a sash of fine linen or taffeta artfully wound round it in plaits.

— A kind of head-dress worn by ladies.

(*Conch.*) The complete set of whorls belonging to a shell.
Turbett, in *Pennsylvania*, a township of Juniata co., 7 m. S.W. of Mifflintown.

Turbid, *a.* [Lat. *turbidus*, from *turba*, uproar, confusion.] Muddy; foul with extraneous matter; having the lees or sediment disturbed; thick; not clear; as a *turbid* liquid.

— Being in a state of confusion; disturbed; as, fierce and *turbid* spirits.

Turbidness, **Turbidity**, *n.* State or quality of being turbid; muddiness; foulness.

Turbineaceous, (*-a'shus*), *a.* Pertaining to turf; having the characteristic qualities of turf.

Turbinal, *n.* [From Lat. *turben*, a top.] The nasal capsule in the head of a fish.

Turbinate, *v. n.* To whirl or spin round like a top.

Turbinate, **Turbinated**, *a.* [Fr. *turbiné*, from Lat. *turben*, a top.] Gyration or spinning round after the manner of a top; as, *turbinate* motion.

(*Bot.*) Top-shaped; as, a *turbinate* nectary.

Turbation, (*-a'shun*), *n.* [Lat. *turbatio*.] Act of revolving, spinning, or whirling, as a top.

Turbine, *n.* (*Hydraulics*.) See WATER-WHEEL.

Turbot, in *Pennsylvania*, a township of Northumberland co., 13 m. N. of Sunbury.

Turbulence, **Turbulency**, *n.* [Fr. *turbulence*.] State of being turbulent; agitation; disorder; tumult; confusion; disposition to resist authority; riotousness; insubordination.

Turbulent, *a.* [Fr.; from Lat. *turbo*, to disturb.] Being in violent commotion; tumultuous; agitated; disturbed; as, *turbulent* winds. — Restless; unquiet; inclined to tumult, insubordination, and disorder; refractory; violent; as, a *turbulent* mob. — Producing commotion or agitation.

Turbulently, *adv.* In a turbulent manner.

Turbut, or **Tarbut**, (*toor-but*'), a city of Khorassan, in Persia, 50 m. from Meshed; pop. 18,000.

Turcism, (*-kizm*), *n.* Same as *TEURISM*, *q. v.*

Turco, **Tur'ko**, *n.* (*Mil.*) In the French service, a soldier native of Algeria, and dressed like an Arab.

Turcoman, *n.*; *pl.* TURCOMANS. (*Geog.*) A native or inhabitant of Turkistan, in Central Asia.

Turdus, *n.*, **Tur'dide**, *n. pl.* (*Zoöl.*) See THRUSH.

Tureen, *n.* [Fr. *terrène*.] A large, deep table-vessel for holding soup; a tureen.

Turenne, HENRI DE LA TOUR D'Auvergne, VICOMTE DE, (*toor-ruin'*), a French general, b. at Sedan, 1611, studied the art of war under his maternal uncle, Prince Maurice of Nassau, and Prince Frederick Henry. In 1634 he received the command of a French regiment, and gained brilliant distinction in the campaign in Flanders. In 1639 he commanded with success in Italy, and in 1643 conquered Roussillon. In the next year he was made marshal of France, and commander of the French armies in Germany. He gained the great battle of Nordlingen in 1645; and by his able manoeuvres, and decision and skill in action, he was the chief cause of the advantages gained over the Imperialists in the latter part of the Thirty Years' war. When the civil war of the Fronde broke out in France, *T.* was first engaged against the court, but afterwards became the chief commander of the royal armies. In 1654 and 1655 he commanded against the Spaniards and the Low Countries, gained the battle of the Dunes, and conquered the greater part of Flanders. The peace of the Pyrenees in 1660 closed this war; but when hostilities were renewed in 1667, *T.* ran through another rapid career of victories in Flanders, and the Spaniards were obliged to beg again for peace in the next year. In 1672 he was at the head of the French troops in Holland. He took 40 towns in 22 days, and won 5 pitched battles against the Dutch and Austrians. He continued to guide the French arms with almost unvarying skill and success till July 27th, 1675, when he was killed by a chance cannon-shot while reconnoitring the ground for an intended battle against the celebrated Imperialist commander, Montecuculi.

Turf, *n.*; *pl.* TURFS. [A. S. and D.; Ger. and Icel. *torf*; Fr. *tourbe*.] The surface or upper surface of grass lands, of a smooth and uniform texture, covered with pasture grass. — Peat; a peculiar kind of blackish, fibrous, vegetable, earthy substance, used as fuel.

(*Sports*.) The distinctive appellation applied, in modern phraseology, to the sport of horse-racing; also, as the sward or ground on which such racing is practised; as, to win the "Derby" is the crowning honor of the *turf*.

(*NOTE.* *Turf* occasionally aids in the formation of such self-explaining compounds as *turf-clad*, *turf-pit*, &c.)

— *v. a.* (*imp.* and *pp.* TURFED, (*turf't*.) To cover with turf or sod; as, to *turf* the slope of a terrace.

Turf'en, **Turf'y**, *a.* Made of, or covered with turf.

Turfiness, *n.* State of abounding with turf.

Turf'ing, *n.* Operation of laying down turf, or covering with turf.

Turfing-spade, **Turf-spade**, *n.* An implement for under-cutting turf.

Turf'ite, *n.* A votary of the turf; an habitual frequenter of horse-races, trotting-matches, &c.; — hence, a professional bettor; a blackleg.

Turf-moss, *n.* A tract of heathery, boggy land.

Turgeneff. See TOURGUÉNEF.

Turgent, (*-jent*), *a.* [Lat. *turgus*, from *turgeo*, to swell.]

Fig. 2536.—TUNNEL IN SWITZERLAND.
(On the road from Brunnen to Fluden.)

Fig. 2537.—TUPELO,
(*Nyssa villosa*.)

the Mersey, between Liverpool and Birkenhead, about 1 mile long. An effort to tunnel the Hudson at New York resulted in failure, but the East river is being successfully tunnelled. Of rock cuttings the first great enterprise of modern times was the excavation of the Mt. Cenis *T.*, $7\frac{1}{2}$ miles long, through the heart of an Alpine mountain. This was pierced by gunpowder blasting, the blast holes being excavated by compressed air, for which external water-power was employed. This work occupied from 1859 to 1870, and that of the Hoosac *T.*, in Massachusetts, $4\frac{3}{4}$ miles long, from 1856

Swelling, tumid; protuberant; rising into a tumor or puffy state; as, *turgent* humors. — Bombastic; tumid; puffy; inflated; *turgid*; as, *turgent* language.

Turgescence, *Turgescence*, *n.* [Fr. *turgescence*.] State of becoming turgid or swollen; act of swelling. — Empty magnificence; ridiculous pomposity; bombast; inflation; puffiness.

(Med.) Superabundance of humors in any part.

Turgescent, *a.* Growing large; a swelling.

Turgid, (-*jid*), *a.* [Lat. *turgidus*, from *turgeo*, to swell.] Swelled; bloated; distended beyond its primary state by some internal agency or expansive force; as, a *turgid* limb. — Tumid; pompous; inflated; bombastic; as, a *turgid* manner of talking.

Turgidity, *n.* State of being turgid or swollen; tumidity.

Turgidly, *adv.* In a turgid manner.

Turgidness, *n.* Quality of being turgid.

Turgot, ANNE ROBERT JACQUES, (*toor'go*), a French statesman, b. in Paris, 1727. He was created comptroller-general of the finances in 1774, in which office he evinced great talents, by endeavoring to effect a reform in the public expenditure, and by introducing several important regulations for the revival and encouragement of trade. After the death of Quesnoy, he was at the head of the society called the Economistes. He was the author of a number of works upon politics, political economy, metaphysics, and literature. D. 1781.

Turi, in Brazil, a town of Maranhão, 40 m. N.N.W. of Guimarães; pop. abt. 6,000.

Turin, in New York, a post-village and township of Lewis co.

Turin, [It. *Torino*.] a city of N. Italy, formerly the cap. of the Sardinian dominions, in a beautiful plain, on the Po, 80 m. from Milan; Lat. 45° 5' N., Lon. 7° 44' E. It is of an oblong form, with a circumference of about 4 m. It is one of the most regular towns in Europe, the streets running in straight lines with intersecting streets at right angles, and all its squares of a perfect shape and regularity; its buildings are massive and lofty, some of its main thoroughfares being lined with arcades. Its chief buildings are the king's palace, the cathedral, the chapel del Sudario, cased with black marble and adorned with gilt bronzes, the old ducal palace of Savoy, the opera house, the university, divided into five faculties, divinity, law, medicine, surgery, and arts, with its library of 112,000 volumes and 2,000 MSS.; botanical gardens, and numerous learned and scientific societies, museums, &c. *Manuf.* Woollen cloths, cottons, silks, velvets, gloves, hats, optical and mathematical instruments, leather, tobacco, paper, carriages, arms, and steel works.

Turio, *n.*; *pl.* TURIONES. [Lat.] (*Bot.*) A shoot, sprout, or sucker from the ground.

Turioniferous, *a.* (*Bot.*) Throwing out shoots, as the asparagus.

Turk, *n.* (*Geog.*) A native or inhabitant of Turkey; an Osmanli. — An old name for a Mohammedan or Musliman.

Turkey, or the OTTOMAN EMPIRE, a very extensive country, partly in S.E. Europe and partly in W. Asia, comprising some of the most celebrated, best situated, and naturally finest provinces of the continents to which they belong. The limits of the Turkish Empire are not easily defined; inasmuch as it is usually represented as including several extensive countries which are substantially independent. Previous to the Russian war of 1877-78, the total area of the Empire was officially estimated at 1,742,874 square miles, with a population of 28,165,000 inhabitants. The result of the war, sanctioned by the great European powers, and embodied in the stipulations of the Treaty of Berlin, which was signed July 13, 1878, greatly reduced the area and population of the Empire, particularly that of its most important part, in Europe. By the treaty which created the semi-independent States of Bulgaria and of Eastern Roumelia, gave Bosnia and Herzegovina to Austria-Hungary, additions of territory to Greece, Roumania, Serbia, and Montenegro, and large territories in Asia to Russia (see below), the total estimated area was reduced to 1,116,848 square miles, and the population to 21 million; but all statistics relating to Turkey are necessarily imperfect in the absence of regular official returns. Turkey in Europe borders on Montenegro, Austria (Bosnia), Serbia, Roumania, the Black Sea, the Bosphorus, the Sea of Marmora, the strait of the Dardanelles, the Archipelago, the Ionian Sea, and the Adriatic. Its political divisions (mostly villages) are Edirneh or Adrianople (Roumelia or Thrace), the principality of Turna or the Danube (Bulgaria), Salonica (Macedonia), Janina (the part left of Thessaly and Albania), Prusend (Albania), Scutari (formerly part of Prusend), Candia or Crete, and the metropolitan district situated at the point where the Black Sea flows into the Marmora; here is the centre of power of the Turkish empire, and its capital, Constantinople. — Asiatic Turkey comprises Asia Minor, and vast adjacent territories. The western frontier is formed by the Mediterranean; to the S. the Turkish dominion stretches as far as the Isthmus of Suez, extending thence without interruption into Africa, occupying (nominally) the whole of Egypt, and along the Arabian Gulf to the Strait of Babel-Mandeb, occupying the narrow coast-belt bounded S.E. and E. by Arabia and Persia, N. by Russia (Caucasus) and the Black Sea. For a distance of 100 miles the Mediterranean washes the shores of Syria, flat and harborless above the promontory of Carmel, then steeper and richer in harbors, flourishing by commerce in the time of the Phœnicians; but now, for the larger part, desolate, the harbors having become filled up by the North African

coast-current. Beyroot, which may be considered as the port of Damascus, is here the most important harbor. From the Bay of Iskanderoon, the coast turns suddenly to the W., and for a distance of 150 m. it is rocky, but rich in small harbors. The W. coast of Asia Minor, about 10 miles long in a straight line, is much cut up, and fringed with numerous islands. Formerly Greek colonies flourished here, with numerous harbors and cities, but now only Smyrna is of any importance. The Hellespont and the Dardanelles lead to the Sea of Marmora, the Thracian Bosphorus to the Black Sea, whose southern coast, about 180 miles long, is rather poorly articulated, but rich in small harbors, of which Sinoob and Trebizond are the most important. The mountains of Koordistan consist of an imposing system, with difficult passes, and form the western border of the plateau of Iran. The highlands of Armenia and Asia Minor are bounded S. by a range which branches off from the mountains of Koordistan, and terminates W. at the Bay of Iskanderoon, separating Armenia from Mesopotamia. To the N. the border range of the plateau continues to the vicinity of Tiflis, and runs along the coast of the Black Sea to Scutari. In the interior of Asia Minor the ranges of Taurus and Anti-Taurus reach a height of 11,000 feet, and form the boundary towards Syria. The Cilician passes afford the only communication between the two countries. Armenia is covered with high mountains, of which Ararat, 16,250 feet high, is the most remarkable. Asia Minor is to some extent steppe land, in many places exceedingly fertile. To the S. of Asia Minor and Armenia, the Lebanon system, consisting of various ranges, runs from N. to S., losing itself to the E. in the Syrian desert, which forms the peninsula of Arabia. Turkey owns only the narrow coast belt, called Hedshas, which, however, is more fertile than the rest of Arabia, as the border ranges which it contains attract some moisture. The lowland of Mesopotamia is a desert W. of Euphrates, and between the Euphrates and Tigris, a steppe-land broken up by some ranges of hills; but from the point where the two streams unite, to their mouth in the Persian Gulf, a distance of about 100 miles, stretches a flat alluvial plain, which in antiquity was the richest cornland of Asia. These two rivers are the largest in Asiatic Turkey. The Euphrates rises in the plateau of

Fig. 2538. — CASCADE IN THE GORGES OF MOUNT TAURUS.

Armenia, breaks through the southern border range near the sources of the Tigris at Diarbekr and reaches the Persian Gulf after a course of 350 geographical miles. The Tigris is 220 geographical miles long from its source to its union with the Euphrates. The region where the two streams approach each other was very rich and densely peopled in antiquity. Here stood Babylon and over and over again new cities arose on the ruins of the old; now, Bagdad stands near. The plateau of Syria is split by a deep furrow between the Lebanon and Anti-Lebanon ranges, in which the Orontes flows. The Leontes, Jordan, and Kishon water Syria and Palestine, the Kishil-Irmak (Halys) Meander, and Hernus, water Asia Minor. Politically, Asiatic Turkey is divided into—Armenia, with the city of Erzeroum, which carries on the transit traffic with Persia, the border fortress of Kars, and the city of Van; Koordistan, with the cities of Diarbekr, Nisibin, Masdin, Mosul (in whose vicinity are the ruins of Nineveh), Bagdad an important commercial place, and Hille (on the ruins of Babylon); Irak Arabi, comprising Southern Mesopotamia, with the city of Basra, the starting-point of the caravans to Mecca; El Dschesireh, comprising the northern part of Mesopotamia, with the cities of Rakka and Orfa; Asia Minor or Anatolia, with the

cities of Brusa, at the foot of the Olympus (up to 1458 the capital of the Osmanli empire), Scutari (a suburb of Constantinople), Kjutahia, Smyrna, Sinoob, Angora, Kaisarijeh, Adhna, and Tarsus; Syria and Palestine with the cities of Haleb, Tskanderoon, Autakijah, Damascus, Tadmor, Baulbec, Tripoli, Beyroot, Saide, Zor, Jaffa, Jerusalem,—these two latter named cities are now being connected by railroad—and Gaza, the starting-point of the caravans to Egypt; and finally, the Arabian possessions with Mecca and Medina. The above provinces were divided into 14 villages previous to the war of 1877-1878; but two of these had to be ceded to Russia, by Art. 58 of the Treaty of Berlin, it was stipulated that there should be annexed to Russia the former Turkish possessions in Asia comprising "The territories of Ardahan, Kars, and Batoum, with the port of Batoum as well as all the territories comprised between the former Russo-Turkish frontier and a line beginning at the Black Sea, and extending to a point to the north-west of Khorda and to the south of Artvin." The provinces thus ceded to Russia are estimated to embrace an area of 5,670 sq. m., with a population of 600,644, including 417,602 Mahometans. By a treaty, signed June 4, 1878, between the British Government and that of the Ottoman Empire, entitled "Convention of defensive alliance between Great Britain and Turkey," it was settled that Asiatic Turkey should be placed under British protection, to be defended, if necessary, "by force of arms" against any invader, and that, "in return, the Sultan promised to England to introduce necessary reforms, to be agreed upon later between the two powers, into the government; and for the protection of the Christians and other subjects of the Porte in these territories; and in order to enable England to make necessary provision for executing her engagements, his Imperial Majesty the Sultan further consented to assign the Island of Cyprus to be occupied and administered by England.—The European population of Turkey is composed of many different elements. In antiquity the Greek race lived in the peninsula, and worked out a rich civilization; the traveller discovers with astonishment numerous ruins of cities, with their temples and aqueducts and other traces of a former civilization, in places where there is now only scanty pasture for goats. The Greek language still lives outside of Greece in Thessaly, in the Chalcidian peninsula and in south-eastern Thracia. In the north-western part of the country lived the Illyrians, belonging to the Iudo-Germanic race; they were subdued spiritually by the Greeks, materially by the Romans. It was during the Middle Ages that the Slaves first penetrated into their territory, the present Dalmatia and Bosnia; and, under the name of Albanians or Arnauts, the Slaves still inhabit the mountain regions S. of Montenegro as far as the Gulf of Corinth. Thracians, Getes, and Dacians lived E. of Macedonia, in the present Bulgaria, Wallachia, Moldavia, and Transylvania. Their empire was crushed by the Emperor Trajan; but, singularly enough, these nations have preserved up to this very day the Roman mark which, at that time, was stamped upon them by violence. In the present Rumania, they call themselves *Rumuni*; that is, Romans. Of the Goths and Longobards, who invaded the country in the early Middle Ages, no trace can be found. Then came the Slaves, and afterwards a Finnish people, the Bulgarians, whose empire lasted to the time of the Turks. They number now about 4,500,000, are Greek Catholics, and are settled S. of the Danube, in Bulgaria, Macedonia, and Thracia. The Franks conquered Constantinople in 1203; and in the same century the Venetians took possession of Crete and the opposite coast regions. Next followed the invasion of the Osmanlis from Gallipoli. They live scattered, and their number in the peninsula is not over 1,000,000. Although they are the ruling race, their number must be kept up by immigration from Asia. There are, moreover, about 400,000 Armenians, as many Gypsies, 75,000 Jews, 400,000 Tcherkassians, and a minor number of other tribes in European Turkey. In Asiatic Turkey the largest part of the population belongs to the Caucasian race. Of the Indo-Germanic family of this race, Persians live in the provinces of Bactria and Sogdiana, Koords in the mountains of Koordistan, and Armenians around the sources of the Euphrates and the Koor. The Armenians formerly possessed a large empire, but it has been divided between Persia, Russia, and Turkey; and the greater part of the nation now wanders around the world as peddlers; they are Christians. Of the Shemitic family, the Aramaic branch occupies the plateau of Armenia, Syria, and Mesopotamia. In these regions the Syrians and Chaldeans formerly possessed powerful empires. The Hebrew branch occupied the coast-land of Syria and Palestine. The Turkish people belong to the Tartar-Finnic family of the Mongolian race. Issuing from the Altai Mountains, their original home, they have spread widely, and they now form the ruling race in the Asiatic part of the Turkish empire. They are most densely settled in Asia Minor, where they distinguish themselves as agriculturists.—The cultivation of the country is very far from corresponding to the exceedingly rich resources, partly on account of the bad administration, partly on account of the indolence of the population. The soil is almost everywhere very fertile, and could produce all kinds of fruit in abundance. About 40 per cent, is in fields and in vineyards, 14 in forest, 11 in pasture, 60 in meadows, and 29 is unproductive. Agriculture is carried on in a most primitive manner. Maize, wheat, and buckwheat are the principal cereals; but, with the exception of the Danubian countries, there is nowhere produced a surplus above the home demand. Almonds, lemon, orange, and olive trees are also extensively cul-

tivated. Cattle-breeding is a very important branch of the national industry. The horses are not equal to the Arabian, but they are strong and useful. The breeds of mules and asses are good. The buffalo plays a considerable part in agriculture. As large districts still lie waste, wild animals, such as bears, wolves, &c., and game, such as the wild boar, the stag, the deer, &c., abound, and hunting is a remunerative occupation. Mining is much neglected; some gold, silver, iron, lead, copper, sulphur, and quicksilver are produced in Macedonia. The circumstances that all trades are still carried on in the old traditional fashion, and no use is made of the inventions and progress of foreign nations, is very characteristic of the state of manufacturing industry. Nevertheless, all the principal manufactures such as carpets, leather goods, arms, &c., are distinguished both for their excellence of workmanship and their fine taste in form and color. But these good qualities are now rapidly vanishing. Formerly, many costly textile fabrics, arms, &c., were exported from Turkey; but the country has now become inundated by the importation of cheap machine-made goods, and this change has almost crushed its manufacturing industry. Woollen and cotton goods are extensively manufactured. The traffic in the interior suffers much from bad administration, and from the want of sufficient means of communication. Good roads are very scarce, and the common roads are suited only for beasts of burden, or for vehicles of the most primitive construction. In 1850, there were, in the whole empire, only 958 miles of railroad open for traffic. The foreign commerce, both by land and by sea, is exclusively carried on by foreigners, Armenians, and Greeks, as the Osmanli is too proud and too lazy to do it himself.—*Govt.* The fundamental laws of the empire are based on the precepts of the Koran. The will of the Sultan is absolute, in so far as it is not in opposition to the accepted truths of the Mohammedan religion, as laid down in the sacred book of the Prophet. Next to the Koran, the laws of the "Mulleka," a code formed of the supposed sayings and opinions of Mohammed, and the sentences and decisions of his immediate successors, are binding upon the sovereign as well as his subjects. Another code of laws, the "Canon-nameht," formed by Sultan Solymán "the Magnificent," from a collection of "hatti-sheriffs," or decrees, issued by him and his predecessors, is held in general respect, but merely as an emanation of human authority. The Koran and the "Mulleka" alone, both believed to be of divine origin, embody the fundamental laws of the state, and prescribe the action of the theocratic govt. A charter of liberties, not yet fully executed, was granted by Sultan Abdul Medjid to his subjects in the "Hatti-Humâyoun" of February 18, 1856. The principal provisions of this imperial order are as follows:—"Full liberty of worship is guaranteed to every religious profession. No one can be forced to change his religion. No legal documents shall acknowledge any inferiority of one class of Turkish subjects to another, in consequence of difference in religion, race, or language. All foreigners may possess landed property, while obeying the laws." The legislative and executive authority are exercised, under the supreme direction of the Sultan, by two high dignitaries, the *Grand-Vizier*, the head of the temporal govt., and the *Sheik-ul-Islam*, the head of the Church. The *Grand-Vizier* is President of the *Divan*, or Ministerial Council, divided into nine departments.—*Turkish Usages.* The national dress of the Turks is loose and flowing; that of the women, with the exception of the turban, differing but little from that of the men (Fig. 2539). The shape and color of the turban serves to distinguish the different orders of the people, and the functions of the public officers. Latterly, however, it has become fashionable to imitate the dress and manners of other European nations; though the former is inconvenient in consequence of the numerous ablutions, the performance of which is enjoined by the Koran. All women of the upper classes, when they appear in the streets, have their faces carefully veiled. And such is the privacy of the harem, or women's apartments, that, unless on very rare occasions, all males are excluded from them except the master of the family. Polygamy is permitted by the law of the Prophet, but

Fig. 2539. — GIRL OF BAGDAD.

is a privilege not often resorted to. If a man marry a woman of equal rank, the marriage of any other wife is frequently guarded against by the marriage contract. In cases of polygamy, the wives are usually either slaves, or women of an inferior rank to the husband. The seclusion, or rather, slavery of the women, powerfully contributes to the maintenance of the worst prejudices of the Ottomans. But the practice is deeply rooted in Oriental habits, and will not be easily changed. There is a regular slave-market at Constantinople; but slaves in the East, and especially in *T.*, are far from being in the depressed condition we might suppose. The laws of *T.* protect the slave from ill-usage; and, in this respect, the customs of the country are in complete harmony with the laws. "The most docile slave," says Marshal Marmont, "rejects with indignation any order that is not personally given him by his master; and he feels himself placed immeasurably above the level of a free or hired servant. He is as a child of the house; and it is not unusual to see a Turk entertain so strong a predilection for a slave he has purchased, as to prefer him to his own son. He often overloads him with favors, gives him his confidence, and raises his position; and, when the master is powerful, he opens to his slave the path of honor and of public employment." The Turks are excellent horsemen, and throw the *djerid* or lance with the greatest dexterity and force; but, excepting this exercise and that of wrestling, they indulge in no active exertion. Their delight is to recline on soft verdure under the shade of trees, and to muse without fixing their attention, lulled by the trickling of a fountain or the murmuring of a rivulet, and inhaling through their pipe a gently enebriating vapor. Such pleasures, the highest which the rich can enjoy, are equally within the reach of the artisan or the peasant. They never dance themselves, but enjoy public dances, the performers in which, however, are reckoned infamous. Turkish usages are, in truth, in almost all respects, the opposite of those of the W. European nations. The close and short dresses of the latter, calculated for promptitude of action, appear in their eyes to be wanting both in dignity and modesty. They reverence the beard as the symbol of manhood and the token of independence, but they practise the depilation of the body from motives of cleanliness. In performing their devotions, or on entering a dwelling, they take off their shoes. In inviting a person to approach them, they use what with us is considered a repulsive motion of the hand. In writing they trace the lines from right to left. The master of a house does the honors of the table by serving himself first from the dish; he drinks without noticing the company; and they wish him health when he has finished his draught. They lie down to sleep in their clothes. They affect a grave and sedate exterior; their amusements are all of the tranquil kind; they confound with folly the noisy expression of gaiety; their utterance is slow and deliberate; they even feel satisfaction in silence; they attach the idea of majesty to slowness of motion; they pass in repose all the moments of life which are not occupied with serious business; they retire early to rest, and they rise before the sun.—*Hist.* The earliest notice of the Turks or Turcomans, in history, is abt. the year 800, when, issuing from various parts of Turkestan, they obtained possession of a part of Armenia, called from them Turcomania. They afterwards extended their conquests over the adjacent parts of Asia, Africa, and Europe, occupying Syria, Egypt, and eventually the territory that remained to the Greek empire. In 1453 Constantinople was taken by Mohammed II., and became the capital of the empire. The Morea and the Islands were afterwards overrun, with parts of Hungary, the Crimea, and the shores of the Black Sea. They next took the whole of the country now forming Turkey in Asia, the Hezja in Egypt, and the regencies of Tripoli, Tunis, and Algiers. From the accession of Mohammed IV. in 1648, the Turkish empire began rapidly to decline, the vice and profligacy of the harem and seraglio being reflected in every branch of the state. The shelter given to Charles XII. of Sweden, in 1711, led to the first war with Russia, which must have ended in the ruin of that empire but for the cupidity of the grand-vizier, who accepted a bribe to allow Peter the Great and his army to escape. From that time till 1774 the war with Russia was frequently renewed, and, by the peace of the latter year, a large extent of territory and the Black Sea were ceded by the Porte to Russia. In the campaign of 1787 the Turks were still more unfortunate, and, though in 1789, under Selim III., they retook Belgrade, they were elsewhere defeated. In 1807 the Emperor Alexander declared war against the Porte, and in the campaign advanced his frontier to the Pruth by the conquest of Bessarabia; the next severe loss of the Turks sustained was from the revolt of the Greeks and the subsequent independence of their country. In 1854 war was once more declared against Turkey by Russia, when England, France, and Sardinia joined the Porte to enable the Sultan to resist the threatened invasion of his dominions; the burning of the Turkish fleet off Sinope, the campaign on the Danube, the battles of Alma, Inkerman, Balaklava, and the bombardment and capture of Sebastopol, were some of the results of the two years' war with Russia; Turkey, for the first time in nearly a century, sheathing the sword without the loss of a foot of territory. Subsequently, *T.* engaged in a war with the Montenegrins, who sought to cast off her yoke; and, later, was concerned in suppressing revolutionary tendencies in the Danubian principalities. In 1875, an insurrection broke out in Herzegovina, and in October, Turkey declared her partial insolvency. Other grave complications threatening the dismemberment

of the empire, the 6 great European powers proposed a scheme of reforms in Feb. 1876, which was mainly accepted by the Sultan, but was of no effect in consequence of the opposition of the Turkish fanatics to Christian equal rights. On May 30, Sultan Abdul-Aziz was deposed, and was succeeded by his nephew, Murad V., who, on June 4, announced his predecessor's alleged suicide. Three months later, Murad V. was deposed on proof of insanity, and was succeeded by his brother, Abdul-Hamid II. On Jan. 18, 1877, a resolution was passed by the Grand Council of Turkey, presided over by Midhat Pasha, rejecting absolutely all the proposals of the European Powers for administrative powers, which gave pretext to Russia to declare war against Turkey, April 21. During the sanguinary conflict which ensued, the Turkish troops fought with heroic valor, but they were eventually obliged to yield to superior numbers, and after the fall of Plevna, the Porte sued for peace, and an armistice was accordingly signed in Feb. 1878. A treaty of peace was soon afterwards signed at San Stephano (March 3), but its provisions were considerably modified by the representatives of the great powers assembled in Congress in Berlin. Pop. (1897), in Europe, 4,000,000; in Asia, 16,000,000; and in Africa, 1,500,000; total, 21,500,000. For Turko-Greek War, of 1897, see GREECE.

Turkey, in *S. Carolina*, a twp. of Williamsburg dist.

Turkey, *n.* (*Zoöl.*) This magnificent bird, that has so improperly received the name of a country to which it is entirely foreign, composes the genus *Meleagris*, family *Phasianidae*. There are two species, both indigenous to N. and Central America. The Wild *T.* of the U. States (*M. gallopavo*), the largest of the gallinaceous birds, now rare on the Atlantic coast, but still found in large flocks in the regions farther west, is abt. 3½ feet in length, being somewhat larger than the domestic variety. The general color of the plumage is black, variegated with bronze and bright glossy-green, in some parts changing to purple; the quills are green-gold, black towards the end, and tipped with white; the tail consists of 18 feathers; on the breast is a tuft of black hairs, 8 inches in length; in other respects it resembles the domestic bird, especially in having a bare carunculated head and neck, a fleshy dilatible appendage hanging over the bill, and a short blunt spur or knob at the back part of the leg. Tame *T.*, like every other animal in a state of domestication, vary considerably in color, but the prevailing one is dark-gray, inclining to black, with a little white towards the end of the feathers. The young males do not put out the tuft on the breast till they are about three years old. The females lay their eggs in the spring, generally in a retired and obscure place, as the male will often break them. They are usually from 14 to 18 in number, white mixed with reddish or yellow freckles; the female sits with so much perseverance, that if fresh eggs be introduced into the nest immediately upon the young being hatched, she will long continue the business of incubation. Young *T.*

Fig. 2540. — OCELLATED TURKEY, (*Meleagris ocellata*.)

require great care in rearing, being subject to a variety of diseases from cold, rain, and dews; but so soon as they are sufficiently strong, the hen abandons them entirely, and they are capable of enduring the utmost rigors of winter. The motions of the male, when agitated with desire, or inflamed with rage, are very similar to those of the peacock; he erects his tail, and spreads it like a fan, while his wings droop and trail on the ground, and he utters at the same time a dull, hol-

low sound; he struts round and round with a solemn pace, assumes all the dignity of the most majestic of birds, and every now and then bursts out abruptly into a most unmusical gurgle. A second species of the *T.* is found in Central America, termed the Ocellated *T.* (*Meleagris ocellata*) (Fig. 2540), which is much more brilliant in plumage than the common variety. It is nearly of the same size, but its feathers are of a beautiful metallic-green or bronze color, variegated with black, gold, and azure-blue.

Turkey-buzzard, *n.* (Zool.) See VULTURIDÆ.

Turkey Creek, in Louisiana, rises in Madison parish, and flowing S.W., unites with Boeuf Bayou in Franklin parish.

Turkey Hill, in Pennsylvania, a village of Lancaster co.

Turkey Lake, in Indiana, in the N.E. of Kosciusko co., is abt. 12 m. long.

Turkey-poult, *n.* A young turkey.

Turkey-red, *n.* A brilliant red dye obtained from madder, used for dyeing calicoes and woollen cloths.

Turkey River, in Iowa, is formed by the junction of the N. and Middle Forks, in Fayette co., and flowing S.E., falls into the Mississippi in Clinton co.

Turkey-stone, *n.* (Min.) Same as NOVACULITE.

Turkish, *a.* (Geog.) Pertaining, or having reference to Turkey, or to the Turks.

Turkism, **Turkism**, (*-izm*) *n.* The manners, characteristics, and religious ideas peculiar to the Turks.

Turkistan, or **Turkestan** (the country of the Turks), a name used to signify an almost undefined tract of territory in Asia, inhabited by the Onigours, Kirgheez, Usbecks, Turcomans, Osmanlis, Nogays, and other nomad tribes who devastated Europe from the 4th to the 12th century, and received the general name of *Turks*. The western portion, commonly known as *Independent Tartary*, *Western Turkestan*, *Great Bokhara*, or simply *Turkestan*, or *Turan*, lies between Lat. 36° and 55° N., Lon. 52° and 89° E., and comprehends various states or khanates, viz.: Khokan, in the N.E.; Khiva, in the W.; Bokhara, in the E. and center; Khoondooz, or Badakshan, in the S.E.; and Kafiristan, a small outlying state, now hardly considered as belonging to Turkestan, being separated from the others by the mighty range of the Hindu-Koosh Mountains. In modern times it has long been inhabited by two classes of people: the settled population, including the Sarts and Tajiks, of ancient Persian stock; the Uzbecks (the dominant race), Hindus and Jews; and the nomadic population of Turkomans, Kirgheez, Karakalpaks, &c., largely predatory in habits, Persia having suffered severely from their plundering and slave-making incursions. Since the Russian occupation these have been forced to adopt peaceful habits and occupations. *Eastern Turkestan*, *Chinese Turkestan*, *Little Bokhara* or *Turfan*, is bounded on the N. by the Tian-Shan mountains, W. by the Pamir table-land, and S. by the Thibet and Cashmere highlands—*Hist.* From the earliest times, Turkestan has played a prominent part in Asiatic history, coming into early relations with the Persian and Macedonian empires, while in the 8th century A. D. it was conquered by the Arabs, and became a part of their extended domains. It was later overrun by the Mongol hordes of Genghiz Khan, and subsequently became the center of the power of the all-conquering Tamerlane or Tamerlane. Under him and his immediate successors, Samarcand, his capital, became a prominent seat of such learning and enlightenment as then existed, though it has since fallen into almost complete decay. Turkestan was afterwards held by various dynasties, and in time broke up into a number of independent khanates, as above named. The more recent history of Turkestan is one of wars between Bokhara, Khokand, and Khiva. In 1849 the Afghans invaded and conquered South Turkestan, and in 1864 Russia subdued Tashkend and Khokand; in 1866 invaded Bokhara, and in 1868 forced its emir to cede Samarcand to Russia. Khiva was invaded and conquered in 1873; and after a fierce struggle in 1875-76, Khokand was conquered and annexed. The Tekke Turkomans were subjugated in 1880-81, and Merv became a Russian province. The country is now divided into Russian Turkestan, including Khokand (now Fergana) in the N. and N.E., Merv and the Tekke Turkoman country in the S.W., Khiva, under Russian influ-

Fig. 2541.

A TURKMAN ESCORT OF CARAVANS IN THE HYRCANIAN DESERT.

ence, in the W., and Bokhara in the E. and center, and Afghan Turkestan in the S. Russian Turkestan is now divided into the 3 provinces of Sir Daria, Fergana, and Samarcand, and has an area of 257,131 sq. m., and a population of 2,670,035. The capital is Tashkend, in Sir Daria. Russia also took possession of Kuldja, in Chinese Turkestan, in 1870, but has restored it, while in 1877 the Chinese defeated an insurgent emir, and regained control of the whole country. A railroad now crosses Russian Turkestan, and trade is rapidly increasing.

Tur'lupin, *n.* (Eccl. Hist.) A French synonym for LOLLARD (*q. v.*).

Tur'maline, *n.* Same as TOURMALINE (*q. v.*).

Tur'man, in Indiana, a township of Sullivan co. Pop. (1897) 2,010.

Turmeric, *n.* (Bot.) See CURCUMA.

Turmeric-paper, *n.* (Chem.) A test-paper, made by immersing unsized paper in tincture of turmeric. It is used as a test for alkalis, which changes its yellow color to reddish-brown, as do also their carbonates and phosphates, some of the alkaloids, and boracic acid.

Turmoil, *n.* Disturbance; tumult; uproar; harassing agitation or labor.

—*v. a.* To harass with agitation or disturbance; to harass; to disquiet.

—*v. n.* To be disquieted or harassed.

Turn, *v. a.* [A. S. *tyrnan*; Fr. *tourner*; Lat. *tornare* = Gr. *torneû*, to round off.] To turn on a lathe; to give circular or other forms to by means of a lathe or revolving cutting-tool; as, to turn ivory or metal, to turn a tobacco-stopper or a bed-post.—Hence, to shape; to form; to mould; to adapt; to put in proper condition; as, "His whole person is finely turned." (*Tatler*).—To cause to move in a circular course; to change or shift, as sides; to cause to go about, either partially, wholly, or repeatedly; to cause to revolve; to cause to move upon a centre, or as if upon a centre; as, to turn the head round, to turn back.—To alter, as a position; to put the upper side downward, or one side in the place of the other; to bring out the inside of; as, to turn a garment, to turn a beefsteak on the gridiron.—To change or alter, as the posture of the body or direction of the look; to deflect; to tend or incline differently; to change direction to or from any point;—employed both in a literal and figurative sense; as, to turn a ship from her course, to turn one's eyes on a person, to turn the attention to or from something.—To direct by a change to a certain purpose or object; to deviate; to move from a given course or straight line; to direct, as the inclination, thoughts, or mind; to keep passing or changing in the course of trade; to transfer; to use or employ; as, to turn money into land, to turn a favorable opportunity to advantage.—To change or alter in any manner; to transform; to vary; to metamorphose; to translate; to alter or change, as color; to substitute by change, as the manner of writing; to convert; to change, as from one opinion, party, or line of conduct, to another; to change or alter from one purpose or office to another; to dissuade from a purpose, or cause to change sides;—frequently with *to* or *into* preceding the effect or result of the change; us, to turn prose into poetry, to turn orange into red, to turn English into French, to turn a Republican to a Democrat; to turn an ague to a fever; to turn from good to bad, &c.—To cause to ferment and become sour; to make acid; to sour; as, the milk has quickly turned.

To be turned off, to exceed; to be advanced beyond; as, she is turned off fifty.—To turn a corner, to pass round a corner.—To turn the enemy's flank. (*Mil.*) To pass round and assume a position behind it, or sideways with it.—To turn aside, to avert.—To turn away. (1.) To discard; to discharge or dismiss from service; as, to turn away a servant. (2.) To avert; to put aside from; as, we pray to God to turn away some evil from us.—To turn back, to return or give back; as, to turn back what one has received from another. (R.)—To turn down, to fold, press, or double down; as, to turn down a leaf in a book.—To turn in, to fold or double under; as, to turn in the edge of a blanket.—To turn in the mind, or to turn over in the mind, to ponder, revolve, meditate, or reflect upon.—To turn off. (1.) To dismiss contemptuously or ignominiously; as, to turn off a kept mistress. (2.) To give over; to reduce; as, we are not turned off to that extremity. (3.) To divert; to deflect; as, to turn off sad thoughts from the mind. (4.) To get through; to accomplish; to perform; as, he turns off a great quantity of bad poetry.—To turn one's coat, to change sides; to rat; to go over to the opposite party; to act the renegade.—To turn out. (1.) To expel; to drive out; as, he turned his son out of doors. (2.) To place at ley or pasture; as, to turn horses out to grass. (3.) To produce, as the result of labor, or any mechanical or manual process; to furnish, as a perfected thing; as, that man turns out a good article.—To turn over. (1.) To transfer; as, he turned over the business to his son. (2.) To cause to roll over; to cause the change of sides of. (3.) To overset; to capsize; to overturn; as, to turn a man head over heels. (4.) To open and examine leaf by leaf, as a book; as, to turn over a novel.—To turn tail, to flee ignominiously.—To turn the back, to retreat; to flee; to depart from; as, he turned his back from temptation.—To turn the back on or upon, to flout; to ignore; to treat with contempt or disdain; to reject or refuse with contumely; as, to turn the back upon one's poor relations.—To turn the die, or dice, to change the course of luck or fortune. "Fortune, when they least expect it, turns the dice."—*Dryden*.

To turn the edge of, to blunt; to make dull; to deprive of keenness; as, to turn the edge of a razor.—To turn the head or brain of, to infatuate; to make giddy; to make mad, wild, or enthusiastic; to overthrow the

mental equilibrium of; as, he has turned his brain with religious crotchets.—To turn the scale, to cause to preponderate; to change, as the state of a balance;—generally, to insure favorableness or success; as, between rich and poor, money turns the scale.—To turn the stomach of, to nauseate; to sicken; to disgust.—To turn the tables, to reverse good fortune by ill.—To turn to, to have recourse to; to make reference to; as, to turn to a person for information.—To turn upon, to retort; to throw back.

—*v. n.* To move round; to have a circular motion; to wheel or whirl round; to revolve entirely, partially, or repeatedly; as, a man turns on his heel, a wheel turns on its axis.—Hence, to hinge; to depend on for determination or decision; to revolve upon, as the chief support; as, the question turns upon this point.—To be brought about eventually; to result or terminate; to issue; to come to pass; as, these inventions have not turned to much account.—To change the course, current, or direction; to deviate; to take a different way or tendency; to pursue a different course of life; to be deflected; to change the mind or conduct; as, he will relent, and turn from his displeasure; they have turned from their evil courses.—To be changed, altered, or transformed; to become metamorphosed or transmuted; also, to become by change; as, to turn traitor, water turns to ice, suspicion turned to jealousy.—To exercise the art or trade of a turner; as, he is engaged in turning.—To sour; to become acidulated; as, ale turns in hot weather.—To be nauseated or revolted; as, it quite turns my stomach.—To become giddy; as, his head is turned with his good fortune.—To change about; as, the tide turns from flow to ebb, and conversely.—To lean in the contrary direction;—said of scales.

(*Surg.*) In obstetrics, to bring down the feet of a child in the uterus, in order to render delivery more easy.

(*Print.*) To insert a type of similar thickness, in lieu of any sort which has run out.

To turn about, to move the face to another quarter; as, he turns about his business.—To turn away. (1.) To digress or deviate. (2.) To go from; to depart.—To turn in. (1.) To have an inward declination; as, his knees turn in. (2.) To go to bed; as, it is time to turn in. (3.) To enter for accommodation or entertainment; as, let us turn in this hotel.—To turn off, to deviate from a direct line or course; as, the street turns off at right angles.—To turn on or upon, to retaliate; to retort; to answer; as, "Pompey turned upon him, and bade him be quiet." (*Bacon*).—To turn out. (1.) To become dislodged or dislocated, as a bone. (2.) To rise from bed; as, I turned out early this morning. (3.) To project; to have an outward bias; to protrude; as, his feet turn out in walking. (4.) To have issue, effect, or result; to terminate in; to appear in the end; as, he turns out to be an unmitigated scamp.—To turn over, to roll; to tumble; to gyrate; to turn from side to side.—To turn to benefit, profit, or advantage, to become worth the while; to promise success; as, some men have the knack of turning other people's slips to their own advantage.—To turn under, to be folded downward or under.—To turn up, to bend upward; as, to turn up one's sleeves.—To transpire; to occur; to come to pass; as, "Something will yet turn up for Micawber." *Dickens*.

—*n.* Act of turning; movement or motion in a circular direction; rotatory action; revolution; as, the turn of a wheel round its centre.—Change of direction; new arrangement, order, or disposition of things; alteration of bent or course; as, his conduct took a turn for the better.—Change; alteration; vicissitude; as, the slippery turns of fortune.—One of the successive portions of a course; meandering; direction; hence, a winding; a bend or bending; also, a walk to and fro; as, let us take a turn in the garden, the river takes a turn at that place.—Successive course; incidental opportunity; proper chance; due time; time at which, by successive vicissitudes, anything is to be had or done; appropriate occasion; as, let each take his turn.—Occasional act of kindness or ill-will; reigning inclination or course; as, to do a person a good turn.—Convenience; occasion; purpose; exigence; as, this will do to serve my turn.—Form; cast; shape; manner; mould; mode; fashion,—employed both literally and figuratively; hence, manner of arranging words in a sentence; style of signification; as, female virtues are of a domestic turn, a person of an agreeable turn, turn of thought, conversation, &c.—A step of the ladder at the gallows. (R.)—One round of a rope or cord; as, a turn of a hawse or cable.

(*Mus.*) A grace marked thus ♪, indicating that the note above it, one degree higher, must be struck before it shortly, then passed quickly through the note itself and turned from the note a degree below into the note itself over which the mark is placed.

—*pl.* (*Med.*) The menses.

By turns, in succession; alternately; one after another; as, "By turns the tuneful Muses love to sing." (*Dryden*).—At intervals; as, "They feel by turns the bitter change of fierce extremes." (*Milton*).—In turn, in due order of precedence or succession; as, to go on duty in turn.—To a turn, perfectly, to a nicety; as, the beef is roasted to a turn;—in allusion to the turn of the spit whereon it is cooked.—To take turns, to alternate; to follow by succession.—Turn and turn about, an alternate ratio of duty or obligation; as, to stand a treat for liquor, turn and turn about.—Turn of life. (*Med.*) The time of the final cessation of the menses in women.

Turnagain, in Alaska, an island at the entrance of Cook's Inlet, abt. 4 m. long and 2 wide; Lat. 61° 8' N., Lon. 150° 30' W.

Turn-beuch, *n.* A simple portable lathe, used by clockmakers and watchmakers.

Turn'-cap, *n.* A cowl for a chimney, made to revolve with the wind.

Turn'-coat, *n.* One who forsakes his party or principles; a renegade; a rat.

Turneff, in the Caribbean Sea, a group of islands near the coast of British Honduras; Lat. 17° 36' N., Lon. 87° 46' W.

Turn'er, *n.* One who turns; especially, one who performs the operation of turning things by means of a lathe; as, a wood- or ivory-turner. — Among the Germans, a gymnast; an athlete.

Turn'er, JOSEPH WILLIAM MALLARD, the most distinguished landscape painter of the English school, b. in London, 1769. Early evincing a marked predilection for art, he, in 1789, entered as a student at the Royal Academy, where he studied assiduously for three years, and produced some of his minor pictures. In 1799, he was elected A. R. A., and, in 1802, became R. A. Down to this period he was principally known as a painter in water colors. Turning his attention to oils, he during the next half century exhibited more than 200 pictures, including some reproductions of nature of marvellous skill and beauty. Among his best works (the values of which average from \$6,000 to \$15,000) may be mentioned the *Wreck*; the *Old Temeraire*; the *Burial of Wilkie*; the *Death of Nelson*; *Ulysses Deriding Polyphemus*; *Crossing the Brook*; *Rome*; *Venice*; *San Rising Through a Mist*; *Wreck of the Minotaur*; *Bay of Baix*; *Dido bewailing Carthage*; *Calais Pier*, &c., &c. T., who has been styled the "English Claude," combined in his works comprehension and truth to nature. Brilliance and fervor of imagination, and breadth of observation, are indeed conspicuous; but these are only modes of that vivid, almost intuitive penetration with which he entered into the arcana of nature. As a colorist, T. ranks among the best painters of modern times. Unsocial and peculiar in his habits — penurious indeed, — T., in all that related to art, exhibited the most extended munificence. He bequeathed the greater bulk of his large fortune to found almshouses for the benefit of reduced artists, and left his unsold pictures — many of them among his choicest examples — to the British nation. These works, about 100 in number, form the contents of the "Turner Room," in the National Gallery, London. D. 1851.

Turn'er, in *Maine*, a post-vill. and twp. of Androscoggin co., 27 m. W.S.W. of Augusta.

Turnera'cea, *n. pl.* (*Bot.*) A small order of plants, alliance *Violales*. *Diag.* Polypetalous flowers, perigynous contorted petals, forked styles, and exstipulate leaves. — They are herbaceous plants, exclusively natives of S. America and West Indies. They have little economic interest.

Turn'er's, in *New York*, a post-village of Orange co., 5 m. N. of New York city.

Turn'ery, *n.* Art of a turner; art or practice of forming into a cylindrical or other shape by the lathe. — Things or wares formed by turning on the lathe.

Turnhout, (*toorn'hout*), a town of Belgium, prov. of Antwerp. *Manuf.* Carpets, lace, paper, &c.

Turn'ing, *n.* The process by which a circular form is given to wood and other materials by means of a lathe and cutting tools, as in wood or metal T.; or by the thrower's wheel, which is a species of lathe, with shaping instruments, and in the manufacture of earthenware. The lathe by which ordinary wood T. is effected, called *turning-lathe*, is a machine for moving the material to be wrought in such a manner that, being fixed opposite to the tool, any point in the circumference will act upon the whole circle in exactly the same manner.

Turn'ing-point, *n.* The point on which anything turns; that which decides a matter.

Turn'ip, *n.* [*Dan.*: A. S. *napa* = Lat. *napus*, a kind of turnip. The *turn* is unaccounted for.] (*Bot.*) A biennial plant of the genus *Brassica*, (*B. rapa*.) It has lyrate hispid leaves, and the upper part of the root, especially in cultivation, becomes swollen and fleshy. It is a native of Europe and the temperate parts of Asia, growing in borders of fields and waste places. It has been long cultivated, and is to be found in every garden of the temperate and cold parts of the world as a culinary esculent; in many countries it is also extensively grown in fields for feeding cattle and sheep. The cultivated varieties are very numerous. In them, the upper part of the root assumes a globose, oblong, or roundish depressed form. Some are common to the garden and the farm, and some of the largest kinds attain a size as to weigh 20 or 25 lbs. Although the T. is of great value for feeding cattle, it is not very nutritious, no less than 90-96 parts of its weight actually consisting of water. The *Swedish T.*, or *Ruta Baga*, extensively cultivated in Europe for feeding cattle, is regarded by some botanists as a variety of the same species, and by some as a variety of *Brassica napus*, but more generally as a variety of *B. campestris*, a species common in corn-fields and sides of ditches in the north of Europe. The young leaves of the T. are good as greens, and particularly those of the *Swedish T.*, when it has begun to sprout in spring.

Turn'ip-fly, *n.* (*Zoöl.*) The *Anthomya radicum*, a dipterous insect of the fam. *Muscidae*, which attacks the root of the turnip, whilst very young, and commits great ravages in turnip-fields.

Turn'key, *n. pl.* TURNKEYS, a person who has charge of the keys of a prison for opening and closing the doors.

Turn'out, *n.*; *pl.* TURN-OUTS. Among workmen, a STRIKE, *q. v.* — Also, a workman out on strike.

— A shunt, or siding, on a railroad. — An equipage; as, his carriage and horses formed a splendid *turn-out*.

— Net quantity of produce yielded.

Turn'-over, *n.* Act or consequence of oversetting; an

upsetting; as, a *turn-over* in a sleigh. — A kind of jam puff or pastry.

— An apprentice, in any trade, who is handed over from one master to another to complete his time.

— *a.* That may be turned down, or over something else; as, a *turn-over* wrist-band.

Turn'pike, *n.* [*turn* and *pike*.] Originally, a cross of two bars armed with pikes at the end, and turning on a pin; fixed to hinder horses from entering any gate by which the way is obstructed, in order to take toll. — Specifically, a TOLL-BAR, *q. v.* — A turnpike-road. (*Colloq.*) — In Scotland, a winding stair in houses.

— *v. a.* To form, as a public highway, in the manner of a turnpike road.

Turn'pike-road, *n.* A public road or highway, made and kept in repair by tolls levied upon travellers and passengers who go along it.

Turn'-serving, *n.* Act or practice of serving one's own turn or interest, to the exclusion of that of others.

Turn'sole, *n.* (*Bot.*) See HELIOTROPISM.

(*Chem.*) A coloring matter used as a dye, and as a chemical test, to detect the presence of free acids. See CROZOPHORA, and LITMUS.

Turn'spit, *n.* One who turns a spit in a kitchen; hence, a person engaged in some menial employment. — A variety of dog, allied to the ferriers, so called from having formerly been employed to turn a wheel on which depended the spit for roasting meat in the kitchen.

Turn'stile, *n.* [*turn* and *stile*.] A turnpike in a foot-path or by-road.

Turn'stone, *n.* (*Zoöl.*) A grallatorial bird of the fam. *Harmatopodidae*, and genus *Streptopelia*, so named from its turning over with its strong bill the stones and weeds along the margins of the sea and of lakes in search of insects, molluscs, as well as crustaceans which hide beneath them. The best known species, *S. interpres*, is about 9 inches long and 18 in alar extent. It is irregularly variegated with black, dark rufous, and white. It is found throughout N. America, on the Atlantic and Pacific shores.

Fig. 2542.
TURNSTONE, (*S. interpres*.)

Turn'-table, **Turn'-plate**, *n.* A circular table, with cross-rails fixed on its surface, supported by rollers, and capable of being turned on a central pivot, used for moving railroad-cars, trucks, &c., from one line of rails to another.

Turpentine, (*ter'pen-tine*), *n.* (*Chem.*) A semi-solid resinous substance, which exudes from various species of pine on cutting incisions in the bark. There are several kinds of T. known in commerce; that obtained from the *Pinus Abies* constitutes common T.; that from the *Pinus Larix*, or common larch, is known as *Venice T.*; that from the *Pistacia Lentiscus* forms *China T.*; and *Canada balsam* is obtained from the *Abies balsamea*. They all consist of various portions of resin, dissolved in the oil or essence of T. If the T. of the *Pinus Abies* is distilled with water, it yields about one-fourth of its weight of the essence, oil, or spirits of T., as it is variously called. The oil passes over with the vapor of the water as a volatile limpid inflammable liquid, of a peculiar penetrating well-known balsamic odor, the residue in the retort being common resin or rosin. Oil of T. is a hydrocarbon, $C_{10}H_{16}$; *sp. gr.* 0.864; boiling-point, 320°. It mixes freely with alcohol and ether, but not with water. It dissolves the fixed and essential oils, resins, sulphur, phosphorus, and india-rubber. In its purified form it constitutes the burning fluid known as *camphene*. Being a ready solvent of the gum resins, it is largely employed in the manufacture of varnish, also, in oil-paint, as a diluent of the oil. Oil of T. is a powerful grease-solvent; but only the fresh oil should be used for this purpose, as, when kept for any length of time, it gradually oxidizes into a resin, which becomes dissolved in the remaining oil. Oil of T. is remarkable in a chemical point of view, on account of the number of singular compounds that may be obtained from it. With hydrochloric acid it forms an artificial camphor, crystallizing in flattened rectangular prisms, which have an aromatic odor resembling oil of thyme. With water it forms crystalline hydrates, and with oxygen a crystalline hydrated oxide. The monohydrate of T., or *terpinol*, is an oily liquid, boiling at 334°, and having an odor like hyacinths. The oils of bergamot, neroli, lemon, thyme, caraway, and several others, contain hydrocarbons isomeric with oil of T., but they differ in their physical and chemical properties. Oil of T. is used as a burning fluid in Deville's lamp-furnace for obtaining high temperatures. It is used in medicine as a rubefacient. It has also vermifuge properties, and stimulates the urinary organs very powerfully. *Canada balsam*, which is a very white resin dissolved in oil of T. is employed in varnish-making and mounting microscopic objects. The other T. are occasionally used in medicine.

Turpentine, in *New Jersey*, a village of Burlington co., 1 m. E. of Mount Holly.

Tur'penzine, *n.* (*Chem.*) A substitute for turpentine, consisting of the lighter hydrocarbons, obtained from paraffine oil and petroleum.

Turpeth', TURPETH, or TURPETH MINERAL, *n.* (*Chem.*) The yellow basic sulphate of mercury, so called from its yellow color.

Tur'pitude, *n.* [*Fr.*, from Lat. *turpitude*.] State of departure from the law of rectitude; moral deformity; shameful wickedness; inherent baseness or villainousness of principle in the human heart; extreme depravity; baseness or villainousness of words, thoughts, or actions.

Turquino, or PICO TURQUINO, (*toor-kee'no*), a mountain of Cuba, 50 m. W. of Santiago de Cuba, 8,000 ft. high.

Turquoise, (*-koiz'* or *keez'*), *n.* [*Fr.*, said to be so called from having been first brought from Turkey.] (*Min.*) A bluish-green stone much used in jewelry. It is an amorphous form of hydrated phosphate of alumina. The finest kinds of turquoise are obtained from Persia and Arabia; but it is also found in Saxony.

Tur'rel, *n.* A cooper's tool.

Tur'ret, *n.* [*Gael. turaid*; *W. tured*, from *tur*, a tower.] (*Arch.*) A small tower, attached to, and forming part of, another tower, or placed at the angles of a church or public building.

Tur'reted, **Turrie'lated**, *p. a.* Having the form of a tower or turret. — Exhibiting turrets.

Tur'ret-ship, *n.* (*Naval*.) A species of iron-clad war vessel, in which the guns are carried in one or more iron turrets, which may be rotated either by hand-winch or by a steam-engine, so that the guns may be fired in any required direction. There are two varieties of T. S., of which the earliest and best is that which was invented by Captain John Ericsson of New York. The other variety — which in many of its features resembles the plan of Ericsson — is known as the system of Captain Cowper Coles, R. N., (though invented by Mr. Theodore R. Timby of N. York,) and this system has been adopted to some extent in the British navy (see Fig. 2543), while the American navy has adopted the system of Ericsson, usually called the *Monitor system* (Fig. 1835). One of the principal points of difference between the *Monitor* and the

Fig. 2543. — ENGLISH TURRET-SHIP.
(The Royal Sovereign.)

British T. S. is, that its hulls are almost entirely submerged, the turret or turrets being wholly above the upper deck; while, in the latter, the hulls rise higher from the water, and the turrets are sunk below the deck, except in so far as is absolutely necessary for discharging the ordnance. See VESSELS, ARMORED.

Tursheez, (*toor-sheez'*), a city of Khorassan, in Persia, situate on the borders of the Great Salt Desert, 75 m. from Mashed. *Pop.* Unascertained.

Tur'tle, *n.* [*A. S. tortel*, a turtle-dove, — a name subsequently applied by sailors to the marine chelonians of the W. Indies.] (*Zoöl.*) The name popularly applied to the marine chelonian reptiles, the characters of which are given under the name of the order CHELONIA. The Turtles form the sub-order *Cheloni*, divided into the two families *Cheloniidae* and *Sphargiidae*. The latter has been described under its name. The *Cheloniidae*, or Loggerhead family, comprises turtles whose general form is somewhat like a heart flattened on one side, and furnished in front with a pair of large flat, wing-like, scaly flippers, and behind with a pair of scaly rudders. — The best known variety of the edible species of T. is the Green T. (*Chelonia mydas*), of the warm parts of the Atlantic coast of America. It attains a length generally of 5 or 6 feet, and of from 500 to 600 pounds weight. The flesh of this T. is peculiarly delicate, and the eggs are likewise esteemed a great dainty. They are generally taken by watching them when they come on shore on moonlight nights for the purpose of depositing their eggs, when their captors secure them by turning them on their backs, so that they cannot escape by running off. They are often met with in the Atlantic, sometimes 1,200 miles from land, where they are easily captured when asleep on the surface of the water. The Hawk's-bill, or Tortoise-shell T., *Eretmochelys imbricata*, is another species, and does not attain so large a size as the one just described, seldom being found to exceed 200 pounds in weight. It is found in the warm parts of the Atlantic, and also in the Indian Ocean, but is not much thought of, as its flesh is very coarse and inferior to that of the green T. It is called the hawk's-bill T. from the curved and pointed form of the upper jaw (Fig. 575), which, however, presents but very little resemblance to the beak of any bird of prey. This T. is much sought after for the value of its shell, which is converted into the best "tortoise-shell" of commerce. The largest species of the family is termed the Loggerhead T., *Thalassochelys caouana*, which is found in the Atlantic and Mediterranean seas. This species generally feeds on molluscs, and its flesh is consequently unfit for food, besides being highly poisonous. The shell, too, is not worth much, and the only thing which it is valued for is a large quantity of oil which it yields, and which burns very well in lamps.

Tur'tle-dove, *n.* (*Zoöl.*) A species of pigeon of the Old World, *Columba turtur*, family *Columbidae*, celebrated for its gentleness and plaintive notes. It is 11-12 inches long; the upper parts tawny slate-color, spotted with brown; the breast brownish, other under parts white.

Turtle, in *Wisconsin*, a township of Rock county.

Turtle Bay, lies on the W. coast of Africa.

Turtle Creek, in *Ohio*, a township of Shelby co.—A township of Warren co.

Turtle Creek, in *Pennsylvania*, enters the Monongahela River from Alleghany co.—A post-village of Alleghany co., 12 m. S.E. of Pittsburgh.

Turtle Creek, in *Wisconsin*, rises in Walworth co., and falls into Rock River from Rock co.

Turtle-shell, *n.* Same as TORTOISE-SHELL, *q. v.*

Turyassu', a river of Brazil, enters the Atlantic at the Bay of Turyassu between the provs. of Maranhão and Para, after a N.W. course of 350 m.

Tuscaloosa, in *Alabama*, a N.W. central co.; area, 1,340 sq. m. *Rivers*, Black Warrior, and Sipsey or New river. *Surface*, hilly; *soil*, very fertile. *Min.* Iron, stone coal, and limestone. *Cap.* Tuscaloosa. *Pop.* (1897) 33,250. —A city, cap. of the above co., 125 m. N. W. of Montgomery; Lat. 33° 12' N., Lon. 87° 42' W. *Pop.* (1897) 5,200.

Tuscaloosa River, in *Alabama*. See BLACK WARRIOR.

Tuscan, *n.* (*Geog.*) A native of Tuscany.

Tuscan Order, *n.* (*Arch.*) One of the five Classic orders, being a Roman modification of the Doric style with inflated columns, and without triglyphs. It is the simplest of the orders.

Tuscany, [*It. Tosca'na*.] Formerly, a sovereign grand-duchy of Italy, in the central part of the Peninsula, lying for the most part S. and W. of the Apennines, in Lat. 42° 20' to 44° 10' N., and Lon. 10° 15' to 12° 20' E.; area, 8,440 sq. m. The N. and N.E. of the country is filled with mountains, whence numerous rivers and streams flow down to the sea, the most important of which are the Arno, the Serchio, and the Ombrone. This district is also the source of the Tiber. The rest of *T.* is an undulating region of hills and dales, except the coasts, which are flat and marshy. Of these marsh-lands, the largest is (or was) the *Maremma*. The principal crops are maize, wheat, rye, and barley. Wine and oil are also abundantly produced. Mules, cattle, and sheep are reared in great numbers; there are flourishing manufactures of silks, woollens, and straw (for hats); and a very considerable trade is carried on in articles of marble, alabaster, porcelain, coral, wax, &c. The chief city, Florence, has been for some years the capital of Italy, now transferred to Rome. Other important places are Leghorn, Pisa, Siena, and Arezzo. *T.* is familiar to the reader of ancient history under the names of *Etruria* and *Tyrrhenia*. It was overrun by the "barbarians" in the 5th century. Held at first as a duchy and fief of Lombardy, it was afterwards ruled by the family of the Medici, and on their extinction, by a younger branch of the imperial house of Austria. In 1860, the National Assembly at Florence unanimously voted its annexation to Sardinia. It has been since divided into 8 provinces, with a total *pop.* of 2,142,525.

Tuscarawas, (*tus-ku-rav'-wuss*), in *Ohio*, a river which rises in Stark co., and flowing S.W., unites with the Wallonding River at Coshocton to form the Muskingum. —An E. co.; area, 520 sq. m. *Rivers*, Tuscarawas River, and Stillwater and Sugar creeks. *Surface*, undulating; *soil*, fertile. *Min.* Iron and stone-coal. *County Seat*, New Philadelphia. —A township of Stark county.

Tuscaro'ra, in *Iowa*, a village of Lee co.

Tuscaro'ra, in *New York*, a village of Niagara co., abt. 3 m. E. of Lewistown.—A township of Steuben co.

Tuscaro'ra, in *Pennsylvania*, a township of Bradford co.—A township of Juniata co.—A township of Perry co.—A post-vill. of Schnylkill co., 73 m. N.E. of Harrisburg.

Tuscaro'ra Creek, in *Virginia*, flows into the Potomac from Berkeley co.

Tuscarora Creek, in *New York*, enters Lake Ontario from Niagara co.

Tuscarora Creek, in *Pennsylvania*, enters the Juniata River from Juniata co.

Tuscaro'ra Mountain, in *Pennsylvania*, extends from the Juniata River S.W. along the E. border of Juniata and Fulton cos., thence S. into Maryland as Cove Mountain.

Tuscaro'ras, a tribe of N. American Indians, who, at the settlement of N. Carolina, had 15 towns on the Tar and Neuse rivers, and 1,200 warriors. In 1711, they began a war with the settlers, and after a series of savage encounters, were defeated, and joined the Iroquois in the State of New York, where they became allies of the English, and where about 50 families, who have adopted the habits of civilization, still remain.

Tusci, *n. pl.* (*Anc. Hist.*) The name given by the Romans to the ancient inhabitants of Etruria or Tuscany, and the people existing when Rome was founded, and till Etruria became a portion of the Roman Empire.

Tuscola, in *Illinois*, a city, cap. of Douglas co., 150 m. S. W. of Chicago. *Pop.* (1897) 2,050.

Tuscola, in *Michigan*, an E. co., bordering on Saginaw Bay; area, 830 sq. m. *Rivers*, Cass and Sebewaning river, and White creek. *Surface*, undulating; *soil*, generally fertile. *Cap.* Caro. *Pop.* (1897) 35,630.

—A village of Livingston co., 30 m. E. of Lansing.

—A post-village and township of Tuscola co., 24 m. N. of Flint.

Tus'cor, *n.* The tusk of the horse.

Tusculum, (*Anc. Geog.*) A city of Latium, was founded, according to tradition, by Telegonus, son of Ulysses and Circe, abt. B. C. 1200. Having become a dependency of Alba, it recovered its liberty abt. B. C. 641. It was attacked by the Volsci and the Æqui B. C. 461, and received assistance from Rome against its assailants, in return for which the Tusculans aided the Romans in re-

covering the Capitol from the Sabines, B. C. 458. War having been declared against it by the Romans, Camillus, at the head of the army, on entering the city, found the people engaged in their ordinary occupations, and received a most friendly welcome, (a proceeding that led to a closer alliance between the two powers,) B. C. 378. For several centuries, its counts held so much power in Rome that they could almost insure the elevation of their own nominee to the papal chair. Continued contests between the two cities in the 12th cent. led to the destruction of *T.* in 1168. It never recovered from this blow; but lower down there arose from its ruins the small town of FRASCATI, *q. v.*

Tussum'bia, in *Missouri*, a post-village, cap. of Miller co., 35 m. S.S.W. of Jefferson City.

Tush, *interj.* Pshaw!—an exclamation expressive of rebuke, unbelief, or contempt; as, *tush*, it is absurd!

Tush, *n.* A horse's tusk, or long, pointed tooth.

Tusk, *n.* [*A. S. tusc*; *Fris. tusch*; *Ir. tosq.*] The long, pointed tooth of certain rapacious, carnivorous, or pugnacious animals; as, the tusk of a wild boar.

Tusked, **Tusk'y**, *a.* Furnished or armed with tusks.

Tuske'gee, in *Alabama*, a post-village, cap. of Macon co., 40 m. N.E. of Montgomery.

Tus'pan, or TUSAPAN, in Mexico, a seaport-town of Vera Cruz, on the Gulf of Mexico, 145 m. N.W. of the city of Vera Cruz; *pop.* abt. 1,200.

Tus'sac-grass, **Tus'soek-grass**, *n.* (*Bot.*) A European plant, genus *Dactylis*, (*D. cespitosa*), remarkable for its great tufts, sometimes 5 or 6 feet in height.

Tus'sey's Mountain, in *Pennsylvania*, extends S.W. from the N. of Centre co. to the S. of Bedford co.

Tussie'ular, *a.* [*From Lat. tussis*, a cough.] Pertaining, or having reference, to a cough.

Tussila'go, *n.* [*Lat. tussis*, a cough.] (*Bot.*) A genus of plants, order *Asteraceæ*, having bractæ with a membranous edge, a naked receptacle, a hairy pappus; the florets of the ray pistilliferous, in many rows, tongue-shaped; those of the disc perfect, few. *T. petasites*, the Pestilent-wort, or Butter-burr, is a European medicinal

Fig. 2544. — COLT'S-FOOT, (*T. farfara*.)

herb. The only American species is *T. farfara*, the Colt's-foot, or Horse-foot (Fig. 2544). It has yellow flowers, with very narrow rays, and is found in wet places, brook-sides, in the N. and Middle States. It has long been used as a popular remedy in chronic coughs and other pulmonary complaints.

Tus'soek-moth, *n.* (*Zoöl.*) A name given by collectors to moths of the fam. *Bombycidae*, comprising the genera *Halesidota* or *Lophocampa*, and *Orgyia*, whose larvæ are short, thick, with a crest of tufts along the back, and which, in the caterpillar state, have long pencils of hair projecting before and behind the body.

Tus'teu, in *New York*, a township of Sullivan co.; *pop.* abt. 1,200.

Tus'teren, an island off the W. coast of Norway, immediately to the W. of Christiansand. It is 12 m. long, with a breadth of 6 m.

Tut, *interj.* An exclamation employed in rebuking, checking, or manifesting contempt or disbelief;—it is synonymous with *tush*; as, "*Tut, tut!* here's a mannerly forbearance."—*Shaks.*

—*n.* [*Dan.*] An imperial or royal ensign, consisting in a golden globe with a cross upon it.

Tut-bargain, *n.* A bargain by the lump.

Tatbury, (*tut'ber-re*), a town of England, in Staffordshire, on the Dove, noted for its ancient castle, now in ruins, in which Queen Mary of Scotland was confined for some time. *Pop.* 2,200.

Tu'telage, *n.* [*Fr. tutèle*, from L. Lat. *tutela*.] Guardianship; protection; state of being under a guardian.

Tu'telar, **Tu'telary**, *a.* [*Fr. tutélaire*.] Guardian; protecting; having the guardianship or charge of protecting a person or a thing; as, a *tutelary* divinity.

Tut'hill, in *New York*, a post-village of Ulster co.

Tu'tor, *n.* [*Fr. tuteur*, from Lat. *tutor*, a watcher.] A protector, defender, or preserver; one who watches over another;—hence, specifically, a guardian; one who is chosen to look to the persons and estates of children left by their parents in their minority;—also, one who has the charge of instructing another, or others, as the children of a family in various branches, or in any department of human learning or morals; a preceptor; a

teacher; as, a private *tutor*, that is, one who instructs his pupils by private tuition.—In the English universities, a member of some college or hall, generally a fellow, who superintends the studies of the under-graduates.—In American colleges, an instructor of a lower grade than a professor.

—*v. n.* To have the guardianship or charge of; to instruct; to teach.—To play the pedagogue; to act the tutor toward; to treat magisterially or severely; as, I am not to be *tutored* by men of your stamp.

Tu'torage, **Tu'torship**, *n.* Office or occupation of a tutor; guardianship; tutelage.

Tu'toress, **Tu'trix**, *n.* A female tutor; a governess.

Tu'torial, *a.* [*Lat. tutorius*.] Pertaining to, or characterized by, the acts of a tutor or preceptor.

Tu'to'ya, a seaport-town of Brazil, on the Atlantic, 160 m. E. of Maranhão.

Tutti, (*tööt'te*), *n. pl.* [*It.*, from Lat. *totus*, the whole.]

(*Mus.*) A direction to performers that all the parts are to be played together.

Tutt'lugeu, a town of Germany, in Würtemberg, on the Danube, 20 m. from Sigmaringen; *pop.* 5,878.

Tut'ty, *n.* [*L. Lat. tutia*.] An impure oxide of zinc, collected from the chimneys of smelting-furnaces.

Tux'tla, in Mexico, a town of Chiapas, 37 m. W. of Ciudad Real; *pop.* abt. 6,000.

Tuy, (*twé*), a fortified town of Spain, in Galicia, on the Minho, 20 m. from Pontevedra; *pop.* 4,500.

Tuyère, (*twée-er'*), *n.* [*Fr.*] (*Metall.*) A conical orifice in a blast furnace, in which tapered pipes are placed for imparting the blast.

Tver, or TWER, (*twair*), a city of Russia in Europe, cap. of a govt. of same name, at the confluence of the Twerza, the Volga, and the Tmaza, 100 m. from Moscow, on the high-road between that city and St. Petersburg. It is a place of considerable activity. *Pop.* 28,700.

Twaddle, (*twöd'dl*), *v. n.* To twattle; to prate much in a weak, silly manner, like a person in his dotage.

—*n.* Twattle; empty, silly talk; fustian; insignificant discourse; gabble; bosh; idle verbiage.

Twad'dler, *n.* One who talks twaddle, or prates in a weak or senseless manner.

Twad'dling, *n.* Silly talk; idle verbiage; gabble.

Twain, *a. or n.* [*A. S. twegen*.] Two;—a word seldom used, except poetically and in burlesque; as, "United, yet divided, *twain* at once."—*Cowper*.

Twang, *v. n.* [*Sansk. dhvani*, a sound.] To sound with a quick, sharp, strident noise; to make the sound of a string which is stretched and suddenly pulled; to twangle or twank; as, the *twanging* of a banjo.

—*v. a.* To make to sound sharply, as by pulling a tense string, and letting it go suddenly.

—*n.* A sharp, quick, vibrating sound; as, the *twang* of a bowstring.

—An affected modulation of the voice; a kind of nasal sound; as, his speech is all *twang* and tautology.

Twan'kay, *n.* The most inferior kind of green tea.

Twat, (*twöz*), A contraction of *it was*.

Twattle, (*twöt'tl*), *v. a. and n.* Same as TWADDLE, *q. v.*

Twat'tler, *n.* A TWADDLER, *q. v.*

Tway'-blade, **Twy'-blade**, *n.* (*Bot.*) See LISTER, and LIPARIS.

Twæk, (*twæk*), *v. a.* [*A. S. twiccian*, to twitch.] To twitch; to pinch and pull with a sudden jerk; as, to *twæk* a person's nose.

—*n.* A sharp pinch, pull, or twist.

Tweed, *n.* A light, twilled cotton or woollen stuff used for summer clothing.

Tweed, a large river of Scotland on the English Border, rises in Peeblesshire, and, taking a course nearly N.E., drains almost all the E. portion of the Scottish Lowlands, and enters the North Sea at Berwick. It is 97 m. long, and forms the English border for 18½ m.

Tweed'dale, the popular name of the Scottish co. of Peebles.

Tweedle, (*twé'dl*), *v. a.* To handle gingerly;—having reference to inartistic violin-playing;—hence, to allure; to wheedle; to coax by blandishments; as, a wife *tweedles* her husband into good humor.

Tweeze, **Tweeze**, *n.* A surgeon's case of instruments.

Tweezers, *n. pl.* [*From Fr. épiler, cases*] Nippers; small pincers used to pluck out hairs, formerly carried by ladies in an étui at the side.

Twelfth, *a.* [*A. S. twelfta*.] The second after the tenth;—the ordinal of twelve.—Forming or being one of twelve equal parts into which a thing is divided.

—*n.* The quotient of a unit divided by twelve; one of twelve equal parts.

(*Mus.*) An interval including an octave and a fifth.

—The name of a stop in an organ.

Twelfth'-cake, *n.* An ornamented cake distributed among friends or visitors on the festival of Twelfth-night.

Twelfth'-day, **Twelfth'-tide**, *n.* The twelfth day after Christmas, being the festival of the EPIPHANY, *q. v.*

Twelfth'-night, *n.* The evening of the Epiphany, a festival of the Church of Rome.

Twelve, *a.* [*A. S. twelf*; *D. twaalf*.] One more than eleven; ten and two more; twice six; a dozen.

Twelve tables. See TABLE.

—*n.* The number which consists of ten and two; the sum of twice six.—A symbol expressing twelve units, as 12, or XII.

Twelve'-month, *n.* A year, as consisting of twelve calendar months; as, "Not twice a *twelve-month* you appear in print."—*Pope*.

Twelve'-pence, *n.* A shilling sterling, equivalent to about 25 cents.

Twelve'-penny, *a.* Worth a shilling; sold for a shilling or twelve-pence.

John Tyler

1790-1862

Twelve'-score, *a.* and *n.* Twelve times twenty, or two hundred and forty.

Twelve Tables. (*Roman Hist.*) The decemvirs appointed at Rome B. C. 451, drew up a code of civil law, which was engraved upon 10 tables of brass, and called the Ten Tables. Two more were added B. C. 450, and the code received the name of the Twelve Tables.

Twen'tieth, *a.* [*A. S. twentigtha.*] The ordinal of twenty. — Being, or forming, one of twenty equal parts into which a thing is divided.

—*n.* One of twenty equal parts; the quotient of a unit divided by twenty.

(*Mus.*) An interval embracing two octaves and a sixth.

Twen'ty, *a.* [*A. S. twentig.*] Two tens or twice ten; a score. — Proverbially, an indefinite number; as, I do not like him for *twenty* reasons.

—*n.* The sum of twelve and eight, or twice ten. — A symbol designating twenty units, as 20, or XX.

Twen'ty-fold, *a.* Twenty times as many.

Twen'ty-fours, *n.* (*Print.*) A sheet of paper which, when printed, folds into 24 leaves or 48 pages; — the book is called a 24mo.

Twib'il, *n.* [*A. S. twibill.*] A reaping-hook; also, a kind of mattock.

Twice, *adv.* [*Icel. tvisvar.*] Two times; once and again; once repeated; as, I *twice* called upon you. — Doubly; in twofold quantity or measure; as, he is *twice* as good a fellow as the other.

Twickenham, (*twit'nam*), a village of England, in Middlesex, on the Thames, opposite Richmond, 12 m. from London. It is the burial-place of Pope. *Pop.* 7,000.

Twifallow, (*-fāl'lō*) *v. n.* To plough a second time; — said of land in fallow.

Twig, *n.* [*A. S. twigg.*] A small flexible shoot or branch of a tree or other plant, of no definite length or size.

—*v. a.* To take notice of, without being observed; as, *twig* what that fellow is about. — To comprehend; to take the meaning of; as, do you *twig* me? (*Colloq.* and *vulgar.*)

Twiggs, in *Georgia*, a S. central co.; *area*, 400 sq. m. *Rivers*, Ocmulgee, also Big Sandy and Turkey creeks. *Surface*, diversified; *soil*, generally fertile. *Cap.* Jeffersonville. *Pop.* (1897) 8,750.

Twiggy, *a.* Full of, or abounding with twigs.

Twilight, (*-līt*), *n.* [*A. S. twigon-lecht.*] The faint or dubious light which is reflected upon the earth after sunset and before sunrise; crepuscular light. — Hence, a dim or faint light generally. — An obscure or uncertain view; as, the *twilight* of the barbaric ages.

—*a.* Faint; dimly or imperfectly illuminated; shaded; faintly visible.

— Perceived or performed by twilight.

Twill, *v. a.* [*Scot. tweel, tweedle*, from *A. S. twæde*, double, twofold.] To weave so as to form into a double texture; to weave in such a manner as to produce a kind of diagonal ribbed appearance upon the surface of the cloth.

—*n.* A variety of textile fabric in which a kind of diagonal ribbed appearance is produced upon the surface of the cloth. — A spool for winding thread or yarn on.

Twitly, *n.* See **WILLI**.

Twin, *n.* [*Icel. tvinnir*, twins; *A. S. twinan*, to make double.] One of two brought forth at a birth, particularly by an animal that ordinarily produces but one; — used mostly in the plural, *twins*, and applied to the young of beasts, as well as to human beings. — One bearing a striking resemblance or analogy to another.

—(*pl.*) (*Astron.*) See **GEMINI**.

—*a.* Noting one of two born at a birth; as, a *twin* brother or sister. — Noting one of a pair bearing a striking resemblance to each other; being in the relation of a twin to something else; — frequently before *to*.

(*Min.*) Presenting two united crystals.

(*Bot.*) Expanding into two protuberances, as an anther.

—*v. n.* To be born at the same birth. — To be paired, or matched.

Twin, in *Ohio*, a township of Preble co.

— A township of Ross co.

Twin'-born, *a.* Born at the same time.

Twine, *v. a.* [*A. S. twinan.*] To twist together, as two into one; to wind, as one thread or cord around another; or as any flexible substance around another body; to unite closely; as, *twined* silk. — To cling to closely; to embrace; to gird; to entwine; to gird closely about.

—*v. n.* To unite closely, as by twisting.

"Friends who *twine* in love unseparable." — *Shaks.*

To wind; to bend; to meander; to make turns, as a river. — To ascend spirally around a support, as a climbing plant; as, the *twining* clematis.

—*n.* [*D. twyn.*] Act of twining or winding round. — A twist; a convolution; as, the ivy's amorous *twine*. (*Philos.*) — A strong thread, cord, or string, composed of two or three smaller threads or strands twisted together; as, a ball of *twine*.

Twine'-flower, *n.* (*Bot.*) See **LINNEA**.

Twine'-reeler, *n.* A machine for twisting twine.

Twinge, (*twinj*), *v. a.* [Another form of *twitch*, *q. v.*] To twitch; to pinch; to tweak. — To affect or torment with a sharp, sudden pain, as if by pinching.

—*v. n.* To suffer a keen, darting, or shooting pain; to experience an acute local pain, like a twitch.

n. A twitch; a pinch; a tweak; as, a *twinge* by the ear. — A sudden, sharp pain; a shooting local pain of momentary continuance; as, a *twinge* of the gout. — A sharp rebuke of conscience.

Twinkle, (*twinkl*), *v. n.* [*A. S. twinclian*, formed from *wink*, with the prefix *ed*, signifying again, anew.] To wink repeatedly; to open and shut the eyes by turns; to blink. — To sparkle; to flash at intervals; to shine with a tremulous intermitted light, or with a broken quivering light; as, a *twinkling* star.

Twinkle, **Twink'ling**, *n.* A repeated winking or blinking; a quick motion of the eye. — The time of a wink; a moment; an instant; as, they vanished in a *twinkling*. — A shining with intermitted, tremulous light, as the fixed stars.

Twink'ler, *n.* One who, or that which twinkles, or blinks; a winker.

Twin Lakes, in *Minnesota*, a post-village, former cap. of Carlton co., about 22 m. W. S. W. of Superior City.

Twin'-leaf, *n.* (*Bot.*) See **JEFFERSONIA**.

Twin'-like, *a.* Having a close resemblance; being a double or counterpart.

Twin'-likeness, *n.* A resemblance as close as that observed between twins.

Twin'ling, *n.* [From *twin*.] A twin lamb.

Twinned, (*twind*), *a.* Produced at one birth, like twins; united.

Twin'ner, *n.* A breeder of twins.

Twinsburg, in *Ohio*, a post-village and township of Summit co., 143 m. N.E. of Columbus.

Twire, *n.* A thread; a twisted filament.

Twirl, *v. a.* [*A. S. thwirl*, a flail.] To whirl round with rapidity; to move or turn round with velocity by the fingers; as, to *twirl* a castanet.

—*v. n.* To be whirled round with rapidity; to revolve with a quick motion.

—*n.* A rapid whirl; a quick, circular motion; rapid rotation; twist; convolution.

Twist, *v. a.* [*A. S. getwisan.*] To unite by winding one thread, strand, or other flexible substance round another; to form by convolution; as, to *twist* a cord. — To form into a thread by many fine filaments; as, to *twist* cotton. — To contort; to writhe; to complicate; to convolve; as, to *twist* a roll of tobacco. — Hence, to pervert; to garble; to cause to deviate from the right form or meaning; to turn from a straight line; as, to *twist* a relation of facts. — To wind; to encircle; to unite by intertexture of parts; as, to *twist* a made-up narrative. — To insinuate; to wriggle; — used reflexively; as, self-interest *twists* itself into every business of life.

—*v. n.* To be twisted; to be contorted or united by winding round each other.

—*n.* A contortion; a convolution; a writhe; a flexure; as, a *twist* in the muscular fibres of an animal. — Manner of twisting; form received by twisting. — That which is twisted; as, (1.) A cord, thread, or anything flexible formed by winding strands or separate filaments round each other. (2.) A kind of cotton yarn, of several varieties. (3.) A kind of sewing silk, used by tailors, &c. (4.) A small twisted roll of dough, baked into bread. (5.) A small roll of tobacco; as, Limerick *twist*. (6.) A beverage concocted of gin and brandy mixed. (*Colloq.* and *vulgar.*)

(*Weaving.*) A warp which can be joined to another by twisting.

Twister, *n.* One who twists; a rope-maker; — also, one who joins the ends of threads together, in weaving. (*Man.*) The inner part of the thigh, which takes the proper grip of the saddle.

Twit, *v. a.* [*A. S. æwitian.*] To taunt, upbraid, reproach, revile, or rebuke, as for some previous act deserving of censure.

Twitch, (*twich*), *v. a.* [*A. S. twiccian.*] To pull with a sudden jerk; to pluck with a short, quick motion; to snatch; as, to *twitch* one by the sleeve.

—*n.* A short, sudden, quick pull; a snatch; a pull with a jerk. — A short spasmodic contraction of the fibres or muscles; as, a convulsive *twitch* of the face.

Twitch'er, *n.* One who, or that which twitches.

Twitch'ing, *n.* Act of pulling with a jerk; — also, the act of suffering spasmodic contractions.

Twitch'-grass, *n.* The Couch-grass. See **TRITICUM**.

Twitter, *v. a.* [*Ger. zwitschern*, to chirp.] To make a succession of small, tremulous, intermitted sounds; as, a *twittering* swallow. — To have a tremulous motion of the nerves. — To titter; to giggle; to laugh in a half-suppressed manner.

Twitter, *n.* [From *twit*.] One who twits, censures, or reproaches.

— [From the verb *twitter*.] A small, tremulous, intermitted sound or noise; as, the *twitter* of certain birds. — A slight, tremulous agitation of the nerves. — A titter; a giggle; a half-restrained fit of laughter.

Twitter'ing, *n.* Act of one who, or that which twitters. — A state of tremulous agitation, or nervousness arising from suspense or expectancy.

Twit'tingly, *adv.* In a twitting manner.

Twit'tle-twat'tle, *n.* See **TITTLE-TATTLE**. (*Vulgar.*)

Twixt, (*twixst*), *a.* A contraction of *betwixt*, used colloquially, and in poetry.

Two, (*too*), *a.* [*A. S. twā, twegen*; *D. twee*; *Icel. tö*; *Fr. deux.*] One and one.

(*NOTE.*) *Two* is extensively used as a prefix in the construction of self-explanatory compounds, denoting something designed for, or applicable to, two objects; as, *two-eared*, *two-handed*, *two-horse*, *two-leaved*, *two-story*, *two-valved*, and the like.)

—*n.* The number which consists of one and one; the number greater than one and less than three. — A symbol expressing two units, as 2, or ii.

Two Creeks, in *Wisconsin*, a vill. and twp. of Manitowoc co., abt. 18 m. N.N.E. of Manitowoc.

Two'-decker, (*-dēk'ūr*), *n.* (*Navy.*) A ship of war having two tiers of guns.

Two-faced, (*-fāst*), *a.* Having two faces or visages, like the Roman deity Janus; — hence, insincere; deceitful; given to equivocation or double-dealing; as, a *two-faced* person.

Two'fold, *a.* Double; duplicate; multiplied by two; as, a *twofold* argument. — Two of the same kind, or two different things existing together; as, *twofold* leaves.

Two'-foot, (*-fūt*), *a.* Measuring two feet, long, thick, or wide; as, a *two-foot* rule.

Two'-handed, *a.* Having two hands; — an epithet commonly used as an equivalent to *large*, *strong*, *powerful*. — Requiring the two hands to grasp; as, a *two-handed* sword.

Two'-parted, *a.* (*Bot.*) Bipartite.

Two'-pence, *n.* (*too-*, colloq. and vulg. *tūp'pens*.) In England, a small coin or money of account, equivalent to two pennies.

Two'-penny, (*toō-*, colloq. *tūp-*), *a.* Of the value of two-pence.

Two'-ply, *a.* Double; consisting of two thicknesses, as cloth, &c. — Woven into a double thickness, by two sets of thread of the warp and weft respectively, as carpeting.

Two'-ranked, (*-rānkt*), *a.* (*Bot.*) Distichous.

Two Rivers, in *Pennsylvania*, a village of Pike co., near the junction of the Delaware and Lackawaxen.

Two Rivers, in *Wisconsin*, a city and township of Manitowoc county, 15 miles northeast of Manitowoc. *Pop.* (1895) 3,593.

Two Sic'ilies, (*KINGDOM OF THE*.) See **NAPLES**.

Two'-tongued, (*-tūngd*), *a.* Double-tongued; hence, deceitful; insincere.

Ty'bee Island, in Tybee Bay, *Georgia*, at the entrance of Savannah River, has a fixed light 80 ft. high at the N. end; Lat. 32° N., Lon. 80° 52' W.

Ty'burn, the name of a place notorious in the criminal annals of England, was the place of public execution for malefactors prior to the year 1783. It was situated near the present N.E. corner of Hyde Park, London, in the centre of the fashionable and magnificently built quarter of the metropolis now called *Tyburnia*.

Ty'cho Brahe. See **BRAHE**.

Tycocktow Island, (*ti-kok-tou*), in the Canton River, China. It is 8 m. long, with a breadth of 6 m.

Tycoon, *n.* [*Jap.*] See **JAPAN**.

Tye, *v. a.* and *n.* An old orthography of **TIE**, *q. v.*

Ty'er, *n.* One who ties, attaches, or unites.

Tye River, in *Virginia*, flows S.E. into James River from Nelson co.

Ty'gart's Valley River, in *W. Virginia*, rises in Randolph co., and unites with the W. Fork of the Monongahela, 1 m. S. of Fairmont in Marion co., after a N. course of 150 m.

Ty'ing, *ppr.* of **TIE**, *q. v.*

Tyke, (*tik*), *n.* A Scottish and north of England term for a dog; also applied, with some degree of contempt, to a man; as, a Yorkshire *tyke*.

Ty'ler, *n.* [*Fr. tailleur*.] Among the Freemasons, one who guards the door of a lodge sitting in council, with a drawn sword.

Ty'ler, JOHN, 10th President of the U. States, b. in Charles City co., Va., 1790, was the 2d son of John Tyler, a distinguished patriot of the Revolution, who afterwards became speaker of the Virginia House of Delegates, governor of the State, and judge of the Federal Court of Admiralty. John entered William and Mary College at 12, and graduating at 17, was admitted to the bar at 19, when he almost immediately entered upon a large practice. At 21, he was elected to the State legislature, supporting the policy of Jefferson, Madison, and the Democratic party. He was almost unanimously re-elected 5 times; and, in 1816, entered Congress. During his long congressional career, he sustained all the measures of the State Rights party. In 1825, he was elected governor of Virginia; and in 1827, senator in Congress. He supported General Jackson and the Democratic policy; but sided with Mr. Calhoun on the question of nullification. At a later period, however, 1833-34, he supported Mr. Clay's resolutions of censure on General Jackson for removing the government deposits from the U. S. Bank. From this period, he became an active partisan of Henry Clay, the candidate of the Whig party; and in 1840, was elected Vice-President of the United States, with General Harrison as President. President Harrison died April 4, 1841, a month after his inauguration, by which Mr. T. became President. He began his administration by removing Democrats from office, and appointing Whigs, and pronouncing in favor of Whig measures, but soon after vetoed a bill for a U. S. bank, passed by Congress, on which occasion several members of the cabinet resigned; and after some changes, John C. Calhoun, the great Southern Democratic statesman, became Secretary of State. The most important act of T.'s administration was the annexation of Texas, March 1, 1845. At the close of his term of office, he retired into private life until 1861, when he was chosen President of a Peace Convention at Washington. Failing in his efforts toward a compromise, he gave his adhesion to the Confederate cause, and was a member of the Confederate Congress until his death, in Richmond, Jan. 17, 1862.

Ty'ler, in *Illinois*, a village of Winnebago co.

Ty'ler, in *Texas*, an E. co.; *area*, 930 sq. m. *Rivers*, Neches river, and Big Sandy creek. *Surface*, level; *soil*, generally fertile. *Cap.* Woodville. *Pop.* (1897) 11,650.

— A post-town, cap. of Smith co., 220 m. N. of Galveston. *Pop.* (1897) 7,500.

Ty'ler, in *West Virginia*, a N. co., bordering on Ohio; *area*, 330 m. *Rivers*, Ohio, also Middle Island creek. *Surface*, diversified; *soil*, very fertile. *Min.* Iron, stone-coal, limestone. *Cap.* Middlebourne. *Pop.* (1897) 12,860.

Ty'lersburg, in *Pennsylvania*, a post-village of Clarion co., 85 m. N.N.E. of Pittsburg.

Ty'lersville, in *Pennsylvania*, a post-village of Clinton co., 10 m. S.E. of Lock Haven.

Tym'bal, *n.* [*Fr. timbale*.] (*Mus.*) A kind of kettle-drum.

Tymoch'te, a creek in *Ohio*, enters Sandusky river from Wyandot co. — A village and township of Wyandot co., 75 m. N.W. of Columbus.

Tymp. *n.* (*Metall.*) In smelting, a space in the chamber of a blast-furnace adjoining the crucible, for cleaning out the earth.

Tym'pan, *n.* [*Fr.*] (*Arch.*) See **TYMPANUM**.

(*Print.*) A frame attached to the carriage of a printing-press by joints, and covered with parchment or cloth, upon which the blank sheets are put, in order to be laid on the form to be impressed.

Tympanites, (*tīm-pa-nī'tēz*) *n.* (*Med.*) A distention of the abdomen, arising from a morbid aggregation of gas in the intestines; tympany.

Tympanitis, *n.* Inflammation of the inner membrane of the middle ear; also, **TYMPANITES**, *q. v.*

Tym'panize, *v. n.* [*Lat. tympanizare.*] To act the part of a drummer.

—*v. a.* To make into a drum, or drum-head; or, to cause to sound like a drum.

Tym'pano, *n.* [*It.*] (*Mus.*) Same as **KETTLE-DRUM**, *q. v.*

Tym'pan-sheet, *n.* (*Print.*) A sheet of paper of the same size as that to be printed, placed on the tympan, and serving as a guide to lay the sheets exactly even upon, while printing.

Tym'panum, *n.* [*Lat. = Gr. tympanon, for tupanon* — *tupō, to strike.*] (*Arch.*) See **EAR**.

(*Arch.*) The triangular space between the horizontal and sloping cornices on the front of a pediment in Classical architecture; it is often left plain, but is sometimes covered with sculpture. This name is also given to the

Fig. 2545. — TYMPANUM OF DOORWAY, (*Eng.*) A. D. 1130.

space immediately above the opening of a doorway, &c., (*Fig. 2545*), in mediæval architecture, when the top of the opening is square and has an arch over it. *T.* are occasionally plain, but are generally ornamented with carving or sculpture.

(*Bot.*) A membrane which stretches across the mouth of the spore cases of some urn-mosses.

(*Mach.*) A wheel placed round an axis for raising weights.

Tym'pauy, *n.* [*See TYMPANUM.*] (*Med.*) See **TYMPANITES**.

Tyne (*line*), a river of England, which rises in Northumberland, and flowing E. falls into the German Ocean, separating the towns of North and South Shields. The *T.* has a course of only 80 m., but is of great importance, owing to the flourishing towns that line its banks. It is famous for boat-racing.

Ty'ner City, in *Indiana*, a village of Marshall co., 8 m. N.W. of Plymouth.

Tyngs'borough, in *Massachusetts*, a post-village and township of Middlesex county, 32 miles N.W. of Boston.

Typ'al, *a.* Pertaining, or having reference to types; typical.

Type, (*ti'pe*) *n.* [*Fr.; Sp. tipo; Lat. typus = Gr. typos, an impression, a model.*] The mark of something; an emblem. — Stamp; mark; kind; sort. — A sign; a symbol; a token; — especially those by which it is said that Christ was prefigured to the Jews, whether figures, as the Brazen Serpent, the Lamb of the Passover, the Sacrifice of Isaac; or persons, as Moses, David, Jonah, &c.

(*Nat. Hist.*) A general form, or that form which gives the character of similarity to a group of individuals; an example or pattern; the primary model, according to which the parts of an animal body are formed. It is synonymous with the term **BRANCH**, *q. v.*

(*Fine Arts.*) The primitive model or pattern of an object or work of art; the impression on a coin or medal of any image or figure whatever.

(*Med.*) The particular form of a disease, as respects the order in which the symptoms appear and succeed each other. — *Dunghison.*

(*Typog.*) The letters, marks, and signs of all kinds (the small sizes cast in metal, the largest cut in wood) with which books, newspapers, broadsides, &c., are printed; — in a collective sense, printing-letters; print. — *v. a.* To prefigure; — also, to represent. (*R.*)

Type-founder, *n.* One who casts or makes type.

Type-founding, *n.* The act, or the art, of casting types used in printing.

Type-foundry, Type-foundery, *n.* A place where the business of casting type and other material used in printing-offices is carried on.

Type-metal, (*mēt'l*) *n.* The alloy of lead and antimony used in casting printer's types, the usual proportions being one part of antimony to three of lead, but a superior and harder kind of type is sometimes made by alloying two parts of lead with one of antimony and one of tin. Both these alloys take a sharp impression from the mould or matrix, owing to their expansion on solidification, and they are hard enough to stand the work of the press, without being brittle or liable to fracture.

Typha'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance

Arales. *Diag.* Numerous flowers on a naked spadix, a scaly or hairy calyx, long filaments, a solitary pendulous ovule, a seed adherent to its pericarp, and slit embryo. — They consist of herbs with rigid linear leaves and monœcious flowers, arranged on a spadix or in heads. They grow in watery places, chiefly in the northern parts of the world. The young shoots of *Typha latifolia* and *angustifolia* are sometimes boiled and eaten like asparagus. Their rhizomes are also edible.

Typhoid Fever, (*ti-foid'*) *n.* [*Eng. typhus, and Gr. eidos, form.*] (*Med.*) A disease which so much resembles in its main features that of typhus, that until very recently the two were generally regarded as but different stages of the same affection. There appears good reason, however, for believing them to be essentially distinct disorders. *T. F.* usually commences more insidiously and more gradually than typhus; the sufferer is less dull and stupid, but more anxious, and during the delirium decidedly more active, and even vivacious. Diarrhœa is almost always present in *T. F.* (often accompanied with hæmorrhage), very rarely in typhus. In the former the eruption consists of rose-colored spots, thinly scattered, and often entirely absent. *T. F.* is most common in youth, and rarely attacks persons after forty; while typhus may occur at any age; and the former does not reach its height for a week later than the latter. The general treatment required in both cases is alike, except in one or two particulars. At the commencement of *T. F.*, emetics are of service, but aperients should rarely be given, in consequence of the tendency to diarrhœa. The intestinal irritation and diarrhœa require for their treatment astringents, combined with opium, which may be administered either by the mouth or rectum. If there be hæmorrhage from the bowels, cold ought to be applied carefully over the abdomen. During convalescence, the patient requires to be carefully attended to, as relapses are apt to occur; and the return to a generous diet must be very gradual.

Typhomania, *n.* (*Med.*) A low delirium commonly attendant on typhus fever.

Typhon, (*tī'fon*) *n.* (*Greek Myth.*) A famous giant who was reputed to be the son of Tartarus and Terra, and fabled to have a hundred heads shaped like those of a serpent, and with devouring flames darting from its many mouths and eyes. Typhon, as soon as born, to avenge the death of his brother giants, made war on heaven, compelling the gods to disguise themselves and fly for safety; Jupiter, however, regaining courage, threw off the resemblance of a ram which he had assumed, and, hurling his thunderbolts at the audacious invader, flung him to earth wounded and writhing, when, to prevent his recovery, he cast Mount Etna at his head, and buried the rest of his body beneath the island. Through this vast mountain, however, the imprisoned giant still belches forth his fire and smoke, and howls his discordant thunder. — In the Egyptian mythology, Typhon is the name given to the Evil Genii.

Typhoon, (*tī'fōn*) *n.* A furious whirlwind, tornado, or hurricane, moving forward with irresistible rapidity and violence; it is of common occurrence in the Chinese seas. The term is sometimes applied to the **SIMOOM**, *q. v.*

Ty'phous, *a.* Belonging, or relating to typhus.

Typhus, (*tī'fus*) *n.* [*Gr. typho, I smoulder, or burn and smoke without vent.*] (*Med.*) A kind of continued fever, characterized by the ordinary symptoms of fever, with debility in the nervous and vascular systems, and a tendency in the fluids to putrefaction. It is so called because it burns not in open violence, as an inflammatory fever does, but with a sort of concealed and smothered flame. Any of the ordinary causes of fever may give rise to *T.*, the typhoid form being often dependent on the state of the constitution on which the cause is acting. Hence cold, intemperance, mental agitation, &c., which in strong and sanguineous habits might generate an inflammatory fever, will often in a debilitated and nervous constitution give rise to *T.* By far the most common cause of typhus is by contagion from febrile miasma, the activity of which is much increased by the crowding in close and ill-ventilated places, filth, insufficient nutriment, and other causes tending to depress the vital power. It is eminently contagious and infectious, and often prevails epidemically. It does not always commence in the same way, and sometimes it may be several days before the disease assumes its proper aspect, during which the patient may continue his ordinary occupation, but complaining of chilliness, nausea, thirst, loss of appetite, languor, and headache. Frequently, however, the precursory stage is short, or altogether wanting, and it commences with symptoms which are common to many acute diseases. Sometimes it sets in with a shivering fit or a severe headache, accompanied with great prostration and muscular pains in various parts. There are also dryness and heat of skin, thirst, constipation, and rapid pulse, with great irritability and restlessness towards the evening. Sometimes, even during the first stage of the disorder, the prostration of strength is so great that the patient lies on his back motionless, and is insensible to all that is going on around him. Towards the end of the first week the eruption peculiar to *T.* begins to show itself. It consists of irregular spots of a dusky or mulberry hue, disappearing on pressure, and feeling as if slightly raised above the skin. They may be few and single, or numerous and large, owing to the coalescence of several of them; their number and depth of color being in proportion to the strength of the attack. In a day or two they become of a brick-dust color, and only slightly fade on pressure, while each patch of eruption remains permanent till the end of the fever. It is rarely absent in adults, but in children, particularly in mild cases, it

does not appear perhaps in more than three out of every four instances. During the second week the pulse becomes more frequent, weaker, and more compressible, the tongue darker and browner, and the voluntary movements very much weakened. The voice becomes feeble, and the patient can scarcely utter an audible sound; perhaps he may be unable to swallow, which is always regarded as a very bad symptom. It is at this period that delirium is most apt to ensue, and the patient generally loses his headache. During this stage there is great deficiency of sensation, and insensibility to impressions. It is in the course of the second week that the disease is most apt to terminate fatally. As it approaches this termination, a peculiar fœtor is exhaled by the patient's body; his tongue becomes dry, black, and fissured; his teeth are covered with dark sordes; sloughs form on different parts, and in extreme cases the toes have mortified. During the third week the patient's chance of recovery improves; in which case the more formidable symptoms begin gradually to diminish and abate. He begins once more to take an interest in what is going on around him, the temperature of his skin becomes more natural; the tongue moist and cleaner; and the frequency of the pulse much less. In many cases the improvement is so gradual that it is impossible to say when it begins; in others it is preceded by a marked aggravation of most of the other symptoms. In the early stages of this disease it is best not to interfere much with nature's operations; the principal aim ought to be to keep the patient alive until the fever poison has expended itself. When seen early, however, it is often of advantage to administer an emetic or a purgative; and the patient's uneasy sensations will be much soothed by sponging the surface of the body with tepid water. Directly the powers of life begin to fail, a stimulating course of treatment should be commenced, — a strong beef or chicken tea, with wine or brandy, frequently administered, taking care that it does not aggravate the febrile symptoms. When there is much general irritability and sleeplessness, a dose of opium may be given. As the patient begins to recover, a course of tonics will expedite his restoration to health.

Typie, Typical, *a.* [*Fr. typique; Gr. typikos.*] Pertaining to, or forming a type; emblematic; figurative; representing something future by a form, model, or resemblance.

(*Nat. Hist.*) Combining or designating the essential characteristics of a type.

Typic fever, (*Med.*) A fever following the diagnosis of a particular type; — correlative to *erratic fever*.

Typically, *adv.* In a typical manner.

Typicalness, *n.* State or quality of being typical.

Typification, (*kā'shun*) *n.* Act of typifying or emblemizing.

Typifier, *n.* One who, or that which, typifies.

Typify, *v. a.* (*imp. and pp. TYPIFIED.*) [*Eng. type, and Lat. facio, to make.*] To make typical; to represent by an emblem, image, form, model, or resemblance.

Typinsan, the most E. and the largest of the *Madjicosina* Islands, in the China Sea; *ext.* 20 m. long, with a breadth of 10 at its widest point. Lat. 24° 42' N., Lon. 125° 29' E.

Typo, (*tī'po*) *n.* [*An abbreviation of typographer.*] A colloquialism for a compositor or type-setter.

Typographer, (*-fer*) *n.* [*Fr. typographe.*] A printer. **Typographic, Typographical,** *a.* Pertaining or having reference to typography or printing; as, the *typographic art*.

Typographically, *adv.* In a typographical manner.

Typography, *n.* [*Fr. typographie, from Gr. typos, type, and graphō, to write.*] The art of printing, or the operation of impressing letters or words on forms of type. See **PRINTING**.

Typology, (*je'*) *n.* [*Gr. typos, type, and logos.*] The doctrine of types or figures, or a discourse on types.

Tyr. (*Scand. Myth.*) The son of Odin, and the god of war and of fame, which idea is expressed in old Norse by the word *tyr*. According to the *Edda*, he was single-handed. When the *Asa-gods* persuaded the wolf Fenrir to allow himself to be bound with the bandage Gleipnir, Tyr put his right hand in the wolf's mouth, as a pledge that he would be loosened; and when the gods refused to release him, the wolf bit off Tyr's hand to the wrist, which was called, in consequence, *Ulflithr*, or the Wolf's Joint. In the twilight-battle of the gods, he meets his death at the same time with his enemy, the monster dog Garmr.

Tyran'nie, Tyran'nieal, *a.* [*Fr. tyrannique.*] Pertaining to, or suiting a tyrant; arbitrary; unjustly harsh or severe in government; imperious; despotic; cruel; as, *tyrannical power*.

Tyran'nieally, *adv.* In a tyrannical manner.

Tyran'nicidal, (*-sīd'*) *a.* Pertaining or relating to tyrannicide.

Tyran'nicide, (*-sīd*) *n.* [*Fr., from Lat. tyrannus, a tyrant, and caedere, to slay.*] The act of slaying a tyrant. — The killer of a tyrant.

Tyran'nize, (*tī'ran-nīz*) *v. n.* [*Fr. tyranniser.*] To act the tyrant; to exercise arbitrary power; to rule with unjust and oppressive severity.

— *v. a.* To oppress; to subject to arbitrary treatment.

Tyranny, (*tī'r-'*) *n.* [*Fr. tyrannie.*] Rule, sway, or authority of a tyrant; arbitrary or despotic exercise of power; unjust or oppressive abuse of sovereign or magisterial power. — Cruel government or discipline; oppressive tendency or command; as, the *tyranny* of an imperious husband. — Severity; rigor; inclemency; as the *tyranny* of arctic weather.

Ty'rant, *n.* [*Fr. tyran; Lat. tyrannus; Gr. tyrannos.*] Originally, one who obtained supremo or absolute power by usurpation, or who derived it from one who had ob-

tained such power by usurpation, and maintained it by force, although he might exercise his power with strict moderation. — Specifically, a monarch, or other ruler or governor, who takes advantage of his power to oppress his subjects or fellow-citizens; one who exercises unlawful authority, or legal authority in an unlawful manner; one who acts towards those who are subordinate to him, in a manner which law and humanity do not authorize, or which the purposes of government or policy do not require: a despot; a cruel task-master; an oppressor.

Tyrant Fly-catcher, *n.* (Zool.) The King-bird. See FLY-CATCHER.

Tyre, (*tyr.*) [Heb. *Tsoor*; Ar. *Soor*.] (Anc. Geog.) A famous city of antiquity, on the coast of Phœnicia, 24 m. to the S. of Sidon. The first city of *T.* was built on the mainland, but the second and more important city was erected on an island about a mile long, running parallel with the shore, but separated from it by a strait of the Mediterranean a mile wide. The city covered the whole island, and was of extraordinary magnificence and beauty, while its wealth made it the envy of all surrounding nations. *T.* had two capacious harbors, and the whole island was surrounded by a strong wall 150 feet in height. It was the emporium of all the commerce of the then known world, and the fleets of its merchant princes traded to all parts of the earth. The Tyrians were celebrated for their splendid dyes, especially of scarlet and purple, for their skill in all mechanical arts, their metallic work, industry, and commerce. In the time of David and Solomon, the Tyrian king, Hiram, maintained friendly relations with the Israelites, and his people, as the importers and chief workmen of Solomon, greatly assisted that monarch in the building of his temple. *T.* is repeatedly mentioned in the Old Testament for its strength, wealth, and beauty, and is threatened with destruction for its pride and grandeur. It was frequently subjected to the horrors of war, endured many long and fearful sieges, and became nominally a tributary state to the Assyrians and Persians. Alexander III. took *T.* after a seven months' siege of extraordinary difficulty, during which he constructed a mole connecting the insular city with the mainland, in July 332 B. C. *T.* was taken from the Saracens by the Crusaders, after a siege of five months and a half, June 20, 1123. Saladin sought in vain to retake it in 1187. The prosperity of *T.* was not finally destroyed until the conquest of Syria by the Turks in 1516. At present it is a poor town, called *Sur*, or *Soor*, with a pop. of abt. 3,000. It occupies the E. side of what was formerly the island, 1 m. long, and $\frac{1}{2}$ m. from the shore, thus enclosing two so-called harbors separated by Alexander's causeway, which is now a broad isthmus. The only real harbor is on the N.; but even this is too shallow to admit any but the smallest class of vessels. It is filled, and the N. coast of the island lined with stone columns, whose size and countless number evince the former magnificence of this famous city.

Tyre, (*tyr.*) in New York, a post-township of Seneca co.

Tyrian, (*tyr'-i.*) *a.* [Lat. *Tyrius*; Gr. *Tyrios*.] (Geog.) Pertaining or having reference to Tyre, or to its people. — Purplish in color, like the dye called *Tyrian purple*. — *n.* (Geog.) A native or inhabitant of Tyre.

Tyringham, in Massachusetts, a post-township of Berkshire county, 126 miles south-west of Boston.

Tyro, *n.*; *pl.* TYROS. [Fr. *tyron*, from Lat. *tiro*, a recruit, a young soldier.] One who is employed in learning the rudiments of any branch of study; a beginner in learning, practice, or experience; a novitiate; a raw hand. — Hence, a person having but a slight acquaintance with any subject.

Tyrol, (*tyr'-ol*; Ger. *te-röl'*) a prov. of Austria, including the Vorarlberg, and bounded N. by Würtemberg, Bavaria, Italy, and Switzerland, between Lat. 45° 39' and 47° 46' N., and Lon. 9° 55' and 13° E.; area, 10,689 sq. m. Of all the countries of Europe, *T.* is the most exclusively mountainous. The Rhetian Alps traverse it from W. to E., and separate the valley of the Turr from those of the Drave and the Adige. The two loftiest peaks are the Ortler-spitz in the W., 12,855, and the Gross-Glückner in the E., 12,438 feet above the sea. The chief rivers are the Turr, Drave, and Adige. — Wheat, rye, barley, oats, and Indian corn are grown in the more fertile districts, and, with hops, tobacco, flax, and hemp, and an abundance of fruit, constitute the most important products of agriculture. Though a good deal of flax is spun, some silk manufactured, and glass and paper made, the *T.* is by no means a manufacturing country. The inhabitants are frugal, hardy, brave, and industrious, and belong to the Roman Catholic Church; in the S. they resemble the Italians, while in the N. they more resemble the Germans, whose language they speak. The *T.* is divided into the 4 circles of Innspruck, Brixen, Trent, and Bregenz. The province is governed by its own national diet, composed of nobility, clergy, and deputies from the towns and districts, who hold their sittings at the capital, Innspruck. Pop. (1897) 1,010,200. This country passed to the house of Hapsburg in the 13th century, and its inhabitants are the most attached of any to the rule of the Austrian empire. (See HOFER.)

Fig. 2546. — A TYROLESE.

Tyrolese, (*tyr-ül-eez'*) *a.* (Geog.) Pertaining or relating to Tyrol, or to the people of that country; as, a Tyrolese jodel.

— *n.* *sing.* and *pl.* (Geog.) A native or inhabitant of Tyrol; plurally, the people of that country.

Tyrolite, *n.* (Min.) A hydrated arseniate of copper with carbonate of lime, composed of 24.4 per cent. of arsenic acid, 43.8 oxide of copper, 9.18 water, and 11.0 carbonate of lime. It occurs in several parts of Tyrol, usually in small reniform aggregations, and diverging fibrous groups of a pale green color, and with a pearly lustre.

Tyrone, a co. of Ireland, prov. of Ulster: area, 1,260 sq. m. The surface is rough and mountainous in the N. and S., and in other parts hilly and scant of wood; but many portions of the soil are rich and fertile, and equally adapted for tillage and pasturage. The chief towns are Strabane, Duugaunon, and Omagh.

Tyrone, in Michigan, a township of Kent county.

— A post-township of Livingston co.

Tyrone, in Minnesota, a township of Le Sueur county, immediately north-east of the village of Le Sueur.

Tyrone, in New York, a post-village and township of Schuyler co., 18 m. N.N.E. of Bath.

Tyrone, in Pennsylvania, a township of Adams co.

— A post-borough of Blair co., 117 m. N.W. of Harrisburg; has extensive industries. Pop. (1897) 5,250.

— A village of Fayette co.

— A township of Perry co.

Tyronism (*-nizm*), *n.* State of being a tyro, novitiate, or beginner.

Tyrrel, in North Carolina, an E. co., bordering on Albemarle and Pamlico sounds; area, 380 sq. m. It is traversed by the Alligator river. Surface, level and partly covered with swamps; soil, sandy. Cap. Columbia. Pop. (1897) 4,560.

Tyrrell, in Pennsylvania, a village of Venango co.

Tyrrhenian Sea. The name given by ancient geographers, and sometimes retained by modern writers, to express that part of the Mediterranean extending between the coast of Italy in the N., and the islands of Corsica and Sardinia in the W., and Sicily in the E.

Tyrtæus, an ancient Greek poet, celebrated for his martial strains, flourished about B. C. 680. His birthplace is unknown. He was lame, and blind of one eye. In the war between the Lacedæmonians and Messenians, the former applied to the Athenians for a general; and the latter, it is said, in derision, sent them *T.* The bard, however, so inspired the Spartans by his warlike songs, that they reduced the Messenians to subjection. He was accordingly treated with great respect, and received the rights of citizenship. Some fragments of his songs are extant.

Tythe, *n.* An old orthography of *TITHE*, *q. v.*

Tzar, (*zar*.) **Tzari'na**, **Tzarit'za**, *n.* See CZAR, and CZARINA.

Tzaritzin, (*tsar-rit-seen'*), a fortified town of Russia, on the Volga, 110 m. from Kamishin. It is celebrated for its mineral waters. Pop. 6,000.

Tzintzontzan, (*tsint-soo-tsan'*), in Mexico, a town of Michoacan, 20 m. S.W. of Valladolid; pop. abt. 2,500.

T.—SECTION II.

TAIN

Ta'ber, JULIA MARLOWE, actress, was born in England, her family name being Brough; came to the U. S. when five years of age, and made her first appearance on the stage in a juvenile *Pinafore* company. When she was 12 years old this company was disbanded, and she was sent to school until she was 16; for four years after this she was in training for the stage, studying *Rosalind*, *Juliet*, *Parthenia*, and similar parts. She made her debut in New York city as *Parthenia*, and established a high standard, to which she has always adhered. Her impersonations include all the lighter heroines of Shakespeare, and several modern plays. In 1896 she appeared in a dramatization of *Romolo*, and (1896-97) in the romantic scottish play *For Bonnie Prince Charlie*. In 1894 she was married to Mr. Robert Taber, who has for several years taken leading parts in her repertoire.

Tachymeter, *n.* A surveyor's transit-instrument, as equipped with stadia-wires for stadia-surveying (*q. v.*).

Tachyscope, *n.* A toy for exhibiting pictures representing continuous motion. A series of instantaneous photographs is mounted on a circular plate, and rotated in a field of view with an intermittent motion. Compare PHENAKISTOSCOPE and KINETOSCOPE.

Taco'na, in *Washington*, a city, cap. of Pierce co., on Puget Sound, 25 m. N.E. of Olympia. At the head of navigation on the sound, with a good harbor and an important commerce, lumber, coal and wheat being largely shipped. Is extensively engaged in the lumber manufacture, having many large saw-mills, numerous planing-mills and sash and door factories, shingle-mills, &c. *Pop.* (1897) 45,000.

Taconic System. (*Geol.*) A term formerly applied to an extensive system of rocks, well represented in the Taconic Mountains, western Massachusetts, formerly regarded as presilurian, but now held by geologists to be truly Silurian, so that the name is now little used.

Taft, LORADO, sculptor, was born in Elmwood, Ill., April 29, 1860; graduated at the University of Illinois (1879); student in Paris at L'École des Beaux-Arts (1880-83), and exhibitor in succeeding Salons. In 1886 he settled in Chicago, and became an instructor in sculpture at the Art Institute, and lectured on painting and sculpture before the university extension classes. Among his works are the reliefs for the Michigan regimental monuments on the field of Gettysburg, and other military monuments; statues of General Grant and of Schuyler Colfax, &c. A work that commanded wide attention and much admiration was his sculptural decoration of the Horticultural Building at the Columbian Exposition, the symbolical beauty of which appealed alike to popular taste and the critical requirements of art.

Tahke'na River. (*Geog.*) A river of the Yukon district, and one of the headwaters of the Lewes. Its sources are at the foot of the Chilkat Pass, where it flows out of West Kussoa Lake (afterward named Lake Arkell); it was formerly much employed by the Chilkat Indians as a means of reaching the interior, but was never in favor with the miners, and is now rarely followed by the Indians themselves, although its navigation from the lake down is reported to be easy. It empties into the Lewes river about 12 miles above Lake Lebarge. See YUKON.

Taine, HIPPOLYTE ADOLPHE, historian and critic, was born at Vonziers, in Ardennes, France, April 21, 1828; studied at the College de Bourbon and l'École Normale, Paris; taught for some years, and gained his doctor's degree in 1853; thereafter devoted himself to literature. He won the Academy prize for an essay on Livy; published *Travels in the Pyrenees* (1855); *The French Philosophers of the Nineteenth Century* (1856); *Critical and Historical Essays*, in which he gave penetrative estimates of Carlyle and John Stuart Mill; *History of English Literature* (1864), a work that commanded the attention of English readers, and which is adjudged to be the most entertaining as well as the most critical work on the subject. In 1866 he published the series of lectures on art which he had delivered from the chair of History of Art and Aesthetics in l'École des Beaux-Arts, Paris, to which he was appointed in 1864. Another work on the same subject, *The Philosophy of Art in Greece*, was published in 1870; *Notes on England* (1871); *Notes on Paris* (1867); *A Voyage to Italy* (1866), &c. His greatest work in volume and in significance is *Origin of Contemporary France* (5 vols., 1876-90). It is in three sections: *The Ancient Régime*, *The Revolution*, and *The Modern Régime*, and is characterized by his

usual critical method, which takes into account race, environment, and social characteristics of the age, and the various moulding influences surrounding individual characters. In 1871 T. received the degree of D.C.L. from Oxford, and in 1878 he was elected a member of the French Academy. Died March 6, 1893.

Tait, ARCHIBALD CAMPBELL, ecclesiastic, was born in Edinburgh, Scotland, Dec. 22, 1811; educated at the Edinburgh Academy and Glasgow College, and later at Balliol College; was one of the leading opponents of the Puseyites. He became master of Rugby (1842); dean of Carlisle (1849); bishop of London (1856); archbishop of Canterbury (1868), the appointment being tendered him by Disraeli. In 1878 he presided over the Lambeth conference. He wrote many theological works in the conversational-lecture style adapted to popular comprehension. As Primate of England his personal influence was used to promote peace and harmony in church discussions. Died Dec. 3, 1882.

Tallahassee, in *Alabama*, a post-village of Elmore co. *Pop.* (1897) 1,510.

Tallyho', *n.* The cry of the huntsman to urge on the hounds.—A four-in-hand coach or drag; perhaps from an individual coach having once been so named.

Tal'mage, THOMAS DE WITT, clergyman, was born at Bound Brook, N. J., Jan. 7, 1832; studied law, but soon entered New Brunswick Theological Seminary, graduating in 1856; preached first at Belleville, N. J., then at Philadelphia, and was called to Brooklyn, N. Y., in 1869. His church, known as the "Brooklyn Tabernacle," was burned in 1872; another was built, and that also was burned in 1889; a third structure, which cost about \$400,000, and dedicated in 1891, was likewise destroyed by fire in 1894. Dr. Talmage removed to Washington, D. C., in 1895. Besides his great popularity as a preacher, he was for 30 years one of the most successful platform lecturers in the U. S. In 1889 he visited England, and afterward made a tour of Palestine and Continental Europe. His sermons and addresses have been published in daily and weekly journals, and also in book form.

Taloga, in *Oklahoma*, a post-village, cap. of "D" co., 70 m. from Kingfisher. *Pop.* (1897) 300.

Tam O'Shanter. The hero of Burns' poem of the same name; a good-natured, drunken rascal who is pursued by witches, but escapes.—A cap with a close-fitting rim surmounted by a large, flat top, usually with a knob or tassel in the center, made from various materials. In Scotland, a tight-fitting woollen cap or a braid bonnet.

Tama, in *Iowa*, a thriving town of Tama co., 50 m. W. of Cedar Rapids; excellent water-power from the Iowa river; has farm-implement works and other industries. *Pop.* (1895) 2,196.

Tam'muz, a god of the Babylonians mentioned in Ezekiel viii., 14, where, it is said, the Israelitish women were weeping for him. Tammuz represents the spring vegetation which ends in the fourth month. For this reason the Babylonians named this month after the god; and as the Jews took the names of the months from the Babylonians, Tammuz was taken among the rest. It seems quite certain that there is some connection between the cult of Tammuz and that of the Greek Adonis. The real home of the Adonis worship appears to have been Syria and Asia Minor, though it is found as early as the 7th century B. C. in purely Greek countries. That sexual excesses were connected with the worship of Tammuz is evident from the phallus which still plays a part in the modern Persian festival of Husein, which, it is proved by Eerdman, contains remnants of the old Tammuz worship.

Tam'pico Fiber. (*Bot.*) Strong fibers, piassava (see LEOPOLDINIA) or *istle*, used in the place of bristles for brushing, and exported from Tampico, Mexico, whence the name. The *istle* is an important tough fiber, also known as *istle*, *pila*, or *pinuella*. It is obtained from the long leaves of *Bromelia sylvestris*, a member of the pineapple family, cultivated in Mexico and largely exported, for use in belt-making, for lagging, cordage, hammocks, etc., and as a substitute for flax, as it is fine and white in the young plants, although short.

Tanagra Figurines. (*Archæol.*) A class of antique terra-cotta statuettes and reliefs first found in 1873 in the necropolis of Tanagra, in Boeotia, Greece, 24 miles northwest of Athens, but since sought for and discovered in other localities in Greece. They usually date from about 400 B. C., though some of them are evidently from prehistoric times. The earlier and

runder specimens are usually quite small, the finest of the later figures being only 8 to 9 inches tall. Although they are often found grouped around the bodies in the stone tombs or packed in vases, they seldom have any reference to death, but represent the simple everyday life of the Greeks. Most of the figures are of young women in a great variety of positions and usually draped, the draperies arranged in the countless graceful ways which were known to the Greek women. Sometimes a group of girls playing together is represented, or one girl is carrying another upon her back, or a girl is playing with an infant Eros, whom she appears half to dread. The motives, although numerous, are repeated over and over, for the figures were cast in clay moulds, many of which are still extant, but as the head was formed in a separate mould, replicas were often varied by giving the figures different heads or accessories. After the different parts were put together, the moulding was perfected with tools for the purpose, and, after baking, color was applied. The hair was usually made a rich auburn, the eyes blue, the lips crimson, the flesh a creamy white, and the draperies white or of any delicate tints most needed in the composition; gold leaf was used freely in the ornaments and in the borders of the draperies. Although in some other parts of Greece terra-cotta statuettes have been found of a purely sculptural style, those of the class found in Tanagra are very rarely heroic in motive, but belong to what is known as *genre* in art, giving a poetic representation of human character. They evidently derive their inspiration from contemporary literature, that of Theocritus, of Moschus, and of Bion. Besides occurring in graves, they are sometimes found in temples, as if they had been offerings, or buried beneath the temples, as if to purify the site, according to an old custom in Egypt. Their abundance proves them to have been inexpensive, probably the work of unknown artists, and within the means of the poorest, yet by the grace and refinement of their treatment they stand high as art, and help to give an idea of the inherent artistic culture of the whole Greek people.

Tanana River. (*Geog.*) One of the largest tributaries of the Yukon, rising from the northern slopes of Mt. St. Elias (see ST. ELIAS ALPS) and flowing northwest some 600 miles through almost unexplored regions to the Yukon at the 152d meridian. Gold has been found along its course at various places, and it is navigable for half or more of its length.

Taney, ROGER BROOKE, jurist, was born in Calvert co., Md., March 17, 1777; son of a planter; graduated at Dickinson College (1795); admitted to the bar (1799); became attorney-general of the U. S. (1831), and secretary of the treasury (1833), in which office he sustained President Jackson's position in regard to the U. S. Bank question. In 1835 he was appointed associate justice of the Supreme Court; the Senate "indefinitely postponed" action on the nomination; Chief Justice Marshall died meanwhile, and T. was nominated to the vacant seat, which appointment was reluctantly confirmed by the Senate that he had so seriously antagonized. The most famous decision rendered by T. was that in the Dred Scott case. It is now believed that T., while deciding adversely in this case, was not actuated by the intense pro-slavery sentiments that were attributed to him at the time and since, but that he rendered decision in accordance with what he believed to be the correct construction of the law. Upon inheriting his slaves he freed them, which indicates that he was not practically disposed to slavery, however strongly he may have sustained the institution in theory. The State of Maryland, by an interesting coincidence, abolished slavery on the very day of T.'s death, October 12, 1864.

Tanganyika, a lake of E. Central Africa, S. of Lakes Victoria and Albert, all three having been discovered by Speke and Burton in 1858. They supposed that Tanganyika belonged to the Nile basin, but this theory was disproved by Livingstone and Stanley, in 1871. Its south and west coasts were surveyed in 1874 by Cameron, who discovered on the west side an outlet, the Lukuga. Stanley found, in 1876, that this channel communicates with the Lualaba, or Upper Congo, although he was satisfied that the channel is generally dried up in certain parts of its course, and carries the overflow of Tanganyika westward at intervals of years only. Thomson reaffirmed the connection between Tanganyika and the Congo by the Lukuga. Mr. Hore found the height of the surface, in March, 1879, to be

2,700 feet above the sea; in August, 1880, the water had fallen 10 feet 4 inches. The lake, which is about 600 miles from the coast, lies between 3° and 9° S. Lat. Its length is 420 miles (nearly a fifth longer than Lake Michigan); its breadth varies from 15 to 80 miles. The water is fresh and wholesome, the climate not unhealthy. The lake is surrounded by high mountains, some of them 10,000 feet in height. The scenery is beautiful, and the shores abound in animals of all kinds. The surrounding country is, in many places, densely populated. The most important town is Ujiji, on the eastern shore. As a line of connection between the Zambesi basin and the Nile, the lake is, in a very true sense, the heart of Africa.

Tannhäuser (*tän'-hoi-zër*). The hero of a German mediæval legend, a knight who, in the course of his travels, comes to the Venusberg, and enters the cave-palace to behold the wonders of the Lady Venus and her court. After living there for some time in every kind of sensual delight, his conscience smites him. He invokes the Virgin Mary, and makes a pilgrimage to Rome, to seek from Pope Urban, through confession and penance, remission of his sins, thus escaping damnation. The Pope, when he hears the knight's story, tells him that he can as little obtain God's mercy as the rod in his hand can become green again. Thereupon Tannhäuser departs in despair and returns to the Lady Venus. Three days after he had gone, the dry rod began to sprout and bear green leaves. Thereupon the Pope sent messengers to every country to look for the knight, but in vain, for he could nowhere be found. A ballad, once very popular all over Germany, and even beyond it, narrated this legend, the substance of which goes back to the days of German paganism. Wagner used the legend for an opera. As a matter of fact, in the middle of the 13th century, in the time of Pope Urban IV. (1261-65), there lived in Germany a Bavarian knight named Tannhäuser, who was a minnesinger and composed spirited ballads.

Taoism, n. (*Philo.*) A Chinese religion and also philosophical system which teaches that by non-resistance and inaction man may harmonize his moral and physical natures with their surroundings, and in this negative way overcome all obstacles to happiness and continued life. The philosophy of Taoism dates from the 600th century B.C., and was taught by the philosopher Lao-tse in a little book called *Tao-teh-king*, imperfectly rendered by the English "Classic of the Way and of Virtue." Taoism as a religion is contemporary with the introduction of Buddhism into China, and is counted one of the three great Chinese religions, of which the others are Confucianism and Buddhism. It has adopted Buddhist forms, and has temples, monasteries, idols, and a hereditary pope; it teaches that there are three "Pure Ones," not unlike the Christian Trinity, and that there is a moral system of rewards and punishments in the universe.

Taos. (*Geog.*) The name of a district in New Mexico, about 50 m. north of Santa Fé, watered by the Rio de Taos, a tributary of the Rio Grande. It is a Mexicanized form of the Indian name of a great double pueblo, or adobe community-house of Indians of Tañau stock, which has existed there since prehistoric times, and is one of the best examples extant of pueblo-architecture. About 400 Indians still inhabit it, but their native customs have become greatly modified by contact with civilization. They were early visited by Spanish priests, who erected a mission church there, the ruins of which remain. Mexicans settled in the valley 200 years or more ago, and began cultivation of the fertile lands, where a village grew up called Fernandez de Taos. This was one of the important centers of civilization when New Mexico came into the Union, and was the scene of a battle, and afterward the seat of the first Territorial government; it was also the residence of Kit Carson and Colonel Bent. It is now a flourishing town of about 4,500 population, and affords a good market to the Indians, who are diligent farmers and stock-raisers upon their small reservation, and are quite self-supporting. Remnants of the same nationality inhabit the Tigua (*tee'-wa*) group of pueblos on the Rio Grande.

Tarbell, Ida M., writer, was born in Pa., in 1860; became a writer for the *Chautauquan*, and contributed much to its success; resided in Paris, engaged in work for various periodicals; became connected with *McClure's Magazine*, for which she wrote biography during 1895-96.

Tarentum, in Pennsylvania, a post-borough of Allegheny co., 22 m. N.E. of Pittsburg; has plate glass and flint glass factories, paper mills, &c. Rich coal mines in the vicinity. Pop. (1897) 5,500.

Tari (*tah'-rè*), n. (*Bot.*) The sap of *Phoenix sylvestris*, a species of palm, used in the production of date-sugar and also as a fermented beverage.

Tariff, n. (*Polit. Econ.*) A rate of duty, or the duty itself, on articles imported or exported. In mediæval Europe such duties were levied for the sake of revenue, but were early found to help special industries by their discriminations; and in 1664-67 Colbert made them an important part of his financial scheme. Other countries levied similar duties, both for revenue and protection, and, later, France and England made war against each other as much by discriminating duties as by arms. The treaty of 1786 was a sort of truce, with its system of reciprocal reductions, but it was soon set aside by the wars of the Republic, and Napoleon.

Adam Smith and the French economists had laid the foundation for a more liberal policy, and after the fall of Napoleon, a change appeared in England. The Revolution had abolished the tariffs formerly maintained by

one French province against another, but had established duties almost prohibitive on foreign importations; but in England the need of food beyond the product of her fields, and of raw material and markets for her growing manufactures, made free trade popular, and under the lead of Huskisson in 1824, Lord Althorp in 1832, and Cobden in 1842, the corn-laws were repealed in 1846, and with the Irish famine that year the protective system fell. Further reductions in duties were made in 1853, and in 1860 a treaty was made between England and France admitting imports at a duty of 10 per cent. Since 1860 England has levied duties only on articles not produced in the country—like wines, tea, and coffee; or, if so produced, like spirits, has balanced the duty by an internal revenue tax of like amount, and England has fully adopted the principle of free trade. This has not prevented the adoption of some protective duties in Canada and Australia, but the expectation that a general Colonial policy of protection would seriously modify the British system of free trade was quite negated by the leading Colonial representatives at the Queen's jubilee in 1897.

In France, however, the treaty of 1860 was never popular, and was ended in 1881, and in 1891-92 France adopted a system distinctly protective, though providing for reciprocity in certain cases.

In Prussia Frederick II. established a system of strong protection, which, however, was somewhat moderated in 1818. Confusion following the varying tariffs in the different German states, a *zollverein*, or customs union, was formed in 1834, establishing free trade between the states of the union, but applying the moderate Prussian tariff of 1818 to foreign imports. In 1853 there were reciprocal reductions of duties between the states of the *zollverein* and Austria. Prussia urged further reductions in 1861, and made an independent treaty with France in 1862, which led to general *zollverein* reductions. But the Liberal party was overborne by the consolidation of the German Empire, which laid duties on farm products, hitherto free, and higher duties on manufactures. Reciprocal reductions, however, were made with Austria and Italy in 1892 as to grains and wines, and a like reciprocity was established with Russia in 1894 as to wheat and barley.

In the United States, before the adoption of the Constitution, Congress proposed a duty on imports, but was unable to secure consenting action of the several States; but in 1789 Madison proposed that specific duties be levied on liquors, wines, and certain other imports, and an *ad valorem* duty on all others; and a tonnage duty on American importing vessels, and a higher rate on foreign vessels. Some manufactures petitioned for rates that would protect their business. This first tariff act of Congress received Washington's signature July 4, 1789. Hamilton recommended a second tariff act, increasing duties by an average of 2½ per cent., which was passed Aug. 10, 1790; and other increases were made in 1791, 1792, 1794, 1797, 1800, and 1804. Some reductions were made in 1807 and 1808, but the act of 1812, passed as a war measure, doubled all existing duties and added 10 per cent. to goods imported in foreign vessels.

These early tariffs were mainly for revenue, though a part of the duties of 1789 were for protection, and the principle of protection was favored in the manufacturing States of Pennsylvania and Massachusetts. But in 1816 there was a distinct protective movement. Specific duties were laid upon crude iron, as well as upon manufactures, and a duty of 25 per cent. upon cotton goods and woollen goods. Henry Clay appeared in advocacy of protection as an economic principle, and the new law was enacted April 27, 1816. The protective movement was strengthened by a commercial crisis in 1818, and in 1824 the first act was passed for protection only, laying duties on hemp, wool, and iron, and increasing duties on manufactures. Daniel Webster made at this time his first great speech on the tariff, in which he argued against protection as a policy full of danger, as it neglected other interests than those specifically protected. The sentiment of Massachusetts was against the tariff, as her manufacturers wanted free raw material. In 1828 a new act, modifying duties in the interests of manufacturers, was more acceptable in New England, and Webster urged the protection of the established manufacturing system. Duties, however, were reduced in 1828, 1830, and 1832; and in 1833 Mr. Clay's "Compromise Bill" was an effort to save the falling protective system. The Whig party represented high protection of manufactures, and this was the main issue against the Democrats, who advocated free trade and were strong in the agricultural States and great commercial cities. The tariff of 1842 was a Whig triumph, with high duties on iron, cotton goods, woollen goods, paper, and glass, and generally protective duties on manufactures; but in 1846 the Democrats passed the "Walker Tariff," which lowered the protective duties somewhat, and made tea and coffee free.

After 1850 the tariff gave place in popular thought to the question of slavery. The Whig party was succeeded by the Republican party, formed to resist the extension of slavery, and maintained as the Union party during the Civil War, and including great numbers of anti-slavery and Union Democrats. The Morrill Tariff, passed in 1861, after the financial crisis of 1857, put a duty on pig-iron of \$6 a ton, and on wool of 3 cents a pound; and the war tariff passed later increased both revenue and protection, and established a system of high protective duties, which were retained after the revenue duties had been reduced as excessive. In

1867 duties on wool and woollen goods were greatly increased, and a compound system of a specific duty *ad valorem* was introduced and largely developed. In 1869 duties on copper were increased. There were reductions and increases in 1870, 1872, and 1875. In 1882 President Arthur appointed a commission to revise the tariff, and some reductions were recommended, but the amendments made in Congress reduced its importance.

The Democratic triumph in 1884 brought the question of tariff reform into prominence. It was strongly urged by John G. Carlisle, of Kentucky, President Cleveland made it the subject of a message to Congress in 1887, and in 1890 William E. Russell was elected by the Democrats governor of Massachusetts on a platform of "free raw materials," and was reelected in 1891 and 1892. Changes in other States showed that the question of protection and free trade was again before the people, and the parties have had alternate success and defeat, the McKinley tariff of high protection in 1890 being followed by the reductions of the Wilson tariff in 1894, and this again by the Dingley protective tariff of 1897.

In the discussion of free trade and protection, on theoretic principles, a great part of the eminent economists and university professors have favored free trade. They argue that protection taxes the community for the benefit of particular industries; that it causes higher prices, which burden the people generally; that it interrupts the natural development of commerce, and creates irritation and hostility between nations; that it is a survival of the mediæval system of war and plunder, and out of place in the development of peace. It would be intolerable between different States of the Union, and is only less burdensome between different friendly nations.

Protectionists reply that government must accept existing conditions, among which is the hindering of the development of great and varied natural resources by the free trade with other nations farther advanced in some kinds of manufacture, while to prohibit or limit that trade will permit the development of infant industries among us, which presently can stand alone, and greatly bless the whole community. In support of this doctrine they refer to the development of our cotton and iron industries, which they claim were built up by protection, and the silk and tinplate manufacture, said to have been created by it. The freetraders reply that these wonderful growths should not be credited to protection; that they belong to modern invention and science, and are found in free-trade countries; that the stimulus of protection is not wholesome, but liable to frequent reverses, and the system brings out a horde of corrupt applicants for favors, so that each new tariff is disfigured and disgraced by corrupt lobbying in its passage, while its provisions represent not a wise protection, but the ability of manufacturers to bribe legislators. At the present time the U. S. has a very highly protective tariff, and the protective system is embedded in its laws, comparatively few advocating absolute free trade. The commercial community, for prudential reasons, deprecates any fresh unsettling of the conditions under which business is reviving. Yet it is commonly felt that the present tariff has been fixed upon no principles of science or justice, and few statesmen look for great permanence in its provisions. The campaign slogan, "Protection to American Labor," has a seductive ring, and would be even more effective in elections if labor could feel sure that the "protection" would extend to its own ranks. It is also coming to be better understood that a tariff which checks imports not only reduces the volume of revenue, but also the volume of exports, which, in turn, reduces the demand for the products of labor to a corresponding extent. It has even been suggested that if it is good policy to impose duties for the purpose of keeping out some foreign products in order to protect home producers, it would logically be better policy to absolutely prohibit all such imports. The truth is, unfortunately, that almost none of the citizens whose votes decide the tariff question have more than the most crude ideas of the subject; and, as the question has been, and is, very thoroughly identified with partisan politics, there is at present little hope of disinterested popular education on the topic through either the press or the rostrum.

Tarkio, in Missouri, a post-village of Atchison co., 8½ m. N.E. of Rockport. Pop. (1897) 1,240.

Tar'o, n. (*Bot.*) The Oceanic name of the rhizomes of species of *Colocasia*, a genus of the *Aran* family. These plants are indigenous to, or are cultivated in, tropical Asia, America, and Africa, eastern Australia, and the South Sea Islands. *C. antiquorum* was known to Pliny as being cultivated in Italy and Egypt. It is the *kolka* of the Arabs and Egyptians, being largely harvested by them as a winter vegetable. The tuberous, stem-like starchy roots contain an acrid poisonous principle that, being volatile, is lost by cooking; but when cooked the rhizomes afford a valuable starchy food, largely used by native tribes. A fine starch can also be obtained from the tubers.

Tar'pon, or Tar'pum, n. (*Ichth.*) A large herring-like fish of the genus *Megalops*, which includes the jewfish, and is represented in all warm seas; specifically, *Megalops thrissoides* of the southern coast of the United States, noted among anglers. This magnificent herring reaches 7 or more feet in length, is clothed with remarkably large and brilliant scales, often 3 inches wide, which are silvery, and are extensively used in ornamental work; hence common names for the fish are "silver king," "grand eaille," and, in Texas, "sava-

nilla. It is distributed through the West Indies, all along the Gulf coast, and northward to Cape Hatteras. It is carnivorous, and actively pursues and feeds upon schools of immigrating fishes, which are followed by it far up fresh-water rivers. In these forays it often does great harm to the nets of fishermen, and even to the fishermen themselves, by hurling itself against them in its efforts to escape or avoid capture; as a large one may weigh 150 pounds, and is a very powerful swimmer, it is able to inflict serious injury. The fact that this strong and courageous fish will take a hook has led him to be the object of the ambition of every angler within his range; and there are many who consider that the catching and killing of a tarpon on a fly-rod constitute a feat superior in every respect to salmon-fishing. The power displayed and durability manifested may be understood, when it is known that men have been pulled out of their boats by the fish, and that three hours are sometimes required to exhaust a hooked specimen, whose rushes and leaps for life are prodigious. The flesh is excellent fare.

Tar'tan, n. (*Fabrics.*) The general name given to Scottish plaid cloths, of variously colored patterns, and of woollen, silk, cotton, or mixed material, but more properly applied only to plaided woollen goods in which the colors are arranged in "sets" having a given width and sequence. The style of this cloth is very old; it has been the material of the Scottish Highland costume for at least four centuries, each clan having a pattern of its own, distinguished by its design or prevalent colors, so as to be recognizable at once.

Taschereau (*tash-er-ō'*), ELIZÉAR ALEXANDRE, ecclesiastic, was born at Saint Marie de la Beauce, Quebec, Feb. 17, 1820; educated at the Seminary of Quebec and at Rome; ordained a priest (1842), and occupied the chair of Moral Philosophy at the Quebec Seminary; studied again in Rome (1854-56), receiving the degree of Doctor of Canon Law; returned to Canada, and became director and superior of the Grand Séminaire for various successive periods of office; was distinguished for his interest in educational progress. He was consecrated archbishop of Quebec in 1871, and elected a cardinal in 1886.

Tashkend', or Tashkent', the capital of Russian Turkestan, 300 miles northeast of Samarkand; it was captured by Russia in 1868, and consists of the old walled city and a new Russian quarter. The population was 121,410 in 1885, of which nearly one-sixth are Russians. There is a Russian citadel, official buildings, military stores, Russian schools, and an observatory. The town has telegraphic connection with Europe, and is a trading center, besides manufacturing silk, leather goods, and other things.

Tasimeter, n. An apparatus for measuring changes in length, temperature, &c., of bodies, by means of variations in the electrical conductivity of carbon, the result of pressure. See MICROTASIMETER.

Tasman'nia, n. (*Bot.*) Several Tasmanian and Australian species of *Drimys*, a genus of the *Magnoliaceæ*, have been given this generic name. All are shrubs, and have simple, entire smooth and leathery evergreen, dotted leaves, scattered on the branches; and inconspicuous flowers crowded together in the axils of the upper leaves, or terminal, producing little unopening fruits containing several shining black seeds. *Tasmania aromatica* (now *Drimys lanceolata*) possesses the same tonic and aromatic properties as the

Fig. 3072.—TASMANNIA.
(*Drimys lanceolata* or *aromatica*.)

Winter's Bark of Magelhaen's Straits (*Drimys Winteri*), and is substituted for it by colonial doctors. The colonists call it the *Pepper-plant*, and use its little black pungent fruits as a substitute for pepper. It grows in large masses, and in favorable situations attains a height of twelve feet, with a trunk sometimes as much as nine inches in diameter; the branches being somewhat whorled, and when young clothed with red bark. Under the microscope the wood exhibits a structure resembling that of many coniferous plants, the fibers being marked with similar circular disks.

Tate, in Mississippi, a N. W. co.; area, 390 sq. m.; bounded W. and N. W. by Coldwater river, and drained by its tributaries. Surface, undulating; soil, fertile. Cap. Senatobia. Pop. (1897) 21,890.

Tat-on-duc Riv'ér. A tributary of the Yukon, entering from the north a few miles west of the Alaskan boundary, and affording a short cut to the upper part of Porcupine river and the passes to the lower Mackenzie. It flows through picturesque cañons, and is fed by warm sulphur springs.

Tattersall's, n. A famous auction market in London, where racing and other high-class horses are sold. It is named from the auctioneer, Richard Tattersall, who established it in 1766, taking a ninety-nine years' lease of property in Hyde Park Corner. After 1865, the lease having expired, the establishment was removed to Knightsbridge Green.

Tauchnitz, CHRISTIAN BERNARD, nephew of the elder Tauchnitz, was born Aug. 25, 1816. The year after his uncle's death (1837) he also set up a printing establishment in Leipsic; is noted for the series of British authors, begun in 1842, and known as the "Tauchnitz Edition"; also published English translations of German authors, and a "Student's" series, &c. He was created a baron in 1860; and in 1877 became a Saxon life peer. Died Aug. 14, 1895.

Tauchnitz, KARL CHRISTOPH TRAUGOTT, printer and bookseller, was born at Grosspaulsdorf, Germany, Oct. 29, 1761; in 1809 he began publishing a series of editions of classic authors, offered a prize of a ducat for every error detected in the edition, and by corrections succeeded in producing in 1828 a remarkably correct edition of Homer. He introduced the process of stereotyping into Germany, and also applied it to music, which had not been attempted before. He stereotyped the Hebrew Bible, and the Koran in the original Arabic. Died Jan. 14, 1836, and was succeeded in business by his son, KARL CHRISTIAN TAUCHNITZ.

Taus'sig, FRANK WILLIAM, political economist, was born at St. Louis, Mo., Dec. 28, 1859; graduated at Harvard (1879); received degrees of Ph.D. (1883) and LL.B. (1886); travelled a year in Europe, and on his return was appointed professor of Political Economy in Harvard University. He published *Tariff History of the United States* (1888-92), and *The Silver Situation in the United States* (1892).

Taylor, JAMES MONROE, clergyman, was born in Brooklyn, N. Y., Aug. 5, 1848; graduated at the University of Rochester and Rochester Theological Seminary; studied also in Europe; became pastor of a Baptist church at South Norwalk, and later at Providence, R. I. In June, 1886, he became president of Vassar College.

Taylor, TOM, dramatist, was born in Sunderland, Eng., in 1817. Among the hundred or more plays he wrote or adapted, the best known to-day are *The Ticket-of-Leave Man* and *Still Waters Run Deep*. Died in 1880.

Taylor, WILLIAM, M. E. clergyman, was born in Rockbridge co., Va., May 2, 1821, and became an itinerant in 1843; since that time he has been a constant worker in foreign lands—Europe, Egypt, Australia, Tasmania, New Zealand, Asia, Africa, and India. On May 22, 1882, he was consecrated missionary bishop of Africa, and going to Central Africa he located 36 mission stations, providing 70 missionaries for their management. He was retired by the General Conference in 1896, but continued to devote himself independently to missionary work. He has published many books embodying the narrative of his varied experiences, with didactic practical reflections.

Taylor, WILLIAM MACKERGO, clergyman, was born at Kilmarnock, Ayrshire, Scotland; graduated at the University of Glasgow (1849); became a minister of the United Presbyterian Church; was a delegate to the General Assembly of the U. S. (1871), and in the same year was called to the pastorate of the Broadway Tabernacle (Congregational) Church, New York city; filled this pulpit until 1892. His published writings are very numerous, being mainly the essence of sermons revised and condensed. Died Feb. 8, 1895.

Taylor, in Texas, a post-town of Williamson co., 35 m. N.E. of Austin. Center of a cattle and sheep raising region. Pop. (1897) 2,795.

Taylor, in Wisconsin, a N. central co.; area, 990 sq. m.; drained by Yellow, Jump, and Black rivers. Surface, rolling; soil, very fertile. Hardwood and pine timber. A good dairy county. Lumbering is the chief industry. Cap. Medford. Pop. (1895) 8,498.

Tchernova'da, a fortified town on the right bank of the Danube, in Roumania, in the province of Kustenji. The river is crossed at this point by a bridge (finished in 1895), which really consists of three viaducts and two bridges. The main bridge, 98½ feet high, crosses the Danube to the Island of Balta, which is crossed by a viaduct; then comes a second bridge across the river Borcea at Felești. Viaducts on either side form the approaches. The entire length is 11,900 feet, and the cost was nearly \$7,000,000.

Technical Schools. (*Educ.*) This class of schools includes polytechnic institutes, institutes of technology, schools of applied science, mining schools—in fact, all schools in which the sciences are taught with a view to their practical application. It also includes technical departments of colleges, which often have a separate organization and name.

In the U. S. the earliest foundation for technical education was that of the Rensselaer Polytechnic Institute, at Troy, N. Y., established in 1824 by Stephen Van Rensselaer as a School of Theoretical and Applied Science. In 1896 it had 17 instructors and 135 students, with 5,000 volumes in its library. It has graduated more than 1,200 students, its work being mostly confined to the education of civil engineers, in which it has had a successful career. About the middle of the century, several of the more important colleges established special departments for scientific work. The earliest of these was the Sheffield Scientific School, of Yale University, founded in 1847 by Joseph E. Sheffield, of New Haven, who gave it an endowment of \$1,000,000. In 1869 the school was reorganized on a more extensive scale. It was followed by the Lawrence Scientific School, of Harvard University, founded in 1848, by

Abbott Lawrence, a merchant of Boston, who gave and bequeathed the school altogether \$100,000. These two were for a long time schools of science rather than its applications, although they have latterly taken more of the character of schools of technology, with thorough courses in several branches of engineering. In 1852 was founded the Chandler Scientific School, of Dartmouth College, which has confined its work chiefly to civil engineering.

During the later years of the Civil War and the years immediately following its close, technical education in the U. S. received great impetus from two causes: First, the passage of the Morrill Act, by which large land grants were made to the several States for the purpose of enabling them to establish institutions for giving instruction in agriculture and mechanics; and, second, the endowment of schools of technology by persons who, by reason of the enormous expenditure of the government during the war, found themselves masters of far greater fortunes than they had ever hoped to possess. Probably half of the institutions growing out of or aided by the land-grant fund have special courses in the various branches of engineering and other technical subjects. Among those best known for the strength of the technical courses may be mentioned Cornell University, at Ithaca, N. Y.; Purdue University, at Lafayette, Ind.; the universities of Wisconsin, of California, the Ohio State University, at Columbus, and the Illinois Industrial University. To these may be added, as among the more important technical schools attached to colleges or universities, and not founded or supported by the land-grant fund, the Thayer School of Civil Engineering, connected with Dartmouth College, the School of Engineering of Washington University, at St. Louis, organized in 1870, and the School of Mines connected with Columbia University, New York city.

One of the foremost schools of technology in the U. S. is the Massachusetts Institute of Technology, at Boston. It was chartered in 1861, and opened in 1865. Though owing its origin to private endowment, it receives a share of the Congressional aid to land-grant colleges. The school of industrial science has grown to be the foremost feature of this institution. In 1896 it had 140 instructors and 1,215 students, with 40,000 volumes in its library. Its revenues in that year were \$291,000. A little younger than this is the Worcester Polytechnic Institute, at Worcester, Mass. It was incorporated in 1865, and its first building opened to students in 1867. It was the first school of technology in the country to add a workshop to its equipment for the instruction of mechanical engineers, and systematically to provide workshop practice as a part of the course of study. In 1896 it had 32 instructors and 219 students, with 4,800 volumes in its library. In that year its income was \$63,000. The location of Lehigh University, at South Bethlehem, Pa., incorporated in 1866, in the heart of a region rich in mineral resources, has given the institution such a bent in the direction of applied science that it may not unjustly be regarded as a school of technology.

In 1871 was founded, under the will of Edwin A. Stevens, a noted engineer, at Hoboken, N. J., the Stevens Institute of Technology. He bequeathed the institution, in addition to valuable land in Hoboken, \$650,000. The school is devoted to mechanical engineering and allied studies. Practical instruction is given in all kinds of machine and electric work. In 1896 it had 25 instructors and 254 students, with 9,000 volumes in its library. Its income in that year was \$64,600. The Rose Polytechnic Institute was opened at Terre Haute, Ind., in 1883. In 1896 it had 21 instructors, 123 students, and 4,000 volumes in its library. Its revenues in that year were \$42,000. In 1891 the Case School of Applied Science was started at Cleveland, O. In 1896 it had 20 instructors, 240 students, and 2,000 volumes in its library. Its income in that year was \$60,000.

Tech'niphone, n. A keyboard arranged like that of a piano, but unconnected with any sounding musical mechanism, designed for practice in fingering, &c., to avoid the annoyance to those within hearing; a dumb piano.

Technique (*tek-nēk'*), *n.* [*Fr.*] (*Fine Arts.*) The method in which an artist uses his materials to express his mental conceptions; the details, considered collectively, of mechanical performance in any art, especially music.

Teck, Duch'y of. (*Geog.*) A small ancient duchy in Swabia, now belonging to Würtemberg. In 1863 the King of Würtemberg conferred it upon the children of Duke Albert, of Würtemberg, whose son, Francis Paul Louis Alexander, consequently became Duke of Teck. He married Princess Mary Adelaide, a granddaughter of George III, of England, and their daughter, Princess Victoria May (born in London, 1867), was married in 1893 to the young Duke of York, only living son of the Prince of Wales, and heir apparent to the British throne. Duke Francis of Teck is a general in the British army and president of the Royal Botanic Society of London.

Technol'ogy, n. [*Gr. teknon, a child, and logos.*] A treatise on children, their training, diseases, &c.

Teem'seh, in Oklahoma, a post-village, cap. of Potawatomic co., 26 m. from Norman. Pop. (1897) 1,400.

Tee-to'tum, n. [Perhaps from *tee-told*.] An institution designed to furnish workingmen and women the privileges of a social club, with good food and non-intoxicating beverages, and also cooked food to families at a low price; a people's café, reading-room, &c.

Tegner (*t'g-nēr'*), ESAIAS, the most eminent of Swedish poets, was born in 1782; became professor of Greek in

Land University (1812), and bishop of Wexio (1824). His fame rests chiefly upon his *Frithjofs Saga*, based upon an old Norse saga of the same name. Died in 1846.

Tegucigalpa, the capital of Honduras, Central America, situated on a plateau surrounded by mountains in the center of a rich agricultural district which once was a gold and silver-mining region, and still has mines. It is 60 miles from the port of Amolpa, on the Gulf of Fonseca, and expects soon to have railway connection with the coast. It contains a cathedral, a university, a library, and a ladies' seminary. Population about 15,000. The department of the same name has a population of over 60,000 and an area of 3,475 square miles.

Tel., Tele.—An initial compounding element, derived from the Gr. *tele*, far.

Telautograph, *n.* A form of telegraph, invented by Prof. Elisha Gray, for duplicating messages, drawings, &c., in facsimile at a distance. The mechanism was announced as perfected about 1892, and attracted much interest in scientific and electrical circles. Exhibitions were made of its workings, and duplications of all sorts of matter written or drawn at the sending mechanism were made at the receiver. A company was established in New York to manufacture and introduce it, but it was found that the use of the four connecting wires essential to the apparatus was too costly to render the invention commercially profitable. Prof. Gray therefore devoted himself to experiments for overcoming the difficulty, and in 1897 it was announced that he had succeeded in operating the machines satisfactorily with two wires, so that the expense of maintenance would be no greater than with an ordinary telegraph line. The transmitting and receiving instruments are very similar in appearance, each having a central flat surface, on which a continuous sheet of paper is drawn by means of a drum, the paper being moved mechanically by a lever at the transmitter, and electrically in unison at the receiver. The pen of the receiver is a glass tube, carrying its ink capillaryly, while the writing instrument of the transmitter may be an ordinary pencil. The duplication of the motions of the pencil at the transmitter is performed by current-impulses controlled by the shortening or lengthening of two silk cords to which the pencil is attached. By a complex mechanism the impulses at the transmitter are so duplicated at the receiver as to cause two aluminum arms to shift the receiving pen along positions similar to those assumed by the sending pencil and the silk cords, so that the record made on the paper at the receiver is always a facsimile of that at the transmitter, whether words, figures, signs, or sketches are made. The system has great value in that all messages may be made autographically, their genuineness being thus recognizable by the recipient. The transmission of drawings is equally useful, though this has been accomplished by several other instruments. Compare *printing telegraph* under TELEGRAPH.

Tele., Teleo.—An initial compounding element, derived from the Gr. *teleos*, complete, perfect.

Telegraphy, Improved Modern Systems of. The first great improvement in the operation of the electric telegraph, after the general introduction of the Morse system, came in the *multiple or synchronous system*, which appears to have been first suggested by Farmer, who conducted successful experiments at Boston in 1852. By placing two rapidly rotating synchronous commutators at each end of the circuit, connecting with two branches at each terminus, he produced a current in each branch, which was continuous enough for practical purposes, though really intermittent. As long as the synchronism of the commutators was maintained, the single wire could be operated from both branches, being made serviceable for sending two messages at the same time, in either direction. But the difficulty of maintaining the synchronism caused him to abandon his experiments. Patrick B. Delaney subsequently improved the synchronous method, producing a practical multiplex telegraph, which was introduced in Great Britain about 1885, where it is now employed by the Post-office Department. Lieut. F. J. Patten also improved the synchronous method, and experimented with it in the United States. He employed corrections of the synchronism of the commutators at very frequent intervals.

The duplex, quadruplex, sextuplex, &c., systems of telegraphy should not be confounded with the multiplex, which is produced by the synchronous rotation of sets of mechanism at opposite ends of a line. The multiplex system may be worked with two, three, four, five, six or more currents, and, according to the number worked, is styled diode, triode, tetrode, penthode, hexode, &c., meaning two-way, three-way, &c. The maintenance of perfect synchronism has not yet been attained, but with the aid of correcting devices a considerable number of ways can be worked on one line, the total being limited in practice by the static capacity of the line. At the Vienna Exposition in 1873 Meyer exhibited a tetrode system which has since been employed between Lyons and Paris, carrying as high as 110 messages an hour. Meyer's method was improved upon by Baudot in 1881, and by Paul La Cour, of Copenhagen, about the same time, but both of these have been supplanted by Delaney's mechanism.

Dr. Gintl, of Austria; Carl Frischen, of Hanover; Stark, of Austria; and J. B. Stearns, of Massachusetts, in the order named, experimented with and developed the system of *duplex telegraphy*, now in general use in

both America and Europe. Gintl connected an auxiliary local circuit with the Morse key, passing through a separate but opposing helix upon the instrument at the home station to neutralize the effect of the current from the home instrument, at the same time the home instrument was left free to respond to increased current caused by operation of the Morse key at the distant station. Stearns' improvement to this was the most important, he adding a condenser to compensate for induction, thus making it practical for long lines. Thomas A. Edison's *quadruplex system* is based upon Stearns', being introduced in 1874. Its principle is taken from the duplex system, two keys being provided in the sending circuit, and two relays, each having a coil in both the line-circuit and compensation-circuit. One key reverses the current, and the other brings into the circuit three times as much battery power, which permits of the two extra workings.

Edison's *phonoplex system* made duplexing practical for offices having a single Morse circuit, thus more than doubling the amount of service obtainable from a wire, without involving any material extra cost. The usual Morse waves are employed with one instrument, while the other instrument is worked from induced currents with the phonoplex apparatus, which employs both condensers and telephonic devices. In the S. D. Field *sextuplex system* of telegraphy three currents are employed, each being worked by the duplex method. The currents are: (1) A direct current, of increasing and decreasing strength, working a neutral relay. (2) A reversed current, working a polarized relay. (3) A rapid vibrating current, vibrating a telephonic diaphragm.

PRINTING TELEGRAPHS.—Telegraphic devices for making a record in ordinary Roman characters, that may be read by any person, have been numerous invented. One of these is the Hughes type-printer, which makes a record in large capital letters. A large keyboard, somewhat like that of a piano, is provided for sending the messages, and the whole affair is quite complex. It is used in England to some extent, especially for circuits connected with Continental systems. The Phelps and House machines have also been used to some extent. The stock-printing telegraph makes use of two type-wheels, on one of which are letters and on the other figures, the printing being done by the force taken from electro-magnets. The Rogers printing telegraph, used by the U. S. Postal Printing Telegraph Co., between Washington and Baltimore, employs a special form of typewriting-machine to punch holes in a paper tape, which tape is fed automatically through a transmitter, having eight minute levers, which make magnetic connections through the holes in the tape, and send corresponding impulses over the wire. In order to carry the system on one wire the octode, or eight-way, synchronous system is used, the wheels being kept in practical synchronism by visual supervision and pressure of the thumb. Each of the eight impulses is made to print a character, which forms a part of any of the 26 letters, so that from the combinations of eight simultaneous printings an angular form of Roman capital is formed. With this system messages can be written as fast as an operator can rattle the typewriter. The transmitter being automatic, they may be sent at almost any speed, and the receiving may be accomplished as fast as it is possible to do good printing with the recording mechanism, which means a durable speed of about 200 words a minute, or as fast as a public speaker would talk. A full description of the printing telegraph of Elisha Gray will be found at **TELAUTOGRAPH**. The electro-autograph of N. S. Amstutz, of Cleveland, O., reproduces pictures by telegraph, actually engraving a plate at the distant station from a gelatin-film original at the home station. This is accomplished by mounting the gelatin-film on a cylinder, over the uneven surface of which electric levers are depressed, with mechanism for producing a duplicate action of engraving tools on a plate at the receiver, so that when the levers at the sender have traversed the whole of the surface of the gelatin-film they have engraved at the receiver a plate having similar elevations and depressions, and fit for mounting on a press for printing. The Essick printing-telegraph provides a form of typewriter at each terminal, printing in lines and columns on a slip of paper $4\frac{1}{2}$ inches wide. By the use of 14 different impulses the whole alphabet is represented. A speed of 50 words a minute is claimed.

TELEGRAPHY FROM MOVING TRAINS.—This is accomplished by induction. A telegraph wire is laid between or alongside the rails, so as to bring it near the train. A magneto-telephone apparatus is then placed in connection with the metallic roof of the car, and a pipe or other conductor low down under the car-body, and with ordinary Morse instruments on the train, and at stations connected with the special wire along the ground, messages may be sent. This has been done several times by Edison, L. J. Phelps, and others, but the system seems to have no commercial value. It is expensive owing to the difficulty of insulating a wire on the ground-level, and the railways do not seem to require it for signalling, or any similar purpose.

TELEGRAPHY WITHOUT WIRES.—It has been known for many years that it was possible to send electric messages without wires to considerable distances by induction. Morse accomplished it across a small river, having batteries on one side and magnets on the other, and parallel wires on each side connected with copper plates sunk at two opposite points on the banks. At Lavernock Point, in the British Channel, in 1893, messages were sent back and forth to Flatholm Island,

more than three miles distant. Wires of 600 yards length were laid in parallel lines on the water's edge on each side, and a current of 150 volts and 15 amperes was employed, with 192 alternations per second. Telephone receivers were used on the secondary circuits, and the ends of the wires were dipped slightly in the water, it being found that a deep submergence resulted in an entire loss of the sounds. W. H. Preece, of the British post-office, also used the inductive system successfully between the Island of Mull and the shore of Scotland, when a broken cable interfered with regular operation, the distance being $4\frac{1}{2}$ miles. Electrostatic methods have been even more successful. Dr. J. C. Bose, a Hindu physicist of Calcutta, in 1895 succeeded in telegraphing by the use of Hertzian waves, from a radiator in one room to a receiver 75 feet distant in another room, three brick walls intervening. He used a reflector of sulphur, ebony, and pitch. This system has since been developed, until a distance of more than a mile has been attained, but it is found that the waves will not pass through metals or water. In 1896 Guglielmo Marconi, an Italian electrician, while experimenting with Hertzian waves, sending them to a receiver a mile away, discovered that he was affecting another receiver also about a mile distant, through a hill three-quarters of a mile in thickness. Further investigation satisfied him that this was done by a new form of wave about 250,000,000 vibrations per second, and that this wave, unlike the Hertzian, was not stopped by metal, water, or anything else, and that the distance to which it could be sent appeared to depend upon the power of the electric apparatus used to set up the vibrations. He took his invention to London, and interested W. H. Preece. The London experiments developed a distance of a mile and three-quarters with an 8-volt and 3-ampere battery, and messages were sent several hundred yards through the intervening walls in the heart of the city of London. Marconi and Preece are now (1897) experimenting at Penarth, Wales, with an apparatus which they expect to carry a message 20 miles, and Marconi has expressed the opinion that it would be possible to send a message between London and New York by this system without wires, if a few hundred horse-power were developed into electrical energy for the setting up of the waves. See TELEGRAPHY, and ATLANTIC TELEGRAPH.

Teleiconograph, *n.* An instrument invented by M. Revoil, a French architect, combining the principles of the camera lucida and of the telescope. The principle involved is that of allowing the image transmitted by the object-glass of a telescope to pass through a prism connected with the eye-piece. The rays of light, that would in the ordinary use of the telescope be transmitted direct to the eye, are refracted by this prism, and thrown down upon a table placed below the eye-piece. The distance between the prism and the table determines the size of the image projected on the latter, and it is easy for the observer to trace, on a paper placed on this sketching-table, the actual outlines indicated by the refracted light. The telescope is fixed on a stand with screws and clamps, allowing of both horizontal and vertical motion, as it may often be necessary to give traverse to the instrument, in order to make a connected drawing of a larger area than can be included in the object-glass at one view. An entire panorama can be traced if the relative positions of the axis of the telescope and the surface of the table are undisturbed. The size of the image may be determined at will without any diminution of accuracy. The system of sketching with this instrument is termed *teleiconography*, and a sketch a *teleiconogram*.

Tel-el-Amar'na, an ancient ruined city on the right bank of the Nile, in central Egypt. It was the residence of Amenhotep IV., about 1600 B.C., and was a seat of sun-worship. Several hundreds of clay tablets, inscribed in cuneiform writing, were discovered in the ruins in 1887. The inscriptions have since been deciphered, and were found to be a diplomatic correspondence between Egypt, Babylonia, Assyria, and other countries of western Asia. They were in the Assyrian language, and prove its international use.

Tel-el-Ke'bir. [The "Great Monnd."] A village of lower Egypt, 50 miles from Cairo and 80 miles from Ismailia on the edge of the Egyptian desert. It was fortified by Arabi Pasha (1882) to prevent the advance of the British, but on Sept. 13, Sir Garnet Wolseley, the British general, surprised the Egyptian camp, and routed the insurgents, inflicting a loss of about 3,000, which caused Arabi Pasha to surrender.

Telemeter, *n.* A device for measuring distances on the earth's surface; a distance-meter. The most simple forms consist of telescopes containing parallel wires accurately spaced. If the height of a distant object, as a building, ship's mast, &c., is known, or can be guessed, the distance can be computed. For obtaining accurate results the telemeter of Capt. Gautier has been used in the French artillery service. He maintains two telescopes, the distance between which is accurately measured. The two telescope-stations are electrically connected, so that an object can be examined by both at the same time. The difference in the angles of observation, as measured from the basal-line uniting the two stations, affords material for calculating the distance by triangulation. This principle has been further developed in the modern range-finder (*q. v.*). Gautier also devised a telemeter for use in field observations. It possessed internal mirrors, whose angle could be absolutely known. If an object were viewed through the telescope and the position of the mirrors noted, and the observer stepped back 100 feet and took another look, it became necessary to shift the

mirrors to bring the object into view, and the length of the base-line of 100 feet and the amount of shift of the mirrors furnished two sides of a triangle of which the third was the distance sought. The mirror principle has been developed in numerous other telemeters. The Watkin telemeter, used by the British artillery, is a form of sextant, with double reflectors, and provides means for surveying a short triangular plot as a base from which an observation is taken, the result being read in yards directly on a scale on the instrument. Acoustic telemeters, as the Boulenger, record the time expiring between the observation of the flash of a gun and the hearing of the sound of the report. They are not absolutely accurate, as the direction and force of the wind affect the time of travel of the sound, and there is always some further error because of the inability of the operator to note the instants of observation to a minute fraction of a second.

Telepathy. *n.* [Gr. *telos*, result, end, and *pathomai*, to experience.] (*Psychol.*) The supposed transfer of thought from one mind to another without any form of physical communication. The term has come to be used in consequence of a series of very painstaking experiments, by which it is held that the reality of such transfer of thought has been proved. These experiments all turn on two things: (1) the arranging of a certain series of thoughts in one person, with no connection whatever with a second person, who remains in ignorance that he is being experimented with; (2) the ascertainment that the second person then thinks over some of the thoughts which occur in the mind of the first. So much for the artificially contrived experiments. Then also cases of so-called "veridical hallucination"—cases in which presentiments of important events, such as deaths, &c.—occurring in certain persons' minds at the instant at which the real event, death, &c., actually happened to the person of whom the first had the presentiment, are also used as evidence.

The evidence is generally considered by competent psychologists—with certain very important exceptions—as far from adequate. There are certain ways of explaining the results without supposing actual telepathy. (1) There is the allowance to be made, as in all statistical work, for chance coincidences. (2) There is the possibility of unconscious suggestion given by the one person to the other. This comes up with especial force in the experiments made by hypnotic subjects, whose suggestibility is so enormously increased. (See *HYPNOTISM*.) (3) We must allow for the deceptions of memory to which all men are liable, more than ever when the matter is one which smacks of the mysterious and also touches upon their own more intimate affairs. It is a common fact that, after things have happened, we are convinced that we had anticipated them, when actual records show that our memory has suffered illusion. These three reasons for caution are sufficient to lead us to entertain a skeptical attitude toward telepathy in the present state of the evidence.

In case there should be finally reasons for accepting telepathy, this would not warrant any belief in supernatural action here, or in the presence of spiritual beings conveying the thought from one mind to another, as many seem to suppose. We are as yet quite ignorant of the ultimate laws which govern the action of the nervous system; and it is quite possible, as perhaps Ochorowicz was the first to say, that one nervous system might, when in certain condition accompanying thought or emotion (especially), set up, by a sort of induction strictly of a physical kind, the same condition and, to a degree, the same thought or emotion in the nervous system and mind of another person. We have a good analogy for this in the phenomena of electrical conditions induced by one conductor in another when there is no connection between them. J. MARK BALDWIN.

Telephone (*tel'efon*), *n.* [Gr. *tele*, afar, and *phonē*, a sound.] (*Telegraphy*.) The sensation which we call sound is excited by the action of the vibrations of the atmosphere upon the tympanum, or drum of the ear. These vibrations are conveyed thence to the auricular nerves in the interior parts of the ear. In the process of reproducing tone by electro-magnetism an artificial imitation of the mechanism of the human ear is employed, consisting of a stretched membrane corresponding to the tympanum, which by its vibrations generates and controls an electric circuit extended to a distant station. The earliest experiments in the production of musical sounds at a distance, by means of electro-magnetism, are generally attributed to Mr. Reiss, of Frankfurt, Prussia, in 1861. His apparatus consisted of a hollow box, provided with two apertures—one at the top and the other in front—the former covered with a membrane tightly stretched in a circular frame. When a person utters sounds into the mouth-piece inserted in the front opening, the whole force of his voice is concentrated on a tight membrane, which is thrown into vibrations corresponding exactly with the vibrations of the air produced by the sound of the singing. A thin piece of platinum is glued to the center of the membrane and connected with a binding screw, in which a wire from the battery is fixed. Reiss' apparatus was capable of producing one only of the characteristics of sound, viz., its pitch. In 1874, Prof. Elisha Gray, of Chicago, invented a method of electrical transmission by means of which the intensity of the tones, as well as their pitch, was properly reproduced at the receiving station. Subsequently he conceived the idea of controlling the formation of what may be termed the electric waves by means of the vibrations of a diaphragm capable of responding to sounds of every kind, so arranged as to reproduce these vibrations at a distance. When this was accom-

plished the problem of the transmission and reproduction of articulate speech over an electric conductor was theoretically solved. Prof. Gray filed a caveat of this invention Feb. 14, 1876, and the same day Prof. Alexander Graham Bell, of Boston, applied for a patent, obtaining the first practical electric speaking telephone. The accompanying diagram illustrates the principle and method of the working of this apparatus. A represents the transmitting, and B the receiving, apparatus. When a person speaks into the tube, T, in the direction of the arrow, the acoustic vibrations of the air are communicated to a membrane tightly stretched across the end of the tube, upon which is cemented a light permanent bar-magnet, *n s*. This is in close proximity to the poles of an electro-magnet, M, in the circuit of the line, which is constantly charged by a current from the battery, E. The vibrations of the magnet *n s* induce magneto-electric pulsations in the coils of the electro-magnet, M, which traverse the circuit, and the magnitude of these

Fig. 3073.—BELL'S SPEAKING TELEPHONE.

pulsations is proportional to the rapidity and amplitude of the vibrations of the magnet. Hence, this apparatus is capable of transmitting both the pitch and intensity of the tones which enter the tube, T. The receiving instrument consists simply of a tubular electro-magnet, R, formed of a single helix with an external soft iron case, into the top of which is loosely fitted the iron plate, *r*, which is thrown into vibrations by the action of the magnetizing helix. The sounds produced in this manner were quite weak, and could be transmitted only a short distance. Other early devices connected with the telephone were invented by Prof. C. E. Dolbear, of Tufts College, Massachusetts. Thomas A. Edison has invented a telephone based upon the principle of varying the strength of a battery current in unison with the rise and fall of the vocal utterance. Edison made the discovery that, when properly prepared, carbon possessed the remarkable property of changing its resistance with pressure, and that the ratios of these changes corresponded exactly with the pressure. By vibrating a diaphragm with varying degrees of pressure

Fig. 3074.—EDISON'S TELEPHONE TRANSMITTER.

against a disk of carbon, which is made to form a portion of an electric circuit, the resistance of the disk would vary in precise accordance with the degree of pressure, and consequently a proportionate variation would be occasioned in the strength of the current. The latter would thus possess all the characteristics of the focal waves, and by its reaction through the medium of an electro-magnet, might then transfer them to a metallic diaphragm, causing the latter to vibrate, and thus reproduce audible speech. The cut shows the telephone as constructed by Edison. The carbon disk is represented by the black portion, E, near the diaphragm, A A, placed between two platinum plates, D and G, which are connected in the battery circuit, as

shown by the lines. A small piece of rubber tubing, B, is attached to the center of the metallic diaphragm, and presses lightly against an ivory piece, C, which is placed directly over one of the platinum plates. Whenever, therefore, any motion is given to the diaphragm, it is immediately followed by a corresponding pressure upon the carbon, and by a change of resistance in the latter, as described above. It is obvious that any electro-magnet, properly fitted with an iron diaphragm, will answer for a receiving instrument in connection with this apparatus. All telephones employ a diaphragm at the transmitting end capable of responding to the acoustic vibrations of the air; all employ a diaphragm at the receiving end capable of being thrown into vibrations by the action of the magnetizing helix, corresponding to the vibrations of the transmitting diaphragm; and, finally, all depend for their action upon undulating electric currents produced by the vibratory motion of a transmitting diaphragm which increases and decreases the number and amplitude of the electric impulses transmitted over the wire without breaking the circuit. The Blake, Crossley, and other transmitters are very similar. The microphone, priority of invention in which was claimed by both Edison and Berliner, forms the basis of the carbon telephone. (See *MICROPHONE*.) In the United States, the American Bell Telephone Company early monopolized the telephone service by buying up the most important patents. Although the primary patents began to run out in 1893, the monopoly is maintained because of patents on switchboards and other conveniences which have grown with the development of the business; and in spite of efforts at competition the Bell corporation maintains control. The statistics of their business for the past four years are given below:

	1893.	1894.	1895.	1896.
Exchanges.....	812	838	867	927
Branch offices.....	539	571	572	686
Wire on poles, miles ...	201,259	214,676	232,008	260,324
Wire on buildings, miles	14,980	16,492	14,525	12,861
Wire underground, miles	90,216	120,675	148,285	184,515
Wire submarine, miles..	1,336	1,637	1,856	2,028
Total miles of wire.....	307,791	353,480	396,674	459,728
Total circuits.....	201,322	205,891	212,074	237,837
Total employees	9,970	10,421	11,094	11,930
Total subscribers.....	232,140	237,186	243,432	281,695

The number of instruments in the hands of licensees under rental at the beginning of 1897 was 722,141. The number of exchange connections daily in the United States is 2,622,440, or a total per year of over 809,000,000. The average number of daily calls per subscriber was 8½.

In Great Britain telephony is carried on under a license from the postmaster-general, who receives one-tenth of the income. The National Telephone Company controls the business, having obtained supremacy by extended litigation. The Blake transmitters and Bell receivers are used.

Long-distance transmission was begun in the United States in 1883, when a line was successfully operated between New York and Cleveland. The difficulties in the way of perfect insulation were gradually overcome, and the conducting power of the line enhanced by using a large copper wire. In 1892 a line was put into successful operation between New York and Chicago, a distance of 930 miles, and this line has been connected with the Boston line, so that 1,259 miles have been employed in conversation. Almost all the large cities of the United States are now connected by long-distance telephones, as are also the principal cities of Europe.

Tel'eseme. *n.* [Gr. *tele*, far, and *sema*, sign.] An apparatus for a hotel, to indicate at the office, by means of electrical transmitters and an annunciator, the article or service desired by the occupant of a room.

Teller, HENRY MOORE, statesman, was born in Allegheny co., N. Y., May 23, 1830; studied law and practiced in New York; removed to Illinois (1858), and thence to Colorado (1861); was elected to the U. S. Senate when Colorado became a State, and took his seat December 4, 1876; was re-elected December 11, 1876, and remained in office until April 17, 1882, when he became secretary of the interior, till March 3, 1885; re-entered the Senate March 4, 1885, where he still (1897) remains. As a member of the National Republican convention at St. Louis, in 1896, he created a dramatic scene by leading the "free silver" forces in their exodus from the convention.

Tellurism. *n.* [Lat. *tellus* (gen. *telluris*), earth.] A theory of animal magnetism proposed by Dr. Kieser, a German, based on the supposed existence of a magnetic force or principle pervading all nature; or the force itself.

(*Med.*) The effect of certain soils in producing disease. **Tel'pherage.** *n.* The system of aerial transportation by means of ropeways, cableways or wireways is common in mining regions, and where railways do not exist. It constitutes a cheap form of transportation, because of the low first cost of the line, which may be attached to trees trimmed for the purpose, and which overcomes all inequalities of ground by simply spanning them. In the case of mines on high ground desiring to deliver a product to some nearby river, they are sometimes operable entirely by gravity, because the loads sent down are always much greater than those sent up, furnishing power to run the line. There are two general systems of construction, one involving a stationary fixed rope or cable, on which the carriers

or hangers are suspended and run along by small pulley-wheels, and the other and more common method consisting of an endless rope, usually of wire, carried over sheaves at each end of the route, the carriers being suspended by clips. The telpherage system is also in common use in many manufacturing plants, as an easy means of handling bulky material. (See ELECTRIC TELPHERAGE.)

Temple, FREDERICK, ecclesiastic, was born Nov. 30, 1821, in Leukas, one of the Ionian Islands; graduated as a double-first at Balliol College, Oxford, and afterward became fellow and tutor of his college. In 1846 he took orders in the English Church; was for ten years principal of a training college near Twickenham, and later was head-master of Rugby. He became noted and influential in the political discussions affecting Church and State. In 1885 he became bishop of London; and in 1896 succeeded Dr. Benson as Archbishop of Canterbury. He has been active in temperance reform measures, and has manifested remarkable talent for administrative and charitable work.

Temple, in Texas, a city of Bell co., 73 m. N.E. of Austin. Pop. (1890) 4,047.

Ten'derfoot, *n.*; *pl.* TENDERFOOTS. (*Slang.*) A newcomer to a mining-camp, or any one unused to frontier life and hardships.

Ten'ebæ, *n. pl.* [Lat. darkness.] (*R. C. Ch.*) The office of matins and lauds for Thursday, Friday, and Saturday of Holy Week, sung in the afternoons or evenings of the preceding days, the *Gloria Patri* &c., being omitted in token of sorrow. A dramatic effect is produced by putting out, one by one, the candles, to represent the darkness during the sufferings and death of Christ, only a single candle being left, which is hidden for a time, and then brought out to show that death could not really obtain dominion over Christ.

Tent-cat'erpillars, *n. pl.* (*Entom.*) The larva of either of two North American web-worms, or moths, of the family *Bombycidae*, and genus *Clisiocampa*. *Clisiocampa americana* inhabits orchards, and *C. sylvatica* infests forests. Both lay their eggs in the fall in gummy bauds encircling twigs. These survive the winter and hatch as soon as the really warm weather of the following summer begins. The gregarious larvæ—which are blackish, red-spotted, very hairy caterpillars—immediately spin themselves a community, tent-like, silken web, beneath which they lie in a squirming crowd at night and for most of the day, scattering at certain hours to feed upon the leaves, until in some cases not only large trees, but whole orchards are defoliated. Each caterpillar pays out a thread of silk as he goes, and by this guides his return to the nest. In a few weeks they cease feeding, spin cocoons, pass quickly through their transformation and emerge as moths, which very soon mate, deposit eggs, and die. The cherry is the favorite tree, and when a large number of cherry trees are near an orchard fruit-raising is almost impossible; a few cherry trees, however, will act as useful traps, since most of the tent-moths will resort to them, and can be easily destroyed. The best plan is to search for their eggs in autumn or winter, snap off the infected twigs, and burn them; failing this, the "tents" of the caterpillars should be burned, or blown off the trees as soon as they are formed. An orchard or line of shade trees neglected one season will be nearly destroyed the next. Compare WEB-WORM.

Terhune, MARY VIRGINIA, known as MARION HALLAN, writer, was born in Amelia co., Va., about 1830; began writing at the age of 14; has produced many novels, the first, *Alone*, appearing in 1854; others that followed were equally popular. Mrs. T. has also engaged extensively in editorial work, and has written voluminously on household topics, cookery, &c. In 1888, she established a magazine called *The Home-Maker*.

Terrell, in Texas, a city of Kaufman co., on the Texas Pacific and Texas Midland R.R.s., 32 m. E. of Dallas; has cotton and woollen factories, flour mills, &c., and surrounded by extensive cattle ranges. Here is the North Texas Hospital for the Insane. Pop. (1897) 3,430.

Ter'ry, ALFRED HOWE, soldier, was born at Hartford, Conn., Nov. 10, 1827; studied law at Yale; began to practice in 1849; filled several State offices; in 1854 was appointed colonel of the 2d Connecticut militia, and in 1861 this regiment was mustered into the U. S. service as the 2d Connecticut volunteers, T. commanding. In April, 1862, he was made a brigadier-general, and from that time had an active and gallant career, his most brilliant victory being the capture of Fort Fisher, which was accomplished in conjunction with Admiral Porter's fleet. T. was promoted to be a brigadier-general in the regular army, and a major-general of volunteers, and received a vote of thanks from Congress. He was brevetted major-general in the regular army in 1865, and was in active service in Dakota in 1876. He was made a full major-general, March 3, 1886, and in 1888 voluntarily retired. Died Dec. 16, 1890.

Terry, ELLEN ALICE, actress, was born in Coventry, Eng., in 1848; made her first appearance on the stage in 1858, during Charles Kean's revival of Shakespearean drama: playing the parts of *Mamillius* in *The Winter's Tale*, and *Prince Arthur* in *King John*. She continued acting until 1864, when she was married and left the stage; reappeared in 1867, and played at the New Queen's Theater, and the Prince of Wales' Theater in London. In 1878 she made her first appearance at the Lyceum Theater, with Henry Irving; since that date her stage career has been identical with that of Mr. Irving.

Terry, in Texas, a N.W. co.; area, 900 sq. m. Unorganized.

Tes'la, NIKOLA, electrician and inventor, was born in Herzegovina in 1858; studied engineering in the École Polytechnique, Paris; was engineer of Edison Station, Paris, and was employed at Edison's laboratory near Orange, N. J., leaving, after several years, to open a laboratory of his own. In 1888 he invented the rotary field-motor, the multiphase system of which is used in the 50,000 horse-power plant built to transmit the water-power of Niagara Falls to Buffalo and other towns. He holds advanced theories as to the possible application of electricity to industrial purposes; and his inventions and contrivances place him in the front rank of electrical scientists. He has already effected improvements which bid fair to revolutionize the accepted methods of utilizing electricity, and is credited with the belief that electric energy may soon be transmitted, under control, to almost any distance without the use of wires or other mechanical conductors.

Tes'lin Lake and Riv'er. (*Geog.*) Teslin Lake is a narrow body of water lying across the northern boundary of British Columbia, just west of the crossing of the 60th parallel and the 132d meridian. The length of the lake is said to be over 100 m., and it is a favorite spawning place of the salmon and resort of the Indians. A river flows into its southern or upper extremity from sources near those of the Pelly, and trails lead from the lake to Dease Lake and to Taku Inlet. Lake Teslin discharges through *Teslinto*, or Newberry, river, an open but rapid stream which flows north through a treeless and somewhat arid valley about 175 m. to the Lewes, 27 m. below Lake Lebarge. Many bars along this river are gold-bearing to a greater or less degree, and the waters are navigable for small boats to the head of the lake.

Test'ing Machines. The accurate testing of iron, steel, and other metals used in constructive work presents a problem of great importance, to which engineers have at all times devoted much attention, and the modern increased use of steel and iron in the largest structures renders it necessary not only that the metal work shall safely bear its load, but that it shall not unnecessarily add to it. The problem presented, therefore, to the modern engineer is to adjust with certainty a safe margin of strength with a minimum of weight (and, incidentally, of cost), and this can be determined only by experimental tests upon

Fig. 3075.—A 200,000-POUND TESTING MACHINE.

1, weighing-head; 2, straining-head; 3, straining-screws; 4, water-pipes; 5, gearing; 6, scales; 7, hydraulic pump.

full-sized sections of the materials used in such construction. One method is to use machines designed to test comparatively small sample pieces under such conditions that the breaking strength of the test-piece is measured by the machine, and from the data thus obtained the strength per square inch of full-sized bridge-members and other constructive material is determined on paper by calculation. A feature common to such machines is, in principle, the common steelyard balance, supported by knife-edge. Of this character are the Riehle and Olsen machines, which are perfected types of weighing machines, made on the principle of the balance. The Riehle is built in sizes up to 100,000 pounds capacity, and the Olsen even larger. It is obvious that there is a limit to the capacity of machines built on the knife-edge principle, and to meet a demand for a more powerful machine, which should remain uninjured after heavy strains, A. H. Emery produced the hydraulic testing machine, which was originally used for the U. S. arsenal at Watertown, Mass. One of the "proof" experiments by the United States Government board was the breaking in tension of a forged iron link, 5 inches in diameter between the eyes, at a strain of 722,800 pounds, and immediately thereafter a single horse-hair $\frac{1}{16}$ of an inch in diameter was slowly strained, and, after stretching 30 per cent., snapped under the recorded strain of 16 ounces. Masses of metal were subjected to pressures of 1,000,000 pounds in compression alternately with eggs and nutshells, and in all cases the machine operated with equal accuracy. The essential peculiarity of the Emery testing machine is the method by which the stress produced upon the piece tested is conveyed to the scale and accurately weighed by mechanism that is entirely frictionless, and hence responds to the same increment of load regardless of the amount of strain upon the specimen. This result is accomplished by receiving

the load against a flat closed cylinder called the hydraulic weighing-head.

In operation the specimen to be tested, either by rupture or compression, is centrally secured between the straining-screws (3). The hydraulic pump (7) is then started to supplying water to the straining-head (2) through the pipes (4). The gearing (5) causes the straining-head to advance or recede from the weighing-head (1), which contains a hydraulic chamber so arranged that the force of the strain is borne by the water, and distributed throughout the whole area of the head, and a small tube carrying a stream of water to the scales (6) is made to bear a minute fraction of the strain, and measure it in such a manner as to record the strain to which the specimen tested has been subjected. When the specimen breaks, its first blow is delivered through a draw-bar and ribbed collar to an abutting piece in the weighing-head, which transmits it through a ring to a rear annular beam, where the blow is absorbed by the total mass. The hydraulic support is thus thoroughly protected. The weighing-head is returned to its place on the bed after movement due to recoil by a set of spiral springs locked up in boxes secured to the bed. These springs are strong enough to move the head, and their resistance diminishes greatly the movement due to recoil, while the friction of the head upon the bed rapidly wipes out the oscillations. The annular beams bolted together constitute one built-up beam to resist the bending due to the pressure on the draw-bar midway between the straining-screws. The hydraulic support is thus enclosed in a rigid mass of cast-iron and effectually protected against injury from violence. This machine comes as near being frictionless as any mechanism ever manufactured, since its whole force is exerted between two bodies of water. Experiments have failed to demonstrate that the mechanism shows the slightest deterioration from the severe strains to which it is subject.

Tew'fik, MOHAMMED TEWFIK PASHA, a khedive of Egypt, eldest son of Ismail Pasha, was born Nov. 15, 1852; proclaimed Khedive in 1879. Though a Mohammedan, he was strongly opposed to the Moslem institutions of slavery and polygamy. Died Jan. 7, 1892.

Texarkana, in Arkansas, a city, cap. of Miller co., 145 m. S.W. of Little Rock, on the border of and partly in Texas. A manufacturing city, with a large cottonseed oil mill, cotton compress, ice factory, &c. Pop. (1897) 6,350.

Tex'as, in Illinois, a township of Dewitt co.

—A village of Iroquois co.

Texas, in Iowa, a village of Washington co.

Texas, in Michigan, a village of Kalamazoo co.

Texas, in Missouri, a S. co.; area, 1,250 sq. m. *Rivers*, Current, and Big Piney and Robidoux Forks of the Gasconade. *Surface*, hilly, and covered with pine forests; *soil*, generally fertile. *Cap.* Houston.

Texas, in New York, a post-village of Oswego co., 38 m. N. of Syracuse.

Texas, in Ohio, a village of Champaign co.

—A post-village of Henry co., about 30 m. S.W. of Toledo.

Thax'ter, CELIA, poet, was born at Portsmouth, N. H., June 29, 1836; was married to Levi Lincoln Thaxter, of Watertown, Mass., in 1851. She was a constant writer for magazines, and several volumes of her verses have been published. Her last book was *An Island Garden* (1894). Died August 26, 1894.

Thayer, in Missouri, a post-village of Oregon co., 23 m. S.E. of West Plains. Pop. (1897) 1,260.

Thayer, in Nebraska, a S.E. co.; area, 576 sq. m.; drained by Little Blue river and Big Sandy creek. *Surface*, undulating; timber scarce; *soil*, fertile. *Cap.* Hebron. Pop. (1897) 15,500.

Tha'trophone, *n.* A telephone connected with a theater or opera-house, so that the words and music may be heard by a person at a distance.

Theosophy, *n.* (*Philos.*) Out of the old religious and mystical philosophy known as theosophy, and distinguished from other forms of religion and mysticism by the fact that all its theories are based upon consciousness rather than the testimony of external phenomena or revelation, has grown a modern Theosophical Society, organized by Madame Blavatsky in New York, 1875, and intended as a protest against the materialistic tendencies of the century. The avowed objects of the society are simple and broad: "(1) To form the nucleus of a Universal Brotherhood without any distinction whatever. (2) To promote the study of ancient and modern religions, philosophies, and sciences. (3) To investigate unexplained laws of nature and the psychical powers of man." Admittance to the society is granted to any one subscribing to these three objects, but the actual beliefs and teachings of most of the members include an intricate and mystical explanation of the universe, mainly based upon the occultism of the Egyptians and the Hindus. Theosophy affirms that the "Eternal Principle" is perpetually immanent, manifesting itself in spirit and matter; that the spiritual manifestations occur in seven planes, differing in degree of refinement rather than in character, and that the spiritual manifestations of the lowest plane are united with the material manifestations in man, who is himself a sevenfold being, composed of three immortal and four mortal principles, called severally *Atman* (spirit), *Buddhi* (spiritual soul, or discernment), *Manas* (mind), *Linga Sahira* (the astral body, which connects the spiritual and material elements, having the form and characteristics of the material body, but continuing for some time after the dissolution of the material elements), *Shula Sahira* (the material body), *Jiva* (the life-energy), and *Kama* (animal instincts and desires); and that the three spiritual elements of man live on after the death of the material, and finally of the astral body, and are eventually re-incarnated, the conditions of each incarnation being governed by the acts of the previous life, in accordance with *Karma* (*q. v.*), the law of just fate, by which every act or thought of every life meets with its unalterable reward or punishment. It also affirms the perfectability of the race by means of its re-incarnations, but claims that the hopelessly wicked, by excluding the spiritual and immortal elements which should belong to them, may bring about their own annihilation. The various orders of spiritual beings who occupy the planes above man and the theosophical beliefs concerning them, as well as the almost innumerable details of the beliefs outlined here, may be found in the books on theosophy, chief among which are *The Secret Doctrine*, *Isis Unveiled*, and *The Key to Theosophy*, by Helene P. Blavatsky; *The Ocean of Theosophy*, by Wm. Q. Judge; *Esoteric Buddhism*, by A. P. Sinnett; *Nature's Finer Forces*, by Rama Prasad; and several translations from Oriental writers. The Theosophical Society now has over 300 branches in different parts of the world, with its main headquarters at Madras, India; in 1895 it claimed 100,000 members in the United States.

Therm. **Thermo.** An initial compounding element, derived from the Gr. *thermos*, hot.

Therm-am/meter, *n.* A device for measuring, in amperes, the strength of an electric current by the amount of heat generated.

Thermograph, *n.* A thermometer provided with a registering device; any mechanism for recording temperature. The form used by the U. S. Weather Bureau has a crescent-shaped bulb, filled with alcohol and hermetically sealed. Changes of temperature affect the curve of the bulb, which alteration of form is communicated to a series of multiplying levers, that exaggerate the motion, and give movement to the recording pen, which makes a tracing on the ruled paper of a moving cylinder. Bartlett's thermograph is especially designed for greenhouses, having a register for exhibiting in the office the temperatures prevailing in the different houses. Registering thermometers are used in the houses, and electrically connected with dials in the office. It is apparent that this apparatus may also serve as a warning of fire, and it is sometimes arranged so that a rise in temperature to 100° will ring a gong.

Thermo-multiplier, *n.* A galvanometer or multiplier bearing a short coil of about 200 turns of fine wire, and arranged to give small resistance, as for use with a thermopile. Called also *thermo-electric multiplier*.

Thermophone, *n.* An instrument devised by Henry E. Warren and George C. Whipple for ascertaining the temperature at a distant point, as the bottom of a lake, with the aid of the ear. It is based upon the principle that the resistance of a substance to an electric current varies with its temperature. The degree differs with the material, and two metals of opposite characteristics are used: copper, whose electrical resistance increases 1 per cent. for each 5° Fahr. of temperature, and German silver, which requires a rise of 50° in temperature to effect a like change in its resistance. A Wheatstone's bridge is formed with arms of these metals. The coils are sealed in brass tubes, and connected by wire at where the temperature is to be read. A movable contact is arranged on a slide-wire, and connected by a leading wire at a point central between the coils. A telephone and interrupter are employed in place of the galvanometer ordinarily used with a Wheatstone's bridge. This apparatus may be used to note the electrical balance between the two metals at the distant point, and as the electrical balance bears a definite relation to the temperature, the latter is arranged to be read direct from a dial. To use the instrument, the telephone is placed to the ear, and the pointer of the

dial shifted. A buzzing sound is heard until the point of electrical balance is reached, when it ceases, and the degree of the dial on which the pointer is stopped indicates the temperature at the distant point.

Thermopile, *n.* (*Phys.*) An instrument much used in experiments on radiant heat, or indeed in almost any case where an extremely small difference of temperature between two points is to be determined. It consists of a series of small bars an inch or so long, of bismuth and antimony soldered together alternately, and bent at the junction so that the bars shall be parallel, and the alternate junctions all looking in the same direction. Thirty or more such bars are generally joined together, the couples being insulated laterally by slips of varnished paper, or by gypsum, and the whole forms a little cube held together by a frame of ivory, which carries two binding screws connected with the first bismuth and the last antimony. When the thermopile is used for experiments in radiant heat, it is generally placed in the axis of a double cone of copper carefully covered with lampblack to prevent radiation from external objects; and it is always used in connection with a galvanometer of small resistance called a *thermo-multiplier* (*q. v.*). The principle of the thermopile has been much used in experimental batteries and generators in the effort to secure the production of electricity direct from coal. The Diamond generator is a philosophical toy, in which alternate bars of silver and lead are used, or some alloys are superposed in rings, the inner ends being heated by a gas-jet, while the outer ends are cooled by radiation. By this means a very slight electric current is set up, and may be observed by using a wire to connect the bars. About 1883 Thos. A. Edison devoted much study to the problem, and produced a machine in which iron was rapidly magnetized and demagnetized, the alterations being used to affect surrounding coils of wire. The results were interesting, but not valuable commercially. Various other inventors have sought to produce a thermopile in which the use of some new alloy should set up a strong current, but none has been found.

Thick-head, *n.* A stupid fellow, blockhead, dolt.

(*Ornith.*) An Australian or Polynesian shrike of the Pachycephaline family, the males often being brightly colored.—Another name for the scissorbill.

Thin-keet In'dians. (*Ethnol.*) To this tribe belong the Indians of the Alaskan coast from Mount St. Elias south to the river Nass. The Russians called them Kolosches. They nowhere cross the mountains into the interior except at Lake Tagish, at the eastern foot of Chilkoot Pass. The principal bands are the Yakutats, about the mouth of the Copper river; the Chilkats, at Lynn Canal; the Hoodsinoos, of Chatham Strait, and, following down the coasts and islands, the Auks, Kakas, Sitkas, Stikeus, and Tungases. The Sitkas, on Baranof Island, were the dominant tribe before the ascendancy of the whites destroyed tribal politics. They are a fine race physically, accustomed to braving both the terrors of the sea and the difficulties of hunting upon land in that region of mountains and forests. They were independent in spirit, warlike, and individually hardy and courageous; their organization includes a noble caste, from which alone chiefs can be elected, and they have many curious social customs. As hunters they have always been daring and successful, pursuing the mountain sheep and goat to the greatest heights, and conquering the bear in his native forest. Like the Haidas, they make large canoes and take hazardous voyages in them, after whales, for fish, and on war raids as well as peaceful journeyings. Their religion is a complicated shamanism, in which feasting and rude magic take a large part, and terror is the principal influence on their minds. They are clever carvers in wood, copper, and silver, and have long been renowned—especially the Chilkats—for their blankets, formerly woven from the wool of the white goat-antelope of their mountains.

Thom'as, CHARLES LOUIS AMEROSI, musical composer, was born at Metz, France, Aug. 5, 1811; entered the Conservatoire (1828); gained many prizes, including the grand prize of Rome in the competition of 1832; composed many operas, including *Mignon*, *Le Carnaval de Venise*, *Françoise de Rimini*, &c. He became director of the Conservatoire in 1871. Died Feb. 12, 1896.

Thomas, THEODORE, musician and orchestral leader, was born at Esens, Hanover, Germany, Oct. 11, 1835; began his musical education in early childhood, and played at a concert when he was 6 years old. In 1845 his family removed to the U. S., and for two years he played violin solos at concerts in New York; travelled for a time in the South; returned to New York (1851), and for the next ten years was actively engaged in concert work. In 1855, in connection with Dr. William Mason and others, he began a series of chamber concerts, which were continued until 1869. His first symphony concerts were given in 1864-65, and except during 1869-72, when he was making concert tours, continued until 1878, when he left New York to take charge of the College of Music in Cincinnati, where he remained two years, returning to New York in 1880. With brief intervals he was the conductor of the Brooklyn Philharmonic Society from 1862; and of the New York Philharmonic Society from 1878 to 1891. He conducted five musical festivals in Cincinnati (1873-75-78-80-82), one in Chicago (1882), and one in New York (1882). In June, 1890, he married Miss Amy Fay, of Chicago; in 1891 he established his orchestra permanently at the Auditorium in that city; in 1893 was musical director at the World's Fair.

Thomas, in *Kansas*, a N. W. co.; area, 1,080 sq. m.; drained by the North and South Forks of Saline river,

the North and South Forks of Solomon river, and the Middle and South Forks of Sappa creek. *Surface*, rolling prairie; *soil*, fertile. *Cap. Colby*. *Pop.* (1895) 3,512.

Thom'as, in *Nebraska*, a central co.; area, 720 sq. m.; intersected by Middle Loup river and the North Branch of Dismal river. *Surface*, rolling; *soil*, a sandy loam, very fertile; timber only along streams. Stock raising is the chief industry. *Cap. Thedford*. *Pop.* (1897) 850.

Thom'aston, in *Connecticut*, a post-village of Litchfield co., 9½ m. N. of Waterbury. The Seth Thomas clock works are here. *Pop.* (1897) 1,050.

Thomp'son, HUGH MILLER, clergyman, was born in co. Derry, Ireland, June 5, 1830; returned to the United States, and studied theology in Wisconsin; entered the Episcopal ministry in 1852; was rector at Chicago, New York, and New Orleans; in 1883 was consecrated assistant bishop of Mississippi, and in 1887 became bishop of that diocese.

Thompson, SIR JOHN SPARROW DAVID, jurist, was born at Halifax, Nova Scotia, Nov. 10, 1841; admitted to the bar in 1865. He was a member of the House of Assembly of Nova Scotia (1877-82); filled many honorable offices from that date onward, and became Premier of Canada in 1893. Died Dec. 12, 1894.

Thompson, LAUNT, sculptor, was born in Queen's co., Ireland, Feb. 8, 1833; removed to America in childhood; worked for nine years in the studio of Krastus D. Palmer, the sculptor; in 1858 he went to New York, and gave his principal attention to medalion portraits. His most notable works were of this character; his talent for portraiture was equalled by few American sculptors. Died Sept. 26, 1894.

Thompson, MAURICE, writer, was born at Fairfield, Ind., Sept. 9, 1844; removed to Kentucky, and then to Georgia; served in the Confederate army; after the war returned to Indiana, and became a civil engineer; studied law; was elected to the legislature in 1879, and was State geologist from 1885 to 1889. Some of his books are: *Hoosier Mosaics* (1875); *A Tallahassee Girl* (1882); *Sylvan Secrets* (1887); and *A Fortnight of Folly* (1888).

Thompson, ROBERT ELLIS, educator, was born at Lurgan, Ireland, April 5, 1844; removed to the U. S. in childhood; was educated at the University of Pennsylvania, graduating in 1865; was ordained by the Reformed Presbyterian Church, in 1868; was professor of History and English Literature in the University of Pennsylvania from 1881 until elected president of the Boys' High School, Philadelphia (1895). He has published several works on social science.

Thom'son, ELIHU, electrician, was born in Manchester, Eng., March 29, 1853; studied electrical science in Philadelphia, and had charge of the chemical department in the High School there until 1880; he invented the system of electric welding, and has taken out over two hundred patents for various electrical inventions.

Thomson, WILLIAM, first LORD KELVIN, British electrician, was born in 1824; graduated from Cambridge (1845), and in the following year was made professor of Natural Philosophy in Glasgow University. In 1848 he published *Distribution of Electricity on Spherical Conductors*, and in 1855 the *Electro-Dynamic Properties of Metals*. He has invented several electrical instruments, among which his quadrant and portable electrometers, from their diversity of application and extreme delicacy and accuracy, have proved of great service in indicating and registering electrical changes in the atmosphere. He has also invented the mirror galvanometer and the siphon recorder, which are of importance in submarine telegraphy, as they can be worked by very low battery power, thus saving the cables from wear. He was prominent in the laying of the first Atlantic cables, and has been conspicuous in the front rank of students of electrical science since that time, contributing much by his original research and experiments. He served in the international commission which decided on the best method of utilizing the power of Niagara. His theory of vortices has been generally accepted, and he has contributed much to the world's knowledge of heat, and the dynamical theory of gases. He was knighted in 1866, elected president of the British Association in 1871, and created Baron Kelvin in 1892. Besides the books already mentioned, he has written: *Thermal Effects of Fluids in Motion*; *The Mathematical Theory of Electricity*; *The Rigidity of the Earth*; *Approach caused by Vibration*; *Natural Philosophy*; *The Constitution of Matter*, and *Geology and General Physics*. Lord Kelvin visited the U. S. in August, 1897.

Thomson, WILLIAM McCURE, missionary, was born near Cincinnati, O., Dec. 31, 1806; educated at Miami University and Princeton Theological Seminary; was sent as a missionary to Palestine in 1833-49, again in 1850, and a third time in 1859, remaining seven years each time. He wrote articles on travels for various magazines. His principal work is *The Land and the Book* (1859). Died April 8, 1894.

Thon, *pron.* A word condensed from *that one*, and proposed, in 1858, by Mr. C. C. Converse, of Erie, Pa., as a pronoun of the common gender, in the third person, to be used when necessary to prevent repetition, or to avoid ambiguity or inaccuracy, as the following examples will illustrate: "If John or Mary is coming, *thon* (instead of he or she) will telegraph me." "Each member must sign *thon's* own name;" instead of his or her, or his alone, which might imply that all the members were males. "If the man or his wife is there, I will see *thon*" (instead of him or her). The same form answers for the plural, but is rarely needed, they, &c., being of the common gender.

Thoreau (*tho'-ro*), HENRY DAVID, an American author and naturalist, a friend of Emerson and others of the

Lord Kelvin

[WILLIAM THOMSON]

1824-

Concord school, was born at Concord, Mass., in 1817. Among his books are: *A Week on the Concord and Merrimack Rivers* (1849); *Walden, or Life in the Woods* (1854); *Excursions in Field and Forest* (1863); *The Maine Woods* (1864); *Cape Cod* (1865), and *A Yankee in Canada* (1866). He is noted for having lived in a small house, of his own construction, on the shores of Walden Pond, near Concord, in trying to demonstrate the simplicity of human needs; and also for upholding the rights of the individual. Died in 1862.

Thorn'ton, SIR EDWARD, diplomat, was born July 17, 1817, in London, England; entered the diplomatic service in 1842; was minister to the U. S. (1867-81); afterward British minister to Russia (1881), and to Turkey (1884); retired from public life in 1886.

Thur'man, ALLEN GRANBERY, statesman, was born at Lynchburg, Va., Nov. 13, 1813; removed to Chillicothe, O., in childhood, and was educated at an academy there; studied law in the office of Gov. William Allen, and was admitted to the bar in 1835; was elected to Congress (1844), and served one term. In 1851 became a justice of the Supreme Court of Ohio, and in 1853 chief justice; was Democratic candidate for governor in 1866, but defeated by Gen. Hayes. He became U. S. senator, March 4, 1869; and was re-elected in 1874. During his term in the Senate he formulated and secured the passage of what is known as the "Thurman Act," compelling the Pacific railroads to fulfill their contracts with the government. From 1876 he was repeatedly before the Democratic national conventions as a candidate for nomination to the Presidency. In 1888 he was nominated for Vice-President, but defeated at the polls. Died Dec. 12, 1895.

Thurs'by, EMMA, singer, was born at Brooklyn, N. Y., Feb. 21, 1857; studied music under Meyer, Rudersdorf, and others in New York, and went to Italy for further study in 1873. On her return she sang in the Broadway Tabernacle, and other New York churches, and made concert tours of the U. S. and Europe. She steadily declined to appear in opera, and made a specialty of sacred music; is a popular soloist for vocal and philharmonic society concerts.

Thurs'ton, JOHN M'ELLEN, lawyer, was born in Montpelier, Vt., Aug. 21, 1847; removed to Wisconsin (1854), and was admitted to the bar (1869); settled in Omaha, Neb., and became active in politics; member of the legislature (1875); chairman of the Republican national convention of 1896; elected to the U. S. Senate in 1896.

Thurston, ROBERT HENRY, mechanical engineer, was born in Providence, R. I., Oct. 25, 1839; graduated from the scientific department of Brown University, and took a practical course in mechanical engineering in his father's shops; served in the navy during the Civil War, and (1865) was assistant professor of Experimental Philosophy at the Annapolis Naval Academy; subsequently he was professor of Engineering in the Stevens School of Technology, Hoboken, N. J. In 1885 he took charge of the Sibley College at Cornell, which he developed into one of the best schools of engineering in the country. Meanwhile he was called as an expert examiner of boilers, safes, &c., and as authority on questions involving strength of materials in mechanical constructions. He has published several books on these subjects.

Thurston, in *Nebraska*, a N. E. co.; area, 398 sq. m.; drained by Logan creek. Surface, rolling; soil, a fertile black loam; timber scarce. Cap. Peuder. Pop. (1897) 3,360.

Tick-et-scalp'er, *n.* One who buys and sells railroad or other tickets at reduced rates; a ticket-broker.

Tidal Mo'tors. (*Engin.*) It is rather surprising to contemplate the utter neglect which such a natural power as tides has received, during this age of development of natural sources and growth of industrial enterprises calling for large quantities of power at low cost. It does seem as if it ought to be cheaper for a manufacturing plant located on a tide-river to make some use of its rise and fall for driving machinery than to secure the power from steam obtained through the burning of coal, which perhaps is hauled hundreds of miles. The most serious difficulty presented in using the tides is that their action ceases for half an hour or more at each turn of the tide, or once in a little more than 6 hours, while all manufactories desire a continuous, steady, even power for 10 hours daily, and sometimes for 24 hours. It is therefore necessary, in constructing tidal motors, to arrange in some way for an accumulation of the power during the strong flow of the tide, and maintaining it in reserve for the period of slack water. The simplest way of doing this is to provide a reservoir into which the water may be pumped during the strong flow of the tide, and used in descending by means of a turbine or other water-wheel. But this method demands an enormous reservoir for a very small acquirement of power, as the losses by friction are so great, in pumping water up and using it in descent, that there is about 90 per cent. of waste. Since the introduction of the electric storage battery, it would appear as if tidal motors might be used to charge batteries, which would accumulate the power and allow it to be used in a regular way from electric motors, but no such arrangement has yet been made a commercial success.

Tid'dledywinks, or **Tid'dlywinks**, *n.* A game in which each player endeavors to snap small disks of bone or ivory into a basket or cup in the center of a table.

Tiger-wolf, *n.* (*Zoöl.*) A marsupial quadruped (*Thylacinus cynocephalus*) indigenous to Tasmania, where it is now becoming scarce. It is a dasyure, related to the Tasmanian devil, somewhat larger than a

wolf, which it resembles in appearance, except that it has short hair and a long, tapering tail. The general color is grayish-brown, but the hinder part of the back, loins and the base of the tail are marked with transverse black stripes. This wolf is a fierce carnivore, originally preying upon the smaller marsupials and birds of Australasia, over which in past times it seems to have been more widely distributed; and since the settlement of Tasmania it has so persistently attacked the sheep that it has been necessary to exterminate it wherever sheep were pastured.

Til'den, SAMUEL JONES, statesman and lawyer, was born in New Lebanon, N. Y., in 1814; graduated from Yale, and the University of New York; was admitted to the bar in 1841, began the practice of law in the city of New York, and was for many years chairman of the Democratic State Committee. He served in the State Legislature in 1845, and in the conventions to revise the State Constitution in 1846. In 1848 he became a Free-soiler, and afterward took an active part against the Tweed Ring, and in the reform of the canal management. He served as governor of New York (1875-1876), and received the Democratic nomination for President in 1876, but was not confirmed as President. (See ELECTORAL COMMISSION.) Died Aug. 4, 1886.

Fig. 3077.—ROOFING TILES.

a, a simple form of eaves-ends; b, normal tile: an imbrex covering two adjacent tegulae; c, Pan tiles.

Tiles, Roof'ing. (*Building*.) Roofing tiles of terra-cotta have been made and applied since a remote antiquity, and their study develops interesting facts, the foremost of which is the remarkable persistence of certain types. These have been studied by Prof. Edward S. Morse, and described in publications of the Essex Institute. As the roofing tile implies a sloping roof, and this form of shelter arose and prevails only in regions having a considerable rainfall or snowfall, it is probable that it was invented in remoter Asia, and most likely in China, where the fictile art has the highest known antiquity and has reached its greatest development. It then spread westward, but had not reached Greece in Trojan days, since Dr. Schliemann could find no evidence of the use of tiles in and about Ilios, although the art of making other pottery had reached an advanced stage there. The earliest known

tiles is quite prehistoric; and China to-day excels all other countries in their use, while all the Orientals have ornamented them, and adapted them to decorative effects in a way equalled by no one else except the artists of classic Rome and Greece.

Tiles now form the principal covering for roofs (omitting thatched huts) in all parts of the world, except the wooded regions of northern Russia and Siberia and North America. All tiles, ancient and modern, are classified by Morse, according to form, under three heads: (1) *Normal*; (2) *Pan*; (3) *Flat*. The first is that of the Asiatic Mediterranean countries. It consists of two elements—"a wide tile (*tegula*) either square or rectangular, more or less curved in section, and a narrow semicircular tile (*imbrex*) usually slightly tapering at one end to fit into the wider opening of the one adjoining. The tegula is placed on the roof, concave face upward, and the imbrex, placed concave face downward, covers the lateral joint between two adjacent tegulae." Sometimes these are arranged in a reversed order—that is, upside down—and various modifications of shape occur. "The *pan tile* is one having a double flexure forming in section the letter S, and is known in some parts of Germany as the S-tile. This tile is an evident adaptation from the normal tile in combining the two elements, imbrex and tegula, in one piece." Its various forms cover the roofs of Belgium, Holland, and bordering regions, including parts of England.

The *flat*, or *plain tile*, is not a tile in the same sense as the other, but is simply a shingle of terra-cotta, nailed or hung to the roof as slates are. One other feature ought to be mentioned, namely, the marginal appendage of the tiles, both tegulae and imbrices, intended to be placed upon the eaves, which serve to close the ends and give an ornamental finish to the edge of the roof. These often take beautiful and characteristic forms, as is evidenced not only by the tilings of modern Oriental houses, but by the relics of those in use in Mediterranean countries during the classical period. The gradual introduction of vitrified roofing tiles for certain large and ornate buildings in the United States is likely to lead to a more general use of this material, which is at once cheap, durable, easy of application, and capable of great artistic effect.

Til'ton, THEODORE, writer, was born in New York city, Oct. 2, 1825. He became editor of the *New York Observer* and then of the *Independent* (1856-71). He was also editorially connected with the *Brooklyn Union* and the *Golden Age*, and was a popular lecturer. In 1883 he settled in Paris.

Tim'by, THEODORE RUGGLES, inventor, was born at Dover, N. Y., April 5, 1822; in 1862 patented his design for the "revolving tower" that was used in the building of the *Monitor*, and for the use of which the contractors paid him a royalty of \$5,000. He also invented the American pattern of the turbine water-wheel, the system of firing guns by electricity, and various designs of use in military engineering.

Time, *n.* A definite moment, or a definite portion of continuous duration.—*Apparent* or *Solar Time* is time deduced from the apparent diurnal motion of the sun, noon being equivalent to the sun's position on the meridian. A truly-placed sun-dial shows apparent time.—*Mean Time*, or *Mean Solar Time*, is the time calculated according to the mean passage of the sun over the meridian at some fixed point, as Greenwich, Eng., or Washington, D. C.—*Sidereal Time* is time calculated by the passage of a fixed star across the vernal equinox, which gives a day somewhat shorter than a mean solar day.—*Astronomical Time* is the time indicated by a clock set to mean solar time, having 24-hour divisions instead of 12, and pointing to 24 at noon.

Fig. 3078.—MAP OF THE UNITED STATES, SHOWING THE STANDARD TIME-BELTS.

terra-cotta roofing tiles in Greece were found in the ruins of the temple of Hera at Olympia, dating nearly 1000 B. C. In Japan, Korea and China, the origin of

Time, Stand'ard. A local standard of time adopted by the R. R. in the U. S., in Nov., 1883, and accepted universally over the entire country. It divides the U. S.

into four great time divisions, called, respectively, Eastern, Central, Mountain, and Pacific Time, and these correspond respectively to the time of the 75th, 90th, 105th, and 120th meridians west from Greenwich. Because of the daily rotation of the earth upon its axis, sunrise, sunset, and noon vary from place to place just one hour for 15° of Lon.; hence, each standard will be one hour faster than that immediately west of it. Thus, noon at—say Philadelphia, on the 75° of Lon., will be 5 p.m. at Greenwich, 11 a.m. at St. Louis, 90° Lon.; 10 a.m. at Denver, 105°, and 9 a.m. on the 120°, at San Francisco. The time indicated at Philadelphia embraces all the territory included within that meridian, and so on with each of the other meridians. The change from one standard time to another is not made upon arbitrary lines, midway between the standard meridians, but at important points on the route, or at the termini of railways, as may be most convenient. New Brunswick and Nova Scotia have adopted the 60° meridian as the standard, and it is termed Inter-Colonial Time. Under this standard of time no place will vary more than 30 minutes between the local time and the standard. The Naval Observatory at Washington, D. C., furnishes the standard time to the Western Union Telegraph Company every day at noon, and that company clears all its wires at three minutes before noon daily, putting everything in direct connection with Washington. The noon signal reaches the most distant point in about one-fifth of a second, after which general business is resumed. The Western Union derives an income from this by furnishing absolutely correct time to clocks at the rate of \$15 a year, and there are some 75,000 regulators in the country that are furnished in this way. Mariners in U. S. ports obtain the benefit of this time for correcting their chronometers by watching the time-balls dropped from some conspicuous point within view of the harbors at noon daily.

Time-detector, n. A mechanism connected with a clock, and having some form of registering device for recording the rounds of a night watchman. In large factories and buildings deserted at night it is common to employ a watchman to make regular rounds of the premises, as a safeguard both against fire and thieves. As a further protection, to insure the detection of the watchman, should he spend his time in sleep or otherwise neglect his duty, the time-detector has been invented. There are two types, one consisting of a small clock, which the watchman carries about in his pocket, and winds with keys fastened at various points on his rounds, the winding affecting an inner recording mechanism, so that the dial will show in the morning whether or not he has performed his duty. It is obvious that this system may be cheated by the use of duplicate keys. The other type of time-detectors is based upon a stationary clock-mechanism placed where the watchman has no access to it, and having an inner dial of paper, ruled for receiving a record, as of punched holes made by pressing electric buttons at the different stations on the watchman's rounds. As the paper dial is changed daily, and as it rotates with the hands of the clock, every punch made from every station may be located as to time, showing the moment at which the watchman visited each and every station on his route. This system serves for several watchmen as well as one, since the dial may be enlarged to receive any number of records.

Tin-plate, n. Iron or steel plated with tin constitutes by far the greater part of the so-called tin which is in familiar use for so many purposes. In its manufacture, four kinds of plate are known, viz.: *Black plate*, which is the rolled iron or steel sheet, preparatory to being tinned; *terneplate*, which is made of black plate, coated with an alloy of lead and tin; *taggers*, which is very thin plate usually cut to half size, and *tin-plate*, which is properly sheet iron, dipped in pure tin two or three times and polished. The term tin-plate is used, however, as including all these varieties. The method of manufacture in the U. S. is an improvement in many ways over the processes employed in Wales, which is otherwise the principal place of manufacture. A billet of iron or mild steel is specially rolled to the most convenient size, which is in the form of a bar 7 inches wide, and from $\frac{1}{2}$ to $\frac{3}{4}$ of an inch in thickness, according to the size and thickness of the resultant plate which is to be produced. The bars so made are sheared into lengths of $21\frac{1}{4}$ inches, so as to admit of later trimming to an exact 20 inches, with true edges. The sheared bars are reheated, and rolled in hot rolls to a length of about 57 inches. Two of these 57-inch sheets are then laid together, while still hot, doubled over in the center, rolled again to a length of 57 inches, so that there remain eight thicknesses, 57 by $21\frac{1}{4}$ inches. These are then trimmed in a special form of machine to 14 by 20 inches, which is the standard size of plate, weighing almost one pound. Thus 32 sheets are made from the original 7 by $21\frac{1}{4}$ bar. Occasionally other sizes are made for special use, but the trade find it more convenient to retain this standard. The sheets so made are the black plates mentioned above, and their color is owing to the dark scale covering them, which is a coating of oxide that forms on iron that has been heated, and is commonly called forge-scale or roll-scale. As this scale peels off more or less readily in flakes, it has to be thoroughly removed before tinning. For this purpose pickling in dilute sulphuric acid is employed.

The Leeburg pickling-machine is an American invention, which does this work far more economically than it was formerly accomplished. It has a central tubular column, serving as a support to the remainder of the mechanism, and containing an internal steam-

cylinder for raising and lowering a piston or ram which protrudes from the top of the column, and carries three horizontal arms, arranged radially. This arrangement is designed so that bundles of plates may be hung on each of the three arms, and hoisted and swung about into pickling-vats and cleaning water as desired. In operation, a car or truck loaded with plates is run under one arm of the machine, and a bundle of black plates attached to an arm. The steam is then admitted under the ram, and the plates are hoisted 4 or 5 feet, and swung over the pickling-vat. Steam is then admitted, the plates lowered into the vat, and vibrated up and down, with a short stroke of the ram, the vibration aiding the acid in removing the scale. When the scale is well loosened, the plates are again hoisted and swung into a swilling-vat, to be washed with clean water. From the swilling-vat they come back to the car. All the work is performed by the steam, the attendant having simply to set the valves, for obtaining a long stroke of the ram when the plates are to be hoisted into or out of a vat, and for a short stroke when vibration is desired, and to hitch and unhitch the bundles of plate to the arm over the car. It is apparent that the three operations of handling the plates, pickling, and washing go on simultaneously, all three arms of the pickling-machine being continually in use. The plates next go to the annealing-furnace, packed in iron boxes with close lids, with the cracks stopped with sand to exclude the air. They are kept at a dull red heat for a length of time varying from 10 to 24 hours, and are then allowed to cool gradually. The annealing serves to reduce the brittleness of the plates, making them softer and tougher.

In order to give a smooth finish to the plates cold-rolling between rolls of hard chilled iron is resorted to. These rolls are very powerful, and tend to concentrate the metal, and to render the surface more even. A second annealing follows, to further soften and toughen the plate, when it would be ready for tinning were it not that iron tends to oxidize so easily that in the time occupied by these operations a certain amount of oxidation has taken place, which would tend to cause the coating of tin to scale off, were it not removed. A second pickling in a weak acid solution is therefore applied, this being denominated white pickling. Scouring with sand and water by means of hemp pads follows, then a rinsing in water, after which the plates are either greased with palm oil or treated with a solution of chloride of zinc and muriatic acid. The palm-oil treatment is considered the best, though the acid process is slightly cheaper. The molten tin is contained in a melting-pot, covered with palm-oil, or, if terneplate is to be made, the mixture in the pot is 2 parts lead and 1 part tin. In this the plates are dipped, usually 3 times, being brushed between dippings. After the third dipping the plates are rolled in a bath of palm-oil, and set up in racks to cool. A cleaning-machine is next brought into use, to rub the plates with bran and absorb the remains of the oil, after which the plates are hand-polished or dusted, and packed for the market. The quantity of tin-plate manufactured slightly exceeds that of terneplate.

There are now (1897) about 75 firms in the U. S. engaged in the manufacture of tin-plate and terneplate, operating some 250 black-plate mills and about 500 tinning-sets. Indiana is the center of the industry. The annual capacity is about 7,000,000 boxes of plate, there being 112 plates to the box. This is enough to supply the home demand, and the amount now imported from Wales is trifling, the competition being practically confined to the Pacific coast, where the Welsh article can be brought in about 22 cents per box cheaper than the American product. Even this market is likely to revert to the American manufacturers, who are in a position to undersell the British plate whenever they choose to make a combination for that purpose. About one-quarter of the U. S. consumption of tin-plate comes from the Standard Oil Company and the Armour Packing Company. The remainder is principally used in roofing and the manufacture of tin boxes for special purposes. The development of the tin-plate industry in the U. S. is the direct result of favorable tariff legislation. There being no tin ore here, and labor being cheaper in South Wales, where the bulk of it had been made, there was nothing to induce anyone to engage here in its manufacture. Even the 1870-73 tariff of 25 per cent. failed to induce local manufacture, and the subsequent figures of 15 per cent. and $1\frac{1}{2}$ cts. per pound were also uninviting. In 1891, the McKinley tariff of $2\frac{1}{2}$ cts. per pound (the equivalent of about 60 per cent.) started a number of firms into the business, and mills were erected very rapidly up to 1894, when the tariff protection was reduced nearly one-half. However, the business has become sufficiently well established that it now seems easily able to hold its own, with a moderate protection, and almost as many mills were erected in 1895 and 1896 as in the 2 years preceding. The erection of mills has now practically stopped, those now running supplying about nine-tenths of the home demand.

Tintometer, n. A device for testing the color of something, as lubricating oils, whose value is reduced by dark tints, often indicating impurities. Lovibond's tintometer was introduced in 1886, and has been improved several times. As made for testing oil, two channels are provided connecting with an eye-piece. In one channel may be adjusted any one of a set of glass slips of graded tints for comparison with 2 inches of oil, which are placed in a rectangular glass cell in the other channel. When the tint is matched, a marking on the glass slip serves to place the value of the oil.

Tiro'nian, a. [Lat. *tironianæ* (notæ), (notes or signs) of Tiro, freedman, pupil and amanuensis of Cicero.] Pertaining to a shorthand system, embracing over 5,000 abbreviations and modifications of words and letters, designed to expedite writing and aid the memory.

Tischendorf, LOBEGOTT FRIEDRICH KONSTANTIN von, an eminent philologist and biblical critic, was born at Lengenfeld, Germany, in 1815. He was educated at Leipzig, was professor there after 1845, and travelled much, comparing the different manuscripts of the New Testament. On one of his Oriental tours he was so fortunate as to discover the Sinaitic manuscript, which is the oldest known copy of the New Testament, and of inestimable worth in textual criticism. Much of his brilliant reputation was due to this discovery, supported as it was by the keenest critical acumen. His revisions have been circulated everywhere, and in Leipzig alone not less than twenty-five of his critical editions have been published. His authorized English New Testament, containing the additions of the three most important manuscripts, was published by Tauchnitz, and in the first year (1869) nearly fifty thousand copies were sent into the United Kingdom. He died in 1874, leaving incomplete a large and comprehensive critical edition of the New Testament.

Toboggan, n. A simple form of sledge, invented by the Indians of northern North America, consisting of piece of birch-bark, or similar material, having the front end turned up, and a rope attached by which it was dragged over the snow. This was in use throughout Canada, and was adopted and improved by the early white explorers and fur-traders for winter travel in the far north. Later it became a toy in Canadian cities, where it was made of carefully prepared hickory splints, from 5 to 15 feet in length, and was used in the sport of sliding down carefully made tracks of frozen snow, inclined upon a natural hillside, or upon a sloping structure of timbers giving the required impetus at the start, and called a *toboggan slide*. The best toboggans are those made in Quebec.

Toc'con, in Georgia, a post-village of Habersham co., 93 m. N. E. of Atlanta. Here are springs of chalybeate and sulphur waters, and the famous Toccoa Falls, 185 feet in height. Pop. (1897) 1,190.

Tol'stoi, LYOF NIKOLAI VITCH, COUNT, novelist and reformer, was born at Yasnaya Polyana, in the province of Toula, Russia, Aug. 28, 1828; educated at the University of Kazan, and entered the Russian army (1851), serving in the Crimean War as an officer of engineers; resigned his commission (1856), and gave attention to literature; published his first novel, *War and Peace*, in 1860. Then followed *Anna Karenina*, in 1876. About this time T. began to devote himself to the study of the problem of social life, and to develop his peculiarly radical views of religion and morals, which he set forth in *My Religion* (1889). His rule of Christian life is to place himself on a plane with the poorest, to work with his hands, and to own nothing but what he can share with the humblest, and to live the life of a Christian socialist. His peculiar views led him to extraordinary utterances, and sometimes questionable arraignments of society, as in the *Kreutzer Sonata* (1890), with its peculiar theory of marriage and social organization. His other writings include: *What to Do* (1889); and several books of an autobiographical nature; his latest publications are: *The Kingdom of God Within Us* (1893); and *Patriotism and Christianity* (1894).

Tol'tees, n. pl. (Ethnol.) A supposed race of Indians, regarded as entirely mythical by many modern ethnologists, said to have inhabited Central America previous to the rise of the Aztecs (who possessed the country at the time of the Spanish conquest). Nothing but vague tradition remains in regard to them; and the place-names connected with these traditions are all expressed in the idiom of the Nahuath, or language of the Aztecs. Those who believe there really was a Toltec race are inclined also to believe that, when driven from Mexico, about 900 years ago, they settled in the Tehuantepec Isthmus and peninsula of Yucatan, and gave rise to the cultured Maya race.

Tom Green, in Texas, a S.W. co.; area, 2,940 sq. m.; drained by Concho river and the Middle Fork of the Colorado river. Surface, mainly prairie, a small portion hilly. One of the finest stock regions in the State. Cap. San Angelo. Pop. (1897) 7,000.

Tomahawk, in Wisconsin, a post-village of Lincoln co., 23 m. N. of Merrill. Pop. (1895), 2,296.

Tombstone, in Arizona, a city, cap. of Cochise co., 65 m. S.E. of Tucson; has important mining interests. Pop. (1897) 2,000.

Tonkaw'a, in Oklahoma, a post-village of Kay co., 14 m. from Ponca City. Pop. (1897) 150.

Tonon'eter, n. [Gr. *tonos*, and *metron*.] An instrument invented by Scheibler, in 1834, for determining the exact number of vibrations per second which produce a given tone, and for tuning musical instruments.

Tooke, HORNE, philologist and politician, was born in London, in 1736, and at first known under his real name of JOHN HORNE; but in the middle of his life he assumed the name of Tooke. He was educated at Eton and Cambridge, and was vicar of New Brentford until 1773; but, becoming a liberal politician (1665), was involved in agitations and controversies from that time forward. He opposed the American war; was at one time tried and imprisoned for libel, and was tried and acquitted in 1794 on a charge of high treason. In 1801 he entered Parliament, and died in 1812. His *Divisions of Twrley* (1786) is a work on philology which has been frequently reprinted.

Henry David Thoreau

1817-1862

Toole, JOHN LAWRENCE, comedian, was born in London, England, March 12, 1832; acted at various London theaters (1854-74); in the U. S. (1874-75); and in Australia (1890). He made a striking success as Walker, in J. M. Barrie's play of *Walker, London*, in 1894. Among his favorite plays are: *The Cricket on the Hearth*, *Through Fire and Water*, and *A Fool and His Money*.

Toombs, ROBERT, politician, was born in Wilkes county, Georgia, July 2, 1810; graduated at Union College, and studied law at the University of Virginia; was elected to Congress in 1844; from 1853-61 was a U. S. Senator; a Southern extremist, favoring secession, and was expelled from the Senate March, 1861. He became a member of the Confederate Congress; was Secretary of State, but resigned to enter the Confederate Army as a brigadier-general. After the war he refused to take the oath of allegiance to the U. S., and so for-

feited his citizenship. He was to the end bitterly opposed to the reconstruction policy of the government. Died Dec. 15, 1885.

Toronto, in Ohio, a post-village of Jefferson co., on Ohio river, 9 m. N. of Steubenville; has manufactures of terra cotta, fire brick, etc. Pop. (1897) 2,750.

Torpedo-Boats. (Navy.) Small, swift vessels for approaching heavy armored battleships, as under cover of darkness, and discharging a destructive torpedo, are known by this name. There are two general types, one a surface boat, with extremely powerful engines, designed for night attacks, and the other a submarine boat, constructed to float either on the surface, or just awash, or entirely submerged. The first type of craft has reached a high degree of development, and all the leading navies of the world comprise fleets of torpedo boats, ranging in speed from 25 knots an hour up to 34 knots, the last-named speed being attained by the *Turbinia*, built in 1897 at the Thornycroft yards in England. The diagrams printed herewith show the plan used in constructing five of the torpedo boats in the Italian fleet.

A description of one of these will serve to give a general understanding of the whole class: These boats are 152 feet long, 17 feet wide, and 7½ feet in depth. The hulls are divided into 12 water-tight compartments, and longitudinal bulkheads are also employed. Half the compartments may be filled without sinking one of the vessels. Each craft has two locomotive-type marine boilers, and two sets of triple expansion engines. The cylinders have 17 inches stroke, and the indicated horse power is 2,200. Three-bladed twin screw propellers of 6 feet diameter are used, with the result that speeds varying from 26 to 27 knots an hour were made by the different boats on their trial trips, the speed being maintained in each case for a run of at least three hours. The coal bunkers are arranged so as to enclose the boilers and engines, affording them some protection. The bunkers are made to contain about 40 tons of coal. The weight of one of these boats, with its torpedo-tubes and fittings, Hotchkiss guns, masts, &c., is 62½ tons; the boilers and engines weigh almost as much, 61 tons; while the crew of 24 men, with their equipments, and a full coal supply, bring the weight up to 170 tons. Great Britain has a considerable number of torpedo boats of the 30-knot class, and since it has been developed that the steam-turbine can be used in these craft to increase their speed, the number of 30-knot boats is likely to increase. (See STEAM-TURBINE.)

The submarine class of torpedo boats are yet in the experimental stage. The principle upon which these are navigated is explained at SUBMARINE BOAT. One of the earliest successful boats of this type was the *Waddington*, built near Liverpool, in 1888. It carried two automobile torpedoes, one on each side, held by grips, and arranged to be released from the interior of the boat, the release starting the propelling motors of the torpedoes into operation. Lieutenant Peral, of the Spanish navy, has attracted considerable attention because of the submarine torpedo boats built under his direction. In France, M. Zédé, chief engineer of the Mediterranean forces, developed the *Gymnote*, in 1888, and its success was such that in 1891 another was ordered on a larger scale, and \$225,000 appropriated for its construction. In the U. S., the Holland boat has proved the most successful. J. P. Holland began his

first submarine boat in 1877. In 1887 he succeeded in interesting the navy department sufficiently that designs were advertised for, but the specifications were so rigorous that no one was able to meet them at that time. The third and most successful of Holland's boats was tested in Newark bay and New York harbor during 1896, and attracted much notice from the press and public. The illustrations show the general outline and section. It is plated with half an inch of steel, and driven by three screws, with triple-expansion engines, while on the surface. When sunk, it may be driven for a long time by hot water under steam-pressure, and when this gives out, the storage batteries and electric motors are used. Its speed on the surface is 13½ knots; about 11 knots awash, and 6½ knots when totally submerged. A conning-tower is provided, and a periscope, or upright telescope with reflecting mirrors, for enabling the pilot to view the surroundings without other

exposure above the surface than a short, dull-colored tube. It is made to carry five locomotive torpedoes, with an air-compressor plant for furnishing power for their discharge. Its dimensions are: Length, 80 feet; diameter, 11 feet; displacement, light, 118½ tons; displacement, awash, 137½ tons; displacement, submerged, 198½ tons; horse power, 1,800.

If necessary to do so, the boat could remain under water for more than six hours without injury to the crew, for 50 cubic feet of compressed air are carried in the air reservoirs. The vessel has sufficient reserve of buoyancy to insure its rising to the surface in case of accident to machinery, and, as a last resort, over two tons of water can be pumped out by hand-pumps. It is built with sufficient strength to resist without leaking a water pressure at a depth of 15 fathoms, and automatic arrangements are made to prevent it from descending below a predetermined depth. Five King-

power electric motor, fed from 48 chloride cells, will furnish the power when submerged. The steam power, electric motor and storage cells are so connected as to be readily reversible in their action, thus rendering it possible to recharge the cells by employing the motor as a dynamo, the steam-engine being used as a prime motor. The electric power may also be connected to a propeller shaft placed in the axis of the boat, in addition to the connection with the main propeller shafts. The motor may thus operate a special propeller, in addition to driving the main shafts independently of the steam engines. The capacity of the storage cells is amply large to prevent injury or deterioration while giving off the power required to propel the vessel—a speed of about 8 knots for at least 6 hours. It is confidently predicted that the vessel will reach a speed of 15 knots in the light conditions, while it will be able to reach 12 knots with 3 feet of water covering the hull, and 7 or 8 knots while submerged. At these speeds an endurance of 15 hours awash and 10 hours submerged is anticipated. It will carry no guns or other armament except 5 automobile torpedoes to be launched from 2 expulsion tubes. Two additional torpedoes can be carried, if desired. The success attained by the boats described renders it probable that all the navies of the world will be supplied with submarine boats before another decade.

Torpedoes, Na'val. (Navy.) Torpedoes for the destruction of hostile vessels may be divided into those which are dirigible, that is steerable or controllable from the point of departure, and those which are uncontrollable, or continue on a fixed course when once discharged. Of the former class, one of the earliest is the *Lay*, which came into notice about 1872. The hull of this craft is about 30 feet long and 3 inches wide, cigar-shaped, and formed, water- and air-tight, of iron plates. It is divided into three compartments, one for motive power, another for machinery, and the third for electrical apparatus. The motive power consists in carbonic acid gas, compressed in sufficient quantity to drive a pair of oscillating engines of 8-horse power, and thus operate the screw, for the period of half an hour, during which time the boat is designed to travel some six or eight miles. The machinery is controlled by wires leading to a battery on shore, the opening or closing of the circuit or wire governing the throttle, and the same on the second wire actuating the steering gear. The cable containing the wire is paid out as the boat moves. The vessel is almost entirely submerged, and being painted green, is indistinguishable at short distances by the unaided eye. In the magazine is placed 500 pounds of powder or nitroglycerin, and in the forward portion of the vessel explosive shells are arranged, to be fired by an electric spark passing through a third wire in the cable. The explosion of the shells may be effected without injury to the boat, but that of the magazine necessarily causes its destruction.

The Sims-Edison, also steerable, came out about 1885. The cigar-shaped torpedo contains the explosive in the forward section, while in the next section is a cylindrical case, in which is coiled a controlling electric cable which is paid out as the torpedo progresses. In the

Fig. 3079.—TYPE OF ITALIAN TORPEDO BOAT.

Fig. 3080.—THE HOLLAND SUBMARINE TORPEDO BOAT.

ston valves are placed under the bottom, with connections above decks, by means of which the ballast-chambers can be flooded and the vessel brought to the surface. One Kingston valve is also placed in each auxiliary water chamber.

The Holland Company has constructed for the U. S. government a torpedo boat, called the *Plunger*, copying most of the devices in the Holland boat, this vessel being launched at Baltimore, Aug. 7, 1897. It is a trifle larger than the Holland boat. With a length of 85 feet and diameter of 11½ feet, it has a displacement when floating light of 155 tons, and when down to the load line, or with the superstructure awash, 167 tons. Two sets of motive power are provided, one for the afloat and awash condition, and one for the submerged condition. Twin quadruple expansion engines, with steam furnished from a water-tube boiler, will operate twin screws when afloat or awash; a 70-horse

center is a little electric motor for driving the propeller-screw, and in the aft part is the steering mechanism. Above the torpedo is a long, boat-shaped float, made buoyant, so as to maintain itself on the top of the waves. From this rise little masts, bearing balls designed to aid the steersman at the directing point in guiding the craft. The masts are hinged, and a sharp nose is given the forward end of the apparatus, so that it may tend to shoot under any logs or other obstacles encountered. The steering device, for use at the point of sending, consists of a powerful electromagnet with pole-changing keys, whose alterations affect the rudder of the torpedo through the controlling cable. When it is desired to explode the torpedo an electric connection is made, igniting a fuse. The Whitehead torpedo is one of the best known of the uncontrollable class. It is cigar-shaped, has a shell of steel or bronze, and is usually about 15 feet in length by 14 inches in diame-

ter. In the conical head is placed from 30 to 75 pounds of gun-cotton. At the front point is an exploding device for firing the charge the instant it strikes. The body of the shell contains an air-chamber, filled with compressed air, for use as a motive power. Next is a balance-chamber, with devices for maintaining a proper position in the water. Next aft is the propelling motor, and in the aft cone is a buoyancy chamber adjusted to secure the proper submergence in the water, the depth being adjustable to from 5 to 20 feet.

This form of torpedo is designed to be discharged from a tube either above or below the water-line, from an armored ship, or from a torpedo boat. As the torpedo leaves its tube its motor is started, and it continues on its course, after the initial energy is spent, by means of its own air-driven motor. The Hall torpedo is very similar to this, using compressed air, a telescopic tube to regulate immersion, and a righting-valve. The Victoria torpedo regulates immersion by horizontal rudders, and preserves balance by a pendulum mechanism. The Patric torpedo is an enormous affair, 40 feet in length, driven by carbonic acid gas, and carrying a float, like the Sims-Edison. The Nordenfeldt torpedo is driven by an electric motor supplied with storage battery accumulators of 120 cells. Two floats are used to maintain a depth of about six feet. The Howell torpedo is designed to be discharged from a gun with powder. It is fired below the water-line at an initial speed of 35 knots. It has the usual devices for controlling submergence and steering.

Touraco (*too-ra'co*), *n.* (*Ornith.*) A bird of the genus *Turacus* (family *Musophagidae*), closely related to the plantain-eaters, and a native of Africa, of which several species are known. All are brilliantly colored, rich, metallic crimson and greens predominating, have lofty, erectile crests, and the beak half concealed by hairy feathers projecting forward about the nostrils, and long, flexible tails. They dwell in forests, frequent the highest trees, and live upon fruits, but not much is known of their habits. The commonest species is the lory, of South Africa (*Turacus erythrax*, Fig. 3081), whose plumage is particularly gaudy. Its crest is red, erect, and compressed; sides of the head, ears, and chin, and patch round the eye (which is large, red, and brilliant), white; general plumage green, inclining to bluish on the body and belly; quills rich purple violet; tail rounded; bill yellow; feet grayish-black. When the bird is excited or in action, the crest is elevated in a compressed subconical shape; and when thus erected it gives the head a helmeted air.

Tourgee', ALBION WINEGAR, journalist and author, was born in Williamsfield, O., May 2, 1838; served in the Union army throughout the Civil War; after the war went to Greensboro, N. C., practiced law, edited the *Union Register*, and entered politics. His experiences and consequent views on the subject of Southern reconstruction were expressed in his books, *A Fool's Errand*, by *One of the Fools* (1879), *Bricks without Straw* (1880), &c. He also published several books on legal subjects. His latest book is *The Battle of the Standards* (1896).

Tourgenieff', **Tourgenieff**, **Turgenieff**, or **Turgenieff**, IVAN SURGAYEVICH, a distinguished Russian novelist, born in 1818, and educated at the University of Moscow and at St. Petersburg; he subsequently spent some time in foreign travel and study, but returned to Russia to serve in the ministry of the interior in 1840. In 1841 he published *Punasha*, a volume of poems, and in 1844 *Andrei Kolosoff*, his first novel. About 1847 he issued *Annals of a Sportsman*, which were written to help in bringing about the emancipation of the serfs, and which, translated into English, French, and German, gave him reputation as an author. In 1852 he commented on the Russian official system in a way which gave offence, and he was deprived of office, imprisoned, and then for a time banished from the capital into the interior of Russia. After he was allowed to return, in 1854, he spent little time in Russia, living mostly in France and Germany. He was broadly democratic in principle, but his tendency to analysis often made enemies even of those with whom he sympathized. His best-known novels are *Rudin* (1855), *A Nest of Nobles* (1858), *Helene* (in English editions, *On the Eve*) (1860), *Fathers and Sons* (1862), *Smoke* (1867), *Virgin Soil* (1876), and *A Lear of the Steppes*, besides a last poem, *Senilia* (1883). Died Sept. 3, 1883.

Tourjee', EBEN, the founder of the conservatory system of musical instruction in America, was born in Warwick, R. I., June 1, 1834; self-instructed, he became an organist at 13; in 1851 he opened a music store in Fall River, Mass., and in 1853 began teaching music in the public schools, and also organized private classes. This was the beginning of class-teaching in America. In 1859 he established a conservatory of music in East Greenwich, R. I.; in 1863 studied in Europe; in 1864 returned and founded a conservatory in Providence, which was removed to Boston (1867), and became the New England

Conservatory of Music. In 1869 he organized the chorus of the Peace Jubilee; in 1872 became dean of the new College of Music in Boston University. Died April 12, 1891.

Tours, BERTHOLD, musician, was born in Rotterdam, Holland, Dec. 17, 1833; received his musical training from his father, the organist of St. Lawrence Church, and at the conservatories of Brussels and Leipzig. In 1861 he settled in London, and became a member of the orchestra of the Royal Italian Opera, and musical adviser for the firm of Novello, Ewer & Co. He has composed many attractive songs, and several hymn tunes and services for the English church, notably his *Servia in F* and the anthem, *God Hath Appointed a Day*.

Tow'er, in *Minnesota*, a city of St. Louis co., 96 m. N. of Duluth; has large manufactures of iron, lumber, and brick. Pop. (1895) 1,265.

Tower City, in *Pennsylvania*, a post-village of Schuylkill co., 26 m. S. W. of Pottsville. Pop. (1897) 2,120.

Towhee (*to-he'*), or **GROUND-ROBIN**, *n.* (*Ornith.*) One of the most common birds in the Eastern U. S. It is a finch (*Pipilo erythrophthalmus*—Fig. 3082), and spends its time mainly upon the ground, where its loud two-syllabled cry is heard from among the thickets, where it scratches industriously for its insect food. To this cry it owes its names, towhee, joree, chewiuk, &c.,

Fig. 3082.—TOWHEE.

and to its gay plumage of black, rust-red, and white (in the male, the female being duller) its other names, "ground-robin," and "skunk blackbird." In the spring the male utters a brilliant song, during the brief mating season, when the female is occupying a domed nest cleverly concealed among the fallen leaves in the woods. Several related species dwell in the western half of the U. S. See Ernest Ingersoll's *Friends North Knowing and Country Cousins* for a fuller account.

Towner, in *North Dakota*, a N. N. E. co.; area, 1,044 sq. m.; drained by small streams and numerous lakes. Surface, undulating; soil, very fertile. Products, The unrivalled No. 1 hard wheat, oats, barley, potatoes, hay, wool; live stock. Cap. Cando. Pop. (1897) 2,750.

Townsend, EDWARD W., humorist, was born in Cleveland, Ohio, Feb. 10, 1855; began journalism at fifteen years of age; was engaged in the *San Francisco Examiner*; joined the staff of the *New York Sun* in 1892; author of *Chimnie Fadden* (1894); *Chimnie Fadden Explains* (1895); and *A Daughter of the Tenements* (1895). These books portray life on the Bowery and the East Side, and are written in the dialect of that quarter.

Townsend, GEORGE ALFRED, journalist, was born in Georgetown, Del., Jan. 30, 1841; became a war correspondent for the *New York Herald* (1862). He then went to Europe, and delivered lectures on the Civil War in America. Returning to the U. S. he was engaged by the *New York World* as war correspondent in 1864, and became noted for his picturesque descriptions. In 1866 he was in Europe, describing the scenes in the Austro-Prussian War. In 1868 he was correspondent of the *Chicago Tribune*, and then began to use the pen-name "Gath." He has published several books, but is best known by his journalistic work.

Townsend, VIRGINIA FRANCES, writer, was born in New Haven, Conn., in 1836. She edited for a time *Arthur's Home Magazine*, and devoted her life to literary work. Many of her juvenile books have been reprinted as the "Breakwater Series."

Toxotes, or **ARCHER-FISH**, *n.* (*Ichth.*) A genus of fishes, belonging to the family *Toxotidae*, allied to the surgeon-fish, embracing small, brightly colored forms of East Indian seas, one species of which (*T. jaculator*)

Fig. 3083.—TOXOTES JACULATOR.

was formerly believed able to shoot drops of water from its mouth so straight and forcibly as to knock down flying insects for food.

Tracy, BENJAMIN FRANKLIN, statesman, was born in Oswego, N. Y., April 26, 1830; studied law; was district attorney for Tioga co., N. Y. (1853); member of the legislature (1862); organized the 137th and 109th N. Y. Regiments, taking command of the latter. At the close of the war he was brevetted brigadier-general of volunteers; settled in Brooklyn; was U. S. district attorney (1866-1873); filled a vacancy on the supreme bench of New York (1881-83); was secretary of the navy (1889-93), and thereafter resumed his law prac-

tice in New York; was Republican nominee for first mayor of "Greater New York" in 1897.

Tracy, in *Minnesota*, a post-village of Lyon co., 91 m. W. of St. Peter. Pop. (1895) 1,687.

Trade Dollar. A silver coin issued in the U. S. in 1873, containing 420 grains, troy, and at the time of issue the metal it contained was worth 102¼ cents. It was intended to take the place in the trade of China and Japan of the popular Mexican dollar, and was not a legal tender in the U. S. These expectations were not fully realized, and coinage and circulation of the coin soon ceased.

Traducianism, *n.* (*Philos.*) The theory that the human soul is derived from the soul of the parents, just as the body is from their bodies. It is opposed to creationism and also to pre-existence—the notion that human souls were in existence before the generation of the bodies with which they are united in this world; a notion anciently, and still, widely spread throughout the East. Athanasius, Gregory Nazianzen, Tertullian, and the Lutheran theologians are traducians, holding, as a general thing, that the parents are the divinely appointed means of a divine act of creation. Augustine evidently leans to this view, without expressing himself positively. During the Middle Ages, however, the orthodox view was creationism, the theory that each soul is a separate creation and joined to the body just after its conception, and this is the prevalent view in the Roman and Protestant churches.

Traver, in *Iowa*, a post-town of Tama co., 47 m. W. of Cedar Rapids. Pop. (1895) 1,218.

Trail, in *North Dakota*, an E. co., adjoining Minnesota; area, 864 sq. m.; bounded E. by Red River of the North, and drained by Goose river. Surface, nearly level prairie; soil, fertile. Cap. Hillsboro. Pop. (1897) 12,780.

Train, GEORGE FRANCIS, author and lecturer, was born in Boston, Mass., March 24, 1829; in 1853 he went to Australia and founded the business house of Caldwell, Train & Co.; travelled extensively, and at one time tried, without success, to promote street railroading in Liverpool and Birkenhead, England; began writing and lecturing, and became noted for his sharp criticisms of English society, and for his own personal eccentricities. His home has been in New York city since 1862.

Transcendentalism, *n.* (*Philos.*) In common parlance, this word is applied to what is disapproved of as abstruse, speculative, obscure, fantastic, and more or less absurd. Transcendent and transcendental, however, are terms employed by some Schoolmen, especially Duns Scotus (*q. v.*), to describe conceptions that, by their universality, rise above or transcend the ten Aristotelian categories. (See ARISTOTELIANISM.) Between the theretofore convertible terms transcendent and transcendental, Kant drew a distinction of considerable importance; at least, for the understanding of his system. (See KANT.) "Transcendental Philosophy" was Schelling's own name for an important part of his system. (See SCHELLING.) The epithets Transcendentalism and Transcendental School have come to be associated in the United States with a group of New England authors and thinkers, who, early in the 19th century, started a reaction, which became widespread, against Puritan prejudices that were time-honored in New England, humdrum orthodoxy, old-fashioned metaphysics, and materialistic philistinism and utilitarianism. The movement was a mixture of idealism, vague pantheism, mysticism, and eclectic orientalism, and at times was, beyond contradiction, extravagant, pedantic, and paradoxical. The leader of the movement was Ralph Waldo Emerson. It was also called the "Concord School," because a number of its promoters lived, like Emerson, in the village of Concord, Mass. Carlyle and German philosophical literature had great influence over it. A Transcendental Club was formed, in 1836, in the house of George Ripley (*q. v.*). Emerson taught that the revelations God made to man were within the soul; that the soul was God's temple—a thing of infinite dignity and capacity. It is an experience founded on the immanence of God. Among conspicuous members of the school were Margaret Fuller and Theodore Parker. One outcome of the school was Brook Farm (*q. v.*). Not long before the death of Emerson, there was formed an association calling itself the Concord School of Philosophy, which for several years met annually—generally in the month of August—and listened for several days to the reading of papers, and discussions of various matters, philosophical and otherwise. See O. B. Frothingham's *Transcendentalism in New England* (New York, 1876).

Transmissibility of Forces, (*Phys.*) A principle in mechanics, which states that a force may be applied at any point in the line of its direction, provided this point be connected with the first point of application by a rigid and inextensible straight line. For example, if a weight be attached by a cord to a spring-balance, the effect will be the same at whatever point in the cord the weight is tied. Similarly, a force may be applied to a body, either directly or by interposition of a rigid rod; and, supposing the rod to be supported independently, the result will be the same. Again, if equal forces are supposed to be acting in opposite directions at the extremities of a string, the string will be in equilibrium, and if we take any point in the string, not an extremity, and transfer one of the forces to it, the forces will be still in equilibrium. Hence we may consider the force applied at one end to be transmitted through the string, and we may suppose two opposite forces at any point equal to the forces at the

extremities. Either of these is termed the *tension* of the string. Suppose the string to pass round a smooth peg, ring, or surface; in this case also the tension of the string is the same at every point.

Transmission of Power. (*Mech.*) There are four principal systems of transmitting power from motors or engines to machines or mechanisms for performing work: (1) Electricity, which is fully treated under that head; (2) compressed air; (3) mechanical connection by means of belts, ropes or chains; (4) direct mechanical connection, as by gearing or connecting-rods. The value of compressed air as a means of distributing power through pipes or hose has been known for a long time, but mechanical connections have been generally preferred, until within recent years the manifest advantages of electric transmission have resulted in attracting attention to the conveniences connected with the use of compressed air, and this means of transmitting power has been greatly developed. In other words, electricity has opened the way for compressed air, and the two are superseding mechanical connections in many fields. Air is usually compressed in a machine which is called a compressor, which closely resembles a steam-engine, being usually of the horizontal type, and employing a cylinder and piston for pumping the air into tanks, from which it may be led by pipes or tubes to the machines to be driven. The power thus carried may be delivered to the machine by means of motor-cylinders, similar to those of a steam-engine, or the pressure may be used direct to drive a ram, in imitation of the hydraulic press. Many proprietors of railroad shops, iron mines, and miscellaneous factories prefer compressed air as a means of transmitting power, as the cost is commonly about the same as electricity, and the air lends itself to a variety of convenient uses to which electricity is not applicable, as for hoisting oil from barrels by turning in a current of air through a hose, or sweeping or dusting railway cars by subjecting the interior to blasts of air directed with a hose and nozzle, or the cleansing of steam passages, &c. For driving portable tools, compressed air is especially convenient, as it may be carried in a rubber tube to any convenient point. Rock-drills have long been operated by this means, also power-calkers for steam-boilers and tanks. Riveting operations often have to be accomplished at points to which it is inconvenient to convey a massive machine; hence portable riveters driven by compressed air are found convenient. The Liverpool overhead railway was put together with a pneumatic rivetting plant, the power being furnished from an air-compressor mounted on a flat-car and run along on the track as completed. The use of compressed air for operating street railways is discussed at RAILWAYS.

Transmission by means of leather-beltting has been developed in the United States, while transmission by hemp ropes has become more common in British practice. Each system has its conveniences and advantages. Leather belts wear better than hemp rope, but give some bother on account of stretching. Hemp ropes stretch more than leather beltting, but as they are provided with idle pulleys for taking up the slack, the stretching does not trouble the user. The great advantage in using leather belts for transmission is that they can be adjusted to slip when any sudden demand is made upon them, and they thus often save a machine from breakage. For instance, if a careless apprentice drops a monkey-wrench into a moving machine that is belt-driven, the machine usually stops, slipping its pulleys within the belts, instead of being forced ahead and breaking some part. The great disadvantage in the use of belts is that they involve somewhat complex arrangements of shafting and pulleys, which absorb a great amount of power by friction. It is not too much to say that in a great many factories it requires as much power to run the shafting and beltting as to operate the machines. With hemp ropes the results are about the same. Wire ropes are very convenient for carrying power across a considerable space, as from one building to another. Their weight on the sheaves, however, entails much friction, which is slightly increased by the continual bending of the rope. It has been calculated that cable railways are able to deliver but 45 per cent. of the power of the steam-engines to the cars that are to be drawn. For hoisting in mines a flat rope of solid steel is often preferred to the ordinary wire cable, as its form renders easy the coiling around the hoisting-drum. The chain is also often found a convenient means of transmitting power, but is open to the objection that it wears at points all along its length, causing extension, which must usually be compensated for after a time by some means, as by taking on a link. Strictly speaking, gearing, connecting-rods and various other mechanical devices are methods of transmitting power, but as these are commonly used for close connections, they are not usually considered under this head, which is generally used with reference to transmission from some distance. For further information bearing on this subject, see NIAGARA FALLS POWER-PLANT.

Trebelli. ZELIA (GILBERT), opera-singer, was born of German parents in Paris, in 1838; made her debut at Madrid under the name of Trebelli (an anagram of the name Gillebert), in 1859. In 1860 she entered upon a series of triumphs in Berlin, and in 1862 repeated these successes in London. She afterward toured in Scandinavia, Russia, and the U. S., and was everywhere recognized as one of the greatest mezzo-sopranos of her day. Died Aug. 18, 1892.

Tree. HERBERT BEERBOHM, actor, was born in London in 1853; educated in England and Germany; made his

first stage appearance in 1878; in 1884 attracted attention by his impersonation of the Curate in *The Private Secretary* at the Prince of Wales Theater. In 1894-5 he made a professional tour in the U. S., presenting a miscellaneous repertoire of tragedy and comedy, in which he was supported by his wife, an accomplished actress, as leading lady.

Tre'go. in *Kansas*, a W. central co.; area, 900 sq. m.; intersected by Smoky Hill and Saline rivers. *Surface*, rolling prairie; *soil*, fertile. *Cap.* Wakeeney. *Pop.* (1895) 2,166.

Trematoids, Trematoda, or Trematode Worms. *n. pl.* [*Gr. trema*, a hole.] (*Zool.*) A group of semi-parasitic worms—the flukes. See DISTOMA.

Triad, n. (*Chem.*) Any element or radical that will enter into combination with three atoms of a monad element, or radical, as bismuth, which is a triad because it has a valence of three.

Tricon'pis. CHARILAOS, statesman, was born at Naulia, Greece, July 23, 1832; son of the Greek statesman and patriot, Spirodon Triconpis (1788-1873). He was educated in England, Paris and Athens; served in the Greek legation in London (1852-63); was chosen deputy to the Greek Legislature from Missolonghi (1863); minister of foreign affairs (1866); and Premier of Greece (1875-95) alternately with his rivals, Comondouros and Delyannis. He is recognized as the foremost statesman of Greece.

Trig'lidae. *n. pl.* (*Ichth.*) A family of very eccentric marine fishes, mostly known as gurnards, sea-robins, &c. Their angular heads, "mailed cheeks," and many curious and ugly knobs and appendages make them well marked and well disliked, although they are not only harmless, but many species are fit for food. The most peculiar appendages are those of the pectoral fins, by which the fish not only really walks along the bottom, but by which it searches for its food, special nerves making these fin-appendages highly sensitive organs of touch. These fishes are distributed all over the warmer parts of the world, dwelling always near shore and on the bottom; more than 40 species are known.

Trinidad', in *Colorado*, a city, cap. of Las Animas co., 90 m. S. of Pueblo; has coke furnaces and other industries. A wool and cattle shipping point. *Pop.* (1897) 6,150.

Tripp. in *South Dakota*, a S. co.; area, 1,800 sq. m.; intersected by the Keyapaha river. Unorganized.

Trolley, n. Originally, a small truck or set of wheels, on which a box or car-body might be mounted; by extension, a grooved wheel (trolley-wheel), mounted for rolling in contact with an electric wire, from which it may take a current, and convey it to the motors of an electric car. In recent modern usage the word has come to be applied to the car, the railway, and the system of electric transportation in which power is taken from overhead wires by trolleys. A full description of these will be found under ELECTRIC and ELECTRICITY. The word also enters into a number of compounds, as *trolley-car*, a street railway car arranged for propulsion by the trolley system; *trolley-hook*, a hook mounted on a long pole, for use in replacing a slipped trolley-wheel; *trolley-line*, a street railway line operated by the trolley system; *trolley-pole*, a pole mounted on a trolley-car, for carrying a trolley-wheel; *trolley-system*, that system of electric propulsion in which a bare overhead wire or wires are used as conductors from which the power is taken through trolley-wheels.

Troons'dale, in *Tennessee*, a N. co.; area, 166 sq. m.; drained by Cumberland river. *Surface*, hilly; *soil*, fertile. *Cap.* Hartsville. *Pop.* (1897) 6,210.

Trout, n. (*Ichth.*) Any of several fishes of the family *Salmonidae* (see SALMO, and SALMON), and genus *Salmo*, not scientifically distinguished from the "salmons," but popularly separated with much distinctness, chiefly by reason of size and habits, since they are mostly small and dwell in inland waters; certain well-known forms, however, are called salmon-trout, expressing popular doubt as to their exact relationships. They abound in the lakes and rivers of the cooler parts of the world, but those of northern Asia are little known. Many non-migratory species exist in the inland waters of Europe; but it is coming to be believed by naturalists that many of the so-called "species" of all parts of the world are in reality only geographical varieties of a few truly distinct forms whose limits are not accurately known.

The common anglers' lake-trout of Great Britain and northern Europe is *Salmo fario*, which is highly variable in color and other external characteristics. It has been known to reach 21 lbs. in weight. The nearest American approach to it is the rainbow-trout. This species (*Salmo iridens*) is characteristic of the Pacific Coast, frequenting every stream and occurring more rarely even to Alaska, but unknown east of the mountains. It is largest in northern California, attaining there to 6 lbs. "The color, as in all other species, is bluish, the sides silvery in the males, with a red lateral band, and reddish and dusky blotches. The head, back, and upper fins are sprinkled with round black spots. In specimens taken in the sea, this species, like most other trout in similar conditions, is bright silvery sometimes and immaculate." (*Jordan*). It is not so gamy as the Eastern brook trout. The steelhead (*Salmo gairdneri*) is a large trout, little valued, which enters the Columbia and neighboring rivers from the sea with the spring run of salmon, and often weighs 20 lbs.; it is doubtful whether it is specifically different from the rainbow-trout.

The most widely distributed and important of the Western black-spotted American trout is *Salmo purpuratus*, the red-throated trout, found in every suitable

stream of the Rocky Mountain region from New Mexico to Alaska, and about Puget Sound, where it often enters the sea. Ordinarily 5 lbs. is a large weight, but in certain lakes, as Lake Tahoe, it reaches 30 lbs. The Rio Grande trout of the southern Rockies and Utah Basin is probably a variety of the red-throated. A Danube trout (the *luchen* or *rotlfisch*) closely resembles this species; and it may be remarked that in Europe none but these black-spotted salmonoids, represented in America only on the Pacific Slope, are called trout. There the remaining species, also passing in the Eastern United States and Canada as "trout," are called charrs, specifically meaning the red charr, or *sälbling*. This is the Old World representative of the genus *Salvelinus*, of which North America has several species. Best known is the brook-trout (*Salvelinus fontinalis*), the delight of every angler for its gamy quality and delicate flesh, although perhaps the least graceful of its kind. It is found only in streams east of the Mississippi and Saskatchewan, and no farther south than the Appalachian hills extend; but within these limits once inhabited every river, lake and stream, large or small. It has been sought so persistently, however, and so many of its waters have been ruined by drainage or lumbering operations or otherwise, that it is now to be taken only by the most skilful anglers and in comparatively remote regions. On the other hand, no fish has been hatched artificially in such immense numbers, nor with any has greater success in re-stocking streams been obtained. It has even been successfully planted in Europe and Australasia.

The Dolly Vardeu trout (*Salvelinus malma*) closely resembles the brook-trout, and occurs in the streams of the coast mountains from California northward. Here, too, fall the great Mackinaw trout (*Salvelinus namaycush*) (see NAMAYCUSH) and its Lake Superior variety the siscowet, besides several little known, small-sized species of arctic waters. Several marine fishes which belong to entirely different families are carelessly called "trout" or "sea-trout" in the U. S. The only fish to which that name properly belongs is not an American, but a British species, the *Salma trutta*, sometimes called bull-trout.

Trow'bridge. JOHN TOWNSEND, novelist, was born at Ogden, N. Y., Sept. 18, 1827; began his career as a teacher, but in 1846 commenced to write for magazines; became editor of *The Yankee Nation* (1850) and co-editor, with Lucy Larcom and Gail Hamilton, of *Our Young Folks*. He has written continuously, publishing more than thirty volumes since 1853, chiefly novels. Among the number are: *Cudjoe's Cave* (1864), *Neighbors' Wives* (1867), *Tinkham Brothers' Tide-Mill* (1884), *The Little Master*, and *His Own Fault* (1887).

Truckee', in *California*, a post-town of Nevada co., 35 m. S.W. of Reno; has abundant water-power, numerous saw-mills, &c. *Pop.* (1897) 1,475.

Trum'bull. HENRY CLAY, author, was born in Stonington, Conn., June 8, 1831; was chaplain of the 10th Connecticut regiment during the Civil War, having been ordained a Congregational minister; in 1865 was appointed missionary secretary of the American Sunday-School Union for New England, and in 1872 normal secretary; in 1875 settled in Philadelphia, and became editor and chief owner of the *Sunday-School Times*. He published *Some Army Sermons* (1864), &c., and several volumes relative to Sunday-school work.

Trumbull. LYMAN, statesman, was born at Colchester, Conn., Oct. 12, 1813; removed to Belleville, Ill., in 1837. He became secretary of state (1841), and a justice of the supreme court of the State (1848). Was elected to Congress as a Democrat (1854), and chosen U. S. senator (1855). In 1860 he joined the Republicans on the anti-slavery principle, and supported Lincoln. He was re-elected to the Senate, and labored effectively for the passage of the Fourteenth Amendment, and was one of the Republicans who voted against the impeachment of Andrew Johnson. After that occurrence he acted with the Democratic party, being the nominee of that party for governor of Illinois in 1880. Died June 25, 1896.

Trusts, n. pl. (*Com. and Law.*) In law, trusts are peculiar species of ownership, whereby property, real or personal, is invested in one or more persons for the use or benefit of others. The person who holds the property in trust is a "trustee"; the person for whose benefit he holds is called *cestui que trust* (he that has the benefit of the trust). Such an arrangement was known to the Roman law, and is of great antiquity in England. There courts of equity have long had jurisdiction over trusts, and decisions in regard to them fill a large space in equity reports. Originally, in England, trusts were created in regard to real estate alone. When, however, personal property increased enormously in quantity and variety, trusts were created in regard to such property also, and before the middle of the nineteenth century developed into what are known as commercial trusts, which are great trade combinations ostensibly intended to cheapen expenses, regulate production, and beat down competition.

Following the example of England, such commercial trusts have been largely created in the U. S. In England, these combinations of capital, directed either to general investment purposes or to the management and control of industry, are regarded in the light of a normal development of industrial forces, like great corporations, and the attitude of the courts toward them has always been very liberal. In the U. S., however, they have for about ten years been regarded by large numbers of persons with suspicion and hostility. These persons apply the term trust to all great trade combi-

nations, irrespective of their form and mode of creation. Used in such a way, the term is wholly a misnomer. A commercial trust is neither more or less a "trust" than any other vesting of property in one person to the use and benefit of another person. The magnitude of the trust is not of the slightest consequence in the eye of the law. Where the trust is of the normal type, the property of several individuals or corporations being vested in trustees, to be administered for the common benefit, there is nothing in the form, the organization or the methods of the combination to render it obnoxious to the law. It is in all essential particulars a trust of the normal, everyday type, such as are habitually enforced by the courts. It is only in those jurisdictions where the law has been radically altered by legislation that any question can arise as to the validity of trusts of this description and the jurisdiction of equity over them. Thus in New York and several other States, a statute provides that express trusts of real property can be created for certain enumerated purposes only, not including such a use as is contemplated by these commercial trusts.

This difficulty, however, may be successfully obviated by vesting in the trustees, not the real and personal property of the corporations forming the combination, and with which its business is to be carried on, but the shares of the stockholders of such corporations. These shares are always personal property, whether the corporate property they represent be real or personal. Of course, the possession of the shares gives the trustees the actual control, though not the legal ownership, of the property, real as well as personal, of the several corporations composing the "trust."

The enemies of "trusts," however, were not to be dissuaded from giving battle by this device, ingenious and well grounded on law though it be, and tried another mode of attack. Corporations, being "artificial persons" created by the State for specific purposes, have a very much more restricted range of activity than is permitted to the natural man. A corporation which abandons the business for which it was organized, and allows its property to be controlled and its operations to be carried on by a person or group of persons who have no direct relation to it, and who are not its agents, is acting *ultra vires* (beyond its powers) and in violation of its organic law, and thereby forfeits its right to exist at all. Acting upon these principles, a proceeding, in the name and behalf of the people of the State, was instituted by the attorney-general for the forfeiture of the charter of one of the corporations forming the combination. This mode of attack proved successful. In this way the Sugar Trust was broken up in New York, the Standard Oil Company in Ohio, and the Chicago Gas Trust Company in Illinois. (People of the State of New York vs. North River Sugar Refining Company, 121 New York Reports, 582; State of Ohio vs. Standard Oil Company, 49 Ohio State Reports, 137; People vs. Chicago Gas Trust Company, 130 Illinois Reports, 368.) The forfeiture of one charter in each case, with the liability to a similar forfeiture in the case of all the other corporations concerned, operated effectually to dissolve the trust.

But there is nothing in these decisions forbidding individuals or corporations to form trust combinations of precisely the character and type of those passed upon by the courts. They do not impeach the right of corporations or of individuals to enter into far-reaching agreements regulating the rate and character of production, and the prices to be charged for goods and services. They do not deny that many corporations may be consolidated into one, or that one gigantic corporation may acquire all of the property and business engaged in a certain line of industry. So the "trust," after it was driven from one form of organization, easily took refuge in another and different form. The trusts which were "destroyed" by the decisions in New York, Ohio, and elsewhere are all still in operation. They have disappeared as corporate trusts, but all of them now exist as great corporations or as combinations held together by contract. Yet, if the trusts remained alive, those hostile to them remained alive also. They still had left some ammunition, which they have used unsparingly to carry on their campaign. They have brought numerous suits against the trusts on the ground that they are monopolies and conspiracies in restraint of trade, and therefore obnoxious to the law. The decisions have been conflicting, but one principle seems settled: that a contract restraining competition will be decreed to be unlawful if, in the opinion of the tribunals before which it is brought, it is unnecessary and unreasonable, so far as the due protection of the parties is concerned, or is prejudicial to the public interests; and that an industrial enterprise will be deemed to be a monopoly when, in the judgment of the courts, it actually becomes a menace to the public and is not justified or required by the existing conditions of trade and industry.

Acting upon this principle, the tendency in most of the States has been to declare against trade combinations; but in the great case against the Sugar Trust (referred to above) the New York Court of Appeals refused to follow the lower courts in ruling that the combination is essentially monopolistic and hostile to the welfare of the State. It is generally thought that, in the absence of legislation, this more temperate and conservative view will ultimately prevail. The warfare in the courts has been supplemented by an epidemic of trust legislation, which has so far produced few conclusive results. There have been legislative investigations by the U. S. House of Representatives, the New York Senate, and the Canadian Parliament. These have

been followed by a crop of repressive acts. The act of Congress passed in 1890, and known as the "National Anti-trust Act," is generally regarded as a practically worthless measure in this campaign against monopoly. Anti-trust laws have also been enacted in a number of the States. There have been as yet, however, no decisions under these statutes which have conclusively demonstrated their efficacy and legality.

Tschaikowsky, PETER ILIITICH, musical composer, was born at Wolinsk, in the Ural district, April 25, 1840; graduated at the Conservatory of Music, St. Petersburg (1865), receiving at the same time a medal for his cantata on Schiller's ode *An die Freude*; was professor at the Conservatory of Moscow (1866-78); after this time devoted himself exclusively to composition, producing overtures, symphonies, concertos, marches, besides several operas, among them *Mazeppa* and *The Maid of Orleans*. He visited London in 1889, and again in 1890, appearing in the Philharmonic Concerts each year; also visited America, and conducted the performance of some of his own compositions at the dedication of Carnegie Music Hall, New York city. Died Nov. 7, 1893.

Tschudi (*tschoo'de*), JOHANN JAKOB VON, a Swiss philologist, traveller, and naturalist, was born in Glarus, 1818. In 1838 he went to Peru, where he studied the natural sciences for many years, and from 1861 to 1863 filled the post of Swiss minister at the Brazilian court. Died 1889.

Tsetse Fly. A small fly (*Glossina morsitans*) destructive to cattle and equine animals in large districts of southeast Africa. It is about the size of a house-fly, but longer, somewhat like that of the honey bee.

Tuckerman, HENRY THEODORE, critic and litterateur, was born in Boston in 1813. His most prominent writings are: *The Italian Sketch-Book* (1835); *Artist Life, or Sketches of American Painters* (1847); *Biographical Essays* (1857), and *Book of the Artists* (1867). Died Dec. 17, 1871.

Tucum, *n.* (*Bot.*) A strong fiber imported from Brazil where it is procured from the young leaves of the palm *Astrocaryum vulgare*. The fine strong threads are much used by Brazilian Indians for cordage hammocks, nets and the like being easily obtained by removing the thin epidermis of the leaf. The fruit also yields a useful oil. Synonyms are Tecum, Ticum, and Tucuma. The name Tucum is also given to *Bactris setosa*.

Tufts College. (*Educ.*) An educational institution at Medford, Mass. It was founded in 1852, the land being given by Charles Tufts, for whom the college was named, and the endowment by a number of other men, the largest donor being Sylvanus Packer. There are 4 distinct departments, viz.: The College of Letters, the Divinity School, opened in 1867; the Bromfield-Pearson Technical School, and the Medical School, both opened in 1893. The college is under the control of the Universalists. There are ample accommodations in buildings and equipments, and an endowment fund of more than \$1,500,000, which, with receipts from all other sources, furnished in 1896 an income of \$95,000. In that year the college had 80 instructors, 500 students, with 33,000 volumes in its library.

Tulare (*tu-lá-ré*), in California, a post-village of Tulare co., 250 m. S. of San Francisco. Here are the repair shops of the S. Pac. R. R. Pop. (1897) 3,100.

Tupelo, in Mississippi, a post-town, cap. of Lee co., 50 m. S. by W. of Corinth. Pop. (1897) 1,620.

Tupper, SIR CHARLES, statesman, was born at Amherst, Nova Scotia, July 2, 1821; educated in medicine and surgery at Edinburgh, but, returning to Canada, devoted his life to politics; filled many offices, and finally, in 1896, became Premier of Canada, succeeding Sir Mackenzie Bowell. In the general elections of that year his administration was defeated on the issue of the Manitoba schools question, and he was succeeded by the Hon. Wilfrid Laurier. He was knighted in 1879, and made a baronet in 1888, in recognition of his services as one of the negotiators of the fisheries treaty with the U. S. (1887-88).

Tupper, MARTIN FARQUHAR, versifier, was born at Marylebone, England, July 17, 1810. He produced some 40 works, of which his *Proverbial Philosophy* is the best known. Died Nov. 29, 1889.

Turbinidae, *n. pl.* (*Zool.*) The top-shell family, comprising gastropodous mollusks which have the shell turbinated, and the operculum very small. The shell is brilliant pearly when the epidermis is removed, and the turban shells (*Turbo*) and top-shells (*Trochus*) are in demand as ornaments. Nearly all these shells inhabit the East Indian seas.

Turbot, *n.* (*Ichth.*) A fish, the most valuable European species (*Psetta maxima*) of the flatfishes (see PLEURONCTES). It sometimes reaches 70 to 90 pounds weight. Its form is shorter, broader, and deeper than that of almost any other flatfish. It is of a brown color on the upper surface, which is studded with hard roundish tubercles. It generally keeps close to the bottom of the sea, chiefly on banks where there is a considerable depth of water. Few kinds of fish are more prized for the table than *T.* The *T.* has never been taken on the American coast, where its nearest relatives are useless as food.

Turkey-corn, *n.* (*Bot.*) Grain-like, yellow tubers born on the subterranean shoots of *Corydalis* (*Dicentra*) *Canadensis*. The plant is found in eastern North America, and the tubers are used as a drug.

Turner, CHARLES YARLEY, artist, was born in Baltimore, Md., Nov. 25, 1850; a pupil of Bonnat, Jean Paul Laurens, and Munkacsy, in Paris; opened a studio in New York; his specialties are *genre* and landscape;

Turner, in Illinois, a suburb of Chicago, in Du Page co. **Turner**, in South Dakota, a S. E. co.; area, 615 sq. m.; drained by Vermilion river and Turkey Ridge creek. Surface, undulating prairie; well watered; soil, very rich. Cap. Parker. Pop. (1895) 11,837.

Tuscan Straw. (*Manuf.*) The split stems of several varieties of wheat that are cultivated for straw in Italy, and especially in Tuscany. The straw is separated, after bleaching, at the first joint from the top, and the upper portion only is woven into the finest braids and hats.

Tuscarora, in Nevada, a post-town of Elko co. Pop. (1897) 1,010.

Tusculumbia, in Alabama, a city, cap. of Colbert co., 2 m. from Sheffield; has several educational institutions. Trade center of an agricultural region. Pop. (1897) 2,860.

Tuttle, DANIEL SYLVESTER, clergyman, was born in Windham, N. Y., Jan. 25, 1837; graduated from Columbia College and from the General Theological Seminary, and was ordained a priest of the Protestant Episcopal Church in 1863; was appointed missionary bishop of Montana, Idaho, and Utah (1867); labored for many years in this field, and was influential in securing the effectual suppression of polygamy in Utah. Later he was elected bishop of Missouri.

Tweed, WILLIAM MARCY, politician, was born in New York city, April 3, 1823; was elected alderman in 1852, and from that date was prominent in municipal affairs. As commissioner of public works he organized the famous "ring" that robbed the city of millions, especially in the construction of public buildings. Samuel J. Tilden and Charles O'Connor headed a reform movement, and caused the arrest of *T.* He was released on a bail-bond of \$1,000,000, and was re-elected to the State Senate while the trial was pending. Finally (Nov., 1873) he was found guilty of fraud, and sentenced to 12 years in the penitentiary. The Court of Appeals set the sentence aside; the city then secured judgment against him for \$6,000,000, and he was locked up in Ludlow Street Jail in default of a \$3,000,000 bond. He escaped and took refuge in Spain, but was returned by the Spanish government and again sent to prison, where he died April 12, 1878.

Two Harbors, in Minnesota, a post-village of Lake co., on Lake Superior, 26 m. E. of Duluth. A lake shipping point for iron ore. Pop. (1895) 1,934.

Tyler, MOSES CORR, educator, was born in Griswold, Conn., Aug. 2, 1835; graduated from Yale (1857); was ordained pastor of the First Congregational Church of Poughkeepsie, N. Y. (1860); afterward made professor of English Literature at the University of Michigan, where he remained until 1881, when he became professor of American History at Cornell University.

Tyndale, WILLIAM, an eminent reformer and martyr, born in England, in 1484. He was ordained priest about 1521, but left England in 1524, having incurred persecution by undertaking a new translation of the Bible. Going to Germany, he was expelled from Cologne, and finally settled in Worms, where he published his first translation of the New Testament in 1526. About 1530 he removed to Antwerp, and in 1533 published two revised translations of the New Testament. In 1535, at English instigation, he was arrested for heresy, and after a long trial was strangled to death in 1536, his body being burned at the stake.

Tyndall, JOHN, a distinguished physicist, born near Leighlin Bridge, Ireland, Aug. 21, 1820. After working as an engineer and a teacher from 1844 to 1848 he studied at the University of Marburg (1848-51), became a member of the British Royal Society (1852), and professor of Natural Philosophy in the Royal Institution (1853), succeeding Faraday as its superintendent. In 1856, after conducting investigations on the phenomena of diamagnetism, and on the polarity of the diamagnetic force, including researches on the magneto-optic properties of crystals, and the relation of magnetism and diamagnetism to molecular arrangement, in conjunction with Mr. Huxley, he explored the glaciers of Switzerland, beginning a study which he continued afterward with important results. In 1859 he began researches into the nature of radiant heat. These studies, together with similar investigations of light and acoustics, are the work by which he is chiefly known; he gave their results to the public in a succession of books remarkable for the clearness of their style as well as for their accuracy of thought. Died Dec. 4, 1893.

Tyng, STEPHEN HIGGINSON, clergyman, was born March 1, 1790, in Newburyport, Mass., graduated at Harvard; took orders in the Episcopal Church (1821); was rector of St. George's Church, New York, for 33 years. He was the leading spirit of the Low Church party, and actively interested in furthering evangelical work. He was a famous pulpit orator and platform speaker, and filled a wide field of usefulness in the church. Died Sept. 4, 1885.

Tyng, STEPHEN HIGGINSON, JR., was born in Philadelphia, June 28, 1839; educated at Williams College, and at Alexandria Theological Seminary, graduating in 1861. He was rector of a church in New York; an army chaplain in 1864; organized the Church of the Holy Trinity, New York (1865); was publicly censured for preaching in a Methodist church in New Brunswick without the consent of the Episcopal rectors of that city. He afterward worked in evangelical revival movements in New York city, and fearlessly defended himself against the criticism to which he was subjected by the conservative party. Though not charged with heresy in doctrines, his independence of formal restrictions was a cause of disaffection between rector and

John Tyndall

1820-1893

people, and T. retired. In 1881 he went to Paris, and engaged in the life insurance business, representing a large New York company.

Type-setting Machines'. (*Print.*) The earliest recorded patent on typesetting machinery was filed in the British Patent Office, in 1794. Church, of Connecticut, devised a machine in 1822, having a keyboard, the manipulation of which guided freshly-cast type to a central point. Delacambre and Young, and Clan and Rosenberg, patented forms in 1840; also Joseph Mazzini, in 1843; William Martin, in 1849; Boule, Mitchel, and Carlland, in 1853; Simoncourt and Wiborg, in 1854; Coulon, in 1855; Delacambre and Laden, in 1856. Alden's machine was the first to come into practical use, being employed in New York city for a few years on book work, and setting about 3,000 ems per hour, which is three times as much as a good compositor will accomplish by hand. Several attendants were required, however, and the economy effected was slight. Hattersley produced a machine a little later, which was used to some extent. The type were arranged in rows by the manipulations of a keyboard, and pushed out by pistons to a guide-plate, leading to a central position, where a continuous line was formed, which was taken in sections by an assistant and spaced into lines of the proper length by hand. The distribution was accomplished by pushing the type, a line at a time, from an inclined galley, the nicks on the body of the type, different for each character, determining the channel in which each one was deposited.

The principles of the Alden and Hattersley machines, in improved form, appear in the Thorne and in the Empire (formerly called the Burr) machines, which are in extensive use to-day. The Thorne was the first to obtain a general sale, demonstrating a decided economy over hand-composition. This machine combines the distribution and composition in a single mechanism. Its distinctive feature is an upright cylinder, containing grooves in its periphery, each groove so formed as to admit only the character bearing corresponding nicks. A boy supplies dead matter (*i. e.*, type that has been set and printed from) to the top of the cylinder, and each letter drops into its appropriate groove as the cylinder turns around. Composition is effected by fingering a keyboard, each depression of a key releasing the lowest type in one of the grooves, and allowing it to slide to its position in the line. An assistant, called a justifier, withdraws the type as set with a grab, spaces it into lines, "leads" the matter if desired, and corrects superficial errors. The manufacturers of the Thorne are now completing a mechanism, to be added to their machine, for effecting the automatic justification of the lines, doing away with one attendant. Two men and a boy are now required, and a speed of 4,000 to 5,000 ems an hour is common.

The Empire machine releases the type from upright channels by means of a pusher, so that they slide down an inclined pane of glass, within view of the operator. The keyboard-work and justification are practically similar to the Thorne. The distribution is accomplished by a separate machine, working automatically, and watched by a boy. Speed, 4,000 to 5,000 ems per hour.

The Mergenthaler linotype is not, correctly speaking, a typesetting machine, as it does not set type, but instead assembles matrices in lines, from which a bar, called a linotype, is cast, this being the equivalent of a line of type. It has the advantage over the machines previously mentioned in that it justifies the lines automatically, requiring but one operator, whose speed is limited only by ability to manipulate the

wheel, where it is made to form the face of the mould, which is cast in a linotype, or solid line of type. The matrices, after being used, are hoisted to the top of the machine, and worked along a conveyor-screw, being suspended by differently grooved teeth in the top of each matrix. These teeth cause them to cling to a distributor-bar until they arrive at the proper groove, when they drop off, and are ready to be used again. It will thus be seen that this machine does not require to be provided with a greater quantity of any one character than may possibly be contained in

Fig. 3085.—LANSTON MONOTYPE CASTING MACHINE.

three or four lines, which are traversing the machine at the same time. The linotype has come into use in all the large newspaper offices of the world, and is now entering the book and magazine field. The casts obtained are not as perfect as ordinary foundry type, but they have much improved within a few years.

The Rogers typograph is a machine very similar to the linotype, having been introduced in 1890, and stopped owing to infringement of Mergenthaler's patents. The machine is less complicated than the linotype, accomplishing its distribution by simply tipping a top frame and allowing the matrices to slide back on the same wires by which they descended. It is understood that it will be placed on the market again when the linotype patents expire. The monoline machine and several others, making use of a solid bar of metal for a line, have also been projected, and are only waiting the expiration of Mergenthaler's patent to seek a market. The McMillan typesetting machine was brought out in 1893, and consisted of three distinct mechanisms—a distributor, typesetting mechanism, and justifier. For some reason, perhaps because of its complexity, it never came into general use.

The Lanston monotype machine is entirely different in principle from any of those so far described. It is comprised in two parts, viz., the keyboard, and the type-casting and composing machine; the former perforates a record-strip that, when carried to the casting-machine, governs all the movements of the latter, which is a purely automatic machine. This keyboard is made up of three principal parts: a bank of keys, corresponding with the characters in the font of types used; a series of punches, and a scale action, registering the body sizes of the types. The finger-pieces include, with the various characters in the font, three sizes of space-types, subject to variation in body widths at the casting-machine to secure the justification of the lines. The selection of the key representing the character to be used—whether roman or italic, cap or lower-case, or of a space type—and its depression effect the perforation of a paper ribbon in such a manner that, when presented to the casting-machine, they will cause it to center the matrix of the character represented by the key depressed. Prior to working upon a certain measure, the keyboard operator sets an index to the number of ems required per line, a few seconds sufficing to effect change of measure. He next strikes the keys, as he would those of a typewriter, until the line will hold no more words or syllables. Then glancing at the scale, which has automatically calculated the space remaining in the line, he strikes one or more justifying keys, as directed by the scale. These justifying keys cause such punches to be made in the record-strip that, when it goes to the casting-machine, set in motion machinery for making the spaces of the line of the exact extra thickness required to space it perfectly. The perforations made at the keyboard of any selected type are two in number, and when fed through the casting-machine

each of these holes puts parts in motion which center the matrix, of which the holes and the key that made them are the representatives. These matrices are carried in a case mounted in a compound slide, the parts of which move at right angles with each other. By an extreme movement of three inches, with a minimum of three-tenths of an inch, any one of these matrices may be centered, and in so doing it will proceed from its normal position to the center in the most direct line. The matrices are all positively held and carried both to and from the center, and can be moved at any rate of speed desired. After being centered, the matrix is seated upon a mould of novel construction, and the type is cast in a vertical position, the flow of metal from the nozzle being directly into the matrix, which is first filled, followed instantly by the occupation of the body of the mould, under pressure, thus ensuring good casts. The types are ejected from the mould into a carrier, and are positively held until placed in the line in the galley, which, upon the completion of any line, advances to receive the next. The speed of the casting-machine, which is automatic, is about 3,800 an hour; but the speed at the keyboard is limited only by the capacity of the operator.

Paul F. Fox, of Chicago, has obtained several patents for a machine of his invention. It is designed to set foundry type, and space it automatically, employing but one operator. At the top is a compartment used as a type reservoir, in which the characters are disposed in channels, from which they may be pushed out by a set of levers as the keyboard is operated. When ejected the types fall on an endless belt, and are carried over a wheel to the line-forming mechanism. A cylindrical case on the left, set at a slight inclination, contains a cylinder filled on its periphery with lengthwise slots, each of which may hold a line of type. There are 28 of these line-holding slots, but only 3 are designed to hold type at one time. One slot is held in position at the top opening until a line of type is set therein, when it moves on to be justified, and moves again to be ejected with a lead onto the galley. The justifying is accomplished automatically through the use of compressible crimped spaces. At the top of the machine on the left is a reel, from which is drawn a strip of metal. This metal is cut off into lengths suitable for spaces, and crimped between toothed jaws. The metal used is quite thin, and it is crimped so as to occupy considerable space in the line. When the operator touches a space-key one of these crimped spaces drops into place. The operator oversets his line until he finishes a word or syllable, then pulls a lever and goes on. This overset line in the slot of the cylinder is then compressed by a sliding piece until it is the exact measure desired. It is obvious that a line so justified must be springy, hence the necessity for "leading" the matter that the width of measure may be maintained in the lock-up. This is why the machine is specially adapted for leaded composition, such as books. If used on a newspaper, the matter would all have to be set leaded or part leaded. The distribution is accomplished by a separate mechanism.

The Calendoli typesetting machine originated in France, but is patented in this country. It is still in the experimental stage. There are 15 alphabets on the keyboard, so arranged that all the common combinations of letters, as found in short words and syllables, as "ence," "ing," "dis," &c., may be found somewhere on the keyboard in proper order, permitting them to

Fig. 3084.—THE LINOTYPE.

keyboard and to decipher copy. The matrices are contained in the upper part of the machine, and are carried down the converging grooves as the keys are touched. When a space-key is struck, a pair of very thin steel wedges, about four inches long, are dropped into the line of matrices. When the line is filled with as many words as it will conveniently contain, the operator touches a lever, and the wedges of the spaces are closed up, spreading the matrices to the exact length of the desired line. The machine then automatically carries the line of matrices to the mould-

Fig. 3086.—LINOTYPE—DISTRIBUTING MECHANISM.

be struck with a single stroke of the fingers. The keyboard, being so large, is of course hard to memorize, but when learned composition proceeds largely by striking syllables rather than individual letters, so that great speed is expected. The Alden machine, of Brooklyn, also in the experimental stage, likewise aims to enable the compositor to obtain syllables at each touch of the keyboard, having the letters of each combination similarly nicked. Numerous other typesetting machines are recorded in the Patent Office. Probably there are twenty or more not described here.

Type-writing Machines'. Henry Mill, of England, is thought to have been the first to produce a writing machine, his patent being issued in 1714. The first American patent was granted to William A. Burt, in 1829. Other early patents were those of Charles Thurber, of Worcester, Mass., 1843, and A. Ely Beach, of New York, 1856. The first really practical machine was the joint work of three Milwaukee inventors, C. L. Sholes, S. W. Soule, and Carlos Glidden, produced

Fig. 3087.—THE REMINGTON TYPEWRITER.

in 1886 and 1887, and subsequently developed into the well-known Remington. The successful machines now in use are of four distinct types: 1. Those which, like the Remington, employ type-bars or levers, printing at a common center, through a shifting ink-ribbon, to the paper, clamped on a cylindrical carriage, and having several characters on each type-bar, the choice of which is regulated at the keyboard by a shift. 2. Those of similar mechanism, but having only one character on each type-bar, and a separate key for each character. 3. Those machines, resembling the second class, which employ an ink-pad instead of a ribbon as an ink supply, the type printing direct on paper. 4. Those machines which employ, instead of type-bars, a type-wheel, or cylinder, or segment of a cylinder, on which the characters are grouped, and printed by bringing the proper portion of the wheel, or cylinder, &c., opposite the paper at the instant that a hammer is depressed to give the impression.

The Remington and Densmore are machines of the first-named class, and a description of the Remington will suffice for them all. The No. 6 model employs 40 keys, two of which are shifts, and a space-bar. The ink-ribbon rolls and unrolls in either direction, and the carriage may be set to any point by the aid of a scale, or may be returned to the starting point, and rotated for the spacing of a line with a single movement. Envelope guides, marginal stops, and a marginal release button are among the minor conveniences. The advantages of this class of machines are a small keyboard, with correspondingly reduced number of type-bars, and slight liability to get out of order.

The Caligraph and Smith-Premier are machines typical of the second class, having a key for every character.

The Smith-Premier has a detachable platen, and paper-feeding mechanism, with numerous minor convenient adjustments, besides a line-locking mechanism and carriage stops that are very useful in writing columns of figures and the like. This class of machines presents the advantage of saving the time of manipulating shifts.

The Yost is typical of the third class, resembling the Smith-Premier, but having, in place of a travelling ribbon, through which the type must strike to the paper, a circular ink-pad, on which the type rest when not in use, so that when they are impressed against the paper the printing is direct, securing a clearness of outline not possible on a ribbon machine.

The Hammond is among the best known of the fourth class, having the type-faces on two segments, which are stopped opposite the printing point by the depression of the keys, while a hammer effects the printing through a rubber strip. An ink-ribbon is used, but no scale. Others of this class use an ink-pad. The Crandall, Blickensderfer, &c., use a type-cylinder. All the machines of this class give good alignment, and most of them maintain the writing almost wholly in sight. The type-wheels wear out, however, and have to be replaced. Within a few years several machines, belonging to all of these classes, have made a point of arranging the carriages so as to bring the writing as much as possible into sight, so that the operator can see exactly what he is doing. The Bar-lock and the Williams are conspicuous examples of these. There are also several cheap, almost toy, forms of typewriters, which are operated with one hand, by simple mechanism. These are very slow, but most of them do good printing, and serve to effect legible writing, even if they do not save time.

Fig. 3088.—THE HAMMOND TYPEWRITER.

In the earlier machines employing type-bars there was some annoyance because of occasional errors in the alignment of the characters, the type-bars failing to score at the exact center. This has been overcome in some machines by means of guides, and in others by making very wide bearings on which the bars are swung. There is considerable difference in machines as to the amount of noise resulting from working, also in

the size of paper which may be handled, some of them taking in any width at all; in the convenience with which the paper can be hauled or brought to a certain point for corrections; in accessibility to the type-faces, for cleaning, &c.; in the touch, or extent and force required for depression of the keys; in the possibility of duplicating several copies by means of carbon paper; in the nuisance resulting from striking two keys at once, and in many other details.

Fig. 3089.—THE YOST TYPEWRITER.

The speed maintained on the leading machines is very similar, appearing to depend mainly on the ability of the operator. A few weeks' practice will give almost anyone a speed of 35 or 40 words a minute, but many of the makers claim records of three times this speed. It is safe to assert that the average person can write more than twice as fast with a machine than with the pen, with the added advantage of insuring legibility, and thus avoiding errors. Some typewriters manipulate their keyboards with a single finger of each hand, but it is generally admitted that the greatest speed is to be obtained by using all the fingers and thumbs, distributing them over the keyboard, and playing somewhat as piano keys are played, except that no two characters can be struck at the same instant. The work of the typewriter presents some peculiar differences from ordinary printing. In all machines the travel of the carriage is the same for each letter, and as a result the thin letters, as *i* and *l*, occupy the same space as the broad letters, *w* and *m*. This has necessitated a somewhat peculiar formation of the characters in the endeavor to produce uniformity of appearance. There is no attempt in any of the machines to space out between the words so that each line shall end evenly, as in type-printing, and the ragged appearance of the lines at the right end has not been considered objectionable. During the past 20 years typewriters have come into common use in business houses, and the great bulk of commercial correspondence is written on the machines, while newspaper writers, authors, and copyists use them to a great extent.

U.

ULCE

U (*yu*) is the twenty-first letter and fifth vowel of the English alphabet. It bears a close resemblance to the vowel *o*, being pronounced, like it, by a round configuration of the lips, but in the case of *u*, with a greater extrusion of the nuder lip. The sound of *u* is short in *tun, tub, must*, but long in *tune, tube*, &c. In some cases it is acute, rather than long, as in *flute, brute*; in others it is obscure, as *nature, venture*. At the beginning of words it is often sounded as if preceded by *y*, as in *union, university*. It frequently interchanges with *a, e, i*, and *o*. *U* and *v* were long regarded as one letter, and were used indiscriminately the one for the other; but, in the beginning of the 16th century, they came to be distinguished, and *u* has since been regarded as a vowel, and *v* as a consonant. As an abbreviation, *U. S.* stands for United States; *U. C.* for *Urbis Condita* (anno), from the building of the city (Rome); *Ult.* for *ultimo*, in the last month.

Tanapu. (*oo-a-na-poo'*) or ANAPU, a river of Brazil, joins the Pará River S. of the Island of Marajo, after a N. course of 400 m.

Uatuma. a river of Brazil, prov. of Pará, flows into the Amazons 50 m. N.N.E. of Silves, after a S.S.E. course of 350 m.

Ubatuba. (*oo-ba-too'ba*.) in Brazil, a town of the prov. of São Paulo, 100 m. N.E. of Santos; pop. abt. 7,000.

Ubeda. (*oo-bai'da*.) a town of Spain, 26 m. N.E. of Jaen.

Uberava. in Brazil, a town of the prov. of Minas-Geraes; pop. abt. 8,000.

Uberlingen. a town of Germany, in Baden, on an arm of Lake Constance, 8 m. from Constance.

Ubiquity. (*-bik'wi-te*.) *n.* [Fr. *ubiquité*, from Lat. *ubique*, everywhere.] Omnipresence; existence in all places or everywhere at the same time; as, the *ubiquity* of God.

Ubrique. (*oo'bre-kai*.) a town of Spain, 45 m. from Cadiz; pop. 6,000.

Uchee An'na. now EUCHEE ANNA, in Florida, a post-village, former cap. of Walton co.

Udder. *n.* [A. S. *uder*; Ger. *euler*; Lat. *uber*; Gr. *outhar*.] The bag, or glandular organ of cows and other female mammalia, in which the milk is secreted and retained for the nourishment of their young.

Uddevala. (*ood-vall'a*.) a town of Sweden, in the prov. of Bohusland, situated on a deep bay of the Cattegat. It has a convenient harbor. *Manuf.* Cotton and linen fabrics, snuff, and leather. Pop. 4,500.

Udell. in Iowa, a twp. of Appanoose co.; pop. in 1869, 820.

Udine. (*oo-de'nei*.) a town of N. Italy, in Venetia, on the canal of La Roja, 75 m. N.E. of Venice, and 40 m. from Trieste. *Manuf.* Silks. Pop. 26,116.

Udolpho. in Minnesota, a township of Mower co. Pop. (1897) 675.

Udometer. *n.* [Lat. *udus*, wet, and Gr. *metron*, measure.] A RAIN-GAUGE, *q. v.*

Uglyly. *adv.* In an ugly manner.

Ugliness. *n.* [From *ugly*.] State or quality of being ugly; total lack of beauty; deformity or unsightliness of person; as, old age and ugliness have their advantages.—Moral depravity; turpitude of mind; loathsomeness of character;—also, malevolence or peevishness of disposition; as, the ugliness of an action.

Ugly. *a.* (*comp.* UGLIER; *superl.* UGLIEST.) [A. S. *oga*, dread; Icel. *ogna*, to inspire terror.] Frightful of aspect; deformed in person; unsightly; forbidding to the view; contrary to beauty; hateful or odious to the sight; as, an ugly woman.—Cross-grained; malevolent; full of spleen, rancor, or ill-nature; as, an ugly temper.

Ugliano. (*ool-yal'no*.) an island of Dalmatia, opposite the city of Zara, in the Adriatic. It is 14 m. long, with a breadth of 2.

Uglitch. (*oo'gitch*.) a town of European Russia, govt. of Jaroslav, on the Volga, 60 m. from Jaroslav; pop. 9,000.

Uharee. or UWHARIE, (*yu-har'ree*.) a river of N. Carolina, rises in Randolph co., and enters the Yadkin River from Montgomery co.

Uhlán, Ulan. (*oo'lan*.) *n.* [Pol. *hulan*, from Turk. *oglan*, a youth.] The name given to a certain class of militia among the modern Tartars.

(*Mil.*) The term bestowed on a kind of light cavalry employed in the Russian, Austrian, and German armies, armed with lances, and corresponding to the regiments of lancers in the English, French, and Belgian services.

Uhlerville. in Pennsylvania, a post-vill. of Bucks co.

Uhrichsville. in Ohio, a city of Tuscarawas co., 100 m. N.E. of Columbus. Pop. (1897) 4,150.

Uin'ta. in Wyoming, a W. co., forming the entire western section of the State, and bordering on Utah, Idaho, and Montana; area, 14,830 sq. m. It is traversed by the Rocky Mountains, and at the northern end is the famous Yellowstone Park. It has extensive deposits of excellent coal, which is mined to the extent of about \$2,500,000 annually. *Cap.* Evanston. Pop. (1897) 8,500.

Uitenhage (*oi'ten-hay*), a town of Cape Colony, South Africa, 18 m. from Port Elizabeth; has an active trade with both it and Graham's Town. Pop. unascertained.

Ujehi. or SATORALLIA, a town of Hungary, 9 m. from Zemplin. It is celebrated for its wine. Pop. 7,000.

Ukase. *n.* [Rus.] An ordinance of the Emperor of Russia, which has the force of law in his dominions.

Uki'ah. in California, a post-village and township, cap. of Mendocino co., about 90 m. W. of Marysville.

Uia'o. or ULOA, in Wisconsin, a village of Ozaukee co., about 22 m. N. of Milwaukee.

Ulcerable. (*ul'ser-a-bl*.) *a.* That may become ulcerated.

Ulcerate. *v. a.* [Fr. *ulcerer*; Lat. *ulcero*, ulceratus.] To affect with an ulcer or with ulcers.

—*v. n.* To be formed into an ulcer; to become ulcerous.

Ulceration. *n.* [Fr.] (*Med.*) An unhealthy action, resulting in the formation of an abraded surface secreting pus, more or less pure or healthy. Ulceration of the bones is a disease always sure to result in necrosis, or the death of the bone. Ulceration of the soft parts is followed by the formation of an ulcer.

Ulcerative. *a.* Pertaining or relating to ulcers.

Ulcered. (*ul'serd*.) *a.* Having become an ulcer; ulcerated.

Ulcerous. *a.* [Fr. *ulcèreux*.] Having the nature or character of an ulcer.—Affected with an ulcer or ulcers.

Ulcerously. *adv.* In an ulcerous manner.

Ulcerousness. *n.* State or condition of being ulcerous.

Uleofanbach'ee. or ALCOFAUHATCHEE, a river of Georgia, rises in Gwinnett co., and flowing S., enters the Ocmulgee River between Butts and Jasper cos.

Ule. *n.* (*Bot.*) A tree, supposed to be *Custillia elastica*, order *Artocarpaceæ*, from which caoutchouc is obtained in Mexico.

Uleaborg. (*o'le-a-borg*), a seaport town of Russian Finland, on the river Ulea, situated on a peninsula running into the Gulf of Bothnia, 70 m. from Tornea; Lat. 65° 18' N., Lon. 24° 40' E. It exports tar, pitch, fish, butter, and salted meats. Pop. 6,000.

Ulea-Trask. a lake of Finland, 50 m. from Uleaborg, 35 m. long, with an average breadth of 10. It discharges its surplus waters by the river Ulea.

Ule'ma. *n.* [Ar., the wise men, pl. of *alim*, wise.] In Turkey, the college

or corporation composed of the three classes of the hierarchy—the *imams*, or ministers of religion; the *muftis*, or doctors of law; and the *cadis*, or administrators of justice. The *Sheikh-ul-Islam*, or mufti of Constantinople, is the president of the whole body.

Ulex. *n.* (*Bot.*) Agen. of European prickly shrubs, order *Fabaceæ*. They are distinguished by their two-parted calyx bearing two minute branches at the base, and their turgid few seeded legume. *U. Europæus*, the Common Furze, Whin, or Gorse, is common in England.

Ullage. (*ul'la-j*.) *n.* (*Com.*) In the gauging of liquors, the quantity which a cask wants of being full.

Ullin. in Illinois, a post-village of Pulaski co., 20 m. N. of Cairo.

Uloa. or ULUA, (*ool-yo'a*.) in Central America, a river of Honduras, flows into the Gulf of Honduras, after a N.N.W. course of 160 m.

Ulls'water. or ULLESWATER, a lake of England, between the cos. of Cumberland and Westmoreland, 9 m. long, with an average width of 1 m. Its S.W. extremity is overlooked by the mountain Helvellyn. It is the second largest city in the famous "Lake District."

Ulm. (*oolm*.) a town of Germany, in Württemberg, is situated at the base of the Suabian Alps, on a declivity, and on the left bank of the Danube; the city is very strongly fortified, of great age, and has many quaint and curious streets, and buildings, many of the tall houses forming the narrow irregular streets being con-

Fig. 2548. — CATHEDRAL OF ULM.

stituted of wood, and most elaborately carved. The cathedral (Fig. 2548) is the great object of admiration, being one of the largest and loftiest Gothic ecclesiastical buildings in Germany. The tombs, stained windows, and shrines, oak carvings, and paintings in oil by the early German masters, which adorn the interior, make the cathedral of Ulm in every respect unique. *Manuf.* Linen, silks, paper, leather, tobacco, porcelain, and playing-cards.

ULTR

Ulmaceæ. *n. pl.* [Lat. *ulmus*, the elm.] (*Bot.*) An order of plants, alliance *Rhamnales*, consisting of trees and shrubs with alternate scabrous leaves and perfect or unisexual flowers, chiefly natives of the N. regions of the world. There are nine genera and about 60 species, some being valuable timber trees. See **ULMUS**.

Ulmamite. *n.* (*Mén.*) A sulphide of nickel and antimony; the latter often partly replaced by arsenic. It generally occurs massive, with a granular structure; or disseminated, and is of a gray color inclining to tin-white or steel-gray; opaque with a metallic lustre.

Ulmic Acid. *n.* (*Chem.*) Same as HUMIC ACID, *q. v.*

Ulmine. (*ul'min*.) *n.* [Fr.] (*Chem.*) See HUMICS.

Ulmus. *n.* [Lat.] (*Bot.*) The Elm, a genus of plants,

order *Ulmaceæ*. The American Elm, or White Elm,

U. Americanus (Fig. 2549), is a majestic tree, common in the Northern, Middle, and Western States. It is a native of the forest, but often grows sponta-

neously in open fields, where it is readily distinguished by its long, pendulous branches. The trunk, with a diameter of 3-5 ft., towers to the height of 30, 50,

and even 70 ft., perfectly straight and naked, when it divides into 2 or more primary branches. These ascend, gradually spread-

ing, and repeatedly dividing into other long, flexible limbs bend-

ing in broad, graceful curves. It is a great favorite as a shade tree, and is frequently seen rear-

ing its stately form and casting its deep shade over the "sweet homes" of our Northern States.

Leaves short-stalked, oval-acuminate, doubly denticulate, and 4-5' long. The veins are quite regular and prominent. Flowers small, purplish, collected into small, terminal clusters, and appearing in April, before the leaves.

Fruit flat, fringed with a dense down. The wood is tough and strong, but not easily wrought; used for the naves of wheels, &c. (*Wood.*) — *U. fulva*, the Slippery elm, is also an American species, common in woods and low grounds, in New England and Canada. Its inner bark is employed as a demulcent for both internal and external use. When ground, it forms an excellent emollient poultice.

Ulna. *n.* [Lat., from Gr. *elene*.] (*Anat.*) The layer of the two bones of the fore-arm (12, Fig. 2375). It forms the joint of the elbow, and is articulated by a species of hinge-joint to the humerus, and to the radius; and below to the radius and to the bones of the wrist.

Ulriei. (*ool-ré'tse*), HERMANN, a German philosopher and author, born March 23, 1806. He studied law, but early devoted himself to literature and philosophy, and was appointed to a professorship at Halle in 1834, where he remained till his death, Jan. 11, 1884. He wrote numerous works, several of them being studies of Shakespeare.

Uterior. *a.* [Lat. comp. of obsolete *ulter*, beyond.] Being or situated beyond or on the further side of any line or boundary;—opposed to *citerior*, or hither.

—More distant or remote; further; following after; as, *ulterior* measures, *ulterior* propositions.

Uteriorly. *adv.* In an ulterior manner.

Ultimately. *adv.* Finally; at last; in the end.

Ultimation. *n.* State of being ultimate; finality.

Ultimatum. *n.; pl.* ULTIMATA. In diplomacy, the final conditions offered by a government for the settlement of its dispute with another; the final propositions, conditions, or terms offered as the basis of a treaty; any final offer, proposition, or condition.

Ultimo. *n.* [Lat.] The last month before the present;—opposed to *proximo*; as, on the 20th *ultimo*;—commonly abbreviated *ult*.

Ultra. A Latin prefix, denoting *beyond*, *on the other side*, in connection with words having relation to place; as, *ultramontane*, *ultramarine*, &c.—In other relations, it bears the significance of *extreme*, *exceedingly*, *beyond what is common, usual, natural, or proper*; as, *ultra-conservative*, *ultra-republican*, *ultra-Catholic*, &c.

—*a.* Radical; extreme; having a tendency to go beyond others, or past the proper limit; as, *ultra* ideas.

—*n.* An ultraist. **ULTRA VIRE** (*Law*), beyond one's power.

Ultraism. (*-izm*.) *n.* [Fr. *ultraisme*.] The principles of those who strive to carry out radical reform, or any extreme measure of civil, domestic, or ecclesiastical policy.

Ultraist. *n.* One who goes to extremes in anything, especially in political or religious matters; a radical; an ultra.

Ultramarine. (*ul-trā-mā-reen'*.) *n.* A blue pigment, highly valued for the purity, delicacy, and permanency of its color, formerly obtained exclusively from the precious stone *lapis lazuli*, by a tedious process. The stone was first calcined, and broken into pieces about the size of a nut, the heated fragments being quenched in vinegar by which they were rendered more friable. They were next levigated for many days, with a thin syrup of honey and dragon's blood, after which a resinous paste was formed, and the *U.* extracted by suspension in hot water. True *U.* is but rarely used in the present day, being almost entirely superseded by the artificial pigment, which is manufactured in large quan-

Fig. 2549.
THE WHITE ELM.
(*U. Americanus*.)

titles in France and Germany. The ingredients used by different makers are trade secrets; they, however, consist mainly of china-clay, sulphate of soda, carbonate of soda, sulphur, and carbon, in some form or other, the proportions differing according to the shade of color desired. The chemical composition of *U.* still remains in great obscurity. Many analyses have been published, but all widely differing in their results. One thing, however, seems pretty certain, that the tone of color depends mainly on the amount of combined sulphur in the pigment, the light blue variety containing 6 to 8 per cent., the darker, as much as 10 to 12 per cent. The most probable conclusion comes to as to its composition seems to be that of Brunner, who, from very exact analyses of the real and artificial material, considers it to consist of silicate of alumina, colored with variable proportions of sulphide of sodium. Green *U.* is said to be blue *U.* which has not been roasted.

Ultramarine ashes. (*Paint.*) The residue of lapis-lazuli from which ultramarine has been extracted, and varying in color from dull gray to blue. Although not equal in beauty, and inferior in strength of color, to ultramarine, they are extremely useful pigments, affording grays much more pure and tender than such as are composed of black and white, or other blues, and better suited to the pearly tints of flesh, foliage, the grays of skins, the shadows of draperies, &c., in which the old masters were wont to employ them. The brighter sorts of ultramarine ashes are more properly pale ultramarines, and of the class of blue; the inferior are called *mineral gray*.

Ultramontane, a. [Fr. *ultramontain*, from Lat. *ultra*, and *montanus*—*mons*, mountain.] Being beyond the mountain or mountains, that is, specifically, beyond the Alps, as viewed from Rome; thus France, with regard to Italy, is an *ultramontane* country.

(*Ecc.*) Belonging to that party in the Roman Catholic Church which assigns the greatest weight to the papal prerogatives.

—*n.* One who resides beyond the mountains, that is, the Alps; a foreigner; an alien.—In an ecclesiastical sense, one of the Ultramontane party.

Ultramontanism. (*-izm*), *n.* [Fr. *ultramontanisme*.] (*Ecc.*) The term applied to the doctrines of those who, in the Church of Rome, maintain the most advanced notions of papal supremacy, as distinguished from the principles of those who hold that the authority of a general council is paramount to that of the Pope;—the name thus used by those living N. of the Alps, is derived from the circumstance that the theologians of Italy, the country *beyond the Alps*, were considered more favorable to ultra-papal doctrine than the Cismontane ecclesiastics of France and Germany. The school opposed to *U.* is called the *Gallican*, and their doctrines *Gallicanism*.

Ultramontanist, n. One of the Ultramontane party in the Church of Rome; an advocate of Ultramontanism;—also called *Ultramontane*.

Ultramundane, a. [Lat. *ultra*, and *mundus*, the world. See *MUNDANE*.] Being beyond the world, or beyond the limits of the mundane system.

Ultra-tropical, a. [*Ultra* and *tropical*.] Being beyond, or outside of, the tropics or tropical regions;—opposed to *intertropical*; also, denoting a temperature warmer than that of the tropics.

Ulnate, v. a. [Lat. *ululare*.] To howl, as a dog or wolf. (*R.*)

Ululation, (-lū'shun), n. [Lat. *ululatio*.] The howling, as of a wolf or dog.

Ulverstone, a town of England, in Lancashire, 18 m. N.W. of Lancaster. *Manuf.* Cottons, linens, ropes, hats, and woollen yarn. *Pop.* 8,000.

Ulysses, (-lis'seez), n. [Lat.; Gr. *Odysseus*.] (*Heroic Hist.*) One of the most renowned of the Greek heroes. *U.* was the king of Ithaca, one of the small Ionian isles, the husband of the exemplary Penelope, and father of Telemachus. *U.* was not only a prudent warrior, but a sage counsellor, and was as much honored in the general conference as he was valued in the field for his military skill, ready expedients, and undaunted courage. When the Greeks undertook the Trojan War, *U.*, after long declining to join the alliance, at last consented, and, embarking his small but picked band, set sail for the Phrygian shores. During the war he acted a prominent part; he induced Achilles to return to the camp, slaughtered the sleeping Thracians in their tents, entered Troy in disguise, and carried off the palladium of the Trojans. After the fall of the city he embarked on board his fleet, with his followers, to return to his wife and kingdom; but the gods, enraged at his carrying off the palladium, defeated all his efforts to regain his native country, and for twenty years, by adverse winds and fearful storms, made him the sport of winds and waves. At length, after an absence of thirty years, he regained his island home, and found his faithful and still beautiful Penelope surrounded by a host of importunate suitors. Having by stratagem obtained an entrance into his palace, and put to the sword the riotous suitors, *U.* was restored to his throne, to the arms of his wife, and to his son, whom he had left a child. After a reign of sixteen years, a natural son of *U.*, not knowing Ithaca was part of his father's kingdom, landed in the island at the head of a lawless band, and, beginning to plunder the inhabitants, *U.* hastened to meet the invader; when, in the contest that ensued, he fell by the sword of his son. The adventures encountered by *U.* on his return voyage form the subject of Homer's poem of the *Odysses*.

Ulysses, in New York, a township of Tompkins co., 9 m. N.W. of Ithaca.

Ulysses, in Pennsylvania, a post-township of Potter co., 15 m. E.N.E. of Coudersport.

Umā. (*Hindoo Myth.*) One of the principal names of the consort of the god Siva. She is also usually designated under the names *Kālī*, *Durgā*, *Devī*, *Pārvatī*, *Bhāvānī*, &c. The myths relating to this goddess, who is worshipped in various parts of India—particularly, however, in Bengal—are met with in the great epic poems and Purānas, in poetical works, such as the *Kumārasambhava*, and in modern popular compositions; but the text-book of her worshippers is the *Devīmāhātmya*, or 'the majesty of Devi'—a celebrated portion of the *Markandeya Purāna*, considered to be of special holiness by the worshippers of this goddess, and in which are narrated the martial feats of the goddess. The latter consisted chiefly in the destruction by her of two demons, *Madhu* and *Kaitabha*, who had endangered the existence of the god Brahman; the demon *Mahisha*, or *Mahishasura*, who having conquered all the gods, had expelled them from heaven; moreover, in her defeating the army of *Chandna* and *Munda*, two demon-servants of *Sumbha* and *Nisumbha*. She is often represented (Fig. 2550) holding the severed head of *Chandainherhand*, with the heads of his soldiers formed into a garland suspended from her neck, and their hands wreathed into a covering round her loins—the only covering she has in the image constructed for the *pājā*. The worship of *Kālī* (*i. e.*, the Black), to which the narrative of her victory over *Chanda* and *Munda* has given rise, is considered by the Hindoos themselves as embodying the principle of *tamas*, or darkness. She is represented as delighting in the slaughter of her foes, though capable of kinder feeling to her friends. She is, however, styled the Black Goddess of Terror, frequenting cemeteries, and presiding over terrible sprites, fond of bloody sacrifices; and her worship taking place in the darkest night of the month. See *THUG*.

Fig. 2550. — KALI, OR UMA.

Umatilla, in Oregon, a N.E. co., bordering on Washington, is washed by Columbia, Umatilla, and John Day rivers, and traversed by the Blue Mountains. *Soil*, productive in the valleys. *Min. Gold.* *Cop.* Pendleton. *Pop.* (1897) 15,000.—A post-village, former cap. of the above co., at the junction of the Columbia and Umatilla rivers, 100 m. N.E. of The Dalles.

Umbel, n. [Lat. *umbella*, dim. of *umbra*, shade; Fr. *ambelle*.] (*Bot.*) See INFLORESCENCE.

Umbellales, n. pl. (*Bot.*) An alliance of plants, subclass *epigynous exogens*. *DIAG.* Dichlamydeous polypetalous flowers, solitary large seeds, and a small embryo lying in a large quantity of albumen. The alliance includes 5 orders—APIACEÆ, ARALIACEÆ, CORNACEÆ, HAMAMELIDACEÆ, and BRUNIACEÆ.

Umbellate, Umbellated, a. (*Bot.*) Umbel-like; producing umbels.

Umbellet, Umbellule, n. (*Bot.*) A little or partial umbel.

Umbellifer, n. (*Bot.*) An umbelliferous plant.

Umbelliferæ, n. pl. Same as APIACEÆ, *q. v.*

Umbelliferous, a. (*Bot.*) Bearing or producing umbels.

Umbel, n. [Fr. *ombre*.] (*Min.*) Two distinct substances are used as pigments under this name. One is a variety of Peat or Brown Coal, large beds of which are worked near Cologne, and which is said to be largely used in the adulteration of snuff; the other, called *Turkish umber*, is a variety of ochreous iron-ore (Limonite), composed, according to the analysis of Klaproth, of 48 per cent. of peroxide of iron, 20 peroxide of manganese, 12 silica, 5 alumina, and 15 water.

(*Zoöl.*) An African bird, *Scopus umbretta*, of the family *Ardeidae*, of an amber color, and about the size of a crow.—Also, a fish—the GRAYLING, *q. v.*

—*a.* Relating to, or resembling umber; dark-brown; dark-colored.

—*v. a.* To stain with umber; hence, to shade; to darken.

Umbery, a. Pertaining to, or resembling umber.

Umbilic, Umbilical, a. [Lat. *umbilicus*, the navel.] Pertaining to the navel.

U. cord. (*Anat.*) See NAVEL.—(*Bot.*) (Called also *funicular cord*.) An elongation of the placenta in the form of a small thread, by which the seeds are sometimes attached, as in the hazel pea.

U. region. (*Anat.*) The middle region of the abdomen, in which the umbilicus is placed.—*U. ring*, a fibrous ring which surrounds the aperture of the navel. *Dunglison*.—*U. vesicle.* (*Physiol.*) The name given to the proportionately small vitellicle, or yolk-bag, in man and most mammalia.

Umbilicate, Umbilicated, a. (*Bot.*) Navel-shaped, as a flower or leaf.

Umbilicus, n. [Lat.] (*Anat.*) The NAVEL, *q. v.*

(*Bot.*) Same as *ILIUM*, *q. v.*

(*Conch.*) The aperture or depression in the centre of a univalve shell, round which the shell is convoluted.

Umbles, (ūm'blz), n. pl. The entrails or intestines of a deer.

Um'bo, n. [Lat.] A boss or protuberance, as of a shield.

(*Conch.*) The point of a bivalve shell immediately above the hinge.

Um'bonate, Um'bonated, a. [From Lat. *umbo*.] (*Bot.*) Having a projection resembling a boss, as the pili of many species of *Agaricus*.

Um'bra, n. [Lat., a shadow; Fr. *ombre*.] (*Astron.*) The dark cone projected from a planet or satellite on the side opposite to the sun. See ECLIPSE.

Umbraculiform, a. [Lat. *umbraculum*, a shady place, and *forma*, form.] Umbrella-shaped, as a mushroom.

Umbrage, (ūm'braj), n. [Fr. *ombrage*, shade, mistrust.] Shadow; shade; hence, that which serves to shade, as a bower or a grove of trees.—A gloomy, lurking suspicion; offence taken at another as standing in one's light or way; suspicion of injury; resentment; dissatisfaction; as, a person takes *umbrage* from an imaginary slight or affront.

Umbrageous, (-brā'jus), a. [O. Fr. *ombrageux*.] Shading; forming or constituting a shade; as, *umbrageous* foliage.—Shady; shaded; screened, as from the sun; as, an *umbrageous* recess.

Umbrageousness, n. Shadiness.

Umbrel'la, n. [Fr. *ombrelle*, *parapluie*; It. *umbrello*, dimin. of *ombra*, Lat. *umbra*, a shade.] A portable shade, screen, or canopy, which opens and folds, carried in the hand for sheltering from rain or snow, or from the rays of the sun.

(*Zoöl.*) The umbrella-like organ of a medusa or jelly-fish.

Umbria. A central province of Italy, bounded N. by the Marches; E. the Marches and the Abruzzi; S. the Latium; W. the Tiber River and Tuscany. Chief towns, Perugia (the cap.), Spoleto, and Terni. *Pop.* 549,601.

Umbiferous, a. [From Lat. *umbra*, and *ferre*, to bear.] Throwing or affording a shade or screen.

Umea, (oo'me-ō), a seaport town of Sweden, in West Bothnia, at the mouth of the river Umea, 110 m. from Hernösand; Lat. 63° 49' 46" N., Lon. 20° 4' E. *Pop.* 1,500.

Umpirage, Umpireship, n. [from *umpire*.] The power or authority invested in an umpire.—Arbitrament; ruling; decision delivered by an umpire or referee.

Umpire, n. [Said to be corrupted from Lat. *impar*, odd, uneven—in, and *par*, even, because an umpire is chosen by two, four, or any even number of arbitrators (on their being equally divided) to give his casting vote.] A person to whom sole decision of a controversy or question between parties is referred; a sole arbiter or arbitrator.

(*Sport.*) In horse-racing, trotting, coursing, &c., one of two or more appointed to decide which animal has won;—in cases wherein they are not able to agree, a third person may be applied to as *sole referee*.—In baseball one umpire is usually required, though sometimes there are two, one of whom decides the points relating to base-running.

(*Law.*) A third, or odd, person called in to decide a question or controversy submitted to arbitrators, when the latter do not agree in opinion, and are equally divided in their award.

Umpqua, a river of Oregon, formed by the junction of the N. and S. Forks, 8 m. W. of Roseburg, in Douglas co., and flowing N.W., enters the Pacific Ocean at Umpqua City.—A village of Douglas co.

Un. [A. S. *un*, or *on*.] A prefix derived from the Anglo-Saxon, having its equivalent in the Latin prefix *in*, and denoting negation, depreciation, privation, or contrariety. *Un* is prefixed to adjectives with their derivatives, as *unapt*, *unaptly*, *unaptness*; and to passive participles, as in *unhurt*, *unfavored*; it is also prefixed to participial adjectives, as in *unpleasing*, but rarely in the verbal sense expressing action; thus, we cannot say, the arrow flew *unwounding*, though we say, the man escaped *unwounded*.—The distinction between the use of *in* and *un* may be defined thus: to words of purely English origin, we prefix *un*, as in *unfit*; to words borrowed in the positive sense, but made negatives by ourselves, we also prefix *un*, as in *ungenerous*. In cases where both terms are borrowed, we retain the Latin *in*, as in *inelegant*, *injudicious*. Before nouns having the English termination *ness*, it is proper to prefix *un*, as in *unfitness*, *ungraciousness*. When they have such terminations derived from the Latin as *tude*, *ice*, or *ence*, and for the most part when they end in *ty*, the negative *in* is placed before them, as in *inaptitude*, *injustice*, *inadvertence*, *infidelity*.

(NOTE. The application of this prefix in the formation of compounds is so manifold and general, and the majority of such terms are in themselves so sufficiently obvious in their meaning, that we have considered it needless to give them in every case; but, rather, to confine our vocabulary of such compounds to those which are indispensable, or in most frequent use, or which demand something of an elaborate definition and elucidation.)

Una, a river of Brazil, forms part of the boundary between the provs. of Alagoas and Pernambuco, and enters the Atlantic 12 m. N. of Barra-Grande, after an E. course of 150 m.

Unabated, a. Not diminished in strength or violence.

Unable, (-ā'bl), a. Not able; lacking sufficient strength or means; impotent; weak in power or poor in substance; not having adequate knowledge or skill.

Unaccept'able, *a.* That may not be accepted; not pleasing or welcome.

Unaccount'able, *a.* Not subject to account or control; not liable to answer; irresponsible; as, an *unaccountable* agent. — Inexplicable; not to be solved by reason or the light possessed; mysterious; as, an *unaccountable* mistake.

Unaccount'ably, *adv.* Strangely; in a manner not to be explained.

Unadilla, in *New York*, a river which rises on the border of Madison and Otsego cos., and flowing S., enters the E. Branch of the Susquehanna River at Unadilla. — A post-village and township of Otsego co., abt. 100 m. W.S.W. of Albany.

Unadilla, in *Michigan*, a post-village and township of Livingston co., abt. 33 m. S.E. of Lansing.

Unadilla Centre, in *New York*, a post-village of Otsego co., abt. 30 m. S.W. of Cooperstown.

Unadilla Forks, in *New York*, a post-village of Otsego co., abt. 85 m. N.W. of Albany.

Unadvisable, (*-vîz'ə-bl*), *a.* Not to be recommended; inexpedient; not prudent.

Unadvised, *a.* Not advised; indiscreet. — Rash; imprudent; done without due consideration; as, an *unadvised* step.

Unaffected, *a.* Not moved; not having the heart or passions touched. — Plain; natural; real; not labored, artificial, or hypocritical; simple; as, *unaffected* sorrow.

Unaffectedly, *adv.* Really; in sincerity; without disguise, or attempting to produce false appearances; as, he was *unaffectedly* glad to see me.

Unaka (or **UNIKA**) **Mountains**. That portion of the Appalachian range extending S.W. between N. Carolina and Tennessee, from the Little Tennessee River to Fannin co., Georgia.

Unalienably, *adv.* In a manner not admitting of alienation.

Unal'ist, *n.* [From Lat. *unus*, one.] (*Eccl.*) The holder of a single benefice; — the opposite of *pluralist*.

Unalloyed, *a.* Not reduced by foreign admixture; — hence, pure; simple; unmixed; as, *unalloyed* satisfaction.

Unamiable, *a.* Not adapted to gain affection; lacking the power of conciliating love or esteem.

Unanim'ity, *n.* [Fr. *unanimité*; Lat. *unanimitas*.] State of being unanimous; concord; agreement of a number of persons in opinion or determination.

Unanim'ous, *a.* [Lat. *unanimus* — *unus*, one, and *animus*, mind.] One-minded; of one accord; agreeing in opinion or determination; harmonious; as, the people were *unanimous*. — Formed with, or expressing, unanimity; as, a *unanimous* vote.

Unanswerable, *a.* Not susceptible of refutation; cogent beyond cavil or dispute; as, an *unanswerable* argument.

Unap'propriated, *a.* Not applied, or directed to be applied to any specific object, as money or property; not granted or given to any person, company, etc.

Unapt, *a.* Dull; not ready or propense; not disposed to learn; unfit; not qualified; (with *to* before a verb, and *for* before a noun); improper; unsuitable.

Unare, a river of Venezuela, enters the Caribbean Sea, 40 m. W. of Barcelona, after a N. course of 120 m.

Unarmed, *a.* Without arms or weapons; not equipped; as, an *unarmed* man. — Without scales, spines, prickles, or other defence, as animals and plants.

Unascertain'able, *a.* That cannot be ascertained or reduced to a certainty; that cannot be positively known.

Unassign'able, *a.* That cannot be transferred by assignment or indorsement, as a bill of exchange.

Unassim'ilated, *a.* Not made to assimilate with or resemble; not united with, and actually made a part, either of the proper fluids or solids of the body; not animalized, as food.

Unassum'ing, *a.* Without assumption; not bold or forward; modest; not arrogant; exhibiting no lofty pretensions; as, a gentleman is known by his *unassuming* manner.

Unassured, *a.* Lacking assurance or confidence. — Not insured against loss; as, an *unassured* life.

Unattached, *a.* Not attached to by ties of duty; as, an *unattached* officer of the army. — Not arrested, as a person against whom a writ has issued. — Having no fixed interest. — Not united by ties of affection; as, an *unattached* couple.

Unattain'able, *a.* Not to be gained, obtained, or possessed.

Unau', *n.* (*Zoöl.*) The Two-toed Sloth, which, like the *Ai*, or common Three-toed Sloth, is an inhabitant of the dense forests of the tropical portion of S. America, and has all the singularities of conformation and habits which distinguish that species.

Unauthor'ized, *a.* Not warranted by proper authority; not duly commissioned.

Unavail'able, *a.* Not having sufficient power to produce the intended effect; not practicable; vain; useless; as, *unavailable* securities.

Unavailing, *a.* Not having the effect desired; ineffectual; useless; as, *unavailing* efforts.

Unavoid'able, *a.* That cannot be avoided; not to be shunned; inevitable; certain; as, an *unavoidable* necessity. — Incapable of being made null or void, as a legal act.

Un'aware, *a.* Giving or taking no heed; inattentive; without thought; as, he is *unaware* of the consequences of his own folly.

Un'aware, **Un'awares**, *adv.* Suddenly; unexpectedly; without notice or warning; with premeditated design or previous preparation; as, I was quite taken *unawares*.

Unbalanced, *a.* Lacking balance or poise; not in equipoise, as a scale. — Not restrained by equal power; unsteady; unsound; not sane; as, an *unbalanced* mind.

(*Com.*) Not settled; not brought down to an equality of debit and credit; as, *unbalanced* accounts.

Unballast'ed, *a.* Not furnished with ballast; — hence, unsteady; cranky; as, an *unballasted* mind.

(*Naut.*) Without ballast on board; — said of a ship.

Unbar', *v. a.* To open; to unfasten; to remove a bar or bars from; as, to *unbar* a gate.

Unbarbed, *a.* (*Nat. Hist.*) Not having barbs, hairs, or plumes, as a plant.

Unbecom'ing, *a.* Not befitting; unsuitable; indecent; indecorous; improper for the person or character; as, *unbecoming* conduct.

Unbelief, *n.* [A. S. *ungelæfa*.] Incredulity; the withholding of belief; as, "*unbelief* is blind." (*Milton*). — Particularly, infidelity; disbelief of divine revelation; scepticism of the truth of the gospel; rejection of Christ as the Saviour of men, and of the doctrines he taught; distrust of God's promises and faithfulness, &c.; as, *atheistical unbelief*.

Unbeliev'er, *n.* An incredulous person; a doubter. — Especially, an infidel; one who professes no faith in divine revelation, or in the principles or doctrines of Christianity; a sceptic.

Unbeliev'ing, *a.* Incredulous; sceptical. — Discrediting divine revelation, or the mission, character, and doctrines of the Redeemer; as, "*the unbelieving Jews*."

Unbend', *v. n.* (*imp.* and *pp.* *UNBENT*.) To become unbent or relaxed; to rid one's self of constraint; to act with freedom; as, the sternest men are apt to *unbend* in the privacy of home.

— *v. a.* To free from curvature or flexure; to make straight; as, to *unbend* a bow. — To relax; to set at ease for a time; to remit from a strain, or from exertion; — also, to relax effeminately; as, "*When ease your soul unbends*." (*Dryd.*)

(*Naut.*) To take the sails from their yards and stays; — also, to cast loose, as a cable from the anchor; — also, to untie or detach, as one rope from another.

Unbend'ing, *p. a.* Not suffering flexure or curvature; as, "*unbending* corn." (*Pope*). — Rigid; inflexible; unyielding; resolute; determined; stern; — applied to persons. — Constrained; firm; unyielding; inflexible; — said of things; as, *unbending* facts. — Devoted to relaxation or pleasure; as, an *unbending* hour.

Unbent, *pp.* of **UNBEND**, *q. v.*

Unbid', Unbid'den, *a.* Not bid or bidden; not commanded. — Self-produced; spontaneous; as, "*Roses unbid*." (*Dryden*). — Uninvited; not requested to attend; as, *unbidden* guests.

Unbind', *v. n.* (*imp.* and *pp.* *UNBOUND*.) To remove a band, tie, or shackle from; to untie; to loosen; to unfasten; as, to *unbind* the hair, to *unbind* a prisoner's limbs.

Unbit', *v. a.* To remove the bridle from, as a horse. (*Naut.*) To loose the turns from off the bits; as, to *unbit* a cable.

Unblem'ished, *a.* Pure; not stained; free from turpitude, reproach, or deformity; spotless; intact; as, an *unblemished* reputation.

Unblest, *a.* Excluded from blessing or benediction; as, an *unblest* undertaking. — Wretched; unhappy; miserable; as, an *unblest* lot in life.

Unblush'ing, *a.* Impudent; bare-faced; without sense of shame; as, an *unblushing* liar.

Unbolt', *v. a.* To open by drawing back the bolt; to unfasten; as, to *unbolt* a door.

Unbolt'ed, *a.* Unsifted; not having the fine and coarse parts separated; as, *unbolted* meal.

Unborn, *a.* Not brought into life; — hence, yet to come; future; as, children yet *unborn*.

Unbos'om, *v. a.* To disclose freely, as one's secret feelings or ideas; to reveal in confidence.

Unbound'ed, *a.* Without bound, confine, or limit; measureless in extent; illimitable; infinite; interminable; as, *unbounded* space. — Unrestrained; owing no check or control; as, the *unbounded* license of a woman's tongue.

Unbreech', *v. a.* To remove the breeches of. — To free from its fastenings or coverings, as the breech of a cannon.

Unbrid'led, *p. a.* Loosed from the bridle, or as from something resembling a bridle; — hence, licentious; unrestrained; without check; as, *unbridled* insolence, *unbridled* passions.

Unbrok'en, *a.* Not broken, crushed, or weakened; as, an *unbroken* spirit. — Not violated or infringed; as, an *unbroken* vow. — Not tamed; untaught; not accustomed to the saddle, harness, or yoke; as, an *unbroken* colt.

Uncase', *v. a.* To disengage from a case or covering; as, to *uncase* goods.

(*Mil.*) To display or present to view; as, to *uncase* the colors.

Uncasville, in *Connecticut*, a post-village of New London co., abt. 6 m. N. of New London.

Uncas'ing, *a.* Without cessation; not intermitting; continual; as, *unceasing* attentions.

Uncertain, *a.* Questionable; doubtful; without certainty; not positively known; equivocal; as, an *uncertain* event. — Insecure; not to be depended on; not sure or reliable; as, a person of *uncertain* temper. — Not possessing certain knowledge; not assured; dubious; as, "*Certain pain, uncertain of relief*." (*Granville*). — Not sure of the direction or the consequence; as, my future movements are *uncertain*.

Uncertain'ty, *n.* State of being uncertain; absence of certainty; doubtfulness; dubiousness; as, their safety is still a matter of *uncertainty*. — Contingency; possible chance; as, "*slippery uncertainties*." (*South*). — Lack of exactness or precision; as, the *uncertainty* of the signification of words. (*Locke*). — Something unknown or indefinite; as, he is unwise who abandons a certainty for an *uncertainty*.

Unchar'itable, *a.* Deficient in charity or benevolence; contrary to charity, as the universal love pre-

scribed by Christianity; harsh, severe, or censorious in judgment; as, an *uncharitable* bigot.

Unchrist'ian, *a.* Not evangelized; not converted to the Christian faith; infidel; as, an *unchristian* thinker. — Contrary to the laws or principles of Christianity; as, an *unchristian* temper.

Uncia, (*ün'shī-ah*), *n.*; *pl.* **UNCIAE**. [Lat.] Among the ancient Romans, a twelfth part, as of the coin called *as*. **Un'cial**, *a.* [Fr., from Lat. *uncialis* — *uncia*, the twelfth part of a thing, an ounce, an inch.] Pertaining to an ounce or an inch. — Pertaining, or having reference to letters of a large size, as if an inch in length, used in ancient Latin and Greek manuscripts.

— *n.* An uncial letter; — also, a letter that stands for a word in inscriptions, epitaphs, and the like, as *C* for *consul*.

Uncia'tim, *adv.* [Lat.] Once by ounce, or inch by inch.

Unciform, (*ün'se-*), *a.* [Fr. *unciforme*; Lat. *uncus*, a hook, akin to Gr. *angkos*, a bend or hollow.] Hook-like; presenting a curved or hooked form. — *Unciform bone*. (*Anat.*) The last bone of the second row of the wrist bones; so called from its hook-like process in man, which projects toward the palm of the hand, and gives origin to the great ligament which binds down the tendons of the wrist.

Uncinate, *a.* [From Lat. *uncinus*, a hook.] (*Bol.*) Furnished with hooked spines, as a capsule.

Unciv'il, *a.* Not civil or conformed to civilization; as, an *uncivil* state of man. — Deficient in civility; impolite; not complaisant or courteous in manners or deportment; rude; churlish; as, *uncivil* behavior.

Uncivil'ized, *a.* Not civilized; unreclaimed from a state of savagery or barbarism; rude; as, the *uncivilized* aborigines of Dahomey. — Coarse; indecent; vulgar; not refined or elegant; as, *uncivilized* language. (*R.*)

Uncle, (*ung'kl*), *n.* [Fr. *oncle*; contracted from Lat. *avunculus*, dimin. of *avus*, a grandfather. — Literally, a lesser grandfather.] The brother of one's father or mother. — *Great uncle*, one's father's or mother's uncle. — *Uncle-in-law*, the brother of a wife's or husband's father. — *My uncle*, a cant term for a pawnbroker.

Unclean, *a.* Foul; filthy; dirty; lacking in cleanliness; as, an *unclean* skin. — Sinful; morally foul or impure; as, an *unclean* act.

(*Jewish law*.) Ceremonially impure; not cleansed by ritual practices.

Unclean'ness, *n.* Want of cleanliness; filthiness; dirtiness, as of the body. — Moral impurity; defilement by sin; sinfulness; lewdness; incontinence.

(*Jewish law*.) Absence of ritual or ceremonial purity.

Unclose', *v. a.* To open; to break the seal of, as a letter. — To disclose; to make known; to reveal; to lay open; as, to *unclose* one's thoughts.

Uncock', *v. a.* To lower the cock of; as, to *uncock* a gun. — To open out, or spread about from; as, to *uncock* hay.

Uncom'eat'able, *a.* Inaccessible; not to be reached or come at; as, an *uncomestable* solution of a mystery. (*Colloq.*)

Uncom'e'liness, *n.* Lack of comeliness; want of beauty or grace; uncountiness; as, *uncomeliness* of person, dress, or manners.

Uncom'fortable, *a.* Lacking in comfort; affording no comfort; gloomy; as, an *uncomfortable* home. — Causing trouble or uneasiness; as, an *uncomfortable* seat or situation.

Uncom'mon, *a.* Not common; unusual; out of the ordinary state or nature of things; rare; not frequent; seldom seen, known, or experienced; — hence, strange; remarkable; peculiar; as, an *uncommon* plant, an *uncommon* hard winter, an *uncommon* degree of daring.

Uncom'promising, *a.* Not admitting, or open to compromise; not agreeing to terms; uncomplying; granting no concessions; unyielding; inflexible; as, an *uncompromising* opponent.

Un'concern, *n.* Lack of concern; freedom from care or solicitude; absence of heedfulness or anxiety; as, the *unconcern* of indifferent persons.

Unconcern'ed, *a.* Not manifesting concern; feeling no solicitude; having or expressing no interest in; indifferent; heedless; carelessly secure; over-confident; as, he is quite *unconcerned* about his fate.

Uncond'itional, *a.* Without a condition or conditions; not limited by any conditions or contingencies; without reserve; absolute; peremptory; as, an *unconditional* surrender.

Uncond'itionally, *adv.* Without conditions, terms of limitation, or any reservation whatsoever; as, he gave the required promise *unconditionally*.

Uncond'itioned, *a.* Without being subject to conditions or restrictions.

(*Metaph.*) Illimitable; infinite; hence, incogitable; inconceivable.

Unconfirmed, *a.* Weak; raw; not fortified by resolution; lacking force; as, *unconfirmed* troops. — Not strengthened by additional or conclusive evidence or testimony; as, an *unconfirmed* statement. — Not confirmed according to the ritual of the Church; as, an *unconfirmed* Christian.

Unconform'able, *a.* Wanting conformity; not consistent; not agreeable; not conforming or agreeing; as, an action *unconformable* to duty.

(*Geol.*) See **CONFORMABLE**.

Uncon'scionable, *a.* Not guided or influenced by conscience. — Unreasonable; inordinate; excessive; being beyond the limits of any reasonable claim or just expectation; as, an *unconscionable* demand, an *unconscionable* price. — Vast; enormous; immense; as, a thing of *unconscionable* size.

Uncon'scious, *a.* Without consciousness. — Imperceptible; not rendered the object of consciousness; as, he made an *unconscious* fool of himself.

Unconstitu'tional, *a.* Not conformable to, or authorized by, the constitution; contrary to constitutional laws or principles; as, an *unconstitutional* edict.

Unconstrained, *a.* Acting voluntarily; not proceeding from constraint.

Uncontrol'able, *a.* That cannot be controlled; ungovernable; that cannot be restrained, resisted, or diverted; as, *uncontrollable* passions. — Indisputable; irrefragable; as, the sovereign's *uncontrollable* title to the English throne.

Uncouple, *v. a.* To let slip, as dogs, from their couples; as, to *uncouple* hounds. — Hence, to part; to disjoin; as, to *uncouple* husband and wife.

Uncouth, (*-kooth*), *a.* [A. S. *un*, and *cuth*, pp. of *cunnan*, to know.] Strange; unusual; odd; unhandy; ungraceful; clumsy; ungainly; not rendered pleasing by familiarity; as, an *uncouth* person, an *uncouth* sight.

Uncover, *v. a.* To lay bare; to divest of covering; to lay open; to disclose; to unroof, as a building; to strip off, as a veil or anything that conceals; as, to *uncover* a statue, to *uncover* a treasonable plot. — To take off the head covering; to bare the head in token of respect; as, to stand *uncovered*.

Uncreat'ed, *a.* Not yet created; as, progeny *uncreated*. — Not produced by creation; as, the idea of God is that of a being *uncreated*.

Unction, (*ung'shun*), *n.* [Fr. *unction*; Lat. *unctio*, from *ungo*, *unctus*, to anoint with any fatty substance or unguent.] A rubbing or smearing with fat, grease, or oil; act of anointing, as with oil; act of anointing medically, or as a symbol of consecration; as, the *unction* of the tabernacle. (*Hooker*). — Unguent; ointment. (*R.*) — Hence, something soothing, softening, or lenitive.

"Mother, . . . lay not that flattering unction to your soul." *Shaks.*

— Hence, also, that which excites piety and devotion; richness of gracious affections; divine or sanctifying grace; also, sometimes, simulated, factitious, or unnatural fervor; as, he makes a joke with irresistible *unction*.

Extreme unction. (*Eccl.*) See *EXTREME UNCTION*.

Unctuous'ity, **Unctuousness**, *n.* [Fr. *unctuosité*.] Quality of being unctuous, greasy, or oleaginous; fatness; greasiness; oiliness.

Unctuous, (*ung'tu-üs*), *a.* [Fr. *unctueux*.] Fat; oily; greasy; having a resemblance to oleaginous substances; as, an *unctuous* priest.

Uncus'tomed, *a.* Not subjected to custom-house duties. — Not having paid duty, or been charged with customs, as goods.

Uncut, *a.* Not separated or divided by cutting or otherwise; — used in especial reference to the leaves of new books when they have not been cut during the process of binding; as, an *uncut* novel.

Undated, *a.* [From Lat. *unda*, a wave.] (*Bot.*) Waved, as a leaf.

— Bearing no date; as, an *undated* letter.

Undaunt'ed, *a.* Not daunted by danger; not subdued or depressed by fear; disdaining peril; intrepid; dauntless; hold; as, a man of *undaunted* courage.

Undecagon, *n.* (*Geom.*) Same as *HENDECAGON*, *q. v.*

Undecennary, (*-sën-*), *a.* [From Lat. *undecim*, eleven — *unus*, one, and *decem*, ten.] Eleventh; hence, occurring once in every eleven years.

Undecennial, *a.* Belonging to, or occurring once in, every eleven years.

Undemon'strative, *a.* Not exhibiting an outward manifestation of feeling; reserved whether from diffidence, modesty, or policy; as, an *undemonstrative* person.

Unden'i'able, *a.* That is beyond denial; irrefutable; obvious; palpably true or actual; as, an *undeniable* fact.

Under, *prep.* [A. S.; Ger. *unter*.] Indicating a lower position with respect to place; so as to be overtopped, overhung, or covered by; so as to have something over or above; lower than; below; beneath; — opposed to *over*, *above*, *on*, *upon*; as, he stood *under* a gateway, to sink *under* water; a ship *under* full sail; to place anything *under* a cover. — Hence, figuratively: (1.) In a state of pupillage or subjection to; in relation to something or person imposing liability, obligation, subordination; in a state of bearing, or of being loaded or burdened; in a state of oppression or subjection to; noting the state in which one is considered as bearing or having anything laid upon one; as, to be *under* the eye of the authorities; to labor *under* difficult circumstances; to have patience or fortitude *under* pain, misfortune, or oppression; to stagger *under* a heavy load; to be *under* the necessity of doing one's duty; to be *under* recognizances to keep the peace, &c.; to sign a document *under* protest. — In a less degree than; for less than; in a relation of the less to the greater; in a degree, state, or rank inferior to; noting rank, class, or order of precedence; noting inferiority in size, weight, number, and the like; as, he weighs something *under* twenty stone; his pay is *under* a thousand dollars yearly; marquises take precedence *under* dukes; — hence, it is sometimes used as an equivalent for *at*, *with*, *for*, *less than*; as, I shall not part with the goods *under* the top market price. — Indicating relation to something designative or representative, comprehensive or inclusive; with the pretense of; in the state of bearing, or being known by; with the cover or pretext of; during the time of; as, *under* the name of patriotism; the Civil War commenced *under* Mr. Lincoln's presidency; *under* this head may be mentioned so-and-so; he passed *under* the name of Jones. — Not having reached or arrived; as, a minor *under* legal age. — Attested by; signed by; as, *under* my signature, a document *under* the seal of the court. — Ruled or influenced by; — in a moral sense; as, his wife keeps him *under* her finger and thumb. — In a state of being hampered, treated, or discussed, or of being the subject of active treatment, regard, manipulation, and

the like; as, the troops advanced *under* a heavy fire; a question *under* discussion; a patient *under* the doctor's hands; a scheme *under* consideration, &c. — To knock *under*. See *KNOCK*. — *Under arms.* (*Mil.*) Drawn up in a position to use arms, as troops. — *Under fire*, exposed to the enemy's shot; as, the volunteers behaved well *under fire*. — *Under ground*, beneath the surface of the ground. — *Under sail.* (*Naut.*) In motion; moving by impulsion of the sails, as a ship. — *Under sentence*, sentenced; having sentence pronounced against. — *Under the breath*, in an undertone; with low breath; almost inaudibly; as, to speak *under the breath*. — *Under the lee.* (*Naut.*) To the leeward; as, *under the lee* of the land. — *Under the rose.* See *ROSE*. — *Under water*, beneath the surface of the water. — *Under way.* (*Naut.*) In a condition to proceed; hence, having started; in progress or course of proceeding; as, the business was got well *under way*.

— *adv.* In a lower or subordinate manner; in inferiority or subjection; — used only in a few phrases; as, to keep *under*, to control; to hold in subjection; as, refractory children should be kept *under*; also, to bring *under*, to reduce to subjection or subservience; as, they were brought *under* the yoke.

— *a.* Lower in rank, class, station, or degree; subject; subordinate; inferior; as, an *under-sheriff*.

(NOTE. *Under* forms the prefix to a great number of compounds, mostly self-explanatory, and all, more or less, indicating that which is less than is right, usual, or proper, or which is inferior, subordinate, or subject to some other thing.)

Un'der-action, (*-ak'shun*), *n.* Subordinate action; by-play.

Un'der-agent, *n.* A sub-agent; an inferior agent.

Underbear, *v. a.* (*imp.* UNDERBORE; *pp.* UNDERBORNE.) To support; to endure.

Under-bearer, *n.* One who upholds, supports, or sustains; especially, at a funeral, one who aids in bearing the coffin.

Underbid, *v. a.* (*imp.* and *pp.* UNDERBIN.) To bid or offer less than, as at auctions.

Underbrace, *v. a.* To brace or bind together below.

Under-bred, *a.* Low-bred; of inferior manners or breeding.

Underbrush, *n.* Same as *UNDERGROWTH*, *q. v.*

Underchaps, *n. pl.* The lower jaws.

Undercharge, *v. a.* To charge less than is usual or expedient.

Undercharged mine. (*Mil.*) A mine whose vent is not as wide at top as it is deep.

Un'der-clay, *n.* (*Geol.*) The clayey layer (or bed of finer clay) usually underlying a coal bed.

Un'der-cliff, *n.* A lesser cliff formed on a shore by debris from the higher cliff above.

Undercliff, or **UNDERCLIFFE**, a maritime tract of England, in the Isle of Wight, extending along its S. coast from Niton 5 m. E. to Bonchurch. Its average width is $\frac{3}{4}$ of a mile, and it has been formed by a landslip from a range of chalk cliffs which buried it on the land side. (See Fig. 367.)

Un'der-clothes, **Un'der-clothing**, *n.* Garments worn under others for warmth or cleanliness.

Un'der-croft, *n.* A crypt; a subterranean vault or apartment.

Un'der-crust, *n.* The inner crust; as, the *under-crust* of a pie; — hence, the lower classes, being the substratum of society; — opposed to *upper-crust*; as, a man who rose from the *under-crust*.

Un'der-current, *n.* A current below the surface of the water, or beneath another current usually flowing in an opposite direction.

Underdo, *v. a.* (*imp.* UNDERDID; *pp.* UNDERDONE.) To do less than is required or expected; — hence, to cook in an insufficient degree, as meat.

Un'derdone, *pp.* Done less than is requisite; moderately or imperfectly cooked; as, *underdone* roast beef; — hence, rare.

Un'der-drain, *n.* A drain or trench below the surface of the ground.

— *v. a.* To drain by cutting a covered passage below the surface, as of land.

Under-es'timate, *v. a.* To appraise at too low a figure; to set too small a value upon; as, to *under-estimate* a contract.

Un'derfoot, *adv.* Beneath.

— *a.* Trodden down; miserable; base; abject.

Under-fur'row, *v. a.* To plough in, as under a furrow.

Undergird, *v. a.* To bind below or beneath; to gird round the bottom.

Undergo, *v. a.* (*imp.* UNDERWENT; *pp.* UNDERGONE.) To bear, support, sustain, suffer, or endure, as something burdensome or painful to the body or the mind; to pass through; to sustain without yielding, sinking, or failing; as, the political geography of Europe has *undergone* many changes; he *underwent* an operation for the stone, &c.

Un'der-gown, *n.* A gown worn under another; a petticoat.

Un'der-grad'uate, *n.* A student or member of a university or incorporated college who has not taken his first degree.

Un'der-ground, *n.* A place or space beneath the surface of the ground.

— *a.* Being below the earth's surface; as, an *under-ground* railway.

— *adv.* Beneath the surface of the earth.

Un'dergrowth, **Un'derbrush**, **Un'derscrub**, *n.* Shrubs or small trees growing among large ones.

Un'derhand, *a.* Under cover of the hand; — hence, secret, surreptitious; clandestine; — usually implying meanness or fraud, or both; as, *underhand* proceedings.

— *adv.* In a clandestine or stealthy manner; by secret or surreptitious means. — By fraud, or illegal means.

Un'derhanded, *a.* Underhand; clandestine; surreptitious. — Short-handed; scantily provided with hands or workmen.

Underhew, *v. a.* (*imp.* UNDERHEWED; *pp.* UNDERHEWED or UNDERHEWN.) To hew less than is usual or proper; especially, to hew as a piece of timber which should be square, in such a manner that it appears to contain a greater number of cubic feet than it really does.

Un'derhill, in Vermont, a post-township of Crittenden co., 23 m. N.W. of Montpelier.

Un'der-jaw, *n.* The lower chap or jaw.

Underlay, *v. a.*, (*imp.* and *pp.* UNDERLAID.) To lay beneath; to support by something laid under. — In some parts of England, to sole, or mend the sole of a shoe.

— *v. n.* To incline from the perpendicular; — said of a vein or lode in a mine.

— *n.* (Also written UNDERLIE.) (*Mining.*) The inclination of a vein or lode from the perpendicular.

(*Typog.*) A thickness of paper or pasteboard placed under a cut or part of a cut, or stereotype plate, to bring it up to the proper height, so as to secure the right impression.

Un'derlayer, *n.* One who, or that which, underlays; a lower layer.

(*Mining.*) A perpendicular shaft sunk to cut the lode at any required depth.

Un'der-lease, *n.* (*Law.*) An alienation by a tenant of a part of his lease, reserving to himself a reversion. It differs from an *assignment*, which is a transfer of all the tenant's interest in the lease.

Underlet, *v. a.*, (*imp.* and *pp.* UNDERLET.) To let below the true value. — To let under a lease; to let or lease at second-hand; to sub-let.

Un'der-letter, *n.* One who lets under a lease.

Underlie, *v. a.*, (*imp.* UNDERLAY; *pp.* UNDERLAIN.) To lie or be situated under; as, a stratum of lime *underlying* other strata. — To form the support, basis, or foundation of; as, a nation *underlying* a monarchical government. — To be liable, or answerable to or responsible for.

Un'derlie, *n.* See *UNDERLAY*.

— *v. n.* To lie below, under, or beneath.

Underline, *v. a.* To underscore; to mark with a line below the words, to arrest the attention; as, to *underline* a passage in a letter.

Un'derling, *n.* A subordinate person or agent; a hireling; an understrapper; — usually employed in a disparaging sense, as being equivalent to a mean, sorry fellow.

Un'der-lock, *n.* A lock of wool depending from a sheep's belly.

Un'derlying, *a.* Lying beneath or subordinate in position, — said of strata.

Un'der-masted, **Un'der-sparred**, (*-spärd*), *a.* (*Naut.*) Having masts or spars of less than the ordinary dimensions; as, an *under-masted* ship.

Undermine, *v. a.* To mine under or below; to sap; to excavate, as the earth beneath, for the purpose of suffering to fall, or of blowing up; as, to *undermine* a building. — To remove, as the foundation or support of anything by clandestine means; to ruin or destroy in an underhand manner; as, dissipation has *undermined* his constitution.

Undermost, *a.* Lowest in place beneath others; lowest in place, state, rank, class, degree, or condition; — opposed to *uppermost*.

Underneath, *adv.* Below; beneath; in a lower or subordinate place; as, the river flowed *underneath*.

— *prep.* Under; beneath; as, "Underneath this sable hearse." — *Ben Jonson*.

Un'derpin, *v. a.* (*imp.* and *pp.* UNDERPINNED, (*-pind*.) To lay stones under, to form a rest for the sills of a building. — To place something beneath to form a foundation or support.

Un'derpinning, *n.* Act of one who underpins. — The stones on which a building immediately rests.

Un'derplot, *n.* A subordinate plot in a drama; by-play. — An underhand plot; a clandestine scheme.

Underrate, *v. a.* To undervalue; to rate or appraise below the real value.

Underrun, *v. a.* To run or pass under; particularly, to pass along and under, as a cable or hawser, for the purpose of taking in, as for stowing away or inspection.

To *underrun* a tackle. (*Naut.*) To separate the parts of a tackle, and put them in order.

Under-sail, *adv.* (*Naut.*) With anchor up, and under the influence of sails; also, with sails set, though the anchor is down.

Underscore, *v. a.* To draw a mark or line under.

Undersell, *v. a.* (*imp.* and *pp.* UNDERSOLD.) To sell cheaper than; as, to *undersell* the market.

Underset, *n.* (*Naut.*) A current of water below the surface, especially when moving in a direction contrary to that of the wind.

Undersetting, *n.* A foundation; a prop, support, or pedestal.

Un'dershapen, *a.* Low-sized; under the usual shape; small.

Un'der-sheriff, *n.* A sheriff's deputy.

Undershot, *a.* Worked by water passing underneath.

Undershot-wheel, *n.* (*Hydraul.*) A wheel with a number of flat wash-boards, which receive the impulse of the water conveyed to the lowest part of the wheel by an inclined sluice or canal; — correlative to *overshot* wheel.

Un'dershrub, *n.* (*Bot.*) The designation of a woody plant of small size, the ends of whose branches perish every year.

Undersign, (-sîn') *v. a.* To write, as one's name at the foot or end of a letter or any legal instrument. — *The undersigned*, the subscriber, or subscribers; the person or persons whose names are written at foot; as, "We, the undersigned."

Undersized, *a.* Of less than the ordinary size; as, an undersized man.

Under-soil, *n.* Same as SUB-SOIL, *q. v.*

Under-song, *n.* The burden, chorus, or refrain of a song. — Accompaniment; underlying meaning.

Under-spurred, (-spûrd') *a.* See UNDER-MASTED.

Understand, *v. a.* (*imp.* and *pp.* UNDERSTOOD.) [A. S. *understandan*.] To support or hold in the mind; to apprehend; to comprehend; to perceive; to know; to have just and adequate ideas of; to have the same ideas as the person who speaks, or the ideas which a person intends to communicate; to receive or have, as the ideas expressed or intended to be conveyed in a writing or book; to know the meaning; to have knowledge by experience or intuition; as, to *understand* a foreign language; to *understand* a problem in Euclid; to *understand* a book, a nod, or a shrug of the shoulders; to *understand* a woman is not easy. — To be informed or apprised of; as, I *understand* that you are going abroad. — To interpret, at least mentally; to hold in opinion with conviction; to know, or conceive to know, as the meaning of another; to ascribe intention or significance to; as, my meaning is not so to be *understood*. — To mean without expressing; to know, as what is not expressed; to imply; as, "War open, or *understood*." *Milton.*

— *n. a.* To be an intelligent and conscious being; to have the use of the intellectual faculties. — To learn from, or be informed by, another.

Understanding, *p. a.* Knowing; intelligent; skillful; as, an *understanding* man.

Understanding, *n.* (*Phil.*) That faculty by which man derives ideas from sensations. The impressions received from the outward world by means of the senses are regarded as the basis of all knowledge, and a creature destitute of perception would be incapable of learning or understanding. According to Aristotle, the one sense which is an indispensable condition for the acquisition of knowledge is that of touch. To the ideas formed immediately from perception, he gave the name of *phantasms*, this power of perceiving being the imagination, which with memory constitutes the whole intellectual nature of brutes, while in man it furnishes only the groundwork for the operation of the intellect, which, working on these sensations, reaches first simple and then more complex and general notions. — Act of a person who understands anything (in the various senses of the word); knowledge; interpretation; belief; discernment; exact comprehension. — Agreement of minds; union of sentiments; adjustment of differences; intelligence between two or more persons; anything mutually understood or agreed upon.

Understandingly, *adv.* In an understanding manner; with full or complete knowledge, intelligence, or apprehension; as, to judge *understandingly*.

Understate, *v. a.* To state or represent with less force or fulness than the truth will permit.

Under-statement, *n.* A statement less than the truth.

Understood, *imp.* and *pp.* of UNDERSTAND.

Understrapper, *n.* A subordinate agent or employé; a petty official; hence, generally, a mean, contemptible hireling; a jack-in-office.

Under-stratum, *n.*; *pl.* UNDER-STRATA, or, sometimes, UNDER-STRATUMS. Same as SUB-SOIL, *q. v.*

Undertake, *v. a.* (*imp.* UNDERTOOK; *pp.* UNDERTAKEN.) To take under one's charge, care, or management; to engage in; to take in hand; to enter upon; to set about; to begin to perform or execute; as, to *undertake* the conduct of a business. — Specifically, to covenant or contract to perform or execute; to take upon one's self to do; to enter into stipulations; or place one's self under obligations; as, to *undertake* the construction of a line of railroad.

— *v. n.* To take upon one's self, or assume any business or promise. — To promise; to be bound; as, I *undertake* to say he is wrong with respect to this matter. — To *undertake for*, to become bail or surety for.

Undertaker, *n.* One who undertakes anything; one who engages in any enterprise or business. — One who stipulates, covenants, or contracts to carry out the performance of work for another. — One who conducts the management of funerals.

Undertaking, *n.* That which is undertaken or entered upon; any business, work, or project, which a person engages in, or attempts to perform; an enterprise; as, the laying of the Atlantic Cable was a gigantic *undertaking*. — Specifically, the business of an undertaker, in the conduct or management of funerals.

Under-tenancy, *n.* Tenancy or tenure under a tenant or lessee.

Under-tone, *n.* A low tone; a tone or utterance lower than is usual.

Undertook, *imp.* of UNDERTAKE, *q. v.*

Under-tow, *n.* A current of water below, differing or deviating from, that on the surface.

Under-valuation, *n.* Act of valuing or appraising below the true or real worth.

Undervalue, *v. a.* To value, rate, or estimate below the true or real worth; as, to *undervalue* an estate. — To hold in light esteem; to treat as of little worth or consequence; to despise; to disparage.

— *n.* Low rate, price, or estimation; a valuation lower than the real worth.

Underwent, *imp.* of UNDERGO, *q. v.*

Underwood, *n.* The low woody growths produced

among timber trees, sometimes called *coppice wood*, though the term *coppice wood* is more especially applied to woods in which low growths of shrubs, or the woods of trees, are more abundant than timber trees.

Underwork, (-wûrk') *v. a.* (*imp.* and *pp.* UNDERWORKED or UNDERWROUGHT.) To execute work at a lower price; as, one man *underworks* another of the same trade. — To undermine; to subvert or destroy by clandestine measures.

— *v. n.* To work for a less price than is usual or proper. — To operate clandestinely or surreptitiously.

— *n.* Subordinate work; petty affairs.

Underworker, *n.* One who underworks another or others. — An inferior or petty workman.

Under-world, (-wûrld') *n.* The lower or inferior world. — The lower or inferior part of mankind. — The opposite side of the world; the antipodes. (*R.*)

Underwrite, (-rit') *v. a.* (*imp.* UNDERWROTE; *pp.* UNDERWRITTEN.) To subscribe; to write under, as something else. — To subscribe, as one's name for insurance; to set, as one's name to a policy of insurance, for the purpose of becoming responsible for loss or damage, in consideration of a certain premium per cent.; to take a risk; as, the ship was *underwritten* at Lloyd's.

— *v. a.* To practise insuring or underwriting.

Underwriter, *n.* An insurer; one who underwrites his name to the conditions of a policy of insurance; as, he has a claim on the *underwriters*.

Underwriting, *n.* Act or practice of insuring ships, goods, houses, &c., against loss or damage.

Undetermined, (-mind') *a.* Not determined, settled, resolved, or decided; as, I am *undetermined* whether to go or not. — Not fixed, defined, or regulated; unlimited; undetermined; as, "In circuit *undetermined*, square or round." (*Milton.*) — (*Math.*) Not known.

Undeviating, *a.* Not deviating; not digressing or departing from the way or course, or from a rule, principle, plan, or purpose; regular; steady; persistent; as, *undeviating* rectitude of mind. — Not erring, wandering, or crooked.

Undid, *imp.* of UNDO, *q. v.*

Undignified, *a.* Lacking dignity or self-respect; mean; low; common; as, *undignified* submission.

Undine, (-undeen') (sometimes written *ONDINE*) *n.* [From Lat. *unda*, a wave.] A naiad; a fabled spirit of the waters; a water-nymph.

Undirected, *a.* Lacking guidance or direction; left without direction. — Misled; misguided; misdirected. (*R.*) — Wanting address or superscription; as, an *undirected* letter.

Undiscerning, (-diz-zern') *a.* Lacking discernment; not making apt or just distinctions; wanting judgment or the power of discrimination; as, an *undiscerning* mind.

Undisciplined, (-dis-si-plind') *a.* Wanting in discipline; not duly instructed or exercised; not trained into habits of regular order; as, *undisciplined* militia. — Untaught; lacking teaching or experience; as, an *undisciplined* mind.

Undisguised, (-gîzd') *a.* Without disguise; not covered with a mask, or with a false or pretentious appearance; open; frank; plain; candid; artless; as, *undisguised* sympathy or antipathy.

Undistinguishable, (-ting'gwish-a-bl') *a.* That cannot be marked or distinguished by the eye; not to be distinctly seen; — hence, not to be known or distinguished by the intellect, or by any peculiar property.

Undistinguished, *a.* Lacking distinction; not so marked as to be distinctly known from each other; not separately seen or described; not plainly discerned; having no intervening space; — hence, not marked by any particular property; not treated with any particular respect; not distinguished by any particular eminence.

Undisturbed, (-turbd') *a.* Free from interruption or disturbance; not molested or hindered; free from mental perturbation; calm; tranquil; placid; serene; quiet; not agitated, stirred, or moved; as, *undisturbed* peace.

Undivided, *a.* Not divided, separated, or disunited; unbroken; whole; integral; as, grant me your *undivided* attention. — Not set off or apart by division; as, an *undivided* half of a share in a business.

(*Bot.*) Entire, as a leaf.

Undo, (-doo') *v. a.* (*imp.* UNDO; *pp.* UNDONE, (-dun.) To reverse what has been done; to bring to naught; to annul, as any transaction; as, to *undo* a marriage by divorce. — To loose; to open; to unfasten; to unravel; to untie; to take to pieces; as, to *undo* a knot. — To ruin; to impoverish; to bring to penury or destitution; to ruin, in a moral sense; to blast in reputation; to bring to everlasting destruction and misery; as, "Some men *undo*, and some are themselves *undone*." — *Denham.*

Undock, *v. a.* To take out of dock, as a ship.

Undoer, (-doo') *n.* One who reverses or annuls what has been done; one who brings poverty or destruction; one who blasts or destroys the reputation of another; — also, a seducer.

Undoing, (-doo'-) *n.* The reversal or annulling of what has been done. — Ruin; destruction; downfall; fatal mischief.

Undone, *pp.* of UNDO, *q. v.*

Undoubted, (-dout') *a.* That may not be doubted or called in question; indisputable; indubitable; irrefragable; as, an *undoubted* proof.

Undoubt'edly, *adv.* Without doubt or question; indubitably.

Undress, *v. a.* To strip; to divest of dress or clothes. — To deprive of ornaments or frippery; to assume a negligee; as, "Undressed at evening . . . she changed her look." — *Prior.*

(*Med.*) To remove the dressing or covering from, as a wound.

— *n.* A loose, negligent style of dress; — opposed to *full dress*.

(*Mil.* and *Nav.*) Regulation dress of officers, soldiers, sailors, &c., but not full uniform.

Undue, *a.* Not due; not yet demandable by right; as, a bill *undue*. — Not right; not legal; improper; as, an *undue* proceeding or precedent. — Excessive; out of just proportion; not agreeable to a rule or standard, or to duty; as, *undue* severity in the execution of law.

Undulate, *v. a.* [*Fr.* *onduler*, from Lat. *undula*, a little wave.] To cause to play or move, as waves; to move back and forth, or up and down, like waves; to cause to vibrate; as, to *undulate* the voice.

— *v. n.* To wave; to vibrate; to move back and forth; as, *undulating* air.

Undulate, Undulated, *a.* Resembling waves in form or motion; undulatory.

(*Bot.*) Wavy, as a leaf or corolla.

Undulating, *p. a.* Wavy; rising and falling like waves; resembling waves in form or motion; as, an *undulating* gait, *undulating* ground.

Undulation, (-lû'shun') *n.* [*Lat.* *undulatio*.] Act of undulating; a waving motion or vibration; fluctuation; as, the *undulations* of a woman's figure.

(*Mus.*) Same as BEAT, *q. v.*

(*Surg.*) Same as FLUCTUATION, *q. v.*

(*Phys.*) A wavy appearance; a liquid, aerial, or luminous wave.

Point of undulation. (*Geom.*) A point at which a curve is met by its tangent in four consecutive points. A point of undulation of higher order, is one at which the curve is met by its tangent in any even number of consecutive points.

Undulationist, *n.* A scientist who adopts the undulatory theory of light.

Undulatory, *a.* [*Lat.* *undulatorius*] Moving in the manner of waves; or, resembling the motion of waves, which successively rise, or swell, and fall. See UNDULATORY THEORY, in SECTION II.

Unduly, *adv.* In an undue manner; not according to duty, justice, or propriety; lacking proper proportion; excessively; inordinately; as, your nerves are *unduly* strained.

Undying, *a.* Not dying or perishing. — Immortal; not subject to death.

Unearth, *v. a.* To drive from the earth, or from a hurry; as, to *unearth* a fox. — Hence, to uncover; to disclose; to bring to light; as, to *unearth* a mystery.

Unearthly, *a.* Supernatural; not earthly or terrestrial; as, an *unearthly* visitant.

Uneasily, (-ez'i-le') *adv.* With uneasiness or pain; in a troubled or uncomfortable manner; with difficulty; not readily.

Uneasiness, *n.* Quality or state of being uneasy; a moderate degree of pain; restlessness; lack of ease; disquiet; perturbation of mind; moderate anxiety; disquietude. — That which occasions trouble, disquiet, or restlessness; as, the *uneasiness* of a journey.

Uneasy, (-ez'y) *a.* Hard; difficult; not easy; as, "the road will be *uneasy* to find." (*Scott.*) — Not at ease; experiencing some degree of restlessness and anxiety; feeling some sense of pain, trouble, and the like; disturbed in mind; morbidly apprehensive of evil; unquiet; as, "Uneasy lies the head that wears a crown." (*Shaks.*) — Stiff; awkward; not composed or graceful in manner; constrained; betraying gaucherie; as, he seemed quite *uneasy* among such grand people. — Constraining; cramping; causing want of ease or self-possession; giving some pain or chagrin to others; displeasing; disagreeable; as, an *uneasy* seat in the saddle; *uneasy* rules or regulations.

Unembarrassed, (-bâr'rast') *a.* Without embarrassment, confusion, or perplexity of mind. — Free from pecuniary difficulties, obligations, or encumbrances; as, his estates are quite *unembarrassed*. — Free from entanglement or complicated matters; as, I am *unembarrassed* with domestic responsibilities.

Unembodied, *a.* Disembodied; free from corporeal entity; as, *unembodied* spirits. — Not formed or collected into a body; as, *unembodied* army reserves.

Unequal, (-ek'wal') *a.* Not equal; not even; not paired; unmatched; not of the same size, dimensions, quantity, quality, age, station, degree, &c.; hence, inferior; insufficient; inadequate; unadapted; as, an *unequal* marriage. — Disproportioned; ill matched, pitted, or balanced; hence, unjust; unfair; one-sided; partial; as, an *unequal* struggle. — Not equable, regular, or uniform; as, "So strong, yet so *unequal*, pulses beat." *Dryden.*

(*Bot.*) Without symmetrical arrangement of the two sides, or the parts.

Unequaled, (-ek'wald') *a.* Not to be equalled or excelled; unrivalled; unparalleled; — either in a good or bad sense; as, *unequaled* goodness, *unequaled* villany.

Unequally, *adv.* Not equally; in different degrees; irregularly, without symmetry or proportion to each other; as, a loaf *unequally* divided.

Unequally pinnate. (*Bot.*) Pinnate, but having an odd number of leaflets.

Unequivocal, (-ek'kwiv') *a.* Not admitting of doubt or equivocalness; clear; evident; palpable; as, *unequivocal* testimony. — Not bearing dubious signification; without ambiguity; not admitting different interpretations; as, *unequivocal* language.

Unequivocally, *adv.* In an unequivocal manner.

Unerring, *a.* Incapable of error; committing no mistake; as, the *unerring* laws of nature. — Sure; certain; exact; accurate; incapable of miss or failure; as, an *unerring* shot with the rifle.

Unessential, (-sên'shal') *a.* Not essential, indispensable, or absolutely necessary; not of prime or paramount importance; not constituting the essence. — Void of real being.

Unevangelical, (-jél',) *a.* Not evangelical; not according to orthodoxy, or to the gospel.

Uneven, (-é'vū,) *a.* Not even; not level; not uniform in surface; rough; undulating; as, *uneven* ground. — Not equable; not of equal length; as, *uneven* feet in poetry.

Uneven number, an odd number, as 3, 5, 7.

Unevenness, *n.* Quality or state of being uneven; inequality or ruggedness of surface; irregularity; want of uniformity or smoothness; as, the *unevenness* of a road. — Changeableness; turbulence; variability; as, *unevenness* of temper.

Unexamined, *a.* Without precedent; unparalleled; having no example or similar case; unique; unprecedented; as, God's *unexamined* mercy.

Unexceptionable, (-sép'shun-ə-bl',) *a.* Not open to any exception, cavil, or objection; unobjectionable; faultless; excellent; as, an *unexceptionable* match.

Unexpected, *a.* Not looked for; coming without notification or warning; not anticipated; not provided against; sudden; as, *unexpected* guests.

Unexperienced, *a.* Same as INEXPERIENCED, *q. v.*

Unfailing, *p. a.* Not failing; not liable to fail; not liable to become exhausted; reliable; certain; as, *unfailing* hope.

Unfair, *a.* Without fairness or impartiality; not honest or straightforward; disingenuous; using or comprehending trick, quibble, or artifice; unjust; unequal; proceeding from treachery or dishonesty; as, to take an *unfair* advantage of a woman's confidence.

Unfairness, *n.* State or quality of being unfair; employment of trick, quirk, or artifice; injustice; want of equitableness; dishonest or disingenuous conduct or practice; as, the *unfairness* of favoritism.

Unfaithful, *a.* Deficient in faithfulness; not observant of promises, vows, allegiance, or duty; violating trust or confidence; treacherous; perfidious; not performing the proper duty assigned and belonging to; negligent of ties of honor; as, an *unfaithful* subject, citizen, soldier, servant; an *unfaithful* wife, a man *unfaithful* to his word.

Unfashionable, *a.* Out of the fashion.

Unfathomable, *a.* That cannot be fathomed; not to be sounded with a line of ordinary length; very deep; as, *unfathomable* depths, an *unfathomable* intellect.

Unfavorable, *a.* Not favorable; unpropitious; inauspicious; not disposed or adapted to countenance, encourage, or support; not kind or obliging; repellent; discouraging; as, *unfavorable* tidings.

Unfavorably, *adv.* Unpropitiously; in an unfavorable manner.

Unfeeling, *a.* Insensible; cold; destitute of feeling or sensibility. — Lacking warmth or sensibility of heart or disposition; not having kind feelings or sympathies; hard-hearted; callous; cruel; as, an *unfeeling* person.

Unfeigned, (-fānd',) *a.* Not feigned, counterfeited, put on, or pretended; not hypocritical or assumed; real; genuine; sincere; veritable. — *Unfeigned* sorrow.

Unfetter, *v. a.* To loose from fetters, chains, bonds, or shackles; as, to *unfetter* a captive. — To free from restraint or dress; to allow free vent to; as, to *unfetter* the intelligence.

Unfinished, (-fin'isht',) *a.* Not finished; incomplete; not brought to an end or conclusion; imperfect; wanting the remainder; requiring the last hand or touch; as, an *unfinished* house, an *unfinished* work of art, an *unfinished* letter.

Unfit, *a.* Not fit, proper, or suitable; unqualified; inadmissible; as, a man *unfit* for his duties.

— *v. a.* To make unfit or unsuitable; to disable; to divest of the proper surroundings for anything; as, noise *unfits* a man for reflection. — To disqualify; to deprive of the necessary qualifications demanded by the case; as, intoxication *unfits* one for ladies' company.

Unfitness, *n.* State or condition of being unfit.

Unfix, *v. a.* To remove the fastening, shackle, or bond from; to set free from any restraint; to detach from something that holds; to unning; to unsettle; as, to *unfix* a misplaced affection. — To dissolve; to fluidize, as snow or ice.

Unfold, *v. a.* To lay open the folds of; to spread out; to expand; as, to *unfold* a napkin. — To lay open to view or contemplation; to disclose; to reveal; to declare; to tell; to display; to illustrate; as, to *unfold* a mystery, to *unfold* one's mind to another, to *unfold* the characteristic features of a doctrine, &c. — To set free from a fold or pen; as, to *unfold* sheep.

— *v. n.* To open; to become disclosed, displayed, or developed.

Unformed, *p. a.* With the form maimed or destroyed; decomposed or resolved into parts. — Not having received form; deficient in systematic shape, order, or relationship.

Unformed star, (*Astron.*) A star not included in any of the constellations.

Unfortunate, *a.* Wanting in good fortune; unprosperous; unsuccessful; unlucky; untoward; attended with mishap, calamity, or trouble; as, an *unfortunate* man, an *unfortunate* event.

Unfounded, *a.* Not founded or based; not built or established. — Hence, by analogy, without basis or bottom; having no foundation; idle; vain; empty; as, an *unfounded* rumor, *unfounded* expectations.

Unfrequented, *a.* Seldom, or rarely, visited, or resorted to by people at large; as, an *unfrequented* island.

Unfriendly, (-frēnd'-) *a.* Not on terms of friendship, kindness, or benevolence; antagonistic; inimical; as, *unfriendly* relations. — Unfavorable; unpropitious; not adapted to promote the well-being of any object; as, *unfriendly* weather at sea.

Unfrock, *v. a.* To strip off the frock; — hence, specifically, to divest of sacerdotal character or privilege; as, an *unfrocked* ecclesiastic.

Unfruitful, *a.* Not prolific; not producing offspring; barren; as, an *unfruitful* wife. — Not yielding fruit; not fructiferous; as, an *unfruitful* tree. — Infertile; not productive; sterile; as, an *unfruitful* soil. — Unproductive of good effects, works, or consequences; as, an *unfruitful* career.

Unfruitfulness, *n.* State or quality of being unfruitful.

Unfurl, *v. a.* To expand; to spread out; to loose and unfold; as, to *unfurl* sails, to *unfurl* a standard, or regimental color.

Ungainly, *a.* [A. S. *ungægne*.] Inexpert; lacking grace or dexterity; clumsy; awkward; uncomely; as, a man of *ungainly* figure.

Unga'va (or South) Bay, in British N. America, an inlet of the Atlantic, in the N. of Labrador, S. of Hudson's Strait.

Ungear, *v. a.* To unharness; — also, to throw out of gear, as machinery.

Ungenerous, (-jén'er-ūs',) *a.* Deficient in generosity; illiberal; lacking noble or gentle instincts; ignoble; unkind.

Ungodliness, *n.* State or quality of being ungodly; impiety; profanity; wickedness; godlessness; disregard of God and religious ordinances; want of reverence.

Ungodly, *adv.* Neglecting the fear and worship of God, or violating his commands; not pious or godly; irreligious; wicked; sinful; as, an *ungodly* reprobate. Polluted by sin or wickedness; as, "an *ungodly* day."

Unglvar, (*oong'var*), a town of Hungary, on the river Ungh, 82 m. from Debreczin; pop. 8,500.

Ungovernable, *a.* Deficient of government or control; that cannot be brought under subjection; that cannot be ruled or restrained; licentious; unbridled; wild; furious; as, a woman of *ungovernable* temper, a man of *ungovernable* passions.

Ungraceful, *a.* Lacking grace and harmony; deficient in ease and dignity; wanting beauty or elegance; without good breeding or politeness; without polish or refinement; awkward; gauche; clumsy; as, *ungraceful* manners.

Ungracious, (-grā'shus',) *a.* Deficient in grace or graciousness; manifesting no amenity of disposition, or kindness of heart; unacceptable; brusque; uncivil; disagreeable; offensive; unpleasing; not favored; as, to meet an *ungracious* reception.

Ungrateful, *a.* Wanting in gratitude for favors; not making returns, or making ill returns, for favor or kindness; as, an *ungrateful* mind. — Disagreeable; harsh; producing an ill effect; as, discordant sounds are *ungrateful* to the ear.

Unqual, (*ung'qual*), **Ungnie'ular**, *a.* [From Lat. *unguis*, a nail, claw, hoof.] Pertaining, or having reference, to a nail, claw, or hoof. — Having a process in the form of a nail, hoof, or claw, as certain bones of the feet.

Unguent, (*ung'went*), *n.* [Lat. *unguentum*, an ointment.] A soft composition, in the form of ointment, of a consistence more or less analogous to that of lard. They are used chiefly as local applications to ulcers and wounds, but are sometimes rubbed upon a part in cutaneous affections, and especially when it is desired that the constituents of the ointment shall be absorbed.

Ungnitate, **Ungnie'ulated**, *a.* Possessing claws.

(*Bot.*) Furnished with a claw, forming a slender base, as the petals of soap-wort.

Ungniferous, *a.* [Lat. *unguis*, nail, claw, and *ferre*, to produce.] Producing, possessing, or supporting claw-like processes.

Unguiform, *a.* [Lat. *unguis*, and *forma*, form.] Claw-shaped.

Unguinous, (-gwin'us',) *a.* [Lat. *unguinus*.] Oily; unctuous; oleaginous; consisting of, or resembling, fatty matter.

Unguis, (*ung'wis*), *n.* [Lat., nail, claw, hoof.] The nail of the foot or finger; the hoof of a beast; the claw of a bird.

(*Bot.*) The narrow part, or claw, of the base of a petal, taking the place of the footstalk of a leaf, of which it is a modification; — also written *ungula*.

Os unguis. (*Anat.*) A small, quadrilateral, very thin, and semi-transparent base, which has been compared to a human nail, and is situated at the anterior and inner part of the orbit. It aids in the formation of the lachrymal gutter and the nasal duct.

Ungula, *n.* [Lat., a claw, hoof.] (*Surg.*) A kind of hooked instrument for extracting a dead fetus from the womb.

(*Bot.*) See UNGUIS.

(*Geom.*) A solid formed by cutting off a part from a cylinder, cone, or other solid of revolution by a plane passing obliquely through the base. — *Spherical ungula*, a part of a sphere bounded by two planes intersecting in a diameter and by a lune of the surface.

Ungulate, *a.* [Lat. *ungulatus*.] Hoof-shaped. — Having hoofs; as, *ungulate* quadrupeds.

Unhallowed, (-lōd',) *a.* Not hallowed or sanctified; hence, impure; profane; wicked; as, *unhallowed* lust.

Unhandy, *a.* Not handy, expert, or dexterous; awkward; as, an *unhandy* workman. — Inconvenient; as, an *unhandy* position for reporting.

Unhang, *v. a.* To strip of hangings, as an apartment. — To take from its hinges, as a gate.

Unhappy, *a.* Not happy, prosperous, or fortunate; unlucky; as, things have taken an *unhappy* direction. — Causing a degree of misery or wretchedness; as, his absence makes her *unhappy*. — Characterized by infelicity; bringing calamity; evil; untoward; as, an *unhappy* marriage.

Unharness, *v. a.* To loose from gear or harness; as, to *unharness* a horse. — To divest of armor or accoutrements; as, to *unharness* a mailed knight.

Unhead, *v. a.* To remove the head from; as to *unhead* a barrel.

Unhealthiness, *n.* State or condition of being unhealthy; unsoundness; habitual weakness or indisposition; — used in respect to persons. — Want of vigor; lack of stamina; as, the *unhealthiness* of plants or vegetation. — State of being unpropitious or unfavorable to health; insalubrity; as, the *unhealthiness* of a climate.

Unhealthy, *a.* Destitute of health, soundness, or vigor; wanting tone; constitutionally weak or infirm; as, an *unhealthy* person, *unhealthy* vegetation. — Rife with disease or malaria; sickly; injurious to the possession of health; as, the *unhealthy* slums of a great city. — Insalubrious; unwholesome; adapted to generate disease; as, an *unhealthy* country. — Morbid; not proceeding from natural health, vigor, or soundness; as, an *unhealthy* mind.

Unheard, *a.* Not heard; not caught by the ear; not vouchsafed an audience; as, their cries were *unheard*, his petition was *unheard*. — Obscure; unknown by fame; not in vogue, as a man of genius.

Unheard-of, unprecedented; strikingly novel or unique; as, an *unheard-of* prodigy.

Unhesitatingly, *adv.* Without hesitation or doubt; promptly.

Unhinge, (-hin'j',) *v. a.* To take from the hinges, as a door or gate.

— To throw out of place by violence; to loosen by convulsion; as, "hills *unhinged*." *Blackmore*. — To derange; to upset; to unsettle; to render unfixed or wavering; as, troubles *unhinge* the mind.

Unholy, *a.* Not sacred or holy; unhallowed; not revered or sanctified; profane; impious; wicked; not consecrated; not ceremonially purified.

Unhoped, (-hōpt',) *a.* Not expected; not so probable as to excite hope.

Unhoped-for, not anticipated with hope; unlooked for; as, *unhoped-for* success.

Unhurt, *a.* Not hurt; free from harm or injury; safe and sound; as, to come off *unhurt*.

Uniax'al, **Uniax'ial**, *a.* [Lat. *unus*, one, and *axis*, an axis or axle.] (*Crystallog.*) Having only one axis of double refraction, as certain crystals.

Unicap'sular, *a.* (*Bot.*) With one capsule only to each flower.

Unicellular, *a.* Possessing, or consisting of, but one cell; as, a *unicellular* animal.

Unicorn, *n.* [Lat. *unicornis* — *unus*, one, and *cornu*, a horn.] A beast so called in the English version of the Old Testament (Heb. *ram*), and now commonly understood to be the rhinoceros. The unicorn of Pliny, however, has the head of a hart, the feet of an elephant, the tail of a boar, while the rest of the body resembles a horse. Aristotle, Elian, and all the classical writers on animals, mention the unicorn. The traveller Ludovicus Romanus asserts that he saw two unicorns kept alive in the temple of Mecca. Many strange virtues were attributed of old to the horn of the *U.*, particularly against poison; but the horns preserved in collections, and to which that name was given, belonged either to the rhinoceros, or to the narwhal or sea-unicorn.

(*Her.*) A fabulous animal, having the figure of a horse, with a single horn issuing from its forehead; — frequently represented as a supporter, as in the royal arms of Great Britain, (Fig. 1134.)

Unicorn'ous, *a.* [Fr. *unicorne*; Lat. *unicornis*.] One-horned.

Unicorn-root, *n.* (*Bot.*) See HELOXIAS.

Unie, (*oo'ne*), an island in the Adriatic Sea, 15 m. from Istria. It is 6 m. long, with a breadth of 2. Pop. unascertained.

Unieh, (*oo'ne-ai*), (anc. *Enoe*), a seaport of Asia Minor, on the coast of the Black Sea, 25 m. from Sansouu. The inhabitants consist of Turks, Greeks, and Armenians, who carry on a considerable trade with Constantinople and the Crimea. Pop. unascertained.

Unifacial, (-fū'shal',) *a.* Having one face or front only, as certain corals.

Unifie, *a.* Unifying; making one.

Unification, (-kā'shun',) *n.* Act of unifying, or state of being unified; as, the *unification* of a people.

Unifilar, *a.* [Lat. *unus*, one, and *filum*, a thread.] One-threaded.

Uniflorous, (-flō'rus',) *a.* (*Bot.*) Bearing but a single flower.

Unifoliate, *a.* (*Bot.*) Bearing a single leaf; one-leaved.

Uniform, *a.* [Fr. *uniforme*; Lat. *uniformis* — *unus*, one, and *forma*, form.] Having invariably the same shape, form, manner, or characteristic qualities; as, heat maintained at a *uniform* temperature. — Consonant; partaking of the same form with others; conforming to one rule or mode; not variable; as, *uniform* habits or practices. — Undeviating; regular; constant; always self-consistent; not different; alike; as, my political opinions have always been of a decided and *uniform* cast. — *Uniform matter*, homogeneous matter. — *Uniform motion*, equal motion.

— *u.* A dress of the same kind with others; especially, the particular dress worn by persons belonging to the army, navy, or any body of men incorporated by authority; as, regimental *uniform*, in dress *uniform*, an officer in naval *uniform*, &c. — *In full uniform*, wearing the whole of the regulation uniform; not in undress; as, an officer *in full uniform*. — *Uniform sword*, an officer's sword of the regulation pattern prescribed for the army or navy.

Uniformitarian, *n.* (*Geol.*) One who believes that the causes now in operation are sufficient to account for all geological changes.

Uniformity, *n.* [Fr. *uniformité*.] Quality of being uniform; even tenor; absence of difference or varia-

tion; self-resemblance at all times. — Conformity to a pattern, rule, or example; resemblance, agreement, or consonance; as, the *uniformity* of speech-making at public dinners. — Sameness; correspondence; consistency; as, the *uniformity* of national prejudices. — Likeness between the constituent parts of a whole; as, the *uniformity* of sides in a quadrangle. — Continued or unvaried sameness or similitude.

(*Fine Arts.*) Resemblance in shape between the correspondent parts of a subject.

Act of Uniformity. (*Eng. Hist.*) An Act of Parliament, passed in 1562, regulating the form of public prayers, administration of the sacraments, and other ceremonies of the Church of England.

Uniformly, *adv.* In a uniform manner; with even tenor; without variation; without diversity of one from another; maintaining consistency throughout; as, a disposition *uniformly* amiable.

Unify, *v. a.* [*Lat. unus*, one, and *facere*, to make.] To make one; to unite; to form into a unit. (*r.*)

Unigenitus, (*yu-ni-jen'e-tus*.) [*Lat.*, only-begotten.] (*Ecc. Hist.*) The name of a celebrated papal bull issued by Clement XI. in 1713, and so called from its commencing *Unigenitus Dei Filius*. It was directed against the "Moral Reflections on the New Testament," by Père Quesnel, a celebrated Jansenist, and produced a great commotion in France, many of the clergy refusing to accept of it.

Unjigate, *a.* [*Lat. unus*, one, and *jugum*, yoke.] (*Bot.*) Applied to pinnate leaves whose petiole bears one pair of leaflets.

Unilabiate, *a.* [*Lat. unus*, and *labium*, a lip.] (*Bot.*) Noting irregular, monopetalous corollas having only one lip.

Unilateral, *a.* [*Lat. unus*, and *latus*, lateris, a side.] Belonging or relating to one side.

(*Bot.*) Arranged on, or turned towards, one side only; one-sided.

Unilateral, *a.* [*Lat. unus*, and *littera*, a letter.] Consisting of one letter only.

Unilocular, *a.* [*Lat. unus*, and *loculus*, a cell.] (*Bot.*) Noting seed-vessels not separated into cells.

(*Conchol.*) Applied to cells which are not divided into chambers.

Unimpeachable, *a.* That cannot be impeached; free from stain; blameless; irreproachable; as, a person of *unimpeachable* character.

Unimproved, (*-proov'd*), *a.* Wanting in improvement; not made better or wiser; not advanced in knowledge, manners, or excellence. — Not used or employed. — Not put to the best advantage; as, he let his chance pass *unimproved*. — Not placed under tillage or cultivation; as, *unimproved* land.

Unincumbered, *a.* Without burden, incumbrance, or drawback.

(*Law.*) Free from any mortgage, rent-charge, or other debt or incumbrance; as, an *unincumbered* property.

Uninterested, *a.* Not interested; having nothing at stake either to win or to lose; as, he is *uninterested* in the business. — Without having the mental or emotional faculties engaged; as, I am *uninterested* in this book.

Uninterrupted, *a.* Without break or interruption; not disturbed by intrusion or avocation; continuous; incessant; as, a life of *uninterrupted* prosperity.

Uniola, *n.* (*Bot.*) A genus of plants, order *Gramineae*. They are N. American herbs of no agricultural value, but of extraordinary beauty, found on the seacoast, from Long Island, N. Y., to Virginia and southward. They are 2-3 feet high, and have tough perennial roots, from the creeping root-stocks of which issue tall erect culms, with flat, lanceolate, broad leaves, and broad many-flowered spikelets of closely appressed flowers.

Union, (*yoon'yun*), *n.* [*Fr.* and *Sp.*; *It. unione*; *L. Lat. unio*, from *unus*, one.] Oneness; unity; act of joining two or more things into one, and thus forming a compound body or a mixture; or, the junction or coalition of things thus united; combination. — Concord; agreement and conjunction of mind, will, affections, or interest; harmony; solidarity; as, *union* is strength. — A federal pact; a confederation; a league; a consolidated body; that which is formed by a combination or coalition of parts or members; as, the American *Union*. — The upper inner corner of an ensign, as distinguished from the rest of the flag, which is known as the *fly*. The *union* of the American flag consists of a blue field dotted with white stars, properly equal in number to that of the States. The *union* of the British ensign is a similar field emblazoned with the combination crosses of St. George, St. Andrew, and St. Patrick, emblematic of the union of the three kingdoms of England, Scotland, and Ireland; — also called *union-jack*.

(*Theol.*) See *HYPOSTATIC*.

Legislative Union. (*Eng. Hist.*) The union of the kingdoms of Great Britain and Ireland in 1800. — *Union*, or *Act of Union*, the act by which the kingdoms of England and Scotland were incorporated into one in 1707.

Union by the first intention. (*Surg.*) See *INTENTION*.

Union down. (*Naut.*) A signal of distress made by reversing the flag, or turning its union downwards.

Union, *The American.* The federated republic of States known as the UNITED STATES (*q. v.*).

Union, in Alabama, a post-village of Greene co., 33 m. S.S.W. of Tuscaloosa.

Union, in Arkansas, a S. co., bordering on Louisiana; area, 1,138 sq. m. *Rivers.* Washita; also Sulphur creek, and the North Fork of Bayou d'Arbonne. *Surface*, hilly; *soil*, productive. *Cap.* El Dorado. *Pop.* (1897) 15,850. — A township of Ashley co. — Also the name of 11 townships in Conway, Fulton, Greene, Independence, Izard, Jackson, Lee, Marion, Newton, Van Buren, and White counties.

Union, in California, a township of Humboldt co.

Union, in Connecticut, a post-township of Tolland co., 33 m. N. E. of Hartford.

Union, in Georgia, a N. county, bordering on North Carolina; area, 325 sq. m. *Rivers.* Hiawasse, Notley, and Toccoa. *Surface*, traversed by the Blue Ridge; *soil*, fertile in the valleys. Among its remarkable features is Pilot Mountain. Indian corn, grass, and pork are the staple products. *Min.* Gold, iron, granite, and marble. *Cap.* Blairsville. *Pop.* (1897) 8,850.

Union, in Illinois, a S. county, bordering on the Mississippi; area, 400 sq. m. It is drained by Clear creek. *Surface* is undulating or hilly, and is extensively covered with forests of the ash, hickory, oak, maple, tulip-tree, &c. The soil is fertile. Indian corn, wheat, oats, pork, and grass are the staple products. This county is intersected by the Illinois Central and the Chicago & Texas Railroads. *Minerals.* Iron, lead, copperas, stone-coal, chalk, alum, and porcelain-clay. *Capital.* Jonesboro. *Pop.* (1897) 23,230.

— A township of Fulton co.

— A township of Livingston co.

— A post-village of McHenry co., 62 m. N.W. of Chicago.

Union, in Indiana, an E. county, bordering on Ohio; area, 170 sq. m. It is traversed by the East Fork of Whitewater River. *Surface*, level in the E. and undulating in the W.; *soil*, very fertile. *Min.* Limestone. *Cap.* Liberty. *Pop.* (1897) 9,100. — A township of Adams county. — A township of Bartholomew county.

— A township of Clarke county. — A township of Crawford county. — A township of De Kalb county. — A township of Delaware county. — A township of Elkhart county. — A township of Fulton county. — A township of Hendricks county. — A township of Howard county. — A township of Huntington county. — A township of Johnson county. — A township of La Porte county. — A township of Madison county. — A township of Marshall county. — A township of Miami county. — A township of Montgomery county. — A township of Ohio county. — A township of Parke county. — A township of Perry county. — A township of Porter county. — A post-village of Randolph county, 47 m. N.W. of Dayton Ohio. — A township of Rush county. — A township of St. Joseph county. — A township of Shelby county. — A township of Union county. — A township of Vanderburg county. — A township of Wells county. — A township of White county. — A township of Whitley county.

Union, in Iowa, a S.S.W. county; area, 432 sq. m. *Rivers.* Grand and Platte. *Surface* is undulating or nearly level, and is diversified with prairies and woodlands. The soil is fertile. Indian corn, oats and hay are the staple products. This county is traversed by the Chicago, Burlington & Quincy Railroad. *Cap.* Creston. *Pop.* (1895) 17,043. — A township of Appanoose county. — A township of Benton county. — A township of Boone county. — A township of Dallas county. — A township of Davis county. — A township of Delaware county. — A township of Des Moines county. — A township of Floyd county. — A post-village and township of Hardin county. — A township of Harrison county. — A township of Jackson county. — A township of Johnson county. — A township of Louisa county. — A township of Lucas county. — A township of Mahaska county. — A township of Marion county. — A township of Monroe county. — A township of Poweshiek county. — A township of Story county. — A township of Union county. — A township of Van Buren county. — A township of Warren county. — A township of Wayne county.

Union, in Kansas, a village and flourishing township of Rush co., 15 m. S.W. of Lacrosse.

Union, in Kentucky, a N.W. county, bordering on the Ohio River; area, 380 sq. m. It is bordered on the S.W. by Tradewater creek, and on the N. E. by Highland creek. *Surface* is partly hilly, and in some parts nearly level. The soil is fertile. Indian corn, tobacco, wheat, cattle, and pork are the staple products. This county has plenty of timber. *Min.* Bituminous coal and sulphur. *Cap.* Morgantown. *Pop.* (1897) 19,160.

Union, in Louisiana, a N. parish, bordering on Arkansas; area, 905 sq. m. *Rivers.* Washita; also d'Arbonne and L'Anse la Poudre. *Surface* is moderately hilly, and a large part of it is covered with forests of pine, oak, hickory, and other trees. The soil is fertile. Cotton, Indian corn, cattle, and pork are the staple products. *Cap.* Farmersville. *Pop.* (1897) 18,180.

Union, in Maine, a post-town of Knox county, 28 m. S.E. of Augusta.

Union, in Michigan, a township of Branch county.

Union, in Minnesota, a township of Houston co., about 10 m. S.W. of La Crosse.

Union, in Mississippi, a N. county; area, 424 sq. m. It is drained by the Tallahatchee River and Oldtown creek. The surface is extensively covered with forests of the beech, hickory, magnolia, oak, tulip-tree, &c. The soil is fertile. Cotton and Indian corn are the staple products. *Cap.* New Albany. *Pop.* (1897) 16,060.

Union, in Missouri, a post-village, cap. of Franklin county, 55 m. W. of St. Louis. — A township of Iron county. — A township of Marion county. — A township of Monroe county. — A township of Randolph county. — A township of Washington county.

Union, in New Jersey, a N.E. county; area, 192 sq. m. It is bounded on the E. by Newark Bay and Staten Island Sound, and on the N.W. by the Passaic River. It is drained by the Rahway River. The surface is nearly level, except in the N.W. The soil is fertile. Butter, hay, Indian corn, and potatoes are the staple products. This county is intersected by the Central Railroad of New Jersey and the Pennsylvania Railroad. *Cap.* Elizabeth. *Pop.* (1895) 85,404. — A village and township of Hudson county. — A township of Hunter-

don county. — A township of Ocean county. — A post-village and township of Union county, about 46 m. N.E. of Trenton.

Union, in New York, a post-village and township of Broome county, 224 m. N.W. of New York city.

Union, in North Carolina, a S. county, bordering on South Carolina; area, 640 sq. m. It is drained by Richardson and Warsaw creeks. *Surface*, hilly; *soil*, only partially productive. *Min.* Gold. *Cap.* Monroe. *Pop.* (1897) 22,590.

Union, in Ohio, a W. central county; area, 445 sq. m. It is drained by Boques, Darby, Mill and Rush creeks. *Surface*, level, and heavily timbered; *soil*, fertile. *Min.* Limestone. *Cap.* Marysville. — A township of Auglaize county. — A post-township of Belmont county. — A township of Brown county. — A township of Butler county. — A township of Carroll county. — A township of Champaign county. — A township of Clermont county. — A township of Clinton county. — A township of Fayette county. — A township of Hancock county. — A township of Highland county. — A township of Knox county. — A township of Lawrence county. — A post-township of Licking county. — A township of Logan county. — A township of Madison county. — A township of Mercer county. — A township of Miami county. — A township of Morgan county. — A township of Muskingum county. — A township of Pike county. — A township of Putnam county. — A township of Ross county. — A township of Scioto county. — A township of Tuscawawas county. — A post-township of Union county. — A township of Van Wert county. — A village and township of Warren county. — A township of Washington county.

Union, in Oregon, a N.E. county, bordering on Idaho. *Rivers.* Grande Ronde, and Lewis or Snake River. *Surface*, hilly; *soil* in the valleys is fertile, and adapted to pasturage. *Min.* Gold. Volcanic rocks are found in this county. *Cap.* Union. *Pop.* (1897) 13,200.

Union, in Pennsylvania, an E. central county; area, 306 sq. m. *Rivers.* Susquehanna and its W. Fork; also, Buffalo, Penn and White Deer creeks. *Surface*, traversed by the Buffalo, Jack, Nittany and Shade ridges of the Allegheny Mountains; *soil*, fertile in the valleys. There are extensive forests of the oak, hickory and other trees. *Minerals.* Iron and limestone. *Cap.* Lewisburg. — A township of Adams county. — A township of Bedford county. — A township of Berks county. — A township of Centre county. — A township of Clearfield county. — A township of Erie county. — A township of Huntingdon county. — A township of Jefferson county. — A township of Lawrence county. — A township of Lebanon county. — A township of Luzerne county. — A township of Mifflin county. — A township of Schuylkill county. — A township of Tioga county. — A village and township of Union county. — A village and township of Washington county, about 15 miles S. of Pittsburgh.

Union, in Rhode Island, a village of Providence county, abt. 15 m. N.W. of Providence.

Union, in S. Carolina, a N. district; area, 500 sq. m. *Rivers.* Broad, Ennore, Pacolet and Tyger. *Surface*, hilly; *soil*, productive. *Min.* Gold, iron and granite. *Cap.* Union. *Pop.* (1897) 26,630.

Union, in West Virginia, a post-village, cap. of Monroe co., about 200 m. S. of Wheeling.

Union, in Tennessee, a N.N.E. county; area, 230 sq. m. *Rivers.* Clinch and Powell. *Surface*, hilly; *soil*, generally fertile. *Cap.* Maynardville. *Pop.* (1897) 12,150.

Union, in Utah, a post-village of Salt Lake county, 12 m. S.E. of Salt Lake City.

Union, in Wisconsin, a township of Pierce county. — A post-village and township of Rock county, 22 m. S.E. of Madison. — A township of Vernon county. — A township of Waupaca county.

Union, in Central America, a seaport-town of San Salvador, on the W. of Conchagua Gulf, 70 m. E.S.E. of San Salvador.

Union Centre, in New York, a post-village of Broome county.

Union Centre, in Wisconsin, a post-village of Juneau county, abt. 60 m. N.W. of Madison.

Union City, in Iowa, a post-village of Union county, abt. 15 m. S.W. of Afton.

Union City, in Michigan, a post-village of Branch county, 115 m. S.W. of Detroit.

Union City, in Ohio, a village of Darke county.

Union Corners, in Iowa, a village of Van Buren county, 90 m. S.S.W. of Iowa City.

Union Cross Roads, in New Jersey, a village of Gloucester county, abt. 4 m. S.E. of Woodbury.

Union Depot, in Pennsylvania, a post-village of Dauphin county, abt. 30 m. N. of Harrisburg.

Union Falls, in New York, a post-village of Clinton county, abt. 160 m. N. of Albany.

Union Furnace, in Pennsylvania, a village of Union county.

Union Hall, in Virginia, a post-village and township of Franklin county, 200 m. W.S.W. of Richmond.

Unionidae, *n. pl.* (*Zoöl.*) The Pond and River Mussel family, embracing a large number of bivalve mollusca, distinguished by having two teeth in each valve.

Union Island, in the British W. Indies, one of the Grenadines, 5 m. N. of Carriacou.

Unionist, *n.* An advocate or supporter of union or unity; particularly, a federalist, or upholder of a confederation of States.

Unionist, *a.* Pertaining to, or done in the character of federal loyalty; tending to support, promote or preserve union; confederative.

Unionite, *n.* [From Unionville, in Pennsylvania, where it occurs.] (*Min.*) A white lime-epidote, resembling soda-spodumene in general appearance.

Union-jack, *n.* (*Naut.*) A small flag containing only the union without the fly, and usually hoisted at the ship's bowsprit; — the word *jack* is probably derived from the surcoat or *jacque* of the English man-at-arms, which, during the Middle Ages, was usually emblazoned with the red cross of St. George. See **UNION**.

Union-joint, *n.* A joint in the form of the letter T, for uniting pipes of iron, &c.

Union League, *n.* (*Am. Hist.*) A political organization formed during the late Civil War in most of the cities of the North, to assist pecuniarily and otherwise the cause of the Union. In New York, Philadelphia, and other large cities they have handsome club-houses, with a social as well as political organization.

Union Mills, in *Indiana*, a post-village of La Porte co., 11 m. S.S.W. of La Porte.

Union Mills, in *Iowa*, a post-village of Mahaska co., abt. 10 m. W. of Oskaloosa.

Union Mills, in *Maryland*, a post-village of Carroll co., 65 m. N.N.W. of Annapolis.

Union Mills, in *New York*, a post-village of Fulton co., 40 m. N.W. of Albany.

Union Mills, in *Pennsylvania*, a post-village of Erie co., 22 m. S.E. of Erie.

Union Mills, in *Virginia*, a post-village of Fluvanna co., 75 m. N.W. of Richmond.

Union Pacific Railroad, a railway crossing the W. part of the N. American continent from Omaha City, Nebraska, to Ogden, a distance of 1,032 m., and by connecting lines forming a direct course of communication between the Atlantic and Pacific Oceans. This great work, commenced in 1863, was completed in May, 1869. The entire length of the road between Omaha and San Francisco, is 1,914 m. The obstacles presented during its construction were found to be less than had been anticipated, the gradients not exceeding 96½ feet per mile in the mountainous sections, and that only for short distances, while an altitude of over 8,000 feet is attained by gradual ascent. Omaha City, the starting-point E., is 760 feet above sea-level, while Cheyenne, 516 m. westward, is 5,921 feet, so that the total rise is 4,961 feet in 516 m., or an average of 96 feet per mile. Practically, the road from Omaha to Cheyenne is a straight line with gradients ruling below 30 feet, and averaging about 10 feet per mile. The highest point attained on this route is at Sherman Station, 8,235 feet above the sea. The only difficulty to be apprehended in the regular working of the line is from snow-drifts in the mountainous regions; so far, however, no impediment has arisen from this source, and ample protection is secured against exposure to such drifts by the erection of immense snow-sheds. Jan., 1880, the Union Pacific, the Kansas Pacific, and the Denver Pacific Companies were consolidated into one, to be known as the **UNION PACIFIC RAILWAY COMPANY**. The length of the lines controlled by this co. was reported, in 1897, at 4,442 m., of which 1,822½ m. belonged to the U. P. proper.

Union Point, in *Geo.*, a p. v. of Greene co.

Unionport, in *Ohio*, a p. v. of Jefferson co.

Union River, in *Maine*, flows into the Atlantic, opposite Mount Desert Island, from Hancock co.

Union Springs, in *Alabama*, a post-vill. and twp. of Bullock co., 40 m. S.E. of Montgomery.

Union Springs, in *New York*, a post-village of Cayuga co., 10 m. S.W. of Auburn.

Union Square, in *New York*, a post-village of Oswego co., 12 m. E. of Oswego.

Union Square, in *Pennsylvania*, a post-village of Montgomery co., 92 m. E. of Harrisburg.

Uniontown, in *Alabama*, a post-village of Perry co., 60 m. S. of Tuscaloosa.

Uniontown, in *California*, a village of El Dorado co., 8 m. N.W. of Placerville.

Uniontown, in *Iowa*, a post-village of Delaware co., abt. 8 m. S. of Delhi.

Uniontown, in *Kentucky*, a post-village and township of Union co., 244 m. S. of Louisville.

Uniontown, in *Maryland*, a post-village of Carroll co., 40 m. N.W. of Baltimore.

Uniontown, in *Ohio*, a post-village of Belmont co., 114 m. E. of Columbus.

—A village of Stark county, 132 m. north-east of Columbus.

Uniontown, in *Pennsylvania*, a post-borough, cap. of Fayette county, about 45 miles southeast of Pittsburgh. Pop. (1897) 6,890.

Uniontown, in *Pennsylvania*, a village of Lycoming co., 12 m. S. of Williamsport.

Union Vale, in *New York*, a township of Dutchess co., 12 m. E. of Poughkeepsie.

Union Village, in *New York*, a village of Broome co., abt. 20 m. N.W. of Binghamton.

—A village of Washington co., about 35 miles N.N.E. of Albany.

Union Village, in *Vermont*, a post-village of Orange co., 46 m. S.E. of Montpelier.

Union Village, in *Virginia*, a post-village of Northumberland co., 88 m. E.N.E. of Richmond.

Unionville, in *Connecticut*, a post-village of Hartford co., abt. 14 m. W. of Hartford.

Unionville, in *Georgia*, a post-village of Monroe co., 55 m. N.W. of Milledgeville.

Unionville, in *Indiana*, a post-village of Monroe co., abt. 9 m. N.E. of Bloomington.

Unionville, in *Iowa*, a post-town of Appanoose co., about 120 m. S.W. of Iowa City.

Unionville, in *Maryland*, a post-village of Frederick co., 67 m. N.W. of Annapolis.

Unionville, in *Missouri*, a post-town, cap. of Putnam county.

Unionville, in *Nevada*, a village, former cap. of Hum-

boldt county, about 165 miles north-east of Carson City.

Unionville, in *New Jersey*, a village of Atlantic co., abt. 13 m. E.N.E. of May's Landing.

Unionville, in *New York*, a post-village of Orange co., abt. 120 m. S.S.W. of Albany.

Unionville, in *Ohio*, a post-village of Lake co., 184 m. N.E. of Columbus.

Unionville, in *Pennsylvania*, a borough of Center co., 6 m. W. of Bellefonte.—A post-village of Chester co., 35 m. S.W. of Philadelphia.—A village of Lehigh co., 9 m. S. of Allentown.

Unionville, in *South Carolina*, a village, former cap. of Union co., 70 m. N.N.W. of Columbia.

Unionville, in *Tennessee*, a post-town of Bedford co., 46 m. S.S.E. of Nashville.

Unionville Centre, in *Ohio*, a post-village of Union co., 25 m. N.W. of Columbus.

Unionville, in *Ohio*, a post-village of Auglaize co., abt. 27 m. N.W. of Bellefontaine.

Uniovulate, *a.* (*Bot.*) Having one ovule only.

Uniparous, *a.* [*Lat. unus*, and *pario*, to bear.] Producing only one at a birth.

Uniped, *a.* [*Lat. unus*, and *pes, pedis*, a foot.] One-footed.

Unipersonal, *a.* Existing in a single person, as the Deity.

(*Gram.*) Used in one person only, particularly in the third person; as, a *unipersonal* verb.

Uniplicate, *a.* [*From Lat. unus*, and *plica*, fold.] Having, or consisting of, only one fold.

Unique, (*yu-neek'*) *a.* [*Fr.*, from *Lat. unicus* — *unus*, one.] Single in kind or excellence; without like, match, or equal; sole; as, a *unique* edition of a book.

—*n.* A thing without a match, like, or counterpart; as, "The phoenix, the *unique* of birds."

Uniradiated, *a.* [*Lat. unus*, and *radius*, ray.] One-rayed.

Uniseriate, *a.* With one row or series.

Uniserial, *a.* [*Lat. unus*, and *series*, a row.] Possessing but one line or series.

Unisexual, *a.* (*Bot.*) Same as **DICLINOUS**, *q. v.*

Unison, *n.* [*Fr. unisson*, from *Lat. unus*, one, and *sonos*, sound.] Accordance; consonance; agreement; harmony; concord; union.

(*Mus.*) Perfect agreement or identity in pitch of two or more musical notes; a consonance of two sounds equal to each other in gravity or acuteness, i. e., sounding the same note. — Absence of harmony, as in a piece or passage for several instruments or voices all performing the same part. — *In unison*, together; in agreement or accordance; as, to sing *in unison* with another.

—*a.* Sounding alone; as, "Voice, choral, or *unison*." *Milton*.

(*Mus.*) Sounded as one; as, a *unison* passage in a musical score.

Unison, in *Virginia*, a post-village of Loudoun co., 16 m. S.W. of Leesburg.

Unisonance, (*-nis'o-nans*) *n.* Coincidence of sounds.

Unisonant, *a.* [*Lat. unus*, and *sonans*, from *sono*, to sound.] Being in unison; having a coincident degree of gravity or acuteness.

Unisonous, *a.* Being in unison or accordance.

Unit, *n.* [*Fr. unité*; *Lat. unitas*, oneness, from *unus*, one.] One, or the least whole number, represented by the figure 1. — A single thing or person.

(*Math.*) A magnitude or number considered as a whole; — otherwise called *interval unit*.

Abstract unit. (*Arith.*) The unit of numeration; the discrete number expressed by 1, as distinguished from a *concrete* or *denominate unit*. — *Duodecimal unit*, a unit in the scale of numbers adding or reducing by twelves.

— *Fractional unit*, the unit of a fraction; as, for example, ¼ is the *unit* of the fraction ¾. — *Unit of measure*, the quantity of the same kind with which a quantity is compared; thus the unit of measure of lines is a line of known or assumed length, as one inch, one yard, &c.

(*Davis & Peck*). — *Unit of power*, in steam-engines, a horse-power, or the power required to raise 33,000 lbs. per foot per minute. — *Unit of work.* (*Mech.*) The measure of any amount of work, calculated by a pressure of 1 lb. per foot, the pressure acting in the direction in which the space is described.

Unitable, *a.* That may be united by growth or other means.

Unitarian, *n.* In philosophy, science, &c., one who opposes *dualism*. — A monotheist.

—*a.* Pertaining or having reference to Unitarians, or to their doctrines; as, *Unitarian* worship. — Pertaining or relating to a system of philosophy, science, &c., which is opposed to *dualism*.

Unitarianism, (*-izm*) *n.* The doctrine of Unitarians, who deny the divinity of Christ.

Unitarianize, *v. a.* To conform, or cause to conform, to Unitarian views in theology.

Unitarians, *n. pl.* (*Eccles. Hist.*) A sect of religionists who believe in the existence of only one great and supreme Being, possessed of the glory and attributes of divinity, as opposed to the *Trinitarians*, or those who hold that there are three persons in the Godhead. The U. differ greatly in the opinions which they hold regarding the nature of Christ. Some believe him to be the greatest of all created beings, endowed with great power and dignity, and existing before all worlds; others consider him to have had no existence previous to his birth on this earth, and to have been simply a man approved of God by miracles and wonders and signs, which God did in him. His mission, they generally consider, was to introduce a new moral dispensation, and his death they look upon, not as a sacrifice or atonement for sin, but as a martyrdom in defence of truth. They thus deny the necessity of an atonement, relying through obedi-

ence upon the mercy of God alone for salvation. Many of the modern U. hold that all mankind will be ultimately saved. Sabellius, in the 3d, and Arius in the 4th cent., held and propagated Unitarian notions. In the 16th century again, Faustus Socinus was very successful in diffusing similar doctrines; and in 1553, Servetus was burned by the instigation or consent of Calvin, for holding such views. In England, in the 16th and 17th centuries, similar sentiments prevailed, and in the beginning of the 18th many of the Presbyterian ministers embraced these opinions. In a short time their congregations generally adopted the same views, and thus many of the old Presbyterian chapels and endowments have become the property of Unitarians. Unitarianism in this country is substantially indigenous. After 1740, Arian views of the person of Christ were pretty widely diffused among the New England clergy; and in 1787 took place the first secession from the Episcopal Church, on the ground that those parts of the liturgy which imply a belief in the Trinity could not be any longer employed. From the first, the New England churches were remarkably free from the restraints of tests and creeds, and were thus prepared for the adoption of a liberal theology. By imperceptible degrees, many of them glided into Unitarianism; but it was not until about 1815 that the name began to be much used. At that time, the influence of Dr. Channing was thrown into the scale; and since then, Massachusetts, and particularly Boston, has been the stronghold of Unitarianism in America. Their form of government is essentially congregational, each congregation ruling itself, without regard to courts or synods. Since 1865, however, the churches have been brought into closer relations by means of national conferences. The denomination has now about 400 societies and 450 ministers in the States, and Divinity schools at Cambridge, at Meadville, Pennsylvania, and also at Cleveland, Ohio, beside a preponderating social, intellectual, and moral influence over Harvard; two weekly religious papers, two monthly magazines, a publishing house in Boston, which issues abt. 20,000 vols. of books a year; a leading interest in many charities and philanthropic associations; and it supports a number of home missionaries, and has two in India. But it has not confined its labors within its own lines, and its people generally feel little denominational zeal, but are rather proud of showing their interest in other denominations, and still more in objects of public concern and human welfare. It is this, in connection with the literature and high culture of the body, which has given it an interest which does not attach to its numbers.

Unitary, *a.* Of the nature of a unit; characterized by a unit or units; single; not double.

Unité, *v. a.* [*Fr. unir*; *It. unire*, from Low Lat. *unio*, *unitus*, from *unus*, one.] To join into one; to combine; to connect, as two things to form a whole; to attach; to make to adhere; as, to *unite* bricks by mortar. — To join in affection, fellowship, or interest; to conjoin; to associate; to cause to agree; to make uniform; to make to adhere; to connect by any moral or legal tie, as families by marriage, nations by treaty, states by confederation, men by consonance of opinions, &c.

—*v. n.* To become a unit or one; to be consolidated; to coalesce; to grow together; to combine by adhesion or mixture; as, the lips of a wound *unite* in healing. — To act in concert; to concur; to join in an act; as, "United we stand — divided we fall." — *Morris*.

United, *p. a.* Joined; attached; connected; allied.

United Brethren, *n. pl.* Same as **MORAVIANS**, *q. v.*

United Brethren in Christ, a Protestant Church, having no ecclesiastical connection with the Moravians, with whom they are frequently confounded. They arose among the Germans in Pennsylvania about 1760. They have but one grade of ministers, are Armenians in theology, and supply their churches with preaching on the itinerant plan. They have quarterly, annual, and general conferences. The highest ecclesiastical body is the General Conference, which meets every 4 years, and is composed of delegates from the conference districts elected by ballot, every member of the Church being entitled to vote. No adhering member of any secret combination, and no manufacturer, seller, or drinker of intoxicating liquors, can be a member of the Church. They regard a change of heart as an indispensable condition of membership. Baptism is administered by either sprinkling, pouring, or immersion, each member being permitted to exercise his own judgment in regard to the mode; infants are baptized when it is desired. Open communion at the Lord's table is practised. No manufacturer, seller, or drinker of intoxicating liquors can be a member of the church. In 1897 this denomination had about 250,000 members, and owned several institutions of learning, viz.: Lebanon Valley College, Annville, Pa.; Otterbein University, Westerville, O.; the Union Biblical Seminary, Dayton, O.; Hartsville University, Hartsville, Ind.; Green Hill Seminary, Poolsville, Indiana; Roanoke Seminary, Roanoke, Indiana; Western College, Western, Iowa; Lane University, Leocompton, Kansas; and Philomath College, Philomath, Oregon, &c.

United Provinces. See **HOLLAND**.

Unitedly, *adv.* With union or joint efforts; jointly; combinedly.

United States of America, The, a republic of N. America, occupying the entire width of the central portion of the continent, between Lat. 24° 30' and 49° N., and between Lon. 66° 50' and 124° 30' W. It is bounded on the N. by Canada, from which it is partly separated by the St. Lawrence river and the Great Lakes; S. by Mexico and the Gulf of Mexico; E. by the Atlantic, and W. by the Pacific Ocean. Its greatest

breadth, from Cape Cod on the Atlantic to the Pacific, near the parallel of Lat. 42°, is about 2,600 m., and its greatest length, from Madawaska in Maine to Key West in Florida, is about 1,600 m., its mean length being about 2,400 m., and its mean breadth about 1,300. The area of this immense territory, excluding Alaska, is given in the latest determinations of the Census Bureau as 3,025,600 sq. m. This includes 55,600 m. of water-surface—coast waters, bays, gulfs, sounds, &c., 17,200; rivers, creeks, &c., 14,500; lakes and ponds (excluding the Great Lakes), 23,900. The area of Alaska is estimated at 577,390 sq. m., making a total for the whole country of 3,602,990, being about 50,000 sq. m. larger than the entire continent of Europe. This great area is divided into 45 States, 1 District, and 5 Territories (including Indian Territory, as yet unorganized). The following table gives the populations and areas of those divisions for 1890:

Political Divisions.	Date of Adm.	Area in Sq. Miles.	Population.
Alabama.....	1819	52,250	1,513,017
Alaska.....		577,390	31,795
Arizona.....		113,020	59,620

West Virginia.....	1863	24,780	762,794
Wisconsin.....	1848	56,040	1,686,880
Wyoming.....	1890	97,890	60,705
TOTAL,		3,602,990	62,971,081

The entire territory belonging to the U. S. is divided into four great regions: 1st, the Atlantic slope; 2d, the vast basin of the Mississippi and Missouri; 3d, the country between the Rocky Mountains and the Sierra Nevada; and 4th, the Pacific slope. These divisions are formed by three mountain ranges, the Appalachian chain towards the E., the Rocky Mountains in the centre, and the Sierra Nevada on the W. The Appalachian or Alleghany chain is more remarkable for length than height. It extends from the State of Mississippi, N.E. through the States of Alabama, Georgia, Tennessee, N. Carolina, Virginia, Pennsylvania, New York, and Vermont, for about 1,200 m., at a variable distance of from 70 to 300 m. from the Atlantic, and consists of several parallel ranges of an average aggregate breadth of about 100 m. The mean height of the Alleghanies is not more than from 2,000 to 3,000 feet, about half of which consists of the elevation of the mountains above the adjacent plains, and the rest of the elevation of the latter above the sea. The White Mountains, in New Hampshire, which belong to this chain, reach a height of 6,226 feet. The Black Mountain, in North Carolina, rises 6,732 ft. above the sea; and other summits reach 6,000 feet and upwards. The Rocky Mountains are a prolongation of the great Mexican cordillera. Their average height may be about 8,500 ft. above the ocean, but some of their summits attain to from 12,000 to nearly 15,000 ft. About 10° or 12° W. from the Rocky Mountains is the great coast-chain of the Sierra Nevada, or Snowy Mountains, which extends, under different names and with different altitudes, from the peninsula of California to Alaska. It is of still greater elevation than the Rocky Mountains; some of its passes (within the U. S.) being about 9,000 ft., and some of its summits

16,000 ft. above the level of the sea. The region between these two vast mountain ranges comprises the E. and most extensive and sterile portion of Oregon and Washington; and also the great inland basin of Upper California, elevated from 4,000 to 5,000 ft. above the Pacific; and the country drained by the great river the Colorado and its affluents. W. of the Sierra is the Pacific slope. The country extending from the Atlantic nearly to the E. bank of the Mississippi was, in its native state, almost covered by a continuous forest; and a great part of it still remains in the same primitive condition. The portion of the basin of the Mississippi and Missouri, on their right bank, is by far the most extensive. It comprises: 1st, a tract of low, flat, alluvial, and well-wooded land, lying along the rivers, and stretching inwards from 100 to 200 m. or more; and 2d, the prairie and wild region, extending from that last mentioned, by a pretty equal ascent, to the Rocky Mountains. The prairies are of immense extent; but they are not, as is commonly supposed, level. Their surface, on the contrary, is rolling or billowy, sometimes swelling into very considerable heights. They are covered with long rank grass, being interspersed in Texas and the S. States with clumps of magnolia, tulip, and cotton trees, and in the N. States, with oak and black walnut. The prairies gradually diminish in beauty and verdure as they stretch towards the W., and become more elevated, till at length they imperceptibly unite with, and lose themselves in, a barren zone or belt skirting the foot of the Rocky Mountains. The Pacific slope, comprising the country W. of the Sierra Nevada, includes maritime California and the best and most fertile portions of the States of Oregon and Washington. Like the Atlantic coast, it is, for the most part, heavily timbered. — *Rivers.* The rivers of the U. S. are of prodigious magnitude and importance. Of those flowing S. and E. the principal are the Mississippi and Missouri, which with their tributaries, the Ohio, Arkansas, and Red River, give to the interior of the U. S. an extent of inland navigation, and a facility of communication, unequalled, perhaps, and certainly not surpassed, in any other continent. The Alabama and Appalachian flow, like the Mississippi, into the Gulf of Mexico: the Savannah, Roanoke, Potomac, Susquehanna, Delaware, Hudson, Connecticut, and Penobscot, into the Atlantic; and the Oswego, Cayahoga, and Maumee, into the great lakes of the St. Lawrence basin. Of the rivers which have their sources W. of the ridge of the Rocky Mountains, and their embouchure in the Pacific, or in some of its arms, the principal are the Columbia, which falls into the Pacific; the San Joaquin and Sacramento, which fall into the great bay of San Francisco; and the Colorado, which, with its tributaries, after draining a vast extent of country, falls into the Gulf of California. Next to the great lakes, in the basin of the St. Lawrence, the largest lake within the limits of the U. S. is the Great Salt Lake, located in Utah. Lake Champlain, between New York and Vermont, is also of considerable dimensions. Numerous small lakes occur in New York, Maine, and especially in Wisconsin and Minnesota. The coast of the Atlantic is indented by many noble bays, as those of Passamaquoddy, Massachusetts, Delaware, and Chesapeake; and several extensive and sheltered inlets are formed by the islands off the coast, the principal of which are Long Island Sound, near New York, and Albemarle and Pamlico Sounds, in N. Carolina. The coast of the Gulf of Mexico has also many valuable inlets and back waters, and there are some, though fewer, on the shores of the great lakes. The great bay of San Francisco, in California, on the Pacific, is one of the finest basins anywhere to be met with. Altogether, the U. S. is furnished with some of the best harbors in the world. — *Climate.* In a country extending through 24 degrees of lat., and nearly 60 of lon., the climate must, of necessity, vary considerably. In the N., along the British frontier, the winter is very severe; during this season the snow is sufficiently abundant in the New England States to admit of the use of sledges, and the ice on the rivers strong enough to bear the passage of horses and wagons. In the summer, on the contrary, the heat is proportionately oppressive. As far S. as New York, Pennsylvania, and New Jersey, the thermometer falls in winter below zero; rising, in summer, to nearly 100° Fahr. The climate of the Atlantic coast between Lat. 41° and 45° is colder in winter, and warmer in summer by nearly 10°, than the parts of Europe under the same parallels; and even at New Orleans, where the summer heats are intense, a winter seldom passes without frost. Snow, however, rarely falls further S. than Lat. 30°, nor is it often seen S. of the Potomac river, except on mountains. The mean annual temperature of Albany is about 49° Fahr.; of New York and Cincinnati, nearly 51°; of Philadelphia, 54°; of Natchez, 65°, and of Cantonment Brooke, in Florida, 72°. The prevalent winds are from the N.W., S.W., and S.E. The first is by far the driest and coldest, and predominates in winter; the second prevails throughout the basin of the Mississippi for most part of the year, except during about 2 months of the winter season. The N.E. wind brings moisture, particularly in the N. part of the Union. The temperature in the country along the Pacific is a good deal higher than along the corresponding latitudes on the E. coast. The year is there divided into two seasons: the *wet*, extending from April to November; and the *dry*. In the former, the rains are frequent and heavy. In the S. parts of the coast the dry season commences sooner and continues longer than in those more to the N.—*Vegetable prod.* The forests of the E. section of this great territory comprise 140 different kinds of trees, of which about 80 attain the height of 60 feet and upward. Among

them are numerous species of oak, ash, pine, the hickory and tulip tree, American cypress, the plane, and several kinds of magnolia and walnut. Apples, pears, cherries, and plums flourish in the N.; peaches, melons, and grapes, in the Middle States; and pine-apples, pomegranates, figs, almonds, and oranges, in the S. Maize is grown from Maine to Louisiana, and wheat throughout the Union; tobacco, as far N. as about Lat. 40°, and in the W. States S. of Ohio. Cotton is not much raised N. of 37°, though it grows to 39°. Rice is cultivated in S. Carolina, Georgia, Louisiana, and as far N. as St. Louis, in Missouri. The sugar-cane grows as high as 33°, but does not thoroughly succeed beyond 31° 30'. The vine and mulberry-tree grow in various parts of the Union; oats, rye, barley, in all the N., and the mountainous parts of the S. States; and hemp, flax, and hops, in the West and Middle States.—*Zoöl.* The animal kingdom includes as its largest representative the bison, popularly known as the buffalo, which formerly occupied the vast prairies W. of the Mississippi in immense numbers, but now exists only in parks and private enclosures, where considerable herds are now reared. (For details as to this industry, see BUFFALO.) Among the other quadrupeds are the moose, or American elk, the prong-horned antelope, the Virginian deer, cougar, black and grizzly bears, American fox, (*Vulpes fulvus*), raccoon, opossum, beaver, skunk, and glutton. Among the birds are the white-headed eagle, several vultures, and a great many birds common to the whole world, though few of the wading species resemble those of Europe. The alligator is a native of the S. States, but does not occur N. of the Carolinas and the Red River. Cod, mackerel, and salmon abound on the shores; and shell-fish are particularly abundant in the rivers of the Mississippi basin.—*Geol. and Min.* The White Mountains consist of granite, which is also very prevalent in the greater part of New Hampshire and Maine. The Rocky Mountains and the Sierra Nevada consist principally of granite intermixed with volcanic matter. Sienite, porphyry, and greenstone occur in the N.W. part of the Appalachian chain; gneiss forms the upper regions in New York and New Jersey; most of the mountain summits S. of the Juniata river consist of silicious sandstone; and talcose mica, chlorite, and other slates, with crystalline limestone and serpentine, lie along the W. side of the primary belt, in the middle and S. parts of the Union. Blue-limestone, red-sandstone, shales, anthracite, coal-measures, and other transition formations, flank these rocks in many places. Secondary strata occupy by far the largest portions of the

Fig. 3076.—ARMS OF THE UNITED STATES.

U. S.; but little trace is found of strata corresponding in date with the new red-sandstone or oolitic groups of Europe. Tertiary formations, many of which abound with fossil remains, have been found in many parts of the Atlantic slope, in Alabama, and in the S. part of the Mississippi basin; and, in common with Cretaceous, occur widely through the region W. of the Mississippi, where they are of interest for the abundance and remarkable character of their fossil remains. The most extensive alluvial tract is that bordering the Mississippi. If we except a few small isolated fields, all the bituminous coal in the U. S. lies W. of the Appalachian chain, where a vast series of coal-beds stretch from the mountains W. through Ohio, Indiana, and Illinois, and parts of Kentucky and Alabama, into the State of Missouri, and even as far as 200 m. beyond the Mississippi. Anthracite coal, or that best suited for fuel, lies at the N. extremity of this great field, in Pennsylvania. Pennsylvania and several other States also contain immense deposits of mineral oil, or petroleum. Iron is found abundantly in Pennsylvania, Ohio, West Virginia, Tennessee, Alabama, and other Appalachian States; also in Michigan, Missouri, and other regions of the West. Lead is found in Missouri, Wisconsin, and Illinois, and in several of the Rocky Mountain range of States. In some parts of Wisconsin the lead-ore is so rich as to yield from 60 to 70 per cent. of lead. Copper has been found in large deposits in Michigan, in the peninsula which stretches into Lake Superior. Immense sheets or walls of native copper occur in some of the mines in this district; and it is a curious fact that, though only recently re-discovered, they had evidently been opened and wrought, at a remote period, by the Indians. Gold has been found in small quantities in certain parts of Virginia, the Carolinas, Georgia, and Tennessee, and on a large scale in the States and Territories W. of the Rocky Mountains, and in Alaska. Silver is a very abundant metal in Nevada and Colorado, and occurs in considerable abundance in Arizona, Idaho, Nevada, and

Utah. With it are associated large quantities of copper and lead. Quicksilver, tin, zinc, manganese, and many other mineral products occur somewhat plentifully.—*Agriculture* is referred to under each State, and we need only give here a summary of some of the leading crops. The cereal returns of Indian corn, wheat, and oats, in 1895, were as follows: Indian corn, acres planted, 82,075,830; yield, 2,151,138,580 bushels. Wheat, acreage, 34,047,332; yield, 467,102,947 bushels. Oats, acreage, 27,878,406; yield, 824,443,537 bushels. The yield of cotton was 9,892,766 bales; of sugar, 650,000,000 pounds; total value of agricultural products, census of 1890, \$2,460,107,454.—*Manuf. and Com.* Protected by duties on foreign importations, manufactures have had, during the last few years, remarkable development. The principal are hollow-ware, rolled iron, steel, Bessemer and other kinds; steam-engines and machinery, carriages, agricultural implements, cotton and woollen goods, silks, leather, boots and shoes, harness, pottery, &c., India-rubber goods, paper, oil-cloth, &c. The following is a summary of the imports and exports during the fiscal year 1896:

Countries.	Exports.	Imports.
Argentine Republic.....	\$ 5,979,046	\$ 9,313,385
Austria.....	2,439,651	7,644,154

TOTAL,	\$882,606,938	\$779,724,674

Government. The several States of the Union, so far as their internal affairs are concerned, are sovereign and independent, while for the common interests of all, they delegate a portion of their powers to a central government, whose edicts and laws, so long as they are not in conflict with the Constitution (see CONSTITUTION), are paramount to State authority. The government consists of three branches, the legislative, executive, and judicial. The executive power is vested in a president (see PRESIDENT, and ELECTOR). The national legislature consists of a Congress, composed of a Senate and a House of Representatives (see CONGRESS). The judiciary consists of a Supreme Court, with 1 chief-justice and 8 assistant-justices, appointed by the President for life, and district judges in each district. The Supreme Court has jurisdiction in all cases arising under the Constitution, laws, and treaties of the U. S.; causes affecting ambassadors and consuls, of admiralty and jurisdiction; controversies to which the U. S. is a party, or as between a State and the citizens of another State, citizens of different States, or citizens and foreign States. It has original jurisdiction in State cases, or those affecting ambassadors or consuls—in others appellate. A person may be tried for treason, both against the Federal gov-

ernment, and against the State of which he is a citizen. The President can reprieve or pardon a person condemned by a Federal court; but has no power to interfere with the judgments of State tribunals. Besides the Supreme Court, there are CIRCUIT COURTS, DISTRICT COURTS, and a COURT OF CLAIMS, *q. v.*; all the other courts are established by the authorities of the several States, and their organization differs according to the State laws.—*Education and Religion.* Public instruction is nowhere more extensively diffused than in the Union; and the education in the common schools is of the best description. The attention paid to the education of the people, and the liberal provision made to insure that grand object, is most creditable to American legislation. Almost everywhere the primary schools are supported by a property tax, and almost all the States have school funds in addition, the income of which is distributed among the towns in proportion to the number of pupils educated. The total number enrolled in the public schools is over 14,000,000, and the total expenditures for school purposes nearly \$200,000,000. The college attendance is about 150,000. The press is very active, and in no country, perhaps, are periodical publications (which numbered over 20,000 in 1897) so widely circulated. Religion is free from any interference of either the Federal or State government, and all denominations exist in entire freedom upon the voluntary principle. Under the heads of the respective States will be found religious and educational statistics; and also an account of the benevolent, literary, and scientific institutions of the U. S., which are generally State institutions. The exceptions are the Smithsonian

Fig. 2551.—THE CAPITOL AT WASHINGTON.

Institute (*q. v.*), American Association for the Advancement of Science, and military and naval academies and hospitals.—*Army.* Relying upon volunteers in case of emergency, the policy of the country has ever been contrary to the maintenance of a strong military force in time of peace. The national army, under the command of the President, consisted, in 1790, of 1,260 men. In 1861, its numbers were 14,000, and those who took part with the Confederates, or were disbanded in the Confederate States, reduced the number to about 5,000. April 15, 1861, 75,000 volunteers were called out; May 4, 64,000; July and Dec., 1861, 500,000; July 1, 1862, 300,000; August 4, 1862, 300,000; summer of 1863, 300,000; Feb. 1, 1864, 500,000;—total, 2,039,748. This vast army was raised by volunteering, by enlistment in the regular army, and by drafts or conscriptions, and in some measure by bounties of \$300 to \$1,000 to each volunteer. The negro troops recruited in the seceded or slave States, in Oct., 1863, numbered 38,707, and increased in numbers to the end of the war. According to statistics in the Adjutant-General's office, the casualties in the Union Army during the Civil War, from April 15, 1861, to the close, were: killed or died of wounds, officers, 6,365; men, 103,673; total, 110,038. Died of disease, officers, 2,795; men, 223,791; total, 224,586. Total deaths from various causes, officers, 9,584; men, 349,912; total, 359,496. Actually killed in action, officers, 4,142; men, 62,996. The statistics of deaths in rebel prisons are not com-

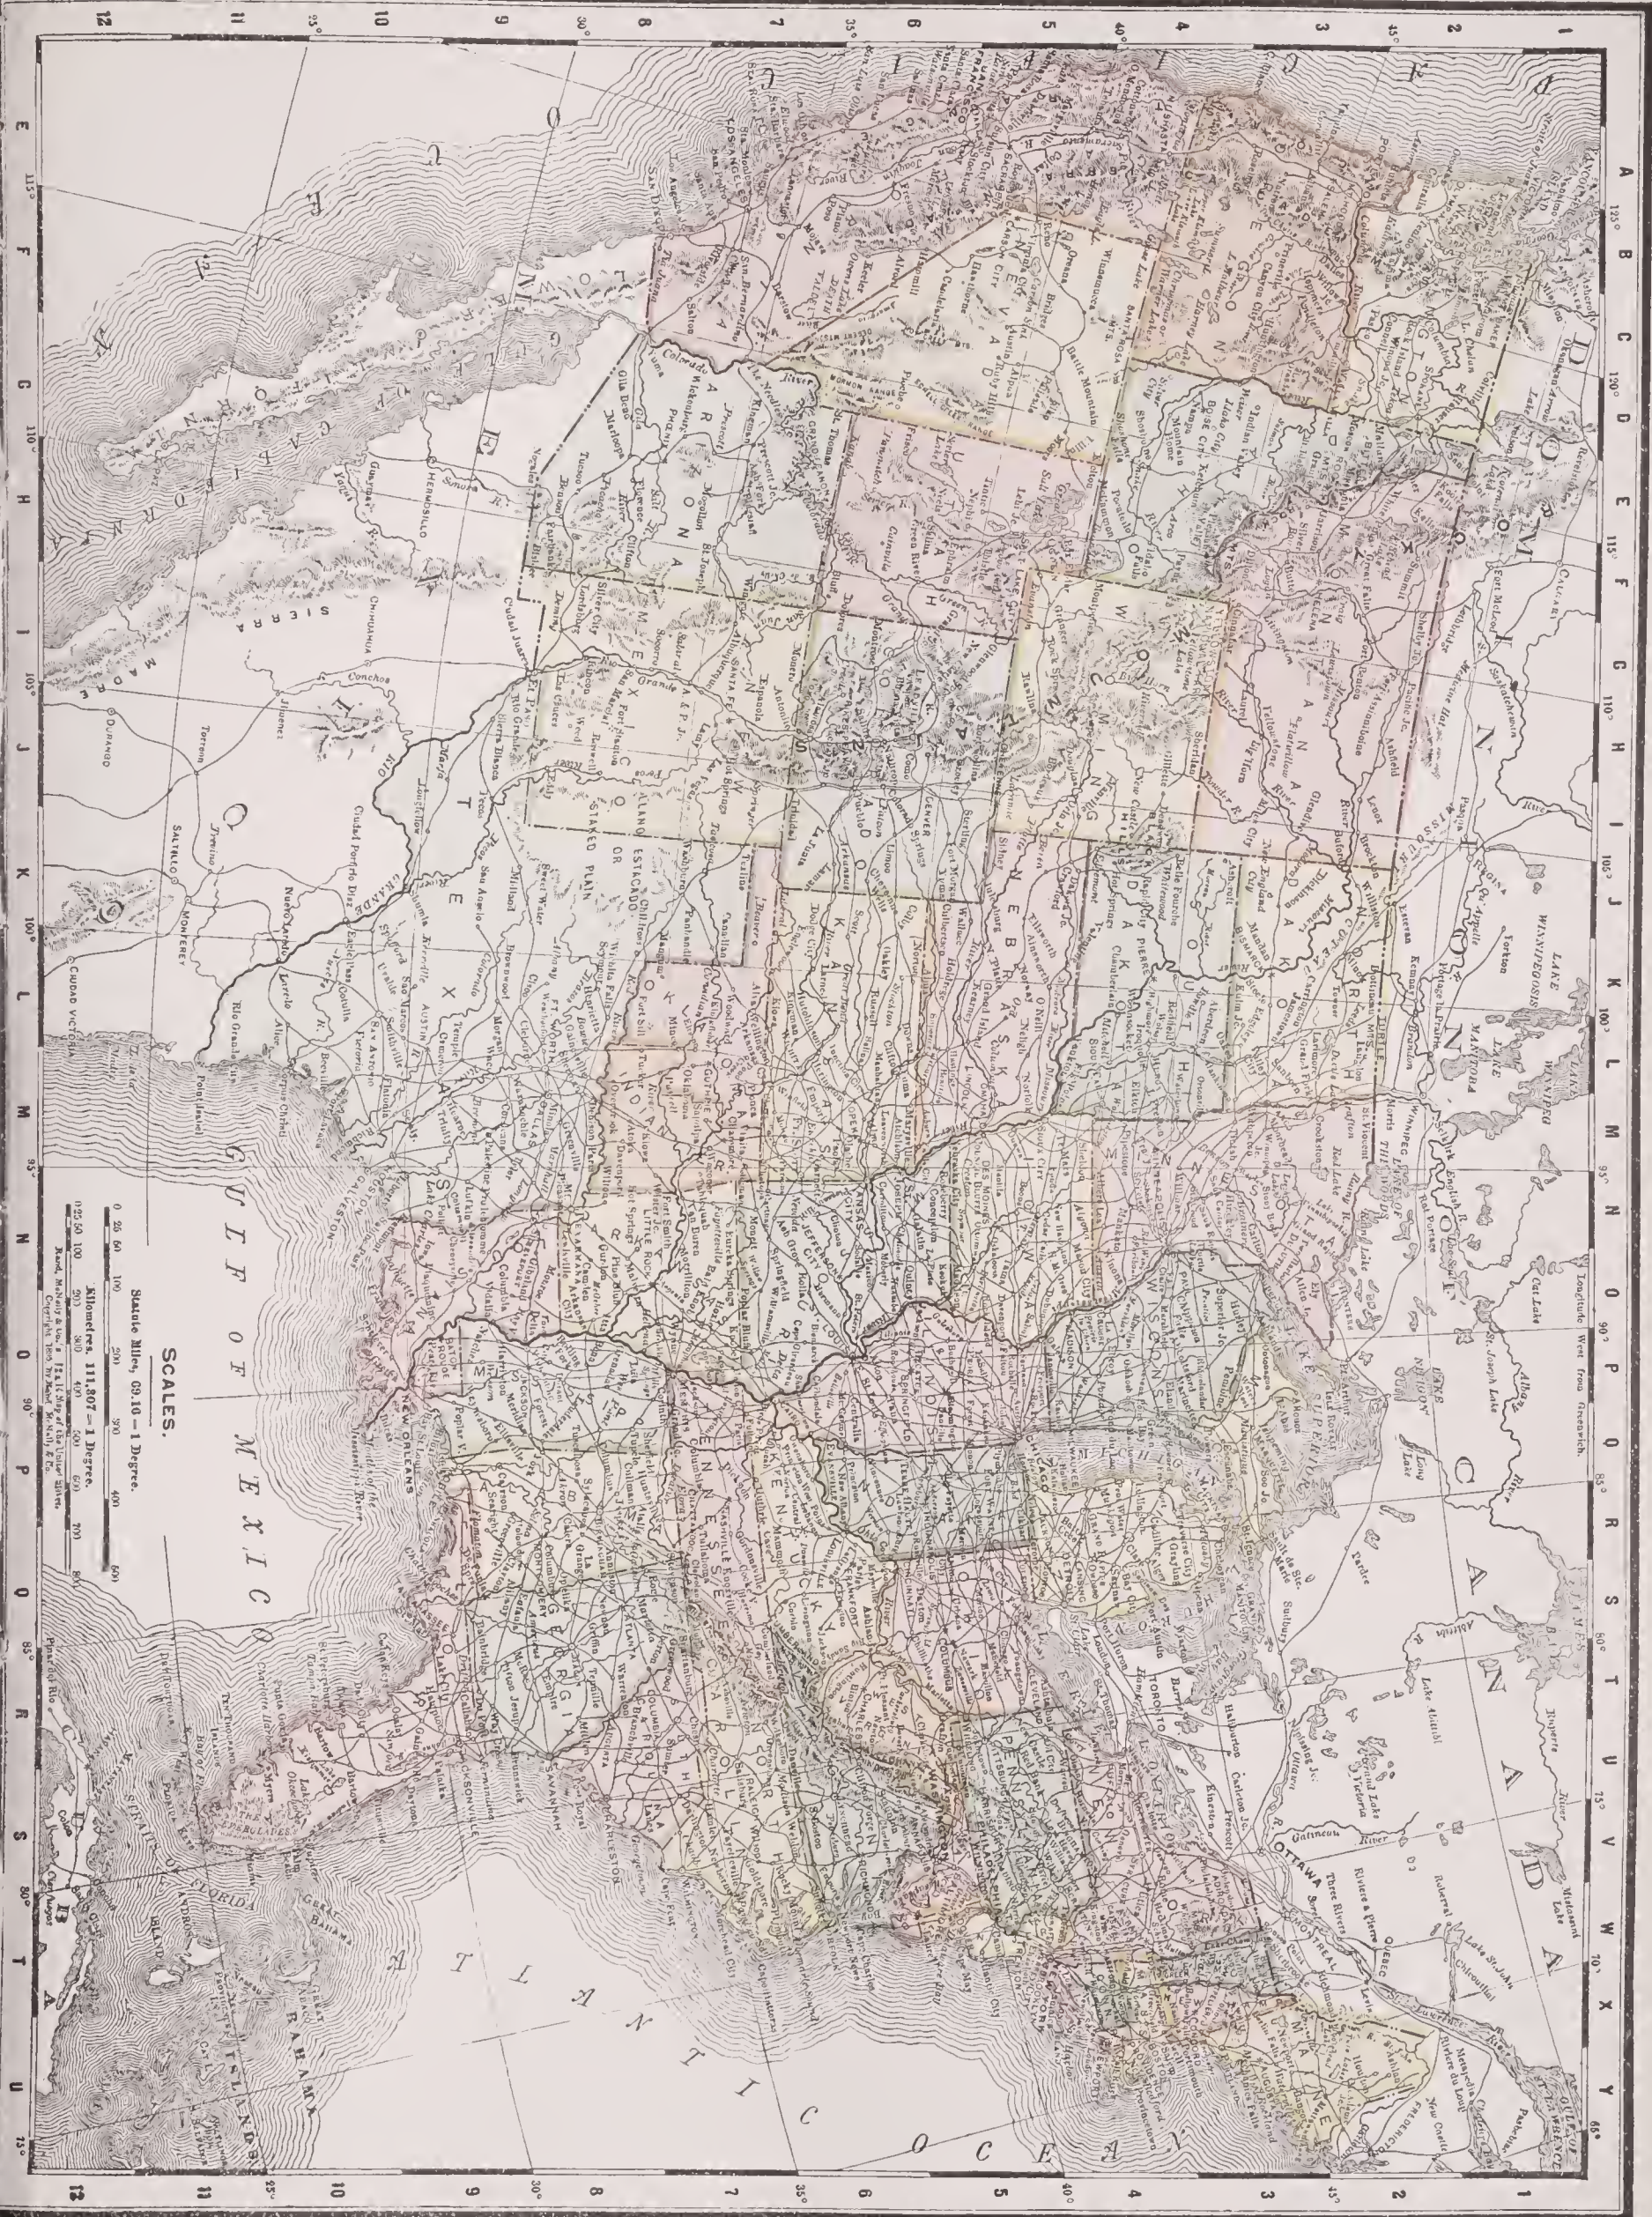

Fig. 2552.—THE WHITE HOUSE (WASHINGTON).

plete, but they are estimated at not less than 30,000. By an Act of Congress passed July 15, 1870, the army was reduced to the limit of 30,000 men, which has since been again reduced to about 25,000 men. There are numerous arsenals and manufactories of arms at Springfield, Mass.; Philadelphia and Pittsburg, Pa., &c. The Military Academy at West Point, New York, educates cadets, nominated from each State by members of Congress, and appointed by the President, who receive commissions as officers in the army.—*Navy.* After the close of the Civil War, the U. S. navy was considerably reduced, and for a number of years remained neglected, becoming weak and inefficient. In 1882 there were 140 vessels on the navy list, but of

these 25 were mere tugs, while a large number of others were antiquated and useless. This state of affairs, so strongly contrasted with the rapid progress in naval construction in Europe, aroused the attention of the people and the government, and the building of a new navy shortly afterward began, and has continued with accelerating rapidity to the present time. At present the U. S. navy, while surpassed in strength by those of several European nations, contains a considerable number of coast-defence vessels and cruisers of the highest grade, and most complete and effective armament, while the defensive qualities of their armor are unsurpassed. The navy now in commission or under construction includes 11 new battleships, of strong armor and powerful batteries; 2 armored cruisers of great speed; 6 double-turreted and 13 single-turreted armored monitors (the latter, those used in the Civil War); 1 armored ram; 16 unarmored steel vessels; 18 gunboats; 24 torpedo boats, and a considerable number of vessels remaining from the old navy. The building of the navy is still in active progress, and its strength and effectiveness is being steadily increased.—*Finances.* The public debt of the U. S. reached its ultimate height in 1866, as a result of the expenditure for the Civil War, its amount on July 1 of that year being \$2,773,236,173. On Nov. 1, 1896, the interest-bearing debt aggregated \$847,364,460 (the interest varying from 3½ to 4½ per cent.); the debt bearing no interest aggregated \$373,707,357; the gold and silver certificates, Treasury notes, &c., in circulation, \$564,340,923. Total indebtedness, \$1,785,412,640. The last given item of indebtedness was offset by cash in the Treasury, while the Treasury held in addition a gold reserve of \$100,000,000, a net cash balance of \$133,572,761, and other assets amounting to \$38,762,537, leaving a net balance of public debt of \$836,676,221. In addition to the U. S. debt, there exists a large State and local indebtedness, which, for the census of 1890, amounted to a grand total of \$1,135,210,442. Of this aggregate the State debts footed up \$228,993,389; county debts, \$145,048,045; municipal debts, \$724,463,060; school district debts, \$36,701,948. The debt of the U. S. is not a heavy burden, and has been reduced with remarkable rapidity since 1866. That of its smaller communities is also easily borne, it amounting in 1890 to a per capita sum of \$18.13, while that of the U. S. at the same date was \$14.63 per capita. This is greatly below the per capita indebtedness of the principal nations of the world. The total assessed valuation of real and personal property in the U. S. in 1890, per the census returns, was \$25,473,173,418, having increased \$8,000,000,000 during the preceding decade. The revenue of the U. S. for the year 1896 was as follows: From customs, \$160,021,752; internal revenue, \$146,762,865; public lands, \$1,005,523; other resources, \$19,186,061; total revenue, \$326,976,200. The expenditures were: Civil and miscellaneous expenses, \$87,216,235; war department, \$50,830,921; navy department, \$27,147,732; Indians, \$12,165,528; pensions, \$139,434,001; interest on public debt, \$35,385,029; total, \$352,179,446. This shows a balance of over \$25,000,000 in favor of expenditures, while during the past few years there has been an increase in the debt, a state of affairs not occurring before since the close of the war, and unlikely to continue. The treatment of its invalided soldiers by the U. S. government has been unprecedented in liberality, there being at present, more than 30 years after the war, nearly 1,000,000 pensioners on the list (invalids, widows, &c.), while the disbursements in 1893 reached the great ultimate of \$158,155,342. This constitutes a severe drain on the resources of the government, but one which is certain to decrease with some rapidity during the coming years. There were, at the end of 1896, 7 widows of Revolutionary soldiers still on the pension lists.—*Statistics.* On June 30, 1896, there remained of public lands subject to entry under the homestead laws a total of 600,040,671 acres, of which 316,651,861 acres had been surveyed. This is inclusive of Alaska, of military and Indian reservations, reservoir sites, forest reservations, &c.—Of patents for any single article, the largest number has been for carriages and wagons, 20,000. There are in the U. S. over 70,000 post-offices, with 456,000 miles of post roads, the mails being carried at an annual loss of several millions of dollars. The total number of immigrants entering the U. S. since 1820 has aggregated 17,544,692, mainly from northern Europe until 1880, since when large numbers have come from southern and eastern Europe, China, &c. There has been a very perceptible decrease in immigration since 1893.—*Hist.* The settlements and early history of the various colonies which now constitute this Republic will be found under the head of the different States and Territories. (See also AMERICA.) The first effort at a union of the colonies was in 1643, when the settlements in Massachusetts, New Hampshire, Rhode Island, and Connecticut formed a confederacy for mutual defence against the French, Dutch, and Indians, under the title of *The United Colonies of New England*. They experienced the benefits of united action in 1754, when an English grant of lands to the Ohio Company brought on the French and Indian war. George Washington was sent on his first expedition, to remonstrate with the French authorities; and the colonies being advised to unite for general defence, a plan for a general government of all the English colonies was drawn up by Benjamin Franklin; but it was rejected by both the colonies and the British government—by the colonies, who wished to preserve their separate independence, and by the crown from a jealousy of their united strength. The colonists, however, took an active part in the war. Under Major

Washington, they joined General Braddock in his unfortunate expedition against Fort Du Quesne, now Pittsburg; and they powerfully aided in the reduction of Louisburg, Ticonderoga, Crown Point, and Niagara. In 1761, the enforcement of the Navigation Act against illegal traders, by general search-warrants, caused a strong excitement against the English government, especially in Boston. In 1765, the passing of an act of parliament for collecting a colonial revenue by stamps caused general indignation, and led to riots. In 1766, the Stamp Act was repealed; but in 1767, duties were levied on glass, paper, printers' colors, and tea. This renewed attempt met with a general resistance, and cargoes of tea were thrown into the harbor of Boston. To punish this measure, Parliament passed the Boston Port Bill, 1774, by which the chief town of New England was no longer a port of entry, and its trade transferred to Salem. To enforce the act of the govt., a fleet conveying 10,000 troops was sent from England, while the colonists prepared to resist the unconstitutional assumptions of the mother country. The first encounter took place at Lexington, April 19, 1775. A congress of the colonies assembled at Philadelphia, which resolved to raise an army of 20,000 men, and appointed George Washington commander-in-chief. June 17, Bunker Hill, in Charleston, near Boston, where 1,500 Americans had hastily intrenched themselves, was taken by assault by the British troops, but with so heavy a loss (1,054) that the defeat had for the Provincials the moral effect of a victory. After a winter of great privations, the British were compelled to evacuate Boston, carrying away in their fleet to Halifax 1,500 loyal families. The British government now put forth a strong effort to reduce the colonies to submission. An army of 55,000 men, including 17,000 German auxiliaries ("Hessians"), was sent, under the command of Sir William Howe, to put down this "wicked rebellion." On the 7th of June, 1776, Richard Henry Lee, of Virginia, offered a resolution in Congress, declaring that "the united colonies are, and ought to be, free and independent States; that they are absolved from all allegiance to the British crown; and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved." This resolution, after an earnest debate, was adopted by the votes of 9 out of 13 colonies. A committee, consisting of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robt. R. Livingston, was instructed to prepare a declaration in accordance with the above resolution; and on the 4th of July, 1776, the *Declaration of Independence* (q. v.) received the assent of the delegates of the colonies, which thus dissolved their allegiance to the British crown, and declared themselves free and independent States, under the general title of the *Thirteen United States of America*. The first campaign of the war was disastrous for the Americans, and for the moment the prospects of the cause of freedom looked gloomy. But in the midst of the general despondency, Washington, sustained by the firmness of Congress, maintained his fortitude and confidence in final success. Carefully watching the opportunity to retrieve the credit of the American army, he defeated the British forces at Trenton, Dec. 25, 1776; and his exploits in the following campaigns revived the spirit of the nation, and confounded and dismayed the enemy. In 1780, England sent an additional force of 35,000 troops, and a strong effort was made to subjugate the Carolinas, where the war became of a bitter partisan character, and was conducted with spirit by Sumter, Marion, and other Southern chieftains. Lord Cornwallis, with a large army, marched from Charleston, through North Carolina, and arrived in Virginia, where he was confronted by Lafayette, Wayne, and Stenben. In the meantime, Admiral de Terney had arrived upon the coast with a powerful French fleet, and 6,000 soldiers of the élite of the French army, under Count de Rochambeau. Cornwallis was obliged to fortify himself at Yorktown, blockaded by the fleet of Count de Grasse, and besieged by the allied army of French and Americans, waiting for Sir Henry Clinton to send him relief from New York. October 19, 1781, he was compelled to surrender his army of 7,000 men—an event which produced such a change of feeling in England as to cause the resignation of the ministry, and the dispatch of General Sir Guy Carleton to New York with an offer of terms of peace. The preliminaries were signed at Paris, November 30, 1782; and on September 3, 1783, peace was concluded between England and France, Holland, and America. The independence of each of the several States was acknowledged, with a liberal settlement of territorial boundaries. In April, a cessation of hostilities had been proclaimed, and the American army disbanded; New York, which had been held by the English through the whole war, was evacuated, November 25th; and on December 23d, General Washington took leave of his companions in arms, and resigned into the hands of Congress his commission as commander. In 1787, a national convention met at Philadelphia, May 14, and after four months' deliberation adopted the present Constitution of the U. S., and submitted it to the people for ratification. After a thorough discussion, lasting in some of the States for 2 or 3 years, the Constitution was accepted by all of them; first by Delaware, December 7, 1787, and lastly by Rhode Island, May 27, 1790. During the war which, at the beginning of this century, raged against France, the commerce of this Republic was highly prosperous, her ships enjoying much of the carrying-trade of Europe; but in May, 1806, England declared a blockade from Brest to the Elbe, and Napoleon, in November, decreed the blockade of the coasts of the United Kingdom. American vessels were captured by both parties, and were

searched by British ships for British subjects; and men, suspected of having been born on British soil were—in accordance with the doctrine, once a subject always a subject—impressed into the naval service. Even American men-of-war were not excepted from this process. The British frigate *Leopard* meeting the American frigate *Chesapeake*, demanded four of her men, and on refusal, fired into her, and the surprised *Chesapeake* struck her flag. British ships were hereupon forbidden U. S. harbors. The French decrees, prejudicial to neutral commerce, were revoked in 1810; but those of the English continued, a source of loss and irritation, while hundreds of American citizens were in forced service in British vessels. The feeling was increased by a night encounter between the American frigate *President* and the British sloop-of-war *Little Belt*, May 16, 1811. The indignation aroused by these events led, on June 18, 1812, to a declaration of war against Great Britain, for which Congress voted to raise 25,000 enlisted soldiers, 50,000 volunteers, and 100,000 militia. (See MADISON.) The treaty of Ghent, Dec. 24, 1814, put an end to this war, which, from the beginning, had been very distasteful to the majority of the people of New England; but before the news of peace could cross the Atlantic, a British army, 12,000 strong, landed in Louisiana and made an attack on New Orleans, defended by Andrew Jackson with 5,000 men, chiefly militia. The attack was repulsed, January 8, 1815, with a loss to the British of 2,000 killed, wounded, and prisoners, while the entire American loss was but 71. From that time, and without excepting the period of the Mexican war (1845-48), for which see MEXICO and TEXAS, the history of this country was one of almost uninterrupted prosperity till the breaking out of the great Civil War, at the commencement of the year 1861, for which see SECESSION. This gigantic struggle was brought to an end in 1865, at an immense cost of blood and treasure. But great as was the struggle has also been its fruit, since it resulted in the total abolition of slavery, and the opening of a nobler career than ever before entered upon by the American people.—*Pop.* The progress of population in the U. S. (see IMMIGRATION) has been rapid beyond any previous example in history. Up to the present time, 10 decennial censuses have been taken, which give the following results:—1790, *pop.* 3,929,827; 1800, *pop.* 5,305,937; 1810, *pop.* 7,289,814; 1820, *pop.* 9,638,191; 1830, *pop.* 12,866,020; 1840, *pop.* 17,069,453; 1850, *pop.* 23,191,876; 1860, *pop.* 31,445,080; 1870, *pop.* 38,555,983; 1880, *pop.* 50,155,783; in 1890, *pop.* 62,622,250; in 1897 (estimated) *pop.* 74,036,761. The 1890 population included 54,983,890 whites and 7,638,360 colored.

So exhaustive is our treatment upon all subjects pertaining to the U. S. throughout this work, in expositions of its geography, history, natural history, products and resources, political and constitutional system and economy, laws, &c., &c., that we have here given only a summary of matters pertaining to the country as a whole. Of recent events of interest may be named the gradual development of a reformed civil service system, the rapid development of wealth, progress of internal improvements and growth of cities, which have raised the U. S. to one of the most prominent places among the nations of the earth.

Unitize, *v. a.* To reduce to a whole; to form into a unit.
Unity, *n.* [Fr. *unité*; Lat. *unitas*, from *unus*, one.] The state of being one; oneness.—Concord; conjunction; oneness of sentiment, affection, opinion, or behavior; agreement; uniformity; as, *unity* of parties, *unity* of doctrine.

(*Math.*) The abstract expression for any unit whatsoever. (*Fine Arts.*) That proper balance of composition or color in a work of art which produces a perfectly harmonious effect, and to which all parts of the work conduce.

(*Law.*) An agreement or coincidence of certain qualities in the title of a joint-estate or an estate in common. In a joint estate there must exist four unities: that of interest, for a joint-tenant cannot be entitled to one period of duration or quantity of interest in land, and the other to a different; one cannot be a tenant for life, and the other for years; that of title, and, therefore, their estates must be created by one and the same act; that of time, for their estates must be vested at one and the same period, as well as by one and the same title; and, lastly, the unity of possession: hence, joint-tenants are seized *per my et per tout*, or by the half or moiety and by all; that is, each of them has entire possession as well of every parcel, as of the whole. Co-partners must have the unities of interest, title, and possession. In tenancies in common, the unity of possession is alone required.

Unity, in *Ills.*, a twp. of Piatt co.—In *Maine*, a post-twp. of Waldo co., 33 m. N.E. of Augusta.—In *Md.*, a p. v. of Montgomery co., 30 m. S.W. of Baltimore.—In *N. H.*, a post-twp. of Sullivan co., 40 m. N.W. of Concord.—In *O.*, a p. v. and twp. of Columbiana co., 35 m. N. of Steubenville.—In *Pa.*, a twp. of Westmoreland co.

Univalve, *a.* [Lat. *unus*, one, and *valva*, valves.] (*Zoöl.*) Having one valve only;—a term applied to those mollusks the shell of which is composed of one piece, and which is generally convoluted spirally, as in the snail. *U.* shells are mostly thin.

Univalve, *n.* [Lat. *unus*, and *valva*, a valve.] (*Zoöl.*) A shell which consists of only one piece. The name given in the science of Conchology to those mollusks whose shell is in a single piece, known as the Gasteropoda, as opposed to the Lamellibranchiata, or bivalves, whose shell is in two pieces. Some of the cephalopods also have univalve shells, as the nautilus and argonaut; but these are differently constructed, and the animals possessing them are not classed with the univalves. The shells of the univalve, or gasteropod mollusks, are composed of carbonate of lime, extracted by the animal from the sea-water, and laid, in the great majority of cases, in spiral whorls around the body, which are added to steadily during the growth of the animal. These shells VOLATA MUSICA ($\frac{1}{2}$ size), vary greatly in shape, size, and color, many of them being graceful in shape, beautifully ornamented with spires, ridges, &c., and colored in varied designs, and with considerable diversity of hues. A familiar example is the land-snail. There are many land and fresh-water forms, but the great bulk of univalve mollusks dwell in ocean waters.

Fig. 2553.

Universal, *a.* [Fr. *universel*; Lat. *universalis*—*unus*, and *verto*, *verto*, to turn.] Extending to, or comprehending the whole number, quantity, or space; unlimited; as, *universal* prosperity.—Combined into one whole; pertaining to all or the whole; total; constituting or considered as a whole; as, the *universal* Church, i. e., the Church of God throughout the world.

(*Log.*) Applied to a proposition in which what is predicated is declared to apply to everything comprehended in it; as, all men are mortal. A *U.* proposition may be either affirmative or negative; as, all men are subject to death; no man is perfect. It is opposed to a particular, which asserts or denies something of some, implying that the others are, or may be, left unspoken of; as, some men are handsome; some animals cannot live in this country.

n. (*Log.*) A general notion framed by the human intellect and predicated of many things, on the ground of their possessing common properties,—as *animal*, which may be predicated of man, horse, lion, &c.

Universalism, *a.* Pertaining or having reference to Universalism.

Universalism, *n.* (*Theol.*) The doctrine or belief held by the Universalists.

Universalists, *n. pl.* (*Ecc. Hist.*) A religious denomination whose principal tenet consists in the universality of the atonement, or that all men will finally be saved, as opposed to those who hold the doctrine of eternal punishment. The grounds on which their faith in the final salvation of all men rests are derived, they believe, from reason and from Scripture; and when they appeal to the latter, it is, they say, to the spirit and design of the Gospel as well as to particular passages. They argue, that when an infinitely wise, holy, and benevolent God resolved to create man, it could only be with a view to his everlasting good; that if he did allow him to be tempted and fall, it must have been because he foresaw that through sorrow and suffering man could rise to higher degrees of perfection; that therefore all punishment (or what, with our limited knowledge, we conceive to be such) is of necessity designed as a remedial agent, and not intended to satisfy God's indignation as a sovereign at the disobedience of his subjects; that no other view of the subject is compatible with the scriptural, and especially the New Testament representation of God as "Father," or with the oft-repeated declaration (in various terms) that Jesus Christ was a propitiation for the sins of the whole world. *U.* it may be observed, generally differ from the prevalent bodies of Christians in other important doctrines, though it is not because of such differences that they have received their name, nor is it necessary to merit the name that one should share these differences. Most of them agree with Unitarians—but there are eminent examples to the contrary—in rejecting the doctrine of the Trinity; they are also Pelagian in the matter of original sin, and reject the notion that the new birth is something supernatural. The *U.* believe that their main doctrine is found in the earliest Christian writings—and during the three first centuries of the Christian era was the prevailing belief of the Christian Church, and it had supporters in most of the countries into which the Reformation penetrated. Nor has it wanted illustrious adherents belonging to the Church of England, and to the French Protestant and German churches;—indeed it may safely be asserted that the *free* mind in all ages is disposed to look favorably upon the doctrine of universal restoration to holiness and happiness of all fallen intelligences, whether human or angelic. In the year 1770, the Rev. John Murray became a propagator of Universalist views; and since his time, an organized body has sprung up, which contains many able, learned, and pious divines. There are now in the U. S. about 1,280 societies, owning about 1,000 churches, and ministered to by about 750 preachers. These societies have under their patronage 11 institutions of learning, in-

cluding 3 colleges and 8 academies, and they support 17 periodicals. Various missionary, tract, and Sunday-school associations are also employed in teaching and propagating their views, that in the end, "God shall be all in all."

Universal^{ty}, Univers^{alness}, n. [Fr. *universalité*.] State or quality of being universal; the state of extending to, and comprehending, the whole; unlimited reach or application; as, the *universality* of sin.

Universalize, v. a. To make universal; to generalize.

Universally, adv. In a universal manner; in a manner to reach to and include all, without exception; with extension to the whole.

Universe, n. [Fr. *univers*, from Lat. *universus* — *unus*, and *verto*, *versus*, to turn.] The world; the collective name of heaven and earth, and all that belongs to them; the whole system of created things.

University, n. [Fr. *université*; Lat. *universitas*, the whole of anything, as contrasted with its parts.] This name, in Europe, usually denotes an establishment for the purpose of instruction in some or all of the most important branches of science and literature, and having the power of conferring certain honors or dignities termed *degrees*. (See *DEGREE*.) About the beginning of the 12th century, Paris became the resort of learned men, who, by means of teaching and public lectures, infused new life into the existing schools. The brilliant lectures of Abelard and Lombardus attracted immense crowds from all parts of Europe, and local immunities and other advantages came to be accorded to the teachers and pupils by the city, which well appreciated the advantages of this great resort. The continually increasing number of teachers and students rendered it expedient to adopt some form of government, in order that their labors might be carried on with some degree of regularity; and, accordingly, the university appears to have been incorporated towards the end of the 12th century. At first it comprised only the faculty of arts; but subsequently those of divinity, canon law, and medicine arose. The papal and royal privileges subsequently conceded did not create the faculties which they then publicly protected; but in this way the universities came to form integral parts of the Church and State, and subject to their control. Philip Augustus, by his ordinance of 1200, granted to the *U.* exemption from the ordinary tribunals, and prohibited the citizens, under the severest penalties, from molesting the students. Subsequent kings of France conferred additional privileges, and by various enactments, teachers and students were exempted from all customs, taxes, or personal burdens; were not liable to arrest, to seizure or confiscation of goods, and were especially exempted from being summoned out of Paris on any legal process. Nor were the popes behind the kings in their gifts to the university; and Innocent IV. declared that no sentence of excommunication, suspension, or interdict against the university, or any of its members, should have effect without special license of the Apostolic See. It thus soon became the most distinguished seminary of education in Europe, and was resorted to by students from all parts. In 1453 the number of students amounted to 25,000, and when Joseph Scaliger was a student, it had reached 30,000. When the teachers and students came to form one body, the division into *nations* originated, which division must have been of great benefit at the time when students came from all parts of Europe to one *U.* At the head of each nation was a procurator, selected from among themselves, whose duty it was to protect their rights and privileges, and see that all its regulations were duly observed. The four nations of the Paris *U.* were: — 1. The French, including Spaniards, Italians, Greeks, &c.; 2. The Picard, comprising the N.E. of France and the Netherlands; 3. The Norman; and 4. The English, called afterwards the German, including English, Scotch, Irish, Germans, Poles, &c. The university of Bologna contests the palm of antiquity with that of Paris. It first became famous through the teaching of Irenaeus in the early part of the 12th century. His lectures on Roman law attracted a great number of pupils, and he is considered to have originated a grand revolution in the legislation of Europe. His successors were men of ability, and for several centuries after, the university of Bologna continued to be celebrated for its legal learning, and to be flocked to by students from all parts. The first universities founded in Germany were those of Prague, 1348, and Vienna, 1365. Universities were now expressly established, and not left to grow up of themselves, as before. For several centuries the popes continued to found these institutions, and exercise the right of protecting and superintending them. Monarchs who wished to establish a university requested the papal confirmation, and submitted to the authority which the Roman See arrogated over them. The unhappy Thirty Years' War did much injury to the German universities; but since that period they have made rapid advances, beyond those of any other country. The character of life at the German universities is such that the student ever after recalls it with fondness. An amount of freedom and liberty is enjoyed there to which they are afterwards strangers, and the students are very jealous of their privileges. The liberal principles which have from time to time animated Germany have been manifested in a particular degree by the students at the universities; and there have not been wanting attempts on the part of the governments to curtail their liberties. In a German university there are usually ordinary and extraordinary professors, and *doctores* or licentiates. The ordinary professors are those who form the great body of the teaching staff. In most universities they are appointed by the government, have general jurisdiction over the

students, and make the provisions respecting instruction. They divide themselves into four faculties, each having a dean chosen by themselves from their own number. The whole constitute the senate, at the head of which is the rector, who is chosen annually. The extraordinary professors are usually persons who have distinguished themselves in some particular branch or branches, and whose services the government wishes to retain. They receive small salaries, and are the persons looked to to fill vacancies among the ordinary professors. The *doctores* are those who, after undergoing an examination, have obtained liberty to teach. Any person may request to be examined in this way, and if found qualified, is entitled to be licensed. The *doctores* receive no salaries; but from among them the extraordinary professors are usually selected. Every person in these three classes can lecture upon whatever subject he pleases, the professors being only obliged to deliver lectures also in the branches for which they are specially appointed. Hence, very often three or four courses of lectures are delivered on the same subject, and theologians will be found lecturing on politics, philosophers on questions in theology, and so on. The German student is usually left at full liberty to choose the lectures which he will attend; and he is subject to no official examination during his term of study. The only regulation is, that, in case of most sciences, he is required to attend certain lectures, and to study full three years, if he wishes to practise a profession, &c. The student's examinations commence after he has finished his course of study, or on entering on a profession; and are very severe for one wishing to become a clergyman, physician, lawyer, statesman, or teacher of a superior school. These examinations are both oral and written, and the successive steps of promotion are attended with new examinations. The English universities were founded on the model of the *U.* of Paris. The two most celebrated have been spoken of under their respective names. (See *CAMBRIDGE* and *OXFORD*.) In the U. S. the title university is very loosely applied, often to a college where the course of study is not advanced, while in other cases the title college is given to an institution with several faculties, and therefore answering to the European conception of a *U.* Of the nearly 500 collegiate institutions in the U. S., a considerable number have some claim to the title of *U.*, while a still larger number are simply high-schools, though some of these seek dignity under the title of university. Several American institutions are universities in the fullest sense, and in their breadth of study will bear comparison with any of those of Europe. The State universities, endowed by grants of government land for educational purposes, differ from the older institutions in being free from denominational control, the chief original purpose of most American colleges having been to train men for the ministry. Canada possesses 16 degree-granting colleges and universities, every province, except British Columbia, having at least one. See *HARVARD*, *YALE*, *CORNELL*, &c.

Univocal, a. [Fr. *univoque*; Lat. *unus*, one, and *vox*, *vocis*, a voice, a word.] Having one meaning only, as a word; — correlative to *unequivocal*. — Having one notion of sound. — Certain; regular; pursuing always one tenor; as, *univocal* conformity.

Univocally, adv. In an univocal manner; in one term; in one sense. — In one tenor.

Unjoint, v. a. To disjoin; to sever or dislocate, as the joints.

Unjust, a. Acting contrary to justice, or to the standard of right established by the divine law; as, an *unjust* person. — Not equitable; wrongful; contrary to justice and right; as, an *unjust* act.

Unjustifiable, a. That cannot be justified or proved to be right; not to be vindicated or defended.

Unjustly, a. In an unjust manner.

Unkempt, a. Uncombed; dishevelled. (o.)

Unken^{nel}, v. a. To drive from a kennel, hole, or covert, as a fox. — To release from a kennel or kennels, as hounds. — To start from secrecy or hiding, as a mystery.

Unkind, a. Wanting in kindness or benevolence; not favorable or obliging; cruel; harsh; unnatural; as, *unkind* treatment.

Unkindly, a. Not kind or complaisant. — Unfavorable; unpropitious; malignant; as, *unkindly* weather.

— Unnatural; contrary to natural laws; as, an *unkindly* crime.

— *adv.* Without kindness, complaisance, or affection; harshly; cruelly; as, he treats his wife *unkindly*. — Unnaturally; in a manner contrary to nature; as, "Works of nature . . . *unkindly* mixed." — *Milton*.

Unkindness, n. Absence of kindness; quality of being unkind; want of natural sympathy or affection; disfavor; disobliging treatment; harshness.

Unknown, (-nōn'), a. Not having knowledge of; as, an *unknown* place or person. — Greater than is imagined; as, an *unknown* advantage. — Not having cohabited with; as, "I am yet *unknown* to woman." (*Shaks.*) — Without communication; as, I did this *unknown* to anybody.

Unlace, v. a. To loose from lacing or fastening by a cord or string passed through loops and holes; as, to *unlace* a pair of boots. — To loose, as a part of a dress; as, to *unlace* a woman's stays. — To divest of ornament; as, "You *unlace* your reputation." — *Shaks.*

(*Naut.*) To loose and take off, as a bonnet from a sail, or to cast off, as any lacing in any part of the rigging of a ship.

Unlade, v. a. (*imp.* UNLADED; *pp.* UNLADED or UNLADEN.) To unload; to take the cargo out of; as, to *unlade* a ship. — To discharge; to remove, as a load or burden.

Unlaid, a. Not fixed; not laid or placed; as, "The first foundation being yet *unlaid*." (*Hooker*) — Not al-

laid; not pacified; not suppressed; as, an *unlaid* ghost. — Not laid out; as, an *unlaid* corpse.

Unlaw^{ful}, a. Illegal; not according to law; contrary to, or not permitted by, law; as, *unlawful* traffic. — *Unlawful assembly.* (*Law.*) See *RIOT*.

Unlay, v. a. (*imp.* and *pp.* UNLAID.) (*Naut.*) To untwist, as the strands of a rope.

Unlearned, (-lārd'), a. Ignorant; illiterate; not learned or instructed; as, an *unlearned* man. — Not gained by study; not known; as, to learn things that were better *unlearned*. — Not suitable to a learned man; as, *unlearned* verses. — *Shaks.*

Unless, conj. [The *imper.* of A. S. *onlesan*, *onlisan*, to unloose, to relieve, to dismiss.] Excluding the case that; if not; supposing that not; as, I will go to New York next week, *unless* something shall prevent me.

Unlicked, (-līkt'), a. Shapeless; not formed; uncultivated; rough; — derived from an old and vulgar opinion that the bear licks her young into shape; as, that young fellow is an *unlicked* cub.

Unlike, a. Having no resemblance; dissimilar; diverse; as, the son is quite *unlike* his father.

Unlike quantities. (*Math.*) Quantities expressed by different letters, or by different powers of the same letter: thus *a*, *b*, *a*², and *a**b* are all unlike quantities. — *Unlike signs*, the signs *plus* (+) and *minus* (—).

Unlikelihood, Unlike^{liness}, n. Improbability; state of being unlikely.

Unlikely, a. Having no likelihood; improbable; such as cannot be reasonably expected; as, an *unlikely* occurrence. — Not promising success; with a probability of failure; as, he has made an *unlikely* beginning.

Unlimited, a. Having no bounds or limits; illimitable; as, God's *unlimited* mercy. — Undefined; not bounded by proper exceptions; as, *unlimited* credit. — Unconfined; not restrained.

Unlimited problem. (*Math.*) A mathematical problem which is susceptible of an indefinite number of different solutions.

Unliquidated, (-lik'wi-,) a. Not settled; unpaid; unadjusted; as, an *unliquidated* account.

Unliquidated damages. (*Law.*) Penalties or damages not ascertained.

Unload, v. a. To disburden of a load; to discharge of a load or cargo; to unlade; as, to *unload* a ship or a wagon. — Hence, by analogy, to relieve from that which troubles or oppresses; as, to *unload* pent-up sorrow.

Unlocated, a. Not fixed in a place or location. — Not having been surveyed, or designated by marks, limits, or boundaries, as appropriated to some individual, company, or corporation; as, *unlocated* lands.

Unlock, v. a. To unfasten that which is locked; as, to *unlock* a drawer. — Hence, generally, to lay open; as, to *unlock* one's secret thoughts.

Unlook^{ed-for}, a. Not looked for; not expected; unforeseen; as, this is an *unlooked-for* happiness.

Unlovely, (-lū'le-,) a. Lacking in loveliness; unamiable; unattractive; disagreeable; unsightly; destitute of the qualities that charm, or possessing the qualities that repel.

Unlucky, a. Deficient in, or destitute of, luck; wanting success or good fortune; subject to frequent misfortunes; as, an *unlucky* man, an *unlucky* speculation, &c. — Unpropitious; ill-omened; without happy auspices; as, he was born under an *unlucky* star. — Mischievously inclined; waggish; frolicsome; as, an *unlucky* wight.

Unmake, v. a. (*imp.* and *pp.* UNMADE.) To destroy the make, form, or qualities of: to deprive of qualities before possessed; to uncreate; as, to make or *unmake* a king.

Unmalleable, a. Without the property of malleability.

Unmalleability, n. State or quality of being unmalleable.

Unman, v. a. (*imp.* and *pp.* UNMANNED, (-mand.) To deprive of the distinctive qualities of a human being, as reason, &c.; as, "What, quite *unman*'d in folly?" *Shaks.* — To emasculate; to deprive of the procreative power. — To defect; to depress; to dishearten; to break into irresolution; to deprive of manly courage and fortitude; as, it was a sight that quite *unmanned* me. — To remove men from; as, to *unman* a fortified post, or a ship.

Unmanageable, a. Not manageable; not easily restrained, governed, or directed; not controllable. — Not easily wielded.

Unmanly, a. Not becoming a man or a human being; as, *unmanly* cruelty. — Effeminate; unsuitable to a man; as, *unmanly* tenderness. — Ignoble; base; ungenerous; pusillanimous; as, *unmanly* fear.

Unman^{nerly}, a. Wanting good manners; ill-bred; rude in bearing or behavior; unpolished; not according to the rules of politeness; as, an *unmannerly* speech.

Unmeaning, a. Conveying no meaning; having no signification; destitute of sense or substance; as, *unmeaning* compliments. — Not indicative of life or intelligence; inexpressive; immobile; vacant; as, an *unmeaning* face.

Unmentionables, n. pl. A humorous name for the breeches, or pantaloons, as being a garment not to be named in the vernacular.

Unmerciful, a. Destitute of mercy; cruel; not disposed to spare or forgive; inhuman to such beings as are in one's power; as, an *unmerciful* judge. — Exorbitant; unconscionable; as, *unmerciful* demands upon one's purse.

Unmind^{ful}, a. Not mindful, heedful, or attentive; careless; regardless.

Unmistakable, a. That cannot be mistaken or misunderstood; plain; clear; evident; pronounced; as, *unmistakable* proofs.

Unmitigated, a. Without mitigation; not lessened;

not softened in severity or harshness; as, *unmitigated* rancor.

Unmixed', *Unmixt', a.* Without mixture; unmingled; pure; unadulterated; not vitiated by foreign or extraneous admixture; unalloyed; as, *unmixed* liquor, *unmixed* pleasure.

Unmoor', *v. a. (Naut.)* To loose from anchorage, as a ship; as, "All hands *unmoor, unmoor!*" (*Dublin.*)—To bring to the state of riding with a single anchor, after having been moored by two or more cables, said of a ship.

Unmoved', (*-moovd.*) *a.* Not moved; not transferred from one place to another; as, *unmoved* chess-men.—Firm; unshaken; not changed in purpose; as, *unmoved* determination.—Not affected; not having the emotions or passions excited; not touched or impressed; stoical; as, *unmoved* to pity.—Not altered by mental perturbation; as, an *unmoved* face.

Unmuffle', (*-muf'fl.*) *a.* To uncover, as the face.—To remove the muffling of; as, *unmuffled* drums.

Unna, (*oon'na.*) a town of Prussian Westphalia, 19 m. from Arnberg. Near it are the famous salt-works of Königsborn. Pop 6,826.

Unnatural', *a.* Contrary to the laws of nature; not in conformity to nature; antagonistic to the natural instincts or feelings; not agreeable to the real state of persons or things; as, an *unnatural* crime.—Acting without the affections of our common nature; as, an *unnatural* parent or child.

Unnecessarily', (*-nes'.*) *adv.* Without necessity; needlessly.

Unnecessary', (*-nes'.*) *a.* Not required by the facts or circumstances of the case; free from necessity; needless; useless; as, to take *unnecessary* trouble.

Unneighborly', (*-nā'bur-ly.*) *a.* Not kind or friendly; not well disposed or obliging; not becoming persons living near each other; as, *unneighborly* exclusiveness.—*adv.* In a manner contrary to the kindness and friendship which should subsist among neighbors.

Unnerve', *v. a.* To deprive of nerve, force, or strength; to enervate; to weaken; to enfeeble.

Unobjectionable', (*-jēk'shun-a-bl.*) *a.* Not liable to objection; that need not be condemned as faulty, false, or improper.

Unobservant', *a.* Not observant or attentive; heedless.

Unobstructed', *a.* Without obstruction or impediment; not filled with obstacles; not hindered or estopped; as, an *unobstructed* course.

Unoccupied', (*-kū'pid.*) *a.* Not in occupation or possession; not engaged in business; being at leisure; not employed or taken up, as time.

Unoffending', *a.* Not giving offence; not sinning; free from fault or transgression; harmless; innocent; as, an *unoffending* person.

Unofficial', (*fish'al.*) *a.* Not official; not pertaining to office; not proceeding from the proper officer or from due authority; as, an *unofficial* report.

Unopposed', (*-pōzd'.*) *a.* Not opposed or resisted; not meeting with any check or obstruction; as, the bill passed *unopposed*.

Unorganized', *a.* Same as INORGANIZED, *q. v.*

Unostentatious', (*-tā'shus.*) *a.* Without boasting or ostentation; not exhibiting show or parade; modest; unassuming; not pretentious, as, an *unostentatious* manner of living.—Not glaring or showy; as, *unostentatious* coloring.

Unpacked', (*-pākt'.*) *a.* Not packed; not collected by unlawful artifices; as, an *unpacked* jury.

Unpaid', *a.* Not paid; unliquidated; not discharged, as a debt; not having received his due, as a workman.

Unpalatable', *a.* Unsuitable to the palate; disagreeable to the taste; not such as to be relished; as, *unpalatable* food, *unpalatable* advice.

Unparalleled', (*-lēld.*) *a.* Having no parallel or equal; unmatched.

Unpardonable', *a.* Not to be pardoned or forgiven; that cannot be remitted, as a sin.

Unparliamentary', *a.* Contrary to the usages or rules of proceeding in, or the constitution of, parliament. Contrary to the course of proceeding prescribed by any legislative assembly; as, *unparliamentary* language.

Unpassable', *a.* Impassable, as a road, river, mountain, &c. (*R.*)—That will not pass current in common payment; as, *unpassable* coin.

Unpeople', (*-pē'pl.*) *v. a.* To depopulate; to deprive of people or inhabitants.

Unphilosophically', *adv.* In a manner contrary to the principles of sound philosophy or right reason.

Unpin', *v. a. (imp. and pp. UNPINNED (-pīnd).* To remove the pins of; to unfasten, as that which is held together by pins; as, to *unpin* a ticket, to *unpin* the frame of a building.

Unpleasant', (*-plez'ant.*) *a.* Not affording pleasure; disagreeable.

Unpolished', (*-isht.*) *a.* Not made smooth or bright by attrition; as, *unpolished* wood.—Not refined in manner; uncivilized; rude; plain; as, *unpolished* people.

Unpopular', *a.* Not popular; not enjoying the public favor or esteem; not in good repute; disliked by the people; disposing to public disfavor; as, an *unpopular* statesman, an *unpopular* measure.

Unpractised', (*-prākt'ist.*) *a.* Not having been taught by practice; raw; unskillful; inexperienced.

Unprecedented', (*-pres'.*) *a.* Without precedent or example; not preceded by a similar case; new; novel; not fortified with authority of prior example.

Unprejudiced', (*-prej'u-dist.*) *a.* Without prejudice; free from undue bias or prepossession; impartial; as, an *unprejudiced* mind.—Not warped by prejudice; as, *unprejudiced* opinions.

Unpremeditated', *a.* Not previously meditated or

prepared in the mind; not priorly purposed or intended; not done by design; as, an *unpremeditated* crime.

Unprepared', (*-paīrd'.*) *a.* Wanting preparation; not ready; not fitted or furnished by previous measures; not prepared, by holiness of life, for the event of death and a happy immortality.

Unprepossessing', (*-poz-zes'.*) *a.* Not having a prepossessing, winning, or attractive appearance.

Unprincipled', *a.* Deficient in, or destitute of, principle; without settled principles.—Destitute of virtue or good moral principles; profligate; not restrained by conscientious objections; as, an *unprincipled* man.

Unproductive', *a.* Not productive; sterile; infertile; not producing large crops; barren; as, an *unproductive* soil.—Bringing no profit; not yielding profitable returns for labor; not productive of profit or interest, as capital; as, *unproductive* stock.—Inefficient; not producing substantial results.

Unprofitable', *a.* Bringing no profit; producing no gain beyond the labor, expenses, and interest of capital; yielding no gain, improvement, or advantage; not useful to others; serving no end or purpose; as, an *unprofitable* business, *unprofitable* study, *unprofitable* land, an *unprofitable* life.

Unpromising', *a.* Not affording a favorable prospect of gain, advantage, success, excellence, &c.; as, an *unpromising* season.

Unqualified', (*-kwōl'i-fīd.*) *a.* Not fit or qualified; not possessing the needful talents, abilities, or accomplishments; as, an *unqualified* practitioner.—Not having taken the necessary oath or oaths; as, an *unqualified* member of Congress.—Not modified or restricted by conditions, exceptions, or stipulations; absolute; as, *unqualified* censure.

Unquestionable', (*-kwēst'yun-a-bl.*) *a.* That cannot be doubted or called in question; indubitable; certain.

Unquestioned', (*-kwēst'yund.*) *a.* Not doubted or called in question; as, *unquestioned* authority.—Not examined or interrogated; having no questions asked; as, an *unquestioned* witness.—Indisputable; not to be opposed; as, *unquestioned* pleasure.

Unquiet', (*-kwī'et.*) *a.* Not quiet, calm, or tranquil; restless; uneasy; agitated; unsatisfied; disturbed; as, an *unquiet* house, an *unquiet* conscience.

Unravel', (*-rāvel.*) *v. a.* To free from a ravelled state; to disentangle; to disengage or separate, as threads that are knit; as, to *unravel* a knot.—Hence, to free; to clear from complication or difficulty; to unfold; to clear up, as the plot or intrigue of a play; as, to *unravel* a mystery.—To separate, as connected or united parts; to throw into disorder; as, "unravelling the principles of reason and religion."—*Tillotson.*

Unread', (*-rēd'.*) *a.* Not read or perused, as a book or writing.—Not recited or rehearsed; as, an *unread* drama.—Untaught; illiterate; not learned in books; as, an *unread* man.

Unready', (*-rēd'y.*) *a.* Not ready or prepared; not fit; not prompt or quick; awkward; ungaily.

Unreason', (*-rē'zn.*) *n.* Want of reason; nonsense; absurdity.
Abbot of Unreason, a mock abbatial character in the old English Christmas revels.

Unreasonable', (*-rē'zn-a-bl.*) *a.* Not agreeable to reason; irrational; as, an *unreasonable* prejudice.—Exceeding the bounds of reason; claiming or insisting on more than is fit; as, an *unreasonable* exaction.—Exorbitant; immoderate; inordinate; as, an *unreasonable* love of money.

Unreasonable', *n.* State or quality of being unreasonable; inconsistency with reason; as, the *unreasonableness* of intemperate language.—Exorbitance: excess of claim, demand, and the like; as, the *unreasonableness* of a proposition.

Unreconcilable', (*-sil'a-bl.*) *a.* That cannot be reconciled, or made consistent; irreconcilable; as, two *unreconcilable* accounts.—Implacable; incapable of being appeased or made amicable; as, *unreconcilable* enemies.

Unredeemed', *a.* Not redeemed or ransomed; unpaid; not recalled into the treasury or bank by payment of the value in money, as bills, notes, or stock; as, *unredeemed* American securities.

Unreeve', *v. a. (imp. UNROVE.) (Naut.)* To withdraw or take out, as a rope from a block, thimble, and the like.

Unrefined', *a.* Not refined or purified, as liquors, metals, &c.—Without ease, elegance, or polish of mind or manners; ill bred; as, *unrefined* people.

Unrelenting', *a.* Not relenting; feeling no pity or compunction; hard; cruel; vindictive; as, *unrelenting* cruelty.—Impassably strict; inflexibly rigid; not beuding to circumstances; as, an *unrelenting* law.

Unreliable', *a.* Not to be relied on; not trustworthy; unworthy of dependence upon; as, *unreliable* testimony.

Unremitting', *a.* Without remission or abatement; not relaxing temporarily; incessant; continued; as, *unremitting* toil.

Unrepealed', (*-pīld'.*) *a.* Not repealed, revoked, or abrogated; remaining in force, as a law or custom.

Unrepresented', *a.* Having no one to act in one's stead.

Unreserved', (*-zērd'.*) *a.* Without retention or reserve.—Not limited; full; without restraint; not withheld in part; as, *unreserved* faith.—Without reticence or reticence; concealing or keeping back nothing; free; frank; open; undisguised; as, an *unreserved* bestowal of confidence.

Unreservedly', *adv.* Frankly; without disguise or concealment; with open disclosure; without limitation or reservation; as, he spoke his mind *unreservedly*.

Unrest', *n.* Absence of rest or repose; disquietude; uneasiness; anxiety; restlessness; as, "Distress with sad unrest."—*Daniel.*

Unrestrained', *a.* Without check or restraint; uncontrolled; not confined; not hindered; loose; licentious; not limited; as, *unrestrained* pleasures.

Unrig', *v. a. (imp. and pp. UNRIGGED, (-un-rīgd.)* To strip, as a ship, of both standing and running rigging, &c.

Unrighteous', (*-rī'chus.*) *a.* [A. S. *unrihtwis*, not right-wise.] Not righteous or just; not conformed in heart and life to the divine law; wicked; evil; as, an *unrighteous* man.—Contrary to law and equity; unjust; as, an *unrighteous* sentence.

Unripe', *a.* Not ripe; lacking maturity; not brought to a state of perfection; as, *unripe* fruit.—Not yet proper; not seasonable; as, *unripe* vengeance. (*Dryden.*)—Not prepared; not completed; crass; immature; as, an *unripe* conspiracy.

Unrivalled', (*-rī'vald.*) *a.* Without a rival; peerless; having no equal or competitor; as, a woman of *unrivalled* beauty.

Unroll', *Unrol', v. a. (imp. and pp. UNROLLED, (-rōld.)* To open that which is rolled or convoluted; as, to *unroll* carpeting.—To lay open; to display.

Unroof', *v. a.* To strip off, as the roof or covering of a building.

Unroot', *v. a.* To uproot; to extirpate; to eradicate; as, to *unroot* a tree, to *unroot* a prejudice.

Unruliness', *n.* State, quality, or condition of being unruly; licentiousness; turbulence; refractoriness; disregard of restraint; as, *unruliness* of disposition.—Practice of breaking or leaping over fences.

Unruly', *a.* [From *rule.*] Disregarding restraint; licentious; not submissive to rule or command; refractory; ungovernable; turbulent; disposed to violate the laws and order; as, an *unruly* mob.—Accustomed to break from inclosures; apt to break or leap fences; as, an *unruly* beast.

Unsaddle', *v. a.* To take the saddle from, as a horse.—To throw from the seat or saddle; as, to *unsaddle* an antagonist in a tournament.

Unsatisfactory', *a.* Not giving satisfaction; not affording content; not convincing the mind or senses; as, an *unsatisfactory* plea, an *unsatisfactory* dinner.

Unsatisfied', *a.* Not satisfied; not having, or having had, enough; not filled, or gratified to the full; as, an *unsatisfied* appetite.—Discontented; not pleased; as, an *unsatisfied* disposition.—Not settled in opinion; not resting in confidence of the truth of anything; not fully convinced or persuaded; as, an *unsatisfied* inquirer.—Not fully paid; as, an *unsatisfied* debt or creditor.

Unsavory', *a.* Having no savor; insipid; tasteless; as, *unsavory* food.—Having a bad taste or smell; offensive; nauseating; as, an *unsavory* odor.

Unsay', *v. a. (imp. and pp. UNSAID.)* To recant or recall, as that which has been spoken; to retract; to deny something declared; as, to say, and straight *unsay*.

Unscientifically', *adv.* In a manner contrary to the rules and principles of science.

Unscriptural', *a.* Not according to the Scriptures; not warranted by divine authority; as, an *unscriptural* tenet.

Unscrupulous', *a.* Not restrained by scruples; unprincipled; ruthless; as, an *unscrupulous* villain.

Unseal', *v. a.* To open, as what is sealed; to break or remove the seal of; as, to *unseal* a letter, to *unseal* one's lips.

Unseasonable', (*-sē'zn-a-bl.*) *a.* Not being in the proper season; ill-timed; untimely; as, to call upon a person at an *unseasonable* hour.—Late; being beyond the usual or suitable time; as, he goes to bed at an *unseasonable* time.—Unfit; unadapted; not suited to the time or occasion; as, an *unseasonable* remark.—Not agreeable to the time of the year; as, an *unseasonable* temperature.

Unseaworthy', (*-wur'.*) *a.* Not seaworthy; not fit for a voyage; not able to encounter the perils of the sea, as a ship.

Unseemly', *a.* Not fit, proper, or becoming; indecent; as, *unseemly* conduct.

Unserviceable', *a.* Useless; not affording advantage, service, profit, or convenience.

Unsettle', *v. a.* To move or loosen from a settled or fixed state; to unfix; to make uncertain or fluctuating; to unhinge; to move from a place; as, a man of *unsettled* opinions.

Unsettled', *a.* Not settled, fixed, or determined, as doctrines, questions, opinions, and the like.—Not established; irregular; as, an *unsettled* state of things.—Unequal; changeable; variable; as, an *unsettled* temper.—Having no fixed position, or definite place of abode; as, to be *unsettled* in life.—Having no inhabitants; not occupied by permanent residents; as, an *unsettled* country.—Turbid; not having deposited its lees or dregs, as liquor.

Unshackle', (*-shāk'l.*) *v. a.* To loose from shackles or bonds; to unfetter;—hence, to liberate from restraint; as, to *unshackle* the will.

Unshak'en', *a.* Not shaken, agitated, or moved; firm; fixed; resolute; as, *unshak'en* belief or confidence.—Firm; steady; not subject to vibration or concussion; as, an *unshak'en* edifice.

Unship', *v. a. (imp. and pp. UNSHIPED, (-shīpt.)* To discharge from, or take out of, a ship or other craft; as, to *unship* goods.—To remove from the place where it is fixed or fitted; as, to *unship* the oars.

Unskilfulness', *n.* Disagreeableness to the sight; deformity; ugliness.

Unskilful', *a.* Deficient in skill; awkward; bungling; inept; clumsy; lacking the knowledge and dexterity which are acquired by observation, practice, and experience; as, an *unskilful* pilot.

Unskilfully', *adv.* Without skill, knowledge, or dexterity; clumsily.

Unskilled', (*-skīld'.*) *a.* Short of skill; destitute of

readiness or dexterity in performance; without practical knowledge; as, an *unskilled* mechanic.

Unslung, *v. a.* (*imp.* and *pp.* UNSLUNG.) (*Naut.*) To release from the slings; as, to *unslung* the yards.

Unsociable, (*-sō'sha-bl*.) *a.* Not suited or suitable to society; not having the qualities which are proper for society, and which render it agreeable; not apt to converse; not free in social intercourse; reserved; exclusive; as, an *unsociable* individual.

Unsocial, (*-sō'shal*.) *a.* Not adapted or beneficial to society.

Unsophisticated, (*-fis'*.) *a.* Without sophistication; genuine; pure; simple; as, an *unsophisticated* mind.—Pure; not adulterated by mixture; not spurious; as, *unsophisticated* liquors.

Unsorted, *a.* Not sorted, or separated into sorts; not distributed according to kinds or classes; as, *unsorted* nails.

Unsound, *a.* Not sound; defective; as, *unsound* timber.—Sickly; infirm; radically weak; as, an *unsound* constitution.—Unorthodox; deficient; as, *unsound* doctrine.—Not honest, just, or upright; not sound or trustworthy in character; deceitful; as, a man of *unsound* principles.—Not true, real, palpable, or substantial; as, *unsound* delights. (*Spenser*.)—Not of close or compact texture or substance; as, *unsound* cheese.—Not solid; not material; as, an *unsound* substance.—Insincere; not true, staunch, or faithful; as, *unsound* affection.—Not strong; not capable of bearing pressure; as, *unsound* ice.—Sophistical; delusive; erroneous; fallacious; wrong; as, an *unsound* argument or proposition.—Not fast; not deep; not calm; as, *unsound* sleep.—Not well established; doubtful; questionable; as, an *unsound* reputation, *unsound* credit.

Unsparring, *a.* Not parsimonious; generous; liberal; profuse; lavish; as, *unsparring* munificence.—Inexorable; vindictive; harsh; not merciful or forgiving; as, *unsparring* animosity.

Unspeaking, *a.* That cannot be spoken or uttered; that cannot adequately be revealed or expressed; unutterable; inexpressible; as, *unspeaking* joy or sorrow.

Unspotted, *a.* Free from spot, stain, or blemish; as, an *unspotted* skin.—Untainted with guilt, or any moral stain or blemish; unvitiated; immaculate; as, an *unspotted* good name.

Unst, the most southern of the Shetland Islands, in Lat. 60° 45' N., separated on the S. side from Yell, by Blue Mull Sound, 1 m. across. It is 11 m. long, with an average breadth of 3½ m. There are numerous tumuli, a chain of Scandinavian dunes, and the ruins of upwards of 20 ancient chapels. Pop. 3,000.

Unstained, *a.* Not stained, dyed, or tintured; as, *unstained* paper.—Not tarnished, polluted, or dishonored; as, an *unstained* pedigree.

Unsteadily, (*-stēd'-l*.) *a.* Without steadiness; in a wavering, vacillating manner; inconstantly; variously; mutably.

Unsteady, *a.* Not steady; as, an *unsteady* posture.—Irresolute; fickle; mutable; changeable; not in the same manner at different times; as, an *unsteady* mind.—Dissipated; not adhering constantly to the serious concerns of life; as, the best of us are *unsteady* at times.

Unstring, *v. a.* (*imp.* and *pp.* UNSTRUNG.) To deprive of a string or strings; as, to *unstring* a violin.—To relax the tension of; to loosen; as, *unstring* nerves.—To remove from a string; as, to *unstring* beads.

Unsuccessful, *a.* Without success; not producing the desired effect, nor having a happy issue; not fortunate.

Unsuitable, *a.* Unfit; not suitable or adapted; as, the man is *unsuitable* for the place.—Improper; unbecoming; not in accordance; as, the electoral franchise is *unsuitable* for women.

Unsuspecting, (*-pish'us*.) *a.* Entertaining no suspicion; not indulging the imagination of evil or wrongdoing in others; as, an *unsuspecting* nature.—Not to be suspected; irrefragable; as, *unsuspecting* testimony.

Unsymmetrical, *a.* Wanting symmetry or harmonious proportion of parts; as, an *unsymmetrical* figure. (*Bot.*) Not symmetrical;—said of the segments of the calyx and corolla, the sepals and petals, and also the stamens when they are not regular and similar.

Unsystematic, **Unsystematical**, *a.* Not having regular or systematic order, distribution, or arrangement of parts.

Untainted, *a.* Not tainted or rendered impure by admixture, or by impregnation with foul matter; as, *untainted* air.—Not rendered distasteful or unsavory by putrescence; as, *untainted* meat.—Not accused; as, he is yet *untainted*.—Not sullied or stained; unblemished; spotless; as, a man of *untainted* honor.

Untax, *v. a.* Not taxed; not having taxes imposed on; as, an *untaxed* people.—Not accused; as, a person suspected but *untaxed*.

Untenable, *a.* That cannot be held in possession; that cannot be maintained or supported; not defensible; as, an *untenable* fort, an *untenable* argument.

Unterwalden, (*oon'ter-val-den*.) a canton of Switzerland, bounded N. by the Lake of Lucerne, E. by the Canton of Uri, S. by Berne, and W. and N.W. by Lucerne. It is divided into Upper U. (Oberwalden), cap. Sarnen, and Under U. (Niederwalden), cap. Stanz, each division forming an independent republic, with its own administration. Both have a *landsgemeinde*, or citizen congress, composed of all the inhabitants 20 years of age, which assembles in the open air late in the spring, when it passes new laws, imposes taxes, and appoints the executive officers. The greater part of U. is occupied by mountains, whose heights range between 3,000 and 10,000 feet above sea-level. The remainder consists of 4 principal valleys, which have a general slope towards the lake on the N. frontier, into which the chief rivers, the

Melch and the Aar, discharge nearly all the drainage of the canton. There are several small lakes, and abt. ¼ of the area of Lake Lucerne (Fig. 2554) belongs to U.

Fig. 2554.—VIEW ON THE LAKE OF LUCERNE, FROM THE UNTERWALDEN SIDE.

The inhabitants are nearly all Roman Catholics; they speak German; and pasturage is their chief occupation. They are exceedingly simple in their habits. Pop. 24,902, divided into abt. equal parts between the 2 half cantons. U. formed, with Uri and Schwyz, early in the 13th cent., the nucleus of the Confederation, in which it holds the 6th place.

Unthinking, *a.* Thoughtless; inconsiderate; not with thought or heed; as, an *unthinking* man.—Not indicating thought or reflection; as, "With round *unthinking* face."—Pope.

Unthread, (*-thrēd'*.) *v. a.* To draw or take out a thread from; as, to *unthread* a needle.—To loose the ligaments or threads of.

Untie, *v. a.* To loosen or free from being tied; to disengage, as the parts that form a knot.—To unbind; to free from any fastening; to let loose; as, "to *untie* the winds." (*Shaks.*)—To loosen from convoluted intricacies; as, "snakes *untied*." (*Pope*).—To loose; to separate something attached; as, a woman's *untied* tongue.—To resolve; to clear; to unfold, as difficulties or perplexities.

Until, *prep.* [See TILL.] Into; to; till; as far as;—in relation to time, place, or degree;—seldom used in modern acceptance, except with reference to time; as, keep this in mind *until* the day shall come.

—*conj.* That is;—having reference to an event mentioned, or to the time of it; to the point or place of; to the degree that; till; as, "Treasons are never believed . . . *until* they come to act."—*Denham*.

Untimely, *a.* Happening before the usual time; unseasonable; taking place before the natural or proper time; premature; as, his *untimely* fate.

—*adv.* Before the natural or ordinary time; prematurely.

Untiring, *a.* Not becoming tired or exhausted; patient; enduring; as, *untiring* zeal.

Unto, *prep.* [A. S. *on*, *an*, *in*, *into*, and *to*.] To;—rarely used except antiquatedly, formally, or scripturally.

Untold, *a.* Not told, spoken, related, or revealed; as, grief *untold*.—Not numbered or told over; as, wealth *untold*.

Untoward, (*-tō'ard*.) *a.* Froward; perverse; refractory; not easily guided or taught.—Awkward; ungainly; ungraceful; as, *untoward* words or manners.—Inconvenient; troublesome; unmanageable; as, an *untoward* pledge.

Untowardly, *a.* Awkward; perverse; froward; as, *untowardly* tricks or vices.

—*adv.* In an untoward, perverse, or froward manner; awkwardly; ungainly.

Untravelled, (*-trāvēl'd*.) *a.* Not travelled; not trodden by wayfarers or passengers; as, *untravelled* wilds.—Not having seen the world; not having visited foreign countries.

Untrue, *a.* Lacking truth; false; contrary to the fact; as, your account of the matter is *untrue*; not faithful to another; not fulfilling duties or obligations; false; disloyal; inconstant; as, she is *untrue* to her husband.

Untruth, *n.* Falsehood; contrariety to truth; want of veracity or fidelity; disloyalty; treachery.—That which is untrue; a lie; a falsehood; a false assertion; as, he is notorious for uttering *untruths*.

Untune, *v. a.* To render incapable of harmony; to put out of tune or tone; as, "Untune'd the music, and disun'd the voice." (*Prior*).—To disorder; to throw into confusion; as, *untuned* senses.

Untwist, *v. a.* or *n.* To separate and bring apart, as threads twisted; or, to turn back that which is twisted; as, "The twine that *untwisteth*, *untwisteth* the twist." (*Wallis*).—To open; to disentangle; as, intricacy; as, "un*twisting* his deceitful clew."—*Spenser*.

Unusual, (*-yu'zhu-al*.) *a.* Not usual, common, or ordinary; rare; as, a person of *unusual* accomplishments.

Unusually, *adv.* Not commonly, ordinarily, or frequently; rarely.

Unutterable, *a.* That cannot be uttered or expressed; ineffable; as, "She sighed, and looked *unutterable* things."—*Thomson*.

Unvarnished, (*-nishl*.) *a.* Not overspread with varnish.—Not artfully embellished; plain; as, an *unvarnished* tale.—*Shaks*.

Unwarped, (*-warpt'*.) *a.* Not warped; unbiassed; not turned from the true direction; impartial; as, *unwarped* judgment.

Unwarrantable, *a.* Not warranted; not defensible.

Unweighed, (*-wūd*.) *a.* Not having the weight ascertained.—Not deliberately considered and examined, negligent; as, *unweighed* evidence.

Unwell, *a.* Sick; indisposed; not in good health; ailing; somewhat ill.—Affected with, or having catamenial or menstrual discharges, as a woman.

Unwholesome, (*-hōl'sum*.) *a.* Not wholesome; not favorable to health; insalubrious; as, *unwholesome* food.—Injudicious; distasteful; as, *unwholesome* counsel.

Unwholesomeness, *n.* State or quality of being unwholesome, or injurious or noxious to health; insalubrity; as, the *unwholesomeness* of a climate.

Unwieldy, (*-wēld'*.) *a.* That is moved with difficulty; unmanageable; bulky; ponderous; as, an *unwieldy* body.

Unwilling, *a.* Not willing; loth; disinclined; reluctant; as, an *unwilling* witness.

Unwind, *v. a.* (*imp.* and *pp.* UNWOUND.) To loose or separate, as that which is wound or convolved; as, to *unwind* a ball of thread.—To disentangle; as, to *unwind* the affections from an object.

Unwise, (*-wīz'*.) *a.* Not wise; not choosing the best means for the end; defective in wisdom or sound judgment; not dictated by prudence; injudicious; foolish; indiscreet; as, *unwise* measures, *unwise* delay, an *unwise* man.

Unwisely, *adv.* Not characterized by wisdom; injudiciously; without prudence or discretion; as, *unwisely* liberal.

Unwittingly, *adv.* Without knowledge or consciousness; ignorantly; as, I have *unwittingly* offended him.

Unwonted, (*-wunt*.) *a.* Not wonted; unaccustomed; unused; not made familiar by habit or practice; as, "Sea-calves *unwonted* to fresh waters hie." (*May*).—Infrequent; uncommon; unusual; as, an *unwonted* change.

Unworthily, (*-ūw'rhī-ly*.) *adv.* In an unworthy manner; without due regard to merit; not in accordance with desert; as, I have been treated *unworthily*.

Unworthy, *a.* Deficient in worth or merit; undeserving; as, an *unworthy* person.—Vile; base; worthless; as, *unworthy* money.—Not suitable; inadequate; unbecoming;—preceding *of*; as, he is *unworthy of* credit, this article is *unworthy of* his pen.

Unwritten, (*-rit'ūn*.) *a.* Verbal; oral; not written; not reduced to, or conveyed in, writing; as, *unwritten* tradition.—Blank; containing no writing; as, a rude, *unwritten* blank.

Unwritten doctrines, (*Theol.*) Oral or traditional doctrines.

Unwritten laws, laws, such as belong to the early and barbarous European nations, handed down by tradition or minstrelsy.—*Unwritten law*. (*Lat. lex non scripta*.) That portion of English and American law not having had derivation from express legislative enactment.

Unyielding, (*-yēld'*.) *a.* Not yielding to force or persuasion; unbending; unpliant; stiff; firm; obstinate; not giving place; inexorable; as, an *unyielding* temper.

Unyoke, *v. a.* To loose or free from a yoke, as cattle.—To part; to disconnect; to disjoin; as, to *unyoke* man and wife.

Up, *adv.* [A. S. *up*, *upp*, *uppe*.] Aloft; on high; above; in a higher position; in a state of elevation or exaltation;—correlative to *down*.—Hence, in various derived applications; as, (1.) From a lower to a higher position, whether literally or figuratively, as from a state of concealment or recumbence; in a state of climbing or ascending; from a dependent or inferior condition; from younger to older years;—connected with motory verbs, indicated or implied; as, to get *up* from bed; he worked himself *up* to his present prosperity; my temper is quickly *up*.—(2.) In a state of being increased or raised; in a state of advance or proficiency; in a condition of elevation, prominence, and the like; in the state of being built or constructed; in the state of having arisen; in a higher position, literally or figuratively;—having application with verbs indicative of condition, situation, repose, &c.; as, he has just got *up*; so soon as the sun is *up*; the people were *up* in arms; those people who are *up* in the world are apt to forget the time when they were low; the honorable member is *up*.—In a state of approaching; to or in a condition of equal progression or equality; not less advanced than; not short of; not back of, or away from;—in most cases, preceding to or *with*; as, to come *up with* the front rank; to live *up to* one's income; to be *up to* the middle in water; to act *up to* our duty.—To or in a state of thoroughness or completion; entirely; wholly; quite; completely; as, he ate *up* his dinner; to burn *up* a letter; to sum *up* evidence;—in an elliptical sense, *up* is used as equivalent to *get up*, expressing a command or advisory intimation.

"Up! up! my friend, and quit your books."—*Wordsworth*.

It is all *up with* him, it is all over, or ended, with him. The time is *up*, the appointed or allotted time is come.—To blow *up*. See BLOW.—To come *up with*. See COME.—To draw *up*, to arrange in proper order; to put in suitable form; as, to draw *up* a memorial.—To grow *up*, to grow to maturity; as, a grown *up* youth.—Up to snuff. See SNUFF.—Up and down, backward and forward; from one place, state, or position to another; as, to pace *up and down* a street.

—*n.* State or condition of being up or above.—Ups and downs, alternate states of elevation and depression, or of prosperity and adversity; as, Life's ups and downs. (*Colloq.*)

Up, *prep.* From a lower to a higher place on or along; at the top of; as, to walk *up* a hill. — *Up sound.* (*Naut.*) From the sea. — *Up stream*, against the stream. — *Up the country*, in the direction toward the head-waters of a stream or river.

Upas, *n.* [Malay, poison.] (*Bot.*) See *ARTOCARPACEÆ*.

Upbar, *v. a.* To bar up, or fasten with a bar.

Upbear, (*-bair*'), *v. a.* (*imp.* *UPBORE*; *pp.* *UPBORNE*.) To bear up or aloft; to raise; to lift; to elevate; to sustain aloft; to support in an elevated position.

"Swift as on wings of wind upborne they fly." — *Pope*.

Upbraid, *v. a.* [*A. S.* *up-gebrædan*, to charge, reproach.] To reproach; to charge with something wrong or opprobrious; to cast in the teeth of; — preceding *with* or *for* before the thing imputed; as, to *upbraid* a man *with* his illegitimacy of birth. — To reprove or admonish with severity; to chide energetically; to bring reproach on.

Upbraid'er, *n.* One who reproves, chides, or reproaches.

Upbraid'ingly, *adv.* In an upbraiding manner.

Upbreed, (*imp.* and *pp.* *UPBRED*), *v. a.* To rear, breed, or bring up; as, *upbred* at home.

Upcast, *a.* Cast upward; thrown heavenward; — opposed to *downcast*; as, *upcast* eyes.

— *n.* (*Games.*) In bowling, a throw; a cast.

(*Mining.*) See *DOWNCAST*.

Upcoiled, *a.* Made into a coil; as, *upcoiled* hair.

Upheaval, *n.* Act of upheaving; a heaving or lifting up.

Upheave, *v. a.* To heave or lift up from beneath.

Upheld, *imp.* and *pp.* of *UPHOLD*, *q. v.*

Upher, (*ūfer*'), *n.* (*Arch.*) One of a set of fir piles, chiefly used in scaffolding, and running from 20 to 40 ft. in length, with a diameter of from 4 to 7 inches.

Uphill, *a.* Ascending; tending upward; as, an *uphill* path. — Difficult; like the act of ascending a hill; as, *uphill* work.

Uphold, *v. a.* (*imp.* *UPHELD*; *obs.* *UPHOLDEN*.) To hold up; to lift aloft or on high; to elevate; as, to *uphold* the hands. — To sustain; to keep from slipping or falling; to keep from declension; to support in any state; to continue; to maintain, as, to *uphold* the authority of the law. — To keep or continue in being; to defend; to invest with moral support or countenance; as, to *uphold* the claims of an injured person.

Upholder, *n.* One who, or that which, upholds, supports, sustains, or defends. — Formerly, an upholsterer; also, an undertaker for funerals.

Uphol'sterer, *n.* One who fits up dwelling-houses with furniture, beds, hangings, and the like; — formerly written *upholder*.

Uphol'stery, *n.* Furniture supplied by upholsterers.

Uphroe, (*yoo'rō*'), *n.* (*Naut.*) An oblong block, without sheaves, and having several holes. Its use is to hold ropes temporarily extended, the formation preventing the rope from slipping.

Upland, *n.* [*up* and *land*.] High land; land on hills and steep declivities, which in general requires a different kind of management from lands in plains or plateaux; they are generally kept in pasture or underwood, and are for the most part dry; — opposed to *meadow*, *marsh*, *swamp*, &c.

— *a.* Higher in situation; being on upland; as, an *upland* tract. — Pertaining to uplands; as, *upland* grazing. — *Upland sumach.* (*Bot.*) The *Rhus glabra*. See *RHUS*.

Upland, in *Pennsylvania*, a village of Chester co., 38 m. S.W. of Philadelphia. — A post-borough of Delaware co., 14 m. S.W. of Philadelphia. *Pop.* (1897) 2,980.

Uplander, *n.* An inhabitant of the uplands.

Uplandish, *a.* Dwelling on high lands or mountainous slopes; hence, rustic; rude; as, *uplandish* people. (*R.*)

Uplift, *v. a.* To raise up; to lift aloft; to elevate; to place on high or higher; as, with *uplifted* head.

— *n.* (*Geol.*) Strata, although generally in horizontal position, when formed, are, in most regions, at the present time, *tilted*, or inclined, and the inclinations vary from a small angle to verticality, or even beyond verticality. They have been raised into folds, each fold often many inches in sweep, and equal to a mountain-ridge in extent. They have been crumpled up into groups of irregular flexures, one fold or flexure succeeding to another, till like a series of wrinkles on the earth's surface. Every mountain-region possesses examples of these flexures or uplifts, and most intermediate plains have at least some undulation, in conformity with the system in the mountains. In connection with all this uplifting, there have been fractures on a great scale; and strata thus broken have been displaced or dislocated by a sliding of one side of such a fracture through varying distances from a few feet to miles — one side dropped down to this extent, or the other side shoved up. — A dislocation or *uplift* is called *fault*, when the dislocation of the strata is in the plane of a fracture.

Up-line, *n.* In England, that line of track of a railway which leads in the direction of the chief terminus; — opposed to *down-line*.

Up'most, *a.* Highest; topmost; — little used, *UPPERMOST* (*q. v.*) being preferred.

Upon, *prep.* [*A. S.* *uppan*, *uppon* — *on*, and *up*, high, exalted.] *On*; — used in all the senses of that word, with which it is interchangeable, and opposed to *under*. See *ON*. — To take upon, to assume; to undertake; as, he took upon himself the responsibility.

To assume upon. (*Law.*) To promise; to undertake.

Upper, *a.* (*comp.* of *UP*, *q. v.*) Higher in place; further up; — used literally or figuratively; superior in rank, dignity, position, and the like; as, the *upper* lip, the *upper* classes of society, the *upper* deck of a ship, the *upper* house of the legislature.

Upper case. (*Print.*) The higher one of a pair of compositors' cases, in which are kept capitals, small capitals, and references. — *Upper ten*, or *upper ten thousand*,

a colloquialism for the ten thousand highest in rank or wealth; in other words, the ton; the aristocracy; the upper class; the fashionable world. (*Vulgar U. S.*) — *Upper works.* (*Naut.*) Those parts of a ship's hull which are above the water-line when she is fully laden and placed in sailing trim.

Upper, in *Arkansas*, a township of Sebastian county.

Upper, in *New Jersey*, a township of Cape May county.

Upper, in *North Carolina*, a township of Chowan county.

Upper, in *Ohio*, a township of Lawrence county.

Upper Allen, in *Pennsylvania*, a township of Cumberland co.

Upper Alloway's Creek, in *New Jersey*, a township of Salem county, 72 miles south-west of Trenton.

Upper Alton, in *Illinois*, a city of Madison co., 1½ m. E. of Alton. *Pop.* (1897) 2,050.

Upper Aquabogue, in *New York*, a post-village of Suffolk co., 75 m. N.E. of New York city.

Upper Augusta, in *Pennsylvania*, a township of Northumberland co.

Upper Bern, in *Pennsylvania*, a post-township of Berks co.

Upper Chick'ester, in *Pennsylvania*, a township of Delaware co.

Upper Cove, in *Georgia*, a district of Walker county.

Upper Creek, in *N. Carolina*, a precinct of Burke co.

Upper-crust, *n.* The top or raised crust, as of a pie. — Hence, a cant term for the upper class of society.

Upper Dar'by, in *Pennsylvania*, a post-township of Delaware co., 9 m. W. of Philadelphia.

Upper Dick'inson, in *Pennsylvania*, a township of Cumberland co.

Upper Dub'lin, in *Pennsylvania*, a post-twp. of Montgomery co., 15 m. N. of Philadelphia.

Upper Fair'field, in *Pennsylvania*, a township of Lycoming co.

Upper Fork, in *N. Carolina*, a precinct of Burke county.

Upper Free'hold, in *New Jersey*, a township of Monmouth co.

Upper Gloucester, (*-glos'ter*), in *Maine*, a post-village of Cumberland co., abt. 25 m. N. of Portland.

Upper Grove, in *Iowa*, a post-village of Hancock co., abt. 42 m. N.E. of Fort Dodge.

Upper-hand, *n.* Superiority; advantage; ascendancy; as, to get and keep the *upper-hand*.

Upper Han'over, in *Pennsylvania*, a township of Montgomery co.

Upper Hant'ing, in *N. Carolina*, a township of Buncombe co.

Upper Hunt'ing Creek, in *Maryland*, a village of Caroline co., 57 m. E. of Annapolis.

Upper Iowa River, rises in Freeborn co., Minnesota, and flowing E., enters the Mississippi in Allouakee co.

Upper Lea'cock, in *Pennsylvania*, a township of Lancaster co.

Upper-leather, (*-lèth'ler*), *n.* [Often abbreviated to *upper*.] The leather used in making the ramps and quarters of shoes.

Upper Maenn'gy, in *Pennsylvania*, a township of Lehigh co., abt. 10 m. S.W. of Allentown.

Upper Mahant'ango, in *Pennsylvania*, a post-twp. of Schuylkill co.

Upper Mah'onoy, in *Pennsylvania*, a township of Northumberland co.

Upper Make'field, in *Pennsylvania*, a township of Bucks co.

Upper Marl'borough, in *Maryland*, a post-village, cap. of Prince George co., 17 m. E.S.E. of Washington.

Upper Mer'ion, in *Pennsylvania*, a township of Montgomery co., on the Schuylkill River, opposite Norristown.

Upper Mid'dleton, in *Pennsylvania*, a post-village of Fayette co., 40 m. S.E. of Pittsburg.

Upper Mil'ford, in *Pennsylvania*, a township of Lehigh co.

Up'most, *a.* Upmost; furthest up; highest in place, power, position, or authority; supreme; as, "Tis all one to the common people who's *up'most*." *L'Estr.*

Upper Mount Bethel, in *Pennsylvania*, a township of Northampton co.

Upper Naz'areth, in *Pennsylvania*, a township of Northampton co.

Upper O'kaw, in *Illinois*, a township of Coles county.

Upper Ox'ford, in *Pennsylvania*, a twp. of Chester co.

Upper Pax'ton, in *Pennsylvania*, a twp. of Dauphin co.

Upper Penn's Neck, in *New Jersey*, a township of Salem co.

Upper Pitts'grove, in *New Jersey*, a township of Salem co.

Upper Prov'idence, in *Pennsylvania*, a post-twp. of Delaware co. — A township of Montgomery co., 25 m. N.W. of Philadelphia.

Upper Red Hook, in *New York*, a post-village of Dutchess co., abt. 15 m. S. of Catskill.

Upper Sal'ford, in *Pennsylvania*, a township of Montgomery co.

Upper Sandus'ky, in *Ohio*, a post-village, cap. of Wyandot co., 63 m. N.W. of Columbus. *Pop.* (1897) 3,590.

Upper San'con, in *Pennsylvania*, a township of Lehigh co.

Up'per St. Clair, in *Pennsylvania*, a post-twp. of Alleghany co., abt. 9 m. S.W. of Pittsburg.

Upper Stras'burg, in *Pennsylvania*, a post-village of Franklin co., abt. 10 m. N.N.W. of Chambersburg.

Upper Swata'ra, in *Pennsylvania*, a township of Dauphin co.

Upper-ten, *n. pl.* See *UPPER*.

Upper-ten'dom, *n.* The aristocracy; the upper classes of society. (*Colloq. U. S.*)

Upper Towamen'sing, in *Pennsylvania*, a township of Carbon co.

Upper Tulpehoek'en, in *Pennsylvania*, a township of Berks co.

Upper Tur'keyfoot, in *Pennsylvania*, a township of Somerset co.

Upper Uweh'tan, in *Pennsylvania*, a township of Chester co.

Upperville, in *Virginia*, a post-village of Fauquier co., 135 m. N.W. of Richmond.

Upper-world, (*-wôrld*'), *n.* The atmosphere; the ethereal world of space. — Heaven; the celestial world. — This world, in distinction from the *under-world*.

Uppish, *a.* [From *up*.] Proud; arrogant; self-conceited; snobbish. (*Colloq.*)

Uppishly, *adv.* Proudly; petulantly.

Uppishness, *n.* Purse-pride; vulgar arrogance; snobbism; vulgar imitation of good style or aristocratic manners; assumed air of superiority. (*Low.*)

Uppraise, *v. a.* To raise or lift up; to elevate.

Upprear, *v. a.* To rear or raise up; to bring up; as, to *uprear* a family.

Upright, (*ūpr'it*'), *a.* Straight up; pointing directly upward; perpendicular or vertical to the plane of the horizon; erect; as, an *upright* posture, an *upright* pillar. — Just; honest; possessing rectitude; adhering to, or not deviating from, correct moral principles; as, an *upright* man, an *upright* mind. — Conformable to moral truth and equity; as, *upright* conduct.

— *n.* That which stands erect or perpendicular.

(*Arch.*) An elevation, as of a building.

Uprightly, *adv.* Perpendicularly; with erectness; in an upright manner. — Without deviation from rectitude or integrity; equitably; honestly.

Uprightness, *n.* State of being upright.

Uprise, (*-rîz'*'), (*imp.* *UPROSE*; *pp.* *UPRISEN*, (*-rîz'n*'), *v. a.* To rise; to get up; to bestir, as from rest or recumbency.

Uprising, (*-rîz'-*'), *n.* Act of rising; also, an ascent; an acclivity; a steep place.

Up'roar, *n.* [*Swed. Goth. upror* — *up*, and *röra*, to move.] Great tumult or noisy commotion; violent disturbance, bustle, and clamor.

Up'roarious, *a.* Making uproar; accompanied by great clamor, or noise and tumult; as, *uproarious* laughter. (*Low.*)

Uproot, *v. a.* To tear up by the roots, or as if by the roots; to eradicate; to extirpate; as, *uprooted* trees; to *uproot* heresy.

Uprouse, *v. a.* To rouse, as from sleep; to stir up.

Upsal, an ancient city of Sweden, 45 m. from Stockholm, on the small river Sala. The cathedral, in which the Swedish kings used to be crowned, is a large structure. The university, founded in 1476, has faculties of law, philosophy, theology, and medicine. It is governed by a chancellor, assisted by 31 professors; and has a library containing about 200,000 volumes, an observatory, &c.

Upsend, *v. a.* (*imp.* and *pp.* *UPSENT*.) To throw, send, or cast up.

Upset, *v. a.* (*imp.* and *pp.* *UPSET*.) To set up or place upright. — To set upside down. — To overturn or overset; as, to *upset* a tray, carriage, &c. — To make thicker and shorter, by hammering on the end of a piece of heated metal set up endwise, as the tire of a wheel.

— *v. u.* To become thickened and shortened, as a piece of iron by end-hammering.

— *a.* Set up; having reference to something that is set up for sale; as, an *upset* price, that is, the lowest price at which anything can be sold at auction.

— *n.* Act of upsetting; also, an overturn; a spill, as of a carriage or other vehicle.

Up shot, *n.* Final issue or result; end; conclusion; ultimate consequences.

Up'shur, in *Ohio*, a post-village of Preble co.

Upshur, in *Texas*, a N.E. co.; area, 520 sq. m. Rivers, Sabine and Big Cypress bayou. Surface, level; soil, fertile. Cap. Gilmer. *Pop.* (1897) 13,730.

Upshur, in *West Virginia*, an E. co.; area, 350 sq. m. Rivers, Buchanan and the West Fork of the Monongahela. Surface, hilly; soil, fertile. Cap. Buckhannon. *Pop.* (1897) 14,100.

Up'side, *n.* The upper side or uppermost surface. — *Upside down*, topsy-turvy; with the upper part undermost; hence, in complete confusion or disorder.

Up'son, in *Georgia*, a W. central co.; area, 321 sq. m. Rivers, Flint; also Potato creek. Surface, diversified; soil, fertile. Cap. Thomaston. *Pop.* (1897) 13,930.

Up'sonville, in *Pennsylvania*, a post-village of Susquehanna co., 180 m. N.N.E. of Harrisburg.

Upstairs, *adv.* In or toward the upper story of a building.

Upstart, *v. n.* To start or spring up suddenly.

— *n.* That which springs, starts, or shoots up suddenly; specifically, a parvenu; a snob; one who has risen by a sudden stroke of fortune from a low condition of life to rank, wealth, power, or importance; as, a vulgar *upstart*. — *a.* Suddenly raised to prosperity, prominence, or importance.

Up'stroke, *n.* The fine line or stroke made by a pen or pencil when moving upward, in distinction from the *downstroke*, which is thicker and more prominent.

Up'ton, in *Maine*, a post-twp. of Oxford co.

Up'ton, in *Massachusetts*, a post-township of Worcester co., 33 m. W.S.W. of Boston.

Upton, in *Missouri*, a twp. of Texas co.

Upton, in *Pennsylvania*, a post-village of Franklin co., 13 m. S.W. of Chambersburg.

Up-town, *a.* Situated in, or belonging to, the upper part of a town; as, *up-town* society.

—*adv.* Toward, or in, the upper part of a town.

Up'-train, *n.* In England, a railway-train proceeding toward the main terminus.—In the U. S., a railroad train going toward the direction conventionally denoted by *up*.

Upturn, *v. a.* To turn or direct upward.

Upupa, *n.* (*Zoöl.*) The HOOPOE, *q. v.*

Upward, *a.* Ascending; directed to a higher place.

Upward, Upwards, *adv.* Toward a higher place; in a direction from lower to higher;—opposed to *downward* or *downwards*; as, looking *upward*, we saw the summit of the peak.

—Above; with respect to the higher or upper parts; as, the *upward* half of the body.—Yet more; with a tendency to a higher or greater number; as, two years' or *upward*, of incessant labor.—*Upward* or *upwards of*; more than; above;—hence, about; nearly; as, I have known him *upwards of* twenty years.

Ur, (*Script.*) See ORFAH.

Ural, or **Oural**, (*oo'-ral*), a river of Russia, rising near Minsk, on the E. side of the Ural chain, and considered with the Ural Mountains to form the E. boundary of Europe. After an estimated course of about 1,800 m. it enters the Caspian Sea, 180 m. from Astrakhan.

Ural or **Oural Mountains**, an extensive mountain range extending nearly under the same parallel from the N. border of the Sea of Aral to the shores of the Arctic Ocean, or from Lat. 28° to 69°, and forming during the greater part of its course the boundary between Europe and Asia. Its breadth varies from 1 to 5 m., and its highest peak is 6,400 ft. It is rich in gold, copper, and iron.

Uralsk, a town of Russia, on the Ural, 150 m. from Orenberg. It is the residence of the hetman of the Cossacks. *Pop.* 14,000.

Urania, (*Myth.*) One of the Muses, daughter of Jupiter and Mnemosyne; she presided over astronomy. She is represented as a virgin, with a crown of stars, draped in garments spangled with stars, holding in her left hand a celestial globe.

(*Astron.*) An asteroid discovered by Hind in 1854.

Uranic, *a.* (*Chem.*) Noting salts whose base is uranic acid or sesqui-oxide of uranium.

Uranite, *n.* (*Min.*) See URANIUM.

Uranium, *n.* (*Chem.*) A metal discovered by Klaproth in 1789, who named it after the planet Uranus, discovered about that time. It occurs in the minerals *uranium ochre* $UO_3 \cdot H_2O$; *pitch blende*, which consists of the black oxide U_3O_8 , associated with silica, lead, and iron; *chalcocite*, *uran-glimmer*, or *uran-mica*, which consists of the phosphate of copper and uranium, $CuO \cdot 2UO_3 \cdot P_2O_5 \cdot 8H_2O$; and *uranite*, which is the phosphate of lime and uranium, $CaO \cdot 2HPO_3 \cdot P_2O_5 \cdot 8H_2O$. Uranium is a very hard, but moderately malleable metal, sp. gr. 18.33, and resembles nickel or iron in color and luster. The salts of the oxides of uranium are of a green or yellow color; the persalts have been most examined. Ferrocyanide of potassium produces in them a very characteristic rich brown precipitate, not unlike that formed by the persalts of copper. They are also precipitated brown by the infusion of galls. Peroxide of uranium is used to give a green or greenish-yellow color to glass, and a suboxide (U_2O_5) is somewhat extensively used in porcelain painting for the production of an intense black. *Equiv.* 240; *Symbol* U.

Uranography, Uranology, *n.* [*Gr. ouranos*, the heavens, *grapho*, to describe, and *logos*, treatise.] A description of the heavens.

Uranoscopy, *n.* [*Gr. ouranos*, heaven, and *skopein*, to view.] Contemplation of the heavens or heavenly bodies.

Uranoscopus, *n.* (*Zoöl.*) The Star-gazers, a genus of fishes, family *Percide*, so called by Linnæus because both eyes were placed on the superior surface of the head, which presents a nearly cubical form. The mouth is cleft vertically at the anterior part of the head, and, like the eyes, is directed upwards. *U. onoplos* (Fig. 2556), 2 in. or more in length, is found on the S.E. coast of the U. States.

Uranus, *n.* [Heaven, the most ancient of the gods. Symbol, ♅ , the initial of Herschel, with a planet suspended from the cross-bar.] (*Astron.*) Uranus, which for 65 years was considered the frontier planet, is the third of the outer group, and seventh in the order of distance from the sun. It was accidentally discovered by Sir William Herschel on March 13, 1781. Its period

Fig. 2555.—URANIA.

Fig. 2556.—STAR-GAZER. (*U. onoplos*.)

is 84 years. It follows that since this discovery it has completed one revolution and is well advanced on another. When found it did not occur to Herschel that it was a planet, but a new and a curious comet, in appearance totally unlike all comets hitherto known. When its planetary character was ascertained, and search made of previous records by different observers, it was seen that M. Le Monier had previously observed it on 12 successive nights, without a suspicion of its planetary character. A sharp, youthful eye, under favorable seeing conditions, can, if its place be known, see it without a telescope. As the inclination of its equator to its orbit (on which the character of a planet's seasons depends) is unknown, no conclusions can be formed regarding its seasons except that the poles must be alternately in light and darkness for 42 of our years. If thermal conditions are the same there as here, the sun's heating power must be nearly 400 times less than our planet enjoys. The orbit of *U.* is inclined to the ecliptic (earth's orbit) the least of any of the major planets (46° 28'). It is so far away the variation in its distance from us produces but little difference in its apparent brightness. *U.* has four satellites—not six, as Herschel supposed. They revolve retrograde, nearly north and south. See PLANET, SOLAR SYSTEM, &c.

Urate, *n.* (*Chem.*) A compound of uric acid and a base.

Urban, *a.* [*Lat. urbanus*—*urbs, urbis*, a walled city, from *orbis*, a circle.] Pertaining, or having reference, to a city; as, an *urban* population.

Urban I., POPE, succeeded Calixtus I. in 222, and suffered martyrdom in 230.

Urban II. (*Odo of Lagny*), succeeded Victor III. in 1088. He caused Guibert, who had been supported as anti-pope under the title of Clement III., to be driven out of Rome; preached the first crusade in 1095, and convoked the councils of Bari, Clermont, and Rome. D. 1099.

Urban III. (*Herbert Crivelli*), archbishop of Milan, was the successor of Lucius II., and was elected to the papal chair in 1185. He endeavored to send assistance to the Christians in the East, who were being sorely pressed by Saladin; but his death took place before he could effect his object. D. 1187.

Urban IV., became Pope in succession to Alexander IV. in 1261. He excommunicated Manfred, king of Naples, and offered the crown to Charles, count of Provence and Anjou, and brother to Louis IX. of France, which led to the subsequent wars of the Anjous for the possession of Sicily and Naples. D. 1265.

Urban V., succeeded Innocent VI. in 1362. He restored the papal seat from Avignon to Rome, founded many churches, and reformed numerous abuses. D. 1370.

Urban VI. (*Bartholomæo Prignano*), succeeded Gregory XI. in 1378. The cardinals afterwards chose Robert of Geneva, who took the name of Clement VII., and took up his residence at Avignon. Thus was originated the famous "Western Schism," which endured for nearly fifty years. D. at Rome, 1389.

Urban VII. succeeded Sixtus V. in 1590, but d. in less than a fortnight afterwards.

Urban VIII. (*Maffeo Barberini*), b. 1568, ascended the pontifical throne in 1623. He condemned the Jansenists, revised the hymns of the Roman Catholic Church, and was the author of some Latin and Italian poems. D. 1644.

Urban, in *Iowa*, a village and township of Monroe co., 10 m. S.E. of Albia.

Urbane, *a.* Citizen-like; civilized; hence, courteous; polite; affable; elegant in address or manners.

Urbane, in *Illinois*, a village of Jackson co., abt. 50 m. S.S.E. of Kaskaskia.

Urbanity, *n.* [*Lat. urbanitas*, from *urbs*, a city.] Quality of being urbane; civility; courtesy; elegance of deportment; blandness of speech; politeness.

Urbino, (*oor-be'-no*), a town of Italy, in the former States of the Church, 20 m. from Pesaro. *Manuf.* Pins, &c. It is the birth-place of Raphael. *Pop.* 8,146.

Urceolate, *a.* [*Lat. urceolus*, dim. of *urceus*, a pitcher.] (*Bot.*) Pitcher- or urn-shaped. It differs from *campanulate* in being more contracted at the orifice, and having the limbs erect.

Urchin, *n.* (*Zoöl.*) The HEDGE-HOG, *q. v.*

—A child or small boy;—used jocosely or in contempt; as, a mischievous *urchin*.

Ure, ANDREW, a Scottish chemist, b. in Glasgow, 1778. After lecturing with some success upon chemistry, natural philosophy, and materia medica, at Glasgow, he was nominated to the post of astronomer, upon an observatory being established in that city. In 1821 he produced a valuable work, entitled a *Dictionary of Chemistry*. He took up his residence in the metropolis in 1830, and was four years afterwards appointed analytical chemist to the Board of Customs. In 1831 he produced his *Dictionary of Arts, Manufactures, and Mines*, a work of immense labor and research, which has gone through many editions, and also been translated into the leading continental languages. D. 1857.

Urea, (*yu-re'-a*), *n.* One of the few organic bases of animal origin. It forms an essential constituent of the urine of all animals, and is most abundant in that of the mammalia, particularly so in the case of the carnivora. It is the principal outlet of nitrogen from the system, after the materials which compose the animal tissues have experienced oxidation under the influence of inspired air. A person in good health secretes about an ounce of *U.* daily. Dumas made several fruitless attempts to form *U.* from the azotized constituents of the body, but Bechamp has recently succeeded in doing so, by subjecting albumen to the oxidizing action of permanganate of potash. *U.* does not appear to be formed in the kidneys, these organs appearing to act more as filters in separating it from the mass of blood in which it is

formed before it reaches them; perhaps it is produced in the liver. *U.* may be formed artificially in several ways, and was one of the first organic products made from inorganic materials. The easiest method of procuring it is by heating together 56 parts of ferrocyanide of potassium with 28 of black oxide of manganese, and washing the residue obtained. The cyanate of potash thus formed is transformed into the ammonia salt by dissolving it in 41 parts of sulphate of ammonia. The cyanate of ammonia may be dissolved out by alcohol, and slow evaporation converts it into *U.* It crystallizes in white, slender, striated prisms, which are slightly deliquescent. Its solution has a cool, bitterish taste, and is neutral to test-paper. It is very soluble in water and hot alcohol, but sparingly so in ether. It does not appear to form a definite hydrate. It melts at about 248° Fahr., and at a temperature a little above this, it is decomposed into ammonia, carbonate of ammonia, and metameric acid. A solution of *U.*, heated in a sealed tube, takes up four equivalents of water, and is converted into carbonate of ammonia. The same change takes place in stale urine; hence its ammoniacal odor after keeping it a few days. Although forming salts with certain of the acids, *U.* does not possess well-marked basic properties. With nitric and oxalic acids it forms crystallizable salts. With certain metallic oxides and salts, such as the oxides and nitrates of silver and mercury, it forms definite crystalline compounds. *U.* constitutes about one and a half per cent. of the urine of a healthy person, or about one-third of its solid constituents. The hydrogen in *U.* may be replaced by compound radicles, such as ethyl, phenyl, &c., giving rise to numerous compounds, known as the compound *U.* It also combines with other radicles, forming compounds known as *ureides*.

Uredo, *n.*; *pl.* UREDINACEÆ. [*From Lat. urere*, to burn, scorch.] (*Bot.*) A genus and order or family of *Fungales*, parasitical on plants, particularly on grasses, and notable for the great abundance of dark-colored spores which they throw off. They produce the diseases of corn and other cultivated plants called blight, rust, burnt-ear, &c.

Ureter, *n.* [*Fr. uretère.*] (*Anat.*) A long, membranous, pipe-like canal (Figs. 368 and 1478), which, extending from the kidney to the bladder, conveys into that organ the secretion distilled from the other. The *U.* on either side proceeds from the pelvis of the kidney, of which it is the continuation, and, descending through the abdomen, enters the bladder at the fundus of that organ, and near what is called the *trigon*.

Ureteritis, *n.* [*Lat.*] (*Med.*) Inflammation of the ureter.

Urethra, *n.* [*Lat.*, from *Gr. ourethra*, from *ourein*, to make water.] (*Anat.*) See BLADDER.

Urethral, *a.* Pertaining, or having reference, to the urethra.

Uretic, *a.* Stimulating the discharge of urine; urinary; diuretic.

Urfé, HONORÉ D', (*oor'-fai*), a French romance writer, b. 1567, at Marseilles, was author of the romance of *Astrée*, which was once exceedingly popular in France. D. 1625.

Urge, (*érj*), *v. a.* [*From Lat. urgeo, urgere*, to press upon, drive.] To press, push, or drive; to impel to action; to force onward; as, to *urge* a horse to speed.—To provoke; to exasperate; as, "*Urge* not my father's anger." (*Shaks.*)—To press, as an argument or objection; to importune; to solicit; as, he *urged* her to elope with him.—To follow closely; to press hard upon; as, "*Heir urges* heir, like wave impelling wave." (*Pope.*)—To press on the attention; to present to the mind in an urgent manner; as, to *urge* a plea in one's justification.—To apply violent or forcible treatment to; as, to *urge* an ore with intense heat.

—*v. n.* To press on or forward; as, "*he strives to urge* upward."—*Donne.*

Urgency, (*jén-se*), *n.* Quality of being urgent; entreaty; solicitation; importunity; as, the *urgency* of a petition or request.—Pressure of difficulty or necessity; as, the *urgency* of a case or occasion.

Urgent, (*jén-t*), *a.* [*Fr.*, from *Lat. urgens, urgere*.] That urges; pressing; importunate; impelling; vehement; violent; demanding instant or immediate attention; as, *urgent* business.

Urgently, *adv.* In an urgent manner.

Urger, *n.* One who urges, presses, or importunes.

Urginea, *n.* (*Bot.*) A genus of plants, order *Liliaceæ*, including the official Squill, (*U. scilla*), a native of the sandy shores of the Mediterranean, the bulb of which is sometimes as large as a child's head, and contains a viscid juice so acrid as to blister the fingers if much handled, while the vapor arising from it irritates the nose and eyes. It was by the ancients, and is still now, used as a diuretic and expectorant, and occasionally as an emetic; but it must be recollected that in moderately large doses it acts as a narcotic irritant poison, 24 grains having proved fatal.

Uri, (*oo'-re*), a canton in the central part of Switzerland, bounded N. by the canton of Schwyz, E. and S.E. by Glarus and Grisons, S. by Ticino, and W. by Valais, Bern, and Unterwalden; *area*, 418 sq. m. The surface is very mountainous, many of the summits being from 8,000 to above 10,000 feet above sea-level. The best known is that of St. Gothard, though by no means the most elevated summit. The only practicable outlets from the canton are by the road to Italy, which leads over the pass of St. Gothard, 6,700 feet above the sea (Fig. 2557), and by the Lake of Lucerne. The principal river is the Reuss. The climate is cold, and the soil generally unfertile. *U.* is governed as the canton of Unterwalden. The inhabitants are Roman Catholic, and speak German. *Cap.* Altorf. *Pop.* 15,145.—The *Lake of Uri*

forms the S. extremity of the Lake of Lucerne, and receives the river Reuss.

Fig. 2557. — A BRIDGE ON THE ROAD FROM SWITZERLAND TO ITALY, ACROSS THE ST. GOTTHARD.

Uric Acid, (*yu'rik*), *n.* (*Chem.*) A very important excrementitious product, which occurs in small quantities in human urine, to the extent of rather less than one per cent. of the solid matter contained in it. It is met with in much greater abundance in the excrement of birds and reptiles, that of the boar consisting almost entirely of urate of ammonia. Guano also contains large quantities of it, and has been most extensively employed as its source in the now almost extinct manufacture of murexide dyes. When excess of *U. A.* is secreted in the system, it deposits hard crystallizing grains in the bladder, which, if retained, gradually form concretionary calculi, and grow into the disease known as *gravel* or *stones*. In *gouty* patients, *U. A.* accumulates round the joints, forming white friable concretions, known improperly as *chalk-stones*. *U. A.* is generally prepared by dissolving the dried excrement of the boar in water, and converting the urate of ammonia into nitrate of potash by adding excess of potash, and boiling until the whole of the ammonia has been set free. Hydrochloric acid is then added, and the acid separates in minute crystals, which are thoroughly washed and dried. Pure *U. A.* is a white crystalline powder, requiring 10,000 parts of water for solution, to which it imparts a very feeble acid reaction. It is insoluble in alcohol and ether, but dissolves in concentrated sulphuric acid, which deposits it in a hydrated condition or dilution. The urates of the alkalies are much more soluble than the acid itself. *U. A.* is dibasic, giving rise to acid and neutral salts. By being submitted to heat, *U. A.* breaks up into a number of compounds; but the remarkable number of definite and crystallizable substances with it give rise to, when treated with various oxidizing agents, present the highest physiological interest, inasmuch as the great changes which occur in the animal economy under the influence of vitality are always accompanied by oxidation.

Urim, *n.* [*Heb.*] (*Script.*) A word connected in its signification with the word *thummim*, being the plural of the Hebrew *aur*, a light, a luminary; whence it has come to signify fire. *Thummim*, which is the plural of *thom* or *tam*, means *fulness* or *perfection*. The two words conjointly signify *light* and *perfection*; but the Septuagint renders it literally *ἐξλαοις καὶ ἀληθεία*, *manifestation and truth*. The *urim* and *thummim* are described as the precious stones on the high-priest's breastplate, which were supposed to make known the will of God by casting an extraordinary lustre, and thus to *manifest* the success of events to those who consulted them.

Urine, *n. pl.* (*Zoöl.*) The Guillemites, a sub-family or group of sea-birds, fam. *Alcedæ*. Their bill is firm, strong, and pointed; the upper mandible slightly blending near the end, and the base covered with soft short feathers; tongue long slender; legs placed far backwards; and no hind toe. The Black Guillemot, *U. grylle* (Fig. 2558) of the N. Atlantic, is 13 inches long, and the wing 6½ inches.

Fig. 2558. — BLACK GUILLEMOT. — (Winter plumage.) (*Uria grylle*.)

Urinal, *n.* [*Fr.*; *Lat. urinalis*.] A bottle in which urine is kept for inspection. — A public or private receptacle or reservoir for urine.

Urinary, *a.* Pertaining, or having reference to urine; as, *urinary* calculi. — Resembling, or partaking of the characteristic properties of urine.

U. calculi. (*Med.*) By this term is understood the various kinds of deposits from the urine found in the human bladder, or in the urine of those persons subject to this kind of disease. Surgeons have divided urinary calculi into three varieties:—first, the *pulverulent* or *amorphous sediment*, always existing in a state of solution, and only thrown down as the urine begins to cool,

when it is precipitated in the form of a fine brown or pink powder, and consists of the lithates of ammonia, soda, and lime; this is commonly known as the red or pink sand. Secondly, *crystalline sediment*, or *gravel*. This is generally voided in the form of minute grains or crystals, and is either composed of lithic acid, of triple phosphate of ammonia and magnesia, or of oxalate of lime. This sediment has received the name of white sand. Thirdly, *solid concretions*, or calculi proper, formed of an aggregation of these sediments. Calculi are sometimes, but not frequently, formed in the kidneys, and are occasionally found there and in the ureters, on their way to the bladder, where they attain their full size. *U. C.* are of all sizes, shapes, and colors. The average dimension of a calculus may be taken as that of a chestnut, though sometimes exceeding the bulk of a large egg. Some are of extreme density and remarkably hard; others are so soft that they crumble to pieces under the slightest pressure. The symptoms of calculi, or stone in the bladder, begin with weight in the loins and back, and a dragging pain, gradually extending to the groin in females, and to the testicle in males, with an irritation felt at the point of the penis in the latter, often relieved by pulling the foreskin; frequent desire to make water, the operation being attended with pain and smarting; the urine is often bloody, and the stream in voiding is frequently arrested by the stone getting before the pipe of the *urethra*. Motion, especially of a jolting nature, such as riding in vehicles, greatly increases the pain, while rest and the horizontal position always afford relief. Sometimes a small calculus is voided with the water, or a discharge of gravel takes place, in which case there is always a cessation of the symptoms for some time afterward; but, in general, there is no radical cure for stone but by an operation, for which see LITHOTOMY and LITHOTRITY.

U. organs. (*Physiol.*) Under this head are comprised two secreting organs (the kidneys): one receiving organ (the bladder); two connecting tubes, between the springs and the reservoir (the ureters); and one canal, or outlet (the urethra). Space will not permit here any description of the diseases of the *U. O.* or of urine, a subject of so great interest to the physician that many volumes have been devoted to it. When the secretion of urine is very abundant, it may constitute either the symptom *diuresis*, or the disease *diabetes*; when painful, it is called *dysuria*; when suppressed, *ischuria*; and when drop by drop, with pain, burning, and spasm, *strangury*; when the secretion cannot be retained, it is called *incontinence*. — See BLADDER, BRIGHT'S DISEASE, DIABETES, GOUT, ISCHURIA, URINARY CALCULI, &c.

Urine, *v. a.* [*Lat. urinare*.] To piss; to discharge urine; to make animal water.

Urination, (*-d'shun*), *n.* Act of pissing or urinating.

Urinator, *a.* Provoking the discharge of urine.

Urinator, *n.* [*Lat. urinator*, to dive.] A pearl-diver.

Urine, (*yu'rin*), *n.* [*Fr.*, from *Lat. urina*.] (*Chem. and Med.*) A highly complex fluid secreted from the blood by the kidneys. In a healthy person when recently voided, it is a clear limpid fluid, of a pale yellow or amber-color, with a peculiar, faint aromatic odor, which becomes pungent and ammoniacal when decomposition takes place. Often, however, as it cools, it becomes opaque and turbid from the deposition of part of its constituents previously held in solution; and this may be consistent with health. Healthy *U.* may, however, be nearly colorless, or of a brownish or deep-orange tint, and may present every shade of color between these extremes. The quantity secreted in 24 hours depends upon the amount of fluid drunk, and the quantity secreted by the skin; but generally it is about from 30 to 40 fluid ounces. Its specific gravity varies in health from 1.015 to 1.030, but 1.020 is the average standard. It is acid in its reaction, and contains some mucus and epithelium. In 1,000 parts of ordinary *U.* there are 933 parts of water and 67 parts of solid matter. The following analysis is given of the solid contents of *U.*, but the proportion of the materials is liable to very great variation, depending on food, exercise, and other conditions:—Urea, 49.68; uric acid, 1.61; extractive matters, ammoniacal salts, and chloride of sodium, 28.95; alkaline sulphates, 11.58; alkaline phosphates, 5.96; phosphates of lime and magnesia, 1.50. Medical men distinguish three kinds of *U.*—1. *urina sanguinis*, or that which is secreted from the blood at times when neither food nor drink has been recently taken, as in the morning before breakfast; 2. *urina patius*, or that which has been secreted after any considerable quantity of fluid has been taken into the body; and 3. *urina cibi*, or that secreted during the period immediately succeeding a meal of solid food. The last of these contains a larger quantity of solid matter than either of the former, both of which are largely diluted with water. The first, or morning *U.* is the best for analysis; it is from it that we are best enabled to learn the state of the kidneys, and of the system in general.

Uriniferous, *a.* [*Lat. urina*, and *ferre*, to bear.] Conveying urine.

Urinometer, *n.* [*Lat. urina*, and *Gr. metron*, measure.] (*Med.*) A small hydrometer for determining the specific gravity of urine.

Urinose, *Urinous*, *a.* Pertaining to, or resembling, urine.

Urne, *n.* [*Fr. urne*, from *Lat. urna*, from *urinator*, to plunge under water.] A kind of vase, or vessel of a roundish form, but swelling in the middle like the common pitcher; a vessel for holding water; especially, a utensil employed to keep water boiling at the tea-table. — A vessel in which the ashes of the dead were formerly preserved after incineration.

(*Bot.*) A spore-case, or *THECA*, *q. v.*

—*v. a.* To inclose in an urn, or as if in an urn.

Urinal, *a.* Pertaining to an urn.

Urocerata, *n.* (*Zoöl.*) The Boring Saw-fly family, comprising comparatively rare and large hymenoptera. They have the body elongated, nearly cylindrical, and the blunt abdomen ends in a horny point. From beneath the abdomen projects a long, saw-like, and powerful borer, with which they bore holes into trees, in which to lay their eggs. The larvae are borers into the trunks of trees.

Urodela, *n.* (*Zoöl.*) An order of *Batrachian reptiles*, comprising those which preserve the tail through all the stages of their existence, as the Salamanders, Sirens, &c.

Urogenital, (*jén'-*), *a.* [*Gr. ouron*, urine, and *Eng. genital*.] (*Med.*) Pertaining or relating to the urinary and genital organs.

Urology, *Uronology*, *n.* [*Gr. ouron*, and *logos*, description.] (*Med.*) That branch of medicine which treats of urine.

Ur'ry, *n.* [*Ir. uir*, clay.] A sort of blue or black clay, found in proximity to coal.

Ursa, *n.* [*Lat.*, a female bear.] (*Astron.*) The name of two constellations. — 1. *Ursa Major*, the Great Bear, one of the 48 constellations of Ptolemy, in the N. hemisphere, and near the pole. It is often mentioned in the most ancient histories, sacred and profane, under the various denominations of Arcturus, Boötes, Helix, Callisto, Megisto, the Wagon, the Plough. It contains seven very conspicuous stars, called *septriones*; whence *septrio*, the north. — 2. *Ursa Minor*, the Little Bear. This constellation also consists of seven stars disposed in a manner closely resembling that of the Great Bear, but in a contrary direction, the polar star being placed in the corner of the triangle, which is farthest from the quadrangle. The Greeks called it *Cynosura* or Dog's Tail; at the tip of this imaginary tail the polar star is situated.

Ursa, in *Illinois*, a post-village and township of Adams co., 114 m. W. of Springfield.

Ursidae, *n. pl.* (*Zoöl.*) A family of carnivorous mammalia; comprising the true Bears, the Badgers, the Raccoons, and the Wolverines. They are characterized by a plantigrade step, or walk on the whole sole of the foot; grinders more or less tuberculated; stature generally large; carnivorous and frugivorous. claws formed for digging; tail generally short. The typical genus is *Ursus*, the BEAR, *q. v.*

Ursiform, *a.* [*Lat. ursus*, *ursa*, a bear, and *forma*, form.] Having the shape of a bear.

Ursine, (*ur'sin*), *a.* Pertaining to, or resembling, a bear.

Ursine, ANNE MARIE DE LA TREMOUILLE, PRINCESS DES, (*oor'sé*), a celebrated name in Spanish history. B. in France abt. 1643. She was married in 1659, to the Prince de Talleyrand-Chalais, and in 1675 to the Duke de Bracciano, chief of the Orsini family. After the death of the latter, she was attached to the court of Spain, and really governed the country during the early part of the reign of Philip V. In 1714, however, she was banished the kingdom, and subsequently kept house for the "Old Pretender," Prince James Stuart. D. 1722.

Ursion, *n.* (*Zoöl.*) The Canada Porcupine. See PORCUPINE.

Ursula, (*St.*) a celebrated virgin and martyr, and a saint of the Roman calendar, supposed to have been a daughter of a British prince, and to have been put to death at Cologne at a date which varies from 384 to 463. There is a legend that 11,000 virgin martyrs suffered with her, which some have explained by supposing that she had a companion named *Undecimilla*. It is pretty certain, however, that many were put to death at the same time. She is especially honored in Germany, and particularly at Cologne, which is the reputed place of her martyrdom.

Ursuline, *a.* [*Fr.*] Pertaining or having reference to the order of Ursulines.

Ursulines, *n. pl.* (*Ecc. Hist.*) A Roman Catholic religious order of females, founded for aiding the poor, and instructing females, by Angela di Brescia, abt. 1537. The order took its name from Saint Ursula (*q. v.*) when the institution was confirmed by Pope Paul III. in 1544. Madame de Sainte Benve established the first house of the order at Paris in 1604. They have about 20 houses in the U. States and Canada.

Urtica, *n.* (*Bot.*) The Nettle, the typical gen. of the nat. ord. *Urticaceæ*. The species are well known for their stinging hairs. Some yield useful fibres; thus Caloe hemp, or Rhea fibre, is obtained from two Asiatic species.

Urticaceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Urticales*. *DIAG.* Small, flat stipules, limpid juice, a solitary, erect ovule, a straight albuminous embryo, and superior radicle. — They are herbs or trees, with a watery juice. Leaves alternate, usually rough or with stinging hairs. Flowers small, unisexual, or rarely perfect, scattered or arranged in heads or catkins. There are 23 genera and 300 species distributed over the globe.

Urticales, *n. pl.* (*Bot.*) An alliance of plants, subclass *Diclinous Exogens*. *DIAG.* Scattered monochlamydeous flowers, single superior carpels, and a large embryo lying in a small quantity of albumen. The alliance includes 7 orders, — STILAGINACEÆ, URTICACEÆ, CERATOPHYLLACEÆ, CANNABINACEÆ, MORACEÆ, ARTOCARPACEÆ, and PLATANACEÆ, *q. v.*

Urtication, (*-kà'shun*), *n.* (*Med.*) The stinging of the skin with nettles. A name given to the indamed appearance produced on the skin by flipping it with a bunch of nettles — a practice sometimes adopted by medical men in cases of paralysis of the leg, arm, or any particular part of the body, in the hope of restoring animation to the torpid muscles, and vigor to the sluggish circulation.

Urubamba, a town of Peru, 40 m. N.W. of Cuzco; pop. abt. 4,000.

Urubu', or **URUBU-DE-CIMA**, (*oo-roo-bo-da-se'e'ma*.) in Brazil, a town of the prov. of Bahia, on the São Francisco, 120 m. N.W. of Rio de Contas.

Urubucuará, or **URUBUQUARA**, (*oo-roo-bo-kuwa'ra*.) a river of Brazil, prov. of Para, rises in the Serra Velpa, and flowing S. expands into a lake of the same name, near Oriteiro, 20 m. S. of which it enters the Amazon.

Urucuaia, (*oo-roo-ku'a*.) a river of Brazil, enters the São Francisco, 16 m. N. of São Romão, after an E. course of 200 m.

Urucua'ga, a river of Brazil, rises in the W. of the prov. of Santa Catharina, and flows E. into the Atlantic.

Uruguay, (*oo-roo-gwa'*.) a river of S. America, rises in the N.E. of the prov. of Rio Grande do Sul, Brazil, Lat. 28° S., and flows N.W. 100 m., and afterwards S.S.W. uniting with the Parana to form the Rio de la Plata, Lat. 34° S., Lon. 61° 40' W. Its entire course is 800 m., of which it is navigable for sailing-vessels to the Great Falls, 40 m. S. of the Ibici, and above the fall for small boats almost to its source. The country along its banks is fertile, but poorly cultivated.

Uruguay, or **BANDA ORIENTAL**, a republic of S. America, bounded on the N. and N.E. by Brazil, E. and S.E. by the Atlantic Ocean, S. by the Rio de la Plata, and W. by the Uruguay, which last-named rivers separate the state from the Argentine Confederation. *U.* lies between 30° 5' and 34° 56' S. Lat., and Lon. 53° 10' and 58° 20' W.; and has an extreme length of 350 miles by a breadth of 320; area, 66,716 sq. m. *Pol. Div.* The republic is divided into 13 depts., viz.:—Cerro Largo, Colonia del Sacramento, Darazno, Florida, Guadalupe, Maldonado, Minas, Montevideo, Paysandú, Salto, San José, Soriano, and Tacuarembó. *Chief Towns.* Montevideo (the cap.), Maldonado, Colonia, and San José. *Gen. Desc.* The coast to the N. of Cape Santa Maria is low and sandy, but S. and W. of it, and on the estuary of the Plata, it is more bold and indented, presenting some fine bays and harbors. The most important rivers in the interior are the Rio Negro, with its numerous affluents, and the Arapey, Daiman, Yaguaron, and Sebollati. The greater portion of the surface consists of an elevated plateau, penetrated by many fertile valleys along the S. coast-line. The surface of this table-land presents a series of extensive plains, traversed by occasional ranges of hills of no great elevation, the whole being almost destitute of trees. *Clim.* Remarkably mild and salubrious. *Min.* Copper, potter's earth, amber. *Soil.* Generally rich and fertile. *Prod.* Wheat, maize, barley, rice, pulse, flax, hemp, cotton, and sugar. Fruits are produced in abundance. *Zoöl.* Among the wild animals are the tapir, deer, ounce, monkey, paca, rabbit, and fox; and large packs of wild dogs roam over the plains. There are also many varieties of birds and water-fowl. Vast droves of horses and horned cattle run

Fig. 2559. — MONTEVIDEO.

wild on the pampas, the latter furnishing the jerked and salted beef, tallow, hides, horns, and hair, which constitute the great bulk of the exports of the country. The imports of the republic are principally from Great Britain and the U. States. *Govt.* Theoretically, the constitution of *U.* is liberal and representative, but, like the majority of the S. Amer. States, it has degenerated into a mere military despotism, and the president, usually some general who has achieved success by violence or intrigue, in reality possesses absolute power. *Relig.* The established religion is Roman Catholic; other forms of worship are, however, tolerated. *Pop.* (1897) est. 750,000. The inhabitants are chiefly Creoles of Spanish descent, the Indians and negroes being a comparatively small number. *Hist.* The territory forming the present republic of *U.* was originally settled by a party of Spanish colonists from Buenos Ayres, and its possession caused a subsequent war between Spain and Portugal, during which it was several times occupied by both. Eventually, however, the country remained in the hands of Spain, who annexed it to the viceroyalty of Buenos Ayres, under the name of *Banda Oriental*. On the outbreak of the war of independence, the state espoused the side of Buenos Ayres against the mother country, but soon separated from that republic. Annexed by Brazil in 1821, a war ensued, 1826-8, which was terminated by a treaty of peace, effected through the agency of Great Britain in the latter year, by which the N. part of the territory, known as the Seven Missions, was ceded

to Brazil, and the S. portion declared an independent state under the style and title of *Republica del Uruguay Oriental*. Intestine commotions resulted, followed by a war between *U.* and Buenos Ayres. England and France being called upon to interfere, an allied fleet blockaded Montevideo, 1848-9, and peace was restored in 1851. In 1860 a revolution took place under Flores, who was defeated in 1863, but reinstated by Brazil in 1865, and assassinated in 1868. Senhor Idiarte Borda was elected President in March, 1894.

Urumea, **URUMIYAH**, or **OORMIAH**, (*oo-roo-me'a*.) [*Ar. Kapanta*, from *kapait*, blue.] The principal lake of Persia, in Azerbaijan, 35 m. from Tabriz. It has a number of small islands, and receives several rivers; but its waters are so salt that none but the lowest kind of animal life can exist in them. It has a circumference of 300 miles.—Also the name of a town, 12 m. from the lake, the reputed birthplace of Zoroaster. It is the see of an Armenian bishop. *Pop.* Unascertained; perhaps abt. 20,000.

Urus, *n.* (*Zoöl.*) See **BUFFALO**.

Us, *pron.* [*A. S.*] The objective case of *We*, *q. v.*

Usable, (*üz'a-bl*.) *a.* That may be used.

Usage, (*üz'aj*.) *n.* [*Fr.*, from Lat. *utor*, *usus*, to use.] Act or manner of using or treating; treatment; behavior towards a person or thing; as, ill *usage*.—Long-continued practice; received method; custom; habit; use; as, according to the *usages* of the country.—Customary application, as of a word in a particular sense or signification, or the signification itself.

Usance, (*u'zans*.) *n.* [*Fr.*] (*Com.*) A certain period of time allowed, one, two, or three months, according to the respective usages of countries, for the payment of a bill of exchange.

Us'beeks, (*üz'bēks*.) See **TURKISTAN**.

Use, (*yooz*.) *n.* [*Lat. usus*, from *utor*.] Act of employing any person or thing to any purpose; state of being employed to any purpose; application; conversion to an act or purpose; as, the *use* of a spade in digging; the *use* of a clerk in business.—Need; necessity; occasion for employment; as, to have no further *use* for a person's services.—Advantage received or derived; benefit; utility; usefulness; power of yielding service.

"Tis *use* alone that sanctifies expense."—*Pope*.

—Customary or continued act or practice; usual employment; usage; custom.—Hence, common occurrence; habitual experience; as, these things are beyond all *use*. (*Law.*) See **TRUST**.

Cestui que use. (*Law.*) See **CESTUI**.—*Contingent use*, a use contingent or dependent on a future event.—*In use*, in operation or employment; in constant practice or customary observance; as, an article in common *use*.—*Of use*, useful; profitable; yielding benefit or advantage.—*Out of use*, obsolete; not applied or in employment; no longer used.

Secondary or shifting use, a use susceptible of change by circumstances.—*To put to use*, to make use of, to derive service from; to use; to employ to advantage.

Use, (*yüz*.) *v. a.* [*Lat. utor*, *usus*.] To put to use; to make use of; to avail one's self of; to employ; to apply; to act with or by means of; as, to *use* a knife and fork at table; to *use* water for irrigation; to *use* one's legs in walking.—To act or behave towards; to treat; as, you have *used* me well.—To practise customarily; as, "Use hospitality one to another." (1 *Pet.* iv. 9.)—To inure, to accustom; to habituate; to render familiar by application or practice; as, a people long *used* to tyranny lose by degrees the idea of liberty.

To use up, to leave nothing remaining of; to consume or exhaust totally; as, to *use up* provisions;—to weary; to tire out; to exhaust the force or use of; as, excessive fatigue has *used* me up.

—*v. n.* To be accustomed; to be wont; to practise customarily or habitually; as, so he *used* to say.

Usedom, (*oo'zch-dom*.) an island of Prussia, in Pomerania, formed by the Baltic and several inland waters, 9 m. from Rügen; area, 150 sq. m. *Pop.* 13,500.

Useful, *a.* Valuable for use, application, or employment; conducive or helpful to any end; suited or adapted to any purpose; promoting the end or objects in view; profitable; serviceable; beneficial; advantageous.

Usefully, *adv.* In a useful manner.

Usefulness, *n.* State or quality of being useful.

Useless, *a.* Being without use; unserviceable.

Uselessly, *adv.* In a useless or unprofitable manner.

Uselessness, *n.* State or quality of being useless.

User, (*u'zr*.) *n.* One who uses, treats, or occupies.

Ushant, (*Fr. Ouessant*.) an island on the N.W. coast of France, in the dept. of Finistère, 25 m. from Brest, though very small, the largest of a group of islets called the *Iles d'Ouessant*.

Usher, *n.* [*Fr. huissier*, a door-keeper, corrupted from Lat. *ostium*, a door.] One who has the care of the door of a court, hall, &c.; hence, an officer whose business is to conduct or introduce strangers into the presence of a dignitary or distinguished personage; as, a gentleman-usher at a royal court.—A subordinate teacher in a school or academy.

Usher of the Black Rod. (*Eng.*) An officer of the order of the Garter, who has the custody of the chapter-house of the order. He is also the chief gentleman-usher to the sovereign of Great Britain.

—*v. a.* To introduce, as a for-runner or dry-binger; as, "With due honors *usher* in the May."—*Dryden*.

Usher, JAMES, an Irish prelate and theologian, b. in Dublin, 1580. Receiving his education at Trinity College, Dublin (his native place), he was, in 1607, chosen professor of divinity in his college, and, also, Chancellor of St. Patrick's Cathedral. In 1620, *U.* became Bishop of Meath, and, in 1624, being translated to the archiepiscopal see of Armagh, he became Primate of Ireland. On the breaking out of the Irish insurrection, in 1644,

he sought refuge in England, where he became preacher to Lincoln's Inn, and, dying in 1656, was buried in Westminster Abbey. Among his many contributions to theological literature may be mentioned *De Ecclesiastiarum Christianarum Successione et Statu* (Lon., 1613); *De Romanæ Ecclesiæ Symbolo* (Lon., 1647); and *Chronologia Sacra* (1667). A complete edition of Archbishop *U.*'s works has been published by the University of Dublin in 17 vols.

Ush'erdom, **Ush'er ship**, *n.* Office or position of an usher.

Us'kup, or **SCOPIA**, a town of European Russia, on the Vardar, 120 m. N.W. of Salonica. *Manuf.* Leather. *Pop.* 11,000.

Uspallata, (*oos-pal-ya'ta*.) in the Argentine Republic, a table-land, containing silver mines, 40 m. N.W. of Mendoza.

Usquebaugh, (*üs'kwe-baw*.) *n.* [*Ir. uisge*, water, and *beatha*, life; literally, water of life.] A name sometimes given to Irish or Scotch whisky indiscriminately; poteen.—A liquor compounded of brandy, raisins, cinnamon, and other spices.

Ussel, (*oos-sel*.) a town of France, dept. of the Corrèze, 20 m. from Tulle; *pop.* 4,946.—Also a town in the island of Corsica; *pop.* 5,000.

Ustica, (*anc. Eustonimo*.) an island in the Mediterranean, off the N. coast of Sicily, 42 m. from Palermo.

Ustulation, *n.* [*From Lat. ustulare*, to scorch.] (*Chem.*) The roasting of ores, to separate the arsenic, sulphur, and other volatile substances combined with the metal.

Usual, (*yü'zhu-al*.) *a.* [*Fr. usuel*, from Lat. *usualis*—*usus*.] Customary; common; frequent; ordinary; general; habitual.

Usually, *adv.* In a usual manner.

Usucaption, (*-kap'shun*.) *n.* [*Fr.*, from Lat. *usucapio*.] (*Civil Law*.) Same as *prescription* (*q. v.*), but restricted to movables only.

Usufruct, (*yü'zhuo-frukt*.) *n.* [*Fr. usufruit*, from Lat. *usus*, use, and *fructus*, fruit.] (*Civil Law*.) The right of using and reaping the fruits of things belonging to others, without destroying or wasting the subject over which such right extends.

Usufructuary, *n.* [*Fr. usufruitier*.] One who enjoys a usufruct.

—*a.* Pertaining or relating to a usufruct.

Usunasin'ta, a river of Central America, rises in Guatemala, dept. of Vera Paz, and joins the Tobasco, near its mouth, after a N.W. course of 400 m.

Usurer, (*yü'zhuo-rer*.) *n.* [*Fr. usurier*, from Lat. *usurarius*.] One who practises usury; one who lends money upon interest;—commonly used of one who takes exorbitant or illegal interest.

Usurious, *a.* Practising usury, or money-lending on exorbitant or illegal interest; as, a *usurious* person.—Pertaining or relating to, or consisting in usury; as, *usurious* interest on money.

Usuriously, *adv.* With usury.

Usuriousness, *n.* State or quality of being usurious.

Usurp, (*ü-zerp'*.) *v. a.* [*Lat. usurpo*, *usu-rapio*—*usus*, use, and *rapio*, to seize.] To seize and hold by force, and without right; to assume fraudulently; as, to *usurp* the royal prerogative.

—*v. n.* To be or act as a usurper; as, a *usurped* throne.

Usurpation, (*-pä'shun*.) *n.* [*Fr.*, from Lat. *usurpatio*.] Act of usurping; forcible, illegal seizure, possession, or assumption, as of regal or supreme power.

Usurpatory, *a.* Characterized by usurpation.

Usurper, (*ü-zerp'r*.) *n.* One who usurps; one who seizes or occupies the power or property of another without right.

Usurpingly, *adv.* By usurpation.

Usury, (*yü'zhuo-ry*.) *n.* [*Fr. usure*, from Lat. *usura*—*utor*, to use.] Money paid for the use of money; especially, illegal interest, or higher interest than is allowed by law, in countries where such laws exist. See **INTEREST**.

Ut, (*Mus.*) The French name of the first of the musical syllables referring to the note which we call C. The Italians, for the sake of softening the sound, use the syllable *do* instead of *ut* in the modern solfeggio.

Utah (*yü'täh*), a State of the American Union, lying N. of Arizona, W. of Colorado and the Rocky Mountains, E. of Nevada, and S. of Idaho and Wyoming; has a maximum length of 345 m. by a breadth of 275. Area, 84,970 sq. m.—*Gen. Desc.* It is intersected from N. to S. by the Wasatch Mountains, the region E. of which is drained by the Colorado of the West. The altitude of the surface is similar on both sides of the dividing range, the valleys and lakes lying from 4,000 to 6,000 ft. above sea-level, and the mountains rising to an elevation of from 6,000 to 13,000 ft., the tops of the highest peaks being above the line of perpetual snow. In common with the riparian system of Nevada, the section W. of the Wasatch range contains no outlet to the ocean for its numerous streams, or its lakes of salt and fresh water, many of the former being of great size, especially the largest, Great Salt Lake (*q. v.*). Several rivers, rising principally in the Wasatch Mountains, empty into this lake, among which are the Jordan, Bear, and Weber. The only other bodies of water of considerable magnitude are the fresh-water Bear and Utah Lakes, respectively N.W. and S. of Great Salt Lake, to which they are tributary. Utah Lake is 30 m. in length by 10 in width, and abounds in fish of considerable size and excellent flavor. It is connected with Great Salt Lake by the Jordan river. Besides the tributaries to Great Salt Lake, the only stream of importance west of the Wasatch Mountains is the Sevier, which passes by a circuitous route into the deserts, where it sinks. It formerly flowed into

Sevier Lake, but its waters are now so extensively used for irrigation that the lake has disappeared. The section lying E. of the mountains contains no lakes, its entire water-system being composed of the Colorado of the West and its tributaries, including Grand, Green, San Juan, and White rivers. These streams frequently intersect the mountain ridges of the country, running in cañons of immense depth with nearly vertical sides; debouching from these cañons as the lower plains or valleys are reached, the streams become broad and shallow, running in beds but slightly depressed below the surface of the earth, and sometimes dividing their waters into numerous rivulets, which wind over the surface of broad, fertile meadows, irrigating the soil and producing luxuriant vegetation. The celebrated Grand Cañon of the Colorado commences in *U.* below the magnificent valley in which Green and Grand rivers unite to form the Colorado, and extends a distance of over 400 m. into Colorado and Nevada. The Uintah Mountains, a broad range extending E. from the Wasatch, has elevations of nearly 14,000 ft. W. of the Wasatch lies the Great Basin, an elevated and arid region, whose surface presents an alternation of broad desert valleys and narrow, abrupt ranges of mountains, which rise sharply from the valleys. The mountains rob the westerly winds of their moisture, the only waters which reach the plains and valleys being those coming from the melting of the winter snows. It may be here stated that the E. slope is more mountainous than the portion lying within the Great Basin, and contains more numerous streams; but the high cañons intersecting the mountain ridges as channels for the water-courses prevent the availability of the waters for irrigation, although not interfering with the business of stock-raising on the surrounding hills and elevated plains. The timber lands of *U.* are comprised in about 2,000,000 acres of pine, fir, and similar evergreens, on the slopes of the mountains, and extensive copses of willow, box-elder, birch, cottonwood, spruce, and dwarf-larch, in the river bottoms, added to large tracts of the soil of both valleys and hillsides, which have been planted with varieties of hard-wood in order to supply the natural deficiency; the young artificial forests thriving vigorously, and promising soon to equal the requirements of the settlers with regard to such timber. — *Soil, Agric., &c.* The most important industries of *U.* are agriculture and horticulture, accompanied with irrigation, the facilities for which have been carried forward to a condition of great perfection, under the pursuance of a course of strenuous and systematic energy and perseverance inaugurated by the earliest settlers at Salt Lake City in 1847. Wealth and plenty have, accordingly, followed their labors, the result exceeding the anticipations of the most sanguine, in the certainty and abundance of the crops. The construction of reservoirs and canals has been prosecuted until a perfect network of irriguous channels extends over the settled portions of the valleys, supplying the only requisite naturally wanting for exceeding fertility, the soil being principally formed of disintegrated feldspar rock mixed with detritus of the limestone (entering so largely into the composition of the surrounding mountains), along with decomposed vegetable matter, and friable clay. The crop of cereals produced in this manner is considerably over a million bushels per annum, supplying the requirements of the local population as well as that of adjacent mining regions, 50 and 60 bushels of wheat to the acre being a frequent crop. Barley, oats, rye, buckwheat, flax, and hemp succeed equally as well as wheat, and are extensively grown; but the nights are generally too cold for large crops of maize, except in the S.W. part near Rio Virgen, where corn and sorghum thrive, and cotton is found to produce such excellent yields, as to induce considerable immigration to that section specially to engage in its culture. Potatoes, hops, garden vegetables, melons of all kinds, and all the fruits of the temperate zone are produced in abundance. Cattle-breeding and wool-growing is carried on to a limited extent. The settled portion of *U.* lies mainly along the western base of the Wasatch range and in its valleys, in which flowing streams render irrigation of the fertile soil available. The population is principally located in the northern part of the State, and there are also considerable settlements near the southern boundary, in the valleys of the Virgin river. There were in 1890 10,517 farms, containing 1,323,705 acres, of which 548,223, or about 1 per cent. of the entire area of the State, were improved. Of the cereal crops the principal is wheat, the yield of which is about 2,500,000 bushels per annum. — *Minerals.* The mineral products are numerous, including gold, silver, copper, iron, lead, zinc, coal, salt, sulphur, alum, borax, asphalt, &c. Of these products, the most important are silver and lead, the mining of which is almost exclusively in the hands of the Gentile population, while the farmers are principally Mormons. The annual product of gold, silver, copper, and lead is valued at over \$10,000,000. There is a considerable yield of coal, the most important deposits being in the vicinity of Coalville, in Summit co., and at the foot of the Wasatch range, in Sanpete co. Iron occurs in abundance, of the red hematite variety, and in Millard co. is an extensive deposit of sulphur. Salt is abundant, rock-salt occurring plentifully in various sections of the Wasatch Mountains, while the salt lakes yield salt of a superior quality. — *Manuf.* Manufacturing industries, of a somewhat varied character, have been developed to some extent, there being, in 1890, 531 establishments, with an output of products valued at \$8,911,047. — *Railroads.* *U.* is well supplied with railroads. The Union and Central Pacific roads meet near Ogden, in its northern section,

and furnish communication east and west. From Ogden a branch road runs north to Montana and another south to Salt Lake City, and thence southward through the State. The Denver and Rio Grande Western connects Salt Lake City with Pueblo, in Colorado. In addition, there are numerous short branches in the mountains. — *Pol. Div.* *U.* is divided into 27 counties, viz.:

Beaver,	Grand,	Rich,	Uintah,
Boxelder,	Iron,	Salt Lake,	Utah,
Cache,	Juab,	San Juan,	Wasatch,
Carbon,	Kane,	Sanpete,	Washington,
Davis,	Millard,	Sevier,	Wayne,
Emery,	Morgan,	Summit,	Weber,
Gartfield,	Piute,	Tooele,	

The chief towns are Salt Lake City (the capital), Ogden, Provo, and Logan. There are numerous smaller places, making a large aggregate of city and village population. This comes from the policy of the Mormon Church, which favors the gathering into villages of the farming population. — *Climate.* The climate is mild and equable, and generally more uniform than in the Eastern States. It is very cold in the mountains in winter. — *Hist.* The region embracing *U.* was acquired by the U. S. from Mexico in 1848, and the Territory of *U.* was organized in 1850, its boundaries extending much beyond those of the present State. The subsequent formation of Colorado, Wyoming, and Nevada reduced it to its present limits. The Mormons, led by Brigham Young, had begun to settle in Salt Lake Valley in 1847, and they rapidly occupied the fertile valleys of the Territory, few Gentiles settling in *U.* until the extension of railroads made it more easily accessible. At a later period the Gentile population rapidly increased, and vigorously opposed the supremacy of the Mormons, who managed to control all governmental positions. A bill passed by Congress in 1882 disfranchised all polygamists and annulled the act of the Territorial legislature extending the franchise to women. In 1887 a still more drastic bill was passed, which confiscated the property of the Mormon Church and the Perpetual Emigration Fund, with the exception of the church buildings and parsonages, and devoted it to the support of public schools in the Territory. Since then the Mormons have renounced polygamy, it being officially forbidden by the Mormon Church in 1890, and the Mormons are beginning to abandon their policy of exclusiveness. For a considerable time previously efforts had been made to have *U.* admitted as a State, but this was not acceptable to Congress until after the abolishment of polygamy. A bill was passed in Dec., 1893, making *U.* a State. It was not finally consummated, however, until Jan. 4, 1896, when it entered into Statehood as the 45th State of the Union, under the proclamation of President Cleveland. Pop. (1890) 207,905; (1897) est. 261,222.

Utah, in *Utah*, a central co.; area, 2,100 sq. m. It is drained by the Timpanogos or Provo river, and contains Utah Lake. Surface, mountainous; soil, fertile in the valleys. Cap. Provo City. Pop. (1895) 29,229.

Utica, (*Anc. Geog.*) A city of Africa, on the river Bagradas, near the Bay of Carthage, a little N.W. of the present city of Tunis. It was founded by the Tyrians, abt. B. C. 1165, and is mentioned as an ally of Carthage, B. C. 348. Scipio besieged it, B. C. 204. Curio was defeated and slain near this city, by Varus and Juba, B. C. 49. Cato the younger, and many of the partisans of Pompey who escaped from Pharsalia, assembled here, B. C. 47. Cato formed his little senate, and opposed Julius Caesar; and here he committed suicide, B. C. 46. It was destroyed by the Saracens about 700. Its site is now occupied by the little village of Duar.

Utica, in *Illinois*, a post-village of La Salle co., 5 m. E. of La Salle.

Utica, in *Indiana*, a post-vill. and twp. of Clarke co., on the Ohio River, 7 m. N. of Louisville, Ky.

Utica, in *Iowa*, a twp. of Chickasaw co.

Utica, in *Michigan*, a post-village of Macomb co., 20 m. N. of Detroit.

Utica, in *New York*, a flourishing city, semi-cap. of Oneida co., on the Mohawk River, 95 m. W.N.W. of Albany; Lat. 43° 6' 49" N., Lon. 75° 13' W. It is pleasantly situated, with regular and wide streets, and well-built houses. There are numerous and important manufacturing of flour, starch, organs, pianofortes, clothing, carriages, machinery, carpets, oil-cloth, cotton and woolen fabrics, &c. *U.* was founded on the site of old Fort Schuyler, built to guard the settlements against the French and Indians. Pop. (1897) 47,450.

Utica, in *Ohio*, a post-village of Licking co., 12 m. N. of Newark.

Utica, in *Pennsylvania*, a post-borough of Venango co., 9 m. N.W. of Franklin.

Utica, in *Wisconsin*, a township of Crawford co.

—A township of Winnebago co.

Utile, (*yu'til*), *a.* [Fr., from Lat. *utilis*.] Useful. (*R.*)

Utilitarian, *a.* [Formed from *utility*.] Consisting in, or having reference to, or connection with, utility; belonging to utilitarianism; — sometimes used in a reproachful sense, as implying a certain degree of sordidness; as, *utilitarian ideas*.

—*n.* One who holds the doctrine of utilitarianism.

Utilitarianism, (*-izm*), *n.* The doctrine, presented by Jeremy Bentham, that the value of all institutions or pursuits is to be tested by the principle of utility; that is, the promotion of the greatest happiness of the greatest number. — The doctrine that utility is the sole standard or criterion of moral conduct.

Utility, *n.* [Fr. *utilité*; Lat. *utilitas*, from *utor*, to use.] State or quality of being useful or utile; usefulness; production of good, benefit, or advantage; profitable-

ness to some valuable end; as, the *utility* of medicines in diseases.

Utilization, *n.* Act of utilizing; state of being utilized. (*R.*)

Utilize, (*yu'til-iz*), *v. a.* [Fr. *utiliser*; It. *utilizzare*.] To render useful; to put to use or application; to employ for some profitable purpose; as, to *utilize* time.

Utilia, or **UTILLE**, an island in the Caribbean Sea, Bay of Honduras, 7 m. long, and 3 m. wide; Lat. 16° 5' N., Lon. 86° 50' W.

Uti Possidetis, *n.* [Lat., as you possess.] (*International Law*.) A phrase used to signify that the parties to a treaty are to retain possession of what they have acquired by force during the war.

Utmost, *a.* [A. S. *utmaest*, *utmost* — *ut*, out, and *mæst*, most.] Being most or farthest out; most distant; extreme; as, the *utmost* extent of human sagacity. — Being in the highest, greatest, or superlative degree; as, they live together in the *utmost* harmony.

—*n.* The most that can be; the greatest or most supreme power, degree, or effort; as, I have done my *utmost*.

Utopia, *n.* [From Gr. *ou*, not, and *topos*, place.] An imaginary island, represented by Sir Thomas More, in his work entitled *Utopia*, as enjoying the utmost perfection in morals, laws, and polity. — Hence, a position or place of ideal perfection.

Utopia, in *Ohio*, a vill. of Clermont co.

Utopian, *a.* Ideal; chimerical; fanciful; not well founded; as, *utopian* ideas.

Utopianism, *n.* A chimerical project in theory or practice; quality of being utopian.

Utopist, *n.* One who entertains chimerical ideas, or practises visionary schemes.

Utraquists, *n. pl.* [From Lat. *uterque*, both.] (*Ecclesiast.*) The Hussite sect called Calixtines were, in 1420, also called *U.*, because they received the Eucharist in both forms.

Utrecht, (*u-trek't*), a city of Holland, cap. of a prov. of same name, on the Old Rhine, which divides it into two parts, 20 m. S.E. of Amsterdam; Lat. 52° 5' N., Lon. 5° 7' E. The town is approached by several fine avenues, and was formerly strongly fortified, but its ramparts are now laid out in pleasant walks; the houses are nearly all built in the Gothic style, giving it a most romantic appearance (see Fig. 1300); its chief buildings are the stadhuis, or town-house, in which, in 1579, the union of the Provinces was signed, and the treaty of Utrecht, which in 1713 gave peace to Europe; next are the mint, arsenal, hospital, museum, the palace of Louis Bonaparte when King of Holland, and the university, founded in 1634. *Manuf.* Linen fabrics, lace, needles, pins, fire-arms, sugar-refining, &c.

Utrera, (*ou-trai'ra*), a town of Spain, on a very steep eminence, at the foot of which flows the Carbonel, 18 m. from Seville. *Manuf.* Soap, leather, starch, &c. Pop. 13,816.

Utricle, *n.* [Lat. *utriculus*, dim. of *uter*, a leathern bag.] (*Anat.*) See EAR.

(*Bot.*) A one-celled, one- or few-seeded, superior membranous fruit, frequently dehiscing by a transverse suture, as in *Chenopodium*. Also a fruit with a thin skin and a single seed. Sometimes this word is employed to express a separate cell of the cellular tissue of a plant, which is usually a little vegetable bladder.

Utricular, *a.* [Fr. *utriculaire*.] Containing utricles; furnished with small air-cells, like small bags, as plants. — Resembling a bag or utricle, as the condensed vapor of certain minerals when deposited upon cold bodies.

Utricularia, *n.* (*Bot.*) A genus of plants, order *Lentibulaceae*, composed of aquatic herbs, loosely floating or fixed in the mud; leaves radical, multifid or linear, and entire, mostly furnished with little inflated vesicles; scape erect. *U. vulgaris*, the common Bladder-wort, and *U. inflata*, the Whorled Bladder-wort, are found in stagnant pools throughout the U. States.

Utter, *a.* [A. S. *uter*, *uttra*.] Total; complete; entire; perfect; final; as, *utter* ruin. — Absolute; peremptory; unqualified; as, the book is *utter* nonsense. — Entire; mere; quite; perfect; as, he was an *utter* stranger to me. — *v. a.* To disclose; to express; to speak; to pronounce; to publish; to declare; to divulge; as, to *utter* words. — To put into circulation; to cause to pass in commercial transactions; as, to *utter* bank-notes.

(*Law*.) To utter and publish a counterfeit note is to assert and declare, directly or indirectly, by words or actions, that the note offered is good. It is not necessary that it should be passed in order to complete the offence of uttering.

Utterable, *a.* That may be uttered, pronounced, or expressed.

Utterance, *n.* Act of uttering words; vocal expression; pronunciation; manner of speaking; as, he gave *utterance* to an oath.

Utterer, *n.* One who utters.

Utterly, *adv.* To the full or entire extent; fully; perfectly.

Uttermost, *a.* Being the farthest, greatest, or highest degree; extreme; as, he was in the *uttermost* distress. — *n.* The most that can be; the greatest power, degree, or effort; that beyond which nothing is; as, this is the *uttermost* I can do.

Uttoxeter, a town of England, in Staffordshire, near the river Dove, 13 m. from Stafford. In the neighborhood are numerous iron-forges. Pop. 5,500.

Uvalde, in *Texas*, a S.W. co.; area, 1,420 sq. m. Rivers, Rio Frio and Sabinal. Surface, undulating; soil, fertile. Cap. Uvalde. Pop. (1897) 4,560.

—A post-town, cap. of the above co., 80 m. S.W. of San Antonio.

Uva'ria, *n.* (*Bot.*) Same as *ANONA* (*q. v.*).

Uva Ur'si, *n.* (*Bot.*) See *ARCTOSTAPHYLOS*.

U'vca, *n.* [Lat. *uva*, grape.] (*Anat.*) The choroid coat of the eye;—the posterior layer of the iris.

U'veous, *a.* [Lat. *uveus*.] Resembling a grape.

U'vula, *n.* [Lat., dim. of *uva*.] (*Anat.*) A small fleshy protuberance which hangs at the middle of the posterior margin of the soft palate. In the case of sore throat, it frequently becomes enlarged and inflamed, and is to be treated by the application of stimulants and astringents in gargles. When other means fail, it may be amputated, an operation neither painful nor dangerous.

U'vular, *a.* (*Anat.*) Belonging to the uvula.

Uvula'ria, *n.* (*Bot.*) A genus of plants, order *Liliaceae*. The Mealy Bellwort, *U. perfoliata*, is a handsome, smooth plant, found in woods in the United States and Canada; stem 10 to 14 feet high, passing through the perfoliate leaves near their bases, and dividing into 2 branches at top; flowers pale-yellow, pendulous from the end of one of the branches.

Uwar'owite, *OUVAROVITE*, *n.* (*Min.*) A lime-chrome garnet of an emerald-green color, found at Kyschtinsk and Bissersk in the Ural.

Uwehlaud, or **Uwehlan** (*yook'lan*), in *Pennsylvania*, a post-township of Chester co., about 30 m. W.N.W. of Philadelphia.

Ux'bridge, a town of England, co. of Middlesex, 17 m. W.N.W. of London. *Pop.* 4,250.

Uxbridge, in *Massachusetts*, a post-town and township of Worcester co., 18 m. S.S.E. of Worcester.

Ux'mal. (*Anthropology*.) One of the most important of the ruined cities of Yucatan, the production of a race of partially civilized Indians known as the Mayas, who had reached a striking degree of culture. It was in a state of decay at the time of the Spanish conquest, after having endured through a prehistoric period of unknown duration. Some of these cities were forgotten ruins at the time of the conquest, though others seem to have been still inhabited. Their remains consist of the ruins of great and elaborately sculptured buildings, statues of gigantic dimensions, and numerous objects of more or less primitive art now buried in the depths of forests. Uxmal is situated in the N.W. of Yucatan, 40 miles S.W. of Merida, and stands unrivalled among these cities for the magnitude of its buildings, the richness of its sculptured façades, and the beauty of its statuary, which approaches that of classic production. These great edifices—palaces, temples, or whatever their purpose may have been—are built upon artificial terraces of considerable height and great dimensions, raised in sloping pyramidal form. Chief among these great edifices are the so-called “nunnery” and the governor's palace (“Casa del Gobernador”). The latter is adorned with a wonderful sculptured frieze, 325 feet long, “having a row of colossal heads divided in panels, filled alternately with grecques in high relief.” The nunnery forms a vast quadrangle, one front of which is 280 feet long, while the inner courtyard measures 258 by 214 feet. It contains, in all, 88 apartments of different sizes. Statuary and other works of art add to the treasures of this remarkable forest-grown locality, a statue of surprising beauty, far surpassing anything previously found in Central America, having been found here by Dr. Le Plougeon in 1881. This he carefully hid again, to keep it out of the hands of the Mexican authorities, who had seized another remarkable statue which he had previously discovered. This, supposed to be the figure of a king named Chac Mool, represents the reclining figure of a man, naked except for his head-dress, bracelets, feather

anklets, and sandals. He holds by both hands to the center of his body a large vase. The total length is 1.55 meters. This, like the larger statuary of the region in general, is carved in high relief, not being entirely detached from the matrix-stone. These are but the principal among the many objects of interest at Uxmal, and in this connection it may be well to give a brief description of the Yucatan antiquities in general, since in some respects these excelled any others found on the American continent. Of ruined cities no less than 62 have been traced and to some extent explored in Yucatan, and it is probable that at the time of the Spanish conquest the whole northern section of that country, now destitute of running streams, was thickly peopled and possessed numerous populous cities, since, though at that time in a state of decadence, it was strong enough to resist for 20 years the invading efforts of the “conquistadores” of Mexico. The absence of rivers, however, is not due so much to lack of rain as to the porous character of the limestone soil, which drinks in the water like a sponge. Water may be had in abundance by sinking wells, and many such wells and underground reservoirs remain from the ancient culture. One of these reservoirs is 450 feet underground, and is reached by a passage 1,400 feet long. Of the 62 ruined cities of Yucatan, the best known are Uxmal, Izamal, Mayapan, Aké, Acanceh, Tikul, and Kabah, in the N.W.; Chichen-Itza, between Tikul and the E. coast; Labna, Nohbecan, and Potonchan, in the Campeche district. Other cities of leading importance existed outside the limits of Yucatan, including Palmque, in Chiapas; Copan, in Honduras, and Coban and Lorillard, in Guatemala. The antiquities of some of these other cities may be briefly described, though it may be said that none of them equal in effectiveness those of Uxmal. Twelve miles S. of the latter city lie the ruins of Kabah, the two places having formerly been connected by a plastered causeway. Its ruins spread over a considerable area, and indicate a very large city, comprising lofty pyramids, vast terraces, and sumptuous temples or palaces, so elaborately ornamented as largely to conceal their architectural features. Among the sculptures are bas-reliefs, resembling the war-pictures of the Egyptian temples, representing Maya warriors receiving the weapons of kneeling Aztec captives. Chichen-Itza displays among its wonderful remains a “nunnery” resembling that of Uxmal, several temples, and other buildings, the whole being profusely ornamented with rich friezes, statues, pillars, reliefs, and other sculptured embellishments, the whole grouped around a great central pyramid, on whose summit still stands a beautiful structure known as the Castillo. This city, probably inhabited at the time of the conquest, was the capital of a powerful Maya people known as the Itzaes. Mayapan, the “Banner City of the Mayas,” covers with its ruins a considerable space, including a lofty artificial mound overgrown with trees. Aké presents as its striking feature a huge pyramid with an immense flight of steps, and surmounted by 36 pillars, each 4 feet square and 14 to 16 feet high. At Izamal, a few miles to the E., is another great pyramid, nearly 650 feet wide at base, three smaller ones, and a colossal head 13 feet high. This is not a monolith, but is built up of rough stones and mortar. Such is a very brief description of some of the more remarkable of those numerous cities. In all probability many more such monuments of the past civilization remain to be discovered and described, buried at present under the rank tropical vegetation,

particularly in the region towards the Guatemalan frontier, where the still unsubdued Itzaes and Lacandons render exploration dangerous. Palmque, Copan, and the other stations outside of Yucatan are equally wonderful in their architectural and sculptural remains, and, in common with the buildings of the cities mentioned, present numerous inscriptions, written in a language which yet remains a mystery, it having defied all efforts at its decipherment. These inscriptions, though varying somewhat, all belong to the same system of writing, but whether that system is purely ideographic or phonetic, or combines the two, is unknown. A few Maya manuscripts exist, having escaped the destructive fury of the Spanish priests. One of these, the *Popol-Vuh*, copied about 1558 from an older manuscript, Brasseur de Bourbourg has edited and claims to have translated; but the alphabet used by him is not to be trusted, and the riddle still remains unsolved. Of the characteristics of the Uxmal and other ruins, one of the most striking is the peculiar form of the arch employed, the true arch being unknown, and the effect of an arched support being obtained by the gradual approach of successive horizontally-laid stones, which finally meet in the center, the protruding corners then being cut away and the surface smoothed off. At Palmque, however, is an example of a nearly true trefoil arch. As already mentioned, the great edifices of these vanished cities stand on grand basements or terraces, square in plan and rising by huge steps to the summit, having the outline of a low truncated pyramid. One of those at Palmque is 280 feet square at base and 60 feet in height, bearing an oblong temple 76 by 25 feet in dimensions. Others, such as those that bore the great structures at Uxmal, were considerably larger, the “temple” at Copan having a ground-plan of 809 by 624 feet. This edifice is built of heavy blocks of cut-stone, with walls about 25 feet thick and reaching a height of 90 feet. The “fortress” at Mitla has stone walls 8 feet thick, 18 feet high, and more than a mile long. Other buildings display immense blocks of granite 15 to 19 feet long, and elaborately carved on the surface. Many of the structures at Uxmal, Chichen-Itza, and elsewhere are covered externally with intricate carved designs, worked out with extraordinary toil in a hard limestone rock. When we consider that the builders were destitute of iron or steel tools, and perhaps had nothing harder than stone hammers and chisels, the labor involved in this work becomes almost incredible. The same may be said of the great statues produced, which were of all sizes, from idols no larger than the little finger to the colossal serpents at Chichen-Itza, whose heads alone are 10 feet long. See PALMQUE and COPAN.

Uxoricide (*uks-or'i-sīd*), *n.* [Lat. *uxor*, wife, and *cadere*, to slay.] Wife-murder by a husband.—One who murders his wife.

Uxo'rious, *a.* [Lat. *uxorius*, from *uxor*, wife.] Excessively or foolishly fond of a wife.

Uxo'riously, *adv.* With fond or weak submission to a wife.

Uxo'riousness, *n.* Conjugal thralldom; counubial dotage; excessive and silly fondness for a wife.

Uz. (*Script.*) A land mentioned as the land where the patriarch Job lived (*Job* i. 1), B. C. 2130. It is supposed to have been in the S. of Arabia Deserta.

U'zema, *n.* In Burmah, a measure of 12 miles.

Uzes (*oo'zai*), a town in France, dept. of the Gard, 12 m. from Nîmes. *Manuf.* Silk, pasteboard, &c. *Pop.* 8,376.

Uzzi'ah, king of Judah. See AZARIAH.

Ludwig Uhland

1787-1862

U.—SECTION II.

UGAN

Ubiqua'rian, Ubiquita'rian, n. [From Lat. *ubique*, everywhere.] (*Ecol. Hist.*) One of a school of Lutheran divines, so named from their distinguishing doctrine, that the body of Christ is everywhere, thus interpreting the belief in its real presence in the eucharist. They were followers of Johann Breng, or Brentius (1499-1570), a co-worker of Luther, and of Jacob Andreae, or Andreas (1528-1590), who held the same opinions. Also called *Ubiquitists*.

Ucayale (*oo-ki'ah-le*), or **Ucayali**, a large river of South America, forming one of the chief tributaries of the Amazon, which it joins from the south in Ecuador, in S. Lat. 4° 40', W. Lon. 73° 30'. Its whole length is 1,400 miles, of which 1,000 are navigable; it rises in 14° 30' S. Lat., and flows through a rich and densely wooded country, receiving the Apurimac and joining the Marañon. Near its source it is called Vilcamayn and Urubomba.

Uche'an Indians. (*Ethnol.*) A language-stock of North American Indians chiefly represented by the Uchee (also Utchee and Yuchi). These Indians inhabited southern Georgia, and were among the first with which Europeans became acquainted. "The Yuchi," says Powell, "are supposed to have been visited by De Soto during his memorable march [1540], and the town of Cofitachiqui, chronicled by him, is supposed by many investigators to have stood at Silver Bluff, on the left bank of the Savannah, about 25 miles below Augusta . . . This would locate the Yuchi in a section which when first [next] known to the whites was occupied by the Shawnee. Later the Yuchi appear to have lived somewhat farther down the Savannah, on the eastern and also on the western side, so far as the Ogeechee river, and also upon tracts above and below Augusta, Georgia." Thence, about 1730, they scattered somewhat farther west. At present several hundred civilized Yuchis dwell near the Creeks in the northern part of the Indian Territory; but, although associating with the Creeks, and formerly a part of the Creek confederacy, they insist upon being regarded as a separate people. They seem to have been originally unusually intelligent, courageous, and high-minded, as compared with many other Southern races of red men.

Ugan'da. (*Geog.*) When Speke, the Englishman, explored (1860) the northern and western shores of the Victoria Nyanza (*q. v.*), which he had previously discovered, and when Stanley visited it in 1875, they found there a state called Uganda, extending along the northwest shore to the lake. The people were much higher in intellectual development and civilization than any others in East or Central Africa. The men were tall and well built, with good features, dark, chocolate-colored skin, and woolly hair. The women in their youth were good-looking. Both men and women were fully clad. The country is partly mountainous, partly undulating, partly a plain, well wooded and, on the whole, very fertile. The climate is mild, and very uniform throughout the year, ranging from 50° to 90° F. Stanley called the country the "Pearl of Africa." He and Grant estimated the population at 1,000,000. King Mtesa, of a family which has reigned in Uganda for over three hundred years, was in power when the lake was discovered, and he requested that Protestant missionaries be sent thither, which was done in 1877. His successor, Mwanga, was bitterly hostile to Christianity, burnt forty converts at the stake, and murdered Bishop Hannington, who had come out from England. Moreover, for a number of years after 1884 the country was greatly exhausted by desperate civil wars, and it is now estimated that the population does not exceed 500,000. The Imperial British East Africa Company, whose territory is called Ibea (*q. v.*), occupied and administered the Uganda kingdom until July, 1893, when they withdrew from it, and also from the region between that and Albert Edward Nyanza and the river Semliki, which connects Albert and Albert Edward Nyanzas. Thereupon a British protectorate was declared over that country, which has now at its head a royal commission, subordinate to the British agent at Zanzibar. Although the king has been shorn of almost all his power, he is still regarded with superstitious reverence by many of the peasantry. There has been constructed a line of British forts between Albert and Albert Edward Nyanzas. The British government decided (June, 1895) to build a railway between the seaport of Mombasa (*q. v.*) and Victoria Nyanza, a distance of 675 miles. A preliminary survey has been made and the railway constructed as far as Dnnautaba,

Between Mombasa and Kebmazi (200 miles distant) there is a good road.

Uhländ (*oo'lant*), LUDWIG, poet and jurist, was born at Tübingen, Germany, in 1787. He wrote various collections of ballads of a patriotic character, full of spirit, imagination, and truth, finely picturesque in their sketches of nature, and exquisite in their varied feeling. He was also a statesman and student, having studied jurisprudence, practiced as an advocate, held the chair of German Language and Literature at Tübingen, where he himself had graduated, and been a member of the German National Assembly. Besides his lyrics, *Fatherland Poems*, and other songs and ballads, many of which have become almost national songs, he wrote eight volumes on the history of German poetry and legend, as well as several dramas. Died in 1862.

Ulrich (*oo'rik*), JEAN JACQUES ALEXIS, a French general of German extraction, was born at Phalsbourg, in 1802; after completing his education in the Military College of St. Cyr, he entered the army, served in Spain and Algeria, and in 1852 became a brigadier-general, serving in the Crimean War; in the Italian campaign of 1859, he gained the rank of general of division, and in 1862 became grand officer of the Legion of Honor. After retiring into the Army Reserve in 1867, he resumed active service on the outbreak of the Franco-German War in 1870, undertaking the command of a division of Alsace-Lorraine troops. After the battle of Wörth, he became commandant of Strasburg, which was comparatively unprovided with arms and provisions. Nevertheless he defended it during seven weeks of merciless bombardment. After receiving extravagant praise, then unqualified blame, from his countrymen, Gen. Ulrich retired into private life in 1873, and died in 1886.

Uin'tah, in Utah, an E. co.; area, 5,834 sq. m.; intersected and partly bounded by the Green river. Surface, mountainous; occupied by Uintah Mountains. Cap. Ashley. Pop. (1895) 3,967.

Uji'ji. See TANGANYIKA.

Ukraine (*ook'rain*), *n.* [Slav., a frontier country or marsh.] (*Geog.*) The name given in Poland first to the frontiers toward the Tartars and other nomads, and then to the fertile regions lying on both sides of the middle Dnieper, without any very definite limits. The Ukraine was long a bone of contention between Poland and Russia. About 1686 the part on the east side of the Dnieper was ceded to Russia (Russian Ukraine); and at the second partition of Poland, the western portion (Polish Ukraine) also fell to Russia, and is mostly comprised in the government of Kiev. The historic Ukraine forms the greater part of what is called Little Russia (a name which first appears about 1654), and is made up of the governments of Kiev, Tchernigov, Poltava, and Kharkoff. This tract of country has always been celebrated for its fine breed of fleet horses and horned cattle.

Ulcer, n. [Fr. *ulcère*; Lat. *ulcus*, *ulceris*, a sore.] (*Path.*) A local disintegration of the soft parts of the body, either opening to the surface or to any internal cavity, and attended with a secretion of pus or some kind of discharge. It may arise from a variety of causes, similar to those producing inflammation; wounds in the flesh, if at all deep, may pass into ulcers; and persons in whom from any cause the circulation has become sluggish are liable to ulcerations. In simple cases nearly all that seems useful is to keep the surface clean and covered with some antiseptic ointment. Where the part or the constitution is too weak to carry on the healing, general as well as local treatment is required, and the system has to be strengthened by nutritious diet, tonics, &c. In indolent ulcers the applications require to be principally of a stimulating nature.

Ulloa (*ool-lo'a*), DON ANTONIO, a Spanish naval officer and mathematician, was born 1716. In 1735 he was sent, with Jorge Juan, to South America to co-operate with Condamine and other French Academicians in measuring a degree of the meridian. He was afterward given high naval and civil offices, among them the governorship of Louisiana; his later life is more remembered in connection with the construction of public works requiring engineering skill, and with the founding of the first metallurgical laboratory and the Observatory of Cadiz. In 1748, in connection with Juan, he published an account of their voyage and nine years' residence in Peru. Died in 1795.

Ulpianus (*ul-pi-a'nis*), DOMITIUS, an eminent Roman jurist, the tutor, friend, and minister of the Emperor

UMBR

Alexander Severus, who made him his secretary and afterward prætorian prefect. Having offended the soldiery by his reforms, they broke out into open mutiny and murdered him, about A. D. 228. His writings on law were very numerous, and many excerpts from them are included in the *Digest*.

Ulster, in Ireland, the most northern of the 4 provinces, bounded by the Irish Sea, the Atlantic Ocean, the North Channel, and the provinces of Leinster and Connaught. Its coasts are indented by great arms of the sea, such as Donegal Bay, Loughs Swilly and Foyle, Belfast Lough, and Dundrum Bay; in the north the country is hilly and rather sterile, but the southern parts of the province are rich, fertile, and well cultivated, producing flax, grain, fodder, horses, cattle, milk, butter, and cheese. Ulster is the seat of the great Irish textile manufactures, the annual value of the linens alone being about \$15,000,000. The people are descendants of Scotch and English settlers who were introduced in the time of James I., to occupy lands confiscated from the original Irish owners on account of insurrectionary designs. Although the two races have intermixed, the inhabitants of Ulster have always been more or less distinct from the rest of the Irish people, and there have been many bitter feuds, notably the Ulster rebellion of 1641, an uprising of the original Irish against the English settlers. The natives who retained lands were often oppressed by their stronger neighbors, and it is likely that the unsettled leases, consequent on so general and violent a change of ownership, was the cause of the *Ulster tenant-right system* which has attracted much attention in the recent discussions of Irish land tenure. It provides for a compensation to a tenant for loss on quitting land which he has held, and for improvements, and secures facilities to tenants in securing their holdings. Ulster has an area of 8,550 sq. m. It is divided into 9 counties: Antrim, Armagh, Cavan, Donegal, Down, Fermanagh, Londonderry, Monaghan, and Tyrone. The principal towns are Belfast, Londonderry, Enniskillen, and Lisburn. Pop. (1897) 1,595,400.

Ulster, in New York, a S.E. co.; area, 1,157 sq. m.; bounded E. by the Hudson river. Surface is broken by the Catskill and Shawangunk Mountains; soil, suited for grazing; iron ore, limestone, slate and flagging are found. Products, Butter, hay, wool, corn, potatoes; fruits of all kinds, especially grapes and berries. Manuf. Very numerous and important. Cap. Kingston. Pop. (1897) 94,460.

Ultima, a. [Lat., last.] Most distinct or remote; furthest; last; most extreme limit or reach.—*U. ratio*. [Lat.] The final reason, argument, or resource.—*U. Thule*, or *Thule*. A name given by Pytheas of Marseille, about 300 B. C., to a vaguely described land lying north of Scotland, probably the Orkney or Shetland Islands, although its exact size and position have been under discussion almost ever since. The name has come to be used figuratively to signify any little known or mythical northern region, or even any desire whose fulfillment seems uncertain and distant.

Umbrel'la-bird, n. (*Ornith.*) A curious bird (*Cephalopterus ornatus*) of the Chatterer family (*Cotingidae*), which includes a large number of tropical South American birds noted for splendor of colors and strange adornments in their plumage. This species inhabits the Amazonian and Orinocoan forests, is of the size of a crow, and black all over, with metallic reflections. Its peculiarity is described by Alfred Russell Wallace thus: "The crest is perhaps the most fully developed and beautiful of any bird known. It is composed of long slender feathers rising from a contractile skin on the top of the head. The shafts are white, and the plume glossy blue, hair-like, and curved outward at the tip. When the crest is laid back the shafts form a compact white mass, sloping up from the top of the head, and surmounted by the dense hairy plumes. Even in this position it is not an inelegant crest, but it is when it is fully opened that its peculiar character is developed. The shafts then radiate on all sides, from the top of the head, reaching in front beyond and below the top of the beak, which is completely hid from view. The other singular appendage of this bird is the neck-plume. On examining the structure of this plume, it is found not to be composed of feathers only, growing from the neck. The skin of the neck is very loose; looser and larger, in fact, than in any bird I know of. From the lower part grows a cylindrical fleshy process about as thick as a goose quill, and an inch and a half long. From this grow the feathers to the very point, thus pro-

ducing the beautiful cylindrical plume quite detached from the breast, and forming an ornament as unique and elegant as the crest itself." Another species (*C. penduliger*), having a still more extraordinary feathered dewlap, inhabits western Ecuador; and a third (*C. glabricollis*) is known in Costa Rica, in which the throat is reddish-orange, and the dewlap bare of feathers except at the extremity. These birds are near relatives of the strange bell-bird, or campanero, of South American forests, and subsist upon a mixed diet of fruit and insects.

Uncas, an American Indian who was famous in the early annals of New England. He was originally a Pequot (see *Pequot*), who, with his following, revolted against Sassacus (about 1635), and formed a new band, called Mohegans, after the ancient name of the tribe. He acquired considerable power, and, with great foresight, allied himself steadily with the whites, and shared in their victories over the Pequods and other tribes, receiving grants of conquered territory. This made him new enemies among the red men, by whom he was regarded as a traitor, and unsuccessful attempts were made to assassinate him. This led to his attacking his old allies, the Narragansetts, and in 1643 he overpowered them and captured their chief, Miantonomah, in a battle that took place near Norwich, Ct. The English authorities at Hartford consented that this powerful and hitherto friendly chief should be savagely put to death by Uncas, and a monument now marks the spot on Sachem's Plain, north of Norwich, where he was slain. This whole episode was doubtless a quarrel fomented by the English in the hope of getting rid of the red men by each other's tomahawks. The remainder of the Narragansetts continued the struggle for some years, and once would have overcome Uncas had he not been assisted at the last moment by English troops. Thus the whites played one against the other. He lived in the neighborhood of Norwich, Conn., to a great age, always a man of mental force as well as physical power, but always an unregenerate savage. He died in 1682, and is buried in a little plot in the city of Norwich, known as the royal Mohegan burying-ground, among the bones of ancestors long antedating his momentous career and the coming of Europeans. He was the "last of the Mohicans," and as such became the hero of Cooper's novel; and President Andrew Jackson dedicated the granite obelisk which now marks his grave.

Underwood, FRANCIS HENRY, author, was born in Enfield, Mass., Jan. 12, 1825; is widely known by his *Handbooks of English and American Literature*, which have been popular school text-books. He also published *Builders of the American Literature*, and *Handbook of English History*, and biographies of Lowell, Longfellow, and Whittier. He is accredited with originating the idea of starting the *Atlantic Monthly*, with James Russell Lowell as editor, U. himself being assistant manager. He was clerk of the Massachusetts Senate (1852-54); clerk of the Boston Superior Criminal Court (1859-70); consul at Glasgow (1885), and consul at Edinburgh (1893). Died Aug. 7, 1894.

Undulatory Theory. (*Physics*.) The theory, now universally accepted, that light, radiant heat, &c., are forms of energy propagated through the ether by a wave-motion imparted to the ether by the molecular vibrations of the radiant body. The ether, specifically called the luminiferous ether, is a medium presumed to fill all space, including those spaces where the densest bodies are located. Light and radiant heat travel through it by undulations of immense rapidity, these undulations being spoken of as waves, for want of a better term, but being rather disturbances of the equilibrium of the medium, which are propagated from point to point by a continuous motion, the particles vibrating only laterally, while the motion or phase of vibration is onward. The term radiant energy is devised to include light, radiant heat, and electro-magnetic radiation, each of which is considered as travelling in the ether with a wave-motion of different length or rapidity. To these may now be added the Roentgen, Hertzian, and other waves, each of which manifests different qualities. Light is the name that we give to those waves that affect the eye, and are visible in the spectrum; electricity to those waves that are manifest to our senses in the electric current, and which are capable of transferring power; and Roentgen rays to those waves that proceed from the Crookes tube, and are changed into light rays by fluorescent substances. The undulatory theory displaced the corpuscular theory of Newton. See *LIGHT*, *ELECTRICITY*, and *ROENTGEN RAYS*.

Ungava, an unorganized district of Canada, including the whole region between Hudson Bay and the Atlantic Ocean, north of Quebec, except the coast of Labrador, which belongs to Newfoundland. Its southern boundary is formed by the East Main and Hamilton rivers, and a conventional line connecting their sources along the water-shed between the St. Lawrence and Hudson and Ungava Bays. Ungava Bay is a deep southward indentation of the coast of Hudson Strait, also connected with the Atlantic by a narrow inland channel. The district is a rolling and a somewhat elevated plain of Laurentian gneiss—a part of the most ancient frame of the continent, and contains a great number of lakes, rivers, and swamps among the rocky ridges. The land is generally forested, and may yield considerable good timber, while its mineral resources may prove valuable. The soil seems to be fertile where it has been examined along the eastern shore of Hudson Bay, but around Ungava Bay the hills are barren and rocky, and the climate precludes

the agriculture possible farther south. The only resource of the region at present is the fisheries, especially of Hudson Strait, where whales abound, porpoises are taken in immense numbers (at Ungava Bay, for the sake of their oil and hides), and where cod, whitefish, trout, &c., throng in extraordinary numbers. Sparse bands of Indians dwell on the southerly coasts and rivers, and the region of Ungava Bay is thinly inhabited by Eskimos. For these a few small posts and fisheries of the Hudson Bay Company are maintained, but otherwise there is no habitation.

Unicoi, in *Tennessee*, a N.E. co.; area, 196 sq. m.; drained by Nolachucky river. *Surface*, rugged and mountainous; *soil*, fertile in valleys near streams; iron ore abundant. *Cap.* Erwin. *Pop.* (1897) 4,840.

Union, or **Union City**, in *Oklahoma*, a post-village of Canadian co., 6 m. from Minco, Indian Territory. *Pop.* (1897) 250.

Union, in *South Dakota*, an extreme S.E. co., adjoining Nebraska and Iowa; area, 430 sq. m.; bounded E. by Big Sioux river and S.W. by Missouri river. *Surface*, rolling prairie and woodlands; *soil*, fertile. *Cap.* Elk Point. *Pop.* (1895) 10,515.

Union City, in *Indiana*, a city of Randolph co., 9 m. E. of Winchester, has hub and spoke, and carriage factories, manufactures of flour, lumber, &c. Trade center of an agricultural district. *Pop.* (1897) 3,450.

Union City, in *Pennsylvania*, a post-borough of Erie co., 26 m. S.E. of Erie; has excellent water-power and important manufactures. *Pop.* (1897) 2,425.

Union City, in *Tennessee*, a post-village, cap. of Obion co., 33 m. N. of Trenton. An important manufacturing point. *Pop.* (1897) 3,990.

United Christians. (*Eccles.*) An organization first announced July 25, 1894, by its founder, John C. Bateson, M. D., of Scranton, Pa. Its purposes are announced to be as follows: (1) To unite all Christian believers regardless of sect or creed for mutual benefit. (2) To encourage people to study the Bible and obey the laws of God. (3) To bring about a more general and coöperative effort for the advancement of Christianity throughout the world. "All persons who desire to honor God and do good unto their fellow men" are eligible to membership.

United Greek Church. (*Eccles.*) That portion of the Eastern Christian Church, which, while in general retaining the discipline, rights, liturgy, and customs of the Greek Church, acknowledges the supremacy of the Pope of Rome. Its origin was in isolated Greek communities upon which the Church of Rome brought its influence to bear, but it now amounts to an important fraction of the whole Greek Church. Submission to papal supremacy was usually the only condition of union; but Rome has used her influence further whenever possible, so that the United Greek Church, or the "Unia," as it is called, is much varied in its rites and discipline.

United States Marine' Hos'pital Ser'vice. See *NAVY OF THE UNITED STATES*.

United States Military Acad'emy. See *WEST POINT*.

University Extension. (*Educ.*) The university extension movement, with the object of providing "means of higher education for persons of all classes and both sexes, engaged in the regular occupations of life," was originated by the University of Cambridge, England, in 1872; Prof. Stuart gave a series of lectures to several women's clubs in the north of England, and they were received so enthusiastically that he repeated them to various audiences in all parts of the country. These gave rise to the university extension idea. It is carried out by systematic courses of lectures and classes, taking up subjects usually taught in universities, and followed by examinations and the granting of certificates. Centers for the work are chosen and grouped into circuits, which agree to employ the same lecturers, making it easier to obtain the best talent in places remote from universities, or other centers of thought. The work spread throughout England, and has been taken up vigorously in the U. S., where *The American Society for the Extension of University Teaching* was organized in 1890, at Philadelphia. In 1894-95, it arranged for over 1,000 lectures, divided into courses of about six lectures each. In other parts of the country other societies have been formed, which coöperate with that in Philadelphia, and their work is so thoroughly organized that almost anyone in any part of the country, who is willing to give a little time to study, may receive instruction from the best scholars and thinkers in any department which he may choose.

University Settlements. (*Sociol.*) Under this name, in the poorer quarters of many cities, homes have been founded where educated people live in neighborly contact with the uneducated classes, and try by example, friendly influence, and regular instruction to spread higher ideas of life and of citizenship. The work of the settlements is entirely carried on by voluntary, unpaid residents, only the head worker receiving a salary. The policy of the settlement is almost entirely controlled by the head worker, advised by the residents, and depends upon the character and needs of the surrounding neighborhood, although most of the settlements are under the general direction of a University Settlement Society or other philanthropic association. The university settlement movement arose gradually and from various distinct beginnings in England, between 1860 and 1880, and was in part an outgrowth of the university extension work. *Toynbee Hall*, a settlement in memory of Arnold Toynbee, one of the early workers in the movement, was established in Whitechapel, London, 1885, and many other settle-

ments were soon founded in other parts of London, and in several Scotch cities. In 1887, *The Neighborhood Guild*, an organization for work of this sort, was founded in New York city, and was merged into the *University Settlement Society* in 1891. There are now settlements in most of the large cities of the U. S., the best known being the *University and College Settlement*, New York city; *Hull House*, Chicago; *Philadelphia College Settlement*, and *Denison House and Andover House*, Boston.

Upchurch, JOHN JORDEN, organizer, was born in Franklin co., N. C., March 26, 1822; was a master mechanic, employed in the machine shops of the Atlantic & Great Western Railroad, at Meadville, Pa., when he organized the Ancient Order of United Workmen, and in 1868 formed the first lodge of the order. He travelled extensively in the interests of the society. Died Jan. 18, 1887.

Up'ham, THOMAS COGSWELL, educator, was born at Deerfield, N. H., Jan. 30, 1799; was a graduate of Dartmouth, and of Andover; in 1825 was appointed professor of Mental and Moral Philosophy at Bowdoin, and filled the chair until 1867, when he retired as professor emeritus. He published several volumes bearing upon his special field of thought, as well as several works of a religious character. Died April 2, 1872.

Up'john, RICHARD, architect, was born in Shaftesbury, England, Jan. 22, 1802; removed to America about 1829, and followed his craft as builder and architect. He became known for his Gothic church structures, chiefly in New York and Brooklyn; among them Trinity steeple, for many years the highest building in America. Died Aug. 16, 1878.

Up'son, ANSON JUDG, educator and theologian, was born in Philadelphia, Nov. 7, 1823; educated at Hamilton College. Between 1870 and 1880 he was pastor of the Second Presbyterian Church in Albany, N. Y.; except for this period, his whole life has been spent as a college professor. In 1892 he became chancellor of the University of the State of New York.

Up'ton, in *Texas*, a W. co.; area, 1,140 sq. m. Unorganized. *Pop.* (1890) 52.

Urban'a, in *Illinois*, a city, cap. of Champaign co., 92 m. N.E. of Springfield. *Pop.* (1897) 4,050.

Urbana, in *New York*, a post-township of Steuben co.

Urbana, in *Ohio*, a post-town and twp., cap. of Champaign co., 42 m. W. of Columbus. *Pop.* (1897) 6,850.

Urbana, in *Virginia*, a post-village, former cap. of Middlesex co., 84 m. N.E. of Richmond.

Usury. *n.* Although originally signifying simply interest, or a rate paid for the use of money, usury now means a rate of interest in excess of that permitted by law. In the United States this is governed by State statutes, which name a certain maximum rate, beyond which interest is illegal, and in most cases deprive the lender of any right to collect, not only the stipulated rate, but, in many cases, even the principal involved. The laws of the State in which the contract was made govern in such cases; but these laws are frequently changed. In most of the States, 6 per cent. is the legal rate; but in some Southern and far Western States, 7 or 8 per cent. may be charged; and in Idaho, Montana, and Wyoming, 10 or 12 per cent. The maximum rate in nearly all the States is 10 per cent. or less, with exceptions in favor of small loans. (See *PAWNBROKING*.) The penalty for violation of usury laws varies greatly, several States enacting a forfeiture of the whole interest; others of two or three times that amount; others a forfeiture of the principal, or fine or imprisonment, as for a misdemeanor.

Ute Indians. (*Ethnol.*) One of the principal tribes of the Shoshonean stock of Indians, inhabiting, when first known to Europeans, the mountainous parts of the present States of Colorado and Utah, the last name being derived from the early and proper dissyllabic pronunciation of the word. They were fine, athletic, intelligent, well-to-do Indians, and more warlike than the rest of the Shoshonean tribes, yet never were engaged in a general war with the whites, although a local uprising in northwestern Colorado in 1875 nearly precipitated one. This peace policy was due largely to the wise influence of their later head chief, Ouray, who governed them during the time, between 1865 and 1880, when mining, railway construction, and industrial development were most rapidly invading and changing their mountain haunts, and who prepared them for the inevitable restrictions to follow. In 1873 began that collecting of these Indians into reservations which has proceeded with ever narrowing limits until the present time, when most of them are gathered in the northeastern corner of Utah, and all that remain perhaps number 5,000 souls, none of whom have made much progress toward civilization. The term *Ute* appears in combination with several other allied and neighboring tribes, as the *Pai-Utes*, of the Colorado Valley in Utah and northwestern Arizona; the *Gosintes*, of northwestern Utah, and others.

Uten'sil, *n.* [*Fr.* *ustensile*, or *utensile*, from *Lat.* *utensilis*, fit for use.] That which is useful, or necessary for use;—specifically, an instrument for any use, such as the vessels of the kitchen or the tools of a trade; an implement.

Uterine, *a.* [*Lat.* *uterinus*, from *uterus*, the womb.] Pertaining, or having reference, to the womb; belonging to the uterus.—Born of the same mother, but having a different father; as, a *uterine* brother or sister.

Uterogestation (-ta'shun), *n.* (*Med.*) Pregnancy.

Uterus, *n.* [*Fr.* from *Lat.*] (*Anat.*) The womb.

Utrecht Vel'vet. (*Fabrics.*) A plush woven from goat's-hair, and used in upholstery, and for the linings of carriages, &c.

V.

VACC

V (*ve*), the twenty-second letter of our alphabet, and properly a consonant, being placed before vowels, as in *vacant*, *vibrate*, *venal*, &c. It is formed by the junction of the upper teeth with the lower lip, with a gentle expiration. It is the middle labial aspirate, bearing the same relation to *f* that *p* does to *b*. The letters *u* and *v* had always two distinct sounds, but they had only one form till about the beginning of the 4th century, and it was not till about the 16th century that the two letters came to be definitely distinguished. The Romans probably pronounced *v* like our *w*, which would account for the fact of there being no *w* in their language. In German, *v* has the sound of *f*, and *w* of *v*. *V* is interchangeable with *b* and *m*, and also with *f*. As a numeral, it denotes 5, and with a dash over it (*V*) 500. *V.R.* among the Romans stood for *Uti Roga*, "As you desire;" in Great Britain, *V.R.* signifies *Victoria Regina*, "Queen Victoria." In music *V.* stands for *violin*, and *V.V.* for *violins*. — See also ABBREVIATIONS.

Va, *v. imper.* [It.] (*Mus.*) Proceed: go on; continue.

Vaal, [Du.; corresponding to the Hottentot name *Ky-Gariep*, yellow,] a South African river, the chief affluent of the Orange River, which it joins in about 24° E. Lon. The discovery of diamonds on its banks was made in 1867, and in the following years people from all parts of the world flocked to the fields. These lie in the eastern portion of a territory north of Cape Colony, known as Griqua Land West, which, as a consequence of the discovery, the unsettled nature of its government and turbulent population, was annexed to the British Empire in 1871. The mining has now become a settled industry, with its accompaniment of a fine population and rapidly growing towns. The fields extend between the lower Vaal River and its tributary the Modder. The largest diamond found to this day weighed more than 200 carats.

Vacancy, (*vā'kan-se*), *n.* [Fr. *vacance*, from Lat. *vacans* — *vaco*, to be empty or void.] State or quality of being empty or vacant; — hence, leisure; listlessness; intermission. — That which is vacant; as, (1.) Vacuity; empty space; as, to fix one's eyes on *vacancy*. (2.) Gap; chasm; hiatus; blank; any space between bodies or things; as, a *vacancy* between words or between buildings. — Time of leisure or unoccupation; period of intermission; vacation; as, I have scarce a minute's *vacancy*. — Place or office unfilled or without an incumbent; as, a *vacancy* in the Treasury department.

Vacant, *a.* Empty; not filled; void of every substance except air; as, a *vacant* house. — Hence, free; unencumbered; unengaged with business or care; unoccupied; as, *vacant* time. — Not filled or occupied with an incumbent or possessor; as, a *vacant* throne. — Thoughtless; void of reflection; not occupied with study or meditation; indicating want of thought or intelligence; as, a *vacant* face, a *vacant* mind.

(*Law.*) Having no heir, claimant, inheritor, or occupier; as, a *vacant* estate.

Vacant succession, (*Law.*) An inheritance for which the heirs are unknown.

Vacantly, *adv.* In a vacant manner; empty.

Vaca Station, in California, a village of Solano co.

Vacate, *v. a.* [Fr. *vaquer*, from Lat. *vaco*, *vacatum*.] To make empty, void, or vacant; to quit possession of and leave destitute; as, to *vacate* an office or dignity. — To annul; to make of no authority or validity; as, to *vacate* a charter.

Vacation, (*-kā'shun*), *n.* [Fr., from Lat. *vacatia*.] Act of making vacant or void, or of rendering of no validity; as, the *vacation* of a commission. — Leisure; freedom from care, interruption, or embarrassment. (R.) — Intermission of a stated employment, proceeding, or office; rest. — Hence, especially, (1.) Intermission of judicial proceedings; the space of time between the end of one term and the beginning of the next; as, the Long *Vacation*. (2.) The intermission of the curriculum of study of a university, a college, or other seminary, when the students have a recess; as, the midsummer *vacation*. (3.) The time when a see or other spiritual dignity is vacant.

Va'caville, in California, a post-vill. and twp. of Solano co., 8 m. N.N.E. of Suisun city.

Vaccina, **Vaccinia**, (*vak-si'na*), *n.* Cow-pox.

Vaccinate, *v. a.* [Fr. *vacciner*; from Lat. *vacca*, a cow.] To inoculate with the cow-pox by means of a virus taken or derived from cows, and called *vaccine matter*.

Vaccination, (*vak-si-nā'shun*), *n.* (*Med.*) The arti-

ficial production of a disease known as the cow-pox, by inserting some of the matter of the disease under the skin, with the view of protecting it against the incomparably more severe disease called *small-pox*. For the history of the discovery of *V.*, see JENNER. The great advantage of *V.* over inoculation is, that it only produces a slight disorder, which is attended with no risk, and not communicable except by direct engrafting. By inoculation the virus and the disease is conveyed wherever it is used, and the country filled with contagion. On the other hand, when vaccine matter is used, the contagion of small-pox need never come, and if rightly used, it affords the means of perhaps eradicating this most loathsome pestilence from every well-regulated community. The operation is usually performed by making an oblique puncture through the epidermis, and introducing a portion of the virus on the point of the lancet or needle. If the operation has been successful, a small inflamed spot is discernible about the third or fourth day. This increases in size, becomes hard and elevated, and about the sixth day a small quantity of fluid may be distinguished in the centre. About the eighth day, when the pustule is fully formed, the constitutional effects begin to appear, — headache, shivering, loss of appetite, &c., which gradually subside in one or two days. Afterwards the fluid dries up, and a dark-brown scab forms, which remains for about a fortnight, and on disappearing leaves a depression. It is a disputed point whether the effects of *V.* are permanent, or whether they disappear after a certain time. The majority seem to be in favor of the latter opinion, at least to the extent of recommending that persons who have been vaccinated in infancy should be re-vaccinated on attaining maturity. From the operation being imperfectly performed, or from other causes not well understood, *V.* does not in all cases afford absolute immunity from the disease; but in those cases in which it occurs, it is usually in a mitigated form.

Vaccinator, **Vaccinist**, *n.* One who practises vaccination.

Vacciniaceæ, *n. pl.* (*Bot.*) The Cranberry family, an order of plants, alliance *Cinchonales*. *DIAG.* Epigynous stamens and anthers opening by pores. They are shrubs or small trees, remarkable for their astringent leaves and bark, and for their edible subacid fruits. There are about 200 species, chiefly natives of the temperate regions of the globe; they are comprised in 13 genera. See VACCINIUM.

Vaccinium, (*vāk-sin'*), *n.* (*Bot.*) The typical gen. of the ord. *Vacciniaceæ*. They are heath-like shrubs, dispersed through a very wide area in both the Old and New World, and generally in mountainous districts or wet heathy places. Among the N. American species are: *V. virgatum*, the Blue Whortleberry, which yields sweet berries of a bluish-black color; *V. stanineum*, the Deerberry, the berries of which are large, bitter, and of a greenish-white color; and *V. pennsylvanicum* (or *V. tenellum*), the common Low Blueberry (Fig. 2560), found in thickets and pastures in hard soils, and common from Canada to Pennsylvania. It is a low under-shrub, 6-12' high, growing in dense patches; flowers reddish-white; bracts mostly colored; berries large, blue, sweet and nutritious. Among the best known European species are *V. myrtillus*, which yields the edible Bilberry or Blackberry; *V. uliginosum*, the Bog or Black Whortleberry; and *V. vitis-idaea*, the Red Whortleberry or Cowberry.

Vaccine, (*vāk-sin'*), *a.* [Fr. *vaccin*.] Pertaining to, or obtained from, cows; relating to vaccination; as, the *vaccine* disease.

Vache Island, (*vash*), in the W. Indies, off the S. of Hayti, 8 m. S.E. of Aux Cayes, 10 m. long and 3 broad.

Vacher, (*vāsh-ā'*), *n.* [From Fr. *vache*, a cow.] A stock-keeper or herdsman. (*Local U. S.*)

Fig. 2560. — LOW BLUE-BERRY.
(*V. pennsylvanicum*.)

VAGI

Vach'ery, *n.* A pen for cattle; also, a dairy.

Vacillancy, (*vās'il-lan-se*), *n.* Quality of being vacillant.

Vacillant, *a.* [Fr., from Lat. *vacillare*.] Vacillating; fluctuating; wavering.

Vacillate, (*vās'il-lat*), *v. a.* [Fr. *vaciller*.] To move one way or the other; to reel or stagger; as, a *vacillating* gait. — To waver; to fluctuate in mind, purpose, or opinion; to be unsteady or inconstant; as, a *vacillating* man.

Vacilla'tion, *n.* [Fr., from Lat. *vacillatio*.] A moving one way and the other; a wavering; a reeling or staggering. — Inconstancy or fluctuation of mind: unsteadiness; change from one object to another; as, *vacillation* of purpose.

Vacu'ity, *n.* [Fr. *vacuité*; Lat. *vacuitas*.] State, quality, or condition of being vacuous; emptiness; a state of being unfilled. — Space unfilled or unoccupied, or occupied with an invisible fluid only; void; vacuum. — Nihilism; inanity. (R.)

Vacuous, (*vāk'yū-ūs*), *a.* Empty; void; unfilled.

Vacuousness, *n.* State or quality of being vacuous.

Vacuum, (*vak'yū-um*), *n.* [Lat.] (*Phys.*) A space devoid of all matter. Whether there be any such thing in nature as an absolute *V.*, or whether the universe be completely full, is a question that has given rise to disputes among philosophers in all ages. The ancients distinguished a *V. coaccervatum* and a *V. interspersum*, or *disseminatum*. By the former they understood a place destitute of matter, such as would exist if God were to annihilate all the air and other bodies within the walls of a chamber; by the latter they designated the space supposed to be naturally interspersed in and among bodies, and in the interstices between different bodies. Until recently the most perfect vacuum that could be produced was the *Torrice'llian vacuum*, or the space above the mercury in the barometric tube. It is obvious, from the nature of the pneumatic machine, that the vacuum produced by the air-pump can never be perfect, since some air must remain in the receiver however long the process be continued. A more complete vacuum can be produced by filling the receiver with carbonic acid and introducing a stick of caustic potash; the receiver then being exhausted to the full limit of the air-pump, the potash will absorb most of the remaining carbonic acid. The Sprengel pump is a very efficient vacuum-producing apparatus. In this mercury is allowed to flow down a long tube of narrow-bore, and carries with it the air from a vessel connected by a side tube with the vertical tube. The highest vacuum obtainable with the air-pump is 150 times the millionth of an atmosphere, while with the Sprengel pump it is possible to obtain a vacuum of 4005 of the millionth of an atmosphere. See BAROMETER, PUMP, and GEISSLER'S TUBES.

Vacuum Tubes. See GEISSLER'S TUBES.

Vade-mecum, (*vā-de-mē'kum*), *n.* [Lat., go with me.] A manual; that which a person carries with him for guidance or reference.

Va'dinum, *n.* [From Lat. *vaduri*, to bind.] (*Law.*) Bail; security; pledge; guaranty.

Vag'abond, *a.* [Fr., from Lat. *vagabundus*, wandering to and fro.] Driven to and fro; floating about without any particular direction; as, "By evivous winds blown *vagabond*." (*Milton*). — Wandering to and fro; moving from place to place without any settled habitation; as, a *vagabond* life.

n. A vagrant; a bummer; one who wanders from town to town or from place to place illegally, having no certain habitation, or not abiding in it, and generally without the means of honest livelihood.

Vag'abondage, **Vag'abondism**, *n.* [Fr.] State or condition of being a vagabond.

Vag'abondize, *v. a.* To act the vagabond; to loaf about.

Vaga'ry, *n.* [Fr. *vaquer* = Lat. *vagor*, to wander.] A wandering of the thoughts; a wild freak; a whim; a capricious frolic.

Vagina, (*-jī-*), *n.*; *pl.* VAGINÆ. [Lat., a sheath.] (*Anat.*) One, and the largest, of the female passages, leading to the uterus. It extends from the *vulva*, or external parts, to the neck of the uterus, and being composed of a firm corrugated membrane, is capable of considerable elongation. These circular corrugations, or *rugæ*, which at one time of life are a collateral sign of virginity, disappear after many labors, when the passage becomes perfectly smooth from the *vulva* to the *os uteri*. A thin,

firm membrane extends almost completely across the vagina, cutting off all access to the uterus, but allowing the periodical secretion to escape from it by a semicircular opening below; this membrane is called the *hymen*, and only exists before marriage. The vagina is subject to many diseases, particularly to inflammation, ulceration, and weakening discharges, gleet, &c. It is also subject to prolapsus, or a falling down, especially in delicate females who have had many children in rapid succession. In such cases injections of oak-bark, gall-nuts, or other astringents are necessary, with the introduction of a pad or pessary to support the passage when restored to its proper situation.

(Bot.) The leaf-stalk of those plants in which this part becomes thin and rolls round the stem, to which it then forms a sheath, as in grasses.

(Arch.) The part of a terminus out of which the statue seems to issue.

Vaginal, (*vāj-'*) *a.* Resembling a sheath or scabbard; pertaining or having reference to a vagina or sheath.

(Anat.) Belonging or relating to the vagina.

Vaginant, **Vaginate**, *a.* (Bot.) Having the property of sheathing or investing.

Vagrancy, **Vagrantness**, *n.* [From *vagrant*.] A state of wandering from place to place without a settled home; the life and condition of wandering beggars, rogues, vagabonds, &c.

Vagrant, *a.* [O. Eng. *vagarant*, strolling, from Lat. *vagor*.] Wandering from place to place without any certain or settled habitation.—Unsettled; moving without any certain course or direction; as, *vagrant* impulses.

n. A stroller; an idle wanderer; a vagabond; a sturdy beggar; one who has no settled dwelling, or who does not abide in it. See **BEGGAR**.

Vagrantly, *adv.* In a vagrant or unsettled manner.

Vague, (*vāg-*) *a.* (com. *VAGUER*; superl. *VAGUEST*.) [Fr., from Lat. *vagus*, wandering.] Unsettled; unfixed; undetermined; indefinite; ambiguous; as, a *vague* idea.—Unauthorized; proceeding from no known or substantial source; as, *vague* hearsay.

Vague'ly, *a.* In a vague or uncertain manner.

Vague'ness, *n.* State, quality, or condition of being vague.

Vaigatch', or **VAIGATZ**, an island of N. Russia, separated from the mainland by the Strait of Vaigatch; Lat. 70° 25' N., Lon. 59° 10' E. It is 95 m. long and 35 broad.

Vail, *n.* See **VEIL**.

Vailes, in *Alabama*, a twp. of Pickens co.

Vain, *a.* (comp. *VAINER*; superl. *VAINEST*.) [Fr., from Lat. *vanus*, void, empty.] Unreal; empty; deficient; worthless; unsatisfying; not possessing real substance or importance.—Fruitless; wanting in force or efficacy; ineffectual; as, a *vain* attempt.—Showy; ostentatious; ornate.—Conceited; puffed up; proud of petty things, or of trifling accomplishments; elated with self-esteem, or with the possession of things more showy than useful or valuable.

In *vain*, to no good end or purpose; ineffectual; without advantage or success; as, to labor *in vain*.—To take the name of God *in vain*, to speak of the Almighty in terms of levity or profanity.

Vain'glorious, *a.* Vain to excess of one's own accomplishments or achievements; elated beyond due bounds; boastful; feeling or indicating vainglory; proceeding from vanity; as, a *vainglorious* man.

Vain'glory, *n.* Exclusive vanity, excited by a sense of self-importance, or by the measure of one's own accomplishments or achievements; empty pride; undue elation of mind; pomposity.

Vain'ly, *adv.* In a vain, fruitless, or ineffectual manner; to no purpose; as, you *vainly* attempt to dissuade me.—Proudly; arrogantly; vauntingly; boastfully; with vanity; as, she thinks *vainly* of her own attractions.—Idly; foolishly; as, he *vainly* expects to succeed.

Vain'ness, *n.* State or quality of being vain; vanity.

Vair, *n.* (Her.) See **FUR**.

Vaisya, (*vis-*) *n.* See **CASTE**.

Valais, (*val-ai'*) (THE) a canton in the S. of Switzerland, bounded by the cantons of Uri, Berne, and Freiburg, and in another direction by Savoy and the Lake of Geneva; area, 1,665 square miles. *Desc.* It lies in the direction of north-east and south-west, and is of an oblong form, its length being about 100 miles, and its medium breadth from 25 to 30. It is the largest valley in Switzerland, watered in its whole extent by the Rhone, and bordered on the north, as on the south, by the loftiest mountains in Europe—the Pennine and the Bernese Alps. Cattle-rearing is the principal branch of industry. The F. opens into the Lake of Geneva, and is connected by great high-roads, and now by railway, with the other parts of French Switzerland and Savoy. The Grimsel and Gemmi passes connect the eastern part of the valley with German Switzerland; and the passes of Great St. Bernard and Simplon connect it with Italy. F. is a Catholic canton. It is divided into *Upper* and *Lower*; in the first the German, and in the second the French language is spoken. For administrative purposes it is divided into 13 *dizains*, each of which has a council of members elected by all citizens over 18 years of age, each council sending 4 deputies to a *diet*, in which the legislative power is vested. The diet has an executive, composed of 5 members, elected annually. *Cap.* Sion. *Pop.* (1897) 108,810.

Valance, **Valence**, *n.* [From O. Fr. *slavaler*, to hang or fall down.] The drapery depending from a bed, window, &c.; especially, the hangings around a bedstead, from the bed to the floor.

Valatie, (*val-a-tee*), in *New York*, a post-village of Columbia co., 20 m. S.E. of Albany.

Valcour, (*val-koor'*), in *New York*, an island in Lake Champlain, 6 m. S. of Plattsburg.

Val de Peñas, (*val dai pain'yas*), a town of Spain, on the Jabalon, 33 m. from Ciudad-Real. It is celebrated for its wines. *Pop.* 10,788.

Val'des, an island off the W. coast of British Columbia, in the Gulf of Georgia; Lat. 50° N., Lon. 125° 2' W.

Valdivia, a city and strong fortress of Chili, cap. of a prov. of same name, on the Valdivia river, 9 m. from the sea. Founded in 1551, it was taken and plundered by the Arancanians in 1590, and, in 1837, was ruined by an earthquake. The harbor is situate in a beautiful bay, formed by the river, and is the safest, the strongest from its natural position, and the most capacious of any of the ports in the South Pacific; Lat. 39° 48' S., Lon. 73° 19' 30' W. *Pop.* 2,000.

Valdos'ta, in *Georgia*, a post-town, cap. of Lowndes co., 157 m. S.W. of Savannah.

Vale, *n.* [Fr. *vallée*, *val*, from Lat. *vallis*.] A valley; a dale; a tract of low ground, or of land between hills or mountains.—A small trough or canal, to carry off water; a dale.

Valedic'tion, *n.* [From Lat. *vale*, adieu, and *dico*, to speak.] A bidding farewell; a farewell; an adieu.

Valedictorian, *n.* One who pronounces a valedictory address;—especially, in American colleges, the student who pronounces the valedictory oration at the annual commencement.

Valedictory, *a.* Bidding farewell; snitable, or designed, for a taking leave; as, a *valedictory* address.

n. An oration or address spoken at commencement, in American colleges, by one of the class whose members receive the degree of bachelor of arts, and take their leave of the college, and of each other.

Valeggio, (*va-li'jo*), a town of Italy, in Lombardy, 7 m. from Peschiera. It has a fortified bridge, about 550 yards long, defended by lofty towers. *Pop.* 4,620.

Valença, in Brazil, a town of the prov. of Rio de Janeiro, 90 m. W.N.W. of Rio de Janeiro: *pop.* abt. 6,000.

—A town of the prov. of Bahia, near the mouth of the Una, in the Atlantic, 10 m. N. of Cayn; *pop.* abt. 2,000.

—A town of the prov. of Piahy, 56 m. N.E. of Oeiras: *pop.* abt. 4,000.

Valengay, (*va-lain'sai*), a town of France, dept. of the Indre, on the Nahon, 25 m. from Châteauroux; *pop.* 4,516.

Valen'cia, in *New Mexico*, a W. cent. co.; area, 8,900 sq. m. *Surface*, crossed by several mountain ranges; heavily timbered; soil, fertile when irrigated. *Cap.* Los Lunas. *Pop.* (1890) 13,876.

—A village, former cap. of the above co., 80 m. S.S.W. of Santa Fé.

Valencia, in Venezuela, a lake in the dept. of Caracas, 2 m. E. of Valencia city, 22 m. long, and 6 m. broad. It contains numerous islands. —A city in the dept. of Caracas; Lat. 10° 12' N., Lon. 67° 55' W.; *pop.* abt. 20,000.

Valencia, (*va-len'she-a*), an ancient kingdom in the E. of Spain, extending in an oblong form from N. to S., with the sea on one side, and the Castilian provinces on the other. It now forms the provs. of Alicante, Valencia, and Castellon-de-la-Plana.

United area, 7,680 sq. m. *Desc.* Mountains in the N.W., but in the centre fertile and well watered, with extensive rice-grounds in the neighborhood of Lake Albufera.

Rivers. The Xucar, the Segura, and the Guadalquivir, are the principal.

Products. Grapes, olives, oranges, figs, maize, wheat, wine, silk, flax, hemp, and rice.

The sugar-cane is also cultivated, and, with the silk and hemp, yields valuable returns.

Min. Salt, marble, and potter's clay.

VALENCIA, the cap. of the above prov. and ancient kingdom, an ancient city and seaport, 3 m. from the sea, in an open plain, on the Guadalquivir, here crossed by five wide bridges; Lat. 39° 28' N., Lon. 0° 24' W. It is surrounded by a rampart pierced by eight gateways (Fig. 2562), but its citadel is small and ill-fortified, and does not even command the town. The interior, far from meriting the eulogium of Mariana, or the flattering epithet of "Valencia la Bella," consists of narrow and winding streets, crossed by a multiplicity of lanes, in many of which there are no thoroughfares. It contains a large number of churches and convents, with several hospitals, besides public buildings less remarkable for elegance than for antiquity and profuse decoration. It is the see of an archbishop, and the seat of a supreme court of justice. The university was founded in 1209, and is on an extensive scale, but the course of study is antiquated. It has 70 professors, and a library of up-

wards of 15,000 volumes. Its academies are also numerous, and it has a seminary for nobles. *Manuf.* Silk, linen, and woollen fabrics, hats, leather, Valencia tiles for flooring, glass, artificial flowers, and paper.

Fig. 2562. — THE SERRANOS GATE, (Valencia.)

Valencia, **Valen'tia**, *n.* A kind of mixed stuff for vests or waistcoats.

Valen'cia de Alcantara. [Probably the ancient *Contrasta*.] A small, but strongly fortified, town of Spain, on a height near the frontiers of Portugal, 27 m. from Alcantara; *pop.* 5,300.

Valencia'ua, in Mexico, a town and silver-mine in Guanajuato, a few m. N. of Guanajuato city.

Valenciennes, (*va-lain'se-en*), a fortified city of France, dept. Nord, on the Scheldt, 25 m. from Lille. A famous kind of lace is made here, as well as fine-woolen fabrics and gauzes. *Pop.* 25,875.

Valens, **FLAVIUS**, (*va'lens*), emperor of the East, was the son of Gratian, and became the colleague, in the government of the Roman empire, of his brother Valentinian, in 364. A zealous Arian, he violently persecuted the orthodox bishops. He forced the Goths to make peace, but imprudently suffered them to settle in Thrace, where they were joined by great numbers of barbarians, and the war being renewed, he marched against them, but was totally defeated near Adrianople. His soldiers carried him to his tent, which the barbarians set on fire, the emperor perishing in the flames.

Valentia, (*va-len'she-a*), an island in the Atlantic, near the S.W. coast of Ireland, S. of Dingle Bay. This place was the starting-point, on the European side, of the first and second Atlantic cables. *Ext.* 6 m. long, with a breadth of 2; Lat. 51° 55' 8" N., Lon. 10° 19' W.

Valentine, *n.* A sweetheart or choice made on St. Valentine's day; as, "And birds had drawn their *valentines*." (Sir H. Wotton.)—A letter, or poetical effusion, replete with compliments or amorous expressions, sent by one young person to another on St. Valentine's day, or the 14th of February, a day sacred to St. Valentine, who, according to the legend, was put to death at Rome under the Emperor Claudius. The custom of sending valentines on this day is very ancient, but there is no circumstance, so far as is known, in the life of the saint, from which it could have originated. There is, however, a very old notion that "birds choose their mates, and couple on this day."

Valentinian, (*val-en-tin'yan*.) The name of three Roman emperors:—**VALENTINIAN** (FLAVIUS) I., elder brother of Valens, and son of Count Gratian, was born in Pannonia 321, and succeeded after the death of Jovian, 364. He gave the Eastern empire to his brother, and having defeated the Alemanni and the Quadi, died in a fit of passion, 375.—**VALENTINIAN** (FLAVIUS) II., son and successor of the preceding, was proclaimed emperor by the troops, and his brother, Gratian, at once ceded Italy to him. The latter, shortly after, was vanquished by Maximus, and Valentinian would also have lost his throne but for the timely help of Theodosius, Emperor of the East, who put Maximus to death, and left Valentinian master of the whole Western empire. He was strangled by order of his rebellious general, Arbogastes, 392.—**VALENTINIAN** (PLACIDUS) III., became emperor at the age of six, in 425, under the regency of his mother, Placidia. He was assassinated in 455.

Valentinian, *n.* (*Ecol. Hist.*) A sect of the 2d century, being a branch of the Gnostics:—so named from Valentius, their founder, a native of Egypt, who was excommunicated in 140, and b. 160, after boldly devoting himself to the spread of his tenets in Syria.

Valenza, (*va-lain'tza*), a town of Italy, in Piedmont, 7 m. from Alessandria, on an eminence near the Po. It is inclosed by walls, and entered by four gates. *Pop.* 8,712.

Valerate, **Valer'ianate**, *n.* (*Chem.*) A salt formed by the combination of valeric acid with a base.

Valer'ian, *n.* [From Lat. *valere*, to be strong, powerful; in allusion to its medicinal virtues.] (*Bot.*) See **VALERIANA**.

Fig. 2561. — A VALENCIAN LABORER. (After Doré.)

Vale'rian, (VALERIANUS PUBLIUS LUCINIUS,) a Roman emperor, B. abt. 190, was proclaimed after the death of Gallus, 253. He was defeated in the East by Sapor, king of Persia, and is supposed to have been flayed alive. 260.

Valeria'na, *n.* (Bot.) The Valerian, a genus of the order Valerianaceæ. The root of *V. officinalis*, a plant common in ditches and damp places throughout Europe, and sparingly so in N. America (Fig. 2563), is the officinal *V.* of the pharmacopœias. It is much employed as a nervous excitant and antispasmodic. There are three officinal preparations, viz., the *Infusion*, the *Tincture*, and the *Ammoniated Tincture*. In large doses, *V.* produces considerable disturbance of the nervous system, as headache, vertigo, and even temporary blindness. In average doses—as, for example, in from one to two ounces of the infusion, and from half a drachm to two drachms of either of the tinctures—it is a very efficacious remedy in those severe cases of hysteria which closely simulate epilepsy, and in chorea. As some of the salts of valerianic acid—viz., the valerianates of soda, zinc, ammonia, iron, and quinine—act similarly to, and with more certainty than the above-named preparations, we may infer that the therapeutic action of the remedy is solely due to the acid; and as the infusion and tinctures are by no means agreeable medicines, they will probably soon be entirely replaced by the valerianates.

Fig. 2563.

VALERIAN, (*Valeriana officinalis*.)

Valeriana'ceæ, *n. pl.* (Bot.) The Valerian family, an order of plants, alliance Campanales. DIAG. A one-celled ovary, an imbricated corolla, free anthers, pendulous ovule, and no albumen. They are herbs with opposite exstipulate leaves and cymose flowers. They are chiefly remarkable for the presence of a strong-scented volatile oil, which renders them medicinally active as stimulants, antispasmodics, and tonics. Some are highly esteemed in the East as perfumes.

Valeriana'ella, *n.* (Bot.) Same as FEDIA, *q. v.*

Valerian'ic, or **Valerie Acid**, *n.* (Chem.) An acid which constitutes the leading ingredient of the volatile oil obtained by distilling valerian root with water. It may also be artificially formed by the action of a mixture of quicklime and caustic potassa on the oil of potato spirit, the *fusel oil* of the Germans, the *hydrated oxide of amyl* of chemists, or by distilling fusel oil with a mixture of dilute sulphuric acid and bichromate of potash. It is an oily, colorless liquid, boiling at 347° F. (175° C.), smelling intensely of valerian; it has a sour, pungent, and nauseous taste, leaving a sense of sweetness and a white spot upon the tongue. Some of its salts, or *valerianates*, are used medicinally. See VALERIANA.

Valerius Max'imus, (*va-le'ri-us*), a Roman historian, who was in Asia with Sextus Pompeius, A.D. 14, excepting which nothing is known of him. His work contains many valuable anecdotes and examples of moral excellence, and was one of the earliest printed after the revival of letters.

Vale'rius Publico'la, one of the founders of the Roman republic, 6th century B.C.

Valery, (*St.*) (*val'e-re*), a seaport of France, dept. of the Somme, near the mouth of the river Somme, 36 m. from Amiens. It has docks for building small vessels. Pop. 4,160.

Valer-en-Caux, (*väl'air-ang-kō*), (*St.*) a town of France, dept. of Seine-Inférieure, on the shores of the English Channel, 20 m. from Dieppe; pop. 6,211.

Valet, (*väl'et*, or *väl'ä*), *n.* [From O. Fr. *varlet*.] A servant who attends on a gentleman's person; a servant in waiting.

(*Man.*) An iron-pointed goad.

Valet-de-chambre, (*-de-shöm'br.*) [Fr.] A gentleman's attendant in the dressing-room.

Valet'ta, or **LA VALETTE**, a seaport-town and fortress of the island of Malta, and the cap. of the island, on the N.E. side of which, in lat. 35° 53', lon. 14° 31', it is situated. It occupies a tongue of land, which runs out in a N.E. direction, is 3,200 yards long, and generally about 1,200 yards across, except at the extremity, where it narrows considerably, and forms the *Point of St. Elmo*, on which are a powerful fort and a light-house. From this Point to its landward end, the neck of land, which is well named the *Hog's Back*, rises gradually; and there is a downward slope from the central ridge to the Great Harbor on the right, and to the *Marsa-Musceit*, or quarantine harbor, on the left. The town and harbors are defended by a series of fortifications of great strength. They are mostly hewn out of the solid rock,

and, being mounted with the most powerful artillery, are considered impregnable. *V.* is the centre of the commerce of the island. Pop. 65,000. See MALTA.

Valette, JEAN PARITOT DE LA, Grand Master of the knights of St. John, B. 1494, D. 1568, celebrated for his gallant defence of Malta against a powerful fleet of the Turks. See MALTA.

Valetudina'rian, **Valetu'dinary**, *a.* [Fr. *vale-tudinaire*, from Lat. *valeudo*.] Sickly; weak; infirm; immoderately careful of health; morbidly earnest in seeking to recover health.

n. A person of weak, infirm, or sickly constitution; an invalid who is morbidly seeking to recover health.

Valetudina'rianism, *n.* Condition of a valetudinarian; feeble health; infirmity.

Valguarne'ra, a town of Italy, in Sicily, 50 m. from Noto; pop. 6,142.

Valhal'la, or **Walhal'la**, *n.* [Norse.] (*Scand. Myth.*) The palace of immortality inhabited by the souls of heroes killed in battle.—Hence, a magnificent unwarlike temple, erected by Ludwig I., King of Bavaria, near Regensburg, and adorned with statues of Germany's greatest men, is called by this name.

Valiant, (*väl'yant*), *a.* [Fr. *vaillant*, from Lat. *valeo*, to be strong.] Heroic; brave; courageous; intrepid in danger; as, a *valiant* soldier.—Puisant; performed with valor; bravely or intrepidly conducted; as, a *valiant* action.

Valiantly, *adv.* In a valiant manner; heroically; bravely; courageously; stoutly; vigorously.

Valid, *a.* [Fr. *valide*; Lat. *validus*, from Lat. *valeo*.] Having sufficiency, cogency, force, or strength; founded in truth or substance; that can be justified, defended, or sustained; sound; just; good; not weak or defective; as, a *valid* plea, a *valid* objection.

(*Law*.) Having legal strength, force, or efficacy; supportable by law or equity; executed with the proper formalities; that cannot be justly or rightfully overthrown or set aside; as, a *valid* contract, or any other legal instrument.

Valida'tion, *n.* Act of enduring with validity. (*R.*)

Valid'ity, **Validness**, *n.* [Fr. *validité*.] State or quality of being valid; having strength, force, or power to convince; soundness; justness; efficacy; as, the *validity* of an argument.

(*Law*.) That quality of a thing which renders it maintainable in law or equity; as, the *validity* of a title to an estate.

Validly, *adv.* In a valid manner; in such a degree as to consolidate or to convince.

Val'inch, *n.* [From Fr. *avaler*, to drain.] A siphon for drawing liquors from a cask through the bung-hole.

Valise, (*va-leez'*), *n.* [Fr.] A portmanteau; a travelling bag or knapsack, usually of leather.

Valki, or **WALKI**, (*val'ke*), a town of European Russia, on an affluent of the Donetz, 26 m. from Kharkoff; pop. 10,000.

Val'kyr, **Valkyr'ia**. [O. Norse, *vale*, heaps of slain, and *kiöra*, to select.] (*Scand. Myth.*) One of the maidens of Odin, the god of war, dwelling with the Æsir in Valhalla, and who conducted to the home of the gods the souls of heroes slain in battle.

Valladolid, (*val-ya-do-lead'*), a city of Spain, and cap. of a prov. of the same name, is situated on the left bank of the Esqueva, 100 m. from Madrid. The city has many fine buildings, and was the residence of the court before its removal to Madrid at the end of the 16th century. It has a university, the best in Spain; eight colleges, an academy of arts, and a museum of paintings and sculpture, collected from the lately suppressed religious houses. *Manuf.* Cotton, silk, and woollen stuffs, hats, linen yarn, jewelry, paper, leather, etc. The city is the residence of a captain-general, and the see of a suffragan to that of Toledo. It was here that Columbus died in 1506. Pop. (1897) 70,150.

Valladolid', in Mexico, a city of Michoacan, 115 m. W. N. W. of the City of Mexico; Lat. 19° 42' N., Lon. 100° 52' W. Pop. (1897) 26,650.

—A city of Yucatan, 90 miles E.S.E. of Merida; pop. abt. 17,000.

Valla'ta, a town of S. Italy, 12 m. from Ariano; pop. 5,092.

Valla'tion, *n.* [From Lat. *vallus*, a palisade.] A rampart, fortified work, or intrenchment.

Vallecito, (*val-ya-che'to*), in California, a village of Calaveras co., 10 m. N.W. of Sonora.

Vallejo (*val-lä'ho*), in California, a city and township of Solano county, 28 miles N.N.E. of San Francisco. Pop. (1897) 7,100.

—A former township of Sonoma co.

Vallengin, (*val'lain-zha*), a town of Switzerland, in the Val de Rug, 2 m. from Neuchâtel; pop. 6,747.

Valles, (*val'yés*), in Mexico, a town of San Luis Potosi, 135 m. S.E. of San Luis Potosi city; pop. abt. 3,500.

Vallet, (*val'lai*), a town of France, dept. of Loire Inférieure, 15 m. from Nantes; pop. 7,000.

Val'ley, *n.*; *pl.* VALLEYS (sometimes inelegantly written *vallies*). [Fr. *vallée*, from Lat. *vallis*.] Generally, a depression in mountain districts; but the name is also applied to the channel by which any stream or river is conveyed along a plain country to the sea. In the former case they are not unfrequently characterized by some peculiar features, especially in the upper regions of high mountains, where the ice which partially occupies them often works its way into the plains below before melting. (See GLACIER.) In the latter case, the title *valley* belongs to large and wide plains, including not merely the present water-current, but all that tract of alluvial matter which has in former times been deposited by the stream. Besides the valleys traversed by rivers, and therefore lower at one end than at the other,

there are many into which no water runs, while some which are quite enclosed, allow no water that may enter them to escape, except by evaporation. In such valleys there are often lakes, some being salt lakes, the remains of sea-water once contained in them. Geologists are very much divided as to the origin of valleys. Some hold that they are the result of the operation of the internal agency which has, at different periods, so broken the crust of the earth and changed its surface; while others maintain that various agents now operating more or less favorably in disintegrating and removing the solid materials of the exposed portion of the surface of the earth, produced the inequalities that now exist. There can be no doubt that all these have been active, and that the special advocacy of individual agencies as being the sole causations of these phenomena, is a source of error, and the cause of idle controversy.

(*Arch.*) The internal angle formed by the meeting of the sides of a roof when there is more than one ridge.

Valley, in Arkansas, a township of Madison co.—In Illinois, a post-township of Stark co., abt. 24 m. N.W. of Peoria.—In Iowa, a township of Page co.—In Kansas, a township of Linn co.—A township of Miami co.—In Nebraska, a cent. co.; area, 576 sq. m. Cap. Ord. Pop. (1897) 8,050.

Valley, in Pennsylvania, a township of Armstrong county.—A township of Chester county, 40 miles west of Philadelphia.—A township of Montour co.

Valley Falls, in Rhode Island, a post-village of Providence co., 7 m. N.E. of Providence.

Valley Forge, in Pennsylvania, a post-village of Chester co., 6 m. W. of Norristown. *V. F.* was the winter-quarters of the Revolutionary Army under Washington, during 1777-1778, and where they suffered dreadful hardships from exposure.

Vallievo, (*val-le'vo*), a town of Servia, 46 m. from Belgrade; pop. 5,200.

Vallisneria, *n.* (Bot.) A genus of plants, order Hydrocharidaceæ, remarkable on account of the very curious manner in which the process of fertilization is effected. The best-known species, *V. spiralis*, found wild both in Europe and the U. States, is a perennial herb, bearing a tuft of thin, narrow, green, grass-like leaves (Fig. 2564). The two sexes are borne on separate plants. The male flowers are extremely minute and sessile, but when mature they become detached, and rise

Fig. 2564. — VALLISNERIA SPIRALIS.

a, female plant; b, male plant.

to the surface of the water. The female flowers, on the other hand, are borne singly at the end of a very long slender spirally-twisted stalk, which uncoils more or less according to the depth of the water, so as to allow the flower to float upon the surface, where it expands and is fertilized by the floating pollen, after which the spiral stalk coils up again and conveys the flower to the bottom of the water. The leaves of the *Vallisneria* form an exceedingly beautiful object under the microscope, the extreme tenuity and transparency of their cellular tissue allowing the observer to watch the movement of the fluid contents of the cells.

Valls, (*vals*), a town of Spain, standing in a plain watered by the Francoli, 8 m. from Tarragona. *Manuf.* Cotton and woollen yarns.

Val'lum, *n.* [Lat., from *vallus*.] (*Archæol.*) The name given to the wall or fortified intrenchment of a Roman camp.

Valmy, (*val'me*), a small town of France, dept. of the Marne, 20 m. N.E. of Châlons. Here, Sept. 20, 1792, the Prussians under the Duke of Brunswick were defeated by the French under Kellermann, who received the title of Duke of Valmy.

Valognes, (*val'lonz*), in France, a town of the dept. of Manche, on the river Merderet, 10 m. from Cherbourg. *Manuf.* Gloves, lace, and hats. Pop. 7,040.

Valois, (*väl'vaw*), a French county bestowed by Philip III. of France on his 2d son Charles, in 1285, fell to Louis, Duke d'Orleans, second son of Charles V. of France, in 1392. On the accession to the throne of the Duke d'Orleans, under the title of Louis XII., in 1498, it was reunited to the royal domains. The title of Duke de Valois was borne by the Orleans family till 1790. The House of Valois reigned in France from 1328 till 1589.

Valonia, *n.* The cup of the acorn of *Quercus Ægilops*, brought from the Levant and the Morea, and extensively used in the tanning of leather.

Val'or, *n.* [Fr. *valeur*, from L. Lat. *valor*.] Such strength of mind as enables a man to encounter peril with firmness; warlike courage; intrepidity; bravery; prowess.

Valo'rem, (*Ad.*) see AD VALOREM.

Val'orous, *a.* [Fr. *valeureux*.] Having or exhibiting valor or prowess; courageous; intrepid; stout; brave.

Valparaiso, (*val-pa-ri'zo*), ("Vale of Paradise,") a city, and principal port of Chili, cap. of a province of the same name, on Valparaiso Bay, in the Pacific, 96 m. W.N.W.

of Santiago; Lat. $33^{\circ} 1' 56''$ S., Lon. $71^{\circ} 41' 45''$ W. The bay is semi-circular in form, large and commodious, but exposed on the N. The town is picturesquely situated on the slope of a range of hills, which encircles the bay, is poorly built, and with few handsome buildings. Of the latter the principal are the Custom-House and Exchange, with several large warehouses. It is particularly noted for its rapid growth, since Chili became an independent state, and it has an extensive commerce, being one of the principal places of rendezvous for ships on the Pacific sea-board. It was bombarded by the Spanish fleet, March 31, 1866, and the value of buildings and other property destroyed was estimated at from \$9,000,000 to \$20,000,000. Pop. (1897) 109,520.

Valparaiso, in Indiana, a city, cap. of Porter co., 44 m. S.E. of Chicago. Pop. (1897) 5,650.

Valtellina (*val-te-len'*), *The*. [It. *Valtellina*.] In Italy, formerly a circle of the Austrian government of Milan, now included in the district of Gallarate, province of Milan; area, 1,258 sq. m. Cap. Sondrio. Pop. (1897) 98,450.

Valuable, *a*. [Fr., from O. Fr. *value*.] Possessing value or worth; having some good qualities which are useful and estimable; precious; costly; as, a *valuable* horse, a *valuable* watch.—Worthy; deserving of regard or esteem; as, a *valuable* assistant.

Valuable consideration, a proper equivalent for a thing purchased, as money.

—*n. pl.* That which is valuable or precious; as, he placed his *valuables* in the safe for security.

Valuation, *n*. [From *value*; Fr. *évaluation*.] Act of valuing, or of estimating the value or worth; act of setting a price; appraisement; as, the *valuation* of an estate.—Estimated worth; value set upon a thing; as, the goods sold slightly in excess of the *valuation*.

Value, *n*. [Lat. *valere*, to be worth.] In common parlance, price; worth; as, the *value* of the horse is fifty dollars.—Usefulness; utility; as, his friendship is of great *value*.—Import; significance; as, the *value* of a phrase.—Estimated worth; as, the house was sold below its *value*.

(*Polit. Econ.*) Strictly speaking, *V.* is a ratio; for the idea of *V.* cannot arise until one thing is confronted with another with which it is compared. Thus, the so-called *V.* of wheat is really an expression of the ratio existing between wheat and money. This being true, *V.* cannot be considered a property of matter, much less an intrinsic or inherent property, since it depends upon the vicissitudes of production and trade; nor can it exist in a single object, two compared objects being required for its expression; and the term *standard of V.*, although much used in an incorrect sense, is as absurd as would be the phrase *standard of ratio*. See MONETARY STANDARDS; MONEY; Bimetallism, &c.

—*v. a.* [Fr. *évaluer*; Sp. *valuar*.] To rate at a certain price; to set a price to; to estimate the worth of; to appraise; as, property *valued* at thirty thousand dollars.—To rate or esteem highly; to appreciate; to esteem; to consider with respect to importance or moral obligation; as, I *value* his friendship highly.

Valueless, *a*. Being of, or possessing, no worth or value.

Valuer, *n*. One who values or sets a price on; an appraiser; also, one who holds in regard or esteem.

Valvate, *a*. [Fr. *valvé*, from Lat. *valvatus*.] Pertaining or relating to a valve; resembling or serving as a valve; consisting of, or opening by, a valve or valves.

(*Bot.*) Denoting parts which are united by the margins only, as the sepals of rhamnaceæ, or the valves of a capsule.

Valve, *n*. [Fr., from Lat. *valvæ*, folding-doors, from *valvo*, to turn round or about.] One of the leaves of a folding-door; plurally, a folding-door.—Anything that opens over the mouth of a vessel; especially, in hydraulics, a lid contrived to open one way, to admit a fluid into a tube, but which shuts when pressed from the other, to prevent its return. Among the many varieties of valves employed in mechanics may be mentioned the *slide* or *sluice-valve*, where the orifice is opened by drawing up a plate; the *flap-valve*, which opens and shuts like a door; the *pot-lid valve*, where the orifice is closed by shutting down upon it a disc of metal; the *ball-valve*, where the orifice is closed by a ball; and the *throttle-valve*, where a disc of metal turning on a spindle passing through its edge may be made to stand across a pipe, and so close the opening.

(*Anat.*) A kind of membrane which opens in certain vessels to admit the blood, and shuts to prevent its regress. See CIRCULATION OF THE BLOOD, and Fig. 201.

(*Conch.*) One of the divisions in bivalve and multivalve shells.

(*Bot.*) One of the pieces into which the fruit of a plant naturally separates when it bursts. The name is also applied to similar parts in any other organ, as the anther.

Valve-cage, *n*. (*Mach.*) A perforated chamber placed over a valve to hold it in place and allow the passage of a fluid.

Valve-gear, **Valve-motion**, (*-mō'shun*), *n*. (*Mach.*) See STEAM-ENGINE.

Valvular, *a*. Pertaining to or containing valves.

Valvule, (*valv'yūl*), *n*. A little valve.

Vamoose, *v. a.* [From Sp. *vamos*, let us go.] To go off or take leave suddenly; to depart in haste. (*Colloq.*)

Vamp, *n*. [Probably corrupted from Fr. *avant*, before; *avant-pied*, the fore part of the foot.] The fore or upper leather of a boot or shoe.

—*v. a.* To furnish, as a shoe, with new upper leather; hence, to piece or patch, as an old thing, with a new part; to repair; to mend;—sometimes preceding *up*; as, "This opinion *was* *ramped up* by Cardon." *Bentley*.

Vamp'er, *n*. One who pieces an old thing with something new.

Vam'pire, Vam'pyre, *n*. [Ger. *vampyr*, a word of Servian origin.] Originally, a dead person, formerly believed in various nations of Europe to return in body and soul, and wander about the earth, sucking the blood of persons asleep.—Hence, one who lives by blackmailing, or preying upon others; a usurer; an extortioner.

(*Zool.*) The *Phyllostoma spectrum* and allied species, a blood-sucking bat, native of S. America, of a reddish-brown color, and as large as a magpie. It has two great projections, approximate upper incisors, and similar lancet-shaped superior canines, all of which are very sharp-pointed, and arranged to make a triple puncture like that of a leech. Their whole structure seems to indicate that blood is the sole food. In some parts of Brazil, the rearing of calves is impossible, on account of these bats, and there are districts, chiefly those in which limestone rocks prevail, with numerous caves, in which cattle cannot be profitably kept. Vampires sometimes attack men, when sleeping in the open air; but the stories of their fanning their victims with their wings while they suck their blood, are fabulous. See BAT.—Also the name of a fish of the family *Raiidae*, the *Cephaloptera vampirus*, which attains the width of 16 or 18 feet, and 10 feet or more in length, and weighs several tons.

Vampirism, Vampyrism, (*-izm*), *n*. Practice of blood-sucking; credence given to the existence and action of vampires.—Hence, figuratively, the practice of blackmailing or extortion.

Van, *n*. [A corruption of Fr. *avant*—Lat. *ab*, and *ante*.] The front of an army or of a fleet.

—[From Lat. *vannus*, a winnowing-fan.] Anything spread wide, and moved so as to produce a current of air; especially, a fan for winnowing grain.—In England, a large, light, covered carriage for the transportation of goods.

—*v. a.* To fan, as grain; to winnow. (*R.*)

Van, in Turkish Armenia, a fortified city on a lake of same name, 140 m. S.E. of Erzeroum. It is well built, the houses being composed of stone, or tile, and the streets spacious. A considerable quantity of cotton goods are manufactured here for the Persian market. Estimated pop. 15,000.

Vanad'ic Acid, *n*. (*Chem.*) See VANADIUM.

Vanadium, *n*. (*Chem.*) A rare metal whose chief ore is the *vanadate of lead*, which is found in Mexico and Chili. It is a white metal, forming a blue solution with nitric acid, but not dissolving readily either in sulphuric or hydrochloric acids. Could it be found in any quantity, it would be extremely valuable in the arts as a pigment in china-painting, and as a material for making an almost indelible ink in conjunction with tannogallic acids. It forms three oxides, VO , VO_2 , and VO_3 . The second dissolves in acids, forming crystallizable salts which have a blue color; the third, or *vanadic acid*, has acid properties. It has a yellow color, and fuses at a red heat; as it cools, it re-solidifies with evolution of light. With the alkalis it forms acid neutral soluble salts. It also combines with the other oxides of *V.* to form several compounds of a green or purple color. It also has basic properties, forming crystallizable salts with most of the acids. The other compounds of *V.* are unimportant. In many of its characters it appears to be closely allied with chromium and its compounds. *Symbol V.*

Van Buren, MARTIN, the 8th President of the United States, b. at Kinderhook, Columbia co., N. Y. Educated for the bar, he was elected to the senate of the State of New York in 1812. In 1815 he became attorney-general of that State, and was again a member of the senate in 1816, the two offices being held together. In 1821, he took his seat in the U. S. Senate, where he supported democratic measures. He was re-elected in 1827, but resigned that office on being chosen governor of New York. In March, 1829, he became Secretary of State in the administration of President Jackson, but resigned on April 7, 1831. In 1832 he was elected Vice-President, and, in 1837, he succeeded General Jackson in the presidency, being elected by a majority of 24 votes over his rivals, Clay, Webster, and Harrison. On beginning the duties of his office, he found the country involved in a commercial crisis of unprecedented severity, which led to the universal suspension of specie payments by the banks. Imposing public meetings attributing the disaster to the policy of the government, *V. B.* found himself obliged to immediately summon Congress to an extraordinary session, and, along with other measures, proposed an entire separation of national finances from the banks of the Union, a measure which passed the Senate, but was laid on the table in the other house. The plan of an independent Treasury, again recommended in the President's annual message in Dec., was again rejected by the house of representatives after having been passed by the Senate. This measure, however, by which the administration of *V. B.* is especially distinguished, was finally passed by both houses of Congress in 1840. In that year *V. B.* had to yield his place to General Harrison the Whig candidate; and in 1844, when he again stood for the presidency, he was defeated by Polk. The result of this vote divided the Democrats into two parties, one of which, at a convention held at Utica, unanimously declared for *V. B.* as president in 1848; but his

Fig. 2565.—VAN BUREN.

election was prevented by the military renown of Gen. Taylor, who left both *V. B.* and Cass with minorities. In 1852 and 1856, he gave his vote to Gen. Pierce, and to Mr. Buchanan, the presidential candidates of the Democratic party; and on the outbreak of the civil war, he warmly declared himself in favor of maintaining the Republic in its integrity. *D.* 1862. From the very peculiar circumstances in which his administration was involved, the public career of this statesman has been the subject of much partisan criticism, but all parties have borne testimony to his uncommon personal qualities, and conceded to him penetration, quickness of apprehension, and benevolence of disposition. *V. B.* left 4 sons, 2 of whom have distinguished themselves;—the first, *Abraham*, an officer in the U. S. army, by his gallant conduct during the Florida war; and the second, *John*, as a prominent member of the bar of the city of New York. *B.* 1810, and was elected in 1845 Attorney-General of the State of New York; he died in 1866, upon his passage homeward from a tour in Europe.

Van Buren, in Arkansas, a N. central co.; area, 998 sq. m. It is drained by Little Red river. *Surface*, undulating; *soil*, fertile. Cap. Clinton. Pop. (1897) 9,350. A post-village and township, cap. of Crawford co., 160 m. W.N.W. of Little Rock.

Van Buren, in Indiana, a township of Brown county.—A township of Clay county.—A township of Daviess county.—A township of Fountain county.—A township of Grant county.—A township of Kosciusko county.—A township of Lagrange county.—A township of Madison county.—A township of Monroe county.—A township of Pulaski county.—A township of Shelby county.

Van Buren, in Iowa, a S.E. county, bordering on Missouri; area, 468 square miles. *Rivers*, Des Moines and Fox; also Chequest, Indian, and Lick creeks. *Surface*, level; *soil*, fertile. *Min.* Stone-coal. Cap. Keosauqua. Pop. (1895) 16,829.—A post-township of Jackson county, 40 miles north-northeast of Davenport.—A township of Keokuk county.—A township of Lee county.—A former township of Van Buren co.

Van Buren, in Maine, a post-township of Aroostook co.

Van Buren, in Michigan, a S.W. co., bordering on Lake Michigan; area, 630 sq. m. *Rivers*, Dowagiac, Pawpaw, and the South Branch of Black river. *Surface*, level; *soil*, fertile. Cap. Pawpaw. Pop. (1894) 131,059.—A township of Wayne co.

Van Buren, in Missouri, a post-village, cap. of Carter county, 72 miles south-west of Potosi.—A township of Jackson county.—A township of Newton county.—Also a former county in Missouri, since divided into the two counties of Bates and Cass.

Van Buren, in New York, a post-township of Onondaga co., 140 miles north-west of Albany.

Van Buren, in Ohio, a township of Darke county.—A post-village and township of Hancock county, about 100 miles N.N.W. of Columbus.—A township of Montgomery county.—A township of Putnam county.—A township of Shelby co.

Van Buren, in Pennsylvania, a post-village of Washington co., 36 m. S.S.W. of Pittsburg.

Van Buren, in Tennessee, an E. central co.; area, 350 sq. m. It is drained by the Caney Fork of Cumberland River. *Surface*, mountainous; *soil*, fertile in the valleys. *Min.* Stone-coal. Cap. Spencer.

Van Buren Centre, in New York, a post-village of Onondaga co., 150 m. N.W. of Albany.

Van Buren Harbor, in New York, a village of Chataqua co., on Lake Erie, 5 m. S.W. of Dunkirk.

Vance, in Illinois, a township of Vermilion county.

Vanceburg, in Kentucky, a post-village, cap. of Lewis co., 20 m. N. of Maysville.

Vanceville, in Pennsylvania, a village of Washington co.

Vancouver Island, (*van-koo'vr*), off the coast of Canadian prov. of British Columbia, separated from the mainland by the Gulf of Georgia and Queen Charlotte's Sound; Lat. between $48^{\circ} 20'$ and 51° N., Lon. 123° and 128° W. Area, 16,000 sq. m. *Surface*, mountainous and well wooded, with numerous harbors on the W. coast, and Nootka Sound. *Climate*, healthy. *Min.* Gold, silver, lead, copper, and coal. *Chief town*, Victoria, the cap. of British Columbia. Pop. 26,400. It was discovered in 1762 by Capt. Vancouver of the British navy.

Vandalia, in Illinois, a city, cap. of Fayette co., 80 m. S.S.E. of Springfield. Pop. (1897) 2,250.

Van-courier, *n*. Same as AVANT-COURIER, *q. v.*

Van'dal, (*Hist.*) One of a Slavonic or Teutonic tribe who inhabited the banks of the Oder, and the sea-coasts of Pomerania and Arkleburg, about 250 A. D. At the beginning of the 5th century they traversed the Rhine, the Rhône, and the Pyrenees, and founded a powerful kingdom in Spain. They afterwards passed into Africa under their king Genseric, 429, and after a career of conquest on that continent, during which they had embraced Christianity, Carthage fell under their victorious arms, Oct. 9, 439. Here they commenced the formation of a powerful navy, and fitted out an expedition against Rome, which they sacked, June 15-29, 455. Having embraced the Arian heresy in 530, they carried on a cruel persecution against the members of the orthodox faith. Their rule in Africa was destroyed by Belisarius, and the entire nation had disappeared from that continent by 558.

—Hence, a person ignorant and barbarous, and hostile to the progress of the arts and literature.

Van'dal, Vandal'ie, *a*. Pertaining, or having reference to, or resembling the ancient Vandals; hence, by implication, rude; uncivilized; barbarous; ferocious.

Van'dalism (-izm), *n.* Characteristic qualities of Vandals; hence, barbarous savagery; active hostility to the arts and to literature.

Van'denburg, in *Indiana*, a S.W. co., bordering on the Ohio river; *area*, 230 sq. m. *Surface*, undulating; *soil*, fertile. *Min.* Bituminous coal. *Cap.* Evansville. *Pop.* (1897) 65,450.

Vandervelde, ADRIAN, an eminent Dutch painter, b. at Amsterdam, 1639, excelled in portraying landscapes, which he adorned with figures. He also painted historical subjects, and all his works are scarce and valuable. D. 1672.

Vandervelde, WILLEM, called *the Elder*, a celebrated painter, b. at Leyden, in 1610. He excelled in marine subjects. In the great naval fight between the Duke of York and the Dutch admiral Opdam, V. sailed between the hostile fleets in a light skiff to mark their positions and observe their operations; and in this manner he is said to have been also a spectator of the memorable three days' engagement between Monk and De Ruyter. D. 1693. — His son, Willem V., called *the Younger*, b. 1633, was himself an admirable marine-painter. D. in London, 1707.

Van Diemen's Land, the former name (now discarded) of Tasmania, a considerable island and British colony in the South Pacific Ocean, lat. between 40° 40' and 43° 40' S., and Lon. between 144° 30' and 148° 30' E., lying to the S. of, and separated from Australia by Bass's Strait, 150 m. across. *Ext.* About 180 m. long, and, at its widest points, about the same; *area*, 27,000 sq. m. *Desc.* Greatly diversified, but generally mountainous. Many fine tracts of land are found on the very borders of the sea, and the interior is almost invariably possessed of a soil admirably adapted to all the purposes of civilized man. The highest mountains are Wyld's Craig and Ben Lomond, which respectively attain an elevation of 4,400 and 5,010 feet above the level of the sea. V. D. includes many lakes, and a number of fine harbors, the best of which are the Derwent, Port Davey, Macquarie Harbor, Port Dalrymple, and Oyster Bay. In the S.E. the coasts are indented with many bays, such as Storm, Ralph, and Norfolk. It has also the Tasman and Forrester peninsulas, and Hobart-Town, with the Bruné and Maria islands, lying off this coast. *Rivers.* Of these, the Derwent, Huon, and Tamar rank in the first class. There are also the Clyde and the Isis. *Climate.* Healthy, and congenial to the European constitution. *Pro.* Barley, oats, and potatoes arrive at great perfection. The wheat is also of a superior description, and the fruits comprise the apple, currant, gooseberry, and indeed all such as are suitable to a temperate climate. The colony has been erected into an episcopal see, and there are numerous places of worship for different denominations of Christians. In connection with these there are also numerous schools. Besides these, there are several public hospitals and a lunatic asylum. The administration is vested in a governor and legislative council appointed by the crown. — This island was first discovered by Tasman, in 1633. In 1773 it was visited by Captain Furneaux, and by Captain Cook in 1777; since which period it has been visited by several navigators. In 1804 Hobart-Town (the cap.), was founded abt. 9 m. up the Derwent; and another settlement, namely, Launceston, was founded about 30 miles from the mouth of Port Dalrymple, and 100 miles in a straight line from Hobart-Town. The two settlements were long in a very bad state of defence, having but two companies of troops for the garrison and protection of both. They were consequently infested for many years by runaway convicts, known as *bushrangers*, who endangered the person and property of every one who appeared hostile to their enormities. — At the request of the colonists, the name of V. D. L. was changed to that of Tasmania in 1856. In 1825 it was made into an independent colony, and in 1853 the transportation of convicts ceased. It has about 500 m. of R. R., and a *pop.* (1897) of 149,650.

Van'dyck, or **Vandyke**, SIR ANTHONY, a Flemish painter, b. at Antwerp, 1599. He received his first instructions

portrait-painting, and to visit Italy. Accordingly, he set out for that country, where he studied the coloring of Titian with such success as to excel Rubens in his tints, and almost to become the rival of the great master whose art he imitated. In 1632, on the invitation of Charles I., (see Fig. 569,) he came to England, obtained a pension, and was knighted. He lived in splendid style, kept the best of company, and was himself a liberal patron of the arts. D. in London, 1641. Among his historical paintings, the finest, perhaps, is the *Crucifixion*.

Vandyke Brown, *n.* (*Paint.*) A pigment obtained from a kind of peat or bog-earth of a fine, deep, semi-transparent brown color. It owes its name and reputation from the supposition of its being the brown used by Vandyke in his pictures.

Van-Dyke, JOST, (*van-dik'*) in the British W. Indies, one of the Virgin Islands, 3 m. N.W. of Tortola, 3 m. long, and abt. 2 m. broad.

Vane, *n.* [A. S. *fana*; Ger. *fahne*; D. *vaan*; all in the sense of standard, flag.] Originally, a broad flag carried by a knight in the tournament. Specifically, a contrivance for showing the direction of the wind. It consists, usually, of a thin slip of wood or metal, attached to a perpendicular axis, round which it moves freely; and is so shaped that it presents always the same extremity to the point of the horizon from which the wind blows. In ships, a piece of bunting is used for the same purpose. In Europe, the custom of placing vanes on church-steeple is very old; and as they were commonly made in the figure of a cock, they thus acquired the name of *weather-cocks*. — Any flat, extended surface acted upon by wind or water; as, the *vane* of a windmill, the *vane* of a screw-propeller.

(*Zoöl.*) The thin, membranous part or web of a feather, on the side of the shaft.

Vanes'sa, *n.* (*Zoöl.*) A genus of diurnal lepidoptera, family *Nymphalidae*, in which the inferior palpi are contiguous in their whole length, terminating gradually in a point, and are much compressed.

Van Et'en, in *New York*, a post-village and township of Chemung county, 80 miles east north-east of Elmira.

Van'foss, *n.* [From Fr. *avant*, before, and *fossé*, a ditch.] (*Fortif.*) A ditch cut on the outside of the counterscarp.

Vang, *n.* (*Naut.*) A rope passing from the extremity or peak of a gaff to each of the ship's sides, for the purpose of steadying a spar.

Vanglo, *n.* (*Bot.*) The W. Indian name of *SESAMUM*, *q. v.*

Vangme, in *Arkansas*, a township of Jefferson county.

Van'guard, *n.* [Fr. *avant-garde*.] (*Mil.*) The first line of troops; that part of an army which precedes the main body on the march, as a security against surprise.

Vanikoro, or **PITT ISLAND**, (*va-ne-ko-ro*), one of the New Hebrides, Pacific Ocean, in Lat. 11° 35' S., Lon. 166° 46' E. Here, in 1788, Le Peron's was wrecked and lost.

Vanilla, *n.* [*Sp.*] (*Bot.*) A genus of plants, order *Orchidaceæ*. The species are remarkable for their fragrant odoriferous fruit, which constitutes the V., or vanilla of the shops, so much used for flavoring chocolate and in perfumery. On the continent of Europe, V. is occasionally employed as a medicinal agent in hysteria, &c. The fruits of *V. planifolia* (Fig. 1211) and *V. aromatica* are the most fragrant.

Van'ish, *v. n.* [Fr. *évanouir*; Lat. *vanesco*, to pass away.] To pass away from the place occupied and leave it void; to disappear; to pass from a visible to an invisible state; to pass beyond the limit of vision; hence, to disappear gradually; as, a ship *vanishes* from view beyond the horizon. — To pass away forever; to be annihilated or lost; as, "That spirit of religion *vanished* all at once." — *Atterbury*.

Vanishing fraction. (*Math.*) A fraction which reduces to the form $\frac{0}{0}$ for a particular value of the variable which enters it, in consequence of the existence of a common factor in both terms of the fraction, which factor becomes 0 for this particular value of the variable. (*Math. Dict.*) — **Vanishing line**. (*Persp.*) One of the lines converging to the vanishing point. — **Vanishing point**, that part of a picture to which all the imaginary lines of the perspective converge. — **Vanishing stress**. (*Elocution.*) Stress of voice upon the closing part of a syllable.

Van'ity, *n.* [Fr. *vanité*; Lat. *vanitas*.] Euphuism; nothingness; nullity; want of substance to satisfy desire; unreality; falsity. — Particularly, desire of indiscriminate admiration; inflation of mind upon slight grounds; empty pride, inspired by an overweening conceit of one's personal attractions, accomplishments, or decorations; self-conceit; ostentation; petty pride. — That which is vain; fruitless desire or endeavor; unsubstantial enjoyment; empty pleasure; idle show; vain pursuit; trifling labor productive of no good.

Van'loo, JEAN BAPTISTE, a French painter, b. at Aix, in Provence, 1684, chiefly distinguished as a portrait-painter. He was employed at Fontainebleau by the Regent, Philippe d'Orléans, was received into the French Academy of Painting, and d. 1745.

Van'loo, CHARLES ANDRÉ, a French painter, was b. at Nice, 1705, was the younger brother and a pupil of the preceding, and assisted him in the restorations on which

he was employed at the palace of Fontainebleau. After a short visit to Italy he settled in Paris, in 1729, was admitted to the Academy a few years later, became professor, painter to the king, and director of the Academy. Louis XV. made him chevalier of the order of St. Michael, and Frederick the Great attempted to entice him to Berlin, but unsuccessfully. His works are very numerous, and were at first over-praised; just as they have since been perhaps underrated. D. 1765.

Vannes, (*vau'*) in France, a seaport-town, cap. of the dept. of Morbihan, at the mouth of the river Vannes, in the Gulf of Morbihan, 310 m. W.S.W. of Paris. *Manuf.* Woollens, linens, cottons, lace, and leather; ship-building is also carried on.

Van'ning, *n.* (*Mining.*) Operation of removing the impurities from tin ore by means of a shovel.

Vanquish, (*vank'wish*), *v. a.* [Fr. *vaincre*; It. *vincere*, from Lat. *vincere*, to conquer.] To conquer; to overcome; to defeat or subdue in battle, as an enemy. — Hence, by analogy, to get the better of in any contest; to refute in argument; to put down, as an opponent in controversy.

Vanquish, *n.* A disease in sheep, in which they pine away.

Vanquishable, *a.* That may be conquered or vanquished.

Van'quisher, *n.* One who vanquishes; a victor; a conqueror.

Vanquishment, *n.* Act of vanquishing, or state of being vanquished.

Van Rensselaer, STEPHEN, an American statesman and patron of learning, known as "The Patron," b. in New York, 1769, was the 5th in descent from Kilian Van Rensselaer, the original patroon or proprietor of the Dutch colony of Rensselaerwyk, extending over the greater parts of Albany, Rensselaer, and Columbia counties. He was educated at Princeton and Harvard colleges; was elected to the State legislature in 1789, and to the State senate in 1795. As commander of the State militia, at the beginning of the war of 1812, he led the assault at Queenstown; but the refusal of his men to go out of the State having caused him to be defeated, the general resigned in disgust. At his own cost, he employed Professors Eaton and Hitchcock to make topographical surveys of a large part of New York and New England, and established at Troy an institution for the education of teachers, with free passes from every county. In 1823, he was elected to Congress, where he served several terms, exerting a powerful influence, and securing the election of John Quincy Adams as President of the U. States. D. in Albany, 1839.

Van Rensselaer, in *Ohio*, a township of Ottawa co.

Vansit'tart, in British N. America, an island between Melville Peninsula and Southampton Island; Lat. 65° 40' N., Lon. 84° W.

Van'tage, (-taj), *n.* [Fr. *avantage*.] Advantage; gain; profit; state of superiority as regards opportunity of action. — *To have at vantage*, to be in a more favorable or advantageous position or condition than. — *Vantage-ground*, the place or condition which gives one an advantage over another.

Van Wert, in *Ohio*, a W. co., bordering on Indiana; *area*, about 405 sq. m. *Rivers*, Little Auglaize, and St. Mary's. *Surface*, level; *soil*, fertile. *Cap.* Van Wert. — A city, cap. of the above county, 136 miles N.W. of Columbus. *Pop.* (1897) 6,150.

Van Zandt, in *Texas*, a N.E. central county; *area*, 600 square miles. *Rivers*, Sabine, and the head branches of the Neches. *Surface*, level; *soil*, fertile. *Cap.* Canton.

Va'por, *n.* [Lat.; Fr. *vapeur*; It. *vapore*.] (*Phys.*) When liquids and certain solids are heated, they become converted into elastic fluids or vapors, which differ from gases in this respect, that they are not under common circumstances permanently elastic, but resume the liquid or solid form when cooled down to ordinary temperatures. The most familiar instance of vapor is aqueous vapor, or STEAM, *q. v.*

Hence, generally, exhalation; a visible fluid, as fog, floating in the atmosphere; that invisible elastic fluid which rises constantly above the surface of land and water all over the world, at common temperatures. — Unreal fancy; vain imagination; something unsubstantial or transitory; as, the vapors of melancholy. — See VAPOR, in SECTION II.

(*pl.*) (*Med.*) A disease belonging to a debilitated, nervous system, in which a variety of strange images float in the brain or appear as if visible; hence, hypochondria; spleen; defection of the spirits; — rarely used at the present day.

v. n. To pass off in vapor, fumes, or as a moist floating substance; to evaporate; to steam; to be exhaled. — To bully; to brag; to boast or vaunt with a vain, ostentatious display of worth.

v. a. To emit, effuse, cast off, or scatter in fumes or steam, as a heated fluid; to send off in vapor, or as if in vapor.

Vaporabil'ity, *n.* State or quality of being vaporable.

Va'porable, *a.* Susceptible of conversion into vapor by the agency of caloric.

Vapora'tion, *n.* [Fr. from Lat. *vaporatio*.] Act or process of converting into vapor, or of passing off in vapor.

Va'por-bath, *n.* See BATH.

Vapored, (*va'purd*), *p. a.* Wet, dank, or moist with vapors. — Spleenetic; hypochondriac; depressed and peevish.

Va'porer, *n.* One who vaunts or vapors; a braggart; a boaster; a bully.

Vaporiferous, *a.* Conveying or exhaling vapor.

Fig. 2566. — VANDYCK.

from Van Balen, but afterward became the favorite pupil of Rubens, who advised him to apply himself wholly to

Van Wyck, ROBERT, jurist and politician, was born in New York city in 1850, being of Dutch descent; graduated from Columbia Law School in 1872; was defeated for the City Court bench in 1881, but elected in 1889. In 1895 he was chosen chief justice, by his associates on the bench, and in the same year was reelected for the term of six years. On Nov. 2, 1897, he was elected the first mayor of "Greater New York," on the Tammany Hall ticket, defeating Seth Low, Gen. B. F. Tracy, and Henry George, Jr., and having a plurality of 81,548 over Low, his nearest competitor.

Va'porish, *a.* Full of vapors; peevish; splenetic; hypochondriacal; as, *vaporish* humors.

Vaporization, *n.* Act of vaporizing, or state of being vaporized; artificial formation of vapor.

Va'porize, *v. a.* [Fr. *vaporiser*.] To convert into vapor by the application of heat, or by artificial means. *Vaporizing surface*, that part of the heating surface of a steam-boiler which is brought into actual contact with the water.

—*v. n.* To pass off in vapor.

Va'porous (*-ūs*), *a.* [Fr. *vaporeux*.] Full of vapors or exhalations; as, a *vaporous* mist.—Provoking wind or flatulency; as, *vaporous* food.—Vain; unreal; chimerical; proceeding from, or inspired by, the vapors: as, *vaporous* fancies.

Vapory, *a.* Vaporous; full of vapor.—Peevish; splenetic; morbidly fanciful; hypochondriacal.

Var, a frontier river of France and Italy, rises in the Alps, and falls into the Mediterranean, 5 m. N.E. of Aubibes, after a S.S.E. course of 60 m.

—A S.E. dept. of France, bordering on the Mediterranean; area, 2,820 sq. m. *Rivers*. Var, Verdon, and Argens. *Surface*, mountainous, but level along the coast. *Climate*, various according to the elevation. *Prod.* Corn, and fruits; also cork and silk, which are the principal exports. *Manuf.* Soap, paper, leather, coarse woollens, earthenware and marble articles. *Cap.* Dragnignan. *Pop.* 308,550.

Varazzo, (*-rad'zhe-o*), or VARAZZE, a town of N. Italy, 18 m. S.W. of Genoa. Ship-building is carried on. *Pop.* 8,213.

Var'ee, or **Var'eeck**, *n.* Same as KEMP, *q. v.*

Varese, (*-va-rai'sai*), a town of Lombardy, 12 m. from Como. *Manuf.* Silk, &c. *Pop.* 9,455.—A town situate near the Apennines, 14 m. from Chiavari; *pop.* 5,647.

Varennes, (*-va-rain'*), a small town of France, near Verdun, where Louis XVI., his queen, Marie Antoinette, and their two children, were arrested, on their flight from Paris, June 21, 1791.

Varennes, (*-va-renz*), in *S. Carolina*, a village and township of Anderson dist., 100 m. W.N.W. of Columbia.

Variability, **Va'riableness**, *n.* State or quality of being variable.

Va'riable, *a.* [Fr., from Lat. *variabilis*.] That may vary or alter; susceptible of change in any manner; changeable; alterable; as, *variable* winds, *variable* colors.—Liable to change; mutable; inconstant; fickle; unsteady; as, *variable* tempers or passions.

(*Bot.*) Possessing the same organs in altered form in different parts, as certain leaves.

Variable cut-off. (*Mach.*) See EXPANSION-VALVE.—*Variable exhaust*. In steam-engines, a blast-pipe with an opening capable of adjustment.

Variable quantity. (*Math.*) See VARIABLE.

Variable stars. (*Astron.*) Fixed stars of periodically varying brightness.

—*n.* (*Math.*) A quantity which is in a state of continual increase or decrease; thus, in the equation of the circle $y = \sqrt{(2ax - x^2)}$, x and y are *variables*.

Va'riably, *adv.* In a variable manner; in an inconstant or fickle manner; changeable; with alteration.

Va'riance, *n.* [Lat. *variantia*.] Act or state of being variant; any alteration or change of condition.—Difference, as of opinion; that produces dispute or controversy; disagreement; dissension; discord.

(*Law*.) A difference of statement between two material documents in a cause; as, where the plaintiff's declaration differs from a deed on which it is grounded.

At variance, at odds; in a state of disagreement, dispute, or controversy; at enmity; in dissension; as, a father and son *at variance* with each other.

Va'riant, *a.* Varying; diverse; different. (*n.*)

Va'riate, *v. a.* [From Lat. *variare*.] To vary; to change; to alter; to make diverse or different.

Variation, *n.* [Fr., from Lat. *variatio*.] Act of varying; alteration; a partial change in the form, position, degree, state, or qualities of the same thing; diversity; mutation; as, *variation* of sound, *variation* of opinions, *variation* of proportion.—Degree, amount, or rate of change, diversity, or deviation; extent to which a thing varies.

(*Gram.*) Change of termination of nouns and adjectives, constituting what is called *case*, *number*, and *gender*.

(*Mus.*) A transformation of a melody by melodic, harmonic, contrapuntal, and rhythmic changes. The subject chosen is called the *theme*; it is first simply harmonized with or without an introduction, and then repeated in a variety of different transformations, and the variations collectively with the theme constitute the piece. Occasionally, the different variations are combined by an intermediate passage; but generally each has its separate close, and the whole terminates with an extended and richly-developed variation, or a coda.

(*Math.*) Same as PERMUTATION, *q. v.*

V. of the compass. Same as DECLINATION OF THE MAGNETIC NEEDLE, *q. v.*—*V. of curvature*. (*Geom.*) The change which takes place in the curvature in passing from one point of a curve to another.—*V. of the moon*. (*Astron.*) An inequality of the moon's motion, depending on the angular distance of the moon from the sun.

—*Calculus of variations*. (*Math.*) An important branch of Modern Mathematics, by which may be resolved certain classes of questions respecting *maxima* and *minima*, the solution of which cannot be obtained by the ordinary process of the differential calculus. One of the principal objects of the calculus is to find the variations of integrals of given expressions, and the forms which the indeterminate functions involved in those integrals must have in order that the latter may possess maximum or minimum values.

Varicella, *n.* [Lat. dim. of *variola*.] (*Med.*) The CHICKEN-POX, *q. v.*

Var'ick, in *New York*, a post-township of Seneca co., 165 m. N.W. of Albany.

Var'iceole, (*-seel*), *n.* [Fr., from Lat. *varicis*, and Gr. *kēlē*, tumor.] (*Surg.*) A swelling or distention of the veins of the spermatic cord.

Var'icose, **Var'iceous**, *a.* [Lat. *varicosus*, from *varicis*, a dilated vein, from *varus*, bent.] Preternaturally enlarged, or permanently dilated; as, a *varicose* vein.

Var'iedly, (*vā'rid-le*), *a.* Diversely; differently.

Var'igate, (*vā'regāt*), *v. a.* [It. *variegare*, from Lat. *variis*, spotted, and *ago*, to do.] To diversify in external appearance; to mark or checker with various colors; as, *variegated* marble, *variegated* tulips.

Variegated leaves. (*Bot.*) Leaves irregularly spotted with white or yellow marks.—*Variegated copper-ore*. (*Min.*) Same as ERUBESCITE.

Variegation, (*-gā'shun*), *n.* Act of variegating or diversifying; also, state of presenting a diversity of colors; as, the *variegation* of tulips.

Vari'ety, *n.* [Fr. *variété*; Lat. *varietas*, from *vario*, to vary.] Quality of being various or diversified; difference from a former state; deviation or dissimilitude; intermixture of different things, or of things varying in form or color.—One thing of many which constitutes variety; or, a succession of different things, or of many and different kinds; a varied collection or assortment; one of a number of things akin to one another; as, *varieties* of trees or rocks.

(*Nat. Hist.*) A term applied to individuals of the same species, which, from the operation of different causes, as age, climate, food, locality, domestication, &c., present deviations from the specific type in size, color, form, and relative proportion of parts of the body; but have the capacity of reverting to the original specific form in successive generations, on the cessation of the influences under which the variety originated.

Va'riform, *a.* [Lat. *varius*, various, and *forma*, shape, form.] Presenting a variety of forms; multiform.

Va'riformed, *a.* Of multifarious forms.

Vari'na, in *Virginia*, a township of Henrico co.; *pop.* in 1870, 3,210.

Varinas, or **BARINAS**, (*-va-re'e-nas*), in Venezuela, a town, cap. of the prov. of Varinas, 80 m. S.E. of Merida; Lat. 7° 40' N., Lon. 70° 20' W.

Vari'ola, *n.* [Lat.; Fr. *variole*.] (*Med.*) The SMALL-POX, *q. v.*

Vari'olar, **Variol'ic**, **Variolous**, *a.* Pertaining or having reference to, or presenting depressions resembling those made by, the small-pox.

Va'riolite, *n.* [Fr., from Lat. *varius*, and Gr. *lithos*, stone.] (*Min.*) A variety of Felspar, generally of a dark-green color speckled with gray; but sometimes exhibiting white, blue, red, and other intermediate tints. The name has reference to the remarkable appearance presented by weathered surfaces of the stone, which display projecting black spots or points, each surrounded by a brown (sometimes by a white) ring, and occasionally even by a second whitish circle. It takes a beautiful polish, and is used in that state for ornamenting cabinets, for caskets, snuff-boxes, &c.

Va'rioloid, *a.* (*Med.*) Resembling small-pox; having the nature of, or belonging to, the disease termed varioloid.

—*n.* [From Lat. *variola*, small-pox, and Gr. *eidos*, form.] (*Med.*) A modified and less virulent form of small-pox.

Va'riorum, *n.* [Lat., various persons.] Pertaining, or having reference, to various persons or things; especially, in Bibliography, used adjectively, indicating a collection of annotations by different commentators; as, a *variorum* edition of the classics.

Va'rious, *a.* [Lat. *varius*.] Diverse; different; unlike each other; manifold; several; as, men of *various* names or trades.—Changeable; uncertain; unfixed; as, a word of *various* significations.—Diversified; variegated; as, a tulip of *various* colors.

Va'riously, *adv.* In different ways; varyingly.

Var'isse, *n.* An imperfection on the inside of the hind leg in horses, different from a curb, but at the same height, and frequently injuring the sale of the animal by growing to an unsightly magnitude.

Var'ius, LUCIUS, (*vair-i-us*), a Latin poet, the intimate friend of Virgil and Horace. He was patronized by Mæcenas, and his poems, epic and dramatic, were very highly esteemed. Some fragments of them are preserved. D. 19 B. C.

Va'rix, *n.*; *pl.* VARICES. [Fr. *varice*, from Lat. *varus*, bent.] (*Med.*) A permanent dilatation or swelling of a vein.

Var'let, *n.* [O. Fr. See VALET.] Anciently, a page or knight's henchman.—Hence, in modern usage, a low, mean fellow; a rascal; a scamp; as, an impudent *varlet*.

Var'minton, in *New Jersey*, a village of Monmouth co., 15 m. S.E. of Trenton.

Var'na, in European Turkey, a fortified seaport-town of Bulgaria, at the mouth of the river Varna, at the bottom of a bay of the Black Sea, 50 m. E. of Shumla; Lat. 43° 12' 2" N., Lon. 27° 56' E. It is surrounded by walls, entered by six gates, and has a large and commodious harbor. The Hungarians were here defeated by the

Turks in 1441; and in 1828 it was taken by the Russians, after a siege of three months. In 1854 it was the rendezvous of the allied French and English troops previous to their attack on the Crimea. *Pop.* 28,600.

Var'ua, in *New York*, a post-village of Tompkins co., 5 m. E. of Ithaca.

Var'nish, *n.* [Fr. and Du. *vernis*; Sp. *varniz*; L. Lat. *vernix*.] A solution of a resin in oil of turpentine, wood-naphtha, spirits of wine, or some other solvent, which on evaporating leaves the resin behind in a thin, transparent, highly-polished film. The resins most extensively employed in varnish-making are copal, mastic, dammar, sandarac, cowrie, lac, amber, and occasionally elemi and anime. The solvents used are oil of turpentine, spirits of wine, wood-spirit, methylated spirit, and, lately, the lighter portions of the coal and petroleum oils. The manufacture of varnishes is one requiring great experience; for if too much spirit be used, they crack in drying. To remedy this, oil of turpentine and linseed or poppy oil are added, to prevent too hasty evaporation; if, however, too much is added, the varnish takes too long to dry. The best varnish for photographic purposes is that made by Soehnée Frères, of Paris, the composition of which is a secret. Amber dissolved in chloroform also makes a very good photographic varnish; but it is very expensive, and unless true amber is used, it generally scales off during use. The black varnish used for backing positive photographs is made by dissolving ½ a drachm of caoutchouc in 10 ounces of coal-tar naphtha, and adding to it 4 ounces of asphaltum. The picture should be previously varnished with a clear varnish, made by dissolving 40 grains of soft copal in 1 ounce of benzol.

—That which resembles varnish, either naturally or artificially, and presents like it a glossy appearance; as, the *varnish* of certain leaves.—Gloss; fair external show or appearance; factitious covering; as, the *varnish* of conventional politeness.

—*v. a.* To coat with varnish; to cover with a liquid that gives anything a glossy surface, and protects it from the influences of air and moisture; as, to *varnish* mahogany furniture.—To overlay or cover with something that gives a fair and specious outside show or appearance; as, speech *varnished* with flattery.—To give a fair coloring or external aspect to; to give a specious or plausible appearance to in words.

Var'nisher, *n.* One whose occupation is to varnish; as, a *varnisher* of pictures.—One who glosses over or palliates; one who puts on a fair or specious outside appearance; as, a *varnisher* of unpleasant truths.

Var'nishing, *n.* Act or process of coating with varnish.—Materials employed in making varnish.

Var'ro, MARCUS TERENTIUS, the learned and voluminous Roman writer, was B. at Rome, B. C. 116. He served under Pompey against Cæsar, and upon the defeat of the former, retired from the army; and having conciliated the favor of Cæsar, he was employed in superintending the Greek and Latin libraries at Rome. Equally learned as an historian, grammarian, poet, and naturalist, he was extolled by all his contemporaries. He dedicated to Cicero a treatise on the Latin language, and he wrote a work upon agriculture, entitled, *De Re Rusticâ*, both of which are extant, with some fragments of his Menippean Satires. D. B. C. 27.

Var'try, *n.* (*Her.*) The mixture of argent and aznre together.

Varn'na. [From Sans. *vari*, to surround; hence, literally, the surrounder.] (*Hind. Myth.*) In the Vedic mythology of the ancient Hindoos, one of the *Adityas*, or offsprings of *Aditi*, the deity of space, and among these, one of the most prominent. He is often invoked together with *Mitra*, sometimes together with *Agni*, the god of fire, or with *Indra*, or other elementary deities; but frequently he is also separately praised by the poets of the Vedic hymns.

Var'sovie. The French name for Warsaw.

Va'ry, *v. a.* (*imp.* and *pp.* VARIED, (*vā'rid*). [Fr. *varier*, from Lat. *vario*, to diversify.] To make or cause to be different; to alter or change partially; to alter in form, appearance, substance, or position; to change the aspect of; as, to *vary* the nature, properties, or proportions of anything.—To transform; to change to something else; to transmute; to alternate; as, *varied* customs or practices.

—To diversify; to variegate; to make of different kinds or colors; as, *varied* inclinations, *varied* plumage.

—*v. n.* To be changeable; to alter, or be altered in any manner; to suffer a partial change.—To differ, or be different; to be unlike.—To alternate; to alter or change in succession; as, *varying* hopes and fears.—To deviate; to depart;—with *from*; as, the copy *varies from* the original.—To disagree; to be at variance, or in opposition.

Va'rysburg, in *New York*, a post-village of Wyoming co., 30 m. S.E. of Buffalo.

Va'sa. See GUSTAVUS I.

Va'sa, in *Minnesota*, a post-township of Goodhue county.

Va'sa, a seaport-town of Finland, on a bay of the Baltic, 55 m. N.E. of Christianstadt; Lat. 63° 4' 3" N., Lon. 21° 43' E. *Pop.* 3,740.

Vasarhel'ly, in Hungary, a town on the Torna, 25 m. W. of Veszprim; *pop.* 27,500.—Also, a town on Lake Hodos, 14 m. N.E. of Szegedin.

Vasarhel'y, or MAROS VASSARHELY, in Austria, a town of Transylvania, on the Maros, 8 m. from Vaja; *pop.* 11,000.

Vasa'ri, GIORGIO, an Italian painter and architect, B. at Arezzo, 1512; studied under Del Sarto and Michael Angelo. He is now remembered not for his own achievements as an artist, but for his voluminous, graphic, and delightful account of the lives and works of others. His

work is entitled, *Lives of the most excellent Painters, Sculptors, and Architects*. It was first published in 1550, and has been translated into French, German, and English. Notwithstanding the sharp attacks of criticism, and its admitted numerous errors, strange omissions, and partial views, the book holds, and must hold, an important place in the history of art, which cannot otherwise be filled.

Vas'cular, *a.* [From Lat. *vasculum*, dim. of *vas*, vase, vessel.] Pertaining to, or relating to, the vessels of animal or vegetable bodies; as, the *vascular* functions. — Consisting of full of vessels, or containing them, as an essential part of an organic structure. — Characterized by, or operating by means of, an arrangement of vessels, as arteries, veins, lacteals, and the like.

V. system. (*Bot.*) That portion of the tissue of plants which is destined for the conveyance of air. — *V. plants* are those in which the *V. system* occurs, or forms a principal feature. The air-vessels are the tracheae or spirals.

Vase, (*vāse*, *vāz*, *vawz*), *n.* [Fr.; It. *vaso*; Lat. *vas*, *vasis*, a vessel.] In the widest acceptance of the term, a vessel intended to contain fluids or other substances, and adapted for ornament or for use. It is generally used in this sense with reference to ancient art; — in connection with modern art, it is restricted to vessels of an ornamental kind. See POTTERY, PORCELAIN.

(*Arch.*) A vessel placed on a pedestal crowning a façade, and usually ornamented with sculptured representations of fruits, flowers, festoons, bassi-relievi, &c. — Also, the body of the Corinthian and composite capitals; — also called DRUM, and TAMBOUR, *q. v.*

(*Bot.*) The calyx or corolla of a plant.

Vase-shaped, (*-shāpt*), *a.* Formed in the manner of a vase or flower-pot.

Vas'sal, *n.* [Fr., from L. Lat. *vassallus*, a domestic in the household of a king or prince; W. *gwas-awl*, serving.] (*Feudal Law*.) The holder of a fief, by fealty and service, of a feudal superior or lord. — A bondman; a servant; a dependent; a subject; also, a political slave.

— *a.* Having the characteristic qualities of a vassal; servile.

Vas'salage, *n.* State of being a vassal or feudatory. — Political servitude; subjection; dependence.

Vas'salborough, in *Maine*, a post-village and township of Kennebec county, 14 miles north-east of Augusta.

Vas'sar, in *Michigan*, a post-village and twp., former cap. of Tuscola co., about 22 m. S.E. of Saginaw City.

Vassil'kov, a town of Little Russia, in the govt. of Kiev, 18 m. S.W. of Kiev city.

Vassy, (*vas'se*), a town of France, dept. of the Haute-Marne, 29 m. from Chaumont; pop. 3,478. It is celebrated in history for the massacre of the Protestants, in 1562, by order of the Duke de Guise.

Vast, *a.* (*comp.* VASTER; *superl.* VASTEST.) [Fr. *vaste*, from Lat. *vastus*.] Being of great compass or extent; having a large space or surface; as, the *vast* steppes of central Asia, the *vast* world of waters. — Very great in numbers or amount; as, *vast* multitudes of people. — Mighty; puissant; exhibiting or exercising very great force; as, *vast* labor, *vast* ideas. — Very great in scope or importance; as, a *vast* undertaking.

— *n.* A region of empty waste; an illimitable or seemingly boundless space; as, "the *vast* of heaven." *Milton*.

Vastation, *n.* [O. Fr., from Lat. *vastare*.] A laying waste; devastation; depopulation.

Vastitude, *n.* Vastness; immense extent. (*R.*)

Vastly, *adv.* Very greatly; to a vast extent or degree.

Vastness, *n.* State or quality of being vast; immensity; enormous magnitude or amount; immense extent, bulk, or importance; as, the *vastness* of space; the *vastness* of a nation's resources.

Vas'to, or VASTO D'AMMONE, in Italy, a town of the prov. of Abruzzo Citeriore, on the Adriatic, 30 m. S.E. of Chieti. *Manuf.* Silks, woollens, and earthenware. Pop. 9,900.

Vast'y, *a.* Being enormously large, or of very great extent.

Vat, *n.* [A. S. *fæt*, fat; D. and Icel. *fat*; Dan. *fad*; Ger. *fuss*.] A large vessel or cistern for holding liquors in an immature state; as, a brewer's *vat*; also, a square box or cistern in which hides are laid for steeping in tan. — In Belgium and the Netherlands, the legal liquid measure, equal to 22.01 imp. galls.

(*Mining*.) A wooden tub used to wash ores and mineral substances in.

— *v. a.* To put or place in a vat; as, to *vat* malt.

Vathi, (*va'te*), in Greece, a seaport-town, cap. of the island of Ithaca, on the S. side of the harbor; pop. 2,750. — Also, a town on the N.E. of the island of Samos; pop. 2,640.

Vat'ican, *n.* See ROME.

Thunders of the Vatican. (*Ecol.*) The papal anathemas.

Vaticination, *n.* [Lat. *vaticinatio*.] Prediction; prophecy; soothsaying; foretelling of events.

Vat'tel, EMMERICH, a celebrated Swiss writer on jurisprudence, b. at Neuchâtel, 1714; entered the service of the king of Poland, whose minister to the republic at Bern he became, and devoted the leisure left by his diplomatic duties to the composition of works which have made his name famous. After putting forth some less important works, he, in 1753, published his *Treatise on the Law of Nations; or, the Principles of Natural Law applied to the Conduct of States and Sovereigns*. This is esteemed a standard authority upon the subject of which it treats, and takes rank with Grotius and Puffendorf. D. 1767.

Vauban, (*vō'-*), SEBASTIAN LEPRESTRE DE, the greatest military engineer and tactician of France, was b. in Burgundy in 1633; and commenced his public career in the time of Mazarin. He took part in all the campaigns of Holland and Flanders, and was created marshal in 1703.

He constructed or improved an immense number of fortresses, directed as many as 53 sieges, and was present at 140 battles. He wrote 12 folio volumes on strategy. D. 1707.

Vauban's first system. (*Fortif.*) The name given to the principal of the systems of fortification invented by Vauban, the great French engineer, for the defence of towns of all sizes, which may be briefly described as follows. Irrespective of irregularities in the form of the place to be defended, a particular polygon is selected as that on which the lines of defence are to be drawn. In Fig. 2568 the angle of an octagon is taken; upon this the front of the fortification, extending from the flanked angle of one bastion to the corresponding angle of the

Fig. 2568. — VAUBAN'S FIRST SYSTEM OF FORTIFICATION.

next, as A B. These lines are dissected, and a perpendicular D C is laid down, drawn from the point of bisection towards the place, its length being proportional to the extent of the exterior side and adjacent angle of the polygon. A E G, B E H show the "lines of defence," which are drawn from the extremities of the exterior sides through these points, and upon these lines are marked the shoulders of the bastion E F. The distance between these points is laid along the continuation of each line of defence, a line being drawn to connect them. This line forms the curtain G H. The flanks of the bastions are drawn from lines extended from G H. According to this mode, the whole front of a fortification is drawn, and upon being repeated around the sides of a polygon, the works of the *enceinte* or body of the place are completed.

Vaucluse, (*vo'kloos*), in France, a S.E. dept., bordered on the W. and S. by the Rhone and Durance rivers; area, 1,370 sq. m. Surface, mountainous on the E., and level in the W.; soil, moderately fertile. Climate, healthy. *Prod.* Corn and fruits. *Manuf.* Silks, woollens, perfumery, glass-ware, and printing-types. *Cap.* Avignon. Pop. 266,091. — The name *V.* ("enclosed valley") is derived from the *Fountain of Vaucluse* (Fig. 1528), the source of the river Sorgue, in a rocky cavern, abt. 15 m. from Avignon, near which was the residence of Petrarch.

Vaud, (*vo*), a canton in the W. of Switzerland, bounded on the W. by France, on the S. by the Lake of Geneva, and on the other sides by Savoy, and the cantons Bern, Freiburg, Neuchâtel, and Geneva; area, 1,185 square miles. *Desc.* It is, in general, less mountainous than other parts of Switzerland, consisting of beautiful valleys and plains, intersected by small cultivated hills. In the N.W. it is covered with branches of the Jura, and on the S.E. with those of the Alps. The valleys and plains are appropriated to the culture of corn; the eminences and hills, to that of the vine. *Rivers.* The Upper Rhone, the Orbe, the Venoge, and the Broye. *Lakes.* Joux, and parts of Morat and Neuchâtel. *Prod.* Corn and wine, and the rearing of live-stock forms the chief occupation of the inhabitants. The best vineyards in Switzerland are in this canton. *Min.* Marble, coal, sulphur, with a few metals. Salt is produced from the springs of Bex. *Manuf.* Unimportant. *Cap.* Lausanne. Pop. 216,157.

Vandeville, (*vōd-vil*), *n.* [Fr.] A light satirical song, consisting of several couplets and a refrain or burden, generally introduced into theatrical productions; a song sung about the streets; a ballad. In the French theatre the term has been applied to a short piece, the dialogue of which is intermixed with light or comic songs set to popular airs. In this country the term has been generally applied to any light bustling one-act interlude, with or without music of any kind.

Vandois, (*vo-dwōish*), *n. sing. and pl.* (*Geog.*) An inhabitant, or the inhabitants, of the Canton of Vaud, Switzerland. See WALDENSES.

Vaudrenil, (*vo-drool*), in prov. of Quebec, a S.W. co., having N. the Lake of the Two Mountains, and S.E. the St. Lawrence; area, 330 sq. m. It is traversed by the river De L'Isle. *Cap.* Vaudrenil.

Vault, *n.* [Fr. *voûte*; It. *volta*, from Lat. *valvo*, *volutum*, to turn around.] (*Arch.*) An arched roof, so contrived that the stones,

bricks, or other materials used in its construction, sustain and keep each other in their places. Vaults are circular and elliptical. When their section rises higher than a semi-circle, they are said to be *surmounted*; when less, *surbased*.

Fig. 2569. — CYLINDRICAL VAULT.

The simplest and most ancient kind used over a rectangular area is the *cylindrical* (Fig. 2569), called also a *barrel*, and sometimes *wagon-vault*; this springs from the two opposite walls, and presents a uniform concave surface throughout its whole length. The term "cylindrical" properly implies the form of a segment of a cylinder, but it is applied to pointed vaults of the same description.

The Romans first introduced *groining* (Fig. 2570) formed by the intersection of vaults crossing each other at right angles, and some of their constructions of the kind were of very large size. In groined vaults the arches which cross each other do not always correspond in width; in such cases they sometimes spring from the same level, and consequently are of unequal heights; and sometimes the springing of the narrow vault is raised so that the tops are on the same level. — An underground apartment, generally used as a store for wine and other articles not injured by damp; a cellar; a cave; a cell; a cavern. — A repository for the dead; a tomb or crypt.

— That which forms a continued arch, or an arched roof, ceiling, or covering; as, the *vault* of heaven. — A leap, spring, or bound.

(*Man.*) The bounding turn which riders teach their horses; a curvet; — the turn or flexure in which men throw themselves on or off their horses.

— *v. n.* [It. *voltare*.] To leap; to bound; to jump; to spring; to curvet; to leap with the body bent; as, he *vaulted* over the gate. — To turn or tumble; to act the tumbler or posture-master.

Vault'ed, *a.* Covered with an arch or vault. — Arched; concave, as a roof.

(*Bot.*) Arching over; fornicate.

Vaulter, *n.* One who practises vaulting; a leaper; a tumbler.

Vaunt, *v. n.* [Fr. *vanter*; It. *vantare*, from Lat. *vanus*, vain, empty.] To talk with vain ostentation; to brag; to boast; to speak in terms of self-conceit. — To boast of; to make a vain, ostentatious display of; as, "Charity *vaunteth* not itself." — 1 Cor. xiii. 4.

— *n.* A vain, empty boast; a bit of brag; a display of ostentation springing from vanity; as, an idle *vaunt*.

Vaunter, *n.* One who vaunts or brags; a boaster; one who sounds his own trumpet; as, "Tougue-valiant hero! *vaunter* of thy might!" — *Dryden*.

Vaunt'ful, *a.* Boastful; vainly ostentatious.

Vaunt'mure, *n.* [Fr. *avant-mur*.] (*Fortif.*) A work raised in front of the main wall.

Vauquelinite, (*vōk'lin-il*), *n.* (*Min.*) The native chromate of copper and lead, composed (when pure) of 27.9 per cent. of chromic acid, 10.9 oxide of copper, and 61.2 oxide of lead. It occurs in small (generally matted) crystals, and in mammillated masses forming thin crusts, which are sometimes hollow and approaching to stactitic. The color is black (occasionally with a tinge of green or brown), and it is faintly translucent or opaque.

Vauvenargues, LUC DE CLAPIERS, MARQUIS DE, (*vōv-nahr'g*), a French moralist and elegant writer, born in Aix, Provence, 1715, author of an *Introduction to the Knowledge of the Human Spirit*, and *Mazims*. D. 1747.

Vauxhall, (*voz-haul'*), a district of London, on the S. bank of the Thames, connected with Westminster by a bridge. It was long celebrated for some public gardens, which, as a place of popular amusement, were for more than half a century the favorite resort of the fashion of London for operatic, terpsichorean, and pictorial attractions.

Vauxhall, in *New Jersey*, a village of Essex co., 7 m. W. of Newark.

Vava'o, in the *Pacific Ocean*, one of the Friendly Islands; Lat. 18° 39' S., Lon. 174° W. Pop. 5,500.

Vav'asor, VAVASOUR, VALVASOR, *n.* [Perhaps from the same root as *vassal*.] (*Feudal Law*.) A dependant on a superior lord, and who himself was a superior lord to others under him; thus a baron was a *vavasor* to a prince, who in his turn was a *vavasor* to a king.

Vazabar'ris, a river of Brazil, flows into the Atlantic; Lat. 11° 20' S., after an E. course of 300 m.

Ve'adar, *n.* The thirteenth month of the Jewish ecclesiastical year; the embolismic or intercalary month.

Veal, *n.* [From Fr. *veau*, a calf; Lat. *vitulus*.] The flesh of a calf killed for the table. — *Veal cutlet*, a collop of veal cut for frying or broiling.

Veal'town, in *New Jersey*, a village of Somerset co., 10 m. N. of Somerville.

Veaz'ie, in *Maine*, a post-township of Penobscot county.

Veelt, (*vekt*), a river of the Netherlands and Prussian Westphalia, enters the Zuyder-Zee at Genemuiden, after a N.W. course of 90 m.

— Also, an arm of the Rhine, which separates from that river at Utrecht, and enters the Zuyder-Zee at Muiden.

Vec'tis, *n.* [Lat.] A lever.

Vec'tor, *n.* [Lat., a bearer.] See RADIUS VECTOR.

Ve'das, *n. pl.* [Sansk., knowledge.] The name given to the collective sacred literature of the Brahmans. See HINDOOS (LITERATURE OF THE).

Vedau'ta, *n.* A Hindoo sect professing a philosophy

founded on the revelations contained in the Vedas. Their belief exhibits a close resemblance to QUIETISM, *q. v.*

Vedette', n. Same as VIDEITE, *q. v.*

Veendam, (vān'dam), a town of the Netherlands, 13 m. S.E. of Groningen, *pop.* 5,500.

Veer, v. a. [Fr. *vérer*.] To turn; to change course or direction, as the wind *veers* to the north.

To *veer and haul*. (*Naut.*) To vary the course or direction; — applied to the wind.

—*v. n.* To turn; to direct to a different course; to cause, as a ship, to change her course from one board to the other by turning her stern to windward.

To *veer and haul*. (*Naut.*) To haul in taut and slacken alternately. — To *veer away*, to let out by the run; as, to *veer away* the cable. — To *veer out*, to give a ship more length of cable; also, to let anything drop astern by a rope.

Veeringly, adv. In a veering or shifting manner.

Veerngum, (ve-room'gawm), in British India, a town of the presidency of Bombay, 35 m. from Ahmedabad; *pop.* 18,700.

Ve'ga, n. (*Astron.*) The bright star in the constellation Lyra.

Ve'ga, (Lope de.) See LOPE DE VEGA.

Ve'ga, (La), a town of Hayti, 78 m. N.W. of St. Domingo.

Veger, or BEJAR DE LA FRONTERA, (vā'zhair), a town of Spain, on the Barbate, 26 m. from Cadiz. *Manuf.* Woollens. *Pop.* 9,350.

Vegetable, (vĕj'e-tā-bl), n. [Fr., from *végéter*. See VEGETATE.] A member of the vegetable kingdom; a plant. See BOTANY. — In a more special and colloquial sense, one of those particular plants which are used as esculents, these forming what is called *vegetable diet*. In this sense it includes the potato, cabbage, cauliflower, pea, bean, spinach, and such like, but does not embrace fruits properly so called, as the apple, pear, grape, etc., although these are included in its more extended sense, as embracing the whole vegetable kingdom.

—*a.* Pertaining or relating to vegetables or plants; as, *vegetable qualities*, juices, etc. — Consisting of, or comprising, plants; as, the *vegetable kingdom*. — Possessing the nature or characteristics of plants; as, a *vegetable body*.

I. brimstone, the powder collected from the spore-cases of *Lycopodium clavatum* and *selago*. See LYCOPONIUM. — *I. chemistry*. See ORGANIC CHEMISTRY. — *V. earth*, soil in which decayed vegetable matter is in a much larger proportion than the primitive earths. In floriculture, vegetable earth is called *mould*; and in Agriculture the term is applied to the surface soils of hollows, which contain alluvial soil beneath, and vegetable matter, generally of a black color, on the surface. — *V. Ethiops*. See FUCUS. — *V. flannel*, a textile material largely manufactured in Germany from the *Pinus sylvestris*. A great number of persons are employed in the various processes of separating the fibre from the oil. The fibre, locally called *wold-wold*, is spun, knit, and woven into various fabrics. It is said to be highly efficacious in restoring the function of the skin. — *V. ivory*. For this, see IVORY and PHYTELEPHAS. — *V. kingdom*, the term commonly applied to one of the three primary divisions of nature. It includes all those organized beings which are called plants; for which see BOTANY. — *V. marrow*. See CUCURBITA. — *V. physiology*. See BOTANY. — *V. silk*, a cotton-like material obtained from the seed-pods of *Chorisia speciosa*. — *V. tallow*, a fatty substance obtained from *Stillingia sebifera*, *Vateria Indica*, and other plants. — *V. wax*. See WAX.

Vegetal, (vĕj'-), a. [From Lat. *vegetus*, lively.] Vegetable. (*R.*)

(*Physiol.*) Denoting the class of vital phenomena common to plants and animals; viz., digestion and nutritive assimilation, growth, absorption, secretion, excretion, circulation, respiration, generation; as contrasted from the second class of vital phenomena, viz., sensation and volition peculiar to animals. The first are called the *vegetal functions*, the second the *animal functions*; and the powers or forces on which they depend have been termed, respectively, the *vegetal life* and the *animal life*.

Vegetality, n. Vegetability.

Vegetarian, a. Pertaining or having reference to vegetarianism; as, *vegetarian diet*.

—*n.* One who theorizes that vegetables constitute the only proper food for man, and who, accordingly, lives exclusively upon them.

Vegetarianism, (-izm), n. The theory and practice of vegetarians.

Vegetate, (vĕj'e-tāt), v. a. [Fr. *vegeter*, from Lat. *vegetare*, to nourish, cherish.] To grow, as plants; to sprout; to flourish; to germinate. — Hence, in a figurative sense, to live without mental animation, action, or sensation; to do nothing but eat, sleep, and grow; as, to *vegetate* in seclusion.

Vegetation, (-tā'shun), n. [Fr.] Act or process of vegetating or growing, as plants, by means of nourishment derived from the earth, or from water and air, and received through roots and leaves; vegetable growth; as, plants unfit for *vegetation*. — Sum or body of vegetable life in general; as, luxuriant *vegetation*.

(*Med.*) A morbid production which rises as an excrescence on an organ or part, as on the valves of the heart. — Also, a fleshy granulation at the surface of a wound or ulcer.

Vegetative, a. [Fr. *végétatif*.] That vegetates, or promotes vegetation; growing, or having the power of growing, as plants. — Having the power to produce growth in plants; as, the *vegetative virtues* of soil.

(*Zoöl.*) Partaking of simple growth and enlargement of the systems of nutrition and generation, apart from the sensorial or distinctively animal functions, as in the

vegetative enlargement of the females of some inferior animals, attended with a depression of the animal powers.

Vegetive, (vĕj'-), a. Possessing vegetable life, as plants.

Veg'eto-animal, a. Characterized by the properties both of vegetable and animal matter, as vegetable gluten.

Veglia, (vāil'ya), in Austria, an island in the Adriatic, in the N.W. of the Gulf of Quarnero, 23 m. long, and 12 m. broad. *Surface*, mountainous and barren in the N. and E., elsewhere fertile. *Prod.* Wine, silks, timber, fruits, and live-stock. *Min.* Marble and salt. *Cap.* Veglia. *Pop.* 16,580.

Ve'hemence, Ve'hemeney, n. [Fr., from Lat. *vehementia*.] Quality of being vehement; great force; impulsive energy; eagerness; fervor; impetuosity; violence; as, to speak with *vehemence*. — Violent or uncontrollable passion; animated fervor; great fire or heat; as, *vehemence of temper*.

Ve'herent, a. [Fr., from Lat. *vehemens*.] Impetuous; characterized by great force or fury; mighty; acting with impetuosity; as, a *vehement torrent*, a *vehement flow of words*. — Very ardent, eager, or urgent; fervent in the extreme; unreasonable; violent; as, *vehement desire*, *vehement instigation*.

Ve'hemently, adv. In a vehement manner; urgently; forcibly; violently; with great zeal or pathos.

Vehicle, (vĕ'hī-kl), n. [Fr. *véhicule*; Lat. *vehiculum*.] That in which anything is, or may be, carried; any kind of carriage moving on land, either on wheels or runners, but more especially those on wheels. — That which is employed as the instrument of conveyance or communication; as, speech is a *vehicle of ideas*.

(*Paint.*) The liquid with which the various pigments are applied; medium.

(*Pharm.*) A substance in which medicine is administered.

Ve'hieled, a. Conveyed in, or supplied with, a vehicle.

Vehie'nar, Vehie'nary, a. Pertaining or relating to, or serving as, a vehicle.

Veh'nic Courts, n. pl. (*Hist.*) See FERMGERICHTE.

Ve'ii, (Anc. Geog.) One of the twelve cities of the Etruscan Confederation, on the river Cremera, an affluent of the Tiber. Its inhabitants, the Veientes or Veientes, are first mentioned in history as having been engaged in hostilities with Romulus. *V.* was for centuries the great rival of Rome, succumbing to the latter only after very numerous wars, and a siege, it is said, of ten years, B. C. 396. The castle, known by the name of Isola Farnese, was built on the S. side of the city in the beginning of the 11th century. Many relics of Etruscan art have been found in the ruins.

Veil, VAIL, (vāl), n. [Fr. *voile*; Lat. *velum*, a covering, from *vela*, to wrap up, to envelop.] That which conceals; a cover to conceal the face; any kind of cloth which is used for intercepting the view, and hiding something; — especially, a piece of thin cloth or silk stuff, used by females to hide their faces. — A veil is an indispensable part of the out-door dress of Eastern ladies, who live secluded from the sight of all men except their own husbands and their nearest relatives (Figs. 87 and 167.) If an Egyptian lady is surprised uncovered, she quickly draws her veil over her face, with some exclamation like, "O, my misfortune!" The custom of wearing veils is so ancient as to be lost in remoteness; its use, however, has not been prevalent at all times. Sarah, the wife of Abraham, and Rebekah and her companions at the well, do not appear to have worn them. *Gen.* xii. 14, 15; xxiv. 16.

—*A cover*; a screen; a disguise; as, to throw a *veil* over one's indiscretions.

(*Bot.*) In fungi, the horizontal membrane connecting the margin of the pileus with the stipes.

To *take the veil*, to enter a cloister and become a nun.

—*v. a.* To cover with a veil; to cast a veil over; as, a *veiled woman*. — To cover; to hide; to screen; to invest; to conceal; as, a cloud *veils* the sun, mystery *veils* a crime.

Veil'less, a. Without veil or covering; open; undisguised.

Vein, (vān), n. [Fr. *veine*, from Lat. *vena*.] (*Anat.*) A long membranous canal, which continually becomes wider, does not pulsate, and returns the blood from the arteries to the heart.

—*A streak or wave of different color*, appearing in wood, and in marble, and other stones. — *A cavity or fissure in the earth, or in other substances*; as, "prisms free from *veins*." (*Newton*). — Tendency or turn of mind; particular disposition or cast of genius; peculiar temper; strain; quality; as, a man of a satirical *vein*, a *vein of wit or humor*, he is not in the *vein* of doing business. — Current; course; train, as of ideas; as, "A *vein* of true and noble thinking." — *Swift*.

(*Bot.*) A tube, or an assemblage of tubes, through which the sap is transmitted along the leaves of plants.

(*Geol. or Mining.*) A crack, fissure, or crevice in a rock or mineral, and which may be either earthy or metallic; — in deposits of metallic ores, a *rake-vein* is perpendicular, or nearly so, while a *pipe-vein* is nearly horizontal.

—*v. a.* To mark or form with veins.

(*Mining.*) To wash or cleanse a small portion of ore in a shoal.

Vein'al, Vein'ous, a. Pertaining or relating to, or marked with, veins; veined; as, *veinous hands*.

Veined, (vānd), a. [From *vein*.] Full of veins; variegated; streaked; as, *veined malachite*. — Hence, various; multiform; diverse; as, *veined impulses*.

(*Bot.*) Having sap-vessels spreading over the surface, as a leaf.

Vein'less, a. Without veins, as a leaf.

Vein'let, n. (Bot.) A small vein subordinate to a larger one.

Vein'y, a. Full of veins; marked with veins.

Ve'la, (La), a seaport-town of Venezuela, on the Gulf of Coro; Lat. 11° 25' N., Lon. 69° 40' W.

Velasquez, DIEGO, (vā-las'keth), a Spanish general, who accompanied Columbus in his second voyage; he was engaged in the conquest of St. Domingo, and founded the city of Havana in the Island of Cuba. He sent out the expedition which discovered Yucatan and Mexico, and dispatched Cortez to subdue the latter country. D 1523.

Velasquez, DON DIEGO RODRIGUEZ DE SILVA Y, a Spanish painter, b. at Seville, 1599; he first studied under Francisco Herrera, and afterwards with Pacheco, whose daughter he married. He visited Madrid in 1622, and in 1623 was appointed court painter to Philip IV. of Spain. He visited Italy in 1629, and again in 1648, to make purchases of works of art for the king. He d. 1660. *V.* has the reputation of being the greatest of Spanish painters; he is chiefly distinguished as a portrait-painter, but he excelled also in history, landscape, and genre; like the majority of Spanish painters, he belongs to the naturalist school, — he painted life as he found it, with extraordinary force, facility, and skill. His greatest works are still at Madrid.

Ve'late, a. [Lat. *velare*, to veil.] (*Bot.*) Having a veil.

Ve'lez, (vā'laith), two rivers of Spain, one of which enters the Mediterranean from the prov. of Malaga; and the other rises in Almeria, and flows into the Segura from the prov. of Murcia.

Ve'lez, (Peñon de), a town of Morocco, prov. of Fez, on a rock near the Mediterranean, 75 m. from Tetuan; *pop.* unascertained.

Ve'lez, a town of the Republic of Colombia, 60 m. N. of Tunja; Lat. 6° 10' N., Lon. 73° 50' W. Pop. (1897) 10,200.

Ve'lez el Rubio, in Spain, a town of the prov. of Almeria, 22 m. from Lorca. *Manuf.* Woollens. *Pop.* 14,300.

Ve'lez Malaga, in Spain, a town of the prov. of Malaga, 16 m. E. of that city; *pop.* 17,600.

Velha, (vel'yah), an extensive mountain range in the E. of Brazilian Guiana, N. of the Amazons.

Velhas, (Rio das), or GUACUHY, (*ree'lo das vel'yahs*, or *gwi koo-ee'*) in Brazil, a river of Minas-Geraes, rises in the N. of the Serra Paraupeba, and flows into the São Francisco.

Veliki-Luki, (vĕ'le-ke loo'ke), in European Russia, a town of the govt. of Pskov, 130 m. S.E. of Pskov. *Manuf.* Leather. *Pop.* 4,400.

Velino (Monte), (vāi-le'no), a peak of the Apennines, 8,400 feet high. See TERNI.

Vel'ish, in European Russia, a town of the govt. of Vitebsk, on the Dwina, 47 m. N.E. of Vitebsk; pop. 7,700.

Vel'ites, n. pl. (Anc. Hist.) The light-armed infantry attached to a Roman legion. They were equipped with bows, slings, and javelins, a light wooden buckler covered with leather and a head-piece.

Velleia, (vel'lai-a), a buried city of N. Italy, 18 m. S.E. of Placentia, discovered in 1760, supposed to have been destroyed by the crumbling of a neighboring mountain about the beginning of the 4th century.

Velle'ity, n. [Fr. *vellété*, from Lat. *velle*, to be willing.] Imperfect or incomplete volition; the lowest degree of desire.

Velletri, (vel-lai'tre), (anc. Velitræ), a town of Italy, in the former States of the Church, 20 m. from Rome. The Borgian Museum, originally in the fine Borgian palace here, is now in Naples. Augustus is said to have been born here, 63 B. C.

Vel'licate, v. a. [Lat. *vellicare*, from *vellere*, to pluck.] To twitch; to pluck; to stimulate; as, a *vellicating nerve*.

—*v. n.* To twitch; to move convulsively or spasmodically, as a nerve.

Vellica'tion, n. Act of twitching, or of causing to twitch; stimulation.

(*Med.*) A local twitching or spasmodic movement of a muscular fibre.

Vellon, (vel-yōn'), n. [Sp.] Properly, a certain copper coin; — also, a money of account in Spain and Spanish-speaking countries; as, a hundred reals *vellon*; — answering to the English *sterling*.

Vel'lore, a town and fortress of British India, presidency of Madras; Lat. 12° 55' N., Lon. 79° 13' E. Pop. unascertained, but large.

Vel'lum, n. [Fr. *velin*, from Lat. *vitulinus*.] A fine kind of parchment made of calfskin. The skins are limed, shaved, washed, and stretched in proper frames, where they are scraped with the currier's fleshing-tool, and ultimately rubbed down to a proper thickness with pumice-stone.

Vel'lum-post, n. A superior quality of letter-paper.

Vel'lumy, a. Resembling, or having the properties of vellum.

Velocce, (va-lo'chā), [It., swift.] (Mus.) A term which, prefixed to a movement, indicates that it is to be performed in a rapid manner.

Velocim'eter, n. [Lat. *velox*, *velocis*, swift, and *metrum*, measure.] An apparatus for measuring the rate of speed of machinery.

Velocipede, (-lōs'e-pēd.) A carriage propelled by the feet of the rider, acting on treadles attached to levers connected with the axis by cranks, or on pins projecting from the spokes. Velocipedes were formerly made of various patterns and with several wheels. The two-wheeled *V.*, now generally called bicycle, was first made in France, and was brought to a greatly improved form by M. Michaux and Magee, of Paris (1869-1875), and by James Starley, of Coventry, England, who died in 1881. The bicycle in its original form, with a wooden frame and iron tires, and almost destitute of springs, was the reverse of agreeable as a vehicle, and gained the name of the "bonesbaker." The invention of the rubber tire first tended to make it popular, while the numerous improvements since made have brought it

into well-nigh universal use. The tricycle, or three-wheeled V., has come into little use except as a vehicle for the carriage of small parcels. Quadricycles have also been made. See BICYCLE.

Velocity, (*-lōs'i-tē*), *n.* [Fr. *vélocité*, from Lat. *velocitas* — *velox, velocis*, swift.] Speed; swiftness; celerity; rapidity; quickness of motion.

(*Dynamics*.) When a material point moves, it describes a continuous line which may be either straight or curved, and is called its *path*, and sometimes its *trajectory*. Motion which takes place along a straight line is called *rectilinear* motion; and that which takes place along a curved line *curvilinear* motion. The rate of the motion of a point is called its *velocity*. *V.* is measured by the space through which a moving body passes in a given time. The velocity of a body is *uniform* when it passes through equal spaces in equal times; and *variable*, when the spaces passed through in equal times are unequal. It is *accelerated* when the force by which a body is put into a state of motion continues to act after the motion has commenced; and *retarded*, when the moving body encounters obstacles which tend to destroy its motion. *V.* is merely a relative term; for there is nothing, as Biot remarks (*Traité de Physique*, t. iii. p. 148), which in itself is either swift or slow, any more than great or small. The *V.* of an express train appears very great, yet it is slow in comparison with the motion of a point on the earth's equator carried round by the diurnal motion; and this, in its turn, is far inferior to the *V.* of the earth in its orbit, which again is greatly exceeded by the *V.* of light. For the *V.* of falling bodies, see ACCELERATION; for the *V.* of a body moving in a curve about a centre of force, see CENTRAL FORCES. See also VELOCITY OF LIGHT.

Veluchi, (*Monnt.*) (*vai-lōō'ke*), the chief summit of Mount Eta, Greece, 7,658 feet above the sea.

Velv'tinons, *a.* [From It. *velluto*, velvet.] (*Bot.*) Having the feel of velvet; soft as velvet.

Velveret', *n.* A kind of fustian.

Velvet, *n.* [Fr. *velours*; Sp. *veludo*, from Lat. *villosus*, hairy, shaggy.] A rich kind of stuff, in which, besides the ordinary warp and weft, which are usually arranged as in twill-weaving, there is also a supplementary weft, consisting of short pieces of silk, cotton, or woollen thread doubled under the regular weft, and brought to the surface in loops which are so close together as to conceal the regular web. The loops are afterwards cut evenly, and the ends thus made constitute a covering resembling a very short fur. Of *V.* there are properly only two kinds, that with a *plain*, and that with a *tweeled*, or, as it is also called, a *Genoa* ground or back. When the material is silk, it is called *velvet*; when cotton, *velveteen*. The latter is a kind of fustian, which, under a variety of names, is largely used for men's wearing apparel.

—*v. a.* To cover with velvet; to make to resemble velvet. (*R.*)

Velvet, Velvety, *a.* Made of velvet; or, soft, smooth, and delicate like velvet; as, a velvet robe, a velvety skin.

Velveteen', *n.* [Fr. *velvantine*.] Cotton velvet. See VELVET.

Velveting, *n.* The fine shag of velvet; — also, velvet goods in general.

Vena, *n.* [Lat., a vein.] (*Anat.*) *Vena cava*. See HEART. — *Vena portæ*, the great trunk formed by the union of the veins from the abdominal organs of digestion, which trunk ramifies, after the manner of an artery, in the substance of the liver, and transmits its blood by capillaries to the hepatic veins.

Vena'do, a town of Mexico, 45 m. N. of San Luis Potosi; pop. abt. 9,000.

Venaissin, (*ven'ais-sin*), an ancient country in the S. of France, now a part of the dept. of Vaucluse, was ceded by Philippe the Bold to Pope Gregory X., in 1276; and was definitively annexed to France in 1791.

Venal, *a.* [Fr. and Sp., from Lat. *vena*.] Pertaining or having reference to, or contained in, a vein or the veins; venous; as, *venal* blood.

—[From Lat. *venalis*, pertaining to selling.] That is for sale; that is to be sold; set to sale; purchasable; mercenary; prostitute; hireable; that may be bought or obtained for money or other valuable consideration; as, a *venal* pen, a *venal* mind, *venal* services.

Venality, *n.* [Fr. *venalité*.] State or quality of being venal; state of being purchasable, hireable, or influenced by money; mercenariness; prostitution of talents, advantages, or services for money or other valuable consideration; as, the *venality* of corrupt voters.

Venally, *adv.* In a venal or mercenary manner.

Venango, in *Pennsylvania*, a N.W. co.; area, 850 sq. m. *Rivers*. The Alleghany, and also, French, Oil, Racoon, and Teonista creeks. *Surface*, diversified; soil, moderately fertile, and suitable for pasturage. *Min.* Iron, stone-coal, and limestone. It yields immense quantities of petroleum. *Cap.* Franklin. *Pop.* (1897) 49,320.—A village and township of Butler co.—A post-township of Crawford co., 12 miles N.E. of Meadville.—A township of Erie county.

Venary, *a.* [From Lat. *venari*, *venatus*, to hunt.] Belonging, or having reference, to hunting.

Venatic, **Venatical**, *a.* Used in hunting.

Venation, *n.* [From Lat. *vena*, vein.] (*Bot.*) The arrangement of veins or ribs in a leaf or other organ.

Venatorial, *a.* Pertaining or having reference to hunting; venary.

Vend, *v. a.* [Fr. *vendre*; Lat. *vendere*.] To give for sale; to sell, as wares; to transfer, as a thing and the exclusive right of possessing it, to another person for a pecuniary equivalent; as, to *vend* provisions in market. —*n.* A sale; or, the act of vending.—In England, the whole quantity of coal sent from a colliery in a year. *Simmonds*.

Vendean, (*van-dā'an*), *a.* (*Geog.*) Pertaining or having reference to the dept. of La Vendée.

—*n.* (*Geog.*) A native or inhabitant of La Vendée.

Vendee', *n.* (*Law*.) The person to whom a thing is vendid or sold; a buyer.

Vendée, (*La*), (*van-dai*), a maritime dept. in the W. of France, bounded N. by Loire-Inférieure, S. by Charente Inférieure, E. by Deux-Sèvres and Maine-et-Loire, and W. by the Atlantic; area, 2,630 sq. m. The chief rivers are the Vendée, Sèvre, Niortaise, Autise, Lay, and Vie. La Vendée is divided into three arrondissements, the capital being Napoleon-Vendée. The territory of La Vendée is divided into three parts, the names of which indicate the character of their configuration. In the west is the *Marais*, occupied by salt marshes and lakes; in the north is the *Bocage*, covered with plantations; in the south and middle is the *Plaine*, an open and fertile tract. The coast-line, 93 miles in length, presents few deep indentations, the chief being the bay of Aiguillon, which affords secure anchorage for vessels. *Pop.* 404,473. —La Vendée is famous for a royalist insurrection after the proclamation of the first republic, which spread over Lower Poitou, Anjou, Lower Maine, and Brittany. The movement was semi-religious in its character, and originated with the peasantry, who in 1793, under the lead of a wagoner named Cathelineau, overpowered a small body of the Republican troops, and were thus encouraged to undertake new enterprises. (See CATHELINEAU.) Gaston, a wig-maker, Stofflet, a game-keeper, Charette, a naval officer, and especially La Rochejaquelein, became distinguished as leaders of the insurgents (see LA ROCHEJAQUELEIN); but they were signally defeated in Dec., 1793, and hundreds of them massacred. The ordinary forms of execution proving too slow, Carrier caused the Vendean prisoners at Nantes to be drowned in masses. In the following spring, however, the war broke out again under La Rochejaquelein, Stofflet, and Charette; and the *Chouans* (q. v.), with whom the Vendéans were afterward united, appeared at the same time to the N. of the Loire, in the departments of Morbihan and Côtes-du-Nord. The convention made a peace with them in Feb., 1795, guaranteeing to them a general amnesty, freedom of religious worship, exemption from military service, and indemnification for their losses. The landing of a body of French émigrés at Quiberon in June, however, encouraged them to take up arms again. Gen. Hoche was sent against them, and succeeded, after Stofflet and Charette had been taken and shot (Feb. and March, 1796), in reducing the country to submission.

Vendemiaire, (*ving-dā-me-ahr*), *n.* See CALENDAR, § 6.

Venden, or **Wenden**, (*ven'den*), a town of Russia, in Livonia, on the Oa, 50 m. from Riga; pop. 2,500. This place contained the residence of the Grand-Master of the Teutonic order.

Vend'er, **Vend'or**, *n.* [Fr. *vendeur*.] One who vends;

a seller; one who transfers the exclusive right of possessing a thing, either his own, or that of another, as his agent.

Vend'it'a, *n.* [It., vengeance.] The practice formerly general in Corsica, and still prevailing in the remote parts of the island, of individuals taking private vengeance upon those who have shed the blood of their relatives.

Vendibility, **Vendibleness**, *n.* State of being vendible or salable.

Vend'ible, *a.* [Fr. *vendable*.] That may be sold; salable; that may be vendid; as, *vendible* merchandise.

—*n.* Something to be sold or offered for sale.

Vend'ibly, *a.* In a vendible or salable manner.

Ven'diere, in *S. Carolina*, a township of Colleton dist.

Vendition, (*-dīsh'un*), *n.* [Lat. *venditio*, from *vendere*, to sell.] Sale; act of vending or selling.

Vendôme, CÉSAR, DUKE DE, (*vin-dō-me*), a French prince, eldest son of Henry IV. and of his mistress, Gabrielle D'Estrees, b. 1594, was minister of state under Mazarin, d. 1665. — LOUIS, his eldest son, b. 1612, was viceroy of Catalonia, married a niece of Mazarin, and after her death took orders and became a cardinal, d. 1669. — LOUIS JOSEPH, son of the latter, b. 1654, was successively Duc de Penthièvre and Duc de Vendôme, a famous general in the wars of Louis XIV., required for his services by admission to the honors of a prince of the blood-royal, 1654–1712.—His brother, PHILIPPE, Prior of Vendôme, and the last of his house, d. 1727.

Vendôme, a town of France, in the dept. of Loire-et-Cher, on the Loire, 40 m. from Orléans. *Manuf.* Cloths, needles, embroideries. *Pop.* 10,082.

Vend'or, *n.* (*Law*.) A VENDER, *q. v.*

Vendue', *n.* [O. Fr.] A public sale at auction.

Veneer', *v. a.* [Ger. *furnieren*.] To lay or fix firmly on, as thin leaves of a fine or superior wood over a coarser or inferior wood, so as to give the latter the appearance of a solid mass of the former; as, to *veneer* a table with rosewood.

—*n.* A thin piece of wood of a more valuable kind laid firmly upon another of a more common sort, so that the whole mass appears to be of the more valuable sort.

Veneer'ing, *n.* The process or operation of decorating ordinary surfaces with thin slices of rare and beautiful woods, or inlaying them, in order to enhance the appearance of the whole thing.

Ven'enate, *v. a.* [From Lat. *venenum*, poison.] To envenom; to infect with poison. (*R.*)

—*a.* Envenomed; infected with poison.

Venenation, (*-nā'shun*), *adv.* Act of envenoming or poisoning.

Ven'erable, *a.* [Fr., from Lat. *venerabilis*.] Worthy of veneration or reverence; deserving of honor and respect; as, a *venerable* judge. — To be regarded with awe,

and treated with reverential respect; rendered sacred by religious associations, or being consecrated to God and his worship; as, a *venerable* cathedral.

Ven'erableness, *n.* State or quality of being venerable.

Ven'erably, *adv.* In a manner to excite veneration.

Ven'erate, *v. a.* [Fr. *vénérer*.] To regard with respect and reverence; to revere; as, to *venerate* aged parents; to *venerate* the gospels.

Venera'tion, *n.* [Fr., from Lat. *veneratio*.] Act of venerating; state of being held in the highest degree of respect and reverence; respect mingled with some degree of awe.

Ven'erator, *n.* [Lat.] One who venerates or manifests reverence.

Venereal, *a.* [Lat. *venereus*, from *Venus*, the goddess of love.] Pertaining or having reference to venery or sexual intercourse; as, *venereal* pleasure. — Proceeding from sexual intercourse; as, a *venereal* disease. — Affording a cure for, or tending to remedy, diseases arising from venery; as, *venereal* medicines. — Exciting concupiscence; aphrodisiac; as, a *venereal* philter.

V. disease. (*Med.*) A virulent distemper, to which physicians give the several names of *syphilis*, *lues venerea*, *morbus Gallicus*. This disease, under whatever name it may be called, is the result of man's vice and immorality, and is the direct penalty paid for the violation of the moral and physical laws of our nature. The most extraordinary fact connected with syphilis is, that though from the earliest age of man's existence the same causes have been in operation, there is no record of this disease till the comparatively recent epoch of the 15th century; and then, without any apparent warning, it broke out in the French camp before Naples in the year 1494, and had, by the beginning of the next century, spread nearly over the whole of Europe, astounding medical men by the novelty and virulence of its character, and alarming society by the fatal rapidity of its loathsome visitation. The popular opinion that it was imported into Europe from this continent by the Spanish soldiers who returned with Columbus from his discovery, does not rest on any solid ground, and the truth is that the history of this disease is completely hidden in doubt and obscurity.

Vener'idæ, *n. pl.* (*Zoöl.*) A family of lamellibranchiate mollusks, embracing acéphala which have the shell suborbicular or oblong, and the hinge with three diverging teeth in each valve, as in *Cytherea dione*, Fig. 364.

Ven'ery, *n.* [From Lat. *Venus*.] Sexual intercourse; coition.

Ven'ery, *n.* [Fr. *vénerie*, from Lat. *venor*, to hunt.] The sports of the chase; act or exercise of hunting; as, beasts of *venery*.

Venesection, *n.* [Lat. *vena*, and *sectio*, a cutting.] Act or operation of cutting or opening a vein for blood-letting; phlebotomy. See BLEEDING.

Venetia, (*ve-ne'sh'i-a*), a former kingdom or government of N. Italy belonging to Austria, now a part of the kingdom of Italy, divided into the provinces of Belluno, Padua, Rovigo, Treviso, Udine, Venice, Verona, and Vicenza. *Pop.* 2,340,280. See VENICE.

Venetian, (*-nē'shan*), *a.* [It. *Veneziano*.] (*Geog.*) Pertaining or relating to Venice; as, a *Venetian* gondola.

V. blind, a blind for windows, doors, &c., consisting of a series of thin slats set in a frame, and so arranged as to overlap each other when closed; while, when open, they present a succession of open spaces for the admission of light. — *V. chalk* or *talc*. (*Min.*) A kind of talc or steatite used for making the colored crayons called *pastels*; and also the cosmetic *fard*. — *V. door*, a door presenting long, narrow window-panes on each side. — *V. red*. (*Paint.*) A pigment of burnt ochre, which owes its color to the presence of an oxide of iron. It is used in both oil and water-color painting, and yields a red color alloyed with blue and yellow.

—*n.* (*Geog.*) A native or inhabitant of Venice.

Venezuela, (*ven-e-zue'e'lah*, Sp. pron. *ven-eth-wā'lah*). [It. dim. of *Venezia*.] A republic of S. America, in the N.E. portion of that continent, bounded N. by the Caribbean Sea, W. by the Republic of Colombia, E. by British Guiana, and S. by Brazil; Lat. 10° 20' to 12° 25' N., Lon. 59° 45' to 73° 17' W. Greatest length from E. to W. about 750 m.; average breadth, about 550; area, 426,712 sq. m. — *Gen. Desc.* The Venezuelan coast-line extends from the Colombian boundary, in Lon. 73° 17' W., to the S.E. point of the delta of the Orinoco, a distance of 1,584 m., of which about 150 m. are washed by the Atlantic Ocean, and the remainder by the Caribbean Sea and the Gulf of Paria. The Atlantic seaboard is very low, and is occupied by the delta of the Orinoco, whose many mouths have caused the formation of numerous islands covered with vegetation. The peninsula of Paria separates the gulf of that name from the Caribbean Sea. This land-locked gulf has bold and rocky shores, with several small harbors on the S. shore of the peninsula. These rocky shores continue as far as Barcelona, a distance of 72 m., and have, here and there, several good harbors. Next comes a low, marshy line of coast, 128 m. long, to Cape Codera, beyond which the coast range approaches the shore, and, among others, presents the important harbor of La Guayra. The coast thenceforward, as far as the Lake of Maracaibo, is again low and sandy, with much of its surface covered by swamps and lagoons. With the exception of the table-lands of the N.E., and that portion of the coast lying along the Gulf of Coro, *V.* is plentifully watered. — *Rivers*. The Orinoco, with its numerous navigable tributaries, Rio Negro, Cassiquiare, and Essequibo, with a great number of smaller streams. The principal lakes are those of Maracaibo and Valencia. — *Mountains*. *V.* has three distinct mountain systems, viz: the E. Andes, ranging

through the N. and N.W.; the Sierra de Bergantin in the N.E.; and the Sierra de Parima on its S. border. Several peaks attain an altitude of over 15,000 ft. above sea-level. — *Surface.* The face of the country presents mainly but two aspects: the extensive table-lands, which according to their elevation are named *llanos*, *mesas*, *paramos*, and *punos*, dotted here and there with peaks of considerable elevation; and the low, flat, marshy lands of the seaboard and river and lake basins, overflowed during a part of the year, but some of them, especially in the interior, abundantly fertile during the remainder. The climate, fauna, and flora of V. closely resemble those of Colombia. The country is rich in minerals, producing copper, gold, silver, tin, lead, iron, coal, salt, asphaltum, and petroleum. Little has been done to develop these deposits, except in the case of the Yuruari gold mines, the Arao copper mine, and various rock-salt and coal mines. Rich petroleum springs exist near Lake Maracaibo, and coal is abundant there and in other localities. Valuable emeralds are found on the upper Orinoco. The agricultural productions include coffee, cacao, sugar, indigo, cotton, tobacco, sago, vanilla, many kinds of fruits, dye and furniture woods, &c. The principal article of export is coffee—more than two-thirds of the whole. The wretched condition of the roads greatly restricts trade, though there has been some development of railroads—about 400 m. in all. The Roman Catholic religion prevails, but religious liberty was established in 1873, and the last convent was closed by government decree in 1874. The constitution of V. is designed on the model of that of the U. States; the president is elected for two years. By the new constitution, adopted in 1881, the federal district and 20 states, into which V. was divided, have been united into nine great states—State of the East, Guzman Blanco, Carabobo, State of the South-West, State of the North-West, State of the Andes, Bolivar, Zulia, and Falcon. The principal towns are Caracas (the cap.), La Guayra, Puerto Cabello, Cumana, Valencia, Maracaibo (a port opened to foreign commerce in 1878), Truxillo, Merida, and Bolivar. — *Hist.* The E. coast of V. was discovered by Columbus in 1498; Ojeda and Vespucci followed in 1499, and entering Lake Maracaibo, they found an Indian village constructed on piles, to prevent the ill effects of inundation, and accordingly named the place Venezuela, or Little Venice, a name which afterwards spread to the whole country. The first settlement was made at Cumana in 1520 by the Spaniards; and Venezuela remained subject to Spain till it asserted its independence in 1811, which was followed by a war of nearly eleven years' duration. In 1813, it formed with New Grenada and Ecuador what was called the republic of Colombia. The battle of Carabobo, fought June 24, 1821, destroyed the Spanish yoke and established the new republic. In 1830, on the dissolution of the confederation, Venezuela became an individual republic. The subsequent history of V. was marked by a long period of civil wars, extending from 1847 to 1870, when Guzman Blanco became dictator and then president, holding the reins of power until 1890, when discord again broke out. The most important recent event in the history of V. has been its determined opposition to the alleged encroachments of Great Britain on its territory, through an extension of British Guiana, the inducement being, apparently, the discovery of a rich gold-field near the border. The dispute, through the intervention of the U. S., was submitted to arbitration. *Pop.* (1897) 2,640,335.

Vengeance. (*ven'jans*.) *n.* [Fr., from *venger* = Lat. *vindicare*.] The infliction of pain or punishment, in return for an injury or offence; penal retribution:—frequently used, in a bad sense, to denote fierce and unrestricted revenge.

With a *vengeance*, with great force or vehemence:—sometimes used ironically; as, this is friendship with a *vengeance*. (Colloq.)

Vengeful. *a.* Revengeful; vindictive; retributive.

Venial. *a.* [Fr. *veniel*, from Lat. *venia*, forbearance, pardon.] That may be overlooked, pardoned, or forgiven; excusable; that may be allowed or permitted to pass without censure or punishment; as, a *venial* transgression.—Permitted; allowed; as, *venial* discourse.

Venial sin. (*Theol.*) In the Roman Catholic Church, a sin which weakens sanctifying grace, but does not take it away; it is not necessary, though commendable, to mention such sin in confession. Sins which take away sanctifying grace are termed *mortal*.

Veniality. *n.* State or quality of being venial or forgivable.

Venially. *adv.* In a venial manner; pardonably.

Venialness. *n.* State of being excusable or pardonable.

Venice. (*ven'is*.) [It. *Venezia* (*ve-ned'ze-a*).] A province of N.E. Italy, bounded S.E. and E. by the Adriatic Sea, and remarkable for its long series of lagoons, which, stretching due N. for 25 m., from the mouth of the Brenta to that of the Sile, occupy a considerable part of the old bed of the Piave. These lagoons contain numerous small islands (on some of which the city of Venice itself stands) that are separated from the open sea by a peninsula which is partly composed of the alluvium brought down by the rivers, and partly of the sand thrown up by the waves. Being, however, intersected by both artificial and natural channels, access to the coast, as well as to the capital, is thereby obtained. *Prod.* All kinds of cereals, with rice, maize, hemp, silk, and wine. *Pop.* 294,450.—The GULF OF VENICE is formed by the Adriatic on the N.E. coast of Italy, bounded by the Brenta and the Piave.

VENICE, a celebrated city of N.E. Italy, cap. of the above prov. and of the former *Venetian republic*, situate near

the northern extremity of the Adriatic, 70 m. W. of Trieste; Lat. 45° 25' 9" N., Lon. 12° 20' 2" E. The city is built entirely on piles driven into about eighty small islands situated in the shallow waters of the Bay of V., and known as the *lagoons*, a kind of lake shut out from the deeper water of the Adriatic Sea, by a ridge or long but interrupted belt of sand and earth called the *Littorale*, which extends about two miles from the shore, shutting in all the islands and lagoons from the Adriatic Sea. A modern viaduct, supported on 222 arches, part of the Verona and Venice railway, has lately united the continent with the *Littorale* or protecting beach of the city. The eighty islands on which the city is built are separated from each other by narrow channels, which serve the purpose of thoroughfares, being constantly traversed by gondolas (Fig. 1179), a light river-boat, answering the purpose of cabs and omnibuses, and depositing passengers at any house or building at which they may desire to alight. The whole series of islands are connected with each other by means of 450 bridges. Some of the islands are large enough to have what may be regarded as two or three short streets with intersecting lanes or alleys, but in general they only present blocks of buildings, having river fronts, according to the direction of the canal, or the water frontage of the isle. The longest and most important street in V., the *Mercuria*, is only fifteen feet wide; carriages and horses are unknown in V., the gondola being the universal means of transit to those going from shop to shop or house to house. V. is nearly eight miles in circumference, contains about 28,000 houses, and is divided into two parts by the Grand Canal, or *Canal Grande*. Over this canal there is only one bridge, that of the *Rialto* (Fig. 2571), the most magnificent bridge in Venice, consisting of a single arch 90 feet in span and 24 feet in height, built of marble in 1590. Two ranges of shops divide its upper surface into three narrow parallel streets. Venice

Fig. 2571. — THE RIALTO.

is regarded as one of the finest cities in Europe, and was for many centuries the capital of the first maritime and commercial state in the world. It consequently contains proportionally a larger number of public buildings and palatial residences than any other city in Europe; among the most celebrated of its national edifices, first mention must be given to that stupendous building, the pride and glory of V., the ducal palace of St. Mark, with the cathedral of St. Marco (Figs. 300, 843, and 1179), forming three sides of a square, the grandest and most imposing quarter of all the city. The square of St. Mark—with its arcades, its fine and elegant shops and cafés, the vast grandeur of its ducal residence containing all the chambers of state, audience, and judicature, and its magnificent cathedral—presents a picture of grandeur and beauty unequalled by any capital in Europe. The Bridge of Sighs (*Ponte dei Sospiri*) (Fig. 1422) stretches across the canal called the Rio Palazzo, and communicates between prisons on the east, and the Doge's palace on the west bank of the canal. It is a covered gallery; and prisoners, when led to execution, passed from their cells across this gallery to the palace, to hear sentence of death passed upon them, and then were conducted to the scene of death between the red columns. Few cities in Italy are richer in works of pictorial art than V.; some of the masterpieces of Titian, Tintoretto, Paul Veronese, and the other great chiefs of the Venetian school, are to be found in all the churches of this extraordinary city. The library (a fine marble structure (Fig. 1419), containing 120,000 vols. and 10,000 MSS.), the museum, and cabinet of curiosities of St. Mark's, are regarded as the finest in Europe. The arsenal and dockyard are esteemed as worthy objects of attraction; the latter, in the palmy days of V., contained forty line-of-battle ships, twelve of them three-deckers, with arms for 150,000 men, 4,000 pieces of ordnance, and an immense amount of naval and military stores, with provision and every requisite to maintain its reputation as one of the first commercial and maritime states in the world. For many centuries, in the Middle Ages, V. had the monopoly of all the glass sold to Europe; but this has long since passed away, and its chief trade is now confined to the manufacture of mirrors, jewelry, artificial pearls, silks, velvets, and porcelain.—The foundation of V. was laid in 421, as a place of refuge during the invasion of Italy by Attila. In 697 took place the establishment of an elective prince or Doge, with the appellation of Serene Highness—Paoluccio Anafesto being the first Doge or Duke of V. At first the power of the Doge was absolute, but in time restrictions were placed on his rule, till eventually he became a mere cipher and symbol of authority in the hands of the famous Council of Ten. The prosperity and power of V. be-

gan with the dawn of the 9th century. In 1133, the Doge Sebastiano received from Pope Alexander III. the title of Sovereign of the Adriatic, in consequence of a signal victory gained by the Venetian galleys over the fleet of the Emperor, when, further to mark his joy at the victory, the Pope flung into the gulf a ring of great cost, as a mark of gratitude—a custom afterwards annually followed by the Doges, who, in great state, dropped a rich ring into the sea; this ceremony was called, espousing or wedding the Adriatic. In the reign of Giovanni, in 1280, gold was first coined in Venice, the coin from the ducal dignity of the prince being called a *ducat*. Venice at this time was at the height of its glory as the first maritime and commercial state in Europe, as the most prosperous of nations, and as a leading military and political power. Jealous of the rising influence of the republic of Genoa, already encroaching on the commerce of the east, which V. considered as her exclusive monopoly, she for more than a century carried on a harassing war with her rival, sometimes with serious loss, at others with advantage. In 1396, Genoa placed herself under the dominion of the king of France, and therefore ceased to have a separate existence as an enemy of the republic. The greatest part of the 15th century was passed in repeated wars with the Turks, who captured many of her Greek and Ionian islands, especially Cyprus, and large portions of Dalmatia. When the commerce of V. became annihilated by the discovery of the route to India by the Cape, petty quarrels and political jealousies occupied the Venetians, instead of commerce and dominion. From this time the prestige of V. declined, and her power gradually sank as a state till, on the occupation of Italy by the armies of the French Republic, V.—after an independent existence of thirteen hundred years—without striking a blow became a part of Napoleon's Cisalpine republic, and afterwards of the Italian kingdom. At the Congress of Vienna, 1815, V. was annexed to Austria. The city and territory were ceded to, and incorporated with, the kingdom of Italy in 1866. *Pop.* (1897) 130,130.

Venice, in Illinois, a post-village of Madison co., on the Mississippi, about 6 m. N. of St. Louis.

Venice, in Michigan, a prosperous township of Shiawassee co.

Venice, in New York, a post-town of Cayuga co., 16 m. S. of Auburn.

Venice, in Ohio, a township of Seneca co.

Ven'ire, Ven'ire fa'cias. [Lat., *cause to come*.] (*Law.*) A writ directed to the sheriff, commanding him to cause to *come* from the body of the county, before the court from which it issued, on some day certain and therein specified, a certain number of qualified citizens who are to act as jurors in the said court.

Ven'i Sane'ti Spir'itus. [Lat., *Come, Holy Ghost*.] (*Eccles.*) The name given in the Roman Catholic Church to a sequence in the office of the mass for Whit-Sunday.

Venison. (*ven'zn*.) *n.* [Fr. *venaison*, from Lat. *venatio*, a hunting.] The flesh of beasts or game, or of such wild animals as are taken in the chase, particularly those of the cervine or deer kind.

Venloo', a strong town of Holland, prov. of Limburg, on the Maas, 40 m. from Maestricht. It has a commodious port, and is conveniently situated for trade. *Pop.* 8,000.

Ven'om. *n.* [Fr. *venin*; Lat. *venenum*.] Poison; matter injurious or destructive to life; as, the *venom* emitted by a rattlesnake.—Hence, analogically, malice; spite; malignity; vindictive animus; as, the *venom* of a retaliatory harangue.

—*v. a.* To envenom; to infect with poison. (*R.*)

Ven'omous. *a.* [Fr. *venimeux*; Lat. *venenosus*.] Full of, or charged with, venom or poisonous virus; noxious to animal life; as, the *venomous* bite of a cobra-capello.—Hence, malignant; noxious; mischievous; malicious; spiteful; as, a *venomous* brood, a *venomous* lampooner, a *venomous* tongue.

Ven'omously. *adv.* In a venomous manner.

Ven'omousness. *n.* Quality of being venomous.

Ven'osa, a town of S. Italy, on the river Ofanto, 23 m. from Potenza. It is the birth-place of Horace. *Pop.* 6,714.

Venose', *a.* (*Bot.*) Having numerous veins, as in reticulated leaves.

Venous. (*ve'nüs*.) *a.* [Fr. *veineux*; Lat. *venosus*.] Pertaining or having reference to a vein, or to veins; contained in veins; as, *venous* blood, in distinction from *arterial* blood.

(*Bot.*) Marked with, or characterized by, veins; *venose*.

Vent. *n.* [Fr. *fente*, from Lat. *findere*, to cleave.] A cleft; a small aperture; a hole or passage for air or other fluid to escape; as, the *vent* of a barrel.—Hence, the anus of birds.

(*Mil.*) The touch-hole of a fire-arm; in artillery, the hollow channel in a piece of ordnance through which the flame is communicated to the charge of powder for its ignition.

(*Mach.*) In steam-boilers, the sectional area of the calorimeter.—Hence also, figuratively, passage from secrecy to publicity; way of escape from confinement or privacy; utterance; emission; as, the *vent* of language, the *vent* of anger.

To give *vent* to, to allow to escape; to give egress to; to let out; as, he gave *vent* to his spleen.—To take *vent*, to become disclosed or public; as, the plot took *vent* beforehand.

—*v. n.* To let out at a cleft, or small opening.—To let out, as from privacy or confinement; to utter; to put forth; to publish; as, to vent the overflowings of one's fancy.

Ven'ta. *n.* [Sp.] A poor inn on a road.

Ven'tail. *n.* The visor or aventail of a helmet.

Venta'na. (*Sierra*.) a mountain of the Argentine

Republic (Fig. 184), 320 m. S.W. of Buenos Ayres, 3,500 ft. high; Lat. 38° 5' S.

Venter, *n.* One who gives vent; one who discloses or puts forth.

[*Lat.*] (*Anat.*) The lower part of the abdomen.—The uterus.—The belly of a muscle.

(*Law.*) The wife; for example, a man has three children by the first, and one by the second *venter*.

Vent-hole, *n.* A small orifice or vent for the passage of air or other fluid; as, the *vent-hole* of a cask.

Ventiduct, *n.* [From *Lat. ventus*, wind, and *ductus*, a leading.] A pipe, duct, or passage for the ventilation of rooms.

Ventilate, *v. a.* [*Fr. ventiler*; *Lat. ventilo, ventilatum*.] To fan, as with a gentle wind; to supply with fresh air; to cause the air to pass through; to open and expose to the free passage of air or wind; as, to *ventilate* a room.—To fan; to winnow.—To sift and examine; to bring to light for examination or discussion; to make public; as, to *ventilate* a project or novel idea.

Ventilation, *n.* [*Fr.* from *Lat. ventilatio*.] Act of ventilating, or state of being ventilated: act or operation of supplying houses, mines, or other confined places with a necessary quantity of fresh air, so as to maintain the atmosphere in such places in a uniform state of purity; free exposure to air.—Act of fanning or winnowing, as grain, for the purpose of freeing from chaff and dust.—Act of sifting and examining by exposure to public scrutiny or discussion; a giving vent or expression to; as, the *ventilation* of thoughts or intentions.

Ventilative, *a.* Pertaining or relating to, or adapted to promote, ventilation; ventilating; as, *ventilative* appliances.

Ventilator, *n.* Any contrivance or apparatus for promoting or regulating ventilation.

Ventose, *a.* [From *Lat. ventus*, wind.] Windy; flatulent.—*n.* See *CALENDAR*, § 6.

Ventral, *a.* [*Fr.* from *L. Lat. ventralis*, pertaining to the belly.] (*Anat.*) Noting the parts or aspect of the region of the belly.

(*Bot.*) Denoting connection with the anterior surface; as, a *ventral* suture.

Ventral fin, (*Zoöl.*) That fin, in fishes, which lies between the anus and the throat, as distinguished from the dorsal fin.

Ventricle, *n.* [*Fr. ventricule*, from *Lat. venter*, the belly.] (*Anat.*) A term applied to cavities of the brain and heart, especially the two belonging to the latter organ.

Ventricose, **Ventricous**, (*-kus*), *a.* (*Zoöl.*) Indicating a part which bellies out as if filled with air.

(*Bot.*) Noting an unequal distention of certain organic parts, as the corolla of many labiate and personate plants.

Ventricular, *a.* Pertaining or relating to a ventricle.

Ventriculous, (*-trik'ū-lus*), *a.* Somewhat distended.

Ventriloquism, (*-kū'shon*), *n.* Same as *VENTRILLOQUISM*, *q. v.*

Ventriloquial, (*-lō'kwe-al*), *a.* Belonging to ventriloquism.

Ventriloquism, (*-tril'ō-kwizm*), *n.* [*Lat. venter*, the belly, and *loquor*, to speak.] Act or art of speaking as from the belly; or, act, art, or practice of speaking, or uttering sounds, in such a manner that the voice appears to come, not from the person, but from some place, as from outside the door of the room, or from down the chimney, &c. The art seems to consist in filling the lungs with air, and then employing the vocal organs of the throat in pronunciation, with as little movement as possible of the lips, mouth, or tongue.

Ventriloquist, (*-kwist*), *n.* One who practises ventriloquism.

Ventriloquize, (*-kwiz*), *v. a.* To practise ventriloquism.

Ventriloquous, (*-kwūs*), *a.* Ventriloquial.

Ventriloquy, *n.* Same as *VENTRILLOQUISM*, *q. v.*

Venture, (*ven'tur*), *n.* [*Fr. aventure*, from *Lat. venio, ventus, venturus*, to come.] A hazard; the risking of something upon an event which cannot be forecast with certainty; any undertaking depending upon chance or liable to jeopardy; as, a bold *venture*.—A hap; a chance; luck; contingency; an event that is not, or cannot be, forecast or foreseen.—A stake; a risk; anything put to hazard or chance;—especially, a shipment of goods in the nature of a sea risk; as, the proceeds of a successful *venture*.—At a *venture*, at stake or hazard; contingent on circumstances: without foreseeing the end or issue; as, one buys certain railroad scrip *at a venture*.

—*v. n.* To make a venture; to run a hazard or risk; as, to *venture* goods in a sea-going ship.—To dare; to adventure; to expose one's self to chance or uncertainty; to have courage or presumption to do, undertake, or say; as, to *venture* to pop the question to a lady.

To *venture at, on, or upon*, to attempt without positive forecast or anticipation of success; as, the undertaking we *ventured on* has proved successful.

—*v. a.* To put to venture or chance; to risk or hazard; as, to *venture* one's self in a steam-boat.—To put or send on a doubtful venture or risky speculation; as, to *venture* a shipment of sugar to Barbadoes.

Venturer, *n.* One who ventures or undertakes a risk.

Venturesome, **Venturous**, (*-ūs*), *a.* Adventurous; bold; daring; intrepid; self-reliant.

Venturesomeness, *n.* Quality of being venturous or venturesome.

Venue, (*ven'yū*), *n.* [*O. Fr. visne*; *Lat. vicinia*, neighborhood.] (*Law.*) In civil actions, the *V.* is the county in which the action is to be tried, which is specified in all material allegations in the pleadings; it need not be the county in which the fact took place, except in what are called *local actions*. It can be changed, i. e., the

trial may be directed to take place in another county, either by consent of the parties, or by special order of the court or a judge, on the ground of material evidence, apprehended unfairness of trial, and the like. In criminal proceedings, the general rule is that the offence must on the face of the indictment appear to have been committed within the jurisdiction of the court before whom the prisoner is tried, but many modifications of this rule have been introduced in the several States.

Venulose, *a.* [*Lat. venula*, a small vein.] (*Bot.*) Furnished with veinlets.

Venus, *n.* [The only Queen. Sign ♀, a looking-glass.] (*Astron.*) The opponents of the Copernican system brought, as an argument against it, that, if true, both Mercury and Venus should exhibit phases like the moon. This truth was admitted, but with the statement that "our vision is inadequate to see them." Galileo, with his little spyglass, saw what no mortal had previously seen—the queen of the firmament with a crescent phase; and this formed an argument of overwhelming force in favor of the Copernican theory which no sophistry could overthrow. Except Mercury, Venus is the nearest planet to the sun, and, in proportion to the square of the earth's and her distance from the sun, is a warmer world. Her diameter is about 7,760 miles (Newcomb). The length of her year is 224d. 16h. 49m. 8s. She makes the nearest approach to the earth of any heavenly body except the moon, and yet we know no more about her seasons and her physical condition than we do of the far-away Urauns. Even the period of her rotation is in dispute, some contending that it is about 24h., while others assert that it is a period of 225 days—equal to the length of her year. The controversy waxes warm, and as a result it is hoped the true period may be ascertained. The rotation period of Mercury is also in dispute, some claiming to have evidence that Mercury, too, rotates but once during his revolution around the sun. If it be true that the rotation and revolution periods be equal, it follows that one hemisphere must constantly face the sun, as the moon faces the earth. The mean distance of Venus from the sun is about 67,000,000 miles, but her distance from the earth varies through wide limits, for when in perigee (between us and the sun) she is but 25,500,000 miles distant, while in apogee (on the other side of the sun) she is the whole diameter of her orbit (134,000,000 miles) more distant. It is possible on rare occasions, owing to the ellipticity of the earth's and her orbits, to come 2,000,000 miles still nearer. When astronomers speak of the distance between two celestial bodies, it is always to be understood as from center to center, and not between their surfaces. Gravity on Venus is a little less than on the earth—in the ratio of 0.82 to 1—so that a terrestrial man weighing 150 pounds would, if translated to Venus, weigh but 123 pounds, but on the sun over 4,000 pounds, and on the smallest satellite of Mars but a very few ounces. From our ignorance of the inclination of her axis to the plane of her orbit the character of her seasons is unknown. Some authorities make the inclination as high as 75°—a very improbable amount, and without a known parallel in the solar system. Venus, save the sun and the moon, is the brightest and most conspicuous object in the heavens, and must have been discovered by the first created man. Only three heavenly bodies besides her have ever been known to cast a shadow, viz., the sun, moon, and the great comet of 1843; though Tycho says the pilgrim star of 1572 would cast a shadow. Venus moves in her orbit at the rate of 80,000 miles an hour, or 22 miles a second. She probably has an atmosphere, for during her transits across the sun in 1874 and 1882, just when about one-half of her disk was superimposed on the sun, a faint and very narrow ring of light was seen by many observers encircling the planet, which, with good reason, was supposed to have been her illuminated atmosphere. As she has no satellite, her inhabitants, if any there be, can never witness the grandest phenomenon of nature—a total eclipse of the sun; neither can she have any months. She is often seen by the naked eye at noonday. The first record of such an observation that has come down to us was made in the year 398 A.D. See *PARALLAX* and *TRANSIT*.

Vera'ciously, *adv.* Truthfully; with veracity.

Veracity, (*-rās'i-tē*), *n.* [*Fr. véraçité*.] Habitual truth, or constant observance of truth; truthfulness.

Vera Cruz, (*va'ra-kroos*), in Mexico, a S.E. State, bordering on the Gulf of Mexico; Lat. between 17° 30' and 22° 15' N., Lon. 94° 30' and 99° W.; area, 27,595 sq. m. *Rivers*, Tampico, San Juan or Alvarado, and Hnasacualco. Lagoons are numerous, of which the principal are the Tamiagna and the Tampico. *Surface*, low and sandy along the coast, but diversified in the interior, where the volcanic mountain peak Orizaba has an elevation of 17,374 ft.; *soil*, fertile. *Climate*, almost pestilential along the coast, but healthy in the interior. *Prod.* Maize, barley, cotton, sugar, wheat, tobacco, sarsaparilla, vanilla, oranges, bananas, pine-apples, dye-woods, &c. *Cap.* Vera Cruz. *Pop.* (1897) 889,880.

—A seaport town, cap. of the above State, on the Gulf of Mexico, 185 m. E. of Mexico; Lat. 19° 11' N., Lon. 96° 8' W. Though situated in a low and unhealthy plain, it has a fine appearance; the streets and squares are regularly laid out, the houses are mostly built of stone, and the harbor, which affords but little protection from the N. winds, is defended by the castle of San Juan de Ulloa, on an island at its entrance, which has also a lighthouse with a revolving light 89 ft. above the sea. Its commerce has declined of late years, having been transferred principally to Tampico. *V.* was founded in the 16th century near the place where Cortez landed. It was

taken by the French in 1829, and by the Americans under General Scott in 1847. *Pop.* (1897) 25,250.

Ve'ra Cruz, in Missouri, a post-village, former cap. of Douglas co., about 55 m. E.S.E. of Springfield.

Veragua (*ver-ah'gwah*), a town of the Republic of Colombia, cap. of a province of the same name, 125 m. W.S.W. of Panama. *Pop.* 6,000.

Veran'da, Veran'dah, *n.* [*Hind. buramuda*.] (*Arch.*) A kind of open portico, or a sort of light, external gallery or colonnade in front of a building, with a sloping roof supported on slender pillars, and frequently partly inclosed in front with lattice-work.

Ve'ra Paz, a prov. of Guatemala, between Lat. 16° and 18° N., Lon. 89° 30' and 91° W., with a cap. of the same name on the Rio Coban.

Vera'tria, Vera'trina, Vera'trine, *n.* (*Chem.*) See *VERATRUM*.

Vera'trum, *n.* (*Bot.*) A genus of the order *Melanthaceæ*. *V. album*, found from Canada to Georgia, is the white hellebore, a medicinal plant, the rhizomes of which contain the alkaloids *veratrina* and *jervine*. White hellebore is a narcotic acid poison; it has been employed externally as an errhine and for destroying vermin; and internally, as a purgative and anodyne in gout. The rhizome of *V. viride*, American, green, or swamp hellebore, is now much employed as an arterial sedative in inflammatory affections. Similar qualities are said to exist in *V. sabadilla*, a native of Mexico and the W. Indies.

Verb, *n.* [*Lat. verbum*, a word.] (*Gram.*) That part of speech in which a subject is conceived under certain relations of mood or mode, and tense or time. The *V.* is the most interesting, as it is also the most important, of the parts of speech. By means of changes or modifications, it expresses the various conditions of voice, mood, tense, number, and person. *V.* are *active*, *passive*, or *neuter*, according as they express doing, suffering, or a mere state or condition. They are *transitive* or *intransitive*, according as the action expressed by the *V.* passes, or does not pass, to an object. The latter comprise *neuter* and *passive V.* The moods or modes are the ways in which the predicate is brought into relation to the subject, whether it is given as necessary, real, or possible. These are the *indicative*, *subjunctive*, and *imperative*. The infinitive and participles are not strictly modes, though often classed as such. The tenses are those modifications of the *V.* by which time is denoted. The simple tenses are the *present*, *past*, and *future*; but most languages admit of other tenses, as the *imperfect*, *pluperfect*, *future*, &c. The numbers are the *singular* and *plural* (in Greek also the *dual*); and the persons are the first, second, and third, in both numbers; as *I, thou, he, she, or it; we, you, they*. As respects their origin, *V.* are *primitive* or *derivative*. They are also *regular* or *irregular*, according as they conform to or deviate from certain rules.

Ver'bal, *a.* [*Fr.* from *Lat. verbalis*—*verbum*, a word.] Expressed to the ear in words; oral; spoken; not written; as, a *verbal* agreement.—Respecting words only; consisting in mere words; having reference to words rather than things; as, *verbal* application.—Literal; having word answering to word; as, a *verbal* translation.

(*Gram.*) Having immediate derivation from a verb; as, a *verbal* noun.

—(*Gram.*) A noun immediately derived from a verb.

Ver'balism, (*-izm*), *n.* Something expressed orally.

Ver'balist, *n.* One who deals in words merely; one skilled in, or a minute critic of, words.

Ver'bal'ity, *n.* State or quality of being verbal.

Verbaliza'tion, *n.* Act of verbalizing, or state of being verbalized.

Verbalize, *v. a.* To make verbal; to convert into a verb.

Ver'bally, *adv.* In a verbal manner; not scriptory.

Verbas'ennu, *n.* [*Lat.*] (*Bot.*) A genus of plants, order *Scrophulariaceæ*, having alternate leaves, and flowers on spikes or paniculate racemes. *V. thapsus*, the Common or Grand Mullein, also called High-taper, is found by all roadsides in the U. S. Its leaves have emollient, demulcent, and slightly narcotic properties; its seeds, and those of the species *V. nigrum*, are said to be employed by poachers to stupefy fish, in order that they may be readily taken.

Verba'tim, *adv.* [*L. Lat.*] In the same words; word for word; as, a report *verbatim* of a speech.

Verbe'na, *n.* [*Lat.*; *Fr. verveine*.] (*Bot.*) The vervain, the typical genus of the order *VERBENACEÆ*, *q. v.*

Verbena'ceæ, *n. pl.* (*Bot.*) The Vervain family, an order of plants, alliance *Echiales*. *DIAG.* Irregular unsymmetrical flowers, confluent nuts, and erect ovules.—The species, consisting of trees, shrubs, and herbs, are numerous, the greater number tropical, and several belonging to the U. S. The typical genus, *Verbena*, furnishes one of the most beautiful of our garden-flowers, *V. aubletia*, native of S. America, a slender and delicate plant of the green-house, producing numerous, successive clusters of rose-colored and scarlet flowers. Stem square, viscidly pubescent, 1–2 ft. high, with opposite branches and leaves. Leaves deeply cut and toothed, rhombic-oval, on short stalks. Flowers larger than others of the genus, in corymbose spikes. Bracts nearly as long as the calyx, narrow, permanent, downy as well as the calyx. The *Verbena* of the perfumers, so much prized for its lemon-like scent, is the Lemon-grass, *Andropogon Schenanthus*, from which the oil of *verbena* is extracted.

Verbera'tion, (*-ā'shun*), *n.* [*Fr.* from *Lat. verberatio*.] Act of verberating; a beating, or dealing blows.—The impulse of a body productive of sound. See *REVERBERATION*.

Verbe'sina, *n.* (*Bot.*) An American genus of plants, order *Asteraceæ*, the species of which are herbs or shrubby plants, with leaves often decurrent, serrate, or lobed; heads solitary or corymbose. They are generally unimportant.

Ver'biage, *n.* [Fr.] Verbosity; use of many words without necessity; superabundance of words; practice of pleonasm.

Ver'bify, *v. a.* [Lat. *verbum*, verb, and *facere*, to make.] To verbalize; to make into, or use as, a verb.

Verbose, (*-bōs'*) *a.* [Fr. *verbeux*.] Abounding in words; using or containing more words than are necessary; tedious by a multiplicity of words; pleonastic; prolix.

Verbosely, *adv.* In a wordy or prolix manner; pleonastically.

Verboseness, **Verbosity**, *n.* Quality of being verbose.

Ver'celli, (*ver-chel'le*) *n.* A town of N. Italy, in Piedmont, at the confluence of the rivers Cervo and Sesia, 14 m. from Casale. The cathedral is one of the best in Piedmont. *Manuf.* Silk and woollen fabrics. *Pop.* 30,345.

Vercheres, (*ver-shair'*) *n.* In prov. of Quebec, a town of Vercheres co., on the St. Lawrence, 23 m. N.E. of Montreal.

Verde, (*Rio*) (*pair-dai'*) The name of 6 rivers in Brazil, two of which flow into the São Francisco, the others joining respectively the Maranhão, the Guapore, and the Sapucahy.

Verdancy, (*-se*) *n.* Greenness.

Ver'dant, *a.* [Fr. *verdoyant*.] Green; fresh; covered with grass or growing plants. — Hence, analogically, raw to the ways of the world; inexperienced in practical knowledge of life; green in sagacity or intelligence; glibble; easily humbugged or overreached; as, a ver'dant youth. (*Colloq.*)

Verd'antique, (*-deek'*) *n.* [Fr.; It. *verde antico*.] The green incrustation produced by the action of time on copper and brass.

(*Min.*) A beautiful stone of a dark-green color, with patches of white, and sometimes also black and red. It is a kind of hard breccia, was much prized by the ancient Romans, and is still in great favor in Italy.

Ver'dantly, *adv.* In a verdant manner.

Verden, (*pair'den*) a town of Germany, in Hanover, on the Aller, 53 m. from Hamburg; *pop.* 5,741.

Verdi, Giuseppe, (*pair'de*) a celebrated Italian composer, the son of an inn-keeper, b. at Roncole, in the former duchy of Parma, 1814. He received his first lessons from an organist in Milan, where he resided from 1833 till 1836; studied diligently under Lavigna, and in 1839 published his earliest work, a musical drama, entitled *Oberto di San Bonifazio*. His principal compositions are serious operas, and the *Lombardi*, one of his first productions, made a strong impression throughout

Fig. 2572. — VERDI.

Italy, and laid the foundation of his fame. His best known works are: *I Lombardi*, *Ernani*, *I Due Foscari*, *Attila*, *Macbeth*, *I Masnadieri*, *Luisa Miller*, *Nabuccodonosor*, *Rigoletto*, *Il Trovatore*, *La Traviata*, *Un Ballo in Maschera*, *Don Carlos*, and *Aida* (1872); some of which have attained a very high degree of popularity throughout Europe and in this country. V.'s orchestration is often disagreeably noisy, but his works abound in sparkling melody and in striking dramatic effects. *Il Trovatore* was represented for the first time at Rome in 1853, and has maintained its unparalleled popularity undiminished to the present time. His *Rigoletto* is highly esteemed. His celebrated *Requiem Mass* was first performed at Milan, May 23, 1874. His famous work, *Otello*, was produced in Milan in 1886, and in London in 1889, in which year he celebrated his jubilee as a composer. In 1893 he scored a success with his latest opera, *Falstaff*. He resides near the place of his birth, in Parma.

Ver'dict, *n.* [Lat. *verum*, truth, and *dico*, I speak.] (*Law*.) The answer of a jury given to the court concerning the matter of fact in any cause committed to their trial.

— Decision; judgment; opinion pronounced or declared.

Ver'terville, in Virginia, a post-village of Orange co., abt. 25 m. W. of Fredericksburg.

Ver'digris, (*-de-grees*) *n.* (*Chem.*) A rust of copper formed by a corrosion of the metal by acid. It is chemically a diacetate of copper, and is very poisonous. It is used in an impure state as a green pigment, and when pure as a medicine.

Ver'digris, a river of Kansas, rises near E. boundary of Chase co., and enters the Arkansas river about 10 m. W. of Fort Gibson, in the Indian Territory, after a S. course of 200 m.—A post-village of Lyon co.—A township of Wilson co.

Ver'diter, *n.* (*Chem.*) A blue pigment formed from a

sulphate or nitrate of copper by lime, the precipitate being ground up with an excess of lime; *green verditer* is formed by sea-salt and blue vitriol, or sulphate of copper.

Verditure, (*pair'de-tipoor*) *n.* The palest shade of green.

Ver'doy, *a.* (*Her.*) Denoting a border charged with leaves, fruits, flowers, and the like.

Verdun, (*pair'doon*) a fortified town of France, dept. of Meuse, 26 m. from Bar-le-Duc. It has a bishop's palace, a military hospital, and a public library. It carries on manufactures of famous liquors and confectionery. It was taken by the Prussians in 1792 and 1871. *Pop.* 12,028.

Verdure, (*verd'yur*) *n.* [Fr., from Lat. *virco*, to be green.] Greenness; green; freshness or verdancy of vegetation.

Ver'durous, *a.* Covered with verdure or vegetation.

Ver'galoo, **Vir'galoo**, *n.* A choice variety of pear.

Verge, (*verj*) *n.* [Fr.; It. *verga*, from Lat. *virga*, a twig, a sprout.] A rod, or something in the form of a rod or staff, borne as an emblem of authority; the mace of a dean; as, a silver verge. — Brink; edge; border; margin; the extreme side or end of anything which has some extent of length; as, the verge of a precipice, the verge of life, on the verge of noon, the verge of probability, &c.

(*Arch.*) The outside rim of a border.—The grassy external margin of a parterre.

(*Arch.*) In Gothic architecture, a small ornamental shaft.

(*Horol.*) The spindle of the balance-wheel of a watch.

Verge, *v. n.* [Lat. *vergo*, to turn, to incline.] To incline from the horizontal course or direction; to bend; to slope; to tend downward; as, a wall verges from the perpendicular. — To tend; to approach; to border upon; as, he is verging on the grand climacteric of man's life.

Verge-board, *n.* (*Arch.*) Same as *Barre board*, *q. v.*

Ver'gency, *n.* Act of coming into proximity with.

(*Optics*.) The reciprocal of the focal distance of a lens, used as a measure of the divergence or conveyance of a pencil of rays.

Vergennes, (*ver-shain'*) CHARLES GRAYIER, COUNT DE, a French statesman, b. at Dijon, 1717, was made minister of foreign affairs by Louis XVI., and displayed the qualities of a profound statesman. He negotiated and settled the treaties of commerce (Dec., 1777) and of alliance (Feb., 1778) with the U. States of America. D. 1787.

Vergennes, in Michigan, a post-township of Kent co.

Vergennes, in Vermont, a city of Addison co., on Otter Creek, 21 m. S. by E. of Burlington. It has an excellent harbor, affording sufficient depth of water for the largest vessels. It was an important naval depot during the war of 1812; and a U. States arsenal is still maintained there.

Verger, (*ver'jer*) *n.* [Fr., from *verge*.] In England, an officer who carries a white wand, as an emblem of authority, before the judges of the courts of law; also, an attendant upon a dignitary, as a bishop, dean, &c.—A pew-opener or attendant in a church; a beadle.

Ver'gette, (*-jel'*) *n.* [Fr.] (*Her.*) A pallet or small pile; — hence, a shield divided by pallets.

Verguand, (*ver-ye-ā'*) PIERRE VICTURNIEN, one of the most eloquent leaders of the Girondin party in the French revolution, was b. at Limoges in 1759, and was practicing as an advocate at Bordeaux, when elected to the Legislative Assembly, 1791. He was one of the 22 Girondists condemned by the Jacobins of the revolutionary tribunal, and executed Dec. 31, 1793.

Ver'itable, *a.* That may be verified.

Ver'ification, *n.* [Fr.] Act of verifying or proving to be true; or, state of being verified; act of confirming or establishing the authenticity of any powers granted, or of any transaction, by legal or competent evidence.

Ver'ificative, *a.* Tending or serving to verify.

Ver'ifier, *n.* One who verifies.

Ver'ify, *v. a.* [Fr. *vérifier*, from Lat. *verus*, true, and *facio*, to make.] To make out to be true; to prove to be true or correct; to confirm; to fulfill, as a promise; to establish the truth of; as, to verify a statement or prediction. — To authenticate by examination or application to competent evidence; as, to verify a claim.

Ver'ity, *adv.* [From *very*.] In truth or fact of a verity; certainly; in a very true, or correct manner; as, verily, the man is a fool. — With great or hapless confidence; really; veritably; truly; as, I am verily persuaded that things will go against us.

Verisim'itude, *n.* [Lat. *verus*, true, and *similis*, like.] Probabity; likely; presenting the appearance of truth or actuality. (*R.*)

Verisim'itude, *n.* Likeness or resemblance to truth; probability; likelihood; appearance or semblance of truth.

Ver'itable, *a.* [Fr., from Lat. *verus*, true.] Actual; true; real; agreeable to, or accordant with, fact.

Ver'itably, *adv.* In a true manner; really.

Ver'ity, *n.* [Fr. *vérité*; Lat. *veritas*.] Quality of being very true, real, or actual; agreeability of a statement, proposition, or other thing of fact.—A true assertion or tenet; agreement of the words with the thoughts.

Ver'juice, *n.* [Fr. *verjus*—*verd*, green, and *jus*, juice.] The juice extracted from green or unripe fruit, an acid liquor expressed from crab-apples, wild grapes, &c., used in sauces, ragouts, and the like.

Vermadois, (*pair-man-dwa'*) an old division of France, in Picardy, of which St. Quentin was the capital.

Ver'meil, *n.* Vermilion; — principally used in poetry. — Silver-gilt, or gilt bronze.

(*Min.*) Crimson garnet, with a slight orange tinge; — so called by jewelers.

Ver'mejo. See *RIO VERMEJO*.

Ver'mes, *n. pl.* [Lat., *pl.* of *vermis*, a worm.] (*Zool.*)

The name given by Linnaeus to one of the classes in his zoological system, in which he included all the lower invertebrate animals, whether of worm-like form or not. This term is now altogether disused.

Vermicelli, (*ver-me-chel'li*) *ns.* [It., from Lat. *vermiculus*, a small worm.] A paste of wheat flour in the form of worm-like cylinders of various diameters; the smallest or thread-like being termed *vermicelli*, and the larger *macaroni*. It is also cut into ribbons and other forms, and is then called *Italian paste*. It is made by forcing the paste through small apertures in an iron plate, which is done by a powerful screw press. The most glutinous varieties of wheat are those which yield the finest flour for this manufacture.

Vermic'ular, *a.* [From Lat. *vermiculus*.] Pertaining to a worm; formed or moving like a worm.

Vermic'ulate, *v. a.* [From Lat. *vermiculatus*.] To lay in a manner to resemble the motion or the tracks of worms.

Vermiculated work, (*Arch.*) Checkerwork or channeling formed in masonry as an ornament, giving it the appearance of having been eaten by worms.

— *a.* Worm-like in shape or appearance; covered with worm-like elevations of surface.—Crawling or creeping after the manner of a worm; — hence, insinuating; creeping.

Vermiculation, *n.* [Lat. *vermiculatio*.] Act or operation of moving in the form or manner of a worm; continuation of motion from one part to another, as in the peristaltic motion at the intestines. — Act of forming so as to resemble the motion of a worm.

Vermic'ule, *n.* [Lat. *vermiculus*.] A little worm.

Vermic'ulite, *n.* [From Lat. *vermis*, worm, and Gr. *lithos*, stone.] (*Min.*) A fine sandy variety of Pyrosclerite, resembling Tale in appearance, and composed of micaceous plates cemented together by a whitish matter; it is a hydrated bisilicate of magnesia, protoxide of iron, and alumina. When heated to redness it divides, with a vermicular motion, into threads, as if it were a mass of small worms; hence the name. It is found in Vermont, and at Milbury, Mass.

Vermiform, *a.* [Fr., from Lat. *vermis*, and *forma*, form.] Presenting the form or shape of a worm, as a hollow process or prolongation of the intestine caecum; or, as a part along the middle of the upper and under surfaces of the cerebellum.

Vermifugal, *a.* [Lat. *vermifugus*.] (*Med.*) Tending to destroy vermin, or to extirpate worms.

Vermifuge, (*-fūj*) *n.* [Fr., from Lat. *vermis*, worm, and *fugo*, to expel.] (*Med.*) A medicine or substance used in effecting the expulsion of animal worms; an anthelmintic.

Vermilion, (*-mī'l-yūn*) *n.* [Fr. *vermillon*; Lat. *vermillum*.] (*Paint.*) The red sulphide of mercury, used as a pigment in oil and water colors. It is of a bright red color, inclining to yellow, of a good body, and of great utility in its compounds with white pigments.

— Hence, any beautiful or bright red color; as, lips of vermillion.

— *v. a.* To dye scarlet; to tinge or cover with a beautiful or delicate red.

"A sprightly red vermillions all her face." — *Graville*.

Vermilion, a bay of Louisiana, an inlet of the Gulf of Mexico, Vermilion and St. Mary's parishes, 20 m. long, and communicating with the Gulf through Cote Blanche Bay.—A river which rises near Opelousas, and flows S. into Vermilion Bay.—A S.W. parish, bordering on the Gulf of Mexico; area, 1,230 sq. m. *Rivers*, Mermentau and Vermilion. *Surface*, flat, and consists in part of prairies and marshes; *soil*, fertile. *Products*, Wheat, oats, rice, barley, hay, live stock, &c. *Cap.* Abbeville. *Pop.* (1897) 16,250.

Vermilion, in South Dakota, a river which flows into the Missouri, about 30 m. N.W. of Sioux City.—A city, cap. of Clay co., at the mouth of the above river, 30 m. E. of Vankton. *Pop.* (1895) 1,757.

Vermilion, in Illinois, a river which rises in Livingston co., and flowing N.W. enters the Illinois River near La Salle.—Another river formed by the junction of the N. Middle and S. Forks, near Danville, in Vermilion co., flows S.E. entering the Wabash, 8 m. S. of Perryville, in Indiana. The Little Vermilion enters the Wabash abt. 5 m. S. of the above.—An E. co., bordering on Indiana, and washed by Vermilion River; area, 926 sq. m. *Surface*, level; *soil*, fertile. *Min.* Stone-coal. *Cap.* Danville. *Pop.* (1897) 55,350.

Vermilion, in Indiana, a W. co., bordering on Illinois; area, 270 sq. m. *Rivers*, Wabash and Vermilion. *Surface*, level; *soil*, very fertile. *Min.* Iron and coal. *Cap.* Newport. *Pop.* (1897) 18,360.

— A township of the above co.

Vermilion, in Kansas, a post-township of Marshall co., about 20 m. S.E. of Marysville.

Vermilion, in Minnesota, a village and township of Dakota co., abt. 20 m. S. of St. Paul.

Vermilion, in Ohio, a river which flows into Lake Erie, from Erie county.—A township of Ashland county.

— A post-village and township, and shipping-port of Erie county, on Lake Erie, 21 miles east of Sandusky City.

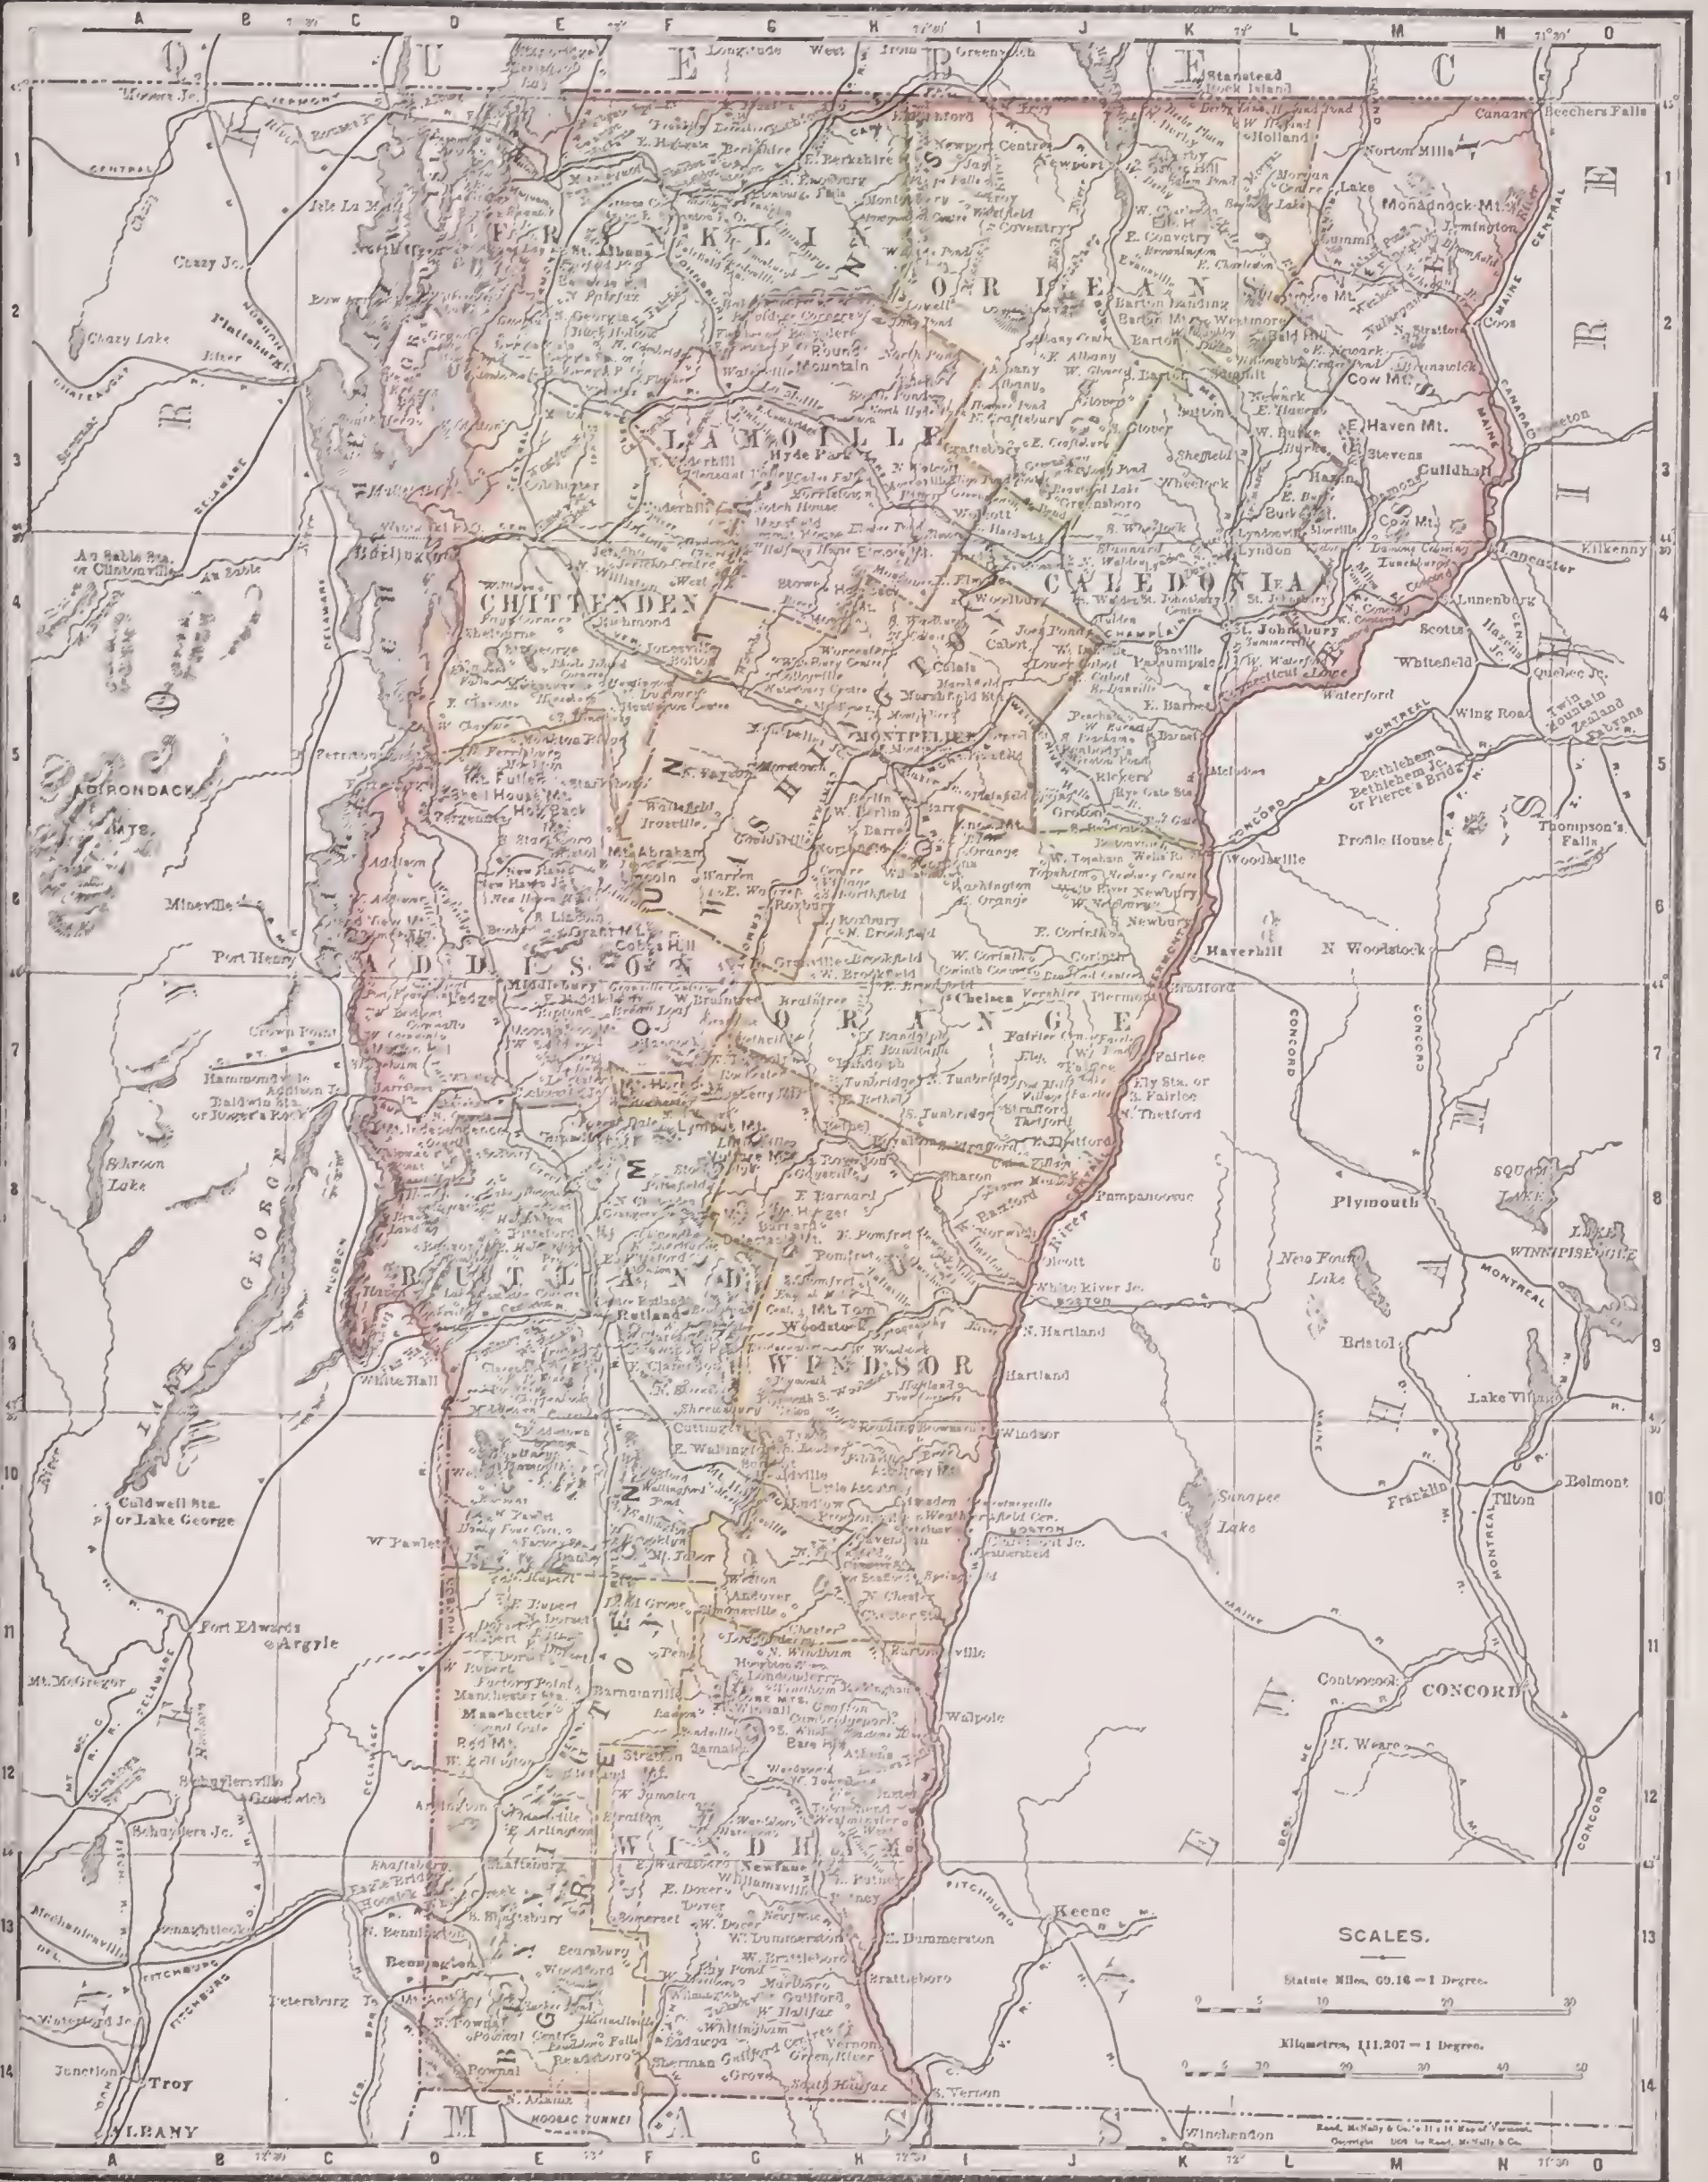

Vermilionville, in Louisiana, a village, former cap. of La Fayette co., 60 m. S.W. of Baton Rouge.

Ver'min, *n. sing.* and *pl.* (used chiefly in the pl.) [Fr. and It. *vermine*, from Lat. *vermes*, worms.] All sorts of small animals which are destructive to grain or other produce; all noxious little animals or insects, as squirrels, rats, mice, grubs, flies, bugs, &c. — Hence, a contemptuous term for despicable or noxious human beings.

Ver'minate, *v. n.* [Lat. *verminare*.] To breed vermin.

Vermination, *n.* Generation or breeding of vermin.

— A colic; a gripping of the bowels.

Verminous, (-ūs), *a.* [Fr. *vermineux*.] Full of, or infested by, or adapted to breed, vermin; as, a *verminous* disposition of the body. (*Harvey*).—Caused by, or owing to, the presence of vermin; as, *verminous* disease.

Vermiparous, *a.* [Lat. *vermis*, and *parere*, to produce.] Bringing forth worms.

Vermivorous, *a.* [Lat. *vermis*, and *voro*, to devour.] Feeding on worms.

Vermont. [From Fr. *verd* (*vert*), green, and *mont*, mountain.] One of the N.E. or New England States of the American Union, and one of the first admitted under the Federal Constitution, is bounded N. by Lower Canada; E. by New Hampshire (the Connecticut River forming the boundary); S. by Massachusetts; and W. by New York and Lake Champlain. It lies between Lat. 42° 44' and 45° N., and Lon. 71° 33' and 73° 25' W.; area, 10,212 sq. m., or 6,535,680 acres.—*Gen. Desc.* The physical view of the State presents, on the whole, a hilly surface, diversified by valleys, elevated plateaux, and mountains of considerable height. The Green Mountains (giving name to the State), exhibit a succession of rounded eminences, from 2,000 to 2,500 ft. in height, covered with vegetation, and cultivated to their summits. This range permeates the State from its S. line in a N. direction nearly as far as Lat. 44°, where it bifurcates into two chains, one of which continues N.E. to the Canadian frontier; while the other, trending N.E., extends to the point of junction of New Hampshire and Canada. The principal rivers watering the E. portion of the State are the affluents of the Connecticut, the chief of which are the Passumpsic, Queechy, White, Black, and Deerfield rivers. The streams forming the W. watershed—the Lamoille, Missisquoi, and Winooski—find their embouchures in Lake Champlain; several smaller rivers, too, discharge their waters into Lake Memphremagog, the S. end of which lies within the State. The principal lakes, after the two already mentioned,

Fig. 2573. — SEAL OF THE STATE.

are those of Willoughby, Danmore, Seymour, Austin, and others. The only harbor of importance within the limits of V., is that of Burlington, on Lake Champlain, a port of entry with a sufficiently commodious harbor, and the entrepôt of a large Canadian trade.—*Geol. and Min.* The geological formations consist of the lower groups of azoic and Silurian. The greater mass of the Green Mountains is composed chiefly of gneiss; while E. of this range, a bed of Devonian limestone extends over a width of from 20 to 30 m. Along the W. base of the same mountain chain, a great belt of quartz is overlaid by a bed of crystalline limestone (Eolian) some 2,000 ft. in thickness. Slates, along with hematite iron, are found in considerable quantities near the shores of Lake Champlain: the latter ores affording employment to several blast-furnaces. Some gold deposits; lead ores, more or less argentiferous; manganese; copper pyrites; chromic iron: several kinds of variegated marbles; serpentine; soapstone; and excellent clay for the manufacture of white stone-ware, form the leading mineral characteristics of the State.—*Clim.* The climate of V., although severely cold in winter, is very generally equable and healthy; the annual average temperature ranging from —17° to +92°.—*Soil, Veget., &c.* The soil of V. is generally a rich loam, most productive where it overlies the limestone strata, but in all places sufficiently fertile for most of the demands of agriculture. The hilly regions afford excellent pasturage, and the proportion of unimprovable land is less than in other mountainous States. Hemlock, fir, and spruce very generally clothe the more elevated tracts; while oak, beech, sugar maple, pine, hickory, elm, birch, basswood, and butternut are plentiful on the plateaux and lower lands; cedar

Fig. 2574.

*SCENE OF THE BATTLE OF LAKE CHAMPLAIN (Sept. 13, 1814).

The island in the centre is Crab Island; the other is Valcour Island, near which Benedict Arnold's famous naval battle was fought in 1776. The hills in the distance are the Adirondack Mts.

too, is abundantly found in the swampy localities. *Zoöl.* The wild fauna of V. comprises the lynx, wild-cat, panther, raccoon, fox, wolf, elk, deer, black bear, rabbits, and squirrels; the moose is found in the extreme N. of the State, and birds (including most of the species found in New England) exist in great numbers. Numerous varieties of fish swarm in immense quantities in the various lakes and rivers. Several species both of venomous and innocuous serpents are also found in parts of the State.—*Agric.* V. takes rank as perhaps the most exclusively agricultural of the N. States; and, in proportion to her pop., produces more wool, live-stock, maple-sugar, dairy produce, hay, hops, and potatoes, than any other State in the Union. As a large proportion of the land is better adapted to grazing than to tillage, the rearing of live-stock is a prominent feature of farming economy, and the horses, cattle, sheep, and swine raised in the State are well known for their superior quality. The 32,573 farms which the State possessed in 1890 made up an aggregate of 4,395,646 acres, of which 2,655,943 were improved. The western portion of the State comprises the finest tracts of arable land, while the climate as well as the soil of the Champlain Valley are especially adapted to fruit-raising. Of cereal products oats stand first, with a yield in 1895 of 5,100,598 bushels. Indian corn yielded 2,153,440, and wheat 185,078 bushels, the latter cereal being very little grown in the New England States. Live stock is kept in considerable numbers, and the most important agricultural interest is that of dairying, the annual product being about 25,000,000 lbs. of butter and 6,000,000 lbs. of cheese. Much attention is paid to the raising of improved stock of horses and cattle, while the rearing of fine breeds of sheep for exportation has become a profitable business. Of maple sugar V. produces more, than any other State, the yield in 1894 being 5,674,178 lbs., or nearly two-thirds the whole yield of the U. S.—*Manuf.* There has been a considerable advance in the manufacturing status of V., owing to the development of the slate and marble deposits, the porcelain manufacture, and the smelting and working of iron in its various applications. V., however, cannot be said to figure as a fabricating State when brought into comparison with her more immediate neighbors. The leading manufactured products consist of cotton and woollen goods, iron (wrought and cast), steam-engines, and machinery, agricultural implements, leather, flour and grist-mill products, furniture, tinware, copperware, &c. The production of lumber is large for the size of the State, and Burlington ranks third in importance among the lumber markets of the U. S. There are numerous marble, slate and granite quarries, yielding a large and valuable annual product. The total products of the manufacturing industries in 1890 aggregated \$38,340,066. These industries are increasing at the rate of about \$1,000,000 of new capital invested annually. Of the many large water-powers of the State few remain unutilized, the most common use of them being for the production of electricity.—*Pol. Div.* The State is divided into 14 counties, as follows:

Addison,	Essex,	Lamoille,	Washington,
Bennington,	Franklin,	Orange,	Windham,
Caledonia,	Grand Isle,	Orleans,	Windsor.
Chittenden,		Rutland,	

Cities and Towns. The principal centres of trade and population are Montpelier (State cap.), Burlington, Rutland, Windsor, Brattleborough, Bennington, St. Johnsbury, St. Alban's, Middlebury, Manchester, and Woodstock.—*Govt., Const., &c.* The original State constitution of V.—approaching higher to a pure democracy than most others—was adopted in 1777, and was framed on that of Pennsylvania. It was revised in 1786, and again in 1793, when, with some slight modifications, it assumed its present form. Another amendment was made in 1828, when some restriction was placed over the electoral franchise. In 1836, a senate was established; in lieu of the gubernatorial council of 12 members which had previously, in conjunction with a house of representatives, formed the mixed legislative and executive power. In 1850, a constitutional amendment ordained the election of all legal State functionaries by popular suffrage instead of by the legislature, as had been the practice heretofore. The executive is vested in a governor (salary \$1,000), lieutenant-governor (who is *ex-officio* president of the Senate), and treasurer, elected by the people; secretary of State, and various other officers chosen by the legislature, or by the board of education. Every male citizen of the U. S., 21 years of age, and of good character, who shall have been a resident of the State one year, may exercise the franchise in respect to all elective officers. The judiciary consists of a chief judge of the Supreme Court and 5 puisne judges, besides 2 assistant county judges. The apportionment reached after taking the census of 1880 has reduced V. to 2 representatives in the National Congress, and therefore to 4 votes in the electoral college.—*Educ.* Funds were set apart for the support of schools by the proprietors of townships as early as 1761, while provision for education was made by the legislature in 1782, the system arranged for including primary schools in every township, a grammar or high school in each county, and one university. The towns were authorized in 1870 to substitute the town for the district system, but they have been very slow in making the change. The revenue for school purposes is derived partly from funds held by the State, but chiefly from town and district taxes. Three normal schools were founded in 1866, and provision for State supervision established in 1874. The State University was founded at Burlington in 1791 and inaugurated in 1800. It provides instruction in arts, engineering, chemistry, agriculture, and medi-

cine, has a library of nearly 50,000 volumes, 50 instructors, and about 500 pupils. There are, in addition, Middleburg College, chartered in 1800, and Norwich University, organized as a military school. Religious worship is represented by churches belonging to nearly every denomination. The State has made beautiful provision for institutions of a benevolent character, in the form of hospitals, refuges for the insane and indigent, orphan asylums, and various others. There is also a Reform School for wayward boys and girls, and a House of Correction for adults. The State prison is at Windsor.—*Finances.* V. is practically out of debt. The assessed valuation of property is about \$175,000,000, the true value about \$250,000,000, and the annual revenue about \$2,000,000. The State has about 50 national banks, with \$7,000,000 capital, and 40 saving banks and trust companies, with deposits of about \$28,000,000. The railroads are under the supervision of three commissioners appointed by the Governor and Senate, and most of the lines are operated by the Central Vermont and the Boston & Maine companies.—*History.* V. was discovered, and a portion of its territory explored, in 1609, by Champlain, and a mixed party of French and Indians. The first settlement by whites was made in 1724 on the site of the present town of Brattleborough. Immigration began to pour in in 1760–68, during which period the soil had been claimed as part of the New Hampshire grant; whereupon, a counter-claim was put forth by the governor of New York, under virtue of the grants from Charles II. to his brother the Duke of York. On an appeal to the English crown, jurisdiction over the new territory was decided in favor of New York. This was the precursor of an armed strife which continued for 10 years between the New York authorities, and the V. settlers under the leadership of Ethan Allen and others. This state of things was partially interrupted by the outbreak of the revolutionary war. In 1777, V. declared her independence, and sought admission into the national confederation. Difficulties intervened, however, and it was not until 1791 that she was admitted into the Union; having previously bought off the claims of New York with the sum of \$30,000. Although not at the time a member of the confederated colonies, V. had played a distinguished part in the war of independence, and her "Green Mountain Boys" participated in some of the hardest fought battles of the war. In the war of 1812, the Vermonters added fresh laurels to their military record. After her admission into the Union, V. prospered beyond most of the other States. During the Civil War V. furnished more than her quota of men, sending 33,288, or more than one-tenth of the whole population. In proportion to population her loss on battlefield and in hospital was larger than that of any other Northern State. After the war there was a decrease in industry and population in many sections, but the former activity shows signs of reviving. *Pop.* (1890) 332,442; (1897) 349,450.

Vermont, in *Illinois*, a post-village and township of Fulton co., 60 m. N.W. of Springfield.

Vermont, in *Wisconsin*, a township of Dane county.

Vermontville, in *Michigan*, a post-vill. and twp. of Eaton co., abt. 10 m. N.W. of Charlotte.

Vermont'er, *n.* (*Geog.*) A native or inhabitant of the State of Vermont; a Green Mountain Boy.

Vermontese, (-ez'), *n. sing. and pl.* (*Geog.*) A Vermonter; plurally, the people of the State of Vermont.

Verner, in *Pennsylvania*, a village of Alleghany co., 10 m. E.N.E. of Pittsburg.

Vernacular, *a.* [Lat. *vernaculus*—*verna*, a slave born in his master's house.] Belonging to the country of one's birth; pertaining to the class or order in which one is born; native; indigenous; domestic; one's own by birth or nature.

—*n.* One's mother tongue, or vernacular language.

Vernacularism, (-izm), *n.* A vernacular idiom, phrase, or mode of lingual expression.

Vernacularly, *adv.* In accord or agreement with the vernacular manner.

Vernal, *a.* [Fr. and Sp., from Lat. *vernalis*—*ver*, *vērīs*, the season of spring.] Belonging to, or appearing in, the spring; as, *vernal* flowers.—*hence*, belonging to youth, the spring of life; as, *vernal* innocence.

Vernation, or **PREFOLIATION**, *n.* (*Bot.*) The arrangement of the leaves in the bud. The different modes in which the unexpanded or rudimentary leaves are disposed in the bud constitute important characters. Considering first the disposition of each leaf, we find that it may be *bent* or *folded* in various ways, or *rolled* in various ways. Of bent leaves there are three varieties,—the *reclinate* or *inflexed*, in which the upper part of the leaf is bent upon the lower; the *conduplicate*, in which the right half is folded on the left; and the *plaited* or *plicate*, folded up like a fan by a number of plaits. Of rolled leaves there are four varieties,—the *circinate*, rolled up on the axis towards the base like a crosier; the *convolute*, rolled up from one margin into a single coil; the *involute*, rolled up inwards from the two margins towards the midrib; and *revolute*, rolled up outwards from the two margins. Considering next the relation of the several leaves of the same bud, taken as a whole, to each other, we have three varieties of V., in which the component leaves are plain or slightly convex; namely, *valvate*, in which the leaves are placed nearly in a circle, and are in contact by their margins, without overlapping; *imbricate*, in which the leaves are at different levels, and the outer successively overlap the inner to a greater or less extent by their margins; and *twisted* or *spiral*, in which, as in imbricate V., the margin of one leaf overlaps that of another, while it is

Its turn is overlapped by a third. Again we have four varieties of *l.* in which the component leaves are bent or rolled; namely, *induplicate*, when involute leaves are applied together in a circle without overlapping; *equitant*, when the leaves are conduplicate, and the outer successively embrace and sit astride of those next within them, as if on a saddle; *half-equitant* and *obovate*, when a convolute leaf incloses another which is rolled up in the same way. See *BUD*.

Vernet, (*vair-nai*), the name of a family of French historical painters, including the father, son, and grandson. The first, CLAUDE JOSEPH VERNET, was b. at Avignon, 1714, received his early professional education from his father, also a painter of some ability, and subsequently repaired to Italy, where he perfected his knowledge in the manipulation of his art. He, however, principally distinguished himself as a marine painter, and, being patronized by Louis XV., received large commissions, and rose to considerable eminence. D. 1789. His son and pupil, ANTOINE CHARLES HORACE, commonly known as *Carl Vernet*, b. at Bordeaux, 1758, succeeded his father, and early displayed ability of a very superior order, though his forte lay more in historic subjects than either marine or landscape painting, and, as a battle painter, his works, on account of their remarkable spirit and accuracy of drawing, advanced their author to a position of remarkable eminence. The works of this artist may be found in nearly every gallery in France. He died in 1836, leaving his mantle to his son,

Fig. 2575. — HORACE VERNET.

HORACE VERNET, b. in Paris, 1789, and the most celebrated delineator of war subjects that the present century has probably produced. The works of this esteemed artist are so universally known and appreciated, particularly through the medium of engraved copies, that the mere names of his productions will be sufficient to bring the pictures vividly to the minds of most readers. Of these the chief are: — *The Taking of the Redoubt*; *The Dog of the Regiment*; *The Dead Trumpeter*; *The Last Cartridge*; *Death of Poniatowski*; *Massacre of the Mamelukes*; innumerable battle-pieces, and many works in other branches of the art; some Scriptural subjects, and the *Taking of Rome in 1849* by Oudinot. D. 1863.

Verneuil, (*vair-nu(r)-e*), a town of France, dept. Eure, on the Arve, 18 m. from Dreux; pop. 4,376.

Vernicose, (*-kōs*), *a.* [From Lat. *vernix*, varnish.] (*Bot.*) Appearing as if varnished, as certain leaves.

Vernier, (*ver-neer*), *n.* [Named from the inventor, Pierre Vernier.] A graduated movable index, used for measuring minutely the parts of the space between the equidistant divisions of a graduated scale.

Vernon, (*vair-naung*), a town of France, dept. Eure. *Manuf.* Cotton goods and velvets. Pop. 7,083.

Vernon, EDWARD, (*ver-nun*), an English admiral, b. in London, 1684. He captured Portobello in 1739, but was unsuccessful in his expedition against Carthage, in S. America, in 1747. D. 1757.

Vernon, in *California*, a post-village and township of Sutter co., 18 m. N.W. of Sacramento.

Vernon, in *Connecticut*, a post-village and township of Tolland co., 12 m. E.N.E. of Hartford.

Vernon, in *Illinois*, a twp. of Lake co.

Vernon, in *Indiana*, a township of Hancock county. — A township of Jackson county. — A post-village and township, capital of Jennings county, 66 miles S.S.E. of Indianapolis. — A township of Washington county.

Vernon, in *Iowa*, a township of Dubuque county. — A post-village and township of Van Buren county, 6 miles S.E. of Keosauqua. — A township of Wright county.

Vernon, in *Louisiana*, a post-village, cap. of Jackson parish, abt. 75 m. S. of Shreveport.

Vernon, in *Michigan*, a post-village and township of Shiawassee co., 70 m. N.W. of Detroit.

Vernon, in *Minnesota*, a post-township of Blue Earth county, 15 miles S.W. of Mankato. — A post-township of Dodge county.

Vernon, in *Mo.*, a W. co., bordering on Kansas; area, 850 sq. m. *Rivers*, Osage and S. Grand, also Deep Water and Miami creeks. *Cap.* Nevada. Pop. (1897) 33,220.

Vernon, in *New Jersey*, a post-village and township of Sussex co., 40 m. N.W. of Trenton.

Vernon, in *New York*, a post-village and township of Oneida co., 111 m. N.W. of Albany.

Vernon, in *Ohio*, a river which rises in Knox co., and

flowing S.E., enters the Walhonding River in Coshocton co. It is sometimes called *Owl Creek*. — A township of Clinton county. — A township of Crawford county. — A post-village and township of Trumbull county.

Vernon, in *Pennsylvania*, a township of Crawford county.

Vernon, in *Vermont*, a post-township of Windham co., 65 m. S.W. of Concord.

Vernon, in *Wisconsin*, a S.W. county, bordering on Minnesota and Iowa; area, 800 sq. m. *Rivers*, Mississippi, Kickapoo, Bad Axe, and Racoon. *Surface*, undulating; *soil*, fertile. *Population* (1890), 25,111; (1895) 27,035. *Capital*, Viroqua. — A post-village and township of Waukesha county, 24 m. southwest of Milwaukee.

Vernon Centre, in *New York*, a post-village of Oneida co., 108 m. N.W. of Albany.

Vernon Springs, in *Iowa*, a post-township of Howard co.

Vernonia, *n.* (*Bot.*) The Iron-weeds, a genus of plants, order *Asteraceæ*, comprising perennial herbs or shrubs with leaves mostly alternate. *V. noveboracensis* is a tall, showy plant, with numerous large, dark-purple flowers; stem branching at top, reddish, 3-6 feet high, found in meadows throughout the U. States. *V. fasciculata* is a coarse, purplish-green weed, 3-10 feet high; cymes compact or loose; corollas showy, dark-purple, twice longer than the involucre; — very common in woods and prairies in the Western States.

Verona, a famous city of N.E. Italy, cap. of a prov. of same name, on the Adige, 22 m. from Mantua. It is inclosed by turreted walls, and surrounded by the fortresses Mantua, Legnano, and Peschiera, and hence considered as of the highest importance for the defence of Upper Italy. It has several gates, of which one, called Porta del Palio, is of elegant architecture. *V.* contains a cathedral and a number of churches, noted for their paintings and their architecture. The town-house, the old Palazzo Bevilacqua, the Palazzo Canossa, the museum, the academy, and the modern palace of the Gran Guardia, are worthy of notice; but of all the monuments of Verona, the most interesting is the Roman amphitheatre, situate in the spacious square called the Piazza di Bra. This is one of the most magnificent remains of Roman architecture that has descended to modern times. *Manuf.* Silk, woollens, cottons, leather, gloves, and shoes, and famous dye-works. The date of the foundation of Verona is not known; but Julius Caesar established a colony here. On the decline of the empire, it experienced the fate of the other towns in the north of Italy. In 1814, on the overthrow of Napoleon I., it fell into the hands of Austria, and in 1822 a congress was held in it. Pop. 67,080.

Verona, in *Minnesota*, a township of Faribault co., abt. 33 m. S.W. of Mankato.

Verona, in *Missouri*, a post-village of Lawrence co., abt. 38 m. S.W. of Springfield.

Verona, in *New York*, a post-village and township of Oneida co., 13 m. S.W. of Rome.

Verona, in *Wisconsin*, a post-village and township of Dane co., 8 m. S.W. of Madison.

Verona Mills, in *New York*, a post-village of Oneida co., 30 m. E. of Syracuse.

Veronese, PAUL, (*ver-o-nēz*), a celebrated Italian painter, b. at Verona, 1522, and whose true name was PAUL CAGLIARI, was the son of a sculptor. His genius for the art in which he subsequently excelled was manifested at an early age. He took Titian and Tintoretto as his models, emulating the fine design and composition of the first, with the gorgeous coloring of the latter. Finding himself unappreciated at Verona, he took up his residence at Venice, which city he embellished with a series of masterpieces. His most admired works are *The Marriage of Cana*, and the *Apotheosis of Venice*. D. 1588.

Veronica, *n.* (*Bot.*) A genus of plants, order *Scrophulariaceæ*, consisting of herbs or under-shrubs, many of which, and chiefly the beautiful German Speedwell, *V. chamædrys*, native of Europe (Fig. 2576) are

Fig. 2576. — VERONICA.

cultivated to adorn our flower borders and green-houses. Their flowers are generally produced in close elongated spikes, and the blue color predominates. *V. virginica*, the Culver's Physic, one of the several American species, is distinguished by its white corolla.

Veronica, a saint of the Roman Catholic Church, who, according to the legend, was one of the women who met our Lord on his way to Calvary. As he was sinking,

overpowered by fatigue, under the weight of the cross, *V.* offered him her veil, to wipe the sweat from his brow, when, wondrous to tell, the divine features were miraculously impressed upon the cloth, and remained as a permanent picture of the face of our Lord. This miraculous picture is reported to have been preserved in Rome at St. Peter's Church from about the year 700. Another, of similar appearance, is preserved at Milan. Many Catholic writers have supposed that the name *Veronica* is but founded on an erroneous application of what in reality was meant to designate not the personage, but the picture, which was described as *vera icon* (Gr. *eikon*), "the true image" (*i. e.* of Christ).

Verplanck's, in *New York*, a post-village of Westchester co., abt. 40 m. N. of New York city.

Verret, in *Louisiana*, a lake of Assumption parish, 10 m. long, connected by a short outlet with Grand River and Lake Chetimaches.

Verrocchio, ANDREA, an Italian artist, b. in Florence, 1432. He was at once a sculptor, a goldsmith, and a painter, but was most distinguished in the first-named capacity. He was the first to make moulds of the human form to aid him in designing. D. 1488.

Verucose, **Verucous**, *a.* [From Lat. *verruca*, a wart.] Characterized by the presence of warts; warty.

Versailles, (*vair-si*), a city of France, cap. of the dept. of Seine-et-Oise, 11 m. from Paris. It has few manufactures, and little trade. It is the see of a bishop, and contains a public library of 50,000 vols., many palatial edifices, and spacious squares; but is chiefly noted for its magnificent palace, which was built by Louis XIV., and continued to be the residence of the court from 1672 till 1789. From that memorable year, however, when both king and queen were led by the mob in triumph to Paris — their first station to the scaffold, the palace of *V.*, a part of which was converted into a museum of painting and sculpture by Louis Philippe in 1837, remained untenanted till the no less memorable year 1871, when it was taken possession of by King Wilhelm I. of Prussia. Since the establishment of the Republic, the sittings of the Nat. Assembly are held here.

Versailles, in *Illinois*, a post-village and township of Brown co., abt. 48 m. E. of Quincy.

Versailles, in *Indiana*, a post-town, cap. of Ripley co., 70 m. S.E. of Indianapolis.

Versailles, in *Kentucky*, a post-village, cap. of Woodford co., 13 m. S.E. of Frankfort.

Versailles, in *Missouri*, a post-town, cap. of Morgan co., 40 m. W.S.W. of Jefferson City.

Versailles, in *Ohio*, a post-village of Darke co., 17 m. E. of Union City.

Versailles, in *Pennsylvania*, a township of Alleghany co.

Versailles, in *Tennessee*, a post-village of Rutherford co., abt. 34 m. S.E. of Nashville.

Versatile, *a.* [Lat. *versatilis*, from *verso*, to turn about often.] That may be turned or moved round, as a screw. — Liable to be turned in opinion; changeable; unsteady; fickle; variable; as, a person of *versatile* disposition.

— Turning with ease and readiness from one thing to another; of easy application to a new, or to various subjects; as, a man of *versatile* accomplishments.

(*Bot.*) Swinging or oscillating easily, as the anthers of certain grasses.

Versatility, *n.* [Fr. *versatilité*.] State or quality of being versatile.

Verse, *n.* [Fr. *vers*; Lat. *versus*, a line of writing, a verse, from *verto*, *versum*, to turn.] A line, generally of poetry, consisting of a certain number of long and short syllables, disposed according to the rules of the species of poetry which the author intends to compose, as the *hexameter*, *pentameter*, *tetrameter*, *Alexandrine*, (*q. v.*) Two or more verses form a *stanza*, or *strophe*. — Metrical language; versification; rhythmical arrangement of words; poetry; rhyme; poetical composition; as, "In splay-foot *verse* or hobbling prose." (*Prior*). — A short division of any composition in words, particularly of the chapters in the Scriptures; as, the first *verse* in the book of Genesis. — A stanza; a stave; a strophe; a short division of poetical composition; as, a psalm of four *verses*. (Used commonly, but improperly.) — A poetical piece; as, "This *verse*, my friend, be thine." — *Pepe*.

(*Mus.*) A portion of an anthem to be executed by a single voice to each part.

Blank verse. (*Poet.*) See *BLANK VERSE*. — *Heroic verse*. (*Pros.*) See *HEROIC*. — See also *PROSODY*, *RHYME*, and *RHYTHM*.

Versed, (*vérs*), *p. a.* [From Lat. *verto*, to turn.] Familiar with; skilled in; practised; acquainted with, as the result of thought, study, experience, &c.; as, a man *versed* in literary composition.

Versed sine. (*Trig.*) The difference between unity and the co-sine of an angle.

Verse-man, **Verse-monger**, *n.* A dabbler in poetry; a writer of verses; a poetaster; — used generally as implicative of contempt.

Versetz, (*ver-sétz*), a fortified town of Hungary, 40 m. from Temesvar. *Manuf.* Silk. Pop. 20,000.

Vershire, in *Vermont*, a post-township of Orange co., 25 m. S.S.E. of Montpelier.

Versicle, (*vérsi-kl*), *n.* [Lat. *versiculus*.] A little verse.

Versicolor, **Versicolored**, *a.* [Lat. *verso*, to turn, twist, and Eng. *color*.] Changeable in color; having a diversity of colors.

Versification, *n.* [Fr., from Lat. *versificatio*.] Act, art, or practice of versifying, or of composing poetic verse; metrical composition.

Versificator, *n.* A versifier; a composer of verses. (*R.*) **Versifier**, *n.* One who makes verses; one who versifies, or composes what he considers as poetry; — gener-

ally, a poetaster; — as implying a depreciatory application. — One who expresses in, or converts into verse, the ideas of another conveyed in prose.

Ver'sify, *v. n.* [Fr. *versifier*.] To make verses. — *v. a.* To relate, describe, or illustrate in verse; as, "to *versify* the truth." (*Daniel*). — To turn into verses; as, to *versify* the Psalms.

Version, (*ver'shon*), *n.* [Fr. and Sp., from Low Lat. *versio*, a turning.] The rendering of thoughts or ideas expressed in one language, into words of a similar signification in another language; act of translating or interpreting. — That which is translated or rendered from one language into another.

Verst, *n.* [Russ. *verstá*.] In Russia, a measure of length containing 3,500 feet, or about two-thirds of an English mile.

Ver'sus, *prep.* [Lat., toward.] Against; — commonly used in legal phraseology; as, the State of Pennsylvania *versus* the city of Philadelphia.

Versute, *a.* [From Lat. *vertere*, *versum*, to turn.] Cunning; wily; deceitful; artful; insidious. (R.)

Vert, *n.* [Fr., green, from Lat. *viridis*.] (*Her.*) A tincture. See *HERALDRY*.

Vertebra, *n.*; *pl.* VERTEBRÆ. [Lat., from *verto*, to turn.] (*Anat.*) One of the bones composing the spinal column. See *SPINE*.

Vertebral, *a.* [Fr.] Pertaining or relating to the vertebrae, or joints of the spine or backbone; as, the *vertebral* arteries.

Vertebra'ta, *n.*; *pl.* VERTEBRATES. [Lat. *vertebratus*, having joints.] (*Zoöl.*) A primary division of the animal kingdom, including those which have a cerebro-spinal nervous axis, protected by a bony cylinder composed of a succession of vertebrae, which are expanded into a cranium, where they enclose the enlarged anterior or upper portion of the nervous axis, called the *brain*. *V.* comprise five classes: *Mammalia*, *Birds*, *Reptiles*, *Batrachians*, and *Fishes*. The hag and lamprey (*Cyclostomata*) and the lancelet (*Amphioxus*) are vertebrates of lower types than the fishes, while the tunicates and the worm-like balanoglossus seem to be ancestral forms.

Vertebrate, **Vertebrated**, *a.* (*Anat.*) Possessing vertebrae.

(*Bot.*) Contracted at intervals, so as to resemble the spine in animals.

Vert'ext, *n.*; *Eng. pl.* VERTEXES; Lat. *pl.* VERTICES. [Lat., from *verto*, to turn.] That round which anything turns or revolves; top; highest point; summit; apex; crown; hence, specifically, the zenith, or pole of the heavens, round which the heavens are said to revolve; also, the top or crown of the head.

(*Math.*) The top or terminating point opposite the base. *V.* of a curve, any point in which a diameter meets the curve. — *V.* of an angle, or cone, the point in which the sides of the angle or cone intersect. — *V.* of a surface of revolution, that point where the axis penetrates the surface.

Vert'ical, *a.* [Fr., from Lat. *vertex*.] Pertaining to, or placed in, the vertex; placed or being in the zenith, or perpendicularly over the head; as, a *vertical* sun. — Straight; plumb; upright; being in a position perpendicular to the plane of the horizon; as, a *vertical* line.

V. angle. (*Geom.*) The angle formed by two straight lines which intersect each other.

V. circle. (*Astron.*) A great circle of the sphere passing through the zenith and nadir; — the meridian and all azimuth circles are *vertical* circles.

V. fire. (*Mil.*) The fire of heavy artillery, as of guns throwing shells, under high angles of elevation.

Vertical leaves. (*Bot.*) Leaves maintaining such a degree of perpendicularity that neither of the sides can be properly designated as the upper or under.

Vertical line, the direction of a plumb-line at any point of the earth's surface; or, the line which points to the zenith, and is, therefore, perpendicular to the horizontal plane at the point. — *Vertical plane.* (*Comp. Sections.*) A plane passing through the vertex and axis of a cone. — (*Perspect.*) The plane passing through the point of sight, and perpendicular to the ground plane. — (*Projections.*) Any plane intersecting a vertical line.

— *n.* (*Astron.*) A great circle of the sphere, passing through the zenith and nadir, and having its plane perpendicular to the horizon.

Verticality, **Vert'icalness**, *n.* State or quality of being vertical.

Vert'ically, *adv.* In a vertical manner.

Verticel, **Vert'icil**, *n.* (*Bot.*) A whorl.

Verticillas'ter, *n.* (*Bot.*) The pair of dense cymes forming an apparent verticle in most *Labiatae*.

Verticillate, **Vertic'illated**, *a.* (*Bot.*) Noting a ring formed round a common axis, as of leaves round a stem, or the sepals, petals, and stamens round an ovary.

Verticity, (*-tis'i-te*), *n.* [From Lat. *vertex*.] Power of rotation or revolution.

Vert'icle, (*-ti'kl*), *n.* A hinge; an axis.

Vertiginate, (*-tij'*), *a.* Turned round; giddy.

Vertiginous, (*-tij'in-us*), *a.* [Fr. *vertigineux*, from Lat. *vertigo*, *vertiginis*.] Rotary; revolving; whirling; turning round; as, the *vertiginous* motion of the earth. — Hence, dizzy; giddy; affected with vertigo; as, choke-damp makes miners *vertiginous*.

Vertig'inousness, *n.* State or quality of being vertiginous.

Vert'igo, *n.* [Fr. *vertige*, from Lat. *vertigo* — *verto*, to turn.] Giddiness of the head; dizziness or swimming of the head. This affection is a common symptom of disordered circulation in the brain, and of nervous and general debility.

(*Zoöl.*) A genus of marsh or land snails; — so named from the abrupt twist of the volutions of the shell.

Vertilin'ear, *a.* Rectilinear: in a straight line.

Verton, (*vair-too*), a town of France, dept. of Loire-Inférieure, 4 m. from Nantes; pop. 6,418.

Vertum'nus, (*Myth.*) One of the Latin deities. From the connection of the name with the word *verto*, he was worshipped as being concerned with everything relating to change in the seasons, vegetation, &c.

Ver'us, LUCIUS CÆSARICUS COMMODUS, a Roman emperor who reigned conjointly with Marcus Aurelius from A. D. 161 to 167, in which latter year he died from apoplexy superinduced by his intemperate habits.

Ver'vain, *n.* (*Bot.*) See *VERBENA*.

Verve, *n.* [Fr.] Animation; enthusiasm; vim; spirit; energy; affluat.

Ver'vels, **Var'vels**, *n. pl.* (*Fal.*) Small rings attached to the ends of the jesses of a hawk.

Verviek, or **WERICK**, (*vair-vek*), a frontier town of Belgium, in W. Flanders, on the Lyt, 9 m. from Ypres; pop. 6,846.

Verviers, (*vair've-ai*), a town of Belgium, on the Wesdre or Vesdre, 15 m. from Liège. *Manuf.* Woollens, dyes, soap, vitriol, and aqua-fortis. *Pop.* 32,375.

Vervine, (*vair've*), a town of France, dept. Aisne, 21 m. from Laon; pop. 4,000.

Ver'y, *a.* [Fr. *vrai*, from Lat. *verus*, true.] Real; true; actual; veritable.

— *adv.* In a high, great, or eminent degree, but not generally the highest; exceedingly; to no small extent; as, a *very* good fellow, a *very* sad accident; — *very*, when preceding participles, is followed by *much*, or by some approximately equivalent adverb; as, he is *very* far gone in liquor; I was *very* much surprised to hear it.

Vesalius, ANDREAS, the greatest anatomist of his age, and the father of modern anatomy, B. at Brussels, in 1513 or 1514. In 1544 he was appointed chief physician to the Emperor Charles V., and on his abdication in 1555 he was nominated to the same office by his son, Philip II. His opposition to the Galenic doctrines, his habit of dissecting human bodies, then considered impious, and the great reputation he enjoyed at the Spanish court, raised him many enemies; and a rumor that he had opened the body of a young Spanish nobleman whose heart showed symptoms of vitality, having got abroad, he was publicly accused of murder. The charge was taken up by the clergy and the medical faculty, to whom he was obnoxious, and also by the relations of the deceased; and though he enjoyed the protection of the king, he was obliged to flee from the persecution by which he was assailed, and to travel into Palestine by way of expiation of his alleged guilt. On his return he was shipwrecked on the island of Zante, where he perished miserably of cold and hunger, 1564. He was the author of numerous works, but that by which he is best known is entitled *De Humana Corporis Fabrica*.

Ves'ical, *a.* [From Lat. *vesica*, the bladder.] (*Anat.*) Pertaining or having reference to the bladder.

Ves'icant, *n.* (*Med.*) Same as *EPISPATIC*, *q. v.*

Ves'icate, *v. a.* [From Lat. *vesica*.] To blister, as the skin; to separate the cuticle by inflaming the skin.

Ves'ication, *n.* [Fr.] The process of raising little cuticular blisters on the skin.

Ves'icatory, *n.* [Fr. *vesicatoire*.] A blistering application or plaster.

— *a.* Having the property, when applied to the skin, of raising a blister.

Vesicle, (*ves'i-kl*), *n.* [Lat. *vesicula*.] (*Med.*) A small blister or bladder-like tumor formed by an elevation of the cuticle, and filled with a liquid fluid.

(*Bot.*) A gland or bladder-like cavity filled with air.

Vesic'ular, *a.* [Fr. *vesiculaire*.] Pertaining or relating to, or consisting of, vesicles. — Hollow; full of crevices or interstices. — Bladdery; vesiculate.

Vesic'ulate, **Vesic'ulose**, **Vesic'ulous**, *a.* [From Lat. *vesiculosus*.] Full of bladders; having little bladders or surface-glands.

Vesoul, (*ve-zool*), a town of France, dept. Haute-Saône, 236 m. E.S.E. of Paris. *Manuf.* Unimportant. *Pop.* 7,677.

Ves'p'rie, or **Ves'p'idie**, *n. pl.* [Lat. *vespa*, a wasp.] The Wasps, a family of aculeated hymenopterous insects characterized by their geniculate antennæ, composed in the males of thirteen joints, and sometimes in this sex hooked at the extremity. Mandibles strong and dentated; elypeus large; ligula plumose or bilobed. The sting of the females and neuters are long, powerful, and highly venomous. The larvæ of the wasp tribe are vermiform and without feet. The genus *Polistes* (Fig. 2577) contains wasps which build an open nest of comparatively few cells arranged in one tier, and attached by a short pedicel. The genera *Odynerus* and *Eumenes* comprise the solitary wasps or sand-wasps, which build nests of sand in which the mother deposits, at the same time with the egg, the bodies of insects, killed for the purpose, upon which the larva feeds.

Vespasian, TITUS FLAVIUS VESPASIANUS, (*ves-pā'zhe-an*), a Roman emperor, B. of a poor family in the country of the Sabines, A. D. 9. He served in the Roman armies, gradually rising to distinction, and in 66 was charged by Nero with the conduct of the Jewish war. He was

still engaged in it when Nero died, and while the civil war was going on between Otho and Vitellius, Vespasian was proclaimed emperor, A. D. 69. He returned to Italy, leaving the conduct of the Jewish war to his son Titus, and applied himself to the re-establishment of order, and the improvement of the administration. He contented himself with the outward life of a private citizen, and contributed the force of his own example towards the introduction of a simpler mode of life, and purer morals. The Jewish war ended in 70, and the next year V. and Titus had a joint triumph. V. died, A. D. 79, leaving two sons, Titus and Domitianus, who both became emperors.

Ves'per, *n.* [Lat., the evening, or evening star: from Gr. *hesperos*.] *Hesper*; the evening star: — a name given to the planet Venus when it appears after sunset. — Hence, the evening.

— *a.* Pertaining or having reference to the evening, or to the religious service of vespers; as, a *vesper* hymn, the *vesper* bell.

Ves'pers, *n. pl.* (*Eccl.*) An evening service of very ancient use, being plainly referred to in the apostolical constitutions, and is noticeable as that one among the canonical hours which in the Roman Catholic Church continues to be regularly sung as one of the ordinary public services of the parish churches, no less than in cathedrals where the entire of the hours are chanted. It resembles hands, and consists of five psalms and antiphons, a lesson, a hymn with versicle and response, a canticle (the Magnificat), and a collect or prayer. The psalms sung at vespers are Ps. cix., cxlvii., which are distributed over the several days of the week. The service of vespers has given occasion to some of the most brilliant efforts of modern musical composers.

Vespers, (*Sicilian*.) See *SICILIAN VESPERS*.

Vespertilio, *n.* (*Zoöl.*) A genus of mammalia, order *Chiroptera*, comprising the common bats. See *BAT*.

Ves'pertine, *a.* [Lat. *vespertinus*.] Belonging to, or being or happening in, the evening.

Vespiary, *n.* A habitation or nest of wasps.

Ves'sel, *n.* [Fr. *vaisseau*, from late Lat. *vascillum* — Lat. *vas*, *vasis*, a vessel.] A concave or hollow utensil made to hold either liquids or solids, as a cup, a bowl, a dish, a vase, a kettle, a barrel, a hoghead, &c.

— In a figurative sense, something receiving or containing; hence, one into whom, or that into which, anything is supposed to be poured; — chiefly employed in scriptural phraseology; as, the few chosen *vessels*.

(*Anat.*) Any tube or canal, in which the blood and other humors are contained, secreted, or circulated, as the arteries, veins, lymphatics, spermatics, &c.

(*Bot.*) A canal or tube of very small bore, in plants, in which the sap is contained and conveyed; also, a bag or utricle, filled with pulp, and serving as a reservoir for sap; also, a spiral canal, usually of a large bore.

(*Naut.*) Any structure made to float upon the water,

Fig. 2578. — ANCIENT LIGHT-VESEL.

(Copied from a painting at Pompeii.)

for the purposes of commerce, war, &c., whether impelled by wind, steam, or oars; as, "The Phœnicians first invented open *vessels*." — *Heylyn*.

Ves'sels, **Ar'mored**, **ARMOR-PLATED SHIPS**, or **IRONCLADS**. (*Navy*.) The various names given to war-vessels covered externally with iron or steel as a protection against artillery. For the successive steps taken in plating vessels with iron see *ARMOR-PLATE*. Vessels of this kind were first tried in battle during the Crimean War, when floating batteries plated with 4 and 4½-in. iron armor successfully engaged a Russian fort, resisting, at a distance of 1,000 yards, 32-lb. shots fired with 10-lb. charges. The next engagement in which iron-clads took part was the famous one in Hampton Roads in 1862, when the memorable battle took place between Ericsson's turreted *Monitor* and the *Merrimac*, whose sloping roof was plated with railroad iron. The impunity with which both these vessels resisted the heaviest naval artillery in use at that period sounded the knell of the wooden ship-of-war, and all the nations of the world were stirred to an active endeavor to replace their old navies with ironclad ships, which it was hoped to render impregnable. The most significant practical test, however, to which armored vessels, of late type, have been put was that made during the Japan-Chinese War (*q. v.*), in which the European vessels of the navies of the contending powers proved the reverse of impregnable, several of the Chinese iron-clads being destroyed or sunk, while those of the Japanese navy suffered serious injury. This experience in actual war, with that gained in numerous experiments in testing the penetrating power of modern projectiles and the resistance of iron and steel plates,

Fig. 2577. — WASP, (*Polistes pallipes*.)

has greatly modified the conceptions formerly entertained concerning armor-plating, many ships-of-war, built at great expense and in accordance with the most advanced ideas of their period, having been rendered obsolete and practically useless. Iron, years ago, was replaced by steel in the construction of armor; the thickness gradually increased until the weight of battleships became immense, and ordinary steel was replaced by the American invention of nickel-steel, the alloying of the iron with a small percentage of nickel adding very greatly to its toughness, while the Harvey process of surface-hardening has also added greatly to the resisting power of armor. The principal incentive to the application of armor in its early days was the increased use of shell in place of solid shot, and the terrible effects caused by the explosion of shells within wooden vessels. A recently discovered defect in the use of shells against armored vessels is their explosion on contact, or before penetration to any depth can be attained, this greatly reducing their effectiveness. The inventive faculty is now at work seeking to devise means to retard shell explosion, that they may have time for deeper penetration and do more damage on exploding. Until 1894 the prevailing practice in foreign countries was to fit a small amount of very heavy armor for a certain distance along the water-line, the remainder of the side being covered with thin armor. This system has been changed, and the present tendency is to extend the heavy armor over a greater area, with a corresponding decrease in its thickness. Of the battleships of the existing American navy may be instanced the *Kearsarge*, whose armor is 15 inches thick at the top and tapers to 9½ at the bottom. It extends 35 feet above and 4 below the water-line, and tapers to 4 inches at the bow, where it meets the ram. There is also a protective deck, with armor from 2¾ to 5 inches thick. All the armor is of Harveyized nickel-steel. The cruisers have little vertical armor, their protection being afforded by a thick protective deck. The tendency is to use as little wood as possible in the construction of these vessels, woodwork having proved a great source of danger in the Japan-China War, from its tendency to take fire. See BATTLESHIP; CRUISER; MONITOR; NAVY OF THE UNITED STATES, &c.

Ves'sionon, Ves'signon, *n.* [Fr. *vessigon*, from Lat. *vesica*, a bladder, a blister.] (*Far.*) A wind-gall.

Vest, *n.* [Fr. *veste*; from Lat. *vestis*, a garment.] Something put on as clothing; an outer garment; a dress; a robe; a vestment; as, a military *vest* of purple.

—Hence, any external covering. —Specifically, a short garment covering the upper part of the body, but without sleeves, worn under the coat, and otherwise called a *waistcoat*; as, a black satin *vest*.

—*v. a.* To clothe; to dress; to invest with a long garment; to cover, surround, or encompass closely; as, a *vested* priest. —Hence, to put or place in possession of; to furnish or invest with; — preceding *with*; as, to be *vested with* authority. —To invest; to lay out to interest or profit; as, to *vest* one's fortune in public securities.

—*v. n.* [Norm. *vest*, *vested*.] To come or descend to; to be fixed or settled; to take effect, as a title or right; as, an estate *vests* in the heir at law.

Ves'ta, *n.* [Lat.; Gr. *Hestia*, primarily the hearth of a house.] (*Myth.*) A divinity equally venerated by the Greeks and Romans. By some she was reputed to be the daughter of Saturn and Rhea; by others, the child of Ops. She was a maiden divinity, and, having vowed eternal chastity by the head of Zeus, was consequently accepted as the patroness of all virgins, and was regarded as the goddess of fire, particularly the fire of the domestic hearth, and as the presiding divinity of union and conjugal happiness. A fire burning on a hearth was regarded as her symbol, and each state had its public hearth or altar, on which a perpetual fire was kept burning. Numa built her a temple at Rome, in which her altar was fed with perpetual fire attended to by virgins dedicated to her service, called Vestals.

(*Astron.*) An asteroid discovered by Dr. Olbers in 1807.

Ves'tal, *n.* [Lat. *vestalis*.] One of the virgin priestesses who, among the Romans, were consecrated to the service of Vesta. Their employment was to take care that the sacred fire of Vesta was not extinguished. It was required that they should be born of a good family, and be without blemish or deformity in every part of their body. The period during which the priestess was bound to the service of Vesta was thirty years, the first ten being occupied with learning her duties, the next in performing them, and the last in teaching them to others. When she entered upon her office, the vestal took upon herself a solemn vow of chastity for the thirty years of her service; the dreadful punishment of a violation of which was, that she should be buried alive in a subterranean vault near the Colline Gate, to which she was carried on a bier, as if dead, and where she found a light, with a scanty supply of bread, water, milk, and oil. For the thousand years during which

Fig. 2579. — VESTA.

the order existed, only eighteen of the vestals were punished for the violation of their vow. The order was abolished by Theodosius the Great, and the fire of Vesta extinguished.

—*a.* Relating to the goddess Vesta. —Hence, virgin.

Ves'tal, in *New York*, a post-township of Broome co., 145 m. W.S.W. of Albany.

Vest'ed, *p. a.* Fixed; not in a state of contingency or suspension; as, *vested* rights.

V. remainder. (*Law.*) An estate by which a present interest passes to the party, though to be enjoyed in *future*, and by which the estate is invariably fixed to remain to a determinate purpose after the particular estate has been spent.

Vestia'rian, *a.* Relating to a wardrobe, or to dress in general.

Vest'iar, *n.* [Lat. *vestiarius*.] A wardrobe. (*R.*)

Vestib'ular, *a.* Pertaining to, or resembling, a vestibule.

Vestib'ule, (*vest'i-būl*), *n.* [Fr.; Lat. *vestibulum*, probably because an altar to Vesta was placed therein.] (*Arch.*) The porch or entrance into a house, or a long open space before the door, but covered; also, a little antechamber before the entrance of an ordinary apartment.

(*Anat.*) See EAR.

Vestige, (*vest'ij*), *n.* [Fr.; Lat. *vestigium*.] A track or footprint; a footprint; trace; sign; but mostly used for the mark or remains of something that has passed away; as, the *vestiges* of ancient Thebes.

Vest'ing, Vest'-piece, *n.* Cloth or material for making vests; a vest-pattern.

Vest'ment, *n.* [Fr. *vêtement*; Lat. *vestimentum*.] A garment; some part of clothing or dress; especially, some part of outer clothing, but it is not restricted to any particular garment; a robe; an article of dress; as, sacerdotal *vestments*.

Ves'tris, GAETANO APOLLINO BALTHAZAR, a celebrated Italian dancer, b. at Florence, 1720. He became the greatest performer of his day, and was surnamed "the god of dancing;" but his vanity was even greater than his reputation. He was in the habit of saying, "There are only three great men in Europe; myself, Voltaire, and the King of Prussia" (Frederick II.). D. 1808. His natural son, Marie Augustin Vestris, also became celebrated as a dancer.

Ves'try, *n.* [Fr. *vestiaire*, from Lat. *vestiarium*, a wardrobe.] The robing room attached to a church, where the ecclesiastical vestments are kept. —In the U. States Episcopal Church, a committee chosen annually by the parish, who, in conjunction with the church-wardens, manage its temporal concerns.

Vesture, (*vest'jur*), *n.* [O. Fr. robes, vestments; from Lat. *vestis*.] A robe; a dress; vestment; habit; covering; garments in general; envelope.

(*Law.*) Grain covering land; as, the *vesture* of an acre. **Vestured**, (*vest'jurd*), *p. a.* Covered with vesture; apparelled; enveloped.

Vest'ure-shroud, *n.* A shroud for a dead body.

Vesuv'ian, *a.* [Fr. *Vesuvien*, from Lat. *Vesuvianus*.] (*Geog.*) Pertaining or having reference to Mount Vesuvius, Italy.

—*n.* [Fr. *véruvienne*.] A fusee; a match for lighting cigars.

Vesuv'ian, *n.* (*Min.*) A name given by Werner to the Idocrase of Italy, after the locality, Vesuvius, where it was first noticed in ejected blocks, associated with mica, hornblende, &c. It is of a hair-brown or olive-green color.

Vesuv'ius, one of the most celebrated volcanic mountains in Europe, 6 m. E. of Naples. It is 30 m. in circuit at its base, and 3,949 ft. in height (Fig. 152). Towns and villages cover the lower portion of the mountain, and villas and luxuriant groves are scattered over the higher terraces, while above the evidences of fertility succeeds a region of absolute waste and sterility. The apex of the mountain has the appearance of a truncated cone deeply covered with ashes; the extreme top presents the character of a narrow ledge of burnt earth nearly two miles in circuit, enclosing the open crater, which has a depth of 350 feet; the bottom being a flat plain, nearly half a mile in diameter. South of the crater is the Monte di Somma, one side of which is a rugged precipice, the others being shelving declivities. The first recorded eruption was in 79, when it overwhelmed and buried Herculaneum, Pompeii, and Stabiae, and proved fatal to Pliny, the naturalist. The ashes on that occasion are said to have been carried not only to Rome, but as far as Africa. Since then many eruptions are recorded; the most remarkable are those of 1036, 1779, 1822, 1839, and 1855. The vine yielding the wine called *Lagrime*, or *Lachryma Christi*, is cultivated only on the slopes of V. Since 1880, a R.R. has been in operation to near the summit of V.

Veszprim, (*ves'sprim*), a town of Hungary, on the Sed, 60 m. from Buda; pop. 13,000.

Vetch, (*veh*), *n.* [Fr. *vesce*; It. *veccia*.] (*Bot.*) See VICIA.

Vetch'ling, *n.* (*Bot.*) See LATHYRUS.

Vet'eran, *a.* [Fr., from Lat. *veteranus* — *vetus*, *veteris*, that has existed for a long time.] Having been long exercised in anything; long practised or experienced; as, *veteran* troops, a *veteran* dramatist.

—*n.* An old soldier; one who has been long exercised in any service or art, particularly in war; one who has grown old in service, and has had much experience; as, "We were regarded as *veterans* in the *beau monde*." *Add.*

Vet'eran, in *New York*, a township of Chemung co., 10 m. E.N.E. of Elmira.

Vet'erina'rian, *n.* [Fr. *vétérinaire*, from Lat. *veterinus* — *vehere*, to bear, carry.] One skilled in the veterinary art, or the treatment of diseases of cattle or other domestic animals.

Vet'erinary, *a.* Pertaining to the art of healing or

treating the diseases of veterinary animals, as oxen, horses, sheep, &c.; as, a *veterinary* surgeon.

V. art. The medical management of the domestic animals, still commonly called *farriery*, appears to have been studied by the ancient Egyptians, as well as by the Greeks and Romans, and Hippocrates contributed a treatise on equine disorders. But in modern times, *V. medicine*, as a scientific art, takes date only from 1761, when the first *V. college* was established at Lyons under royal patronage. Five years after, the flourishing school of Alfort, near Paris, was founded. In 1791, the London college was organized, and since that time the art has made considerable progress.

Ve'to, *n.* [Lat., I forbid.] (*Pol.*) A term including the refusal of the executive officer whose assent is necessary to perfect a law which has been passed by the legislative body, and the message which is usually sent, stating such refusal and the reasons therefor. By the constitution of the United States government, the President has the power to prevent the enactment of any law, by refusing to sign the same after its passage, unless it be subsequently enacted by a vote of two-thirds of each house. When a bill is engrossed, and has received the sanction of both houses, it is transmitted to the President for his approbation. If he approves of it, he signs it. If he does not, he sends it, with his objections, to the house in which it originated, and that house enters the objections on its journal, and proceeds to reconsider the bill. Similar powers are possessed by the governors of many of the States.

—*v. a.* To disallow; to prohibit; to forbid; to withhold assent, as to a bill for a law, or the passage of a decree, and thus prevent its enactment; as, the President *vetoed* the bill.

Ve'toist, *n.* An advocate of the exercise of the veto.

Vevay, (*ver-ai'*), a well-built town of Switzerland, canton of Vaud, on the Lake of Geneva, 11 m. from Lausanne. *Manuf.* Jewelry, woollens, &c. *Pop.* 5,372.

Vevay, in *Indiana*, a post-village, cap. of Switzerland co., on the Ohio, 75 m. S.W. of Cincinnati.

Vevay, in *Michigan*, a twp. of Ingham co.

Vex, *v. a.* [Fr. *vêxer*; Lat. *vezo*, *vezäre*.] To irritate; to plague; to torment; to make angry by little provocations; to harass; to worry; to trouble; to afflict; as, this is enough to *vex* a saint. —To disturb, agitate, fret, or disquiet; as, "mad as the *vexed* sea." —*Shaks.*

Vexed question, a question characterized by prolixity or great pertinacity of discussion, or an intricate question giving rise to much debate.

—*v. n.* To be uneasy; to fret; to be teased or irritated. (*R.*)

Vexation, (*vels-d'shun*), *n.* [Fr., from Lat. *vezatio*.] Act of vexing or irritating, or of troubling, disquieting, and harassing; state of being irritated or disturbed in mind; disquiet; worry; agitation; great uneasiness; trouble. —Cause of trouble, disquiet, or uneasiness. —A vexing, harassing, or troubling by law, as by a suit maliciously prosecuted.

Vexations, (*vels-d'shus*), *a.* Causing vexation, disquiet, or uneasiness of mind; annoying; afflictive; teasing; provoking; as, a *vexatious* blunder. —Full of vexation, trouble, or disquiet; as, to lead a *vexatious* life. —Distressing; harassing; tormenting; as, *vexatious* strife.

Vexatious suit. (*Law.*) A suit causelessly or maliciously prosecuted.

Vexatiously, *adv.* In a vexatious manner.

Vexatiousness, *n.* Quality of being vexatious.

Vex'er, *n.* One who, or that which, vexes.

Vex'illar, Vex'illary, *a.* [Fr. *vezillaire*.] (*Bot.*) Designating that form of aestivation in which one piece is much larger than the others, and is folded over them, as in papilionaceous flowers.

Vexillum, *n.*; *pl.* VEXILLA. [Lat., a flag, a standard.] (*Bot.*) The standard or fifth petal placed at the back of a papilionaceous corolla.

Vex'ingly, *adv.* So as to vex, tease, annoy, or irritate.

Via, *a.* [Lat.] A road, way, or passage.

Via lactea. [Lat.] (*Astron.*) The MILKY WAY, *q. v.*

—*adv.* [Lat. ablative of *via*, road.] By the way of, as between two places; as, to go to Canada *via* N. York. (*Col.*)

Viability, *n.* Quality of being *viable*, or living after birth. —Capacity of sustaining life, or of being distributed over wide geographical space; as, the *viability* of a genus.

Viaduct, (*vi-a-duk't*), *n.* [Lat. *via*, way, and *duco*, duc-

Fig. 2580. — THE BOLLERSWAND VIADUCT.
(On the railroad from Vienna to Trieste.)

tus, to lead.] An arched bridge for carrying a road or railway across a valley at such a height as to maintain the general level of the line; — thus distinguished from an *aqueduct*, or a similar work to support a water-way.

Viable, (*vî'a-bl*), *a.* [Fr., from Lat. *vivo*, to live.] Capable of living;—applied to a fetus whose organs are properly formed, and so developed as to permit its continued existence.

Vial, *n.* [Fr. *firole*.] A phial.

Viamão, in Brazil, a lake of the prov. of Rio Grande de Sul, N. of the Lake of Patos, with which it communicates.—A village on the E. of the above lake, 12 m. E.S.E. of Porto-Alegre; *pop.* abt. 3,500.

Viana, a fortified town of Portugal, prov. of Minho, on the Lima, 37 m. from Oporto; *pop.* 8,683.

Vind, *n.* [Fr. *vind*, from Lat. *vindus*—*vivo*, *victum*.] (Used chiefly in the plural.) An article of food; victuals; meat dressed and cooked; food.

Vi-apple, *n.* The Otaheite (or Tahiti) apple.

Viareggio, (*ve-a-red'jo*), a seaport of Italy, in the former duchy of Lucca, 23 m. from Leghorn. It exports statuary marble. *Pop.* 6,344.

Viasna, a town of European Russia, prov. of Smolensk, at the junction of the rivers Viassna and Behri, 96 m. from Smolensk; *pop.* 12,000.

Viat'ic, *a.* [Lat. *viaticus*.] Pertaining or relating to a journey, or to travelling.

Viat'icum, *n.* [Lat.] Among the ancient Romans, an allowance made to soldiers, and to all persons travelling on business of state.

(*Theol.*) In the Roman Catholic Church, the Eucharist administered to dying persons. The priest is ordered to bring the sacred elements from the church to the dying person at any hour, whether by day or by night, when he may be called on for this last service of religion.

Viat'ka, in European Russia, an E. govt., bounded N.E. by the govt. of Perm, and S. by that of Kazan. *Cap.* Viatka. *Pop.* 2,347,746.—A river which rises 16 m. from Glazov, travels the centre of the above govt., and, after a course of 500 m., joins the Kama in the govt. of Kazan.—A town, the *cap.* of the above govt., on the Viatka. *Pop.* 8,000.

Viborg, an old city of Denmark, in N. Jutland, on a small lake, 25 m. W. of Randers. *V.*, at which all the great high-roads of the interior converge, is important as a military post. *Pop.* 4,972.

Vibrate, *v. n.* [Lat. *vibro*, *vibratum*, to be in tremulous motion; whence, Fr. *vibrer*.] To be in tremulous motion; to quiver; to tremble; to move to and fro, or from side to side; to oscillate; to swing.—To pass from one state to another: as, one's mind sometimes vibrates between hope and fear.—To have backward and forward motion of the constituent particles, without alternate compression and dilation of parts, as any elastic body.—To sound; to produce a vibratory effect; as, music vibrates on the ear.

—*v. a.* To swing; to brandish; to move or wave to and fro; as, to *vibrate* a lath.—To set in vibration, or affect with vibratory motion; as, *vibrated* breath.—To mark, note, or measure by swinging or moving to and fro; as, a pendulum *vibrating* seconds.

Vibratile, *a.* Tending to promote, or employed in, vibratory motion.—Possessing a continued vibratory motion.

Vibration, *n.* [Fr., from Lat. *vibro*.] Act of vibrating. (*Mech.*) The reciprocating motion of a body, as of a pendulum, a musical string, or elastic plate. The term *oscillation* is, however, more frequently used to denote a slow reciprocating motion, as that of the pendulum, which is produced by the action of gravity on the whole mass of the body; while *vibration* is generally confined to a motion with quick reciprocations, as that of a sonorous body, and which proceeds from the reciprocal action of the molecules of the body on each other when their state of equilibrium has been disturbed.

(*Mus.*) That regular reciprocal motion of a body, which, suspended or stretched between two fixed points, swings or shakes to and fro. The vibrations of chords are the source of the different tones emitted.

Vibratimble, *n.* A small or minor vibration.

Vibrative, **Vibratory**, *a.* Vibrating; consisting in vibration or oscillation; as, a *vibratory* motion.—Causing, or tending to, vibration.

Viburnum, *n.* (*Bot.*) An extensive genus of plants, order *Caprifoliaceae*, natives of N. America, Europe, and Asia, but not found in tropical regions. *V. lantanoides*, the Hobble-bush, or Wayfaring-tree (Fig. 2581), is a shrub, very ornamental when in flower. It is rather common in the rocky woods of New England and New York, which it adorns in early spring with its large cymes of brilliant white flowers. Height about 5 feet. Branches long and crooked, often trailing and rooting.

Fig. 2581. — WAYFARING-TREE, (*V. lantanoides*.)

Leaves very large, covered with a rusty pubescence when young, at length becoming green, the dust and down remaining only upon the stalk and veins.—*V. opulus*, the High Cranberry, is a handsome shrub, 8 to 12 feet high, found in woods in the Northern States. Its

red fruit resembles the common cranberry in flavor, and is often substituted for it.—*V. acerifolium*, the Maple-leaved *V.*, or Dockmackie, is a shrub 4 to 6 feet high, with yellowish-green bark, growing in woods in the U. States and in Canada.—*V. lentago*, the Sweet *V.*, is a common tree-like shrub, 10 to 15 feet high, found in rocky woods from Canada to Georgia. Its white flowers are succeeded by well-flavored, sweetish berries, of a glaucous black, sometimes called Sheep-berries.—*V. nudum*, the Withe-rod, is a small tree found in swamps in the U. States. It has large cymes on peduncles an inch or two in length; flowers white, numerous; berries black-blue, covered with a glaucous bloom, sweetish when ripe.—*V. tinus*, the Lanrestine, also called Snowball-tree and Pelotte de Neige, is an exceedingly beautiful evergreen shrub, from Europe. It is 4 to 6 feet high; leaves acute, veiny, dark shining green above, paler beneath; flowers white, tinged with red, and very showy.

Vicar, *n.* [Lat. *vicarius*.] Literally, one who is appointed as deputy to another, to perform his functions in his absence and under his authority. Hence, in the old German empire the imperial *V.* were princes who had the right of representing the Emperor in case of absence or interregnum; and the Pope is sometimes styled Christ's *V.* on earth. Commonly, however, this title is given to the substitute, whether temporary or permanent, employed to act in the place of certain ecclesiastical officials, whether individuals or corporations; as of the Pope, a bishop, a chapter, a parish priest, &c. *V.* take different names from these various considerations. *V.* of the Pope are called "vicars apostolic," and they are generally invested with episcopal authority in a place where there is no canonical bishop. *V.* of a bishop are either "vicars general," who have the full authority of the bishop all over his diocese, or "vicars forane" (Lat. *foraneus*, from *foris*, abroad), whose authority is confined to a particular district, and generally otherwise limited. The name is also applied, especially in the Roman Catholic Church, to the assistant-priest of a curate.

Vic'arage, (*-aj*), *n.* A vicar's benefice.—A vicar's residence or dwelling-house.

Vic'arial, *a.* [From *vicar*.] Pertaining, or relating to a vicar.—Vicarious; acting by delegation.

Vic'ariate, *a.* Exercising vicarious or delegated power.—*n.* Vicarship; delegated office or power.

Vic'arious, (*-us*), *a.* [Lat. *vicarius*, from *vici*.] Deputed; delegated; pertaining, or having relation to a vicar or substitute as, *vicarious* authority.—Acting or suffering for another; as, a *vicarious* agent.—Filling, or substituted in, the place of another; as, *vicarious* punishment.

Vic'ariously, *adv.* In a vicarious manner.

Vice, (*vis*), *n.* [Fr., from Lat. *viti*, a fault, blemish, imperfection, failing.] That which is deserving of being found fault with; a blemish; a stain; an imperfection; a defect; a fault; as, the *vices* of a sensational literary style.—Any voluntary action or course of conduct which deviates from the rules of moral rectitude, or from the plain laws of propriety; any moral unfitness of conduct, either from defect of duty, or from the transgression of known principles of rectitude; depravity or corruption of manners, habits, or customs; wickedness; as, a man notorious for his *vices*.—A fault or bad trick in a horse; as, sound wind and limb, and free from *vice*.

(*Dram.*) The fool or punchinello of the old English morality plays.

[Fr. *vis*, a screw, from Lat. *vitis*, a vine, the tendril of a vine being remarkable for winding.] A blacksmith's or carpenter's tool for holding a piece of metal, while operating upon it, by placing it between two jaws or nippers, and screwing them towards each other.—A machine for drawing lead into flat rods for case windows.

—*v. a.* (*imp.* and *pp.* *VICE*, (*vis*), *to hold as if in a vice*.)

Vice, [Lat., for, instead of, from *vici*, turn, change.] A prefix employed in composition, principally in words indicative of persons, and designating one who acts as proxy for another, or who is second in rank, authority, or importance; as, a *vice*-president, a *vice*-admiral, a *vice*-consul, &c.

Vice, *prep.* In stead or lieu of; in the place of; as, A is gazetted major, *vice* B, who retires on half-pay.

Vicegerency, (*-jê'ren-se*), *n.* Office of a vicegerent; agency under another; deputed power; lieutenantcy.

Vicegerent, (*-jê'rent*), *n.* [Fr. *vicegérant*; Lat. *vicem-gens*—*vici*, and *gens*, from *gero*, to bear, to carry, to act.] One who acts in the place of a superior; a lieutenant; a vicar; an officer who is deputed by a superior, or by proper authority, to exercise the powers of another.

—*a.* Possessing or exercising delegated power; acting by substitution, or in the stead of another; as, Christ, the *vicegerent* Son of the Father.

Vicenary, (*vis'-*), *a.* [Lat. *vicenarius*.] Pertaining or relating to, or consisting of, twenty.

Vicennial, (*-sên'-*), *a.* [Lat. *viceni*, twenty, and *anni*, years.] Lasting, or comprising, twenty years.

Vicenza, (*ve-cheu'za*), a city of N.E. Italy, *cap.* of a prov. of same name, 40 m. from Venice. It stands at the confluence of two rivers, one of which divides the town into two parts, connected by bridges and inclosed by walls. The principal buildings are the town-house, the Olympic theatre, (begun by Palladio, and built in imitation of the ancient Roman theatres,) the cathedral, and a number of churches containing valuable paintings. *Manuf.* Silk, woollens, leather, &c.

Vice-presidency, (*-prêz'-*), *n.* The office of a vice-president.

Vice-president, (*-prêz'-*), *n.* An office-bearer next in rank below a president; as, the *Vice-President* of the United States.

Vice-re'gal, *a.* Pertaining, or having reference to a viceroy or viceroyalty.

Vice-roy, *n.* [Lat. *vice*, and O. Fr. *roy*, a king.] A vice-king; the governor of a kingdom or country who rules in the name of the sovereign with regal authority, as the monarch's substitute.

Viceroyalty, **Vice-royship**, *n.* Dignity, office, or jurisdiction of a viceroy.

Vice Versa, [Lat.] Conversely.

Vich, or **Vique**, (*veek*), a city of Spain, 36 m. from Barcelona. *Manuf.* Linens, printed cottons, &c. *Pop.* 11,772.

Vichada, a river of the Republic of Colombia, flows into the Orinoco, after an E. course of 260 m.

Vichy, (*ve-shê'*), a small town of France, dept. of Allier, on the Allier, in a fine valley surrounded by picturesque mountains, 35 m. S.S.E. of Moulins. It is the most fashionable bathing resort in France. The springs, which rise at the foot of the volcanic mountains of Auvergne, are of the alkaline class, and the most efficacious of the kind that are known. They vary in temperature from 68° to 112° Fahr., and are used both for drinking and bathing. They are resorted to in cases of indigestion, chronic catarrh, gout, &c.

Vicia, *n.* (*Bot.*) The Vetches, a genus of plants, order *Rubaceae*, sub-order *Papilionaceae*, having a tuft of hair on the style beneath the stigma, 9 stamens united, and one free. The species are mostly climbing plants, annuals, with pinnate leaves ending in tendrils, and with no terminal leaflet. The Common Vetch, *V. sativa*, sometimes called *Ture*, introduced from Europe and found in cultivated grounds, and also cultivated in many countries as green food for cattle, has rather large, purple, blue, or red flowers in pairs, axillary and almost sessile. In cultivation, it varies considerably both in size and other particulars, as in the breadth of the leaflets, the number of them in a leaf, &c. Oats are generally sown along with it, to afford it a little support, and thus prevent its rotting in wet weather. *V. Faba* (or *Faba vulgaris*), the Coffee Bean, or Windsor Bean, is a native of Egypt; flowers white, with a large black spot on each of the alæ; seeds very large, with the large hilum at one end (see BEAN). There are several American species.

Vic'inage, (*vis'in-aj*), *n.* [Fr. *voisinage*, from Lat. *vicinia*, neighborhood.] Neighborhood; vicinity; the place or places adjoining or near.

Vic'inal, **Vic'ine**, *a.* Neighboring; near.

Vic'inity, *n.* [Lat. *vicinitas*.] Quality of being near or neighboring; not remote; proximity; propinquity; as, the *vicinity* of two places of public interest.—Neighborhood; near place; neighboring country; that which is near, or not remote; as, the *vicinity* of Germantown.

Vicious, (*vis'us*), *a.* [Fr. *vicieux*; Lat. *viciosus*, from *viti*.] Full of faults or defects; imperfect; as, a *vicious* argument.—Corrupt in principles or conduct; addicted to vice; depraved; wicked; habitually transgressing the moral law; contrary to rectitude; as, a *vicious* example, a *vicious* class of men.—Foul; impure; insalubrious; as, a *vicious* climate.—Wanting in purity or genuineness; as, *vicious* idioms.—Unruly; refractory; not well trained or broken; as, a *vicious* horse.

Viciously, (*vis'us-ly*), *a.* In a vicious manner.

Viciousness, *n.* Quality or state of being vicious.

Vicissitude, (*vis'si-tud*), *n.* [Fr.; Lat. *vicissitudo*, from *vici*, change.] Revolution, mutation, or change; as, *vicissitudes* of fortune.—Alternation; regular change or succession of one thing to another; as, the *vicissitude* of the seasons.

Vicissitudin'ary, *a.* Subject to successive vicissitudes.

Vicissitudin'ous, (*-us*), *a.* Full of changes.—Characterized by, or dependent on, a regular series or succession of changes. (*R.*)

Vicks'burg, in Mississippi, a city and port of entry, *cap.* of Warren co., on the Mississippi, 50 m. W. of Jackson. It is irregularly built on a range of hills, and is of considerable commercial importance from being one of the principal cotton marts on the Mississippi. During the Civil War, *V.*, a stronghold of the Confederates, after sustaining a heavy and memorable siege, was captured by Gen. Grant, on July 4, 1863. *Pop.* (1897) 15,200.

Vico, (*vê'ko*), GIOVANNI BATTISTA, an Italian philosopher, and one of the most original thinkers of his age, was b. at Naples in 1668, and became professor of rhetoric in the university of Naples. His principal work is entitled *Principi di una Scienza Nuova*, and first appeared in 1725. It is a philosophy of history, founded on the recognition of certain laws determining the course of events, and the progress of the human race. *V.* anticipated in some important points the speculation of some of the most eminent thinkers of a later time. His work passed through three editions in his lifetime, and then seems to have been long lost sight of. In 1827 Michelet published a French translation of it, and a German translation had appeared a few years earlier. A collected edition of *V.*'s works appeared at Naples in 1818, and was reprinted in 1835. D. 1744.

Vico'sa, or COMETA, a town of Brazil, 140 m. W. of Ceara; *pop.* of dist. 5,000.

Vic'tim, *n.* [Fr. *victime*; Lat. *victima*, probably from *vincio*, *vinctum*, to bind.] A beast for sacrifice, adorned with the fillet; or, a living being sacrificed to some deity, or in the performance of a religious rite.—Hence, a person or thing immolated, destroyed, or sacrificed in the pursuit of an end or object; as, she fell a *victim* to a seducer's arts.—A person or living thing destroyed by, or suffering grievous injury from another.—Hence, a gull; a dupe; one who is humbugged or cajoled; as, to be the *victim* of a swindler.

Vic'timize, *v. a.* To make a victim of; especially, to

make the victim of a swindling trick or transaction; to gull; to defraud; as, credulity is easily *victimised*.

Victor, *n.* [Lat., *vinco*, *victum*, to conquer.] One who conquers in war; a vanquisher; one who defeats an enemy in battle; also, one who vanquishes another in private combat or contest; one who wins or gains the advantage.

—*a.* Victorious; triumphant.

Victor I., POPE, elected about 190, was born in Africa, and was martyred under Severus, in 202.

Victor II., succeeded Leo IX., 1055. He reformed many abuses in the Church, which were condemned at the council of Florence. The council of Lyon against simony, that of Rouen enforcing celibacy among the priesthood, and that of Narbonne excommunicating those who usurped the possessions of the Church, were also convoked by him. D. 1057.

Victor III. was the successor of Gregory VII., 1086. Ghibert, the anti-pope, was supported by the army of Henry IV., and Victor renounced the pontifical dignity, but was induced to resume it in 1087. By the assistance of the Roman nobility and the Duke of Apulia, he expelled the anti-pope from Rome. Henry IV., having declared that he would invade Rome if Victor were not deposed, the senators forced the Pope to evacuate the Vatican. He retired to Monte Casino, and died there, 1088.

Victor IV., an anti-pope, whose usurpation was supported by Frederick I. and some of the cardinals. This gave rise to a schism. D. 1164.

Victor, CLAUDE PERRIN, DUKE DE BELLUNO, a marshal of France, b. at La Marche (Vosges), 1764. In 1781, he enlisted as a private soldier in an artillery regiment, and so greatly distinguished himself at the outbreak of the revolutionary war, that he rose rapidly to the rank of general. At the battle of Friedland his valor was so conspicuous that Napoleon created him, upon the spot, marshal of France. In 1807 he held the governorship of Berlin, and afterwards served in Spain and Portugal. He was recalled in 1812 to take a command in the grand army about to invade Russia; and at the passage of the Beresina, he held in check the pursuing Russians, and saved a large number of his fellow-soldiers, who would otherwise have fallen into the power of the enemy. During the campaign of 1813 he evinced his accustomed bravery and skill, and at the battle of Craon he was carried off the field severely wounded. After the abdication of Napoleon I., he gave in his adherence to the Bourbons; followed Louis XVIII. to Ghent; became minister of war in 1821; and, in 1823, acted as second in command in the Spanish campaign. D. 1841.

Victor, in *Illinois*, a post-township of De Kalb county.

Victor, in *Michigan*, a post-township of Clinton county.

Victor, in *New York*, a post-village and township of Ontario co., 20 m. S.E. of Rochester.

Victor Amadeus I., (*a-mai-de-us*), Duke of Savoy, was b. 1587, son of Charles Emmanuel I., and crowned 1630. He married the sister of Louis XIII. of France, and in his latter years commanded the forces of that sovereign in his Italian wars. D. 1637.

VICTOR AMADEUS II., Duke of Savoy, and first king of Sardinia, b. 1665, succeeded his father in the duchy, 1675. He married Maria d'Orleans, niece of Louis XIV., but entered, nevertheless, on a tortuous policy, which involved him in a war with that monarch. Having acquired Sicily, he exchanged that kingdom, in 1717, for Sardinia, by treaty with the Emperor. He died two years after his abdication in favor of his son, 1732.

VICTOR AMADEUS III., son and successor of Charles Emmanuel III., b. 1726, ascended the throne in 1773. He founded the Academy of Sciences at Turin, and exhibited the utmost anxiety for the welfare of his subjects. His hostility to the revolution in France provoked a contest with that country, in which his throne fell by the arms of Bonaparte.

Victor-Emmanuel I., King of Sardinia, son of Victor-Amadeus III., b. 1759, succeeded his brother, Charles Emmanuel IV., 1802, abdicated during a revolt, 1821, and d. 1824.

VICTOR-EMMANUEL II., King of Italy, son of Charles-Albert, King of Sardinia, b. 1820. While heir-apparent, he fought in the campaign against the Austrians, which, terminating in the disastrous battle of Novara, caused his father to abdicate. He became king in 1849, under the most unfavorable circumstances, for he had to avert the consequences of a most disastrous war, to allay faction, and to preserve the constitution; to annul which, it is said, Austria endeavored to bribe him with the offer of Parma. On securing the services of eminent statesmen, and chiefly of the illustrious Cavour, he ob-

Fig. 2582. — VICTOR-EMMANUEL.

tained a treaty of peace with Austria upon comparatively easy terms, and undertook the complete reorganization of the finances, the army, and the system of public education. After forming a close alliance with France, Victor Emmanuel, in 1859, again engaged in a war with Austria, which power, after being totally defeated in a short campaign, abandoned Lombardy to the Italians. In 1861, Victor Emmanuel was proclaimed king of Italy. In 1866, as the ally of Prussia, his army was defeated at Custoza, and his fleet at Lissa; but the success of the Prussians at Sadowa restored Venetia to Italy, the unification of which kingdom Victor Emmanuel completed in 1870, by making Rome his capital. The personal character of the first King of Italy bore a close resemblance to that of Henry IV., King of France, and, like that monarch, he possessed a bonhomie which rendered him popular among all classes of his subjects. Like Henry Quatre, too, Victor Emmanuel I. on several fields of battle displayed an almost reckless bravery; while his penchant for the fair sex was as notorious as was that of his illustrious prototype. His four children are: Clotilde, born 1843, married to Prince Napoleon in 1859; Humbert, born in 1844; Amadeus, Duke d'Aosta, elected King of Spain in 1871; and Maria Pia, born 1847, married in 1862 Louis I., King of Portugal. V. E. died at Rome, Jan. 9, 1878, and was succeeded by his son Humbert.

Victoria, (*Myth.*) The Roman goddess of victory, sister of Strength and Valor, and one of the attendants upon Jupiter. She was also greatly honored by the Greeks, particularly at Athens. She was represented with wings, crowned with laurel, and holding the branch of a palm-tree in her hand.

Victoria, (ALEXANDRINA), Queen of the United Kingdom of Great Britain and Ireland, and Empress of India, the daughter and only child of Edward, Duke of Kent, fourth son of George III., by his wife Maria Louisa Victoria, of Saxe-Coburg-Saalfeld, was b. at Kensington Palace, in May, 1819. The Duchess of Kent, whose first husband had been the Prince of Leiningen, and who was the sister of Leopold, King of the Belgians, devoted herself to superintending the education of V., who ascended the throne of the United Kingdom on June 20, 1837, her uncle, the Duke of Cumberland, becoming King of Hanover, in virtue of the law which excluded females from that throne. In 1840, the Queen became the wife of Prince Albert, second son of the Duke of Saxe-Coburg-Gotha, (see ALBERT.) The chief public events of her reign are noticed in other parts of this work. (See GREAT BRITAIN, MELBOURNE, PEEL, RUSSELL, DERBY, ABERDEEN, GLADSTONE, PALMERSTON, BEACONSFIELD, INDIA, &c.)

Fig. 2583. — QUEEN VICTORIA IN 1860.

Since the death of her husband, in 1861, the Queen has led a very secluded life—much of her time being passed at her estate of Balmoral in the Scottish Highlands. Queen V. has 9 children, the eldest of whom are: VICTORIA, Princess Royal, born 1840, who married, in 1858, Frederick William, Crown Prince of Prussia, since Emperor of Germany and King of Prussia; ALBERT EDWARD, PRINCE OF WALES, heir apparent to the British throne; and ALFRED, Duke of Edinburgh, a captain in the British navy. A daughter, Princess LOUISE, married, in 1871, the Marquis of Lorne, eldest son of the Duke of Argyll. April, 1876, V. assumed, by Act of Parliament, the title of Empress of India. The fiftieth anniversary of V.'s coronation was celebrated with great pomp in June, 1897.

Victoria, in China, a town of the British colony of Hong-Kong. Pop. 9,850.

Victoria, in Central Asia, a lake in the table-land of Pamir, 15,000 ft. above the sea. See NYANZA.

Victoria, (formerly PORT PHILIP,) in Australia, a British colonial territory, comprising all that portion of Australia, S. of the Murray River, between Lat. 34° and 39° S., Lon. 141° and 150° E., having N. New South Wales, E. the Pacific, S. Bass's Strait, and W. the colony of S. Australia; area, 97,000 sq. m. Surface, undulating, with the Australian Alps shutting out the fertile and wooded region called Gipps' Land, from Victoria proper. In the W. are the Grampians and the Australian Pyrenees. Rivers, Murray, Loddon, and the Gonblurn, besides many salt lagoons or lakes. Climate, healthy. The temperature of Port Philip ranges from 32° to 90° in the year, and may average 60° Fahr. Prod. Grain;

but sheep- and cattle-rearing are the principal occupations. *Mia.* Gold, coal, copper, lead, and manganese. *Exp.* Wool, sheep, cattle, skins, hides, tallow, pork, beef, timber, and mimosa bark. Although one of the youngest, and in point of area the smallest of the colonies of the Australian group, V. is already the most important in extent and commerce. Cap. Melbourne.

Victoria, *n.* (*Bot.*) A gen. of plants, ord. *Nymphaeaceae*. *V. regia*, the only species known, is a native of equatorial America. The flowers when fully expanded, are more than a foot in diameter, and the leaves, which are cautiously turned up at their edges, vary from 4 to

Fig. 2584. — VICTORIA REGIA.

8 feet in diameter. The plant is commonly known in this country as the *V. water-lily*, and in South America as the *Water-maize*, from its edible seeds, which are commonly roasted with maize or Indian corn.

(*Astron.*) An asteroid discovered by Hind in 1850:—also called *Chio*.

—A kind of 4-wheeled carriage, resembling the cabriolet. **Victoria**, a city and cap. of British Columbia, at S.E. extremity of Vancouver Island, and on the north shore of the Strait of Juan de Fuca; Lat. 48° 27' N., Lon. 123° 25' W. Here is a British naval station, with extensive docks; one of the best harbors on the Pacific. Pop. (1897) 18,250.

Victoria, in *Illinois*, a p. v. and township of Knox co.

Victoria, in *Texas*, a S. co.; area, 850 sq. m. Rivers, Gnadalupe, also Coleta and Garcitas creeks. Surface, low and flat; soil, fertile. Cap. Victoria. Pop. (1897) 9,500.

—A city, cap. of the above co., 120 m. S.S.E. of Austin. Pop. (1897) 3,420.

Victoria, in Brazil, a seaport town, cap. of the province of Espirito-Santo, on the Bay of Espirito-Santo, 270 m. N.E. of Rio Janeiro. Pop. about 6,000.

Victoria, in Mexico, a town, cap. of the State of Tamaulipas, 300 m. N.E. of Mexico. Pop. about 6,500.

Victoria Cross, *n.* A decoration instituted by Queen Victoria, in 1856, for the English naval and military services. It consists of a Maltese cross of bronze, with the royal crest in the centre, and underneath an escroll bearing the inscription "For valor;" it is worn with a blue ribbon for the navy, a red ribbon for the army.

Victoria Land, in British N. America, an insular tract N. of Lat. 68° N., and between Lon. 103° and 110° W., having S. Dease Strait, and E. Victoria Strait which separates it from Boothia Felix. — Also the name given to the supposed Antarctic continent, discovered in 1841 by Sir James Ross.

Victoria River, in N. Australia, falls into the Indian Ocean by the estuary called Queen's Channel, in Lat. 14° 46' S., Lon. 129° 21' E.

Victoria Strait, that portion of the Arctic Ocean between Prince of Wales' Land and Victoria Land on the W., and Boothia Felix and N. Somerset on the E.

Victorine, (*vik-to-reen'*) *n.* A lady's small fur tippet.

Victorions, *a.* [Fr. *victorieux*.] Having gained a victory; having conquered in battle or contest; having overcome an enemy or antagonist; triumphant; conquering; vanquishing; as, a *victorious* army, a *victorious* cause. — That produces victory or conquest. — Emblematic of, or indicating, victory or conquest; as, "brows bound with *victorious* wreaths." — *Shaks.*

Victoriously, *adv.* With conquest; in a victorious manner.

Victory, *n.* [Fr. *victoire*, from Lat. *victoria*.] Triumph; conquest; the defeat of an enemy in battle, or of an antagonist in a contest; a gaining of the superiority in war or combat; — also, the advantage or superiority gained over spiritual enemies, over passions or appetites, or over temptations, or in any struggle or competition.

Victory, in *New York*, a post-village and township of Cayuga co., 22 m. N.W. of Auburn. — A post-township of Saratoga co.

Victory, in *Vermont*, a post-township of Essex co., 45 m. N.E. of Montpelier.

Victrice, (*vik'tris*) *n.* [Lat. *victrix*.] A female victor.

Victual, (*vil'*) *v. a.* (*imp.* and *pp.* VICTUALLED, (*vil'ld.*) [From the *n. pl.* *victuals*.] To furnish or supply with victuals or provisions; as, to *victual* a ship, an army, or a city.

Victualer, (*vil'ler*) *n.* One who supplies victuals.

Victuals, (*vil'ls*) *n. pl.* [Fr. *victuaille*; Lat. *victualia*, provisions.] That which supports human life; food for human beings, prepared for eating; provisions; meat; sustenance; viands; as, broken *victuals*.

Vien'na, *Vieng'na*, *n.* (*Zoöl.*) See LLAMA.

Vida'lia, in *Louisiana*, a post-town, cap. of Concordia parish, on the Mississippi, opposite Natchez.

Vidâme, (*ve-dahm'*) *n.* [Fr., from Lat. *vice-dominus*.] (*Fr. Feudal law*.) Originally, an officer who represented the bishop, as the viscount did the court. In course of time, these dignitaries erected their offices into fiefs, and became feudal nobles.

Vide. [Lat. imper. of *videre*, to see.] See;—employed as a reference, or to direct the attention to something.

Vide licet, *adv.* [Lat., for *vide licet*—*vide*, imper. of *videre*, to see, and *licet*, it is permitted.] That is; namely; to wit;—commonly abbreviated *viz*.

Vidette, **Vedette**, (*-dét'*) *n.* [Fr. *vedette*; It. *vedetta*, from Lat. *video*, to see.] (*Mil.*) A mounted patrol or sentinel stationed on the outpost of an army to observe or watch an enemy, and give notice of danger, or of their movements, &c.

Vidimus, *n.* [Lat., we have seen.] An examination or inspection, as of accounts or documents.

Vidonia, *n.* A brisk, white wine, grown in the island of Teneriffe.

Vie, *v. a.* [A. S. *wigan*.] To contend or strive for superiority; to use effort in a race, contest, competition, rivalry, or strife.

Vielle, (*vē'el*) *n.* The French term for a hurdy-gurdy.

Vien'na. [Ger. *Wien*, (*veen*.)] The capital of the Austrian empire, and one of the finest cities in Europe. It is situated on the S.E. bank of the Danube, where the river Wien joins it, and is surrounded by a large and fertile plain. It consists of a central, or old city, and a new, or external city, composed of 34 suburbs, and lies in Lat. 48° 12' N., and Lon. 16° 20' E. The circuit of the whole city is 20 m. The streets are generally well paved, lighted, and clean, and the houses built mostly of brick, from five to six stories in height. The old city, once the most fashionable quarter, and, though irregularly built, has many fine squares and palaces, besides the imperial residence. The most remarkable of the public buildings are the cathedral of St. Stephen, a Gothic edifice, with a tower 453 ft. in height; the churches of the Augustines and of the Capuchins; the royal palace, with one of the richest collections of valuable curiosities in Europe; the imperial library, containing 300,000 volumes and many thousand MSS.; the archbishop's palace, the Belvedere and Schönbrunn (an imperial palace), the arsenal, custom-house, university, new city hall, parliament house, opera-house, &c. The *Ring-Strasse*, 150 ft. wide, is perhaps the handsomest st. in Europe. The university—with one of the best schools of medicine in Germany—has 80 professors and above 2,000 students attached to it. Few cities are so richly ornamented with works of art, or have such splendid promenades as V. Of the ten most important of these places of public resort, the Prater is considered the gayest and most magnificent. V., being the centre of the empire, is also the centre of all its trade and commerce, and, by means of the Danube line of steamers, has direct communication with Constantinople, Trebizond, and Smyrna, as well as with the Levant. The manufactures are silks, velvets, shawls, woollen cloths, ribbons, lace, straw hats, carpets, gold and silver lace, mathematical instruments, carriages, leather, paper, jewelry, &c. The environs of V. are very fertile and picturesque. To the N. are the islands of the Danube; to the W. the lofty summits of the Kahlenberg; to the S., mountains covered with vineyards and extensive forests; and to the E., vast plains, bounded at the farthest horizon by hills. The islands are adorned by many villas, and few cities are surrounded by so many fine gardens, which contain some of the rarest plants. V. was, under the name of *Vindobona*, long the headquarters of a Roman legion, and afterwards fell successively into the hands of the Goths and Huns. In 791 Charlemagne attached it to his dominions. It was often threatened in the wars with the Hungarians and Turks, who, in 1529, destroyed the suburbs. In 1797 it was threatened by Napoleon I., and occupied by him in 1805 and 1809. On both occasions, proper discipline was observed by the invaders, and little injury was done. In 1814 and 1815, the Congress of V. assembled there for the settlement of the affairs of Europe, and on June 9, 1815, the arrangements were collected in one grand act of 121 articles, signed by representatives of the principal European powers. In 1890 the city limits were extended to an area of 63.7 sq. m. *Pop.* (1897) 1,500,000.

Vien'na, in *Alabama*, a village and twp. of Pickens co., 135 m. W.N.W. of Montgomery.

Vienna, in *Georgia*, a post-village, cap. of Dooly co., 90 m. S.W. of Milledgeville.

Vienna, in *Illinois*, a township of Grundy co.—A post-village and township, cap. of Johnson co., 190 m. S.E. of Springfield.

Vienna, in *Indiana*, a post-village and township of Scott co., 8 m. W. of Lexington.

Vienna, in *Iowa*, a post-township of Marshall co., abt. 32 m. S.W. of Cedar Falls.

Vienna, in *Kansas*, a post-township of Pottawatomie co.

Vienna, in *Maine*, a post-township of Kennebec co., 22 m. N.W. of Augusta.

Vienna, in *Mich.*, a twp. of Genesee co.

Vienna, in *Missouri*, a post-village, cap. of Maries co., abt. 32 m. S.S.W. of Jefferson City.

Vienna, in *New Jersey*, a post-village of Warren co., 48 m. N.W. of Trenton.

Vienna, in *New York*, a post-village and township of Oneida county, on Oneida Lake, 120 miles south-west of Albany.—A village of Ontario county, 7 miles north north-west of Geneva.

Vienna, in *Ohio*, a village of Clarke co., 34 m. W. of Columbus.—A post-village and township of Trumbull co., 10 m. E. of Warren.

Vienna, in prov. of Ontario, a post-village of Elgin co., 134 m. S.W. of Toronto.

Vien'na, in *Wisconsin*, a township of Dane county.—A post-village of Walworth county, 55 miles S.E. of Madison.

Vienne, (*ve-en'*) in France, a river which rises in the dept. of Corrèze, and joins the Loire, in the dept. of Indre-et-Loire, after a N.N.W. course of 220 m.—A W. dept. formed of the anc. prov. of Upper Poitou, and bounded N. by the dept. of Indre-et-Loire, and S. by Charente; *area*, 2,690 sq. m. *Surface*, flat; *soil*, sandy and partly fertile. *Rivers*, The Vienne, Clain, Charente, Gartempe, Creuse, and the Dive. *Prod.* Corn, potatoes, hemp, flax, and wine; horses, mules, and sheep of a superior quality are reared. *Min.* Iron and lithographic stones. *Manuf.* Arms and cutlery. *Cap.* Poitiers. *Pop.* 324,527.—A town of the dept. of Isère, on the Rhone, 47 m. W.N.W. of Grenoble. *Manuf.* Woollens, silk, and paper. A council was held here in 1311, which abolished the order of the Templars. *Pop.* 22,828.

Vienne, (*Hante*.) in France, a W. dept., formed from a part of the anc. prov. of Limousin, and bounded by the depts. of Creuse, Corrèze, Dordogne, Charente, Vienne, and Indre; *area*, 2,130 sq. m. *Surface*, mountainous; *soil*, moderately fertile. *Rivers*, Vienne and Gartempe. *Prod.* Horses, cattle, and sheep are extensively reared. *Min.* Tin, lead, copper, iron, coal, and porcelain clay. *Manuf.* Porcelain, cutlery, and paper. *Cap.* Limoges. *Pop.* 326,037.

Viennese, (*-nēz'*) *a.* (*Geog.*) Pertaining, or having reference, to Vienna, or to its inhabitants.

n. sing. and *pl.* (*Geog.*) A native or inhabitant of Vienna;—*plurality*, the people of Vienna.

Viersen, (*veer'sen*), a town of Prussian Westphalia, on the Niers, 18 m. W. of Düsseldorf; *pop.* 4,399.

Vierzon, (*veer'zawng*.) in France, a town of the dept. of Cher, 17 m. N.W. of Bourges. *Manuf.* Woollens, silks, porcelain, earthenware, and cannon. *Pop.* 7,480.

Viesti, (*ves'te*), a seaport of S. Italy, at the extremity of the promontory of Monte Gorgano, 22 m. from Manfredonia. *Pop.* 5,643.

Vieuxtemps, HENRI, a Belgian violinist, b. at Verviers, 1820. He appeared with success in Paris and Vienna, in 1830, and from that time became a public favorite. He several times visited this country. His playing was chiefly distinguished for elegance and correctness of execution. His compositions combine the qualities of classical and modern music. D. 1881.

View, (*vu*) *v. a.* [Fr. *vue*, from *voir* = Lat. *videre*, to see.] To see, look at, or behold; to survey; to examine with the eye; to look on with attention, or for the purpose of examining; to inspect; to explore; as, to *view* a landscape.—To see or perceive by the mental eye; to survey intellectually; to consider; to examine with the mental vision; as, to *view* the course of events.

n. Act or power of seeing or beholding; survey; sight; inspection; examination or exploration by the eye.—Hence, intellectual or mental survey or examination.—Reach or scope of the eye; intellectual or mental sight or power of vision; range of prospect; as, objects near our *view*.—The whole extent seen; scene; display exhibited to the sight or mind; as, to give a right or wrong *view* of a thing.—Hence, a pictorial sketch or design, as of a landscape; representation of a scene.—Manner of seeing or understanding; mode of apprehension; judgment; opinion; conception; as, you take an incorrect *view* of the case.—Aim; design; purpose; intention; as, he does this with a *view* to business.—Appearance; aspect; show; as, "The splendor of her *view*."—Waller.

Field of view, the whole area seen through an optical instrument.—*Point of view*, the direction from which one looks at a person or thing.—*View-halloo*, the shout uttered by a hunter on sighting the animal of chase.

Viewer, (*vē'ūr*) *n.* One who views or sees.

(*Law*.) A person appointed by a court to see and examine certain matters and make a report of the facts, together with his opinion. In practice, viewers are usually appointed to lay out roads, inspect mines, and the like.

Viewless, *a.* That cannot be viewed or seen; invisible; not being perceivable by the eye.

Vigan, (*Le*.) (*vē'ga*.) in France, a town of the dept. of Gard, 28 m. N.N.W. of Montpellier. *Manuf.* Silk, cotton, paper, and glass. *Pop.* 5,940.

Vigesimo-quarto, (*kwor'to*) *a.* Formed of sheets folded so as to make twenty-four leaves, as a book.

n. A vigesimo-quarto book.—The size of a book so composed;—generally noted thus, 24mo., or 24°.

Vigevano, (*ve-jai-ra'no*.) in Italy, a town of the prov. of Novara, on the Mora, 15 m. S.E. of Novara. *Manuf.* Silks, linen, and cotton fabrics, hats, soap, and macaroni. *Pop.* 19,440.

Viggiano, (*vid-ja'no*.) in Italy, a town of the prov. of Potenza, 9 m. S.E. of Marsico-Novo. *Manuf.* Woollens, soap, and wax-candles. *Pop.* 6,580.

Vigia, (*ve-zhe'a*.) a town of Brazil, 50 m. N. of Para; *pop.* of dist. abt. 10,000.

Vigil, (*rij'*) *n.* [Fr. *vigile*, from Lat. *vigilia*, a watch-keeping.] State of being awake; watch; sleeplessness.—Devotion performed in the customary hours of rest or sleep; religious watching; as, "*Vigils* pale-eyed virgins keep."—Pope.

(*Ecol.*) The evening before a feast-day;—hence, a religious service performed in the evening preceding a holiday; a fast observed on the day preceding a festival.

Vigilance, (*rij'e-lans*) *n.* [Fr., from Lat. *vigilantia*.] A state of being awake; watchfulness; forbearance of sleep; circumspection; guard; watch; attention of the mind in guarding against danger, or providing for safety.

V. committee, a self-constituted body of persons, who, in wild and lawless districts of the U. States, take upon themselves the capture and punishment of those who

are suspected or proved guilty of crimes or serious offences against the common weal.

Vigilant, *a.* Wakeful; watchful; with the attention on the alert; circumspect; studious to discover and avoid danger, or to provide for safety; as, a *vigilant* sentinel or look-out.

Vigilantly, *adv.* With vigilance; wakefully.

Vigilius, (*vi-jil'i-us*.) Pope, a Roman, who, in 537, obtained that dignity from Theodora, wife of Justinian, on a promise to revoke the acts of the council of Constantinople against the Eutychian bishops. He afterwards published a condemnation of that sect, for which he was persecuted and banished. D. at Syracuse, 555.

Vignitivate, (*vi-jin-tiv'*) *n.* [From Lat. *viginti*, twenty, and *vir*, man.] A body of governing functionaries consisting of twenty men.

Vignette, (*vi-net'*) *n.* [Fr., dimin. of *vigne* = Lat. *vinia*, a plantation of vines.] (*Arch.*) An ornament of vine-leaves, tendrils, and grapes, used in Gothic architecture (Fig. 2585). A capital letter in ancient manuscripts;—so called in consequence of their being frequently ornamented with flourishes, in the manner of vine-branches or tendrils. Subsequently, the term was used to signify any large ornament at the top of a page.

Fig. 2585.—VIGNETTE.

(*Print.*) A small ornamental engraving without complete background or boundary-line, used in printing for the illustration or decoration of a page of any work.

Vignola, (*veen-yo'la*.) in Italy, a town of the prov. of Potenza, 5 m. S.W. of Potenza; *pop.* 4,620.

Vignola, the common appellation of GIACOMO BAROZZI, a celebrated Italian architect, b. at Vignola, 1507, successor of Michael Angelo in the works of St. Peter's, and author of a treatise on the *Five Orders*. D. 1573.

Vigny, (*vain-yē'*) ALFRED VICTOR, COUNT DE, a French poet and novelist, b. at Loches (Indre-et-Loire), of a noble family, in 1799. His most celebrated prose work is the historical novel of *Cinq-Mars*, which appeared in 1826, passed through many editions, and has been translated into the principal languages of Europe. He was also author of several plays, among which are the *Marshal d'Ancre*, and *Chatterton*. V. was a member of the French Academy. D. 1863.

Vigo, (*vē'go*.) in Spain, a seaport-town of the prov. of Pontevedra, 76 m. S.S.E. of Corunna; *pop.* 4,350.

Vigo, in *Indiana*, a W. co., bordering on Illinois; *area*, 400 sq. m. It is drained by the Wabash River. *Surface*, undulating; *soil*, very fertile. *Min.* Coal, limestone, and freestone. *Cap.* Terre Haute.

Vigo, in *Indiana*, a twp. of Knox co.

Vigone, in Italy, a town of the prov. of Turin, 9 m. E.S.E. of Pinerola; *pop.* 6,930.

Vigor, *n.* [Lat., from *vigo*, to be lively or vigorous.] Active strength or physical force in animals; as, man's bodily *vigor*.—Strength or force in animal or vegetable motion; as, grain grows with *vigor*.—Intellectual force or energy; strength of mind; as, *vigor* of intellect.—Liveliness; activity; energy; efficacy.

Vigorous, (*It.*) (*Mus.*) With strength and firmness.

Vigorous, *a.* [Fr. *vigoureux*.] Full of vigor, physical strength, or active force; strong; lusty; brawny; powerful; as, a *vigorous* body, *vigorous* health.—Indicating mental or physical strength; as, a *vigorous* blow, a *vigorous* style of composition.

Vigorously, *adv.* In a vigorous manner.

Vigorousness, *n.* Quality of being vigorous.

Viking, (*Hist.*) One of the sea-rovers, or pirate chiefs, of the old Norsemen, who ravaged the coasts of Europe in the Dark Ages.

Vile, *a.* [Fr., from Lat. *vilis*.] Of small value; cheap; despicable; worthless; mean; base; lightly esteemed; as, a *vile* thing, a *vile* condition of life.—Sinful; depraved by iniquity; morally base or impure; bad; wicked; sordid; abject; as, a *vile* act, *vile* hypocrisy, a *vile* character.

Vilely, *adv.* In a vile manner; shamefully; basely.

Vileness, *n.* State or quality of being vile; despicableness; baseness; meanness; as, the *vileness* of a bad dinner.—Moral baseness, depravity, or iniquity; extreme wickedness or turpitude; degradation by sin; as, the *vileness* of treachery.

Vilification, *n.* Act of vilifying, traducing, or defaming.

Vilifier, *n.* One who vilifies; a defamer; a traducer.

Vilify, *v. a.* [Lat. *vilis*, vile, and *facio*, to make.] To make vile; to degrade; to debase.—To traduce; to defame; to attempt to degrade or bring into contempt by slanderous means; as, to *vilify* one's betters.

Vill, *n.* [Fr. *ville*, a town, city, from Lat. *villa*, a country-house.] A village; a small collection of houses;—a word possessing various meanings in English law, being used as indicating a titling; a manor; a parish; a township; a village; a part of a parish.

Villa, *n.*; *pl.* VILLAS, *n.* [Lat., a country-house, probably from Sansk. *valaya*, a fence, inclosure.] A country-house or seat, usually one for the residence of a well-to-do or opulent person.

Villa Bella da Prince'za, in Brazil, a town of the island of São Sebastiao, 85 m. E. of São Paulo; *pop.* 4,000.

Villa del Fuerte, (*veel'ya-del-fuer-ta*.) a town of Mexico, 75 m. N. of Cuauiloa; *pop.* 6,000.

Villa (or *San'ta Maria*) **del Prin'cipe**. See PUERTO PRINCIPE.

Villa do Rio Par'do, in Brazil, a town of the prov.

of Rio Grande do Sul, 80 m. W. of Porto-Alegre; *pop.* of dist. 6,000.

Villa Flor, in Brazil, a town of the prov. of Rio Grande do Norte, 36 m. S. E. of Natal; *pop.* 3,000.

Villa Fran'ca, a town of the island of St. Michael, one of the Azores; *pop.* 4,350.

Villa Franca, in Italy, a town of the prov. of Turin, on the Po, 30 m. from the city of Turin; *pop.* 9,460.

—Also, a town of the prov. of Verona, 9 m. from Verona; *pop.* 6,550. Here, in 1859, were signed the preliminaries of the treaty which closed the war between France and Sardinia, on the one side, and Austria on the other, and which were ratified by the treaty of Zurich.

Villa Franca, in Brazil, a town of the prov. of Para, 20 m. S.W. of Santarem; *pop.* 5,000.

Villa Fran'ca de Paula's, in Spain, a town of the prov. of Barcelona, 27 m. from Barcelona; *pop.* 6,160.

Village, (*vī'lāj*), *n.* [Fr. from Lat. *villa*.] A small collection or assemblage of houses, less than a town or city, and larger than a hamlet.

Village, in Arkansas, a township of Jackson county.

Village Green, in Pennsylvania, a post-village of Delaware co., 4 m. W.N.W. of Chester.

Villager, (*jér*), *n.* An inhabitant of, or resident in, a village.

Village Springs, in Alabama, a post-township of Blount co.

Villa Joyosa (*ho-yo'sa*), a town of Spain, in Valencia, 16 m. from Alicante. *Pop.* (1897) 10,160.

Villamont', in Arkansas, a prosperous township of Jefferson co.

Villanova, in New York, a post-township of Chautauque co., 15 m. E.S.E. of Dunkirk.

Villa-No'va, a town of Brazil, 12 m. N.E. of Rio de Janeiro; *pop.* 2,500.

Villano'va da Rain'ha, in Brazil, a town of the prov. of Para, at the junction of the Canoua and Manhe with the Amazons.

Villanova da Rainha, or CAHETE, in Brazil, a town of Minas-Geraes, 25 m. S.E. of Sabara; *pop.* 7,000.

Villano'va de San Antonio, in Brazil, a town of the prov. of Sergipe, on the Sao Francisco River, 10 m. N. of the Atlantic; *pop.* 5,000.

Villano'va de Son'za, a town of Brazil, 280 m. W. of Parahiba; *pop.* 6,600.

Villano'va do Principe', in Brazil, a town of the prov. of Rio Grande do Norte, 150 m. W.S.W. of Natal; *pop.* 4,000.

Villa Real, (*rai'al*), a town of Portugal, prov. of Trás-os-Montes, on the Corgo, 15 m. from Lamego; *pop.* 5,122.

Villa Real, a town of Spain, in Valencia, on the river Mijares, 5 m. from the Mediterranean. *Manuf.* Woolens and silks. *Pop.* 9,016.

Villa Real de Concepc'ion, a town of Paraguay, 130 m. N.N.E. of Asuncion; *pop.* abt. 4,000.

Villars, (*ve-yar'*) LOUIS HECTOR, DUKE DE, and marshal of France, was b. at Moulins in 1553. He began his career as a soldier in Holland, serving in the corps commanded by Louis XIV. in person; next in Germany, under Condé and Turenne, and at the age of 21 he became colonel of a regt. of cavalry. He accepted the task of subduing the *Camisards*, the Protestants of the Cevennes; in which he appears to have shown all the humane consideration which could be combined with the suppression of the religious revolt. In 1705, he established the famous camp of Sirek, on the heights near Fronsberg, a position naturally so strong that Marlborough did not venture to attack it. Resuming the offensive, he had a series of successes, but was defeated by Marlborough at Ramillies in 1706. He passed the Rhine, and forced the imperial lines at Stolhofen, but some of his troops being withdrawn, he had to retire. After a short campaign in Savoy he again took the command in Flanders; was defeated by Prince Eugene and the Duke of Marlborough, and severely wounded at Malplaquet, in 1709; and after a compulsory retirement to recover his health, he attacked successfully, in 1712, the entrenched camp of Denain, and took several towns and fortresses. The treaty of Utrecht was concluded in the following year, and the peace of Rastadt followed in 1714. For the next 18 years V. exchanged service in the field for the intrigues of the court. He attended Louis XIV. on his death-bed, was admitted into the French Academy, and, as a member of the Council of Regency, opposed the Quadruple Alliance, the financial operations of Law, and the influence of Dubois. His rival, Fleury, finally supplanted him. On the outbreak of the war with Austria, in 1732, although more than 80 years of age, he accepted the command in Italy, with the title of marshal-general of France; but after a successful commencement he demanded his recall, and d. at Turin in 1734.

Villain, (*vī'lān* or *vī'lān*), *n.* [O. Fr.; Fr. *vilain*; Sp. *villano*, worthless, from L. Lat. *villanus*, a husbandman.] Originally, under the feudal law, one who held lands by a base or servile tenure; a villain; a feudal tenant of the lowest class.—Hence, a boor; a bumpkin; a rude, clownish person. (R.)—Specifically, a vile, wicked person; a deliberate scoundrel; a designing knave; a man extremely depraved, and guilty of, or capable of committing, great crimes; a consummate rascal; a base or heartless profligate.

—*a.* Villanous. (R.)

Villainous, *a.* Same as VILLANOUS, *q. v.*

Villakin, *n.* A little village; or, a small villa.

Villanize, *v. a.* To make vile; to debase; to degrade; to defame; as, "The villanizing of mankind to the condition of beasts."—Bentley.

Villanizer, *n.* One who villanizes, degrades, or debases.

Villanous, Villainous, *a.* Like a villain; be-

coming a villain; base; vile; atrocious; detestable;—hence, depraved; wicked; capable of extreme turpitude; as, a villainous wretch.—Resulting from extreme depravity; as, a villainous deed.—Sorry; mean; low; vile; pitiful; mischievous;—in a familiar sense; as, a villainous scrawl, a villainous trick, a villainous subterfuge.

Villanously, *adv.* Wickedly; basely; vilely.

Villanousness, *n.* Baseness; wickedness.

Villany, Villainy, *n.* [O. Fr.; Fr. *vilenie*.] Something villainous; atrocious wickedness; turpitude; extreme depravity; an action of base wickedness; as, the villany of a seducer.—An action characterized by extreme baseness or depravity; a crime; an odious or capital offence.—Obscene speech or written language; depraved employment of thought or talk; cant; lingo.

Villat'ie, *a.* [Lat. *villaticus*.] Pertaining to a village.

Villa Vieio'sa, a town of Brazil, 150 m. W. of Ceara; *pop.* 6,000.

Villehardouin, GEOFFROY DE, (*veel'har-doo-d(n)*), a French historian, b. near Arcis-sur-Aube, 1167, was maréchal of Champagne under Thibaut I., Count of Champagne and Brié. He distinguished himself in 1199, in the fourth crusade; was present at the taking of Constantinople in 1204; and was created marshal of Roumania by the Emperor Baldwin I. The Emperor Henry gave him the city of Messinopolis, and his descendants, during two centuries, ruled over principalities in Greece. He wrote the *History of the Taking of Constantinople by the French and Venetians*, a narrative remarkable for its brevity and clearness, and as being the oldest history in French prose. D. in Thessaly, 1213.

Villeinage, VILLAINAGE, VILLENAGE, *n.* (*Feud. Law.*) The state of a villain or villein, or of lands or tenements held by a feudal tenant of the lowest class.

Villemain, (*vēl'mah*), ABEL FRANÇOIS, a French historian and statesman, who so early distinguished himself as a scholar, as to gain the appointment of professor of rhetoric in the Collège Charlemagne in his 19th year. In 1816 he became assistant professor of modern history in the University of Paris. In 1833 he was created a peer of France, and in the Guizot ministry acted as minister of public instruction. He retired into private life after the revolution of 1848. His principal works are: *Cours de Littérature Française, Tableau du XVIII. Siècle*; *Discours et Mélanges Littéraires* (1823); *Nouveaux Mélanges Historiques et Littéraires* (1827); *Études de Littérature Ancienne et Étrangère* (1846); *Tableau de l'Éloquence Chrétienne au IV. Siècle* (2d. ed. 1849); *Études d'Histoire Moderne* (1846); *Souvenirs Contemporains d'Histoire et de Littérature* (1856); *Choix d'Études sur la Littérature Contemporaine* (1851); *La Tribune Contemporaine, M. de Chateaubriand* (1857); *Essais sur le Génie de Pindare et sur la Poésie Lyrique* (1859); besides a vast number of essays, studies, discourses, notices, and reports, addressed to the French Academy, of which he was secretary from 1832 until his death, in 1870.

Villena, (*veel-yā'nā*), a town of Spain, prov. of Alicante, 66 m. S.S.W. of Valencia. *Manuf.* Soap and coarse woollens. *Pop.* 8,736.

Villi, *n. pl.* [Lat. *pl. of villus*, a tuft of hair.] (*Anat.*) Minute vascular processes covering, in the proportion of about 25 to every square line, the surface of the mucous membrane of the small intestine, and giving it a velvety or fleecy appearance. They promote the absorption of chyle from the completely digested food. The term is also applied to the minute vascular processes of the chorion and other membranes.

(*Bot.*) Fine hairs or flocculence on plants, resembling in feel and texture the pile of velvet.

Villiers, GEORGE. See BUCKINGHAM (DUKE OF).

Villingen, a fortified town of the grand-duchy of Baden, 43 m. N.W. of Constance; *pop.* 4,350.

Villose, (*-lōs*), Villous, (*-lūs*), *a.* [Fr. *villos*, from Lat. *villosus*—*villus*, hair.] Nappy; abounding with fine hairs, or woolly substance.

(*Anat.*) Downy; velvety; as, the villous surface of the mucous membrane of the small intestine.

Villosity, *n.* (*Bot.*) State or quality of being villose or villous.—A covering of long, fine hairs.

Vilvoor'den, a town of Belgium, prov. of S. Brabant, 6 m. N.N.E. of Brussels; *pop.* 5,750.

Vim, *n.* [From Lat. *vimen*, a twig, a shoot.] Spirit; life; energy; go; nerve; as, a man full of vim.

Vimen, *n.* [Lat.] (*Bot.*) A long, slender, flexible twig, shoot, or sprout.

Vimin'eons, *a.* Constructed of twigs or shoots.

(*Bot.*) Sending out slender twigs or shoots.

Vinaceous, (*vī-nā'shūs*), *a.* [From Lat. *vinum*, wine.] Pertaining, or relating to wine or grapes.—Presenting the color of wine.

Vinaigrette, (*vīn-ā-grēt'*), *n.* [Fr., from *vinaigre*, vinegar.] A small bottle or case for holding vinegar.—A small étui of gold, silver, or crystal, with perforations on the top, for holding aromatic vinegar, contained in a sponge.—A sauce, of which vinegar and oil form the chief ingredients.

Vinatha'ven, in Maine, a township of Knox co., 60 m. E.S.E. of Augusta.

Vinaroz, (*ve-nā'roz*), a town of Spain, prov. of Castellon de la Plana, near the mouth of the Ebro, close to the Mediterranean.

Vin'ea, *n.* (*Bot.*) The Periwinkles, a genus of plants, order Apocynaceæ. The Lesser and Lower Periwinkles, *V. minor* and *major*, are handsome evergreen shrubs, several feet high, with slender, straggling branches, very leafy; flowers violet or blue, solitary, alternate, and inodorous. They are natives of Europe.

Vincennes, (*van-sēn'*), a town of France, dept. of Seine, near the confluence of the Seine and Marne, 3 m. E.S.E. of Paris. It is remarkable for its castle, built in the 14th century, of which only one tower remains,

known as the *Donjon de V.*, 170 feet high, with walls 17 feet thick. It was long used as a state-prison. The *Bois de V.*, with its rivulets and agreeable walks, was destroyed during the siege of Paris by the Prussians, in 1870-71.

Vincennes (*vin-senz'*), in Indiana, a thriving city, cap. of Knox co., on the Wabash river, 120 m. S.W. of Indianapolis; Lat. 38° 44' N., Lon. 87° 25' W. It contains numerous foundries, woollen factories, flour-mills, &c. *Pop.* (1897) 10,000.

Vin'cent De Paul, (*St.*) the eminent French philanthropist, was b. at Ranquines, in the department of the Landes, April 24, 1577. After studying in a convent of the Cordeliers, he went to the university of Toulouse, and, in 1600, was ordained priest. On a voyage from Marseilles to Narbonne, he was captured by pirates, and sent to Tunis, where he was kept in slavery for two years under three masters, the last of whom he converted to Christianity, and escaped with him to France, in 1607. He soon after settled at Paris, devoting himself to works of charity. An absurd accusation of theft was brought against him there, the falsehood of which could not be proved for six years. He was named almoner to Margaret of Valois, held for a short time the cure of Clichy, and, in 1613, became tutor to the sons of Philippe de Gondi, one of whom became afterwards celebrated as the Cardinal de Retz. In 1616 he began those labors as a missionary which occupied so large a part of his life, and the next year he founded the *Confrérie de Charité*, the model of so many others afterwards established. His next great task was the reform of the condition of criminals condemned to the galleys; for which great service he was appointed almoner-general of the galleys. This unwearied philanthropist founded, in 1623, the Congregation of the Mission, which was constituted by royal letters patent, and approved by the Pope. In 1634 he instituted the order of *Sisters of Charity*, the most widely known, perhaps, of all his foundations. But the charitable institutions which owed their origin to him are too numerous to be mentioned here. He attended Louis XIII. on his death-bed; was named by the Queen Regent Anne of Austria, president of the Council of Conscience, took part in the controversy between the Jesuits and the Jansenists, against the latter; and d. in the convent of the Lazarists, Sept. 27, 1660. He left several theological writings, and was canonized by Pope Clement XII. in 1737.

Vin'cent, (*St.*) one of the Cape Verde Islands, in the Atlantic Ocean. It is 15 m. long and 9 broad.

Vin'cent, (*St.*) in the W. Indies. See SAINT VINCENT.

Vincent, (*St.*) a gulf of S. Australia, which communicates with Spencer Gulf by Investigator Strait; Lat. between 34° and 35° 40' S., Lon. 137° E.

Vincent, (*Cape St.*) the S.W. point of Portugal, noted for the naval victory gained near it in 1797, by Sir John Jervis over the French fleet; Lat. 37° 2' 54" N., Lon. 8° 58' 39" W.

Vincent-town, in New Jersey, a post-village of Burlington co., 5 m. S.S.E. of Mount Holly.

Vinci, LEONARDO DA, a great Italian painter, born at Vinci, near Florence, 1452. In 1483 he entered the service of Lodovico il Moro, Duke of Milan. In 1485 he established an academy of the arts at Milan, and abt. ten years later, executed his celebrated picture of the *Last Supper*, in oil colors, on the wall of the refectory of the convent of the *Madonna delle Grazie* in that city. In 1514 Leonardo visited Rome, but left shortly afterwards without executing any works there, owing partly to a misunderstanding with Michael Angelo, and also to the

Fig. 2586. — LEONARDO DA VINCI.

Pope's want of proper appreciation of his capabilities; he entered the service of Francis I., accompanied that king to France in 1516, and he died in France at Cloux, near Amboise, May 2, 1519. Leonardo da Vinci has the most remarkable reputation of any of the illustrious artists of Italy. He was a man of universal ability in science and art; he excelled in painting, sculpture, architecture, engineering and mechanics generally; in botany, anatomy, mathematics, and astrono-

my; and he was also a poet, and an admirable extempore performer on the lute. The principal of his literary works is the *Trattato della Pittura*, of which there are divers editions in several languages.

Vincibility, Vincibility, n. State or quality of being vincible.

Vincible, a. That may be vanquished or overcome.

Vinculum, (vin'yu-lum, n.; pl. VINCULA. [Lat., from *vincio*, to bind.] A tie; a bond of union.

(*Algebra.*) A mark or character which connects several letters or quantities, and indicates that they are to be treated as a single quantity.

Vindicability, n. State or quality of being vindicable.

Vindicable, a. That may be vindicated or justified.

Vindicate, v. a. [Lat. *vindico*, *vindicatum*.] To assert power, authority, or influence in regard to; to arrogate; to lay claim to; as, "The beauty shall vindicate her trade." (*Dryden*).—To defend; to justify; to support or maintain as true or correct, against denial, censure, or objections; as, to *vindicate* the truth of a proposition.—To maintain; to uphold; to defend successfully; to assert and prove to be just, correct, or valid; as, to *vindicate* a claim, privilege, or prerogative.—To maintain or defend with arms or otherwise, as against an enemy or aggressor; as, to *vindicate* one's personal honor.

Vindication, (-ka'shun, n.) [Fr.; Lat. *vindicatio*.] Act of vindicating, or state of being vindicated.

Vindicative, a. That vindicates; tending to vindication.

Vindicator, n. [L. Lat.] One who vindicates; one who justifies, maintains, upholds, or defends.

Vindictory, a. Justificatory; serving to vindicate or uphold; defensorial. — Punitive; vengeful; applying punishment.

Vindictive, a. [Fr. *vindicatif*, from Lat. *vindico*.] Given to revenge; revengeful.

Vindictively, adv. By way of revenge.

Vindictiveness, n. Quality of being vindictive.

Vine, n. [Fr. *vigne*; It. *vigna*, from Lat. *vinea*—*vinum*—*Gra. oinum*, wine.] (*Bot.*) The common name of *Vitis vinifera*, the Grape-vine, and other species of the gen. *VITIS*, q. v.—The name is also used in a general sense to designate any stem which trails along the ground without rooting, or entangles itself with other plants, to which it adheres by means of its tendrils or by twining, as in the cucumber and the hop.

Vinegar, n. [Fr. *vinagre*, from *vin*, wine, and *aigre*, sour.] (*Chem.*) A well-known condiment, which is a weak acetic acid of different strengths, and either brown or colorless, according to the source from which it is procured. The simplest mode of obtaining V. is to excite a second or acetous fermentation in wine or cider; in this case oxygen is absorbed, a variable proportion of carbonic acid is generally evolved, and the alcohol of the wine passes into acetic acid. Very good V. is also made from strong beer, or from a wort or infusion of malt prepared for the purpose, or from a decoction of common raisins, or from a mixture of about one part of brandy with eight of water, and some sugar and yeast. The acetic fermentation is accomplished either in casks, or by allowing the alcoholic liquid to trickle slowly over shavings or twigs, a current of air passing in the opposite direction.

—Hence, a metaphorical term for anything sour, harsh, or disagreeable; as, her looks are *vinegar* to me.

Vinegar-plant, n. (*Bot.*) See *PENICILLIUM*.

Vine-grub, n. Same as *VINE-FRETTER*.

Vine-mildew, n. (*Bot.*) See *OIDIUM*.

Vine-land, n. in *New Jersey*, a post-borough of Cumberland co., 32 m. S.E. of Philadelphia. Pop. (1895) 4,000.

Vinetza, or VINITZA, n. a town of Russian Poland, govt. of Podolia, on the Bug, 80 m. N.E. of Kamienetz; pop. 8,250.

Vineyard, n. [A. S. *vineyard*.] An inclosure or yard for the cultivation of grape-vines; a plantation of vines producing grapes.

Vineyard, n. in *Arkansas*, a township of Washington co.

Vineyard Sound, n. in *Massachusetts*, 20 m. long, and 5 m. broad, separates Martha's Vineyard from the Elizabeth Islands.

Vingt-un, (vant-toon', n.) [Fr., twenty-one.] (*Games.*) A popular round game at cards. It depends on the number of pips in the cards dealt each player; in reckoning which, the ace counts either one or eleven at pleasure, the court cards ten each, and the others according to the number of their pips. The object is to obtain the highest number, not exceeding *twenty-one*, whence the name.

Vinic Acid, n. (*Chem.*) One of a group of acids whose mode of formation may be thus described. When a mixture of concentrated sulphuric acid with any of the alcohols is heated to about 212°, chemical action takes place, and the result is the formation of a new coupled or conjugated acid, in which the elements of one molecule of alcohol and one of the sulphuric acid (taken, according to recent views, as *S₂O₃*) are present.

Vinland, n. in *Wisconsin*, a post-village and township of Winnebago co., 3 m. N. of Oshkosh.

Vinose, a. Same as *VINOUS*, q. v.

Vinosity, n. [Fr. *vinosité*.] State or quality of being vinous or vinose.

Vinous, Vinose, a. [Fr. *vineux*; Lat. *vinosus*, from *vinum*, wine.] Full of wine; having the qualities of wine; pertaining, or having reference, to wine; as, a *vinous* taste or flavor.

V. fermentation. See *FERMENTATION*.

Vintage, (vin'taj, n.) [Fr. *vendange*, from Lat. *vindemia*—*vinum*, wine, and *demo*, to take away.] A gathering in of wine-grapes; the produce of the vine for the season; as, the *vintage* is excellent this year.—The wine

produced by the crop of grapes in one season; as, "The choicest wines are of the driest *vintages*." (*Bacon*).—The time of gathering the grape-crop.

Vintager, n. A gatherer of the vintage.

Vintage, n. Act of gathering in a crop of grapes.

Vintimiglia, (veen-te-meel'ya, n.) a town of N. Italy, on the Mediterranean, 18 m. E.N.E. of Nice; pop. 5,500.

Vintner, n. One who deals in wine; a wine-seller.

Vinton, n. in *Iowa*, a city, cap. of Benton co., on B., C. R. & N. R. R., 23 m. N.W. of Cedar Rapids. Pop. 3,500.

Vinton, n. in *Ohio*, a S. co.; area, 414 sq. m. It is traversed by Racoon and Salt creeks. Surface, undulating; soil, very fertile. Min. Iron and stone-coal. Cap. McArthur.—A post-village of Gallia county, 60 m. south-west of Marietta.—A post-township of Vinton county.

Viny, a. Belonging to wine; producing grapes.—Fruitful in vines.

Viol, n. [Fr. *viola*; Sp. *viola*; Hind. *behla*, a fiddle.] (*Mus.*) An ancient musical instrument of the same form as the violin, which may be traced back to the 8th century, and which may be considered as the parent of our modern instruments of the violin kind;—the name is still retained in bass-viol, tenor-viol, &c.

Viola, n. [It.] (*Mus.*) A musical instrument of the same form, and with the same number of strings as a violin, and, like it, played with a bow, but larger, and extending a fifth lower in compass;—it is sometimes called *tenor violin*.

Viola di braccia, [It., viol of the arm.] The counter-tenor viol;—so called in distinction from the *viol di gamba*.—**Viola di spalla, [It., viol of the shoulder.]** A former musical instrument, intermediate in size between the *viola di gamba* and the *viola*.—**Viola di gamba, [It., viol of the arm.]** An instrument larger than the *viola*, and held between the legs;—now rarely, if ever, used.

(*Bot.*) The Violet, a genus of the order *Violaceæ*, consisting of perennial herbaceous plants, acaulescent or caulescent; peduncles angular, solitary; 1-flowered; recurved at the summit, so as to bear the flowers in a supinate position. The species *V. odorata* is the March or Sweet-violet, the flowers of which have always been highly esteemed for their fragrance. An infusion of the

Fig. 2587.

1, Hairy Violet (*V. hirta*); 2, Heart's-ease (*V. tricolor*).

syrup is a useful chemical test, as the violet or purplish color is changed red by acids, and green by alkalies. *V. canina* is the Dog-violet, and *V. tricolor*, the pretty little plant from which all our cultivated varieties of Pansy or Heart's-ease have been derived. The American species are very numerous.

Viola, n. in *Illinois*, a p-vill. of Mercer co.

Viola, n. in *Minnesota*, a township of Olmsted co., abt. 9 m. N.E. of Rochester.

Viola, n. in *Wisconsin*, a post-village of Richland co., 40 m. S.E. of La Crosse.

Violable, a. [Lat. *violabilis*.] That may be violated, broken, or injured.

Violaceæ, n. pl. (Bot.) An order of plants, alliance *Violales*. DIAG. Polypetalous flowers, a many-leaved calyx, hypogynous petals, stamens all perfect, anthers crested and turned inwards, consolidated fruit, and albuminous seeds.—The order, consisting of herbs and shrubs, of which about 300 species are known, is dispersed over nearly all parts of the globe.

Violaceous, (vi-o-lā'shus, a.) [From Lat. *viola*, violet.] Bluish-purple; resembling the color of violets.

Violales, n. pl. (Bot.) An alliance of plants, subclass *Hypogynous Erogens*. DIAG. Monodichlamydeous flowers, parietal or sutural placentæ, and straight embryo with little or no albumen. The alliance includes 12 orders.—*FLACOURTIACEÆ*, *LACISTEMACEÆ*, *SAMYDACEÆ*, *PASSIFLORACEÆ*, *MALESHERBIACEÆ*, *MORINGACEÆ*, *VIOLACEÆ*, *FRANKENIACEÆ*, *TAMARICACEÆ*, *SAUVAGESIACEÆ*, *CRASSULACEÆ*, and *TURNERACEÆ*, q. v.

Violate, v. a. [Fr. *violier*; It. *violare*; Lat. *violo*, *violatum*.] To injure; to hurt; to treat in a violent or outrageous manner; to abuse.—To disturb; to break; to infringe; to desecrate; to profane; to treat with profanity or irreverence; as, to *violate* the sanctity of the grave; a *violated* oath; to *violate* common sense; to *violate* a treaty.—To ravish; to rape; to deflower; as, to *violate* a woman's chastity.

Viola'tion, n. [Fr.; Lat. *violatio*.] Act of violating, or state of being violated; interruption; disturbance; as, *violation* of peace or repose.—Non-observance; infringement; encroachment; transgression.—Act of profanity or irreverence; contemptuous treatment of that which is sacred or venerable.—Constupration; rape; ravishment; act of deflowering.

Violator, n. [Lat.; Fr. *violateur*.] One who violates; one who injures or infringes.—A ravisher; a deflowerer.

Violence, (vi'o-lens, n.) [Fr., from Lat. *violentia*.] Physical force; power or strength of action or motion; moral force; impetuosity; vehemence; as, the *violence* of a storm; the *violence* of a passion; the *violence* of a contest or altercation.—Outrage; desecration; infringement; profanation; irreverence; unjust force; as, to offer *violence* to a person's feelings.—Rape; ravishment; forcible deflowering.

To do *violence on*, to attack; to wound or slay; as, "She, it seems, *did violence on herself*." (*Shaks.*)—To do *violence to*, to outrage; to injure; to hurt; as, she *does violence to* her own reputation.

Violent, a. [Fr.; Lat. *violentus*.] Impetuous; vehement; forcible; moving or acting with physical strength or power urged or driven with force; severe; fierce; excited by strong feeling or passion; furious; as, a *violent* temper, a *violent* gale, a *violent* diatribe, a *violent* headache.—Outrageous; acting by violence or improper force; violating law or right; aggressive; assailing; as, to lay *violent* hands on a person.—Produced by violence or convulsion; abnormal; not natural; wanting spontaneity; as, a *violent* death.—Exorted; not voluntary; as, vows *violent* and void. *Milton*.

Violently, adv. With violence; vehemently; forcibly.

Violet, n. [Fr. *violet* (color), *violette* (plant); Lat. *viola*.] (*Bot.*) See *VIOLA*.

—A purplish-blue color, like that of the violet;—one of the primitive colors.

—a. Red and blue combined; purplish-blue; as, *violet* eyes.

Violet, n. in *Ohio*, a thriving township of Fairfield county.

Violet-shell, n. (*Zool.*) A mollusc of the family *JANTHINIDÆ*, q. v.

Violin, (vi'o-lin, n.) [It. *violine*; Fr. *violon*.] (*Mus.*) An instrument of music played on by means of a bow, vulgarly called a *fiddle*, used at the present day in most parts of the world. Of its origin no certain knowledge can be obtained, some writers believing it to have existed at a very early period, while others assert it to be a comparatively modern invention. Dr. Burney affirms that the method of producing sounds by means of a bow was entirely unknown to the ancients. The truth of this assertion is, however, doubtful, and the Abbé Le Boeuf has produced strong proof that an instrument called the *rebec*, acted on by a bow, was known in France in the 8th century. Be this as it may, it is certain that the modern V. is an improved descendant of the old viol, so popular with our forefathers, and that it was in common use in Italy at the end of the 16th century. The first players of any note were Italians. Of these the first was Baltazarini, who introduced the instrument into France in 1577. The history of the V. for the last 200 years has been a direct contradiction to the doctrine of progress, for during that time, notwithstanding many attempts have been made to improve it, none have succeeded, and the instruments of the early makers, especially those of the brothers Amati and Stradivarius, at Cremona, are still considered by connoisseurs to be much finer both in tone and construction than those of modern makers. A V. consists of three chief parts,—the *neck*, the *table*, and the *sound-board*; on the belly is a *bridge* to bear up the *strings*, which are four in number, and are stretched from one extremity, called the *tail-piece*, to the other, near the head, where they are secured to movable pegs, by which they may be tightened or loosened *ad libitum*. The strings of the violin are tuned in fifths, E, A, D, G; its compass extends three octaves; but as the high sounds are anything but agreeable, being often harsh and squeaky, violinists would do well to confine themselves to a more limited scale. The violin is adapted to every kind of music, and in the hands of a skillful performer is one of the most beautiful instruments we possess; but it is also one of the most difficult to beginners, and requires years of study and practice to become even moderately proficient in its use. Among the most distinguished violinists we may mention Corelli, Tartini, Viotti, Baillot, Spohr, Paganini, Sivi, Vieuxtemps, Ole Bull, and Lotto; Paganini and Sivi ranking far beyond all others.

Violine, n. (*Chem.*) An emetic principle, found in all parts of the common violet, *viola odorata*.

Violinist, n. A skilled performer on the violin.

Violist, n. A player on the bass-viol.

Violoncelist, n. A performer on the violoncello.

Violoncello, (vê-o-lon-chel'lo, or vê-o-lon-sel'lo, n.) [It. dim. of *viola*, a double-bass violin.] (*Mus.*) An instrument of the violin kind, having four strings, the two lowest of which are covered with silver wire, and are tuned in fifths, A, D, G, and C. A violoncello is intermediate between the *viola*, or tenor violin, and the double bass, being an octave lower than the former, and an octave higher than the latter. Its tone is rich and expressive, and although properly adapted to concerted music, it is, in the hands of first-rate performers, an effective solo instrument. It is also called *bass-viol*.

Violone, (vê-o-lō'na, n.) [It. augment. of *viola*, a viol.] (*Mus.*) Same as *CONTRA-BASSO*, q. v.

Viotti, GIOVANNI-BATTISTA, (ve-ol'te, a) a celebrated Italian violinist, b. in Piedmont, 1755. He is chiefly now remembered by his *Six duos Concertans pour deux Violons*. D. 1824.

Viper, *n.* [Fr. *vipère*; Lat. *vipera*, contracted from *vivipera*—*vivus*, alive, and *pario*, to bring forth.] (Zool.) A genus of poisonous serpents, type of the family VIPERIDÆ, *q. v.*

—Hence, by analogy, a mischievous, malignant person; an ingrate; a base, contemptible wretch.

Viperidae, *n. pl.* (Zool.) A family of venomous serpents, having the upper jaw toothless, but with movable fangs in front, no pit between the nostrils and eyes, the scales generally keeled, the tail short and tapering. More than 20 species are known, natives of Europe, Asia, Africa, and Australia. No species has been found in America. To this family belong the Common Viper of Europe, about 2 feet long; the Horned Viper or Cerastes of N. Africa and the W. of Asia; the Puff Adder of Africa, and the Death Adder of Australia. The Death Adder (*Acanthophis tortor*) differs from most of the *V.* in not having the scales keeled. It is widely diffused in Australia, where it is also known as the Black Snake. It is much dreaded, as its bite is said to be sometimes fatal in a quarter of an hour. It has two poison-fangs on each upper jaw. The tail ends in a small recurved spine. To the *V.* belongs also the genus *Naja*, containing the Hooded Snake or Cobra-di-capello (Port., snake with the hood), (*Naja tripudians*), and the Asp (*Naja Haje*). All the species of *Naja* are remarkable for the singular manner in which they dilate the back and sides of the neck when irritated or excited. To this faculty they are indebted for their name; since the elevated skin of the back of the neck, when viewed in front, presents much the appearance of a hood.

Viperine, (*vī'per-in*), *a.* [Lat. *viperinus*.] Pertaining or relating to a viper, or to vipers.

Viperous, (*-ūs*), **Viperish**, *a.* [Lat. *viperous*.] Malignant; venomous; deadly; having the characteristic qualities of a viper; as, Slander's viperous tongue.

Viper's-bugloss, *n.* (Bot.) The common name of the genus *Echium*, *q. v.*

Viper's-grass, *n.* (Bot.) A popular name of the genus *Scorzonera*, *q. v.*

Virago, (*vī'rā-gō*), *n.* [Fr.; Lat., a fuller form of *virgo*.] A female warrior; a woman endowed with masculine stature, strength, and courage; as, a fierce virago. —Hence, by analogy, a vixen; a termagant; a bold, browbeating, domineering, impudent, turbulent woman.

Vire, (*veer*), *a.* town of France, near the river Vire, dept. Calvados, 34 m. from Caen. *Manuf.* Woollen goods, paper, and needles. *Pop.* 8,278.

Virelay, (*vīr'e-lā*), *n.* [Fr. *virelai*—*virer*, to turn, and *O. Fr. lai*, a song.] (Poetry.) A sort of ancient French poem in short lines of seven or eight syllables, and consisting of only two rhymes.

Virent, *a.* [Lat. *virens*.] Verdant; green; fresh; flourishing; not withered or decayed; as, virent leaves.

Virescent, *a.* (Bot.) Turning green; greenish; slightly verdant.

Virgate, *a.* [Lat. *virga*, a twig.] (Bot.) Rod-shaped; twig-like; as, a virgate stem.

Virgil, (*vēr'jil*), PUBLIUS VIRGILIUS MARO, the great Roman epic poet, was b. at Andes, a village near Mantua, B.C. 70. He received a learned education, studying first at Cremona, then at Mediolanum (Milan); and is said to have learned Greek from Parthenius, and philosophy from Syron the Epicurean. The small estate which he inherited from his father, and to which he probably retired after finishing his studies, was assigned with the neighboring lands to the soldiers of Octavian, and the poet was dispossessed. But through the influence of Asinius Pollio and Mæcenas, the estate was restored to him; and the first of his Eclogues is supposed to be the expression of his gratitude to Octavian. *V.* was of feeble health, and appears to have led for the most part a private retired life; sometimes at Rome, sometimes at Naples or Tarentum. Horace was his most intimate friend, and with him he accompanied Mæcenas on the journey to Brundisium, celebrated in one of the satires of Horace. In B. C. 19, Virgil visited Greece, and meeting Augustus at Athens, set out with him for Rome. But his health, long failing, at last gave way, and he only lived to reach Brundisium, where he died B. C. 19. He was buried on the road leading from Naples to Puteoli, where a tomb is still shown as his. The principal works of *V.* are the *Bucolics*, (also called *Eclogues*), the *Georgics*, and the *Æneid*. The *Bucolics* are ten in number, and are supposed to be his earliest compositions. He took Theocritus for his model, but fell far short of him in truth to nature and graphic power. The *Georgics* are didactic, and treat of agriculture and its relative subjects. They are the most finished and the most pleasing of his works. In the *Æneid* *V.* imitates Homer without rivaling him, and treats very learnedly of the adventures of Æneas after the fall of Troy, and of his settlement in Latium. With the ancient legends he associates the glory of Rome, and the emperor, his patron. It must be noted, however, that *V.* died without revising his great poem; and that, therefore, the *Æneid* shows rather what it might have been than what it was as an epic poem. The works of *V.* became school-books within a short time of his death, and were the subject

Fig. 2588. — VIRGIL.
(From an ancient gem.)

of numerous commentaries in after times. His high place in mediæval times may be judged from the fact that Dante calls him his master, and represents him as his guide through the invisible world. The first printed edition of *V.* appeared about 1469. From that time he has been edited and translated by scholars of nearly every country and period.

Virgil, in Illinois, a twp. of Kane co.

Virgil, in New York, a post-village and township of Cortland co., 40 m. S. of Syracuse.

Virgilian, (*ver-jil'*), *a.* Pertaining, or having reference to Virgil.—Resembling the style, or after the manner of Virgil.

Virgine, (*ver-jin*), *n.* [Fr. *vierge*; Sp. *virgen*, from Lat. *virgo*, *virginus*.] A female pure and unpolluted; a maid or maiden; a woman who has had no carnal knowledge of man.

(Astron.) Same as VIRGO, *q. v.*

a. Pure; untouched; chaste; fresh; new; unused; unsullied or undefiled; as, virgin ore.—Maidenly; modest; becoming a virgin; indicating diffidence or modesty; as, virgin blushes.

Virginal, (*ver-jin-al*), *a.* [Fr.] Relating, or belonging to a virgin.

(Mus.) An instrument of music, in vogue in the 16th century, resembling the harpsichord species, and consisting of one string, jack, and quill to each note;—probably so named from its being used by virgins or maidens, and frequently called, plurally, *virginals*.

Virgin Gorda, in the British W. Indies, one of the Virgin Islands, 9 m. long, and 4 broad; Lat. 15° 30' N., Lon. 64° 14' W.

Virginia, (*vīr-jin'i-a*), a Roman virgin. See APPIUS.

Virgin'ia, an E. and one of the 13 original States of the American Union, lies between Lat. 36° 30' and 40° 38' N., and Lon. 75° 10' and 83° 43' W., and is bounded N. by West Virginia and Maryland; E. by the last-named State and the Atlantic Ocean; S. by North Carolina and part of Tennessee; and W. by West Virginia and Kentucky. Greatest length, E. to W., along its southern border, about 425 m.; mean length, 350 m.; extreme breadth, 205 m.; gross area, 42,450 sq. m.; land area, 40,125 sq. m., equal to 25,680,000 acres.—*General Description.* The State is separated from West Virginia by the Shenandoah and Alleghany mountain-chains, which latter extend also through the S.W. section of the State, whose extreme limit is formed by the Cumberland Mountains separating *V.* from Kentucky. On the E. slopes in the N. part of the State is a low outlying range called Bull Run Mountains, separated from the Blue Ridge chain by spurs of low, heavily-wooded hills, alternating with swamps and mountain torrents. The Blue Ridge, the most E. of the true Appalachian ranges, maintains throughout its course in the State a more nearly uniform elevation than either of the other ranges. W. of this chain lies the broad, beautiful, and fertile valley of the Shenandoah, with the mountain range of the same name forming its background. This range, presenting a narrow, well defined ridge toward the central and S. portions of its course, in the N.E. spreads out like a fan into several distinct ridges. The highest peak in *V.* is White Top in Grayson co., 6,000 ft. above sea-level; and next in altitude are the Peaks of Otter (Fig. 159),—so celebrated for their picturesque surroundings,—which attain an elevation of about 4,260 ft. The E. part of the State, though hilly, is not mountainous, and the S.E. region is a rolling country, with extensive swamps in many localities. The Valley of Virginia, as the fertile tract watered by the Shenandoah and feeders of the James is called, lies at an elevation of from 1,200 to 1,500 feet above the sea. The State is plentifully watered; having as its principal rivers the James, Potomac (forming the boundary between *V.* and Maryland), Shenandoah, Rappahannock, Rapidan, York, Elizabeth, Nansemond, Nottaway, Blackwater, Pamunkey, Mattaponi, and the N. and S. Anna; all discharging their waters into the Chesapeake and the Atlantic. The S. part of the State is drained by the Roanoke and its numerous affluents; and by the Blackwater and Meherrin, two arms of the Chowan; these main streams have their embouchure in Albemarle Sound, N. Carolina. The S.W. division of *V.* is intersected by the Holston and Clinch rivers, and their branches—being the head-waters of the Tennessee. The estuary of Elizabeth river, and Hampton Roads adjacent, form one of the most commodious harbors on the N. Atlantic seaboard. A long narrow peninsula, called the *E. Shore of Virginia*, and comprising the cos. of Accomac and Northampton, extends from Lat. 38° to Cape Charles, and forms the E. point of demarcation between the lower Chesapeake Bay and the ocean. Along the seaboard of this peninsula, a series of sand-bars or spits of land, with occasional narrow sounds or inlets, extend for a considerable distance; as also does a succession of shallow reefs or islets, situated some 2 to 10 m. from the mainland, and in some places connected with it by extensive sand-drifts. The shores of that portion of Chesapeake Bay within the limits of *V.* are

Fig. 2589. — SEAL OF THE STATE.

indented by numerous small bays, inlets, and sounds, forming excellent anchorage ground for vessels drawing little water, and abounding in shell-fish. The State is prolific in scenery of the grandest and most picturesque character; among its natural curiosities and chief points of interest may be mentioned the Natural Bridge (Fig. 1916), in Rockbridge co.; Weir's Cave in Augusta co.; Blowing Cave (which sends out a blast of cold air in summer, and draws in air in winter); flowing and ebbing springs, &c.—*Clim.* The climate of the E. and S.E. sections of the State is hot, with malaria in the swampy river bottoms, producing bilious, typhoid, and intermittent fevers; the higher regions are cold in winter, but, taken as a whole, the characteristic climate of *V.* may be designated as pleasant and healthful.—*Geol., Min., &c.* The E. portion of *V.* is composed wholly of tertiary sands, clays, and marls, the newer pliocene and deposits belonging to the present epoch being found along the borders of the Chesapeake and the Atlantic Ocean; while further inland, strata of the miocene group emerge from beneath these and abut against the highest platform of granite, gneiss, and other metamorphic rocks, the E. margin of which is defined by a line connecting the lowest falls upon the principal rivers. From Petersburg the divergent line between the two formations extends S.S.W., leaving the State in the S.E. corner of Mecklenburg co. The miocene marl strata which underlie the greater portion of the E. division of the State, abound with fossil shells which afford fertilizing material in abundance. The metamorphic belt stretches W. beyond the Blue Ridge, and widens greatly toward the S., extending so far as Carroll and Grayson cos., on the line of N. Carolina. This forms the metalliferous belt of the State, producing gold, copper, lead, and iron. Strata of the upper secondary extend in two parallel and narrow belts, following the general course of the Blue Ridge through a considerable portion of the metamorphic district; in this section lie the coal-beds of James River, which are referred to the obolite period. The area of the Virginian coal-field is estimated at about 1,000 sq. m. The great valley of *V.*, W. of the Blue Ridge, extending to the North Carolinian frontier, consists chiefly of lower silurian rocks, among which the prevailing limestones insure a fertile soil. Along the mountain range next W. of the Blue Ridge occur the many and celebrated medicinal springs of Bath, Rockbridge, Montgomery, Augusta, and Rockingham cos. In Washington and Smyth cos., on the N. branch of the Holston river, deposits of gypsum and salt are largely distributed. Iron ores exist in great abundance along the Blue Ridge, and are extensively mined, as are also the ores of manganese, of which *V.* supplies about two-thirds the whole product of the U. S. Besides these mineral products, fire and porcelain clays, fine granite, slate, soapstone, sulphur, and marble are found, the variegated kinds of the latter being of remarkable beauty. From 1830 till 1861 gold-mining was regularly carried on in *V.*, and from \$50,000 to \$100,000 annually received at the mint from this State; but the working has not been found remunerative, and the production, steadily declining, is now very considerably reduced. The gold belt is from 15 to 20 miles in width, and thus far developed in Fauquier, Culpepper, Orange, Spottsylvania, Louisa, Fluvanna, Goochland, Buckingham, Campbell, and Pittsylvania cos. Copper is also found in the lower region, mostly in the form of sulphurets or copper pyrites.—*Soil, Agric., &c.* The soil of the tide-water region of *V.* presents a light sandy loam, capable, with proper care and manuring, of producing large crops of fruit and esculent vegetables; but it has been to a great extent impoverished by superficial cultivation without reinvigoration by manure, and many estates, once highly cultivated and productive, have dwindled away to mere wildernesses of scrub and small timber. These lands are, however, readily susceptible to reclamation; the free application of marl and gypsum is sufficient in two or three years to restore them to a condition of high productiveness. In the basins of the Potomac, York, James, and Rappahannock rivers, great quantities of excellent tobacco are raised. The valley of Virginia possesses a rich soil, admirably suited to the production of cereals, and is in fact the granary of the State. Much of the mountainous territory remains as yet uncultivated, some of it, indeed, being incapable of tillage; but the valleys between the parallel ridges are generally amply irrigated, and yield prolific crops if properly tilled. The variety of vegetation native to the State is very great, ranging from semi-arctic pines and balsams to a very profitable growth of semi-tropic cotton. More than half the area of the State is covered by woodland, hard and soft woods being in nearly equal proportion. The fauna is highly varied, including, besides numerous wild animals, a great variety of game and other birds, while the waters of the State are rich in edible fish, crustaceans and shell-fish. Agriculture is actively pursued, there being over 19,000,000 acres in farms, of which about 9,000,000 acres are improved. Indian corn is the leading cereal, the yield in 1895 being 32,607,158 bushels. In its tobacco crop *V.* is only exceeded by Kentucky and North Carolina, closely approaching the latter State. Of the improved land, about one-eighth the area was in meadows, pastures, orchards, and vineyards, the remainder being under tillage. The unimproved land in farms was mainly in forest and woodland, though a considerable percentage was in abandoned fields. The State had, in 1890, 127,600 farms, valued, with buildings and fences, at \$254,490,600, the implements and machinery being valued at \$6,593,688; the live stock at \$33,404,281, while the annual estimated value of all farm products was \$42,244,458. Indian corn is grown in all parts of the State, in the

tide-water division for sale and in other divisions for home consumption. It is justly highly esteemed as food for man and for fattening stock. The peanut constitutes the principal selling crop in many of the eastern counties where the sandy character of the soil is suitable to its cultivation. The production of this crop has greatly and rapidly increased, the annual product amounting to over 1,000,000 bushels, valued at over \$2,000,000. Cotton forms a valuable crop in the south-eastern counties, where the season for its development is the longest and the soil most congenial. The oat crop is principally consumed at home as provender for stock. Hay is raised mainly in the Piedmont valley and Appalachia division, where it grows remarkably well. It can also be grown in other parts with the exception of those where the soil is of too sandy a character. Here the pea takes its place. Vegetables and fruits constitute a very large and increasingly valuable item in the products of the tide-water counties, the soil being eminently favorable to their growth, and numerous steamships affording cheap and rapid transportation to the northern markets. In the tide-water division also the oyster business gives employment to thousands of people.—*Pol. Div.* The State is divided into 100 counties, viz.:

Cities and Towns. The principal urban centres are Richmond (State cap.), Petersburg, Norfolk, Portsmouth, Staunton, Alexandria, Lynchburg, Fredericksburg, Lexington, and Winchester.—*Govt. and Const.* The executive authority is vested in a Governor (salary \$5,000), who is elected by popular suffrage for 4 years, and who is ineligible for two consecutive terms. The Lieut.-governor and the Attorney-general (salary \$1,500 and fees) are also elected by the people for 4 years. The other executive officers are the Secretary of State, Auditor of Public Accounts, Second Auditor, Register of the Land Office, and Superintendent of the Penitentiary; all of whom are elected by the General Assembly of the State for 2 years, and receive each a salary of \$2,000 per annum. The apportionment based on the census of 1880 gives to V. 10 representatives in the lower house of the National Congress, and 12 electoral votes. By the remodelled constitution drafted in 1868, and ratified by both houses on the 8th of Oct. in the same year, the 14th and 15th amendments to the Federal Constitution were adopted as modifications of the former State constitution of 1851. According to the revised law, therefore, it is enacted that every male citizen of the U. States, 21 years of age and upward, who shall have been a resident of the State 12 months, and of the county, city, or town in which he shall offer, three months preceding any election, shall be entitled to vote upon all questions submitted to the people at such election, with certain exceptions in cases of persons from whom political disabilities imposed by the late war have not been removed. In most respects, judicial administration in V. assimilates with that of the other States of the Union.—*Manuf.* In 1890, according to the Federal census of that year, V. produced manufactured products to the value of \$88,363,824. There were 59,591 hands employed in the manufacture of these goods, to whom \$19,644,850 were paid in wages. This is a small result as compared with the great manufacturing States. The leading item of manufacture is tobacco; iron comes next; then cotton, lumber, wooden-ware and furniture, woollens, sumac, paper, leather, zinc, lead, jute, acids, fertilizers, lime, paper boxes, etc. Openings for new manufacturing enterprises are inviting, especially in the following lines: Pig-iron from native ore by use of coke, pronounced the best in the U. S., now brought to the ore-beds by the Richmond and Alleghany R. R. and other lines just completed, or to be soon so. Steel-rail from iron of best quality; engines for the system of roads centering in the State; cotton into fabrics, on account of access of raw material, cheap labor, abundant water-power, and healthy locality; also, cotton-seed oil, porcelain wares from Kaolin; with abundant cheap fuel and clays needed for manufacture; sulphuric acid from iron pyrites found in abundance on railroad lines; fire-bricks for furnaces, cupolas, and coke-ovens, etc., from clays of best quality, and finding good demand at kilns for home consumption; woollen fabrics; jute and ramie fabrics, the plants growing to perfection on the soil of river-bottoms and second-low grounds. Markets for all above enumerated are very accessible from any of the railway centres and by steamship lines north and south.—*Educ.* The system is as complete in the cities, towns, and thickly-settled sections as in any other State, and is rapidly improving. Sparsity of population in many sections is the chief obstacle to primary

schools. The University of Virginia, located near Charlottesville, Albemarle co., is supported by an annual appropriation by the State and other endowments. The children enrolled in the public schools number about 350,000.—*History.* This State—the “Old Dominion,” and “Mother of Presidents,” as it has been frequently and popularly styled—was the first of the American colonies settled by the English, who founded a plantation on the N. bank of James River, 1607, under the auspices of the London Company of Merchant Adventurers. (See RALEIGH (SIR WALTER), and SMITH (JOHN).) In 1609, the London Company became reorganized, and received a territorial grant covering a tract of country 200 m. N., with an equal distance S. of Old Point Comfort, and W. to the Pacific. The governing council, by the terms of this charter, were placed under the authority of the Company's council in England, which appointed Lord Delaware governor of the colony, and he arrived thither in 1610. The settlement, after passing through a series of vicissitudes, ultimately became prosperous, owing to the influx of immigrants from the mother country—men generally of the patrician stamp, who obtained crown-grants of, or purchased, large estates, and thus became progenitors of families representing what has been termed, in modern times, the “true Virginian stock.” In 1637, the laws of the colony were revised and consolidated, and from *A Perfect Description of Virginia*, published in London in 1649, we find its then population set down as consisting of “15,000 English, and 300 good negro servants.” The cultivation of tobacco, begun by the early settlers, had by this time attained to a considerable degree of importance; about 30 ships coming yearly to trade. In 1641 Sir William Berkeley was appointed governor, and being a staunch royalist, soon became obnoxious to the home parliament. The colony remained fixed in its loyalty to the royal cause until 1652, when an English fleet, sent out by Cromwell, compelled the submission of the loyalists, and brought about the supercession of Berkeley as governor by the appointment of Richard Bennet, a Puritan settler in Maryland. At this time, and since 1619, V. possessed a legislative body of her own, called the *House of Burgesses*, which retained its powers until the Revolution of 1775. On the restoration of Charles II., Sir William Berkeley was reinstated in his govt.; the legal code of the colony was again revised in 1662, the Church of England re-established, and severe laws were passed against “Nonconformists, Quakers, and Anabaptists.” In 1671, the pop. was estimated at “40,000, including 2,000 black slaves and 6,000 Christian servants, of whom about 1,500 were imported yearly, principally English.” The latter were, for the most part, convicts. About this time, the shipment of tobacco (the only exportable

Fig. 2590.—LITTLE STONY FALLS, (60 feet in descent,) (Little Stony is a tributary of Little Kanawha, or New River, in Giles co.)

commodity) was estimated at from 15,000 to 20,000 hhds. of 350 lbs. each. A patent of Charles II., making a grant of the colony to two of his favorites, Lords Arlington and Culpepper, and the heavy exaction of taxes by Governor Berkeley, brought about an insurrection, known as “Bacon's Rebellion,” which was suppressed with difficulty. On the death of Berkeley, in 1677, Lord Culpepper was declared governor, and he, in his turn, was succeeded by Lord Howard of Effingham. In 1689, the colony reluctantly acquiesced in the accession of William and Mary to the English throne. In 1705, by legal statute, slaves were declared to be real estate. In 1698, Williamsburg, founded and named in honor of William III., became the cap. of the colony. In 1754, during the war which broke out against the French on the Ohio, Geo. Washington made his first appearance in history. F. opposed, in concert with the other colonies, the obnoxious Stamp Act of 1764–5, but was not represented in the first Continental Congress which met in New York in the last-named year. The Virginian legis-

lature, in 1769, passed a renewed remonstrance against the measures passed for the taxation of the colonies, upon which the governor, Lord Botetourt, dissolved the assembly. The merchants and planters, however, neutralized, in some degree, the effect of this dissolution of their representative body by entering into a non-importation agreement, shutting out home-imports to the amount of over \$3,000,000. In March, 1773, the House of Burgesses, under the leadership of Jefferson, Patrick Henry, and R. H. Lee, passed certain patriotic resolutions, which was the cause of again subjecting the legislature to dissolution at the hands of the newly appointed governor, the Earl of Dunmore. In the following year, a war broke out between the colonists and certain bodies of Indians, commanded by Logan (q.v.) and other chiefs, which ended in the discomfiture of the savages. In 1775, hostilities commenced between the English executive and the colonists, and Norfolk was bombarded by Lord Dunmore, in 1776. In the same year the Declaration of Independence was proposed in the Continental Congress by the Virginia delegates under instructions from the colonial convention. In 1779 the British Gen. Matthews destroyed Norfolk, took Portsmouth and Gosport, and burnt or captured all the vessels then in the James and Elizabeth rivers. In Jan., 1781, Gen. Arnold captured and burned Richmond, and, later in the year, the greater part of E. Virginia was sacked by Gens. Cornwallis and Phillips, entailing a loss to the colonists of \$10,000,000 worth of property. The surrender of Lord Cornwallis at Yorktown, Oct. 19, 1781, virtually put an end to the war. A convention of States, called for by V. in May, 1786, led to the ratification of a constitution June 25, 1788. In 1784 V. had ceded to the national govt. her claim to lands N.W. of the Ohio, founded on the grant in the charter to the Virginia Company in 1619, reserving to herself her tracts S. of the Ohio, and bounty lands N.W. of that river. From this time forward till the outbreak of the civil war in 1861, V. maintained a predominant influence in the councils of the nation, seven occupants of the presidential chair, at different times, having hailed from the “Old Dominion.” Shortly after the inauguration of the War of Secession, an ordinance of withdrawal from the Union passed the legislature, April 17, 1861, by a majority of 33 votes. V. then became the principal battle-ground of the war, and bore more heavily than any other of the so-called Confederate States the brunt of the war. The 100th anniversary of the battle of Yorktown and the surrender of the British troops under Lord Cornwallis to the united French and American forces, which virtually ended the Revolutionary struggle, was celebrated at Yorktown under national and State auspices in October, 1881. The programme of the celebration covered several days, during which (the 18th) was laid the corner-stone of a monument to be raised at national expense at the scene of the surrender at Yorktown. Pop. (1890) 1,655,980, of whom 635,858 were colored: (1897) estimated at 1,750,000.

Virginia City, in Montana, a post-town, cap. of Madison co., 50 m. N.E. of Dillon (the nearest R. R. station on Union Pac. R. R.). In a rich gold-mining region; Lat. 45° N., Lon. 111° 45' W. Pop. (1897) 1,000.

Virginia City, in Nevada, a city, cap. of Storey co., on the E. slope of Mount Davidson, 6,205 feet above the sea, 15 m. N.N.E. of Carson City. It grew rapidly, on account of the rich silver mines in its vicinity, but afterward declined, the population falling from 10,917, in 1880, to about 5,700, in 1897.

Virginia Islands, in the W. Indies, a group of abt. 100 islands, occupying a space 100 m. long, and 20 wide, between Lat. 18° 5' and 18° 50' N., Lon. 64° 10' and 65° 40' W. Of these, Great Britain owns about 50, the principal of which are Tortola, Anegada, Virgin Gorda, Jost Van Dyke, Guano Isle, Beef and Thatch Islands, Prickly Pear, Camanas, Cooper's Salt, and St. Peter's; St. Thomas, Santa Cruz, St. John, and others, belong to Denmark; and Culebra, with several other islets, to Spain. Surface, diversified; soil, fertile. Prod. Sugar, cotton, molasses, rum, tobacco, salt, ginger, turmeric, pimento, indigo, fruits, and vegetables. Climate, variable, and earthquakes are frequent. Only 1/4th are inhabited. The V. I. were discovered by Columbus in 1494.

Virgin (-jén) River, in Utah and New Mexico, rises at the S. base of the Wahsatch Mountains, flows S., and falls into the Colorado near Lat. 35° 30' N.

Virginity, (vēr-jin'i-tē,) n. [Fr. *virginité*, from Lat. *virginitas*.] Maidenhood; quality of a virgin; state of having had no carnal knowledge of man.

Virginville, in Pennsylvania, a post-village of Berks co., 68 m. E. of Harrisburg.

Virgo, n. [Lat., the virgin.] (*Astron.*) One of the 12 zodiacal constellations, or signs, being the 6th in order, beginning with Aries. Virgo is usually represented with an ear of corn in her hand, and is hence called *Signum Ceresis*. The sun enters this sign about the 22d of August. The constellation Virgo contains one bright star of the first magnitude, called *Spica Virginis*.

Virgulate, a. Wand-shaped.

Virgule, n. [Fr., from Lat. *virgula*.] A comma. (r.)

Viridescent, a. [From Lat. *viridis*, green.] (*Bot.*) Greenish.

Viridity, Viridness, n. [Fr. *viridité*, from Lat. *viriditas*—*viréo*, to be green or veridant.] Verdure; greenness; the color of fresh vegetables.

Virile, (vī'ril or vī'ril,) a. [Fr. *viril*; Lat. *virilis*, masculine, manly.—*vir*, a man.] Belonging to the male sex; pertaining to man, in the eminent sense of the word; as, *virile* maturity.—Masculine, in distinction from *puerile* or *feminine*; as, *virile* strength.

Virility, n. [Fr. *virilité*; Lat. *virilitas*.] Manhood; quality of being viril; state of the male sex which has

arrived to the maturity or strength of man, and to the power of procreation.—The procreative power.

Viro'qua, or VAROQUA, in *Wisconsin*, a fine city and township, cap. of Vernon co., 28 m. S.E. of Lacrosse. Pop. (1895) 1,630.

Virtu, (*ver'too'*), (frequently written VERTU,) *n.* [It. *virtù*, *virtue*.] A love of the fine arts; or, a taste for curiosities, bijoutry, specimens of rococo, &c.—Objects of art or antiquity considered collectively—such as fill museums and private collections.

Virtual, (*vert'yū-al*), *a.* [Fr. *virtuel*, from Lat. *virtus*.] Having virtue; potential; possessing the power of acting, or of visible efficacy without the material or sensible part; as, a *virtual* intention of the mind.—Being in essence or effect, not in fact; as, Bismarck is the *virtual* ruler of Germany.

Principle of virtual velocities. (*Math.*) The law that two forces are in equilibrium when they are in the inverse ratio of the virtual velocities of the points to which they are applied, estimated in the direction in which the forces respectively act.—*Virtual focus.* (*Opt.*) The point from which rays, having been rendered divergent by reflexion or refraction, appear to issue.—*Virtual moment of a force.* (*Dynamics.*) The product of the intensity of the force multiplied by the virtual velocity of its point of application.—*Virtual velocity.* (*Mech.*) The velocity which any point of a body in equilibrium would actually acquire during the first instant of its motion, if that equilibrium were disturbed.

Vir'tually, *adv.* In a virtual manner; by means of some virtue or influence, or the instrumentality of something else; in efficacy or effect only, not in fact.

Virtue, (*vert'yū*), *n.* [Fr. *vertu*; It. *virtù*; Lat. *virtus*, *virtutis*, from *vir*, a man.] Acting power; energy, physical or moral, which works some good effect; strength; force; efficacy; as, the *virtue* of a medicinal herb.—That assemblage of qualities which constitutes a true man; excellence, or that which constitutes value, merit, or worth.—Moral goodness. See *ETHICS*.—Any particular moral excellence or estimable quality; as, the *virtue* of sobriety.—Female chastity; virginity; purity; as, she sets herself up as a paragon of *virtue*.

(*Fine Arts.*) An order of angels, generally represented in works of art in complete armor, bearing pennons and battle-axes; in many ancient paintings the *V.* are depicted as armed females overcoming their opposite *VICES*, (*q. v.*) The *V.* are 14 in number: viz., Liberty, Honor, Promptitude, Fortitude, Concord, Friendship, Majesty, Health, Security, Faith, Prayer, Praise, Power, and Religion.

Cardinal virtues. See *CARDINAL*.

Theological virtues, the three virtues, Faith, Hope, and Charity.—*In or by virtue of*, by authority of; through the force or efficacy of; as, *by virtue of* an Act of Congress.

Vir'tueless, *a.* Wanting in virtue; vicious.

Virtuos'ity, *n.* State or characteristics of a virtuoso; artistic feeling; aesthetic cultivation; sentimentalism.

Virtuo'so, *n.*; Eng. *pl.* VIRTUOSOS; It. *pl.* VIRTUOSI. [It. from *virtu*, a love of excellence.] A lover of virtue; a person skilled in the fine arts, particularly in music; or, a person who is a connoisseur in antiquities, curiosities, bijoutry, rococo, &c.

Virtuo'soship, *n.* The pursuits or practices of a virtuoso.

Virtuous, (*virt'yū-us*), *a.* [Fr. *vertueux*.] Having, or partaking of virtue; morally good; acting in conformity to the moral law; practising the moral duties, and abstaining from vice; acting in consonance with the divine law; excellent in moral principles; righteous; blameless; good; as, a *virtuous* life, a *virtuous* mind.—Potent; efficacious; possessing special power or efficacy; having peculiar operative properties; as, *virtuous* herbs. (*Dryden.*)—Chaste; pure; unpolluted; as, a *virtuous* woman.

Vir'tuously, *adv.* In a virtuous manner; in conformity with the moral or divine law, or with duty or righteousness; as, a child who has been *virtuously* educated.

Virulence, **Vir'ulency**, *n.* [Fr. *virulence*, from Lat. *virulentia*.] Quality of being virulent; that quality or characteristic of a thing which renders it extremely active in doing injury; malignancy; acrimony; venomousness; as, the *virulence* of cholera.—Acerbity or acrimony of mind or temper; malignancy of disposition; extreme causticity or bitterness; as, the *virulence* of animosity.

Virulent, *a.* [Fr. from Lat. *virulentus*—*virus*.] Full of poison or deadly virus; extremely venomous; potent in doing injury; as, the *virulent* bite of a cobra-di-capello.—Malignantly hostile; bitter or rancorous in animus or enmity; as, a *virulent* attack upon a person's character.

Virulently, *adv.* In a virulent or acrimonious manner.

Virus, *n.* [Lat., a slimy or poisonous liquid.] (*Med.*) Active or contagious matter of an ulcer, pustule, &c.—The special agent in transmitting contagious disease; as, the *virus* of small-pox.

—Hence, in a moral sense, the animus, spirit, or drift of that which is injurious; as, the *virus* of jealousy.

Vis, *n.* [Lat.] Power, force, strength.

Vis inertiae. (1) The propensity of nature to remain in its natural condition, whether of motion or rest, and to resist change. (2) Inertness; supineness; inactivity, as of the mind.—*Vis insita*, the power or innate force essentially residing in any body, and by which it endeavors to preserve its present state, whatever that be.—*Vis viva.* (*Mech.*) The force of a body in motion estimated by force; the distance to which the body goes—in distinction from *vis mortua*, or dead force.—*Vis vitatis.* (*Physiol.*) Vital force or vigor.—*Vis motrix*, motive or moving force.

Visa, *n.* and *v. a.* [Fr.] See *Visé*.

Visage, (*viz'aj*), *n.* [Fr., from L. Lat. *visagium* *fasum*, a mask.] The look, face, aspect, or countenance of a person, or of other animals;—principally applied to human beings; as, a lean and melancholy *visage*.

Visaged, (*viz'ajd*), *a.* Having a face, visage, or countenance.

Visalia, in *California*, a post-village, cap. of Tulare co., abt. 200 m. S.E. of Stockton.

Vis-a-vis, (*viz-a-vē'*), *n.* [Fr., face to face.] One who, or that which, fronts, or is face to face with, another; as, a lady was my *vis-a-vis* in the quadrille.—A carriage which enables two persons to sit opposite to each other.

Viscera, (*vis-se'rah*), *n.* [Lat. *pl.* of *viscus*, *visceris*, an entrail.] (*Anat.*) The contents of the three great cavities of the body: the brain, *e. g.*, is the *viscus* of the cranium, the heart one of the viscera of the thorax, and the stomach one of the abdominal viscera. The term is usually restricted to the organs of the thorax and abdomen.

Visceral, *a.* [Fr.; Lat. *visceralis*.] Pertaining, or having reference to the viscera.

Vischer's Ferry, (*vish'erz*), in *New York*, a post-village of Saratoga co., 16 m. N.W. of Albany.

Viscid, (*vis'sid*), *a.* [L. Lat. *viscidus*, clammy, from *viscum*.] Having the qualities of birdlime; glutinous; sticky; tenacious; adhering closely, and having a ropy consistency; not readily separating; as, gum is a *viscid* substance.

Viscid'ity, *n.* [It. *viscidità*.] Quality of being viscid or sticky; glutinousness; tenacity; as, the *viscid'ity* of soft soap.—That which is ropy or viscid; viscous concretion.

Visconti, (*vis-kon-te*), *n.* The name of one of the most illustrious families of Lombardy, which rose to sovereign rank in northern Italy in the 13th century, and was equally distinguished by the share it took in the political contests of the Middle Ages, and by the services which it rendered to literature and science. The name *V.* is derived from the Latin *vice-comites*, and at first was merely the title of an office, but it gradually became a family surname, though when it came to be applied to this family authentic history fails to explain. The power of the *V.* began in 1277, when *Ottone V.*, archbishop of Milan, vanquished his popular opponents headed by Martino della Torre, and became perpetual Lord of Milan. In 1441, Filippo Maria *V.* engaged the services of Francesco Sforza, to whom he gave his natural daughter Bianca in marriage; and on his death in 1447, the *V.* family was succeeded by that of Sforza in the lordship of the Milanese. See *SFORZA*.

Viscount, (*vi'kount*), *n.* [Fr. *vicomte*; It. *visconte*; Pg. *visconde*, from Lat. *vice-comes*.] Originally, an earl's substitute, acting as sheriff of a county; now, especially in England, a nobleman or peer of the realm, next in rank below an earl, and above a baron.—Also, the degree of rank of nobility borne by such individual; as, to create a *viscount*.

Viscountess, (*vi'kount-es*), *n.* [Fr. *vicomtesse*; Sp. *vizcondesa*.] The wife of a viscount; a peeress of the fourth rank of nobility.

Viscountship, **Viscounty**, *n.* [Fr. *vicomté*.] The quality, rank, degree, or office of a viscount.

Viscos'ity, **Vis'cousness**, *n.* [Fr. *viscosité*, from L. Lat. *viscositas*.] Quality of being viscous; glutinousness; viscosity; tenacity; that quality of soft substances which makes them adhere so as not to be easily parted; as, the *viscosity* of pitch.

Viscous, (*vis'kūs*), *a.* [From Lat. *viscus*, birdlime.] Glutinous; clammy; sticky; adhesive; tenacious; viscid; having a ropy consistence.

Vis'cousness, *n.* Same as *Viscosity*, *q. v.*

Vis'cus, *n.* [Lat.] (*Anat.*) See the plural *Viscera*.

Vis'cum, *n.* [Lat.] (*Bot.*) A gen. of the ord. *Loranthaceae*. *V. album* is the common Mistletoe, which is parasitic on many trees, as willows, thorn, limes, elms, oaks, firs, and apple-trees. The mistletoe of the oak was an object of superstitious veneration by the Druids. The fruit is a viscid pulp, which is employed for making birdlime.

Visé, (*vē-zā'*), *VISA*, *n.* [Fr. *pp.* of *viser* = Lat. *videre*, to see.] An indorsement of a passport in certain countries of the European continent, permitting the bearer to proceed on his journey.

—*v. a.* To examine and indorse, as a passport.

Visen, (*vē'sai-oo*), a town of Portugal, prov. of Beira, 47 m. S.E. of Oporto; pop. 1,076.

Vishnei-Volotchok, (*vish'ne-vo-lot-chok*), a town of Russia, gov. of Tver, on the Tsna, 230 m. S.E. of St. Petersburg; pop. 10,120.

Vish'nu, [*Sansk.*] (*Hind. Myth.*) See *HINDOISM*.

Visibility, **Vis'ibleness**, *n.* [Fr. *visibilité*, from Lat. *visibilitas*.] State or quality of being visible or perceptible to the eye; state of being discoverable or apparent; perceptiveness; exposure to view.

Visible, (*vis'i-bl*), *a.* [Fr., from Lat. *visibilis*.] Perceivable by the eye; perceptible; discovered to the view; as, a *visible* object.—Apparent; palpable; open; conspicuous; as, I noticed a *visible* change in his manner toward me.

Visibly, (*viz'-*), *a.* In a manner perceptible to the eye.

Vis'igoths, *n. pl.* (*Hist.*) See *GOTH*.

Vision, (*vish'un*), *n.* [Fr. and Sp., from Lat. *visio*.] (*Optics and Physiol.*) The faculty, sense, or act of seeing. See *EYE*, *LIGHT*, and *SIGHT*.

—Anything which is the object of sight.—Particularly, a mental or optical delusion; something imagined to be seen, but not real; a spectre; a phantom; an apparition; a revelation from God; an appearance or exhibition of something supernatural or prophetic; as "The baseless fabric of a *vision*." (*Shaks.*)—Hence, the production of fancy; something imaginary or ideal; as, the *visions* of a dream.

Arc of V. (*Astron.*) The arc which measures the sun's distance below the horizon, when a star or planet before hid by its rays, begins to be visible. Thus, the arc of vision for Jupiter is about 10°.—*Beautiful or intuitive vision.* (*Theol.*) That vision which the faithful enjoy in heaven.—*Direct vision.* (*Opt.*) That vision which is performed by the agency of direct rays.—*Field of vision*, field of sight or view.—*Reflected vision*, that which is produced by rays reflected from mirrors.—*Refracted vision*, that which is refracted by lenses or prisms.

—*v. a.* To dream; to see in vision; as, "*visioned* terrors."

Vis'ional, *a.* Pertaining to a vision. [*Scott.*]

Vis'ionariness, *n.* Quality of being visionary.

Vis'ionary, *a.* [Fr. *visionnaire*.] Affected by visions, or by phantoms; disposed to receive imaginative impressions; given to reverie; as, a *visionary* thinker.—Imaginary; not real; chimerical; possessing no solid basis or substantial foundation; as, a *visionary* project.

—*n.* One whose imagination is disturbed.—One who forms imaginary or impracticable designs or schemes; one who is confident of success in a project deemed by others to be vain and fanciful.

Visit, (*viz'it*), *v. a.* [Fr. *visiter*, from Lat. *visitare*, frequent, of *viso*, from *video*, to see.] To see frequently or habitually; to go or come and see; to attend; as, a physician *visits* his patients.—To go or come to see for inspection, examination, correction of abuses, &c.; as, a bishop *visits* his diocese, an inspector *visits* those persons or books which are placed in his charge.—Hence, usually in a scriptural sense, to send good or evil on judicially; as, "God *visit* thee in good things." *Judith* xiii. 20.

—*v. n.* To practise going to see others; to keep up the interchange of civilities and salutations; as, a round of *visiting*.

—*n.* Act of visiting; act of going to see another, or of calling at his, or her, house; a going to see, or attending on; as, a *visit* of courtesy, condolence, or congratulation; a *visit* to Europe; a physician makes many *visits*.—Act of going to view or inspect; visitation; as, the *visit* of a government commissioner.

Right of visit. (*International Law.*) See *SEARCH*.

Vis'itable, *a.* That may be visited or inspected.

Vis'itant, *n.* One who visits; a visitor.

Visitation, (*viz-it-ā'shun*), *n.* [Fr., from Low Lat. *visitatio*.] Act of visiting, or state of being visited; access for inspection or investigation; as, the *visitation* of a sanitary commission.—Good or evil dispensed by God, generally the latter; retributive infliction.

(*Law.*) Act of a superior or superintending officer or officers, who visit a corporation, college, church, hospital, or other institution, to examine into its affairs, and see that its laws and observances are duly carried out; as, parochial *visitation*.

(*Eccles.*) A festival of the Roman Catholic Church, in honor of the visit of the Virgin Mary to Elizabeth. It is celebrated on the 2d of July.

(*Eccles. Hist.*) In the Roman Catholic Church, a religious community founded originally in Savoy, in 1610, and in 1808 established in the U. States, under the denomination of *The Order of the Visitation of Our Lady*.

Visitator'ial, *a.* An improper rendering of *VISITORIAL*, *q. v.*

Vis'iter, *n.* A visitor.

Vis'iting, *a.* Authorized to visit and inspect; as, a *visiting* committee.

—*n.* Act of going to see, or attending; visitation.

Vis'itor, *n.* [Fr. *visiteur*.] One who comes or goes to see another, as in civility or friendship; as, to receive *visitors*.—A person officially authorized to visit a corporation or institution, (see *VISIT*, § *International Law*), to see that the laws and regulations belonging thereto are properly carried out; as, the *visitor* of a college.

Visue, (*veen*), *n.* Same as *VENUE*, *q. v.*

Vis'or, **Viz'or**, (also *VISARD*, *VIZARD*), *n.* [Fr. *visière*, from Lat. *visus*, *video*, to see.] The movable and perforated face-guard of a helmet, through which the wearer sees.—Hence, a mask or head-covering to disfigure and disguise; as, "Deceit doth mask in *visor* fair." (*Spenser*).—The peak or fore-piece of a cap.

Visored, (*viz'erd*), *a.* Wearing a visor, masked; disguised.

Vis'ta, *n.*; *pl.* VISTAS. [It., sight, from Lat. *videre*, to see.] A view or prospect through an avenue, as between rows of trees;—hence, the trees or other things that form the avenue; any distant view through or between intervening objects.

Vis'ta, in *New York*, a post-village of Westchester co., 120 m. S.E. of Albany.

Vis'tula, (Ger. *Weichsel*), a river of N. Europe, rises in the Carpathian Mountains, in Austria, Silesia, and flowing N.E. through Poland, then N.W. through E. Prussia, passing Cracow, Warsaw, and other cities, divides into three branches, one of which, called the Noya, and another, the Old Vistula, enters the Frische-Haff N.W. of Elbing; while the other, or main stream, which preserves the name of *V.*, turns westward, and enters the Baltic at Dantzic. Its total course is estimated at 530 m.

Visual, (*vish'yū-al*), *a.* [Fr. *visuel*; It. *visuale*, from Lat. *visus*, *video*.] Pertaining or relating to sight or vision; used in sight; serving as the instrument of seeing; as, the *visual* nerve.

V. angle. (*Opt.*) The angle at which an object is viewed.—*V. ray*, that beam of light which impinges on the eye from the object observed.—*V. zone.* (*Persp.*) A cone whose vertex forms the point of sight.—*V. plane*, any plane which passes through the point of sight.—*V. point*, that point in the horizontal line where the visual rays focus.

Visualize, (*viz'yū-al-iz*), *v. a.* To render visual. (*R.*)

Vita'ceae, *n. pl.* (*Bot.*) The Vine family, an order of plants, alliance *Berberales*. *DIAG.* Regular, symmetric

flowers, axile placentæ, stamens opposite the petals, and anthers opening longitudinally. — They are shrubby plants, usually climbing, with simple or compound leaves, which are opposite below and alternate above; flowers small, green; aestivation of petals induplicate; ovary superior, with a very short, simple style and stigma; fruit a nuculanum; seeds few; embryo erect, in horny albumen. There are probably 8 genera, including some 260 species, which are exclusively natives of warm and tropical regions. See VITIS.

Vital, *a.* [Fr., from Lat. *vitalis* — *vita* (for *victo*), life.] Pertaining or relating to life, whether animal or vegetable; as, *vital* powers. — Containing life; animate; living; as, *vital* heat. — Necessary to life; contributing to existence; as, *vital* air. — Being the seat of life, or that on which life depends; as, *vital* parts of the body. — Essential; very necessary; highly important; as, a subject of *vital* consequence. — So disposed as to be capable of living; — a Latinism. (R.)

Vital statistics, statistics having reference to the duration of life, with its attendant circumstances.

Vitalism, (*-izm*), *n.* (*Physiol.*) The doctrine which ascribes every function of the organism to the direct agency of a vital principle or force.

Vitality, *n.* [Fr. *vitalité*; L. Lat. *vitalitas*, from *vita*, life.] State, quality, or condition of being vital; act of living; the principle of animation or of life. See LIFE.

Vitalization, (*-zā'shun*), *n.* Act or process of vitalizing.

Vitalize, *v. a.* [Fr. *vitaliser*.] To give vitality to; to infuse life; to furnish with the vital or animate principle; as, *vitalized* blood.

Vitally, *adv.* In such a manner as to give life. — Essentially; necessarily.

Vitals, *n. pl.* Vital parts; parts of animal bodies essential to life. — Hence, the part essential to life, or to a sound or whole state; as, repudiation of the public debt preys upon the *vitals* of a nation's credit.

Vitchehda, (*ve-cheh'da*), a river of Russia which traverses the govt. of Vologda, and falls into the Dwina, 12 m. W. of Solvitchegodsk, after a W. course of 380 m.

Vitebsk', or **Vitepsk'**, a city of Russia in Europe, cap. of govt. of same name, on the Dwina, at the confluence of the Vitaba, 389 miles S. of St. Petersburg. *Manuf.* Woollens and leather.

Vitelline, (*vit'el-lin*), *n.* The albumen of the yolk of eggs.

— *a.* [Lat. *vitellus*, the yolk of an egg.] Pertaining to, or consisting of, the yolk of an egg.

Vitellius, AULUS, a Roman general, proclaimed emperor in Germany at the time Vespasian was engaged in war with the Jews, A. D. 69. About the time he arrived in Rome, Vespasian was proclaimed at Alexandria, and, on the latter arriving in Italy at the head of his hostile army, V. was put to death.

Vitellus, *n.* [Lat.] (*Physiol.*) The yolk of an egg.

(*Bot.*) The sac of the amnios in a thickened state, and forming a case within which lies the embryo.

Viterbo, (*ve-tair'bo*), a town of Italy, at the base of Mont Cimino, in the Campagna di Roma, 41 m. N.N.W. of Rome. Its streets are broad and well-paved, and some of its churches are rich in works of art. This city was one of the principal in the Etruscan League, and, in the Middle Ages, the capital of the Patrimony of St. Peter. In one of its public squares the emperor Frederick Barbarossa humiliated himself before Pope Adrian IV. *Pop.* 15,400.

Vitex, *n.* (*Bot.*) A genus of European and Asiatic plants, order *Verbenaceæ*. The Chaste tree, *V. agnus castus*, a native of the countries around the Mediterranean, derives its name from the practice of Grecian matrons to strew their couches with its leaves, especially during the sacred rites of Ceres, in order to banish impure thoughts.

Vitiate, (*vish'i-āt*), *v. a.* [Fr. *vicier*, from Lat. *vitio*, *vitiat*, from *vitium*, fault, defect, blemish.] To make faulty; to injure; to spoil; to mar; to taint; to corrupt; to stain; to injure the substance or quality of, so as to impair and render defective; as, a *vitiated* taste. — To render of no force or validity; to make void; to deprive of efficacy, wholly or in part; as, fraud *vitiate*s a contract.

Vitiation, (*vish-i-ā'shun*), *n.* [L. Lat. *vitatio*.] Act of vitiating, or state of being vitiated; depravation; corruption; a rendering invalid; as, *vitiation* of the bodily constitution, the *vitiation* of a policy of insurance.

Vitiosity, *n.* [Lat. *vitiositas*.] Quality of being vicious. (R.)

Vitious, **Vitiously**, **Vitiouslyness**, *a., adv.*, and *n.* Same as VICIOUS, VICIOUSLY, VICIOUSNESS.

Vitim, (*vi-teem'*), a river of Siberia, rises in the Vitim-Seppe, S.E. of Lake Baikal, govt. of Irkutsk, and joins the Lena in Lat. 59° 15' N., Lon. 112° E., after a N.N.E. course of 900 m.

Vitis, *n.* [Lat., a vine.] (*Bot.*) A genus of plants, order *Vitaceæ*. All the species are climbers, furnished with tendrils opposite the leaves, as in the Grape-vine, the leaves of some being simple, and either undivided or variously lobed, and those of others compound. Their small greenish flowers, whose sexes are very frequently found on different plants, are dispersed in panicles set opposite the leaves. The well-known Grape-vine, or common Wine Grape, *V. vinifera*, is naturalized in nearly all temperate climates, but supposed not to be indigenous to this country. No plant in the vegetable kingdom possesses more interesting attributes, and is cultivated with greater care, than the common vine. By cultivation it sports into endless varieties, differing in the form, color, size, and flavor of the fruit, and in respect to the hardness of its constitution. In N. England its cultivation is chiefly confined to the garden and as a dessert

fruit; but there are extensive vineyards in the Middle and Western States, for the production of wine. The vine is propagated by cuttings. Varieties without end may be raised from the seed, which will bear fruit the fourth or fifth year. — There are several species of vines, which

Fig. 2591. — VITIS VULPINA.

grow wild and bear grapes abundantly in N. America, but they are generally inferior to *V. vinifera*. Of late years, however, good varieties have been obtained, by careful cultivation, from *V. labrusca*, *V. vulpina* (Fig. 2591), *V. rotundifolia*, and others. See OIDIUM, WINE, CATWBA WINE, &c.

Vitre, (*vest'ra*), a town of France, dept. of Ile-et-Vilaine, on the Vilaine, 20 m. E. of Rennes. *Manuf.* Woollens, canvas, and linen. *Pop.* 9,850.

Vitreo-electric, *a.* (*Physics*.) Containing or exhibiting positive electricity, or that which is excited by rubbing glass.

Vitreous, *a.* [Fr. *vitreux*, *vitré*; Lat. *vitreus*, from *vitrum*, glass or wood.] Pertaining or relating to, or derived from, glass; as, *vitreous* electricity. — Resembling glass; as, the *vitreous* humor of the eye. — Consisting of glass; as, *vitreous* particles.

Vitreous electricity. See ELECTRICITY. — *Vitreous humor*. (*Anat.*) See EYE.

Vitreousness, *n.* Quality or state of being vitreous.

Vitrescence, (*-trēs'sens*), *n.* Quality of being vitrescent; glassiness.

Vitrescent, *a.* [From Lat. *vitrum*, glass.] Susceptible of being formed into glass; tending to become glass.

Vitrescible, *a.* That may be vitrified.

Vitrification, *n.* [See *vitrify*.] Act, process, or operation of converting into glass by heat.

Vitrifactory, (*-fakt'yur*), *n.* [From Lat. *vitrum*, glass, and *facere*, to make.] The manufacture of glass and ceramic wares.

Vitrifiable, *a.* That may be vitrified.

Vitriform, *a.* Having the appearance or form of glass.

Vitrify, *v. a.* [Fr. *vitrifier*, from Lat. *vitrum*, glass, and *facio*, to make.] To make or convert into glass.

— *v. n.* To become glass.

Vitriina, *n.* [From Lat. *vitrum*, glass.] (*Min.*) A genus of fresh-water gasteropods, with ovate, thin, glossy, and fragile shells. They greatly resemble young specimens of the genus *Helix*, from which they are distinguished by their never being umbilicated or perforated.

Vitriol, *n.* [Fr., from Lat. *vitrum*.] (*Chem.*) A term applied by old writers to crystallized sulphate of iron, or green vitriol. Sulphate of copper and sulphate of zinc were afterwards called blue vitriol and white vitriol. See COPPER, IRON, ZINC.

Oil of vitriol. (*Chem.*) Same as SULPHURIC ACID.

Vitriolate, **Vitriolize**, *v. a.* To convert into vitriol.

Vitriolic, *a.* [Fr. *vitriolique*.] Pertaining to, having the qualities or characteristics of, or obtained from vitriol; as, *vitriolic* acid (oil of vitriol or sulphuric acid).

Vitriolizable, *a.* That may be converted into a vitriol.

Vitriolization, (*-zā'shun*), *n.* Vitriolation; act of vitriolizing, or state of being vitriolized.

Vitruvian Scroll, *n.* [From *Vitruvius*.] (*Arch.*) A decorative enrichment, consisting of convoluted, undulating ornamentation, which is very fanciful and varied; — it frequently occurs in friezes of the composite order.

Vitruvius, MARCUS POLLIO, (*vi-troo'vi-us*), a writer on architecture, who flourished under Julius Cæsar and Augustus, and is supposed to have been b. at Formiæ, in Campania. His celebrated work, *De Architectura*, is a compendium of the works of various Greek and Roman writers on the same subject. It was first printed about 1480, has passed through very numerous editions, and been translated into English, French, German, Dutch, and Italian.

Vitry-le-François, (*vet're-le-frong-swah'*), a fortified

town of France, dept. of Marne, 19 m. S.S.E. of Chalons. *Manuf.* Hosiery, leather, and cotton goods. *Pop.* 9,078.

Vitta, *n.*; *pl.* VITÆ. [Lat., a fillet.] (*Bot.*) One of the narrow festinæ or channels lodged in the coat of the fruit of umbellifers, and containing oil.

Vit'tate, *a.* [From Lat. *vitta*, a ribbon.] (*Bot.*) Striped, after the manner of a ribbon.

Vitto'ria, a town of Spain, cap. of the prov. of Alava, 27 m. S. of Bilboa. *Manuf.* Brass and iron goods, ebony articles, leather, candles, and linen. The French were here defeated by the allied English, Spanish, and Portuguese, under the Duke of Wellington in 1813. *Pop.* 16,500.

Vitto'ria, a town of Italy, in Sicily, prov. of Syracuse, 14 m. W.N.W. of Modica; *pop.* 12,100.

Vit'line, *a.* [From Lat. *vitulus*, a calf.] Pertaining or relating to a calf or to calves, or to veal.

Vituperate, *v. a.* [Lat. *vituperare*, *vituperatus* — *ritum*, a fault, a vice, and *pario*, to place in order.] To find fault with; to attribute blame or reproach to; to censure; to load with abuse or reviling.

Vituperation, *n.* Blame; censure in the highest degree; overwhelming abuse or reproaches.

Vituperative, *a.* Containing vituperation; conveying blame or censure.

Vituperatively, *adv.* Abusively; with vituperation.

Vituperator, *n.* One who practises vituperation.

Vivace, (*ve-vā'cha*), *a.* [It.] (*Mus.*) A term which, affixed to a movement, denotes that it is to be executed by the performer in a brisk or lively manner.

Vivacious, (*vi-vā'shus*), *a.* [Fr. *vivace*; Lat. *vivax*, *vivacis*, from *vivo*, to live.] Long-lived; tenacious of life. (R.) — Lively; active; brisk; full of spirit or animation; sprightly in temper or conduct; gay; as, a *vivacious* talker.

Vivaciously, *adv.* With vivacity, life, or spirit.

Vivacity, **Vivaciousness**, *n.* [Fr. *vivacité*; Lat. *vivacitas*.] Tenacity of life; power of living. (R.) — Sprightliness of temper or behavior; life; spirit; animation; vim; verve; air of life and activity, as displayed in the countenance; as, *vivacity* is sometimes carried to levity.

Vivandière, (*ve-vōng-dē-air'*), *n.* [Fr.] A female sutler, or a woman who serves soldiers with refreshments on the march, or in the field, and also affords succor to the wounded; — they are generally attached to French regiments of infantry.

Vivara, (*ve'ra-rai*), an old territory of France, in Languedoc, on the Rhone, now comprised in the depts. of Ardèche and Haute-Loire.

Viv'ary, *n.* [Lat. *vivarium*, from *vivus*, *vivo*, to live.] A place for keeping or rearing living animals, as a pond, a park, a warren, &c.

Viva Voce, (*vi-rah vo'sa*), [Lat.] By word of mouth; orally; with the living voice; as, a communication rendered *viva voce*.

Vive, (*ve've*), *v.* [Fr., from Lat. *vivere*, to live.] Live; long live; hurrah to; — used in an exclamatory sense; as, *vive le roi!* long live the king!

Vivero, (*ve'rai-ro*), a town of Spain, prov. of Lugo, at the mouth of the Landrova in the Bay of Biscay. *Manuf.* Earthenware, linen, and quiltings. *Pop.* 5,170.

Viver'ridæ, *n. pl.* [Lat. *viverra*, a ferret.] (*Zoöl.*) A family of carnivorous mammals, of which the genus *Viverra*, comprising the true Civets, is the type. The characters of the Civet tribe are three premolars above, and four below; two tolerably large tuberculate molars above, one tuberculate and one sectorial molar below; the tongue beset with firm papillæ; claws more or less retracted; a large anal scent-gland and pouch. See CIVET.

Vivers, **Vivres**, (*vē'vers*), *n. pl.* [Fr.] Victuals; viands; provisions.

Vives, (*vē'vz*), *n. pl.* (*Furriery*.) A disease of horses, generally happening to young horses while at grass, resembling the strangles, but more particularly seated in the glands and kernels under the ears.

Viv'ian, in *Minnesota*, a post-township of Waseca co., abt. 22 m. S.S.W. of Maunkato.

Viviania'ceæ, *n. pl.* (*Bot.*) A small order of plants, alliance *Malvales*. *Diag.* Free stamens, no disk, seeds with albumen, a curved embryo, permanent petals, and ribbed calyx. They are herbs or shrubs, inhabiting Chili and S. Brazil.

Viv'ianite, or **BLUE IRON-ORE**, *n.* (*Min.*) A native hydrated phosphate of iron, composed of 28.75 per cent. of phosphoric acid, 42.27 protoxide of iron, and 28.98 water. It occurs in very long oblique prisms, frequently reniform and globular, also earthy and incrustated. The color, which varies from pale-green to indigo-blue, becomes darker on exposure.

Vivid, *a.* [Fr. *vider*, from Lat. *videris* — *vivo*, to live.] Bright; strong; glowing; animated; exhibiting the appearance of life or freshness; as, the *vivid* blue of an Italian sky. — Lively; gay; sprightly; painting in glowing colors, or forming brilliant and salient images; as, a *vivid* fancy.

Vivid'ity, *n.* Vividness. (R.)

Vividly, *adv.* In a vivid manner.

Vividness, *n.* Quality of being vivid.

Vivific, **Vivific'al**, *a.* [Fr. *vivifique*.] Enlivening; reviving; reinvigorating; giving life.

Vivificate, *v. a.* [Fr. *vivifier*, from Lat. *vivificare* — *atum*.] To vivify; to give life to. (R.)

Vivification, *n.* [Fr.; Lat. *vivificatio*.] Act of vivifying, or state of being vivified.

Vivify, *v. a.* [Fr. *vivifier*; late Lat. *vivifico* — *virus*, alive, and *facio*, to make.] To make alive; to endue with life; to animate.

Vivip'arous, *a.* [Lat. *vivus*, alive, and *pario*, I bring forth.] (*Zoöl.*) Noting animals which bring forth their young developed and alive, and commonly extricated

from the egg coverings; as all the mammalia, many reptiles, as the viper or *viper*, some fishes, and numerous invertebrate animals. In its restricted sense, the term signifies that mode of generation in which the chorion, or external tunic of the ovum, contracts a vascular adhesion with the uterus; and hence, only the placental mammalia are truly viviparous, the rest being termed *ovo-viviparous*.

(Bot.) Producing living shoots or suckers; as, a *viviparous* plant.

Vivisection, *n.* [Fr., from Lat. *virus*, alive, and *sectio*, a cutting.] The dissection of a living animal, with a view to physiological investigations and experiments.

Vixen, (*vik'sn*.) *n.* [A. S. *fixen*, a she-fox.] Properly, a fox's cub of either sex.—A sharp, cross, snappish, bitter, froward, turbulent, quarrelsome woman; a virago; a termagant; as, a two-legged *vixen*.

Vixenish, *a.* Pertaining to, or resembling a vixen; as, a *vixenish* temper.

Viz, *a.* A contraction of *VIDELICET*, *q. v.*

Vizard, *VISARD*, *n.* A mask; as, a grotesque *vizard*. See *Visor*.

Vizagapatam, a city of British India, cap. of a dist., on the Coromandel coast; Lat. 17° 42' N., Lon. 83° 24' E. Pop. uncertain.

Vizier, (*viz'eer*.) *n.* [Fr. *vizir*; Ar. *wazīr*, *wazīr*, a bearer of burdens.] The title, in various Oriental countries, of a minister and councillor of state. In Turkey, the councillors of state who sit in the Divan, generally 8 in number, are styled *viziers*; and the chief among them, *vizier-azem*, rendered by Western nations *Grand-Vizier* (or prime-minister), is the highest temporal dignitary in the empire.

Vizzine, (*vīl-sē'ne*), a town of Italy, in Sicily, prov. of Catania, 28 m. S.W. of Catania; pop. 9,850.

Vlaardingen, (*vlar'ding-en*), a town of the Netherlands, on the Meuse, 6 m. W.S.W. of Rotterdam; pop. 7,975.

Vladimir, (*vlad-i-meer'*), in European Russia, a city, the cap. of a govt. of same name, on the Khasma, 112 m. E.N.E. of Moscow; pop. 8,250.—Also, a town of the govt. of Volhynia, on the Lui, 28 m. S.S.W. of Kovel; pop. 6,050.

Vladimir, (THE GREAT.) Grand-Duke of Russia, was the illegitimate son of Sviatoslav, who appointed him governor of Novgorod, from which, however, he was driven by Yaropolk, his brother. In 979 he returned to Novgorod, with a large body of Scandinavian adventurers, took prisoner and put to death Yaropolk, and established himself at Kiev as Grand-Duke of Russia. In 988 he established Christianity, according to the forms of the Greek Church, in his dominions, and, encouraged by the court of Constantinople, he spent the remainder of his life in introducing civilization among his subjects. D. near Kiev, 1015.

Vocal, *a.* [Lat. *vocalum*.] A name; a word; a term; particularly, a phrase taken in the sense of its consisting of certain sounds or letters, irrespective of its meaning.

Vocabulary, *n.* [Fr. *vocabulaire*, from Lat. *vocabulum*, a word.] A list or collection of the vocables or words of a language, arranged in alphabetical order, and defined or explained; a word-book, dictionary, or lexicon, whether of a whole language, or of any special or technical branch of lingual science.—Sum-total of phraseology; stock of words employed; as, a copious *vocabulary*.

Vocabulist, *n.* A compiler or expositor of words or phrases; a lexicographer.

Vocal, *a.* [Fr., from Lat. *vocalis*—*vox*, *vois*, a voice.] Possessing a voice or utterance; as, "Mincius, crowned with vocal reeds." (*Milton*.)—Uttered or modulated by the voice; as, *vocal* melody.—Sonant; sonorous; spoken with intonation and resonance; pertaining to the voice or speech;—used with reference to certain articulate sounds.

Vocal cords or ligaments. (*Anat.*) See *LARYNX*.—*Vocal music*, that music which is made by the voice, as distinguished from *instrumental music*; hence, airs or tunes set to words for performance by the human voice.—*Vocal tube.* (*Anat.*) The part of the air passages above the superior ligaments of the larynx, including the passages through the nose and mouth.

Vocalic, *a.* [From Lat. *vocalis*.] Consisting of the voice, or vowel sounds; as, the Gaelic is a *vocalic* language.

Vocalism, (*-izm*.) *n.* The practice of exercising the vocal organs.

Vocalist, *n.* A vocal musician; a singer; especially, a public singer distinguished by superior powers of voice;—opposed to *instrumentalist*.

Vocality, **Vocalness**, *n.* [Lat. *vocalitas*.] Quality of being vocal, sonant, or utterable.

Vocalization, *n.* Act of vocalizing; also, formation and emission of vocal sounds.

Vocalize, *v. a.* [Fr. *vocaliser*.] To form into, and utter by, the voice; to make vocal, sonant, or resonant; as, to *vocalize* the breath.—To practise singing on the vocal sounds.

Vocally, *adv.* In a vocal or voiceful manner; verbally.

Vocation, *n.* [Fr., from Lat. *vocatio*—*voco*, *vocatus*, to call.] A calling, citing, bidding, or summoning; call; inducement; especially, designation or destination to a particular state or profession.—Hence, employment; calling; occupation; trade; profession; business; as, versatility of genius finds many *vocations*.

(Theol.) A calling by the will of God, or a dispensation of heavenly grace; as, the *vocation* of the Gentiles under the gospel.

Vocative, *a.* [Fr. *vocatif*; Lat. *vocativus*, from *voco*, *vocatus*.] Relating to, or employed in, calling or ad-

dress;—expressed of that case of the substantive, pronoun, or adjective, to which a person or thing has application.

n. (*Gram.*) The fifth case or state of nouns in the Latin; or, the case in any language in which a word is placed when a person is addressed;—the so-called case of exclamation or invocation. In strictness of speech it is not a case at all, and as having, therefore, no case ending, it represents simply the root of the word, on which the several cases are formed by means of pronominal suffixes.

Vochytaeae, *n. pl.* (*Bot.*) An order of plants, alliance *Sapindales*. *DIAG.* Complete, unsymmetrical, very irregular flowers, naked petals, anthers opening longitudinally, 3 carpels, and winged seeds.—They consist of trees or shrubs from tropical America, often of great beauty. Little is known of their properties, beyond the hardness of the timber which some of them supply.

Vociferate, *v. n.* [Fr. *rociférer*; Lat. *vociferor*, *vociferatus*—*vox*, *vois*, and *fero*, to carry.] To carry up or raise the voice; to exclaim; to cry loudly; to shout; to call out with vehemence.

v. a. To utter with a loud voice; as, to *vociferate* abusive language.

Vociferation, (*-sifer-ā-shan*.) *n.* Act of vociferating; vehement utterance of the voice; a shouting; a loud, sonorous outcry.

Vociferous, *a.* Clamorous; making a loud outcry; shouting.

Vociferously, *adv.* In a vociferous manner.

Vociferousness, *n.* Quality of being vociferous.

Vocule, (*vōk'yūl*.) *n.* [Lat. *vocalis*, dim. of *vox*, voice.] A short or weak utterance; a faint or feeble sound, as that heard on separating the lips in pronouncing *p*, *t*, or *k*.—*Rush*.

Vodina, or **Vode'na**, a town of European Turkey, in Roumelia, 45 m. N.W. of Salonica. *Manuf.* Cottons and woollens.

Voghera, (*vo-gai'ra*.) a town of N.W. Italy, prov. of Alessandria, 19 m. E.N.E. of Alessandria; pop. 12,200.

Voglite, (*Min.*) A hydrated carbonate of uranium, lime, and copper, which occurs in green scales having a pearly lustre.

Vogue, (*vōg*.) *n.* [Fr., a rowing of a ship, from It. *vogare*, to row = Ger. *wagen*, to wave, fluctuate, vibrate.] The fluctuation of usage or fashion; temporary mode, custom, habit, or practice; popular reception for the time; way or fashion adopted by people at any particular time; repute;—used now invariably as part of the term *in vogue*; as, a *glorification* has of late years been *in vogue* in this country.

Voice, (*vois*.) *n.* [Norm. *voce*; Fr. *voix*; from Lat. *vox*, *vois*, a voice, kindred with *voco*, to call.] (*Physiol.*) Sound intoned and modulated by the organs of speech. In most air-breathing vertebrate animals, there are certain provisions made for the production of sound in some part of the respiratory apparatus. In many animals the sound thus produced admits of being variously modified and altered,—to the greatest extent in man, so as to constitute speech. T. and sound, however, are different things, and depend upon different parts of the human organism; the former being produced in the larynx, the latter chiefly by the tongue and mouth. The sound of the human voice is produced by the inferior laryngeal ligaments or vocal cords, which are thrown into vibrations by currents of expired air impelled over their edges. They contain a large quantity of elastic tissue, which enables them to vibrate like tense membranes, and are likewise so attached to the cartilaginous parts of the larynx that they can be made tense either by the depression of the thyroid cartilage towards the cricoid by means of the crico-thyroid muscles, or by the retraction of the arytenoid cartilages, which are moved backwards by the posterior crico-arytenoid muscles, at the same time that they are approximated by the posterior arytenoid. (See *LARYNX*.) For the deepest notes, the vocal cords are much relaxed by the approximation of the thyroid to the arytenoid cartilages; for the middle notes of the natural voice, the cords are neither relaxed nor stretched, but in a medium state; while the higher notes are produced by the lateral compression of the cords, and narrowing the space between them by means of the thyro-arytenoid muscles, and also by increasing the force of the current of air. Voice is of three kinds:—1. Monotonous, in which the notes have nearly all the same pitch, as in ordinary speaking; 2. Discordant, or the successive transition from high to low notes, and *vice versa*; and, 3. Musical, in which each sound has a determinate number of vibrations, and accords with others, as in singing. The first of these constitutes the *speech voice*, the last the *song voice*. Vocal sounds are divided into *vowels* and *consonants*, the former being continuous tones modified by the form of the aperture through which they pass out; while in sounding consonants, the breath suffers a more or less complete interruption in its passage through parts anterior to the larynx.

—Language; words; expression: manifestation of feeling or opinion; as, "Let us call on God in the *voice* of his church." (*Fell*.)—A vote or suffrage; opinion or choice expressed; as, he was elected by the *voice* of the people.—Command; precept; dictate;—generally in a scriptural sense; as, "Hearken to the *voice* of the Lord." (*Gram.*) A particular mode of inflecting or conjugating verbs; as, the active or passive *voice*.

v. a. To regulate the tone of; to adapt for the production of the proper sounds or tones, as the pipes of an organ.

Voiced, (*voisl*.) *p. a.* Furnished with a voice.

Voiceful, *a.* Vocal; possessing a voice; as, *voiceful* birds.

Voiceless, *a.* Having no voice; silent.

Void, *a.* [It. *vuolo*; Fr. *vide*, empty.] Empty; not occupied with any visible matter; vacant; as, "The earth was without form and *void*." (1 *Gen. ii*.)—Unsupplied; destitute; free; clear; wanting; as, a person *void* of common sense.—Unoccupied; not filled; without an incumbent; as, a dignity for many years *void*.—Without legal or binding force; null; insufficient to produce its effect; not being effectual to convey or maintain a right, or to be obligatory upon parties; as, to declare an act of Congress *void*.—Vain; unprofitable; lacking substantiality; unreal; as, an image *void* and lifeless.

(Law.) Of no legal force or efficacy whatsoever.

n. A vacuum; empty space.

v. a. To make or leave empty or vacant; to quit; to leave; as, to *void* a chamber.—To evacuate; to throw, eject, or send out; to emit; as, to *void* urine, to *void* one's rage upon an object.—To annul or nullify; to vacate; to render of no validity or effect; as, to *void* the performance of a promise.

v. n. To be emitted or evacuated. (*R.*)

Voidable, *a.* That may be voided, emitted, or evacuated.

(Law.) That may be annulled or made void; susceptible of being adjudged void, invalid, or of no force or efficacy; as, a *voidable* decree.

Voidance, (*-ans*.) *n.* Act of voiding or of emptying.

Voided, *p. a.* (*Her.*) A term applied to any ordinary when it is pierced through, so that the field which it overlies appears, leaving only the outer edge of the ordinary, *e. g.*, a saltier, chevron, &c., *voided*.—*Voided per cross*, signifies when pierced with an opening in the shape of a cross, through which the field in like manner appears.

Voider, *n.* One who, or that which, voids, vacates, or annuls.

Voiding, *n.* Act of the person who, or thing which, voids.—That which is voided; a scrap; a fragment; a shred; a remnant.

p. a. Receiving that which is evacuated or ejected.

Voidness, *n.* State or quality of being void.

Voirdire, (*vwair deer*.) [*O. Fr.*, to utter the truth, from L. Lat. *verum dicere*.] (*Law*.) A preliminary examination of a witness to ascertain whether he is competent. When a witness is supposed to have an interest in the cause, the party against whom he is called has the choice to prove such interest by calling another witness to that fact, or he may require the witness produced to be sworn on his *voirdire*, as to whether he has an interest in the case or not; but the party against whom he is called will not be allowed to have recourse to both methods to prove the witness's interest. If the witness answers he has no interest, he is competent, his oath being conclusive; if he swears he has an interest, he will be rejected.

Voiron, (*vwair'wng*.) a town of France, dept. of Isère, on the Morge, 14 m. N.W. of Grenoble. *Manuf.* Iron and steel goods, canvas, and paper. Pop. 9,351.

Voiture, (*vwai'toor*.) *n.* [Fr., from Lat. *vehere*, *rectum*.] In France, a carriage or wheeled vehicle of any kind.

Voiture, VINCENT, a French wit and poet, b. at Amiens, 1598. He became master of the ceremonies to Gaston, Duke of Orleans, was admitted into the French Academy in 1634, and d. 1648. He wrote verses in French, Spanish, and Italian; but his letters are the chief basis of his literary reputation, and in their day they were extravagantly admired.

Volant, *a.* [Fr., from Lat. *volans*, *volare*, to fly.] (*Her.*) Represented flying, or with the wings spread out, as if flying;—said of a bird; as, an eagle *volant*.

Volante, *n.* [Sp.] A large, heavy kind of curricule, peculiar to the island of Cuba.

Volatile, *a.* [Fr. *volatil*; Lat. *volatilis*, flying, winged, from *volo*, *volare*, to fly.] Capable of evaporating or wasting imperceptibly away, or of easily passing into an æthereal state, as hartshorn, ether, musk, &c.; as, a *volatile* substance.—Airy; brisk; buoyant; lively; gay; full of spirit or animation;—hence, fickle; apt to change; characterized by levity or whimsicalness; as, a person of *volatile* temper.

Volatile alkali. (*Chem.*) See *AMMONIA*.—*Volatile oil*. See *ESSENTIAL OIL*.

Volatileness, **Volatility**, *n.* [Fr. *volatilité*.] State or quality of being volatile; character of being capable of, or disposed to, exhalation or evaporation; that property of a substance which has a tendency to rise and float in the air, and thus to be dissipated; as, the *volatility* of mercury.—Levity; liveliness; airiness; buoyancy of temper or disposition; sprightliness in an extreme degree; hence, mutability of mind; fickleness; changeableness; as, the *volatility* of a woman's fancy.

Volatilizable, *a.* That may be volatilized.

Volatilization, *n.* The act of rendering volatile, or the state of being volatilized.—The process by which bodies are resolved into the vaporous or elastic state.

Volatilize, *v. a.* [Fr. *volatiliser*.] To make volatile; to cause to exhale or evaporate; to cause to pass off in vapor or invisible effluvia.

Volborthite, *n.* (*Min.*) A native vanadate of copper, which occurs in small tabular crystals of an olive-green or gray color.

Volcanic, *a.* [Fr. *volcanique*.] Pertaining or having reference to a volcano, or to volcanoes; as, *volcanic* heat, *volcanic* action.—Produced or emitted by a volcano; as, *volcanic* scoræ.—Affected or transmuted by the heat of a volcano.

V. foci, subterranean centres of action in volcanoes, where the heat is supposed to be in the highest degree of energy.—*V. glass.* (*Min.*) A name sometimes given to *Obsidian*, *q. v.*—*V. rocks.* (*Geol.*) See *IGNEOUS ROCKS*, and *VOLCANO*.

Volcanism, (*-izm*.) *n.* Volcanic power or action.

Volcanist, *n.* One learned in the history and phenomenal action of volcanoes. — A theorist of the formation of mountains by volcanic eruptions.

Volcanization, (*-zā'shun*.) *n.* Act of volcanizing, or state of being volcanized.

Volcanize, *v. a.* To cause to undergo the application of volcanic heat, and to be affected by its consequent action.

Volcano, *n.*; *pl.* VOLCANOES. [Fr. *volcan*; Lat. *Vulcanus*, the god of fire.] (*Geol.*) The name given to a part of the earth's surface, whence vapor, mud, ashes, or melted rocks issue from a hollow depression in a conical hill or mountain. (See Fig. 1457.) Generally the material already erupted, of whatever kind, has formed the hill, or where the point of eruption was already at a high level, has added the conical summit. The geographical extent of volcanic districts is very considerable. It is true that the points of eruption and the movements of great earthquakes are confined to certain regions in which the volcanic vents are distributed at intervals, and most commonly in a linear direction; but there is evidence that similar powers are at work continuously throughout the intermediate spaces, for the ground is from time to time convulsed, gases and vapors are disengaged, and hot springs issue, the waters of which are very commonly impregnated with the same mineral matters which are discharged by the eruption of the volcano. There are also abundant proofs of the existence of volcanic fires under various parts of the bed of the ocean, where their effects, though at present unseen and unknown, are probably destined to become evident at some future but very remote period. The substances thrown out by volcanoes are chiefly earthy and alkaline bodies in a state of fusion, together with red-hot and melted rock, stones, cinders, ashes, steam, and various gases; and although they differ very materially in the quantity of ejected matter, their products so generally agree in quality that they may doubtless be all referred to the operations of one cause. What that cause is, is a question not yet satisfactorily answered; we must, however, notice the perpetuity, as it may also be called, of some active volcanoes—volcanoes which have continued to burn and throw out lava and cinders, not only for years, but for successive ages. The lava in the crater of Stromboli has been in a state of ignition for 2,000 years; so that there has been a constant accession of heat, if not renovation of fuel. We have ample evidence of the connection of earthquakes with volcanoes; and all great eruptions have commonly been preceded by violent convulsions, which have ceased upon the bursting forth of the volcanic fires, as if the pent-up matters had found a vent. All this shows the cause of the eruption to be deep below the surface. There is, further, a manifest connection between volcanic vents situated at great distances from each other. Such a connection has been traced not only between Vesuvius and Ætna, but between these two volcanoes and those of the Greek islands at the distance of a thousand miles. Some of the volcanoes of the Andes appear to alternate in their eruptions, though at great distances from each other. When lava is examined near the vent whence it issues, it is usually a semi-fluid mass of about the consistence of honey. It soon cools externally, and its surface becomes rough and irregular; but being a very bad conductor of heat, the interior remains red-hot long after the surface has cooled. The quantity of matter which has been thrown to the surface by volcanic agencies during the historical period is quite enormous, and may serve to give an idea of their influence in modifying the surface of the globe, when such powers are considered in reference to great periods of time. Iceland, for instance, is little less than a mass of lava; and so intense is the energy of volcanic action in that region, that some eruptions of Hecla have lasted six years without ceasing. In this island, too, the volcanic vents are often in alternate action, one serving, as it were, for a time as a safety-valve to the rest; and when, as is often the case, new cones are thrown up, they generally take a linear direction. There are many instances of rocks of decided volcanic origin, *i. e.* extinct volcanic vents, in districts where all other trace of activity has been lost since the earliest historical times. Such are the Vivarais and Auvergne in central France, and the district of Eifel, near Coblenz, on the Rhine. See BASALT, IGNEOUS ROCKS, EARTHQUAKE, &c. For an account of the great eruption of the volcano Krakatoa, see that word.

Volcano, in *California*, a post-town of Amador co.

Volcano, or **VULCANO**, an island of the Mediterranean, off the N. coast of Sicily, the most S. of the Lipari group; Lat. 38° 30' N., Lon. 15° 13' E. It consists of a single volcanic mountain 3,000 ft. high, and of a conical shape, with a crater of an oval form, abt. 1 m. in circuit, and 400 yards in depth.

Vole, *n.* A deal at cards that draws all the tricks; as, to win a *vole*.

(*Zoöl.*) The common name of *Arvicola*, the typical genus of the *Arvicoline*, a tribe of the *Muridae* or Rat family, characterized by incisors as broad as deep, ears short and hidden, muzzle broad and rounded, tail very short, and mostly clothed thickly with hair. This genus is represented in the U. States by more than 20 species, generally known as Field Mice, but the most remarkable species is *Arvicola amphibia*, the Water Vole or Water Rat of Europe, which is abt. 5¼ inches in length, and the tail 4¾ inches. Although the feet are not webbed, the Water V. swims extremely well, and not only at the surface of the water, but often under it. It burrows in the banks of streams, ditches, and ponds; and its food appears to consist chiefly of aquatic plants. — *v. n.* (*Games.*) To take all the tricks by a single deal of the cards.

Volée, (*vo-lā'*.) *n.* [Fr., a flight, from Lat. *volare*, to fly.] (*Mus.*) A rapid flight of notes; a roudade.

Volery, *n.* [From Fr. *volière*, a bird-cage; Lat. *volo*, to fly.] A flight of birds. (*R.*)—An aviary, or large bird-cage.

Volga, a river of Russia, which has the largest course, and, with the exception of the Danube, the largest volume of water, of any river in Europe. It rises in Lake Seligher, among the Valdai Mountains, in Lat. 57° N., and takes a direction in general to the eastward, but with many windings, until reaching the city of Kazan. Below Kazan it receives the Kama, and flowing southward, with a great volume of water, it separates into 60 or 70 branches, and discharges itself into the Caspian Sea, near Astrakhan. *Total length*, computed at 2,400 m. Its basin is estimated at 397,000 geographical sq. m. No river in the world is more abundantly stocked with fish than the V. Though greatly intermingled by shoals, it is navigable for barges of 1,200 tons for more than four-fifths of its course. For six months of the year it is frozen over, but from May to June, in consequence of the melting of the snow, the river is so greatly swollen that large ships can navigate its stream from Tver to Astrakhan.

Volga, in *Iowa*, a post-village and township of Clayton co., abt. 28 m. S.W. of McGregor.

Volin'ia, in *Michigan*, a post-township of Cass co., 10 m. N.E. of Cassopolis.

Volitation, (*-tā'shun*.) *n.* [From Lat. *volitare*, to fly to and fro.] Act of flying; volant motion; flight.

Volitient, (*-lish'ent*.) *a.* Exercising the will or volitional impulse; having power to will; volitive.

Volition, (*-lish'un*.) *n.* [Fr.; Lat. *volitio*, from *volo*, to will.] The power of exercising the will. See WILL.

Volitional, (*-lish'un*.) *a.* Belonging or having reference to volition.

Volitive, *a.* Possessing or exercising the power to will; as, the *volitive* faculty.—Pertaining or relating to, or having its source in, the will.

(*Gram.*) Employed in the expression of a wish or permission; as, a *volitive* proposition.

Volje, (*vol'jai*.) a lake of Russia, govt. of Novgorod, 40 m. from Lake Bielo, 25 m. long, and 12 m. broad.

Volley, *n.*; *pl.* VOLLEYS. [Fr. *volée*, a flight, from *voler* = Lat. *volo*, *volāre*, to fly.] A flight of shot; the discharge of a number of small arms at one and the same time; as, a *volley* of musketry.—A burst or emission of many things at once: as, he vented a *volley* of oaths.

—*v. a.* To discharge with a volley. (*R.*)

—*v. n.* To be discharged in a volley, or as if in a volley.

Volleyed, (*vō'llid*.) *p. a.* Discharged with a sudden volley or burst; as, *volleyed* reproaches.

Volney, CONSTANTIN FRANÇOIS CHASSEBŒUF, COUNT DE, (*vol'ne*.) a celebrated French writer, b. at Craon, in Brittany, 1757. After spending nearly three years in Egypt and Syria, he returned to France, and published his *Voyage en Syrie et en Egypte*, 2 vols., 1787, which was translated into English and other languages, and procured him an extensive reputation. He was elected a member of the states-general; was confined nearly a twelve-month during the Reign of Terror; was appointed Professor of History in the Normal School in 1794; came to the U. States in the following year, resided here until 1798, when he returned to Europe, and published his *Tableau du Climat et du Sol des Etats Unis d'Amerique*, 2 vols., 1803. He was created a senator and count during the Consulate; and, on the restoration of the Bourbons, he was designated a member of the Chamber of Peers. In all situations, however, he was the defender of liberal principles. His most celebrated work is entitled *The Ruins, or Meditations on the Revolutions of Empires*, a work in which Christianity, as well as all other religious beliefs, is considered merely a system of symbols.

Volney, in *Iowa*, a post-village of Allomakee co., abt. 16 m. N.W. of Prairie du Chien.

Volney, in *New York*, a post-township of Oswego co., 24 m. N.N.W. of Syracuse.

Vologda, or **VOLOGDA**, a town of European Russia, cap. of a govt. of the same name, on the river Vologda, 110 m. N. of Jaroslav. *Manuf.* Silks, linens, canvas, dyestuffs, and leather.

Volsci. (*Anc. Hist.*) An ancient, war-like, and numerous people of central Italy, which inhabited the S. part of Latium, and was a branch of the same family as the Umbrians. From B. C. 510, when their cap., Snessa Pometia, was captured by Tarquinus Superbus, they were engaged in almost continual hostilities with the Roman Republic, until they were finally subdued in 338, by L. Furius Camillus, when they disappeared from history.

Volsk, a town of Russia, govt. of Saratov, on the Volga.

Volt, (*vōlt*.) *n.* [Fr. *volte*; It. *volta*, a turn, Lat. *volvō*, to roll.] (*Fencing.*) A sudden spring, to evade a thrust.

(*Elec.*) The unit of tension or electro-motive force, from Volta Aless (*q. v.*)

(*Man.*) A gait of two treads, made by a horse going sideways round a centre.

Volta, *n.* [It.] (*Mus.*) A turning;—principally employed in phrases indicating that the part is to be repeated one, two, or more times.

Volta, ALESSANDRO, a celebrated experimental philosopher, was b. at Como, in 1745. He laid the foundation of his fame by two treatises which described a new electrical machine; was for 30 years professor of natural philosophy at Pavia; was made an Italian count and senator by Napoleon, and d. in 1826. V. directed his attention particularly to the subject of galvanism, or animal electricity, in which science he made many discoveries and improvements; but the great invention which immortalizes his name is the *Voltaic pile*, or electrical column. (See GALVANIC BATTERY.) His works form 5 vols. 8vo.

Vol'ta, a river of Guinea, in W. Africa, rises in the Kong Mountains, and after a S.S.E. course of 360 m., through the territory of the Ashanties, it enters the sea at Adda, Lat. 5° 40' N., Lon. 0° 40' E.

Vol'ta-electric, *a.* Pertaining or having reference to voltaic electricity.

Vol'ta-electrometer, *n.* An apparatus for the true measurement of electric currents.

Voltagraphy, (*-lāg'ra-fe*.) *n.* [From *Volta*, and Gr. *graphein*, to write.] Art, act, or process of reproducing in metals deposited by electrolytic action, a form or design which constitutes the negative electrode in electrolysis.

Volta'ic, *a.* [Fr. *voltaïque*.] Pertaining or having reference to, originated by, or named in honor of, *Volta*, *q. v.*, or the galvanic pile or battery invented by him.—Belonging or relating to, or characterized by, voltaic electricity; as, *voltaic* induction.

V. battery. (*Elec.*) See GALVANIC BATTERY.—*V. couple*, or *element*, a single pair of the conjoined plates of a galvanic battery.—*V. electricity* and *V. pile*. See GALVANISM.

Voltaire, (*vol'tair*.) the assumed name of FRANÇOIS MARIE AROUET, a French poet, historian, and philosopher, and the most celebrated writer of the last century, b. at Châtenay, near Paris, 1694. He was educated by the Jesuits at the College of Louis le Grand, and already showed so clearly the characteristics which marked him through life, that one of his teachers foretold his eminence as the "Coryphée du Déisme." He was early introduced at the *salon* of Ninon de l'Enclos, and became familiar with some of the most distinguished persons of the time. Ninon, pleased with his remarkable intelligence and liveliness, left him a legacy of 2,000 francs, to buy books. His father's ambition was that he should become, not author, but lawyer and judge; and to break off his associations in Paris, sent him away in 1713, as page to the Marquis de Châteauneuf, ambassador to Holland. He was soon sent home, however, after getting into trouble about a love affair, and was next placed with a lawyer. Quickly and finally escaping this attempt to tame and train him for official life, he soon appeared in Paris again, and from that time he pursued his course as a literary man. His life was so full of action, incident, and vicissitude, that to give a mere epitome of it would require far more space than can be allotted in this work to a single literary life. A general outline of its leading features, with an account of his principal writings, is all that is possible. In 1716 he was committed to the Bastille, on suspicion of being the author of a satirical poem on Louis XIV., and remained there a year. His first literary work of mark was the tragedy of *Œdipe*, which, with much difficulty, he got represented in 1718. During a visit to Brussels in 1721, V. was introduced to Rousseau, but this interview made enemies of them forever. He was sent to the Bastille a second time, in consequence of a quarrel at the Duke de Sully's house, and after his release, spent three years in England, where the prevalence of free-thinking made an atmosphere congenial to him. Here, in 1728, he published his celebrated epic poem *La Henriade*, under the title of *La Ligue*, and applied himself to other literary labors. He rose speedily to the summit of renown as an epic poet; he was courted in all the higher circles; and when he returned to France, he found himself a sort of national idol among the French. After the publication of several plays, he retired, about 1735, to the Château de Cirey, near Vassy, in Champagne, belonging to the Marchioness du Châtelet, a lady celebrated for her love of mathematics and abstruse sciences, and who read Leibnitz and Newton in the original Latin. During the several years of his residence with Mme. Du Châtelet, a connection which Lord Brongham defends as entirely Platonic, he wrote, between other works, his *Elements de la Philosophie du Newton*, in which he explained the theories of the great discoverer with clearness, elegance, and learning, though perhaps not always with accuracy. A new epoch opened in V.'s life when, in 1736, he was flattered by a letter from Frederick, Prince-royal of Prussia, afterwards Frederick the Great. These two remarkable men first met after the accession of Frederick to the throne in 1740. The meeting was at a château near Cleves, and a second took place soon after at Berlin. The first Silesian war separated them, and V. returned to Holland. They continued, however, to correspond. For a while, in 1746, V. removed to Paris, where he received the appointment of historiographer of France, and gentleman of the King's bed-chamber. He was at the same time received at the Academy. Soon losing favor at the court, he accepted, in 1750, the often renewed invitation of Frederick II., to settle at his court. Frederick received him with transports of joy. He was lodged in the apartments of the Marshal de Saxe; the king's cooks, servants, and horses were placed at his disposal; he was granted a pension of \$4,000; and he and the king studied together for two hours a day, while he was welcomed to the king's table in the evening. At first the connection seemed a charming one, but V. soon learned by demonstration, not only that courts are wearisome places, but that Frederick of Prussia and François Arouet were too much like each other to become real friends. Their intimacy, chiefly fruitful in jealousies, dissensions, and all kinds of uneasiness, ended after three years by the flight of V. At Frankfurt he was joined by his niece, Mme. Denis; and at the same city he was arrested by the Prussian resident, and detained till a volume of Frederick's poems was given up. After a short stay at Colmar, and some trouble about his *Essai sur les Mœurs*, he settled with Madame Denis at Ferney, then a mere hamlet, near the Genevese territory. There he passed the last 20 years of his life, unwearied in writing, and at the same time active in pro-

moting the interests of the little village, which, under his fostering care, grew up into a neat little town, and became the seat of a flourishing colony of watch-makers. As the home of V. Freney became a centre of attraction for the most distinguished persons of all countries. V. carried on correspondence with Frederick the Great and Catherine II. of Russia; pleaded eloquently and successfully for the Calas family; educated the grand-niece of Corneille, and gave her a marriage portion; and offered Rousseau an asylum. His books and his speculation in the funds had made him enormously rich, but he spent nobly his fortune, and the fugitives from the civil troubles of Geneva and other towns always found an asylum beneath his roof. At the age of 84, yielding to the importunity of his niece, he once more visited Paris, where he brought out a new tragedy, *Irène*. His whole journey and his reception there was one continuous splendid triumph. He was everywhere attended by crowds; occupied the director's seat at the Academy, was crowned at the theatre; and then, exhausted by the excitement and loss of sleep, took opiates, and, after great suffering, fell into a lethargy, and so on May 30, 1778. Among his latest words were these: "I die worshipping God, loving my friends, not hating my enemies, but detesting superstition." The curé of St. Sulpice refused the rites of burial, and the body of the "great mocker" was interred by night in the abbey of Sullyères, whence it was removed at the revolution, and deposited in the Pantheon. The works of V., in the most complete editions, fill 70 vols. 8vo. In addition to those already named, we mention his plays, *Zaire*, *Mahomet*, *Mérope*, and *Oreste*; the too celebrated poem *La Pucelle*; the *Histoire de Charles XII.*; the *Siècle de Louis XIV.*; the *Essai sur les Mœurs et l'Esprit des Nations*; the satirical novel *Candide ou l'Optimiste*; and the *Dictionnaire Philosophique*. The character of V. has been variously judged, and this is not the place to attempt a decision. His literary merits admit of less doubt. There was hardly any department of literature to which V. did not make contributions; and, to say nothing of many efforts trifling or unsuccessful, the variety of his genius is attested by the number and diversity of the departments in which he attained celebrity. He gave to the French language some of its finest tragedies, and its only epic that is worthy of the name; a few of its liveliest novels, and many of the wittiest and most highly finished of its satirical and other light poems; several of its most spirited and judicious histories, and a large number of its most acute critical essays; and, above all, he poured out a considerable series of writings, which, though their claim to the title of philosophical may perhaps be questioned, passed in their time for the exposition of a true and great philosophy, and exercised on public opinion throughout Europe a tremendous and practical influence. He was a consummate master in the art of representation, owing his effectiveness much less to his great clearness and consecutiveness of thought, than to the remarkable skill and liveliness with which he put his ideas into words; his poetical diction is very refined and terse; and his prose style is unsurpassed for its apt perspicuity, its easy and varied grace, and its brilliant turns and strokes of wit. Posterity has confirmed the sentiment of his contemporaries, that he was the sovereign writer of his century.

Vol'taism, *n.* [From *Volta*.] See GALVANISM.

Vol'taite, *n.* (*Min.*) A species of iron-alum, which occurs in dull oil-green to brown or black cubical crystals and their modifications, near Naples.

Vol'tameter, *n.* An instrument invented by Faraday, for measuring the electro-motive force or strength of a current of voltaic electricity by means of an indicating body, generally water acidulated by sulphuric acid.

Vol'taplast, *n.* [From *Volta*, and *Gr. plastos*, moulded.] A form of voltaic or galvanic battery, suitable for use in electrotyping.

Vol'tatype, *n.* Same as ELECTROTYPE, *q. v.*

Volterra, (*vol-tu'ra*), a town of Italy, prov. of Pisa, on the river Era, 32 m. S.W. of Florence. It is inclosed by walls of singular Etruscan architecture, and contains numerous ancient monuments. *Munuf.* Alabaster articles. *Pop.* 4,950.

Vol'ti, [*It* imper. of *voltare*, to turn.] Turn over, that is, the leaf; as, *volti subito* (turn over quickly).

Voltigeur, (*vôl-te-zhoor'*), *n.* [Fr., from *voltiger*, to vault.] A soldier belonging to a regiment of light infantry, as distinguished from a *grenadier*, who is, generally, a taller and heavier man. Voltigeurs are principally employed as skirmishers, and the name is peculiar to the French service.

Vol'tri, a town of Italy, prov. of Genoa, on the Gulf of Genoa, 9 m. W. of the city of Genoa. It is noted for its mineral springs. *Pop.* 11,802.

Volturno, a river of S. Italy, rises in the province of Molise, and falls into the Gulf of Gaeta, 20 m. N.W. of Naples, after a W. course of 90 m. On the banks of this river, Oct. 1, 1860, the army of the king of Naples was defeated by Garibaldi.

Volt'zine, or **VOLT'ZITE**, *n.* (*Min.*) A native oxysulphide of zinc, composed (when pure) of 82.7 per cent. of sulphide of zinc, and 17.3 oxide. It occurs in several places, in small hemispherical incrustations of a dirty rose-red color, which are opaque or only slightly translucent, and have a vitreo-resinous lustre.

Vol'ubilate, **Vol'ubile**, *a.* [Lat. *volubilitas*.] Turning, whirling, or winding; voluble; as, a *volubilate* stem.

Volubility, *n.* [Fr. *volubilité*, from Lat. *volubilitas*—*volvo*, to roll.] State or quality of being voluble; as, (1) Susceptibility of being rolled; tendency to roll; as, the *volubility* of a spherical body.—(2) Act of rolling; as, devious *volubility*.—(3) Fluency of speech; active motion of the tongue in speaking; as, the *volubility*

of a talkative woman.—(4) Mutability; liability to revolution or change; as, the *volubility* of worldly experiences. (*R.*)

Voluble, (*vôl'yū-bl*), *a.* [Fr., from Lat. *volubilis*—*volvo*, to roll.] That turns round with readiness; formed so as to roll with ease, or be easily set in motion; having a tendency to roll or revolve; as, quicksilver is a *voluble* substance.—Fluent; glib; flowing with ease or smoothness, as words; having rapidity or fluency of speech; as, a *voluble* parrot.

(*Bot.*) Having the power of turning; as, the *voluble* stem of the hop-plant.

Volubly, *adv.* In a voluble or fluent manner.

Volume, (*vôl'yūm*), *n.* [Fr., from Lat. *volumen*, a roll, from *volvo*, to roll.] A collection of sheets of paper, usually printed or written, folded and bound, or covered; a book; that part of an extended work which is bound up together in one cover; as, a novel in three *volumes*. (See *TOME*).—As much as is included in a roll or coil; anything which is rolled up; a roll; a turn; a convolution; a convolution; as, the *volume* of a serpent, *volumes* of smoke.

(*Geom.*) The quantity of space, of three dimensions, enclosed by a surface or surfaces. The volume of a body, or its *solid content*, is the quantity of space which it occupies.

(*Mus.*) The compass of a voice, from grave to acute; tone, power, or calibre of voice or sound.

Volumed, (*vôl'yūm*), *a.* Having the form of volumes or rolling masses; as, *volumed* clouds.—Of large dimensions, bulk, or volume; massive; extensive; huge; as, the *volumed* waters of Niagara.

Volumetric Analysis, *n.* (*Chem.*) A method of quantitative chemical analysis in which the balance and other elaborate apparatus are more or less dispensed with; a few glass vessels, some graduated, being alone necessary. It consists in ascertaining how much of a solution of definite strength and properties must be added to a solution of unknown strength before a given effect, indicative of the termination of a chemical reaction, can be produced. Many solutions of unknown strength can thus have quantitative values rapidly given to them.

Voluminous, (-us), *a.* [Fr. *volumineux*, from Lat. *voluminosus*.] Comprising many volumes, or of many coils or complications; as, the *voluminous* folds of a serpent.—Consisting of many volumes, books, or tomes.—Diffuse; copious; prolific; having written much or made many volumes; as, Dumas, the Elder, has been the most *voluminous* author of the past century.

Voluminously, *adv.* In a voluminous manner.

Voluminousness, *n.* State of being voluminous.

Voluntarily, *adv.* In a voluntary or spontaneous manner; of one's own free will.

Voluntariness, *n.* State of being voluntary.

Voluntary, *a.* [Fr. *volontaire*; from Lat. *voluntas*, will.] Proceeding from the will or exercise of volition; done freely or of choice; as, a *voluntary* act.—Acting by free choice or spontaneously; acting without being impelled, instigated, or influenced by another or others; spontaneous; free, or having to act by choice or option; proceeding from free will; of his or its own accord; not prompted or persuaded by external or foreign influence; as, *voluntary* labor or service; a *voluntary* sacrifice.—Purposed; intended; done premeditated or by design; as, manslaughter is not *voluntary* murder.—Endowed with the power of will; possessing the faculty of volition; as, man is a *voluntary* agent.—Subject to the will, as certain muscles.

(*Law*.) Gratuitous; without compulsion or inducement by valuable consideration; as, *voluntary* evidence.

V. oath, affirmation, or *affidavit*. (*Law*.) An oath, affirmation, or affidavit made in an extrajudicial matter.—*V. conveyance*, a conveyance made without valuable consideration.—*V. escape*, the escape of a prisoner by the given consent of the sheriff.—*V. jurisdiction*, that which is exercised in granting dispensations, and using other non-opposed powers.

V. muscle. (*Anat.*) See MUSCLE.—*V. waste*, waste caused by express acts.

—*n.* A volunteer; one who enters upon anything of his own accord. (*R.*)

(*Mus.*) An improvised and fanciful piece of music commonly performed on the organ at the opening of church service.

Voluntaryism, (-izm), *n.* The principle or system of supporting the service of religion by voluntary contribution on the part of its adherents, in opposition to its sustentation by aid or subsidy from the state or government.

Volunteer, *n.* [Fr. *volontaire*, from Lat. *voluntarius*.] A self-elected servant, agent, or participator.

(*Mil.*) One who enters into a military organization of his own choice and free-will, to be subject, while serving, to regular army discipline, and to the observance of the articles of war.

(*Law*.) A party, other than a wife or child, to whom, or for whose benefit, a voluntary conveyance is made.

—*a.* Composed of volunteers.

—*v. a.* To offer or bestow of free will, or voluntarily, or without solicitation, compulsion, or valuable consideration; as, to *volunteer* a song.

—*v. n.* To enter into any service of one's own accord, without solicitation, compulsion, or mercenary inducement; as, he *volunteered* to lead the storming-party.

Voluntown, in Connecticut, a post-township of Windham co.

Voluptas, or **Volup'ia**. (*Myth.*) The goddess of sensual pleasures, worshipped at Rome, where she had a temple. She was represented as a young and beautiful woman, elegantly adorned, having Virtue under her feet.

Volup'tuary, *n.* [Fr. *voluptuaire*, from Lat. *voluptas*, pleasure.] A man addicted to luxury or the gratification of the senses and appetites, and to other sensual indulgences; a sybarite; a roué; a sensualist; a rake; an epicure.

—*a.* Addicted to pleasure or voluptuousness; affording sensual gratification.

Volup'tuous, *a.* [Fr. *voluptueux*; Lat. *voluptuosus*—*voluptus*.] Sensual; exciting or administering to luxurious or amatory gratification; affording sybaritic indulgence or pleasure; as, *voluptuous* beauty.

—Addicted to the enjoyments of luxury and pleasure; indulging to excess in sensual gratification; as, a *voluptuous* woman.

Volup'tuously, *adv.* In a voluptuous manner.

Voluptuousness, *n.* State or quality of being voluptuous.

Volup'sia, in Florida, an E. co., bordering on the Atlantic; area, 1,288 sq. m. St. John's river bounds it on the S.W. Surface, level, and in parts covered with swamps. *Cap.* DeLand. *Pop.* (1897) 12,400.

Volusia, in New York, a post-village of Chautauqua co., 340 m. S.W. of Albany.

Volu'ta, *n.*; **VOLUTIDE**, *n. pl.* (*Zool.*) The Volute family, comprising marine gastropodous mollusks which have the shell turreted or convolute, and the aperture notched in front, as in *Voluta musica*, Fig. 2500. There are 700 living, and 200 fossil species.

Voluntation, (-tā'shun), *n.* [From Lat. *volutare*, to roll.] A rolling or wallowing of a body, as on the earth.

Volute, *n.* [Fr., from Lat. *volvo*, *volutum*, to turn round.]

(*Arch.*) The spiral scroll, appended on each side to the capital of the Ionic order (Fig. 2592). The Corinthian and Composite capitals are also decorated with volutes; but their character is different, their size smaller, and they are always diagonally placed.

Fig. 2592. — VOLUTE.

(*Zool.*) See VOLUTA.

Voluted, *a.* Presenting a volute or spiral scroll.

Vol'vox, *n.* (*Bot.*) A genus of minute organisms which swarm in stagnant waters. They are globular bodies, revolving on their axes, and containing more minute globes, each of which also has its proper rotatory motion. The most common species is *V. globator*, the Globe-animal, which is just visible to the naked eye. They were at first supposed to be animals, and were reckoned among *Infusoria*, but the presence of starch having been detected in them by means of iodine, they are now regarded as vegetable.

Vomer, *n.* [Lat., a ploughshare.] (*Anat.*) A thin, flat bone separating the nostrils.

Vom'ica, *n.* [Lat., from *vomere*, to throw up.] (*Med.*) Small tumors in the lungs, which eventually suppurate, burst, and degenerate into abscesses, discharging, by cough and expectoration, a discolored pus, of different consistencies, and sometimes marked with blood. When there are many such abscesses, the case is called one of *suppurating phthisis*.

Vom'icant, *n.* (*Bot.*) The seed of *Nux vomica*. See STRYCHNOS.

Vom'it, *v. a.* [Fr. *vomir*, from Lat. *vomo*, *vomitum*, to throw up.] To eject the contents of the stomach by the mouth; to spew.

—*v. a.* To throw up or eject from the stomach; to cascade; to puke;—commonly preceding *up* or *out*.—Hence, to eject with violence from any hollow place; to belch forth; as, the Icelandic geysers *vomit* up streams of hot water.

—*n.* The matter thrown up by the stomach.

(*Med.*) An emetic; anything which excites the stomach to eject its contents by the mouth.

Black vomit. [*Sp. vomito prieto*.] (*Med.*) A free vomiting of black matter;—generally, a fatal accompaniment of the yellow fever.

Vomition, (-mish'un), *n.* Act or power of vomiting.

Vom'itive, *a.* Emetic; promoting vomiting.

Vomito, (*vo-mê'to*), *n.* [*Sp.*] (*Med.*) The Spanish term for the YELLOW-FEVER, *q. v.*

Vom'itory, *a.* [Lat. *vomitarius*.] Producing emetic results; vomitive; as, *vomitory* medicines.

—*a.* An emetic; a vomit.

(*Arch.*) A door of a theatre by which the crowd is let out.

Vomitition, (-rish'un), *n.* (*Med.*) (1.) An ineffectual attempt at vomiting. (2.) The vomiting of but little matter;—the vomiting with but little effort.

Von, a German preposition signifying *of* or *from*, and corresponding to the French *de*, and in certain cases with the Dutch *van*. When prefixed to a surname, it indicates that the possessor is of noble rank. This signification of the word is to be traced to the custom prevalent in the Middle Ages, of calling persons of all degrees by their Christian names, with the addition of the place in which they resided. By degrees this became a prerogative of the nobility, who affixed to their baptismal names that of the castle or village belonging to them.

Von'del, JOOST VAN DER, the greatest of the Dutch poets, b. 1587. His works consist of tragedies, dramatic poems, and epics. D. 1679.

Von Moltke, HELLMUTH, FREIHERR, a celebrated Prussian general, b. in Mecklenburg, 1800. Soon after his birth, his father, a military officer, left Mecklenburg, and acquired an estate in Holstein, where M. spent the first twelve years of his life. He was sent to the military academy in Copenhagen, where iron discipline and

François M. A. Voltaire

1694-1778

military frugality laid the foundation of his later character. In 1822 he entered the Prussian army as cornet, and, owing to his eminent qualities, he rapidly advanced through the different stages to the rank of general. As Prussia is indebted to Count Bismarck for her political and diplomatic successes, and for the unification of Germany, so is she to F. M. for the strategy of the victorious campaigns of 1866 against Austria, and still more for those of 1870-71 against France. In the latter conflict, F. M. was virtually commander-in-chief of the German armies, and contributed greatly, through his masterly operations, to the complete success of the German arms. F. M. was a man of great modesty and simplicity; he was reserved, and so little given to talk that he acquired the surname of *the Silent*. He ranked, by general consent, among the best generals and strategists of modern times. Died April 24, 1891.

Voracious, (-rā'shūs,) *a.* [Fr., from Lat. *vorax* — *voro*, to devour.] Eating or swallowing greedily; eager to devour; ravenous; very hungry; rapacious; as, a voracious appetite, a voracious whirlpool.

Voraciously, *adv.* In a voracious manner.

Voraciousness, **Voracity**, (-rā'shē-tee,) *n.* [Fr. *voracité*; L. Lat. *voracitas*.] Quality of being voracious; greediness of appetite; ravenous; eagerness to devour; rapaciousness; as, the voracity of a shark, the voraciousness of a lawyer's bill of costs.

Voraginous, (-rā'jīn-ūs,) *a.* [Lat. *voraginosus*, from *vorare*, to swallow up.] Full of gulfs or whirlpools.

Voraulite, *n.* (*Min.*) Same as LAZULITE, *q. v.*

Voronetz', a city of European Russia, cap. of govt. of the same name, on the Voronetz, 130 m. E. of Kursk. *Manuf.* Woollens, hardware, and leather.

Vortex, *n.* Eng. pl. VORTICES; Lat. pl. VORTICES. [Lat., from *verto*, anciently *vorto*, to turn.] An eddy or whirlpool; a body of water running rapidly round and forming a cavity in the middle, into which floating bodies are drawn.—A whirlwind, or eddying motion of the air.

(*Philos.*) In the Cartesian system, a collection of material particles, forming a fluid or ether, endowed with a rapid rotatory motion about an axis. By means of this hypothesis and the received doctrine of centrifugal forces, a plausible explanation may be given of the motion of the planets, which move nearly in the same plane; but the motions of the comets which traverse the heavens in all directions are inexplicable, and are, in fact, inconsistent with the hypothesis. Descartes, nevertheless, had the merit of attempting to show how the universe might have assumed its present form and be preserved on mechanical principles.

Vortex-wheel, *n.* A turbine. See WATER-WHEEL.

Vortical, *a.* [From Lat. *vortex*, *vorticis*.] Whirling; turning; eddying; as, a vortical motion.

Vorticellidae, *n. pl.* [From Lat. *vortex*.] (*Zoöl.*) A family of *Infusoria*, containing a great number of species, often called *Bell* or *Bell-shaped Animalcules*, from their form. The genus *Vorticella* (fig. 221) consists of minute cup-shaped or bell-shaped creatures, each placed at the top of a long flexible stalk, the other end of which is attached to some object, as the stem or leaf of an aquatic plant. Around the edge of the bell or cup is a fringe or rather long cilia, the motion of which brings food to the mouth.

Vortiginous, (-tī'jīn-ūs,) *a.* Moving with rapidity round an axis or centre; vertical.

Vosges, (Ger. *Vogesen*), a chain of mountains in the E. of France, extending from N. to S., in a line nearly parallel with the Rhine, from Basle to Spire, attaining an elevation in their culminating points of from 4,000 to 5,000 feet, and covered with forests. The summits are rounded and regular in outline, and are called *baillons*.

—A N.E. dept. of France, formerly a part of Lorraine, separated from Germany on the East by the Vosges Mountains; area, 2,350 sq. m. *Surface*, mountainous; soil, fertile in the valleys. *Rivers*, Meuse, Meurthe, Mortagne, Moselle, and Madon. *Prod.* Wheat, maize, hemp, and flax; cattle are extensively reared. *Min.* Iron, copper, silver, and marble. *Cap.* Epinal. *Pop.* 392,988.

Voss, JOHANN HEINRICH, a learned German philologist, b. in Mecklenburg, 1751. He became rector of the gymnasium of Entin, but subsequently settled at Heidelberg, whither his great reputation had caused him to be invited by the Elector of Baden. He translated Homer, Virgil, Hesiod, and Theocritus, and takes rank among the very first scholars of Germany. He also produced commentaries of several Greek writers, and may be considered one of the founders of modern philology. D. 1826.

Vossius, GERHARD JOHANNES, professor at Leyden and Amsterdam, celebrated for his extensive learning as a theologian and philologist, was the son of a Protestant minister, and was born near Heidelberg, 1577. Some of his works are still considered of great value. He was killed by falling from a ladder in his library, 1649.

Vo'tress, *n.* A female votary or devotee.

Vo'tary, *a.* [L. Lat. *votarius* — Lat. *voveo*, *votum*, to vow.] Bound or consecrated by a vow or promise; devoted; consequent on a vow; as, votary abstinence.

—*n.* One bound or devoted by a vow or promise; hence, more generally, one given or addicted to some particular service, worship, study, or state of life.

Vote, [Fr.; Lat. *votum*, a thing solemnly promised, from *voveo*, to vow.] Suffrage; the expression of a wish, desire, preference, or choice in regard to any measure proposed, either in electing a person to office, or in passing laws, rules, regulations, and the like.—A ballot; a ticket; or, that by which will or choice is expressed in elections, or in deciding propositions; as, a written vote.—Expression of will or preference by a majority; legal decision by some announcement of the minds of a number; as, the popular vote was in his favor.

—*v. n.* To give a vote or suffrage; to express, indicate, or signify the mind, will, or preference, in electing persons to office, or in passing laws, regulations, and the like.

—*v. a.* To choose by vote or suffrage; to elect by some expression of will or preference.—To grant by vote or expression of the will of a majority; to enact or establish by determination of choice.

Voter, *n.* One who votes; one who has a legal right to exercise his suffrage; as, a bottled voter.

Votive, *a.* [Fr. *rotif*; Lat. *rotivus*, from *rotus*, vowel.] Pertaining to, or given or promised by, a vow; devoted; consecrated.

V. medal, a medal struck in appreciative memory of some auspicious occurrence.—*V. offering*, a tribute dedicated in fulfilling the vow of a worshipper.

Votively, *adv.* By vow; in a votive manner.

Vouch, *v. a.* [O. Fr. *voucher*, to vouch, to call.] To attest; to call to witness; as, "Let him vouch the silent stars." (*Dryden*).—To attest; to declare; to affirm; to warrant; to maintain by affirmation or affidavit; as, I can vouch his integrity of character.—To confirm; to support; to establish proof.

—*v. n.* To bear witness; to give evidence or complete attestation; as, her innocence was vouched for.

Vouchee, *n.* The person who is vouched, or called into court to support or make good his warranty of title in the process of common recovery.

Voucher, *n.* One who vouches or gives full attestation.—A book, paper, or document, which serves to vouch the correctness of accounts, or to confirm and establish facts of any kind.

(*Law*.) One who calls on another to make good his warranty of title.

Vouchsafe, *v. a.* [vouch and safe.] To permit to be done without danger.—To condescend to grant; as, his majesty vouchsafed him audience.

—*v. n.* To condescend; to deign; to yield.

Vouchsafement, *n.* Act of vouchsafing; also, a gift or grant vouchsafed in condescension.

Voussoir, (voo's'swahr,) *n.* [Fr.] (*Arch.*) One of the wedge-shaped stones of an arch (a, a, Fig. 2593), by the proper disposition of which, in a semicircle or other curve, the arch is formed. The centre stone of the arch (b) is called the key-stone.

Fig. 2593. — VOUSSOIRS.

Vow, *n.* [Lat. *votum*; It. and Sp. *voto*; Fr. *vœu*.] A promise made to divine power to perform some future act or to pursue some future line of conduct, and calling upon that power to be propitious or unpropitious to him according as he keeps or breaks his word. In most cases the *V.* partakes of the character of a bargain; a piece of service is asked and a reward promised in the event of its being performed. The use of *V.* is to be found in most religions, made either under some pressing necessity for the success of some enterprise, or in consequence of some deliverance. Among the Jews they were very common.—In the Roman Catholic Church a *V.* "is a promise made to God of a thing which we think to be agreeable to Him, and which we are not on other grounds obliged to render to Him." "To promise to God to do what He commands, or to avoid what He forbids, is not a *V.*, because we are already obliged so to act." *V.* are divided into *solemn* (taken in the face of the Church) and *simple* (or private). Release from a *V.* must be obtained from a spiritual superior, who has power to grant it. Five *V.* were said to be reserved for papal dispensation only:—that of chastity; the *V.* to enter into a religious order; *V.* of pilgrimages to Rome and to Compostella; and the *V.* of a crusade. Monastic *V.* are now most commonly understood when *V.* are spoken of.

—*v. a.* [Fr. *vouer*; Lat. *voveo*.] To devote; to give, consecrate, or set apart to God, or other deity, by a solemn promise.—To asseverate; to assert or declare solemnly.

—*v. n.* To make vows or solemn promises.

Vowel, *n.* [Fr. *voyelle*; It. *vocale*, from Lat. *vocalis*, sounding.] (*Gram.*) A letter which can be pronounced alone, and is thus distinguished from consonants, which require to be sounded with vocal aid; or, a free unaccompanied modulation of the voice; a simply opening the mouth or lingual organs, as the sounds of *a, e, o*; a voice sound; also, a letter which represents such a sound.—In the English language, *a, e, i, o, u*, and sometimes *w* and *y*, form the series of *written* vowels; the *spoken* vowels are, however, much more numerous. The sound of the vowels can be continued as long as the breath lasts; and hence they predominate in all natural expressions of the emotions. A diphthong consists of two vowels, the sounds of which run into one another. The harmoniousness of a language depends in great measure upon the proportion of vowels to consonants.

—*a.* Vocal; pertaining or having reference to, or consisting of, a vowel or vowels.

Vowelish, *a.* Having the characteristics of a vowel.

Vowelism, (-izm,) *n.* Use or adaptation of vowels. (*R.*)

Vower, *n.* One who makes a vow.

Vox, *n.* [Lat.] A voice; the voice.

Voyage, (voi'aj,) *n.* [Fr.; Sp. *viage*; from Lat. *via*, a way.] Originally, a going or passing on the way or road; a journey; a travelling; specifically, in the modern sense, a passing by sea or water from one place, port, or country to another; especially, a journey by water to a distant place or country.—*Long voyage*, formerly, a term applied to a voyage to India and back round the

Cape of Good Hope or by Cape Horn; as, a mariner on the long voyage.

—*v. n.* To take a journey or voyage; particularly, to sail, pass, or travel by water; as, *voyaging* through arctic seas.

—*v. a.* To travel; to pass over.

Voyager, (-jer,) *n.* [Fr.] One who voyages, or who sails or passes by sea or water.

Voyageur, (voo'ah-yah-zhoor') *n.* [Fr., from *voyager*, to travel.] The French name for a traveller by land or water.—A Canadian river-boatman.

Voyol, *n.* (*Naut.*) A rope used on shipboard to bring the pressure of the capstan to bear on the cable without the necessity of winding the latter round the barrel; also, a block through which the messenger passes;—otherwise called *viol* or *royal*.

Vraisemblance, (vrā'sōng-blōngz') *n.* [Fr.] The semblance or appearance of truth.

Vugh, **Vugg**, **Vo'gle**, (voog,) *n.* (*Mining*.) A cavity in a lode.

Vukovar, (voo-ko-var') a town of Austria, in Slavonia, on the Danube, at the influx of the river Vuko, 24 m. S.E. of Eszek. *Manuf.* The twisting of silk. *Pop.* 6,270.

Vulcan, [Lat. *Vulcanus*; Fr. *Vulcain*.] (*Myth.*) The Roman god of fire and the patron of all metallic handicrafts; the son of Jupiter and Juno, and identical with the Greek Hephaestus. Being extremely ugly and deformed, Juno, ashamed to own such a child, dropped him from heaven, when the infant god, falling into the sea, was rescued and adopted by Thetis, who kept him till nine years of age, when he was restored to his parents. Soon after his return to Olympus, Vulcan took his mother's part in one of the quarrels between husband and wife; Jupiter, enraged at Vulcan's audacity, flung him from heaven. After travelling a whole day, the youth alighted on the island of Lemnos, breaking his ankle in the fall; here he raised forges and workshops, and seems to have commenced as the chief of artificers; some poets, however, fix his workshop on Olympus, another on Etum, where the Cyclops were his ministers and chief assistants, by whose aid he fabricated all the great works attributed to him. He fashioned Pandora, and had Venus given him for his wife, by whom he was father of Cupid. Vulcan is represented bearded, covered with dust and soot, and blowing the fires of his forges, or else in the act of forging Jove's thunderbolts.

Vulcanian, *a.* [Lat. *Vulcanius*.] Pertaining or relating to Vulcan, or to the working of metals.

(*Geol.*) Same as PLUTONIAN, *q. v.*

Vulcanist, *n.* A rare orthography of VOLCANIST, *q. v.*

Vulcanization, *n.* The process of combining India-rubber with sulphur, and so imparting to the former new properties which render it applicable to many useful purposes. See INDIA-RUBBER.

Vulcanite, *n.* (*Chem.*) See INDIA-RUBBER.

Vulcanize, *v. a.* To change the properties of, as India-rubber, by the process of vulcanization.

Vulgar, *a.* [Fr. *vulgaire*; Lat. *vulgaris* — *vulgus*, the people.] Pertaining or having reference to the common unlettered people; used or practised by common or uncultivated people; having reference to common or plebeian life; consisting of low or unrefined persons; not select, educated, or distinguished; as, the vulgar classes, vulgar life, &c.—Belonging or relating to the mass or multitude of people: national; common; public; general; ordinary; hence, used by all classes of people; vernacular; as, to translate from a foreign tongue into the vulgar.—Unrefined; mean; rude; low; rustic; boorish; wanting in polish, cultivation, or good taste; base; as, vulgar persons, minds, manners, speech, &c.

—*n.* The mob; the people at large; the common people; the lower grades of society; the rabble; the riff-raff;—it has no plural termination, but has often a plural verb.

Vulgarian, *n.* A person of vulgar speech, manners, or ideas.

Vulgarism, (-izm,) *n.* Vulgarity; want of good breeding or refinement; grossness or gaucherie of manners; as, the vulgarism of ordinary life.—A low or vulgar phrase or expression; a slang word or term.

Vulgarize, *v. a.* To make vulgar; as, language vulgarized by the introduction of slang phrases.

Vulgarly, *adv.* Commonly; in the ordinary manner among the common people.—In a rude, coarse, or ill bred manner; meanly; boorishly; as, how vulgarly some persons conduct themselves.

Vulgarness, *n.* Vulgarity.

Vulgate, *n.* [Fr.; Lat. *vulgata*, for public use.] (*Ecol.*) The name given to the Latin version of the Scriptures in use in the Roman Catholic Church. It was decreed by the Council of Trent that the Vulgate is to be "held as authentic," which, according to the interpretation usually put on that decree by theologians, means not that it is in any way substituted for the originals, but that it contains nothing contrary to true faith and morals.

Vulnerability, **Vulnerableness**, *n.* State, quality, or condition of being vulnerable.

Vulnerable, *a.* [Fr. and Sp.; L. Lat. *vulnerabilis* — *vulnus*, *vulneris*, a wound.] That may be pierced or wounded; susceptible of wounds or external injuries; as, the heel of Achilles was the only vulnerable part of his body.—Assailable; liable to injury, or to the chance of being affected harmfully; as, a man of vulnerable temperament.

Vul'nerableness, *n.* See VULNERABILITY.

Vul'nerary, *a.* [Fr. *vulnéraire*, from Lat. *vulnerarius*.] Pertaining or relating to wounds; useful in healing wounds, or adapted to the cure of external injuries; as, a *vulnerary* remedy.

—*n.* (*Med.*) Any plant, drug, or compound of utility in the treatment and cure of wounds.

Vul'nerose, **Vuluose'**, *a.* Full of, or characterized by, wounds.

Vuluif'ic, **Vuluif'ical**, *a.* [From Lat. *vulnus*, a wound, and *facere*, to make.] Wounding, or causing the infliction of wounds.

Vul'pes, *n.* [Lat., a fox.] (*Zoöl.*) See FOX.

Vulpine (*vŭl'pīn*), *a.* [Lat. *vulpinus*, from *vulpes*, a fox.] Pertaining or having reference to, or resembling, the fox; hence, crafty; cunning; artful; sly; trickish; foxy; as, a person of *vulpine* instincts.

Vul'pinite, *n.* [From *Vulpino*, Italy.] (*Min.*) An anhydrous sulphate of lime, containing about 8 per cent. of silica.

Vul'ture, *n.* [Lat. *vultur*.] (*Zoöl.*) See VULTURIDÆ.

Vultu'ridæ, *n. pl.* (*Ornith.*) An important family of birds-of-prey, embracing the largest of the flying birds, as the gigantic condor of South America and the great lammmergeyer of Europe and Asia, and whose distinguishing characteristic is the habit of feeding upon carrion, a habit which has brought them into favor in many hot countries as useful scavengers. Though, when pressed by hunger, they will attack small animals, they much prefer dead and even decaying carcases, which they have the power of discovering at enormous distances. It has long been supposed that this is due to an extraordinary sensitiveness of the olfactory organs, but later study has relegated it from the sense of smell to that of sight, which is now believed to be remarkably keen in the *V.* It is well known that, in the case of a camel or other beast of burden falling dead in a desert caravan, vultures of some species quickly appear, often in considerable numbers, though none had been before visible to the eyes of the members of the caravan, and speedily devour the carcass of the dead beast. The most probable explanation of this phenomenon is that offered by Canon Tristram, to the effect that some one of the vultures, which soar at immense heights, sees the fallen body, and at once swoops downward. A more distant bird, observing this movement and knowing its meaning, follows its neighbor's course. Still others follow, so that the downward swoop of the first quickly brings a number into the field, each eager for its share of the prey. For instance, in the Crimea, during the siege of Sevastopol, these birds congregated in enormous multitudes, though they had been very scarce there before, the unwonted abundance of food having apparently brought them together from a vast expanse.

The *V.* are distinguished from eagles, hawks, and other birds-of-prey by the shape of their beak, which is of moderate size, nearly straight above, and suddenly curving downward, being rounded at the tip and without "teeth" in the upper mandible. The head and upper neck are nearly bare of feathers. Their claws are short and feeble, so that, in their assaults on living prey, they are confined to the smaller quadrupeds and birds. Their wings are strong, and their power of swift and sustained flight is remarkable. The *V.* are divided by the more recent writers into two families, the *V.* proper, or those of the Old World, and the *Sarcorhamphidæ*, or New World vultures, which differ from the former in important structural features, though similar to them in habit. Of the Old World *V.* the most striking representative is the huge lammmergeyer, once common but now rare in the Alps, and extended widely through the mountain regions of South Europe and Asia and North Africa. This great bird is nearly 4 feet high when sitting, 5 feet in length, and has a spread of wing of from 9 to 10 feet. It has the reputation of swooping on goats and chamois and hurling them from the brink of precipices and of carrying off young children. The latter stories, however, are difficult to believe in view of the weakness of its claws, which are not adapted for carrying heavy weights. Another well-known species is that called the Egyptian vulture, or Pharaoh's Hen, a bird of delicate build and appearance, yet living on the most repulsive kind of food. It is abundant in India and has a wide range in Africa. The Griffon vulture (*Gyps fulvus*) is one of the best known species, having a wide distribution in Europe and

Africa. The genus *Vultur*, formed by Linnaeus, is now restricted to a single species, *V. monachus*, commonly known as the cinereous vulture, which is found from the Straits of Gibraltar to the seacoast of China. Nearly all these birds inhabit rocky cliffs, on the ledges of which they build their nests.

The American *V.* includes four genera, *Sarcorhamphus*, embracing the condor; *Gypagus*, the king vulture; *Catharista*, the turkey buzzard, and *Pseudogryphus*, the great California vulture. Of these the condor is the most remarkable, from its great size and strength, though these have often been exaggerated. Its only rival among birds-of-prey is the lammmergeyer, it measuring about 3½ feet in length, with an immense spread of wing (said to be 15 feet from tip to tip). No other birds match the condors in power of flight, they soaring to immense heights, until lost in or far above the clouds. The king vulture, with its gaudily colored head and nasal caruncle, is a smaller bird, which inhabits the wooded plains of South and Central America, and owes its name to the manner in which it bullies other vultures. It is reddish-yellow above, white beneath, with bluish-gray ruff and black quills and tail. The most familiar of the *V.* in the United States is the common turkey buzzard (*Cathartes aura*), which is esteemed in southern cities for its services as a destroyer

Fig. 2594.—KING VULTURE.

of carrion. It is about 2½ feet long, black in color with a purplish sheen, and has a carmine and bluish-red head, fleshy neck, and white feet. The fourth genus mentioned, *Pseudogryphus*, has a very limited range on the western slopes of North America, and is threatened with extinction through the use of poison.

Vulturine (*vult'gur-in*), *a.* [Lat. *vulturinus*.] Belonging to, or concerning, the vulture; having the qualities of, or resembling, the vulture;—hence, rapacious; voracious.

Vul'turish, *a.* After the manner of a vulture.

Vul'turous, *a.* Resembling a vulture; rapacious; preying.

Vul'viform, *a.* [Lat. *vulva*, a wrapper, and *forma*, form.] (*Bot.*) Resembling a crevice with projecting edges.

Vy'asa, or **Ve'davyasa**, (*a compiler of Vedas*.) The name given to the supposed author or compiler of the four Sanskrit Vedas, and of the poem *Mahabharata*. Nothing is known of his history.

Vyat'ka, or **Viat'ka**, a government of northwestern Russia, adjoining Perm on the west, and of 39,124 sq. m. area. Its surface is an undulating plateau of from 800 to 1,400 ft. above sea-water, deeply grooved by rivers, whose

banks, broken by ravines, rise like hills. The Kama and Vyatka, with several of their tributaries, are navigable. On the banks of the Izha and Votka are important iron works. Much of the territory is occupied by forests and marshes, the former covering three-fourths of the area, while there are many extensive marshes, and lakes are numerous. The products are corn, iron, hides, leather, timber, &c. Cattle and sheep are largely raised, and the Vyatka horses, a fine but small breed, are well known throughout Russia. There are no railways, but the great highway to Siberia traverses the province. Industries have attained considerable development, the province having numerous and diversified manufactories and a large trade. At Izhevsk is the government manufactory of guns. *V.* is one of the few governments of Russia where the *Zemstvo*, consisting largely of representatives of the peasantry, has been permitted by the government to create a series of educational institutions. Its schools, libraries, village hospitals, and statistical publications are highly spoken of. *Pop.* (1897) 3,105,790.

—A city, the capital of the above government, on the Vyatka river, 653 m. N.E. of Moscow, stands on the steep hills above the river and also on their slopes and at their base. The city is built mostly of wood, and has an important trade in the products of the province, though it has few manufactures. *Pop.* (1897) 26,260. The history of *V.* is of interest. It began as a trading-post of Novgorod, the great commercial republic of ancient Russia, dealing in furs, horses, wax and honey. A town grew around the fort and was surrounded by walls. It was twice taken and plundered by the Tartars. On the fall of Novgorod, in the 15th century, through the intriguing policy of the princes of Moscow, *V.* lost its republican institutions also (1489), and the autocratic Czar, Ivan the Great, became supreme ruler in Russia. It was known as Khljnyoff until 1780.

Vyaz'ma, a town of Russia, 109 m. N.E. of Smolensk, and in the government of that name. It was populous as early as the 11th century, and carried on an active trade with Narva, on the Gulf of Finland. It was taken in the 15th century by the Lithuanian princes, and subsequently by Moscow, and in 1611 by the Poles, who held it till the peace of 1634. It is now an important center for the trade of Smolensk, dealing in corn, hemp, linseed, tallow, hides, fish, metals, and manufactured goods. *Pop.* (1897) 14,440.

Vy'eruyi, formerly **ALMATY**, capital of Semiryetchensk, a Russian province of Central Asia, in N. Lat. 43° 16', 47 m. south of the Ili river. Founded in 1854 as a small block-house, the advantages of the situation caused a rapid growth in population, which is now over 17,000. Thick growths of poplar, elm and fruit trees surround the houses, the streets are wide and planted with trees, and are refreshed with channels of running water. There is an active trade in wheat, rice, corn, tea, oil, and tobacco. *V.* is subject to earthquakes, due to the dislocation of rocks on the northern slope of the Alatau Mountains, at whose base the town is built. A severe shock occurred on June 9, 1887, which destroyed or damaged nearly 1,000 stone houses and killed 326 people.

Vy'ing, *ppr.* of *VIE* (*q.v.*)

Vyrn'wy, a river of England, which rises on the borders of Merioneth and Montgomery and joins the Severn, 8½ m. above Welshpool. In 1881 a series of engineering operations were begun for the utilization of this stream for the water supply of Liverpool, there being formed, by July 14, 1892, an artificial lake 4¾ m. long by 1½ m. broad, 1,121 acres in area, and holding 2,103 million cubic feet of water. The retaining wall, which is built of cyclopean stones, is 100 feet high, and is sunk 60 feet below surface level. The distance followed by the water, in its flow to Liverpool, is 68 m.

Vysh'niy Volot'chok, a town in the Russian government of Tver, 82 m. by rail N.W. of the city of Tver. Its importance is due to its situation in the center of the Vyshne-Volotsk system of navigation, which connects the upper Volga with the Neva. A portage of less than 17 m. between the Tversta, an affluent of the Volga, and the Tsna, whose waters reach Lake Ladga, was long used to transport boats from the one basin to the other. This was succeeded by a canal, which became an important link of communication between the Volga and the Neva. This canal is being abandoned in favor of the Mariinsk system, and the prosperity of the town is declining, though its trade is still considerable. *Pop.* (1897) 12,930.

V.—SECTION II.

VAND

Vaca'tion Schools. (*Educ.*) Prominent educators in New York city, aided by the Association for Improving the Condition of the Poor, undertook to open several schools in that city during the long summer vacation of 1897, and met with encouraging success. The city's Board of Education co-operated so far as to allow the free use of certain school-rooms, with such lights and fuel as were needed, but exercised no control. The experiment was begun by opening ten schools, where 150 teachers were employed, and an average daily attendance of 5,700 pupils was secured, at an average cost for each school of about \$1,000. The significance of this philanthropic innovation is very great. The vacation season is far from a pleasant thing to the children of the common people who make up the bulk of the population in great cities. It is proper to add that the friends of the movement deem its success in some degree due to the fact that it was sustained by private benevolent enterprise rather than by the school authorities, who, however good their intentions, would be likely to deaden the plan by the formalities of government control.

Vac'cine, n. The virus of cow-pox, taken directly from the cow, or from cow-pox pustules in a human body, used in inoculating to prevent smallpox.

Vail, THOMAS HUBBARD, clergyman, was born in Richmond, Va., Oct. 21, 1812; educated at Trinity College, Hartford, and the General Theological Seminary; ordained a priest of the Protestant Episcopal Church (1837); consecrated first bishop of Kansas (1864). He was the founder of Bethany College, Topeka, Kan. Was a forcible preacher and an able writer. Died Oct., 1889.

Vale (*vā'le* or *vā'lā*), *n.* [Lat. *imper.* of *vales*, to be in health.] An adieu; a farewell.

Val'ence, n. [Lat. *valens* (gen. *valentis*), powerful.] The worth or value of a chemical atom as regards its power of displacing other atoms in chemical compounds.

Valenciennes' Lace. (*Manuf.*) See LACE.

Val'ley City, in *North Dakota*, a post-village, cap. of Barnes co., 60 m. W. of Moorhead, Minn. Pop. (1897) 1,195.

Valley Falls, in *Kansas*, a post-village of Jefferson co., 24 m. N.E. of Topeka; has water-power and some manufactures. Pop. (1895) 1,172.

Valver'de, in *Texas*, a S.W. co.; area, 2,880 sq. m.; drained by the Rio Grande del Norte, which bounds it S. and S.W., and the Pecos river. Surface, hilly, suitable for grazing purposes; about 3,000 acres in irrigation; has fine building-stone. Cap. Delrio. Pop. (1897) 3,250.

Vaubéry (*vahm'ba-re*), ARMINIUS, or HERMANN, an Hungarian traveller and Orientalist, was born in 1832; has distinguished himself by travelling in the disguise of a dervish, by routes heretofore unknown to Europeans, through the deserts of Turkestan to Khiva, and thence by Bokhara to Samarcand, in 1861-66. Of that perilous journey, through an unknown country and a population fanatically hostile to Christians, he has given the world an account in his *Travels and Adventures in Central Asia* (London, 1864). Among his other works are *Wanderings and Adventures in Persia* (1867); *Sketches of Central Asia* (1868); *History of Bokhara* (1873); *Central Asia and the Anglo-Russian Boundary Question* (1875); *Islam in the 19th Century* (1875); *Primitive Civilization of the Turko-Tartar People* (1879); *The Future Contest for India* (1886); and several others, including valuable dictionaries of the Turkish language. He is now professor of Oriental languages at the University of Budapesth.

Van Dyke, HENRY JACKSON, clergyman, was born at Abington, Pa., March 2, 1822; educated at the University of Pennsylvania and Princeton Theological Seminary; was pastor of churches in Bridgeton, N. J. (1845-52), Germantown (1852-53), and called to the First Presbyterian Church, of Brooklyn, N. Y., in 1853. He published *The Lord's Prayer*; *The Church, Her Ministry and Sacraments* (1890). Died May 25, 1891.

Van Dyke, HENRY JACKSON, JR., son of the foregoing, was born in Germantown, November 10, 1852; educated at Princeton and at the University of Berlin. He was pastor of the United Congregational Church at Newport, R. I., in 1878; was called to the Brick Presbyterian Church, of New York city, in 1882. He has published: *The Reality of Religion* (1884); *Straight Sermons to Young Men and Other Human Beings* (1893); *The Story of the Other Wise Man* (1895), &c.

Van Dyke, JOHN CHARLES, author and critic, was born in New Brunswick, N. J., April 21, 1856; was educated at Columbia, and studied law; has also studied

in the art centers of Europe. He became librarian of Sage Library, New Brunswick, in 1877; and is also professor of the History of Art in Rutgers College; has published several volumes of critical essays on literature and art.

Vanbrugh (*van-broo'*), SIR JOHN, an English dramatist and architect, was born in London, 1666. He was educated in France and joined the French army, but in 1695 was appointed secretary to the commission for finishing Greenwich Hospital, and returned to London, where he devoted himself to architecture and dramatic literature, writing many brilliant but coarse plays, of which *The Provoked Husband* (originally, *The Journey to London*, left incomplete at his death, but finished by Colley Cibber) and *The Confederacy* held their place for a long time on the English stage. His comedies were edited in 1840 by Leigh Hunt in connection with the plays of Congreve, Wycherley, and Farquhar. As an architect he is best remembered by Blenheim Palace and Castle Howard. He was Clarendieux King-at-arms for twenty years before his death, and in 1714 he was made comptroller of the royal works and knighted. Died in 1726.

Vance, ZEBULON B., politician, was born in Buncombe co., N. C., May 13, 1830; studied law; was a member of Congress (1858-61); joined the Confederate army in 1861; was elected Confederate governor of North Carolina in 1862 and 1864; after the reconstruction was governor in 1870, and U. S. Senator from 1879 until his death, April 19, 1894.

Vance, in *North Carolina*, a N. co.; area, 342 sq. m.; drained by Swift creek, and small streams tributary to the Roanoke river. Surface, rolling; soil, fertile. Cap. Henderson. Pop. (1897) 18,350.

Vancouver, in Washington, a city, cap. of Clarke co., on Columbia river, 6 m. N. of Portland, Ore. Fruit, lumber, and dairy products are the principal shipments. Headquarters of the Military Department of the Columbia. Pop. (1897) 4,750.

Van'derbilt, CORNELIUS, popularly called "Commodore V.," was born on Staten Island, N. Y., in 1794; began to show his financial talent at the age of 16, when he bought a boat to carry farm produce to New York. At 23 he was worth \$10,000. For about 12 years he was captain of a steamboat plying between New York city and New Brunswick, N. J. In 1829 he began running a line of steamboats on the Hudson river and Long Island Sound. In 1851 he started a line to San Francisco by way of the Isthmus, with a branch line to New Orleans. He also started a transatlantic line to Havre, France, but gave it up at the outbreak of the Civil War, and presented the steamer *Vanderbilt*, which cost \$800,000, to the U. S. government. He invested in railroads and grew rich rapidly; established the New York Central Railroad, and gained control of connecting lines, until (1873) he controlled 2,000 miles of track. He gave \$1,000,000 to found Vanderbilt University, at Nashville, Tenn.; also gave to Rev. Charles T. Deems \$50,000 to purchase the Church of the Strangers in New York city. He left a fortune of \$100,000,000 to his son, WILLIAM HENRY VANDERBILT. Died Jan. 4, 1877.

Vanderbilt, WILLIAM HENRY, was born at New Brunswick, N. J., May 8, 1821; in 1864 he became associated with his father, Cornelius Vanderbilt, in the management of the Harlem Railroad. After inheriting the estate, he devoted himself to the care and development of the Vanderbilt system of railroads. His most conspicuous public act was in connection with the bringing of the Egyptian obelisk to New York Central Park, for which he paid all the expense of transportation. He also gave \$500,000 to the New York College of Physicians and Surgeons (1884). Died Dec. 8, 1885, leaving the Vanderbilt millions to his sons, CORNELIUS and WILLIAM KISSAM, the former of whom became chief manager.

Vanderbilt Univer'sity. (*Educ.*) A Methodist Episcopal co-educational institution at Nashville, Tenn. In response to special calls, a convention met at Memphis, Jan. 24, 1892, composed of delegates from Tennessee, Alabama, Mississippi, Louisiana, and Arkansas, to concoct some scheme for promoting higher education throughout the Methodist Episcopal Church South. A plan for a university was adopted, a board of trustees nominated, and shortly afterward a charter obtained under the title of the Central University of the Methodist Episcopal Church South. Efforts were made to raise the necessary funds, but were fruitless, and the

enterprise seemed likely to fail, when Bishop McTyeire induced the elder Cornelius Vanderbilt to give to the institution \$500,000. Out of gratitude for this gift, its name was changed to Vanderbilt University. Vanderbilt afterward increased his gift to \$1,000,000; his son, William H., made gifts at various times which amounted to \$450,000, and his grandson, Cornelius, gave \$30,000. The board of trust, consisting of 31 members, is self-perpetuating. The bishops of the Methodist Episcopal Church South and the chancellor of the university are *ex officio* members of the board. The other members are elected for a term of 8 years. Its productive funds are \$1,050,000. In 1896 it had 80 instructors, 656 students, and 16,000 volumes in its library. Its income in that year was \$100,000.

Vane, SIR HENRY, statesman, was born in Kent, England, in 1612, became governor of the colony of Massachusetts in 1636, and in 1640, as a member of the Long Parliament, one of the foremost impeachers of Strafford (*q. v.*). After the death of Pym, in 1643, he became virtually prime-minister of England; opposed the execution of Charles I., and also the usurpation of Cromwell, and in 1649 was placed at the head of the Admiralty, where he highly distinguished himself by his vigorous administration of naval affairs. After the restoration of Charles II., he was tried for high treason, and executed, 1662.

Van'ner, n. See ORE-CRUSHING and DRESSING MACHINERY.

Vapereau (*vāp-a-ro'*), LOUIS GUSTAVE, litterateur, was born at Orleans, France, 1819; became in 1832 secretary to M. Victor Cousin, whom he assisted in his *Pensées de Pascal*. In 1843 he became professor of Philosophy at the College of Tours, holding that position for a period of 10 years. He next undertook the editorship of the *Dictionnaire des Contemporains* (1858 and subsequent editions). Since 1859 he has issued yearly *L'Année Littéraire et Dramatique*, an annual review of the principal productions of French literature. He is also engaged upon another important work, *Dictionnaire Universel des Littératures*; has written various other books, and has been a frequent contributor to reviews, &c., and is honorary inspector-general of primary schools.

Va'por, n. (*Physics.*) Loosely speaking, a vapor and a gas are identical, but certain distinctions of meaning exist in preferred usage, the term vapor being commonly applied to the gaseous condition of those substances or elements which we are accustomed to see in a solid or liquid state, and the term gas to those which we ordinarily see in a vaporous form. Thus we speak of hydrogen as a gas, but refer to steam as the vapor of water. It is also proper to use the term vapor when referring to any gas near its condensing point, or in a condition where it can be liquefied by pressure alone. Before the fact was established that all gases may be liquefied by the application of sufficient cold and pressure, and that consequently gas was only a form of matter, dependent on temperature and pressure, there existed a need for such a word as vapor, with a distinct meaning from gas. Now that it is demonstrated that all vapors are gases, and that all gases are vapors, the distinction remains as a matter of usage. The vapor we see in the air, of which clouds are formed, is properly called aqueous vapor, and is always present to a greater or less extent, being dense when the humidity is high. When the quantity reaches the point of saturation, the vapor develops into a well-defined mist or cloud, or into rain. Hence we speak of a saturated vapor as one about to pass into the liquid state because of condensation, whereas an unsaturated vapor will endure a considerable increase of pressure, or a fall in temperature, or both, without condensing to a liquid.

Va'ra, n. A Spanish measure. In length, in Spain, it is 2.78 feet or .85 meter, but this varies in Spanish-America, as follows: in Bolivia the vara equals 32.90 in.; Brazil, 43.31 in.; Chile, 32.91; Colombia, 31.50 in.; Cuba, 33.38 in.; Mexico, 32.99 in.; Peru, 32.91; Venezuela, 33.38 in.; Paraguay, 33.00 in.; British Honduras, 32.75 in.; Curaçao, 33.37 in.; Argentine Republic, 34.12 in.; Honduras, 33.03; Costa Rica, 32.88 in.; Portugal, 43.28 in. (the last accounts for the measurement used in Brazil). Measuring a surface, the square vara equals 7.74 sq. ft., or .72 sq. meter. In Honduras 1.90 sq. vara equals 1 sq. yd.; in Mexico 1 sq. vara (vara cuadrada) equals .84 sq. yd. As a cubic measure (usually for solids), a vara equals 20.56 cubic yds. or 15.71 cubic meters.

Va'riant, *n.* A thing differing from another in form, but otherwise essentially the same; a different form, reading, version, spelling, type, &c.

Vas'eline, *n.* (*Chem.*) An ointment made from petroleum, and much used as a base or vehicle for various medicative preparations. Chemically, it is known as *petrolatum*, which is a mixture of the semi-solid hydrocarbons found in paraffine, the heaviest product of petroleum, and is obtained by distilling off the lighter portions of the oil, and purifying and deodorizing the remainder.

Vasomoto'r, *a.* Producing or governing movements of contraction or dilatation; a term applied to nerves that govern the motions of the blood-vessels.

Vas'sar, MATTHEW, founder of Vassar College, was born in Norfolk, England, April 29, 1792; removed to America in 1796; succeeded his father in the brewing business, acquiring a fortune. In 1861 he donated \$400,000 to the institution that became known as Vassar College, at Poughkeepsie, N. Y., and left, by bequest, \$400,000 more to the same object. His nephews, Matthew (1809-1881) and John Guy (1811-1888), who succeeded him in business, continued his work, each having given large sums to Vassar College, and to other educational and charitable purposes. Matthew Vassar died at Poughkeepsie, June 23, 1868.

Vassar College, (*Educ.*) A non-sectarian institution for the education of young women, at Poughkeepsie, N. Y. It was founded in 1861 by Matthew Vassar, a brewer, who, born at Norfolk, England, was brought to this country when four years old by his father, who established at Poughkeepsie the brewery out of which Matthew made his fortune. His original gift to Vassar was added to by his brother and nephew, and the institution has a fund of \$1,020,000. The building, collections, and apparatus are valued at \$1,000,000 more. In 1896 its revenues from all sources were nearly \$300,000. The courses of study are such as are offered in the best colleges for young men, and the requirements for admission are equal to theirs. In 1896 it had 56 instructors, 534 students, and 25,000 volumes in its library.

Vaughn, HERBERT, a Roman Catholic prelate, was born at Gloucester, Eng., April 15, 1832; educated at Stonyhurst College and at Rome; ordained a priest in 1854; returned to England; was founder and became president-general of St. Joseph's Foreign Missionary College, at Mill Hill, Middlesex. In 1871 he accompanied to the U. S. the first detachment of priests sent on a special mission to the colored people. He became bishop of Salford (1872); archbishop of Westminster (1892); was created cardinal (1893), and made head of the Catholic Church in England. He is a practical reformer; built St. Bede's College, in the interest of commercial education.

Vauquelin (*vôk'lahn*), LOUIS NICOLAS, analytical chemist, born near Pont l'Évêque, France, in 1763; succeeded Ducrest in 1801 as professor in the College of France. He discovered glucina and chromium, and greatly conducted to improving the methods of chemical analysis. Died in 1829.

Vaux (*vô*), CALVERT, landscape architect, was born in London, England, Dec. 20, 1824; removed to America (1848), and was associated with A. J. Downing and Frederick L. Olmstead in their chief enterprises in landscape architecture. He was accidentally drowned, in November, 1895.

Vaux, WILLIAM SANDYS, archaeologist, born at Winchester, Eng., 1818, graduated at Oxford, in 1840. He for many years held the post of Keeper of the Coins and Medals in the British Museum, of which institution he has published a valuable *Handbook*. His *Ninereh and Persepolis* has exhausted four editions, and been translated into several European languages. As a numismatologist, V. has a high reputation.

Ved'dahs, *n. pl.* See CEYLON.

Veg'etable Leath'er, (*Manuf.*) A textile fabric woven from flax or other fibrous material, and afterward embossed with certain substances which impart to it the appearance of leather. Also India-rubber spread upon linen.

Vegetable Oil, (*Chem.*) An oil imported from China, and used for lamps, &c.

Vello'zia, *n.* (*Bot.*) A genus of *Hæmodoraceæ*, chiefly Brazilian, having leafy, often dichotomously-branched stems, bearing linear rigid leaves in tufts at the end of

of tree-lily to the plant. The short trunk is often very thick. Thirty to 40 species inhabit tropical and Southern Africa, Brazil, and Madagascar.

Vel'lum-cloth, or **Trac'ing-cloth**, *n.* (*Manuf.*) A kind of cotton fabric used by designers, &c.

Vellum-paper, *n.* Same as VELLUM-POST (*q. v.*).

Velours (*va-loorz'*), *n.* (*Manuf.*) A kind of mixed plush or velveteen fabric manufactured of cotton, linen, and mohair, chiefly in Germany.

Velours d'Utrecht, (*Manuf.*) Same as UTRECHT VELVET (*q. v.*).

Velt, *n.* (*Camb.*) A French measure used in gauging brandy, equivalent to 2 gallons, or 7.57 liters.

Venetian Glass, (*Ceramics.*) See AVENTURINE.

Ventura, in California, a S. co.; area, 1,682 sq. m.; partially irrigated by the Santa Clara river. Surface, generally mountainous; soil, fertile in the valleys. Cap. Ventura. Pop. (1897) 12,300.

—A post-village, cap. of Ventura co., about 300 m. S.E. of San Francisco. Pop. (1897) 2,790.

Venus, (*Myth.*) The Roman goddess of beauty, the mother of love, the queen of laughter, the mistress of the graces and of pleasures, identified with the Greek *Aphrodite*. She arose from the sea near the island of Cyprus, or Cythera, and was carried to Olympus, where all the gods admired her beauty. Jupiter attempted to gain her affections, but V. refused, and the god, to punish her obstinacy, gave her in marriage to his ugly son Vulcan. The power of V. over the heart was fortified by a girdle, called *zone* by the Greeks, and *cestus* by the Romans. This girdle gave beauty, grace, and elegance, when worn even by the most deformed; it excited love, and kindled extinguished flames. V. gained the prize of the golden apple of discord from Pallas and Juno (see PARIS), and rewarded her impartial judge with the hand of the fairest woman in the world. The worship of V. was universally established; statues and temples were erected to her in every kingdom. The rose, the myrtle, and the apple, were sacred to her; and, among birds, the dove, the swan, and the sparrow, were her favorites. She is generally represented with her son Cupid, on a chariot drawn by doves. The figure of V. was a favorite subject of ancient sculptors. One of the most famous specimens extant, and certainly the finest relic of ancient art, is the *V. de Medici*, preserved in the celebrated *Tribune* at Florence. It is a nude statue, 4 feet 11½ inches in height, without the plinth. The face has little expression, and not much beauty, the value of the work consisting almost entirely in its proportions. It was found in 1680, in eleven pieces, in the ruins of the villa of Hadrian, near Tivoli, and is the production of Cleomanes, the son of Apollodorus, an Athenian sculptor, said to have lived 200 B. C. The right arm and the lower half of the left arm, wanting, have been restored by Bandinelli. The *V. of Milo*, in the *Louvre*, at Paris, was discovered in the island of Milo, and is supposed to be a copy of the *V. of Cos*, by Praxiteles. In 1877, the arms of this famous statue were reported as discovered in Milo, within a few feet of the spot where, in 1820, the statue was found, but their authenticity is generally doubted.

(*Zoöl.*) See VENERIDÆ.

Venus's Chariot, (*Zoöl.*) See HYALEA.

Venus's Fly-trap, (*Bot.*) See DIONÆA.

Venus's Looking-glass, (*Bot.*) See SPECULARIA.

Venus's Slipper, (*Zoöl.*) See CARINARIA.

Vera (*vai'ra*), a seaport of Spain, 40 m. from Lorca, on the Mediterranean. Pop. 9,236.

Veracious (*-râ'shus*), *a.* [Fr. *vrai*, from Lat. *verax*, *veracis*=*verus*, true.] Truthful; observant of truth; habitually given to speak truth; as, a *veracious* individual.—Characterized by truth or veracity; not false; as, a *veracious* history.

Vera'gua (DON CHRISTOFAL COLON DE TOLEDO DE LA CERDA Y GANTE), DUKE OF Marquis of Jamaica, and Admiral and Adelantado Mayor of the Indies, the 13th in descent from Christopher Columbus, was born in Madrid, Spain, in March, 1837; educated at the University of Madrid, and received a legal training; was elected to the Cortes, as a Liberal, in 1871; re-elected in 1874, and in 1878 was made a senator; has been minister of the interior, vice-president of the Senate, and royal commissioner of agriculture. The Duke and Duchess were the guests of the U. S. in 1893, and witnessed the opening ceremonies of the Columbian Exposition, at Chicago, May 1 of that year. The Duke is a descendant of Francesca, sister of Diego Columbus, great-grandson of Columbus, with whom the male line became extinct in 1578.

Verba'rimu, *n.* A game in which the players try to form the greatest number of words from the letters of a given one, or to form one word from its own disarranged letters.

Verestha'gin, VASILI, painter, was born at Tcherpovets, Russia, in the government of Novgorod, Oct. 26, 1842; studied with Gérôme, in Paris. He is noted for his realistic battle scenes from the Turcoman campaign, India, and the Russo-Turkish War of 1877. In 1884 he visited Syria and Palestine, and afterward painted a series of pictures of the life of Christ, and other sacred themes, which aroused aggressive criticism by their unconventional style. A collection of his paintings was exhibited in New York and Chicago, in 1888-89.

Ver'ga, GIOVANNI, novelist, was born in Catania, Sicily, in 1840. He has written many society novels, and a series of stories of rustic life, all of which have been popular in current Italian literature. He has been introduced to the world at large by the association of one of his stories, *Cavalleria Rusticana*, with Pietro Mascagni's opera, the story of which is taken from

Verga's novel. An English translation of the novel was issued in Boston, in 1896.

Vergennes' (CHARLES GRAYIER), COMTE DE, statesman, was born at Dijon, France, Dec. 28, 1717; from 1740 to 1774 was engaged in the diplomatic service, after which date he was minister of foreign affairs under Louis XIV.; in this capacity he was the staunch friend of the American patriots of the Revolution, and was finally a party to the treaty of peace signed at Paris, Sept. 3, 1783, by which American independence was definitely recognized. Died Feb. 13, 1787.

Verlaine', PAUL, poet, was born at Metz, March 29, 1844, and became a French citizen in 1873. He was noted for his originality in theme and forms of verse, and for the singular contradictoriness of sentiment expressed in his poems, singing alternately perverse sin and religious repentance. In his unique style, his lyrics are unequalled in modern French literature. Died Jan. 8, 1896.

Vermont', Univer'sity of, (*Educ.*) The official designation of this non-sectarian, co-educational institution is "The University of Vermont and State Agricultural College," the two having been united in 1865. The university is more than a century old, since it was chartered in 1791. It is at Burlington, which has been called the most beautiful city in all New England, and stands on Lake Champlain, upon a high bluff overlooking the lake, with a view of the Adirondack Mountains opposite. The college buildings are on the crest of the hill. Though incorporated in 1791, the university was not organized until 1800, and graduated its first class in 1804. It did not prosper, however, until after 1825. In that year Lafayette laid the corner-stone of the present main building (University Hall). A bronze statue of the great Frenchman, by J. Q. A. Ward, stands in the grounds—the gift of John P. Howard, who also enlarged and reconstructed the main building in 1884. North of this building is the Williams Science Hall, and north of that the Billings Library (of which the townspeople are allowed the free use), one of the masterpieces of the architect, H. H. Richardson. It contains 50,000 volumes, part of which are books collected by George P. Marsh, the philologist. The university has a medical department, and courses in civil, electric, and mechanical engineering. In 1896 it had 50 instructors and 475 students. Its revenues in that year were \$70,000.

Verne, JULES, writer of imaginative fiction, was born at Nantes, France, Feb. 8, 1828; studied law, but began writing in 1850, and in 1863 commenced his series of marvellous stories, characterized by a combination of scientific knowledge and imaginative power. Some of the most familiar are: *Five Weeks in a Balloon*; *Twenty Thousand Leagues Under the Sea*; *Trip to the Center of the Earth*; *The Mysterious Island*; and *Around the World in Eighty Days*. Several of his works have been dramatized.

Ver'non, in Louisiana, a W parish; area, 1,540 sq. m.; bounded W. by Sabine river. Surface, nearly level; nine-tenths covered with valuable yellow pine; soil, generally fertile. Cap. Leesville. Pop. (1897) 6,350.

Vernon, in Texas, a post-town, cap. of Wilbarger co., 163 m. N.W. of Fort Worth. Pop. (1897) 3,160.

Vernon-Har'court, LEVESON FRANCIS, engineer, was born at London, Eng., in 1839; was educated at Harrow and Balliol College, Oxford, where he took a first-class in mathematics and natural science. He has been engaged chiefly in hydraulic and maritime works; in 1865 was appointed professor of Engineering in University College, London; member of the Institution of Civil Engineers (1871); has received a Telford medal, three Telford premiums, and the Manly premium.

Vero'na, in Pennsylvania, a post-borough of Allegheny co., 10 m. N.E. of Pittsburg; has repair shops (A. V. R. R.) and other manufacturing interests. Pop. (1897) 2,000.

Vest, GEORGE GRAHAM, lawyer and politician, was born in Frankfort, Ky., Dec. 6, 1830; graduated at Central College, Ky. (1848), and studied law in Lexington; removed to Missouri (1853) and began the practice of his profession; was a member of the legislature (1860-61); joined the Confederacy, and was a member of the Confederate Congress and Senate; was elected to the U. S. Senate in 1879, and re-elected in 1885, 1890, and 1897.

Veillot (*ve-yoo'*), Louis, a French author and journalist, was born in 1813. In 1838, after a visit to Rome, he became the uncompromising champion of the Church, leading the Ultramontane party and editing the *Univers*. In 1848 his extreme opinions incurred ecclesiastical censure, and the paper itself was suppressed in 1860, to reappear in 1867. His published works include *Mélanges Religieux, Historiques et Littéraires* (1857-59); *Le Parfum de Rome* (1865); and *Les Odeurs de Paris* (1866). Died in 1883.

Viardot-Garcia (*ve-âr-do-gâr'-she-ah*), MICHELLE PAULINE, an eminent vocalist, was born in Paris, 1821, a sister of the late Madame Malibran. At four years of age she spoke in four languages, and at seven was able to play pianoforte accompaniments for the pupils of her father, Manuel Garcia. In course of time she became one of Liszt's most accomplished pupils on the pianoforte, and made her first appearance on the London operatic stage in 1839, as *Desdemona*. Her voice, like that of her sister, was mezzo-soprano, embracing a compass of three octaves. After a brilliant career of nearly thirty years, during which she married M. Viardot, director of the Paris Italian Opera, she left the stage in 1862, and began to teach and compose, being professor of singing for several years at the Paris conservatory.

Fig. 3090.—VELLOZIA COMPACTA.

the branches. The flowers are large, white, yellow, blue, or violet; solitary, or two or three among each cluster of leaves; and campanulate, giving the name

Vi'brant, *a.* Having a rapid motion to and fro, as the string of a musical instrument.—Due to or exhibiting vibrations; resonant; tremulous.

Vi'broscope, *n.* An instrument invented by Duhamel for recording vibrations.

Vicks'burg, in *Michigan*, a post-village of Kalamazoo co., 13 m. S. by E. of Kalamazoo; has flour and planing mills, and is the trade center of a large agricultural region. *Pop.* (1894) 1,573.

Vidoeq', EUGENE FRANÇOIS, a French detective, was born at Arras, July 23, 1775, the son of a baker; was a thief in his childhood; afterward was in the army, in Belgium. Being discharged on account of a wound, he began a life of vagabondage; was convicted of forgery in 1796, and sent to the galleys for 8 years; escaped and joined a band of highwaymen, who expelled him after exacting a solemn oath from him not to betray them. He proceeded to Paris and immediately surrendered the band to the authorities. He also offered his services as a detective, an offer which the authorities accepted on the principle of "setting a thief to catch a thief." He gathered together a company of so-called "detectives," and with them made some remarkable discoveries of burglaries, &c., which were afterward believed to have been organized and carried out by the gang itself. He was dismissed in 1825, and afterward figured in dishonest business operations. He wrote two volumes, purporting to be accounts of his experiences, but he was such a consummate liar that his works are not considered authentic. Died April 28, 1857.

Vig'fussón, GUDBRAND, scholar, was born at Frakkanes, Iceland, March 13, 1827; educated principally at Copenhagen University; went to England in 1864, where for ten years he was completing the *Icelandic Dictionary* begun by Richard Cleasley; was appointed professor of Icelandic Language and Literature at Oxford (1884). He published editions of several Icelandic sagas, critical essays, &c.; his last book, prepared in conjunction with T. Yorke Powell, is *Corpus Poeticum Boreale* (1883). A pathetic incident of his last illness was his homesick longing to see once more the ice and snow-fields of his native Iceland. Died Jan. 31, 1889.

Vi'las, WILLIAM FREEMAN, statesman, was born in Chelsea, Vt., July 9, 1840; removed to Madison, Wis. (1851); graduated at Wisconsin University (1858); studied law in Albany, N. Y., and was admitted to the bar (1860); served as an officer in the Union army (1861-63); returned to the practice of law in Madison. He was postmaster-general, and later secretary of the interior, in President Cleveland's first cabinet. In 1891 he was elected to the U. S. Senate; in 1896 was a prominent opponent of the Bryan nomination.

Vilers, CHARLES MARIE LE MYRE DE, diplomatist, was born in 1833; entered the navy in 1849; in 1859 received the decoration of the Legion of Honor; entered the civil service; for gallantry in the defence of Paris during the Franco-Prussian War he received the rosette of the Legion of Honor; entered the diplomatic service; in 1888 was sent to Madagascar as minister plenipotentiary; from that date has been the active exponent of French influence in that island. For his first success in diplomacy there (1888) he received the cross of the Legion of Honor. As the result of his latest mission (1894), the French occupied Antananarivo on Sept. 30, 1895, finally annexing the island.

Villard, HENRY, originally GUSTAVUS HILGARD, financier, was born in Spire, Bavaria, April 11, 1835; removed to the U. S. in 1853; was newspaper correspondent in the far West, and afterward European correspondent of the *New York Tribune*; in 1870 became interested in railroad securities, and ultimately president of several Pacific Coast roads. In 1881 he was made president of the board of directors of the Northern Pacific R. R., and again in 1888. He has given liberally to the University of Washington, the State University of Oregon, &c.

Villiers, CHARLES PELHAM, long known as the "Father of the House of Commons," was born in England, Jan. 3, 1802. He became a barrister in 1827, and from 1833 to 1852 was examiner of witnesses in the Court of Chancery. In 1835 he was elected to Parliament, for Wolverhampton, which he continuously represented, latterly as a Union Liberal. He was the colleague of Cobden and Bright in the fight for the repeal of the Corn Laws. In 1853 he became a member of the Privy Council. He declined a peerage in 1885; was distinguished in social life as a gifted conversationalist.

Villiers, FREDERIC, war correspondent and artist, was born in London, Eng., in 1850; educated in France and in the art schools of South Kensington; became a student of the Royal Academy (1870). In 1876 he entered upon his work as correspondent and illustrative artist, combining the two in articles sent to the *London Graphic*, from Servia, whither he went with Archibald Forbes. Since then he has been continuously employed at various points. During 1894-95 he was representative of *Black and White*, in China, during the war with Japan.

Villis'ca, in *Iowa*, a post-town of Montgomery co., 65 m. E. of Council Bluffs; has brick and tile yards, and cooper shops. *Pop.* (1895) 2,034.

Vi'lott, in *Oklahoma*, a post-village of Kay co., 15 m. from Hunnewell, Kansas.

Vin'cent, JOHN HEYL, clergyman, bishop of the Methodist Episcopal Church, was born in Tuscaloosa, Ala., Feb. 23, 1832. His early education was received at academies in Lewisburg and Milton, Pa., and at the Wesleyan Institute; the ripe scholarship of his later years is the inevitable evolution of a superior brain and an aspiring and inspiring temperament. His pastoral

charges were in Illinois and New Jersey. In 1865 he established the *Sunday-school Quarterly*, in Chicago; and in 1866 the *Sunday-school Teacher*, in which he introduced his new lesson system, which has since become international. He wrote extensively on topics relating to Sunday-school work. He is most widely known as the chief organizer of the Chautauqua system of educational circles, &c., and the Chautauqua Assembly, which he established in 1874. In 1868 he became corresponding secretary of the general Sunday-school Union of the Methodist Episcopal Church, and editor of the Sunday-school and tract publications of that Church. He was elected bishop in 1888, his episcopal residence being for a few years at Buffalo, N. Y., and latterly at Topeka, Kansas. He has written *Chautauqua Text-Books* in history, and many other works, including *Studies in Young Life* (1890); *My Mother* (1892); *The Story of a Letter* (1893); *Earthly Footsteps of the Man of Galilee* (1894), &c. His lectures, *That Boy, That Boy's Sister*, and *Tom and His Teachers*, have received a cordial hearing in many towns in the U. S.

Vin'land, (*Anc. Geog.*) The name given by the early geographers to that part of New England now supposed to be represented by the southern coast of Massachusetts, with Rhode Island, which is claimed to have been discovered by the Norsemen in the 10th century. According to tradition—more or less well established, as will presently be seen—one Björn Herjulfson, while making the voyage between Iceland and Greenland, of which his father, Herjulf, and Eric the Red were the first colonists, was driven by stress of weather upon the American coast. He did not, however, land on its shores, which were first visited 14 years afterward, or about 1000 A. D., by Leif, a son of Eric the Red, who built a number of wooden huts thereon, to which was given the name of *Leifsbúðir* (Leif's booths), afterward changed to Vinland, in consequence of the grape being found growing in the newly-found country. In 1003 an expedition under the command of Thorwald, a brother to Leif, sailed along the coast toward Long Island, but he was killed in the year following in an encounter with the natives, and further exploration was stopped for the time being. In 1007, Vinland was visited by one Thorfinn Karlsefne, an Icelander, who, with his followers of 160 men, remained there for 3 years, and then returned, abandoning the idea of further attempts at colonization. Rafu, in his *Antiquitates Americane*, has published the most complete collection of the evidence which proves the pre-Columbian settlement of America. Much also to the same effect is to be found in Wilhelmi's *Island, Horvrammaland, Grönland und Vinland*, published at Heidelberg, in 1842. It has been a long-debated question whether or not the existence of Vinland was known to Columbus when he first publicly ventilated his project of crossing the Atlantic Ocean. Certain Scandinavian writers, Rafu and Finn Magnussen particularly, are pertinacious in recording their belief that he derived his first hints of a new world from the accounts of these old Icelandic expeditions. Indeed, Magnussen has, as we think, pretty well established the fact, recorded in his *Nordisk Tidsskrift for Oldkyndighed*, that Columbus did actually visit Iceland 15 years prior to his setting out on his great expedition, that is to say in 1477, and it is probable that while there he may have heard of the Vinland discovered 4 centuries and a half before. See NORTHBEGA.

Vin'ton, DAVID HAMMOND, U. S. A., was born in Providence, R. I., May 4, 1803; graduated at West Point, and went on military duty to Florida and Mexico. When the Civil War broke out, he was chief quartermaster of the Department of Texas; was taken prisoner by the Confederates, but exchanged in a few months, and served as quartermaster-general and chief quartermaster of New York; retired in 1866. Died Feb. 21, 1873.

Vinton, FREDERICK PORTER, artist, was born in Bangor, Me., Jan. 29, 1846. He received his training under Bonnat and Laurens in Paris, and leading masters in Munich; returned to America and located in Boston, devoting himself chiefly to portraits from life, but has done some fine work in ideal figures.

Vi'ole't O'dors, (*Chem.*) The perfume of the violet is extracted from the flower by the "enfleurage" process, and is one of the most expensive of the odorous volatile oils. It is rarely obtained pure. Orris-root, the dried rhizome of three species of *Iris*, has much the same odor as violets, and is, consequently, used to adulterate the true violet-oil, and also to imitate it, both as an extract and as sachet-powder. Costus-root, again, a plant of the northwestern Himalayas, belongs with the perfumes of the violet order, being used for the same purposes as orris, and is in turn greatly adulterated by the most alien substances that absorb the odor of the dried costus. This costus-perfume is used among Asiatics for protecting Kashmir materials from damage by moths, and is greatly imported into China for use as incense, and burned before religious images. It is also smoked and used as a medicine. Several woods also yield the characteristic violet odor, and two or three flowers. The finest violet extract, or perfume, is very expensive, and is made from the pomade, on which violets have been placed, extracted by alcohol, and reinforced by cassia, a perfume derived from the flowers of the cassia-trees (acacias), grown for the purpose on the Riviera. The odor of these flowers is very like that of *Viola odorata*, but, curiously enough, the seeds and root-bark, when chewed, give out an odor of garlic, an association of smells that has been noticed in other plants. An exposure of the body to turpentine, or the taking of it internally, gives a violet odor to the urine. A synthetic violet perfume is now being extensively

made, and is used for scented soaps, and forms the basis of most cheap violet extracts. Cassia and orris-roots, in combination with other essential-oils, furnish most of the violet perfumes, and sachet-powders depend upon the pulverized orris for their character. Orris also strengthens other perfumed mixtures.

Vir'chow, RUDOLF, pathologist, was born at Schivelbein, Pomerania, Germany, Oct. 13, 1821. In 1843 he graduated in medicine at the University of Berlin, and began to lecture on Anatomy, being also professor of the Charité Hospital. His life has been divided between medical science and politics. In 1856 he became professor of Pathological Anatomy at the University of Berlin, and director of the Pathological Institute; in 1880 he entered the Reichstag. In the wars of 1866 and 1870 V. was director of the German hospital service. During the last illness of the Emperor Frederick V. was called as an expert in cancerous disease, and became recognized as an ultimate authority in that special pathological problem. He has written many valuable works on medical subjects; in politics he has been a bitter opponent of Bismarck, and a friend of the workman. He advocates sanitary reforms, and as alderman in Berlin is deeply interested in all municipal work.

Vir'den, in *Illinois*, a city of Macoupin co., 21 m. S. by W. of Springfield. Coal mining is the principal industry, but has also brick and tile manufactures and poultry-packing interests. *Pop.* (1897) 1,920.

Vireon'idæ, *n. pl.* (*Ornith.*) An American family of insectivorous birds, the vireos, or greenlets. They are small and trim, and the many species present few striking points of difference, olive-greens prevailing above and white or yellowish-white below. They are closely allied to the shrikes in structure; but few species range even in summer as far north as Canada. All are pleasant singers and some excel in that direction, the warbling, red-eyed, and white-eyed species being among the most common and pleasing warblers of the northeastern States. A West Indian species is called *Whip-Tom-Kelly*, in imitation of the notes. A distinguishing peculiarity of the vireos is their nest-building, in which all species so nearly agree as to make it difficult to distinguish their nests apart; their eggs are also much alike—pinkish, translucent white, delicately dotted with red about the larger end. The typical nest is a deep cup, woven of strips of thin inner bark, as of the grapevine, and of shreds of hempen fibers, intermixed with bits of down and lined with fine grass; and it is always suspended by its rim from the under side of the fork of a low branch.

Virgin'ia, in *Illinois*, a city, cap. of Cass co., 15 m. N. of Jacksonville. *Pop.* (1897) 1,795.

Virgin'ia University of, (*Educ.*) It is a subject of pride at this non-sectarian institution that it was planned by Thomas Jefferson, who was its first rector. It is located at Charlottesville, Albemarle co., four miles from Monticello, the home of Jefferson. Chartered in 1819 and opened in 1825, it has peculiar features which distinguish it from all other colleges in the U. S. One of these features is that it has no general curriculum, but is divided into separate, independent schools, 23 in number, each under the charge of a professor, who, in some cases, has assistant instructors. The students select their schools, usually three in number. The university has medical, pharmaceutical, law, agricultural, and engineering departments. Its academic head is the chairman of the faculty, annually chosen by the board of visitors, composed of a rector and eight members, appointed by the governor of the State and confirmed by the Senate, in whom the government is vested. The State makes the institution an annual appropriation, beginning in 1825 with \$15,000, and increasing to \$40,000 in 1884, the increase being upon the condition of free tuition in the academical departments to suitably prepared students who are residents of the State. In 1896 the university had 48 instructors and 528 students. At the beginning of that year the library had about 54,000 volumes; but on Oct. 27, 1896, a fire destroyed the rotunda and public hall, two-thirds of the library, and several valuable paintings. Since 1869 it has had numerous gifts in equipments and endowments, including an endowed observatory and an extensive museum of natural history and geology. In the year named the department of agriculture was founded by Samuel Miller, of Lynchburg, with an endowment of \$100,000. Its productive funds amounted in 1896 to \$262,000, and its total revenues in that year were about \$135,000.

Viscom'eter, *n.* Any apparatus or instrument for testing the viscosity of oils. For purposes of lubrication, it is important to know just what viscosity is possessed, especially by the various mineral oils, and a number of ingenious devices have been made for the purpose. Most of them utilize the principle of heating the oil to a specific temperature, and timing its flow over a certain distance. Perhaps the simplest of these is the Phillips, which is made with a plate having a trough interspersed with depressions or cups, extending across its surface. The plate has raised sides, so that it may be partially immersed in water, without danger of flooding the surface. The water being heated to a certain temperature, the plate is tilted to a known angle, and oil is poured in the cups and allowed to flow along the trough, its movement being timed. In the Engler viscometer, a scale is provided for comparison with the flow of water at 20° C., and the oil-cups are made of exact size, so that comparisons can be made at different times and places. The Redwood viscometer has a cylinder for the oil, which is designed to be immersed in a bath of either hot oil or hot water, in which a stirrer is operated to preserve an even temperature throughout

the fluid. The oil is flowed from the cylinder through a minute jet to a graduated flask. Another class of viscometers employs paddles or stirrers to agitate the oil tested, with devices for measuring the strain on the paddles. Of this class are the Napier and the Cockrell. The Doolittle is also similar, but uses concentric rings instead of paddles.

Vitascope, n. A form of machine for exhibiting kinetoscopic pictures on an enlarged scale. An ordinary camera lens is placed in front of the moving film of photographs, and behind this are a powerful lens and an arc-light, so that the pictures are projected on the screen at about 600 times their size. Compare KINETOSCOPE.

Viviscope, n. An optical toy, resembling the zoetrope, and having mechanism for carrying a continuous strip of pictures representing a moving scene before an opening, through which they are viewed, with some resemblance in effect to the kinetoscope (*q. v.*). The strip of pictures is made to remain stationary $\frac{1}{2}$ of the time, and if the mechanism, which is rotated by hand, is cleverly manipulated, good results can be obtained. In effect, the machine is a cheapened and simplified kinetoscope, and has the advantage over the nickel-in-the-slot form of kinetoscope in that its exhibition may be viewed by a dozen or more persons at once, instead of requiring to be inspected through an eyepiece that limits observation to one person at a time.

Vizor, n. [Fr. *visière*.] A head-piece or mask to conceal or disguise.—In ancient armor, that part of a helmet which defended the face, and which could be lifted at pleasure. It was perforated with holes for seeing and breathing.—The projecting piece on a cap for protecting the eyes.—The face or countenance. (*Obs.*)

Vocilion, n. (*Mus.*) A musical instrument like a harmonium, having broad reeds, producing a tone resembling that of the pipe-organ.

Völeker (*föl'kär*), AUGUSTUS, chemist, was born at Frankfort-on-the-Main, Germany, in 1823; became (1862) professor of Chemistry to the Royal Agricultural Society of England. His *Chemistry of Food*; *Chemistry of Manures*; and *Lectures on Agricultural Chemistry*, are esteemed standard works of their kind.

Vogt (*vôt*), KARL, natural philosopher, born at Giessen, Germany, in 1817; studied physiology, and graduated in medicine at Berne, in 1835. After having his attention called to the study of geology and zoölogy under Agassiz, he became professor of Zoölogy in Giessen University, a position he afterward exchanged for that of the chairs of Geology and Zoölogy in the University of Geneva. His name is widely known by his able lectures *On Man, His Place in Creation and in the History of the Earth*, which have been translated into several of the European languages. He was associated with Agassiz in his work on fresh-water fishes, and was the author of many articles and books on geology, anthropology, anatomy, physiology, and zoölogy. Died in 1895.

Voisin-Bey, François Philippe, civil engineer, was born at Versailles, France, May 20, 1821; educated at the École de Ponts et Chaussées; became a chief engineer in 1866, and inspector-general in 1880. He is noted as the director-general of the Suez Canal works (1861-70). He was professor of Maritime Works at the above-mentioned school, and also is an officer of the Legion of Honor. He has published several technical works.

Vokes, ROSINA, actress, was born in London in 1854. She is one of a family of actors who at one time travelled as the "Vokes Family," meeting with great success in England and America. In 1877 Rosina married a barrister and playwright, Cecil Clay, and retired from the stage. In 1886 she organized a company, for farces and comedies, which played annually in England and the U. S. Died Jan. 27, 1894.

Volapük, n. An artificial language intended to be used as a universal means of communication; the word means "world-speech." It was invented about 1878 by Johann M. Schleyer, a German Catholic priest, and for some time created wide interest, especially in Germany, so that a magazine and several hundred books have been published in it, many societies were formed, and an international congress of "Volapükians" was held at Paris in 1889; the matter has since largely fallen out of view, however, as nobody adopted the language in practical affairs. In forming it Schleyer, who was a learned linguist, endeavored to base it upon scientific grounds, and issued a grammar and dictionary. In construction the rules of English were mainly followed, and English nouns were taken as the roots of words whenever possible. Pronunciation was after Continental models, and 37 letters were provided, after omitting q and w; but to several letters entirely new and arbitrary sounds were given. One great advantage is that the language is very easily learned, in spite of its strange, uncouth appearance and sounds.

Voltmeter, n. (*Elec.*) An instrument for measuring in volts electromotive force or difference in potential. The volt is the practical unit of electromotive force, as the farad is the unit of electric capacity, the ampere the unit of electric current strength, the ohm the unit of electrical resistance, and the coulomb the unit of quantity. The volt represents an electromotive force such as would carry one ampere of current against one ohm resistance, or as would charge a condenser of one farad capacity with one coulomb of quantity. The voltmeter is generally some form of high-resistance galvanometer, placed in a shunt circuit. The same mechanism is often used to measure also the ampere and ohms. A current of low voltage is not

dangerous to animal life, and it is therefore important to know just what degree of voltage is maintained. The customary voltage on exposed trolley wires is 500, and on incandescent-light circuits from 75 to 110.

Fig. 3091.—VOLTMETER.

Volu'meter, n. (*Physic.*) An instrument for measuring the volume of a gas by the amount of liquid which it displaces in a graduated vessel under known conditions of pressure and temperature.

Volunteers of America. See SALVATION ARMY.

Voo'doo, n. [Afr.] Superstitious practices among the negroes in the West Indies and Southern U. S., of conjuring, witchcraft, smoke-worship, and even cannibalism; or, the so-called V. doctor or priest that practices these superstitious rites.

Voor'hees, DANIEL WOOLSEY, statesman, was born in Butler co., Ohio, Sept. 26, 1827; graduated at the Indiana Asbury University (1849); studied law, and began practicing (1851); was U. S. district-attorney for Indiana (1858-61); was elected to Congress four terms; was appointed to the U. S. Senate in 1877, and subsequently elected for the unexpired term and the full term ensuing; was re-elected in 1885, and again in 1891. Died 1897.

Vortex, Vortex Atom. (*Physic.*) A vortex, as the word is usually understood, is a whirlpool, or motion of rotation in fluids, and is of very frequent occurrence, on various scales, small or large. The tornado, the whirlpool, and the waterspout illustrate it as largely displayed, while there are innumerable examples of the smaller vortex in air and water eddies, due to conflicting currents or other sources of disturbance. Such eddies may be readily formed in a tea-cup by drawing the half-submerged bowl of a spoon through the surface of the liquid. Two small eddies will follow its two edges. These eddies are the external or visible ends of a half ring of whirling liquid, which is formed as a fringe to the blade of the spoon. In rowing, as the oar is lifted from the water at the end of the stroke a similar effect is seen. The characteristic of such eddies which forms their vortex feature is a rotational movement of the central portion, the liquid whirling round on a semicircular axis, or on a circular or closed axis if the vortex is complete. Such a complete vortex ring often appears in nature, and may easily be produced. Thus vortex rings of smoke are often formed at the mouth of a gun or mortar when fired, or pass off from the funnel of an engine, or may readily be produced on a smaller scale by a tobacco smoker, in the skilful propulsion of the smoke from his mouth. To make them experimentally a closed box is employed, with an orifice in one side, while cloth, india-rubber, or other elastic material forms the opposite side. Every tap made on this elastic side will propel a small quantity of air through the orifice as a vortex ring. To make the ring visible the box may be filled with a

Fig. 3092.—VORTEX-RING.

cloud of sal-ammoniac or other cloud-like vapor. At every tap a smoke-ring will be ejected, which moves on as a whole through space, while its substance rotates round the center of the ring as an axis (Fig. 3092). An interesting characteristic of these rings is the following: If one follows another in quick succession, the foremost one will be seen to expand, while the rear one contracts and passes through it. Then this one in turn will slacken speed and expand, while the other will contract and accelerate its pace, pass through, and again get in front. This strange phenomenon will continue until the friction of the air checks the motion of the

rings. The properties of vortex rings were first investigated by Prof. Von Helmholtz, with very interesting results. In the cases mentioned the rings are formed in a viscous fluid. Indeed, the possibility of forming them depends on the viscosity of the fluid, while this viscosity acts to destroy the vortical rotation. Helmholtz applied the results obtained from his study of smoke rings to the conception of a perfect fluid, i. e., one destitute of viscosity, or unaffected by friction. His reasonings led him to the conclusion that if vortex motion should exist at any time in such a frictionless fluid, it must always continue to exist, and if at any point no vortex motion existed, such a motion could never come into existence. No external could produce it, since no such cause could act on a fluid destitute of friction. For precisely the same reason, it may be said, no such cause could act to bring its motions to an end. Nor could these motions begin or cease of themselves. The absence of friction does away with all exercise of external energy and prevents any loss or gain of internal energy. Thus, in a perfect fluid, the peculiar evolution described as taking place between two neighboring smoke-rings would go on indefinitely. And any other relation of two rings, or peculiarity of form in a single ring, must be of similar eternal duration. Contact of such a ring with a substance of different character could not be accompanied with any transference of energy, the absence of friction preventing them from acting on each other. Helmholtz further demonstrated that a vortex with ends, like that made by a spoon in a cup, cannot exist in a perfect fluid. Either the vortex must form a closed ring, or must continue through the fluid until it arrives at its boundary, as the partial ring in the cup presents ends at the air boundary. In a fluid without boundary it could not exist. These premises, as deduced by Helmholtz, have led Sir William Thomson (Lord Kelvin) to a highly interesting conclusion, namely, that the atoms of matter are such indestructible vortex rings in a perfect fluid. Such a vortex atom in a frictionless plenum would be as persistent as the indestructible hard atom imagined by Lucretius, and at the same time capable of vibration. The vortex rings might be interlocked, or twisted, or knotted in any imaginable manner, these conditions being absolutely unchanging when once existing. They might come into contact as a result of their onward motion, and rebound through their elasticity, like ordinary visible vortex rings, but no change in form and no transfer of inherent energy could take place. This theory of vortex atoms, while interesting and attractive, is one that it has proved difficult to make satisfactory to scientists. In the first place, it depends on the assumption that the luminiferous ether is such a frictionless fluid. Whether or not this assumption is well founded we are, as yet, in ignorance. But the vortex-atom theory requires other assumptions which would demand an extraordinary constitution of the universe. It necessarily denies the existence of attraction and repulsion and the theory of gravitation, claiming that gravitative results are due to quite other than their seeming causes. To explain gravitation under the vortex-atom hypothesis, the doctrine of impact, as originally advanced by Le Sage, of Geneva, is adduced. This advocates the presence in the universe of vast multitudes of particles, or corpuscles, far smaller than atoms, and flying incessantly through space at a speed far greater than that of the heavenly bodies. To the impact of these on the bodies of space he ascribes the seeming effect of gravitation. In the case of their impinging on the earth, for instance, part of them are checked by the sun, which shadows the earth from them in that direction. Thus, their impelling force is not equal on all parts of the earth, which tends to move in the direction in which their flow is checked, or toward the sun. At the same time, to produce the full effect of gravitation, every atom of the earth must be subject to these impacts, so that the corpuscles must find free passage through the earth's mass, and multitudes of them pass through without meeting an obstruction. This theory, indeed, becomes so complicated, when carried to its ultimate, that it tends to fall to the earth of its own weight. One necessary consequence of such a continual bombardment, as pointed out by Clerk Maxwell and others, is the following: Either the corpuscles must rebound at the speed with which they came (in which case they could transfer no energy to the earth and cause no motion), or they must lose a part of this energy and go back more slowly than they came. Such lost energy would show itself as heat, and, as Maxwell justly says, the amount of heat so generated would in a few seconds raise the earth and the whole material universe to a white heat. In brief, it may be said that the advocates of the vortex-atom theory have so far contented themselves with working out its mathematics, and have not actively grappled with the several physical objections. Thomson, indeed, endeavors to explain away the objection above stated, but far from satisfactorily. Beautiful as the theory is, and acceptable as many have found it for this reason, it demands conditions of the greatest improbability, some of which seem impossible to exist. The favorable acceptance which it has had, therefore, is not likely to be a permanent one.

Voting Machines. See BALLOT REFORM.

Votograph, n. A machine invented by John W. Rhines for receiving and recording votes at an election, by means of keys which the voter manipulates, and thus prints the names of the candidates voted for.

W.

WACC

W the twenty-third letter of the English alphabet, is a double letter, which in form resembles two V's, and belongs chiefly to the Teutonic and Slavonic tongues. It was not in use among the Greeks, Romans, or Hebrews; neither, in the present day, has it properly any place in the French, Italian, Spanish, or Portuguese. Its English form is derived from the fact of the letter *v* being identical with *u* in the Latin, and in the more early form of the English language. It is pronounced by opening the mouth with a rounding of the lips, and a somewhat strong emission of the breath. The sound of the French *ou* in *oui*, pretty closely resembles the English *w*. In German, the sound of *w* resembles our *v*, as *warm*, pronounced *varm*; while, with them, *v* takes the sound of *f*, as in *von*, pronounced *fon*. When *w* commences a syllable, it is a consonant; but in all other positions it is regarded as a vowel, though it has no vocal power unless accompanied by one of the proper vowels. At the end of words, *w*, when preceded by *a* or *o*, is often silent. It is also silent when it precedes *r*, as in *wrath*, *wreck*, *wrist*, &c. When followed by *h*, it is always aspirated, as in *when*, *whence*, *whether*. As an abbreviation, *W.* stands for *West*.

Waag, (*vag*), a large river of Hungary, rising in the Carpathian Mountains, and after a course of 200 m., joining the Danube at Komorn.

(*Camb.*) In Denmark and Norway, a weight of 39 lbs. and five-eighths; and in Sweden, a weight of 123¼ lbs. of tin.

Wabash, (*waw'bash*), a river of Indiana and Illinois, rises in Mercer co., Ohio, and flows first N.W. to Huntington co., then W.S.W. to Vigo co., from which point it continues S.S.W., forming the boundary between Indiana and Illinois, and enters the Ohio river near Shawneetown, Gallatin co., Illinois, Lat. 37° 50' N., Lon. 88° W. It is 550 m. long, and is navigable for steamboats, in high water, 300 m. The Wabash and Erie Canal follows the course of *W.* River for 180 m., from Huntington to Terre Haute.

Wa'bash, in Illinois, an E.S.E. co., bordering on Indiana; area, 220 sq. m. Rivers. Wabash, and Boupas creek. Surface, level; soil, fertile. Cap. Mt. Carmel. Pop. (1897) 12,650.—A township of Clark county.—A township of Wabash county.

Wa'bash, in Indiana, a N.E. county; area, 430 sq. m. Rivers. Eel, Salamonie, and Wabash. Surface, diversified; soil, fertile. Cap. Wabash. Pop. (1897) 28,200.—A township of Adams county.—A township of Fountain county.—A township of Gibson county.—A township of Jay county.—A township of Parke county.—A township of Tippecanoe county.—A flourishing city, cap. of Wabash co., on the Wabash and the C. C. & I. R. R.s., 30 m. E. of Logansport. Pop. (1897) 5,950.

Wabash, in Ohio, a flourishing township of Darke county.

Wa'bash, in Minnesota, a S.E. county; area, 540 square miles. Rivers. Mississippi and Zumbro. Lake Pepin borders it on the N. Surface, undulating; soil, very fertile. Cap. Wabasha.—A city, cap. of the above co., on the Mississippi river and the C. M. & St. P. R.R., 33 m. N.W. of Winona. Pop. (1895) 2,545.

Wabam'see, in Kansas, a N.E. county; area, 804 sq. m. Rivers. Kansas river and Mill creek. Surface, undulating; soil, fertile. Cap. Alma.—A post-village, former cap. of the above co., on the Kansas river, 13 m. E. of Manhattan.

Wabble (*wôb'bl*), *v. n.* [A. S. *wapelian*, to wabble; Icel. *rappa*, to move the feet with difficulty.] To move staggeringly from one side to the other, as a spinning-top when about to fall;—expressed of a revolving or whirling body.

—*n.* A hobble; a staggering, unequal motion.

Wab'bling, *a.* Having an irregular motion backward and forward, like a revolving body.

Wac'canaw, a river of North Carolina, rises in Bladen co., and flowing S.W., unites with the Great Peece at Georgetown, S. C., to form an estuary called Winyaw Bay.

—A township of Brunswick co.

—A township of Columbus co.

Wachusett (*waw-chu'set*), in Massachusetts, a mountain in Worcester co., 2,000 feet high.

Wa'co, in Texas, a flourishing city, cap. of McLennan co., on the Texas Central, Mo., Kan. & Tex., and 3 other R.R.s., 95 m. N.E. of Austin; one of the most important cities in the State, having extensive and varied manuf. and a large general trade; ships quantities of cotton. Pop. (1897) 21,650.

Waco'nia, in Minnesota, a post-village and township of Carver co., about 11 m. N.W. of Chaska.

Wad, (*wôd*), *n.* [Ger. *watte* = A. S. *wæd*, clothing, from Sansk. *ve*, to weave.] A little mass of some soft or flexible material, such as hay, straw, tow, paper, or oakum, used for stopping the charge of powder in a gun, and pressing it close to the shot, or for keeping the powder and shot close;—sometimes called *wadding*.—A little mass, tuft, or bundle, as of hay or tow.

—*v. a.* To form into a wad or wadding; as, to *wad* cotton.—To insert a wad or wadding into, as a gun.—To stuff or pad with some soft substance or wadding, as cotton, &c.; as, to *wad* a coat.

Wad, Wadd, *n.* (*Min.*) A term used to denote various mixtures of different oxides of manganese, which cannot be always considered as distinct species, or as having a very definite chemical composition.

Wa'day, **WADY**, **BERGOO**, or **BORGOO**, a country in the interior of Africa, S. of the Great Desert, and E. of Darfour. It is said to be a larger territory than Darfour, and to excel it also in fertility and in abundance of water; but as the country has not yet been visited by any European, nothing of it is accurately known.

Wad'dam, in Illinois, a township of Stephenson county.

Wadding, (*wôd'*), *n.* A wad, or any soft, pliable substance suitable for the making of wads; material for ramming down above the charge of muzzle-loading firearms.—A spongy web, as of cotton or other flocculent material, used for stuffing or padding various parts of ladies' dresses, men's over-coats, pelisses, &c.

Wad'dington, in N. York, a post-vill. of St. Lawrence co., 18 m. E.N.E. of Ogdensburg.

Waddle, (*wôd'dl*), *v. a.* [Corrupted from D. *waggelen*, to stagger, totter.] To move or sway from side to side in walking; to deviate to one side and the other; to vacillate in one's gait; to shamle or shuffle, or move clumsily and tottering along; as, a duck *waddles*.

—*v. a.* To trample or tread down, as grass, by walking through it.

Wad'dier, *n.* One who, or that which, waddles.

Wade, BENJAMIN FRANKLIN, an American jurist and statesman, b. at West Springfield, Mass., 1800, of a family in very poor circumstances. After following the occupations of drover and school teacher, diligently educating himself at every spare moment, he entered upon the study of the law, and at the age of 28 was admitted to the bar, and in the course attained a high reputation. In 1837, and again in 1841, he was elected State Senator; in 1847 Judge of the Third Judicial District of Ohio; and in March, 1851, was returned to the U. S. Senate from Ohio by the Whig party, and re-elected in 1857 and in 1863 by the Republicans. During this period, and during the Civil War itself, Mr. *W.* bore an active part in public affairs, serving as President of the Senate, and Acting Vice-President of the U. States, and had the issue of the impeachment trial terminated in President Johnson's conviction, the senator would have been *ex-officio* President of the U. States. He received a large number of votes for Vice-President at the Chicago Convention of 1868, but at the formal ballot Mr. Colfax had a small majority. Since 1869 Mr. *W.* has not held office, and has taken no prominent part in public affairs, except to serve as Commissioner of the Government to San Domingo in 1871. *n.* 1878.

Wade, *v. a.* [A. S. *wadan*, to wade; D. *waden*, to ford, wade.] To walk or go through water, touching the bottom with the feet; to go or walk through any substance that yields to the feet;—often assuming an active form by the ellipsis of *through*; as, she *waded through* the mire.—To move or pass with labor or difficulty, or pro-

ceed slowly and hesitatingly among things or circumstances of an obstructive or embarrassing character; as, he has *waded through* his worst difficulties.

—*v. n.* To pass or cross by walking in or through a liquid or slushy substance; as, a brook to be *waded over*.

Wade, in Illinois, a twp. of Jasper co.

Wade, in Maine, a plantation of Aroostook co.

Wad'er, *n.* The person who, or thing which, wades.

(*Zoöl.*) A wading-bird. See GRALLATOIRES.

Wadesborough, in Kentucky, a prec. of Callaway co.

Wadesborough, in North Carolina, a post-village, capital of Anson county, 120 miles S.W. of Raleigh.

Wad'ham's Mills, in New York, a post-village of Essex co., abt. 10 m. E. of Elizabethtown.

Wad'hook, *n.* A hook or screw to extract wadding from a gun or fire-arm.

Wad'ing-bird, *n.* (*Zoöl.*) See GRALLATOIRES.

Wad'ing River, in New Jersey, flows into Little Egg Harbor River from Burlington co.

Wad'ing River, in N. York, a post-vill. of Suffolk co.

Wad'ley's Falls, in New Hampshire, a post-village, of Strafford co., 36 m. E. of Concord.

Wadma'lan's Island, in S. Carolina, a township of Colleton dist.

Wads'worth, in Nevada, a vill. of Washoe co.

Wadsworth, in Ohio, a post-village and township of Medina co., 12 m. S.E. of Medina.

Waeg, (*vah'eg*). (*Camb.*) At Antwerp, a quantity of coal 150 lbs. weight.

Wa'fer, *n.* [Low Sax. *wafel*, a wafer, from Ger. *wabe* = Lat. *favus*, a honeycomb.] A thin cake, as of bread or dough; especially, the bread given in the Roman Catholic celebration of the Eucharist; as, a consecrated *wafer*.—A thin, adhesive disc for securing letters, or sticking papers together.—*Wafer-cake*, a sweet cake of extreme thinness.

—*v. a.* To seal or close with a wafer, as a letter.

Waffle, (*wôf'fl*), *n.* [L. Ger. and D. *wafel*.] A thin cake baked hard and rolled, or a soft indented cake baked in an iron utensil on coals.

Waf'le-iron, *n.* A utensil for baking waffles.

Waft, *v. a.* [Sw. Goth. *weefta* = Ger. *weben*, to weave.]

To impel by a waving motion; to convey through water or air; to bear through a fluid or buoyant medium; as, fair winds *wafted* them across the ocean; to *waft* a sigh.

—*v. n.* To float; to be moved or to pass in a buoyant medium.

—*n.* (*Naut.*) A signal displayed from a ship's stern, by hoisting an ensign furled in a roll, to the head of the staff.—An unpleasant aroma; as, a *waft* of stench.

Waft'age, *n.* Transportation or conveyance through a buoyant medium, as air or water.

Waft'er, *n.* One who, or that which, wafts.—A passage-boat.

Wag, *v. a.* [A. S. *wagian*; Ger. *bewegen*, to stir, move.]

To move one way and the other with quick turns; to move a little way, and then turn the other way; to move lightly from side to side, or to and fro; to move vibrantly; to shake slightly; as, to *wag* the head, a dog *wags* his tail.

—*v. n.* To move lightly, or with quick turns, from side to side; to swing; to vibrate; as, the *wagging* of a straw.—To stir; to move quickly;—used in a colloquial and humorous sense; as, "See, quoth he, how the world *wags*." (*Shaks.*)—To pack off; to go from; to depart; as, let him *wag*.

—*n.* [A. S. *wægan*, to deceive, illude.] A droll; a man full of jocular humor; one full of merry frolicsome tricks; one who cuts jokes at the expense of others; a banterer; a wit; a sly humorist; as, a prig affords fine sport to a *wag*.

Wage, (*vah'je*) (*Camb.*) In Germany, a weight of various extent ranging from 45½ to 135 lbs., according to locality and custom.

Wage, (*wâj*), *v. a.* [A. S. *wigan*.] To carry on, as a war, or hostilities; to engage in, as a contest, as if by pledge previously given.—To stake; to pledge; to bet; to lay;

to risk; to wager; to risk on the event of a contest; as, to *wage* a dollar on the game.

To *wage battle*, to give gage or security for joining in the *duellum*, or combat. (*Burrill*).—To *wage one's law*. See *COMPURGATION*.

Wage, *n.* Pay; hire; compensation; meed; reward; recompense; stipend; stipulated payment for services performed; as, a day's *wage*;—used almost invariably in the plural.—See *WAGES*.

Wager, (*wā'jūr*), *n.* [Fr. *gageure*, from *gage*, a pledge, a token.] A bet; a stake; a pledge; a gage; that which is laid, deposited, risked, or hazarded on the result of a contest, or some moot question; as, to make a *wager*.—The subject of a bet or wager; as, "Their ruin was the *wager* of the other's contention."—*Sidney*.

(*Law*.) A contract by which two parties or more agree that a certain sum of money, or other thing, shall be paid or delivered to one of them, on the occurrence or non-occurrence of a certain event. Wagers were valid contracts at common law, and the amount won could be recovered in a court of law, unless the wager operated as an incitement to breach of the peace or of morality, or was *contra bonos mores*, or affected the feelings or interests of a third party, or disturbed the peace of society. In this country the law and decisions of courts in matters of wagers in the several States are much at variance. It is doubtful, however, whether an action by a winner of a mere wager or bet against a loser would be now sustained in any court.

Wager-policy. (*Law*.) A policy made when the insured has no insurable interest. It has nothing in common with insurance but the name and form. It is usually in such terms as to preclude the necessity of inquiring into the interest of the insured, as "interest or no interest," or "without further proof of interest than the policy." Such contracts, being against the policy of the law, are void. (*Bourvier*).—*Wager of battle*. See *BATTLE*.

—*v. a.* To lay or stake, as a wager or bet; to risk or hazard on the issue of a contest, or on some question that is to be decided, or on some casualty; as, to *wager* a heavy sum of money.

—*v. n.* To lay a wager or stake; to make a bet.

Wagerer, *n.* One who wagers or lays a bet; a bettor.

Wages, (*wā'jiz*), *n.* (Plural in termination, but singular in signification.) [Norm. *gages*, *gages*, *sureties*, *wages*.] That which is covenanted to be paid for work done; hire; reward; that which is paid or stipulated for services; price paid for labor; the return made or compensation paid to those engaged to perform any kind of labor or service by their employers; recompense; fruit; that which is given in return;—the term is commonly applied to the payment of manual or mechanical labor, other than that performed by the more educated classes, to which the word *salary* bears reference.

Waggery, *n.* [From *wag*.] Tricks of a wag; mischievous frolic or merriment; sportive trick or gayety; banter, or good-humored sarcasm; jocoseness; pleasantry.

Waggish, *a.* Like a wag; roguish or mischievous in sport, merriment, or pleasantry; good-humored, jocular, or frolicsome; as, a *waggish* boy.—Done in waggery or frolic; made for sport or mischievous pleasantry; as, a *waggish* trick.

Waggishly, *adv.* In a waggish or frolicsome manner.

Waggishness, *n.* Quality of being waggish.

Waggle, (*wā'gl*), *v. n.* [Du. *waggelen*; Ger. *wackeln*.] To waddle; to oscillate from side to side in walking; as, a *wagging* motion.

—*v. a.* To wag, or move one way and the other; as, a dog *waggles* his tail.

Wagner, RICHARD, a German composer, b. at Leipsic, 1813, received his education in Dresden and at the University of Leipsic. At an early age he began to write for the lyrical stage, and was appointed musical director of the Royal Theatre at Dresden, where several of his operas, particularly *Rienzi*, *Der Fliegende Holländer*, *Tannhäuser*, and *Lohengrin*, were produced. Professing liberal principles, he became involved in the political troubles of Saxony in 1848, and being compelled to flee, took refuge at Zurich. He has contributed to the musical literature of the day, and his æsthetic opinions, as well as the merits of his operas, have become the subjects of controversy; one party representing him as a musical reformer of great and original genius, and the other as a visionary in his notions. His operas, founded upon the myths of the *Nibelungenring*, were produced in Bayreuth in 1876 (where he founded, in 1878, a great musical school); consisting of *Das Rheingold*, *Die Walküre*, *Siegfried*, and *Die Götterdämmerung*. *Parsifal* was produced at Bayreuth, 1882. D. at Venice, Feb. 13, 1883.

Wagon, **Waggon**, *n.* [A. S. *wægen*, *wægn*; Du. and Ger. *wagen*.] A four-wheeled vehicle, usually drawn by horses;—especially, one used for the carriage of freight or heavy goods or substances; as, a covered *wagon*.—In England, a freight-car on a line of railroad.

—*v. a.* To convey or transport in a wagon.

—*v. n.* To practise the carrying of goods or commodities in a wagon; as, he *wagons* between the coast and some of the interior towns.

Wagouage, **Waggonage**, *n.* Money paid for conveyance in a wagon.

Wagon-boiler, *n.* (*Mach.*) A low-pressure boiler of wagon-like shape, with arched top and incurved sides.

Wagoner, **Waggoner**, *n.* [A. S. *waggnere*.] The driver of a wagon; a teamster; as, a jolly *wagoner*.

(*Astron.*) Same as CHARLES'S WAIN, *q. v.*

Wagoner, in *South Carolina*, a township of Oconee county.

Wagonful, *n.*; *pl.* *WAGONFULS*. As much as will fill a wagon; a wagon-load.

Wagoutown, in *Pennsylvania*, a post-village of Chester co., 62 m. E.S.E. of Harrisburg.

Wag'ram, a village of Lower Austria, on the river Rossbach, 10 m. from Vienna. It was the scene of a battle between the Austrians and the French, July 5 and 6, 1809, in which the former were defeated.

Wag'tail, *n.* (*Zoöl.*) The common name of the genus

Motacilla, comprising European species of insessorial birds belonging to the *Sylvi-colide* or Warbler family. These birds are to be seen wherever there are shallow springs and running waters; and they are easily distinguished by their brisk and lively motions, as well as by the great length of their tails, which they jerk up and down incessantly, from which circumstance they derive their name. They are handsome and sprightly birds, especially the White W. or Dish-washer (*Motacilla alba*), the *Lavandière* of the French (Fig. 2595), which is about 7 inches in length.

Fig. 2595. — WHITE WAGTAIL.

Wah'bees, or **WAHABITES**, a Mohammedan reforming sect, founded by Abd-el-Wahab, in Yemen, about 1749; which seeks to purge away the innovations and corruptions introduced in the course of ages, and to bring back the doctrines and observances of Islam to the literal precepts of the Koran. They made a successful campaign against Ghaleb, the Grand Sheik of Mecca, in 1792 and 1793; and totally destroyed a Turkish army sent against them in 1801. They took Mecca and Medina in 1803, conquered the greater part of Arabia, and overran Syria. Mehmet Ali sent an army against them, which they defeated near Medina, in 1812. The W., defeated at Zohran, were victorious at Brissel in 1815, when peace was concluded. Ibrahim Pasha made war on them in 1816, and after an obstinate resistance, drove them into Derayah in 1818, which he took in Dec., and sent Abdullah, their chief, and several of his family, to Constantinople, where they were beheaded. The greater part of the territories conquered by the Wahabees fell under the authority of the Pasha of Egypt; but they gave much trouble, by fomenting insurrections in 1827, 1834, 1838, and 1839; and are still now dominant throughout the greater part of Arabia.

Wahkia'kum, or **Wakiaenn**, in *Washington*, a S.W. co., bordering on the Columbia river; area, 244 sq. m. *Cap.* Cathlamet. *Pop.* (1897) 3,000.

Wahkousa, in *Iowa*, a township of Webster county.

Wah'tahgas, or **ALLAGASH RIVER**, in *Maine*, has its origin in a chain of lakes in Piscataquis co., and flowing N., enters the Walloostook River near its junction with the St. François.

Waif, (*wā'f*), *n.* [Norm. Fr. *waif*; L. Lat. *wayfium*.] A stray; that which is found without an owner, or that which is come across, as it were, by chance.

Wail, *v. a.* [Icel. *vælar*, lamentation; W. *wylaw*, to weep, wail.] To cry out in sorrow or lamentation for; to moan; to bewail; to grieve over.

—*v. n.* To utter a loud voice of sorrow; to weep; to express sorrow audibly; to moan; as, a *wailing* cry.

—*n.* A loud cry of sorrow or lamentation; violent expression of grief.

Wailer, *n.* One who wails or expresses loud lamentation.

Wailing, *n.* Loud cries of sorrow; deep lamentation.

Wailingly, *adv.* With wailing or loud lamentation.

Wain, *n.* [A. S. *wæn*.] A wagon, or four-wheeled carriage for the transportation of goods, or for carrying grain, hay, &c.; as, "To glean the fallings of the loaded *wain*."—*Dryden*.

(*Astron.*) See CHARLES'S WAIN.

Wain'scot, *n.* [D. *wagenscot*.] (*Arch.*) A name given to boards serving to line the internal walls of an apartment, staircase, &c. W. is usually made in panels, to serve instead of hangings, wall-paper, &c.

—*v. a.* To line with boards, as a hall, staircase, or apartment; to line with panelling, or as if with panel-work; as, a *wainscotted* chamber.

Wain'scotting, *n.* Wainscot, or the material used in its construction; also, the act of covering or lining walls with boards in panels.

Wair, *n.* (*Carp.*) A piece of plank two yards long and a foot broad.

Waist, *n.* [W. *gwarg*, the place where the girdle is tied.] That part of the human frame which is immediately below the ribs or thorax; or, the small part of the body between the thorax and the hips.

(*Naut.*) That part of a ship's upper deck which is between the fore and main-masts, or between the quarter-deck and fore-castle; as, the boarders were stationed in the *waist*.

Waist'band, *n.* The band or upper part of breeches, pantaloons, trousers, or drawers, which encompasses the waist.—A sash worn round a lady's waist.

Waist'cloth, *n.* A cotton wrapper worn about the waist by the natives of India.

(*Naut.*) A covering for hammocks, made of canvas or tarpaulin, and stowed on a ship's gangways, between the quarter-deck and the fore-castle.

Waisteoat, (pron. colloq. *wes'kut*.) A vest; a short coat or garment for men, extending no lower than the hips, and covering the waist.

Waist'er, *n.* (*Naut.*) A seaman, usually a green hand

or broken-down man, stationed in the waist of a ship of war.

Wait, *v. n.* [Fr. *guetter*; It. *guatare*, akin to D. and Prov. Ger. *wachten*, to watch.] To stay or rest in expectation; to stop or remain stationary, till the arrival of some person or event; to stay proceedings, or suspend any business, in expectation of some person, event, or the arrival of some propitious or suitable time; not to depart; to continue by reason of hindrance; as, I cannot bear to *wait*.—To lie in ambush, as an enemy.

To *wait on* or *upon*. (1.) To attend, as a menial or servant; to perform personal services for. (2.) To go to see; to visit ceremoniously or on business; as, when shall I have the pleasure of *waiting upon* you? (3.) To follow, as an issue; to await; as, ruin *waits* on such folly.

—*v. a.* To await; to rest or remain stationary in expectation of the arrival of; to stay for.—To attend on; to accompany ceremoniously or as a mark of respect. (R.)

—*n.* A watching; ambush; as, to lie in *wait* for one.

—*pl.* Itinerant musicians or singers who perform Christmas carols at night or in the early morning.

To *lay in wait*, to form an ambuscade.—To *lie in wait*, to hide in ambush; to lie perdu in order to take a person or party by surprise;—hence, to make insidious attempts to insnare.

Wait'er, *n.* One who waits; particularly, a servant who waits in a house of public entertainment; an attendant; a domestic in waiting.—A server or salver; a tray, as that on which tea-equipage is carried, or the like.

Waiting, *a.* An epithet applied to one who waits.

—*n.* Act of staying in expectation or attendance.

Waiting-maid, **Waiting-woman**, *n.* An upper servant who attends a lady.

Waitress, *n.* A female attendant in a public-room, or at an hotel or like place of entertainment.

Waits'field, in *Vermont*, a post-township of Washington co., 12 m. S.W. of Montpelier.

Wait'zen, a town of Hungary, on a bend of the Danube, 21 m. N. of Pesth; *pop.* 13,000.

Waive, *n.* (*Eng. Law*.) A woman beyond the pale of legal protection.—A female outlaw.

Waive, *v. a.* [O. Fr. *guesvar*, to give over; probably from O. Ger. *werfan* = A. S. *werpan*.] To relinquish; to forego; not to insist on or claim; to defer for the present; as, to *waive* one's decision.—To reject; to discard; to forsake; to cast off.

(*Law*.) To relinquish voluntarily, as a right which may or may not be enforced at one's option.

Waiver, *n.* (*Law*.) A declining to accept or avail one's self of something, as an estate, or of irregularities in legal proceedings.

Wai'wode, **Vaiwode**, **Waywode**, *n.* In the Turkish empire, the governor of a small province or city.

Wake, *v. n.* (*Imp.* and *pp.* *WAKED*, (*wā'kt*). [A. S. *wacian*; D. *waken*; Ger. *wachen*; Dan. *vaage*.] To be awake; to continue awake; to watch; not to sleep; as, "She praying still, did *wake*, and *waking* did lament." (*Spenser*).—To be roused from sleep; to be awakened; to cease from sleep; as, lest one should sleep, and never *wake*.—To sit up during the time usually devoted to sleep; to revel in the small hours.—To be excited from a quiescent or torpid state; to be excited, or stirred or roused up; to be alive or active; to have the faculties put in motion; as, his passions *waked* from slumber.

—*v. a.* To rouse from sleep or repose; as, be good enough to *wake* me early.—To excite or arouse: to start into life, action, or motion; as, beauty *wakes* the soul to admiration.—To reanimate; to revive; to bring to life again, as if from the state of death.

"To second life *waked* in the renovation of the just."—*Milton*.

—To watch with at night; as, to *wake* a corpse.

—*n.* Act of waking, or of being awakened; as, give me a *wake* in the morning.—State of holding vigils, especially for solemn or festive purposes.—Hence, specifically, the revel or festival held in country parishes, in England, on the anniversary of the day of dedication of the church; or, frequently on the day of the saint to whom the church was dedicated. In Ireland, it is called the *patron day*; as, a village *wake*.—Hence, also, the sitting up, or watching, of persons with a dead body, as extensively practised in Ireland.—The track left by a ship in passing through the water; hence, metaphorically, in the train of; as, he followed in his patron's *wake*. In the *wake of*, immediately following or coming after; as, he moves in the *wake of* his predecessor in office.

Wake, in *N. Carolina*, a central co.; area, 950 sq. m. *Rivers*, Little and Nense. *Surface*, lilly; *soil*, generally fertile. *Min.* Granite and plumbago. *County-seat*, Raleigh.

Wakefield, (*wā'kfēld*), a town of England, in the West Riding of Yorkshire, 9 m. from Leeds. It is one of the greatest corn-markets in England. *Pop.* 35,000.

Wakefield, in *Maryland*, a post-village of Carroll co., 68 m. N.N.W. of Annapolis.

Wakefield, in *Minnesota*, a township of Stearns county.

Wakefield, in *New Hampshire*, a post-township of Carroll co., 35 m. N.E. of Concord.

Wakefield, in *Rhode Island*, a post-village of Washington co., 30 m. S.W. of Providence.

Wake Forest, in *N. Carolina*, a township of Wake co.

Wake'ful, *a.* Not sleeping; indisposed to slumber; vigilant; watchful.

Wake'fully, *adv.* In a wakeful or vigilant manner.

Wake'fulness, *n.* State of being wakeful; indisposition to sleep; want of slumber; forbearance of sleep or repose; watchfulness.

Wake'man, *n.*; *pl.* *WAKEMEN*. In England, the official designation of the chief magistrate of the city of Ripon, co. York.

Richard Wagner

1813-1883

Wake'man, in *Ohio*, a post-township of Huron county.

Wak'en, *v. n.* and *a.* Same as AWAKEN, *q. v.*

Wakener, (*wāk'ner*), *n.* One who, or that which, wakens.

Wak'ening, *n.* Act of one who wakens; act of ceasing to sleep.

Wak'er, *n.* One who, or that which, wakes or rouses from sleep; a watcher.

Wakeshma, in *Michigan*, a post-township of Kalamazoo co.

Wak'ing, *n.* State or time of being awake.

Wakul'ia, a river of *Florida*, flows into Appalachee Bay from Wakulla co.

—A N.W. co., bordering on Appalachee Bay; *area*, 576 sq. miles. *Rivers*, Ocklockonnee, St. Mark's, and Wakulla. *Surface*, diversified; *soil*, generally fertile. *Cap.* Crawfordville. *Pop.* (1895) 3,700.

Wal'cheren, an island of *Holland*, in the province of Zealand, in the German Ocean, at the mouth of the Scheldt. It is 11 m. long, with a breadth of 10. It is very fertile; but it lies low, and would be subjected to inundations from the sea, were it not protected by strong dykes. *Pop.* 50,000.

Wal'chowite, *n.* (*Min.*) A mineral resin, met with in rounded translucent masses, in the brown-coal of Walchow, in Moravia.

Wal'cott, in *Minnesota*, a post-office of Rice co., about 5 m. S. of Faribault.

Wald, *n.* [*A. S.* and *Ger.*] A forest; — used as a termination in German names; as, the Böhmerwald, i. e., Bohemian Forest.

Wald, a town of *Switzerland*, 18 m. from Zurich. *Manuf.* Cotton-spinning and iron goods. *Pop.* 4,577.

Waldeck, (*val'dek*), a former principality of N.W. Germany, consisting of two counties, Waldeck and Pyrmont, now belonging to the German Empire; *Lat.* between 51° and 51° 30' N., *Lon.* between 8° 30' and 9° 11' E.; *area*, 461 sq. m. The country is hilly, but fertile. A third of the surface is covered with forests, and cattle-rearing is extensive. *Cap.* Arolsen. *Pop.* 56,807.

Waldemar I., called *the Great*, king of Denmark, b. 1131, succeeded Eric V., 1147. His reign was illustrated by expeditions against the pirates of the Baltic, and he compelled Magnus VI., king of Norway, to sign a humiliating treaty; d. 1181. — **WALDEMAR II.**, called *the Victorious*, younger son of the preceding, succeeded his brother, Canute VI., 1202. He made many warlike expeditions into Sweden, Norway, and Germany, created a powerful navy, and revised the laws of his kingdom; d. 1241. — **WALDEMAR III.**, eldest son of the preceding, was regent from 1219 to 1231. — **WALDEMAR IV.**, third son of Christopher II., was in Bavaria at the death of his father in 1333. In 1340–44 he recovered part of his kingdom by force of arms, and obtained some further successes against Sweden in 1353 and 1357; eventually, however, he was glad to obtain peace by making some sacrifices; d. 1376.

Wal'den, in *Illinois*, a former twp. of Stephenson co.

Walden, in *New York*, a post-village of Orange co., 90 m. S.W. of Albany.

Walden, in *Vermont*, a post-town and township of Caledonia co., 22 m. N.N.E. of Montpelier.

Walden's, in *Alabama*, a former township of Calhoun county.

Walden'ses, or **VAUDOIS**, *n. pl.* (*Ecc. Hist.*) A sect, said to have derived their name from Peter Waldo, a merchant of Lyons, who practised what he regarded as the pure doctrine of the Scriptures about 1180. His views spread through France, Italy, and Bohemia, and his adherents became especially numerous in Provence, and in the valleys of Piedmont. They were condemned by the Synod of Tarragona, in 1242, and a large number of them were put to death. Those living in the valleys suffered especially from persecution, and under Sixtus IV. a crusade was preached against them. The persecutions of the W. of Piedmont continued with but rare interruption till about the middle of the 18th century, and it was only in 1848 that Sardinia granted them full religious and ecclesiastical liberty and equality of civil and political rights with the Roman Catholics. Until that time they were confined to 3 retired valleys of the Cottian Alps, Lucerne, Perosa, and San Martino, but since 1848 they have organized new congregations in other towns of Sardinia, and since 1858 in all parts of Italy. Their religious doctrines are similar to those of the Reformed churches. They recognize the Bible as their only rule of faith, and agree with the Calvinists in regard to the Lord's Supper, but have not adopted the doctrine of absolute predestination. Every congregation has a consistory composed of the minister, an elder, and a deacon. Above these consistories is placed the supreme consistory, called *the Table*, and composed of 3 clergymen and 2 laymen.

Wal'do, **PETER**. See WALDENSES.

Wal'do, in *Maine*, a S. county, bordering on the Penobscot Bay and River; *area*, 800 square miles. *Surface*, undulating; *soil*, moderately fertile. It contains a number of excellent harbors. *Cap.* Belfast. — A post-town and township of the above county, 35 m. N.E. of Augusta.

Wal'do, in *Ohio*, a post-village and township of Mariou co., 36 m. N.W. of Columbus.

Waldo, in *Oregon*, a post-vill. and precinct of Josephine co., 50 m. N.E. of Crescent City, California.

Waldoborough, in *Maine*, a post-town and port of entry of Lincoln county, at the mouth of Muscongus River, in Muscongus Bay, 55 miles E.N.E. of Portland.

Waldstein'ia, *n.* (*Bot.*) A genus of plants, order Rosaceæ. They are perennial, acaulescent herbs, with

lobed or divided radical leaves, and yellow flowers. *W. fragarioides*, the Dry Strawberry, is a handsome plant, in hilly woods, found from Canada to Georgia, and bearing some resemblance to the strawberry.

Wald'wick, in *Wisconsin*, a township of Iowa county.

Wale, *n.* [*A. S.* *walan*, marks of stripes or blows.] A weal; the mark left by a rod or whip on animal flesh; a streak; a stripe. — A ridge or streak rising on the surface of cloth; hence, the texture of cloth.

—*pl.* (*Naut.*) Lines of planking in a ship's sides and quarters, thicker than the other streaks of plank. They occur at points where some extra strength or curvature is required.

—*v. a.* To mark with wales, weals, or stripes, as by a cane.

Wales, (*wails*), [*Lat.* *Cambria*; *Welsh* *Cymry*, the land of the Cymri; *Fr.* *Galles*.] A principality of England, and in appearance almost a peninsula, being bounded N., S., and W. by the St. George's Channel, the Irish Sea, and the Bristol Channel, and for a considerable portion of the E. by the rivers Severn and Dee, and by the cos. of Chester, Shrop, Hereford, and Monmouth; *Lat.* between 51° 23' and 53° 26' N., *Lon.* between 2° 41' and 5° 15' W.; *area*, 7,425 sq. m. W. is divided into North W., containing the cos. of Anglesea, Carnarvon, Denbigh, Flint, Merioneth, and Montgomery; and South W., containing the cos. of Brecknock, Cardigan, Carmarthen, Glamorgan, Pembroke, and Radnor. W. is by far the most mountainous portion of S. Britain; its continued ranges, intersected by numerous deep ravines and wide-spreading valleys, presenting some of the most varied scenery to be found in the whole island, remarkable for its rugged and romantic charms. The *Cambrian range* includes the entire system of Welsh mountains, each offshoot receiving a distinct name from the culminating point of its range; of these the most celebrated are Snowdon, whose peak is 3,571 feet above the sea; Cader Idris, or "Arthur's Seat," 2,900; Plinlimmon, 2,566; and the Black Forest range, whose culminations in the Beacons of Carmarthen and Brecknock are respectively 2,890 and 2,900 feet. The most important rivers of W. are the Severn, Wye, Towy, Conway, Dee, and Tivy. The vegetable products are chiefly barley, oats, potatoes, and turnips, with small quantities of the other grains, and all useful vegetables in abundance; it is as a grazing country, however, that the Principality is chiefly noted. The minerals of W. are extremely abundant; that great source of national wealth and prosperity, coal, is found in 9 of its 12 counties; iron is abundant; copper is found in some localities of admirable quality; lead is procured in all the N. cos., and silver in different places; as, also, limestone, marble, slate (*Fig.* 2378), and several valuable clays and loams. Merthyr Tydvil, Aberdare, Tredegar, Holywell, Swansea, and Wrexham are the great manufacturing centres. Woollen has long been considered the staple fabric of Welsh manufacture; flannels, stockings, socks, gloves, and hosiery generally are among the most important items of this nature; linen and cotton cloths, twist, with hardware, especially in iron and copper, embrace the leading articles of manufacture. — *Inhabitants*. The Welsh have many strange customs and peculiar superstitions. They are remarkably fond of poetry and music, and their language is said to be peculiarly adapted to poetical effusions. Their ancient language is, however, falling fast into disuse throughout the Principality, more especially the southern part. Family distinction is held in great estimation. The aboriginal Celtic race still inhabit some parts of the country. Llewellyn ap Gryffydd was the last prince who exerted himself for the independence of Wales. In 1282 he was subdued by Edward I., and fell on the field of battle. From that time, Wales has been annexed to the English crown; but the union was not complete till the reign of Henry VIII., when the government and laws were assimilated with those of England. It gives the title of *Prince of Wales* to the heir-apparent of the English throne. *P.* (1897) 1,612,160.

Wales, in *Maine*, a post-town of Androscoggin co. *Pop.* (1897) 485.

Wales, in *Massachusetts*, a post-village and township of Hampden co., 65 m. W.S.W. of Boston.

Wales, in *Michigan*, a post-township of St. Clair co., abt. 12 m. W. of Port Huron.

Wales, in *New York*, a post-township of Erie co., 22 m. E.S.E. of Buffalo.

Wales, in *Utah*, a twp. of San Pete co.

Wal'honding, a river of *Ohio*, formed by the junction of several forks at Loudonville, in Ashland co., and flowing S.E. mites with the Tuscarawas at Coshocton to form the Muskingum. It is sometimes called *Mohican* and *White Woman River*.

Walk, (*wauk*), *v. n.* [*O. Ger.* *walagôn*, to walk.] To move onward on the feet; to step slowly along; to advance by alternate steps moderately repeated, as animals; to move with the slowest pace, as a horse; to move by steps or paces without running, trotting, cantering, or galloping. — To move or go on the feet for exercise or amusement; as, he walks out daily. — To go about or abroad in an unquiet manner; to stir restlessly to and fro; to appear as a spectre or a somnambulist.

—In a scriptural sense, to live and act or behave; as, she walks in the ways of grace. — To depart; to move off; to go from; as, he was made to walk about his business.

To walk, to enter, as a house. — *Walking-papers*, *walking-orders*, *walking-ticket*, papers or instructions commanding dismissal or departure. (*Colloq.*)

—*v. a.* To perambulate; to traverse; to pass through or upon; as, to walk the streets (an elliptical expression for to walk in, or through, the streets). — To lead, drive, or ride with a slow pace; to cause to walk, step, or stride slowly or leisurely; as, to walk a horse up hill.

To walk the plank, a phrase borrowed from the former practice of pirates of projecting a plank from the ship's side, and compelling such persons as were doomed to death to walk off it into the sea; used, figuratively, and in the modern sense, to signify the vacating of an office under compulsion.

—*n.* Act of walking, or of moving on the feet at a slow, or not very rapid, pace. — Act of taking pedestrian exercise; as, a constitutional walk. — Gait; step; manner or mode of walking; method of perambulation; as, a man with a wooden leg may be known at a distance by his walk. — Length of way or circuit through which one walks; or, a place for taking pedestrian exercise or a journey on foot; way; road; hence, a range; a place or region in which animals may wander and graze; as, a shady walk, a walk for sheep. — Hence, regular or frequented track, or sphere or place of action; as, it opened a boundless walk for his imagination. — De-meanor; conduct; line or manner of action or behavior; as, the walk of rectitude.

Walk'able, *a.* That may be safely walked on or over.

Walk'er, *n.* One who, or that which, walks; a pedestrian.

Walk'er, GEORGE, a celebrated Irish divine, who distinguished himself by his gallant defence of Londonderry, in 1689, against the forces of James II., till it was effectually relieved. He afterwards repaired to London, published an account of the siege, and was nominated by William III. to the bishopric of Derry; but, continuing to accompany the army, he was slain at the battle of the Boyne, in 1690.

Walk'er, ROBERT JAMES, an American statesman, born in Northumberland, Pa., 1801. He was a student at the University of Pennsylvania, in Philadelphia; graduated there 1819; commenced the practice of law in Pittsburg in 1819, and made his first mark in public life by placing the name of Gen. Jackson in nomination for the Presidency previous to its being suggested in any other quarter. In 1826 he removed to Natchez, Miss., and in 1835 was elected to the U. S. Senate. Shortly after taking his seat in that body, he came in direct collision with Henry Clay on a public-land question, and his able and spirited reply to the great orator was very favorably received by the people of the West. He was consulted by President Jackson in relation to the prospective acquisition of Texas and California; supported the leading measures of President Van Buren's administration; and afterwards exerted great influence over the administration of President Tyler; and was secretary of the treasury during the Presidency of Mr. Polk, 1845–1848. At the close of Mr. Polk's term of office, W. resumed the practice of law, and did not again take a prominent part in national politics until he was appointed by President Buchanan, in 1856, to the governorship of Kansas, a position which he resigned in consequence of disagreement with the President. During the Civil War, W. resided for some time in Europe, where his influence in behalf of this country was very ably and successfully exerted. He largely contributed to the successful negotiation of the Alaska purchase from Russia. *D.* Nov. 11, 1869.

Walker, WILLIAM, an American adventurer, b. in Nashville, Tenn., 1824. In July, 1853, he organized an expedition for the conquest of Sonora, Mexico, but was unable to escape the vigilance of the authorities until Oct., 1853, when he sailed with a number of followers, and landed at La Paz, in Lower California; but though reinforced in March, 1854, his party dispersed from want of provisions, without accomplishing anything, and W. surrendered himself to the U. S. authorities, was tried for the violation of neutrality in May, 1854, and acquitted. The following year, taking advantage of internal troubles in Nicaragua, he started with 62 followers for an expedition in that state, for which see FILIBUSTER. W. was tried by court-martial in Honduras, and shot, Sept. 12, 1860.

Walker, in *Alabama*, a N.W. co.; *area*, 824 sq. m. It is traversed by Mulberry Fork of Black Warrior river. *Surface*, mountainous; *soil*, fertile in the valleys. *Cap.* Jasper. *Pop.* (1897) 16,960.

Walker, in *Georgia*, a N.W. co., bordering on Alabama and Tennessee; *area*, 404 sq. m. *Rivers*, Chickamauga and Chattooga. *Surface*, mountainous; *soil*, moderately fertile. *Min.* Stone-coal, lead, marble, limestone, and gypsum; also numerous mineral springs. *Cap.* Lafayette. *Pop.* (1897) 14,650.

Walker, in *Illinois*, a township of Hancock co.

Walker, in *Indiana*, a township of Jasper co.

—A township of Rush co.

Walker, in *Kansas*, a township of Anderson co.

Walker, in *Michigan*, a township of Kent co.

Walker, in *Pennsylvania*, a post-township of Center co., 10 m. E. of Bellefonte.

—A township of Huntingdon co.

—A township of Juniata co.

—A township of Schuylkill co.

Walker, in *Texas*, an E. central co.; *area*, 740 sq. m. *Rivers*, San Jacinto and Trinity. *Surface*, level; *soil*, generally fertile. *Cap.* Huntsville. *Pop.* (1897) 13,860.

Walker's, in *Alabama*, a former township of Etowah county.

Walker Creek, in *Arkansas*, a township of Lafayette co.

Walker's Creek, in *Virginia*, rises in Bland co., and flowing N.E., enters New river in Giles co.

—A township of Rockbridge co.

Walker's Lake, in the S.W. of Nevada, 30 m. long, and 10 broad; *Lat.* 38° 45' N., *Lon.* 118° 20' W. Receives the waters of Walker river, but has no outlet.

Walker's River, in *California*, rises in Calaveras county, and flowing E., falls into Walker's Lake, in Nevada.

Walkersville, in *Maryland*, a post-village of Frederick co., 81 m. N.W. of Annapolis.

Walkersville, in *Missouri*, a village of Shelby co., abt. 40 m. S.W. of Quincy, Illinois.

Walkersville, in *Pennsylvania*, a village of Centre co., 100 m. N.W. of Harrisburg.

Walkertown, in *Indiana*, a post-town of St. Joseph co., 16 m. S.E. of Laporte.

Walkertown, in *Pennsylvania*, a village of Chester co., 23 m. W. of Philadelphia.

Walkerville, in *Illinois*, a post-township of Greene co.

Walking-stick, *n.* A staff or stick carried in the hand for sport or amusement in walking; a cane; a rattan. (*Zoöl.*) See PHASMIDÆ.

Walking-wheel, *n.* (*Mach.*) Same as TREAD-WHEEL, *q. v.*

Wall, (*wawl*), *n.* [*A. S.* *wall*, *weall*; *Lat.* *vallum*, a rampart.] A work or structure of stone, brick, or other material, raised to some height, serving to inclose a space, forming a division or partition, supporting superincumbent weights, &c., and affording a defence, shelter, or means of security.

—*pl.* Fortifications or ramparts in general; defensive works; as, to man the walls of a fortress.

To drive or push to the wall, to bring, drive, or push to extremities; to get the advantage of, or mastery over.—To go to the wall, to be hard driven or pushed by necessity; to be the weaker party.—To take the wall, to walk on the side next the wall;—hence, to take the precedence.

—*v. a.* To inclose with a wall, or as if with a wall.—To defend by walls, or as if by walls.—To close or fill with a wall; as, to wall up an aperture or passage.

Wall, in *Illinois*, a twp. of Ford co.

Wall, in *New Jersey*, a township of Monmouth co., on the Atlantic.

Wallace, SIR WILLIAM, a popular Scottish hero, b. in Ayrshire, probably abt. 1270. Having slain the son, and several of the retainers of the English sheriff of Dundee, for an insult offered to him, W. fled to the woods, and was outlawed. Gathering together a number of followers, he drove the English out of Aberdeen, Forfar, Brechin, and elsewhere, and in 1297 defeated the English army at the battle of Stirlingbridge—thus liberating his country for a time. Revered as the savior of the nation, he was chosen one of the commanders-in-chief of the Scottish army, and afterwards guardian of the kingdom, during the captivity of Baliol. He penetrated into England, and ravaged Durham with fire and sword. Edward the 1., then in Flanders, immediately hastened home, and marched against W. who was defeated. His subsequent history is obscurely narrated; but he appears to have carried on a guerilla warfare against the English during several years, until at length he was basely betrayed, and executed in London in 1305.

Wallace, WILLIAM VINCENT, an Irish composer, b. in Waterford, 1814. Born with a passion for music, which was early cultivated by his father, a military band-master, he seems to have had an equal passion for travelling. Having attained considerable skill as a pianist and violinist, he set out at the age of 18 on a long course of wanderings, visiting successively Australia, New Zealand, India, and S. America. After a professional tour in the U. States, he returned to England, where his first opera, *Maritana*, was produced with great success, 1846. This was soon followed by *Matilda of Hungary*. He then visited Vienna and Paris, and for the recovery of his health took a long sea-voyage. In 1854 he produced *Lurline*, one of his best works, and also one of the most successful. His other works are, *The Amber Witch*, *Love's Triumph*, and *The Deserted Flower*. W. was essentially a melodist, and many songs of great sweetness are scattered through his works, and have become popular favorites. Among these are his *Fireside Song*; *Go thou, Restless Wind! Sweet and Low*; *Bird of the Wild Wing*, &c. After a protracted illness at Paris, in 1864-65, he was removed for milder air to the Chateau de Bagin in the Haute-Garonne, and there he died, Oct. 12, '65.

Wallace, in *Arkansas*, a township of Franklin co.

Wallace, in *Kansas*, a W. co.; area, 900 sq. m. *Cap.* Sharon Springs. *Pop.* (1895) 1,592.

Wallace, in *Pennsylvania*, a post-township of Chester co., abt. 12 m. N.W. of West Chester.

Wallaceville, in *Pennsylvania*, a post-village of Venango co., 15 m. N. of Franklin.

Wallachia, (*vol-la-ke-a*), (*Ger.* *Wallachei*), one of the Danubian provs. (now united under the name of *Roumania*), bordered on the N. by a range of mountains separating it from Transylvania and Moldavia; on the S. by a boundary equally majestic, the Danube flowing from W. to E., and dividing it from the frontier of Turkey. *Lat.* bet. 43° 40' and 45° 42' N., *Lon.* bet. 22° 25' and 28° 5' E. *Area*, Estim. at 25,700 sq. m. *Desc.* Considerably diversified. In the north it is mountainous. The central and southern parts are less uneven, consisting partly of valleys, fertile and romantic, and partly of plains, extensive and pleasant. Few countries are more indebted to nature, or might carry cultivation to a greater length. Comparatively little, however, has been done to correct physical defects. The extensive marshes are left undrained, while mountainous tracts are covered with forests. Even in the most favored tracts the country appears deserted, and hardly ever discovers the trace of European culture. The Danube is the principal river. The climate is hot and moist in summer, and very cold in winter. The chief wealth of W. consists in its pastures, which feed numerous herds of cattle and sheep. Forests are extensive, and excellent wool is exported. *Manuf.* Unimportant. Gipsies, who here form no inconsiderable part of the population, are partly employed

in rude hardware work. The trade of the country, almost as backward as its agriculture and manufactures, is in the hands of Jews, Greeks, and Armenians. *Rel.* The Greek church. *Cap.* Bucharest. See ROUMANIA.

Walla-Walla, a river of Washington, rises in Umatilla co., Oregon, and flowing W.N.W., falls into the Columbia river at Walla-Walla.—A S.E. co., bordering on Oregon; area, 1,296 sq. m. *Rivers.* Columbia, Walla-Walla, Yakima, and Snake or Lewis. *Cap.* Walla-Walla. *Pop.* (1897) 15,100.—A city, cap. of the above co., 150 m. N.E. of The Dalles, Oregon. *Pop.* (1897) 6,550.

Walled Lake, in *Michigan*, a post-village of Oakland co., 28 m. N.W. of Detroit.

Wallenpau'pack Creek, in *Pennsylvania*, enters the Lackawaxen from Wayne co.

Wallenstadt, (*Lake of*), (*val'len-stal*), a lake of Switzerland, in the canton of St. Gall. It is 11 m. long, with a breadth of from 2 to 9 miles, and is connected with Lake Zurich by the Linth Canal.

Wallenstein, ALBRECHT WENZEL EUSEBIUS, COUNT VON WALDSTEIN, (*val'len-stine*), the great general of the Imperialists, in the Thirty Years' War, b. 1583, of an ancient and wealthy family of Bohemia. In his youth he repaired to Italy, where he studied philosophy, astronomy, and the sciences then in vogue, and would have become an adept in the abstruse doctrines then so generally believed in, had not the condition of his country called him from the study of the occult sciences to the practice of war. As a soldier and leader he gained honor and distinction on his first field by defeating the Turks, who had penetrated into Hungary. From this time he devoted himself to the service of his country, and in a few years rose to be regarded as the most popular and consummate general in Europe; his vast wealth, immense estates, and extraordinary popularity giving him a power and influence hardly less than sovereign. He became in a few years the mainstay and support of the Imperial cause, and, both alone and in conjunction with Tilly, obtained several victories, and more than once raised the empire from the verge of ruin by his counsel and skill as a commander. For these services he received the dukedom of Mecklenburg, and immense tracts of land both in Bohemia and Hungary. His power and his influence, however, procured for him many enemies, to whom his sovereign, forgetful of the services he had rendered, lent so willing an ear that W., indignant at the coldness of the Emperor, threw up his commission and retired to the privacy of his paternal estates. Hardly had W. quitted the court of his ungrateful master when the "Lion of the North," as he was called—Gustavus Adolphus of Sweden—invaded the empire with his Protestant army, and carried such defeat and ruin into the heart of the Imperial dominions, that the Emperor Ferdinand, seeing his generals slain, his armies routed, and a haughty foe advancing on his capital, was compelled to implore W.—the man he had so deeply injured—to return, and not only save the empire from ruin, but his sovereign from humiliation. Having obtained his own terms from the weak and ungrateful Ferdinand, W. raised his banner, and so much was he beloved by the soldiery that in less than seven days he had armed and equipped 50,000 men at his own cost, and, advancing against the successful enemy, drove Gustavus out of Bavaria, and following him into Saxony, forced him at Lützen to hazard a pitched battle, in which, though the Imperialists were defeated, the death of Gustavus, who fell in the moment of victory, was considered an ample equivalent. The death of the Swedish king made the rest of the war easy, and by W.'s vigilance the empire was again saved. Ferdinand, once more firmly seated on his throne, again became envious of the man to whom he owed both life and crown, and, taking offence at the devotion of W.'s officers, accused their chief of treason, and issued an order to take him dead or alive. Upon this, W. fled with a party of friends to the Castle of Eger, where its commander treacherously murdered him and all his devoted friends, 1634.

Waller, (*waw'l'er*), *n.* A builder of walls.

Waller's, in *Kentucky*, a township of Union county.

Wallet, (*wol'let*), *n.* [*From A. S.* *weallian*, to travel.] A bag for carrying the necessities for a journey or march; a knapsack; a peddler's pack; a mendicant's receptacle for alms; also, a pouch or bag-like purse; a pocket-book for keeping money about the person.—Anything bulging, protuberant, or swaging; as, *wallets of flesh*.—*Shaks.*

Walleter, *n.* One who carries a wallet; a vagrant; a tramp. (*Colloq.*)

Wall-eyed, (*waw'id*), *a.* Having an eye in which the iris is of a very light gray color, approaching to white; as, a *wall-eyed* horse.

Wall-flower, *n.* (*Bot.*) See CHEIRANTHUS.

Wall-fruit, *n.* (*Hort.*) Fruit ripened by being planted against a wall.

Wall'ing, *n.* Act of fortifying or inclosing with a wall.—Walls in general, or material for their construction.

Wall'ing wax, a composition of wax and tallow, used by etchers and engravers to make a bank or wall round the edge of a plate, and so form a trough into which the acid is poured over the lines incised through the etching ground, and which bites in the lines as it lies upon the surface. The wax is rendered soft by steeping in hot water, and when of the consistency of putty, is stuck round the plate, and allowed to cool and harden, a spout being made on one side to carry off the acid.

Wal'lingford, in *Connecticut*, a post-borough and township of New Haven co., 11 m. north of New Haven.

Wallingford, in *Illinois*, a post-village of Will co., 160 m. N.E. of Springfield.

Wal'lingford, in *Vermont*, a post-township of Rutland co., 62 m. S.S.W. of Montpelier.

Wallis's Island, the principal of a group in the S. Pacific Ocean, discovered by Captain Wallis in 1767, surrounded by a reef of rocks. *Lat.* 13° 18' S., *Lon.* 177° W.

Wall'kill, in *New York*, a river which rises in Sussex co., New Jersey, and flowing N.N.E. enters the Rondout, in the E. part of Ulster co., New York.—A township of Orange co. It contains the flourishing town of Middletown, abt. 7 m. N.W. of Goshen, one of the most active and prosperous, of its size, in the State, and a point of junction and railroad centre, and carrying on extensive manufactures of saws, nails, hats, leather, &c.

Wall'kill, in *New York*, a post-village of Ulster co. *Pop.* (1897) 580.

Wall-knot, (*nöl*), *n.* (*Naut.*) See KNOT.

Walloon'scoik River, in *Vermont*, rises in Bennington co., and flowing W., enters the Hoosack River in Washington co., New York.

Wal'loos, *n. pl.* (*Geog.*) A name formerly given to that portion of the Belgians who were of Celtic origin, and whose language is essentially the French of the 13th century. The name is Tentonic, and is etymologically allied to Valais, Wales, &c. The "W. country" comprised the present provinces of Limburg, Liege, Namur, and Luxemburg, and a part of East and West Flanders. More than 1,800,000 of the present inhabitants of these provinces are mixed Celts, and speak the Walloon language.

Walloostook' River, in *Maine*, formed by the N.W. and S.W. branches in Somerset co., and flowing N.E., unites with the St. Francois to form the St. John's River.

Wallop, (*wol'lup*), *v. n.* [*A. S.* *wecallan*, to boil or bubble; *Ger.* *wallen*.] To boil with a continued noisy bubbling or heaving of the liquor.—To waddle; to move in a rolling or unwieldy manner.—To gallop; to move at a quick pace, by violent exertions.

—*v. a.* To flog; to thrash; to beat or whip soundly; as, to wallop a coalheaver. (*Colloq.*)

—*n.* A thick piece or chunk of fat.—A gallop; a rapid rolling movement.—A blow or beating.

Wallow, (*wol'lo*), *v. n.* [*A. S.* *wealwian*, to roll, wallow; *Lat.* *volvo*, to roll, tumble.] To roll one's body on the earth, in mire, or on other substances; to tumble and roll in water or mire, as cattle or swine.—To live or disport one's self in filthy vice or beastliness; preceding *in*; as, *wallowing* in sensuality.

—*v. a.* To roll or tumble in anything unclean or corrupting.

—*n.* A kind of rolling gait.

Wall'ower, *n.* One who, or that which, wallows. (*Mach.*) A trundle.

Wall-paper, *n.* Paper-hangings.

Wall-pellitory, *n.* (*Bot.*) See PARIETARIA.

Wall-pepper, *n.* (*Bot.*) A name of *Sedum acre*. See SEDUM.

Wall-plate, *n.* (*Arch.*) A piece of timber placed along the top of a wall, to receive the ends of the roof timbers, or so placed on a wall as to receive the joists of a floor.

Wall-rock, *n.* Granular limestone, used in building walls. (*S. U.*)

Wall-rue, *n.* (*Bot.*) See ASPLENIUM.

Wall-sided, *a.* (*Naut.*) With sides nearly perpendicular, as a ship;—as distinguished from *tumbling home*.

Wall-spring, *n.* A spring of water issuing from stratified rocks.

Wal'tun Pond, in *Rhode Island*, a village of Providence co., 25 m. N.W. of Providence.

Wall-wort, *n.* (*Bot.*) See ELDER-WORT.

Walney Island, an island of England, in the N. of Lancashire, between Morecambe Bay and the estuary of Duddon, 4 m. from Dalton. *Ext.* 10 m. long, abt. 1 broad.

Walnut, (*wol'-*), *n.* [*A. S.* *wal-knut*, *wal-knutu*.] (*Bot.*) See JUGLANS.

Walnut, in *Arkansas*, a township of Benton co.

Walnut, in *Illinois*, a post-township of Bureau co., about 11 m. N.N.W. of Princeton.

Walnut, in *Indiana*, a post-township of Marshall co.

—A township of Montgomery co.

Walnut, in *Iowa*, a township of Appanoose co.

—A village and township of Jefferson co.

—A township of Madison co.

—A township of Wayne co.

Walnut, in *Kansas*, a township of Atchison co.

—A township of Crawford co.

Walnut, in *Missouri*, a township of Adair co.

Walnut, in *Ohio*, a township of Fairfield co.

—A township of Gallia co.

—A township of Pickaway co.

Walnut Creek, in *Kansas*, a township of Mitchell county.

Walnut Creek, in *Missouri*, a township of Macon county.

Walnut Creek, in *Ohio*, a post-township of Holmes county.

Walnut Grove, in *California*, a post-town of Sacramento co., 32 m. S. of Sacramento.

Walnut Grove, in *Illinois*, a township of Knox co., about 14 m. N.E. of Galesburg.

—A post-township of McDonough co.

Walnut Grove, in *Kansas*, a township of Neosho county.

Walnut Grove, in *New Jersey*, a village of Morris co., about 6 m. W.N.W. of Morristown.

Walnut Hill, in *Illinois*, a post-village of Marion co., 12 m. S.W. of Salem.

Walnut Lake, in *Minnesota*, a township of Faribault co., about 33 m. S.E. of Mankato.

Wal'pole, SIR ROBERT (Earl of Oxford), an English statesman, born at Houghton, 1676. In 1705 he was ap-

pointed Secretary at War, and, in 1708, he became the leader of the Whig party in the House of Commons; but when the Tories, under Harley and St. John, obtained power, W. was, with other members of the late Whig administration, voted by the Commons to have been guilty of corruption, and ordered to be expelled the house. The Whig party, however, strenuously supported him, and he was re-elected to Parliament, though the house declared the election void. At the accession of George I., the Whigs again became the leading party, and W. was made Paymaster-general of the Forces. Distinguishing himself by his zeal for the welfare of the Hanoverian dynasty, as well as by his able conduct as a politician, he acquired so much consideration, that, during the troubles caused by the rebellion of the Pretender, he was nominated First Lord of the Treasury and Chancellor of the Exchequer. In 1721 he was appointed Prime-Minister. After holding office with great firmness during 20 years, he was compelled to resign, and was created Earl of Orford. D. 1745.

Walpole, Horace, Earl of Orford, the youngest son of the preceding, b. 1707, was elected to parliament in 1741; retired from public life in 1768, and led a life of literary ease at his seat at Strawberry Hill, near Twickenham, where he formed a collection of books, manuscripts, pictures, and other works of art or of curiosity, and set up a printing-press, from which proceeded several elegant works, by himself and others. His best works are his *Letters*. D. 1797.

Walpole, in *Massachusetts*, a post-vill. and twp. of Norfolk co., 17 m. S.S.W. of Boston.

Walpole, in *New Hampshire*, a post-vill. and twp. of Cheshire co., 44 m. W.S.W. of Concord.

Walpur'g's Night, *n.* The night of the festival of Walpurga, niece of St. Boniface, the apostle of the Germans. This feast (May 1) is a common day in Germany for the commencement of leases, &c. It is also known as the day on the eve of which, according to popular superstition, the great witch-festival is held on the summit of the Brocken, in the Harz Mountains.

Walrus, *n.* (*Zoöl.*) See *MORSE*.

Walsall, a town of England, co. of Stafford, on the Tame, 8 m. from Birmingham. *Manuf.* Carriage-springs, brass and iron utensils, and foundries in both metals. *Pop.* 42,000.

Walshville, in *Illinois*, a township of Montgomery co.

Wal'terborough, in *South Carolina*, a post-town, cap. of Colleton co., 90 m. S.E. of Columbia.

Wal'tham, in *Illinois*, a township of La Salle county.

Waltham, in *Maine*, a post-township of Hancock co., 25 m. S.E. of Bangor.

Waltham, in *Massachusetts*, a city and township of Middlesex co., 10 m. N.W. of Boston. The village, situate on Charles river, contains numerous cotton mills, and one of the largest watch manufactories in the U. S. *Pop.* (1895) 20,877.

Waltham, in *Vermont*, a township of Addison co., 33 m. W.S.W. of Montpelier.

Wal'tham Abbey, a town of England, co. of Essex, near the river Lea, 13 m. from London. *Manuf.* Pins. About 3½ m. from it, at a small town called *Enfield*, there is a government factory which annually produces upwards of 10,000 breech-loading rifles. *Pop.* 5,000.

Wal'ther von der Vo'gelweide, the celebrated minnesinger, one of the earliest German poets, belonging to the period called the *Swabian Era*. He was born probably soon after 1160, and passed his life in going from court to court, patronized successively by Frederick, duke of Austria, Philip, king of the Romans, Otto, margrave of Saxony, Hermann, landgrave of Thuringia, the Emperor Frederick II., and other princes. W. made extensive travels, seeing Paris, North Italy, Constantinople, and the Holy Land. In 1206 he took part in the poetical contest on the Wartburg, and in the crusade of Frederick II. in 1228. His poems consist of love-songs and patriotic appeals to his countrymen, possessing in a high degree the best qualities of the poetry of their age.

Wal'ton, in *Florida*, a N.W. co., bordering on Alabama and the Gulf of Mexico; *area*, 1,360 sq. m. *Rivers*. Choctawhatchee and Yellow-water. *Surface*, level; *soil*, generally poor. *Cap.* De Funkiah Springs. *Pop.* 8,000.

Walton, in *Georgia*, a N. central co.; *area*, 390 sq. m. *Rivers*. Apalachee and Alcovy; also, Bay and Cornish creeks. *Surface*, elevated and irregular; *soil*, moderately fertile. *Min.* Iron, gold, and granite. *Cap.* Monroe.

Walton, in *Kan.*, a twp. of Labette co.

Walton, in *Kentucky*, a post-village of Boone co., 20 m. S.W. of Covington.

Walton, in *Michigan*, a twp. of Eaton co.

Walton, in *New York*, a post-village and township of Delaware co., 90 m. W.S.W. of Albany.

Walton, in *Va.*, a twp. of Charlotte co.

Walton, in *West Virginia*, a post-township of Roane co.

Wal'tonham, in *Missouri*, a village of St. Louis co., 12 m. N.W. of St. Louis.

Waltz, (*wawltz*), *n.* [Ger. *walzer*, from *walzen*, to roll, to wheel; Fr. *valse*.] The name of the German national dance (now naturalized throughout Europe and the U. States), performed by two persons, who, almost embracing each other, whirl rapidly round on an axis of their own, while at the same time they move quickly in a circle, whose radius is proportioned to the dimensions of the room; also, the species of music which accompanies this dance.

—*v. a.* To dance a waltz.

Waltz, in the State of *Indiana*, a township of Wabash county.

Waltzer, (*wawltz'er*), *n.* [Fr. *valseur*, fem. *valseuse*.] A person who dances a waltz.

Waltz'ing, *n.* Act of dancing a waltz.

Wal'worth, in *New York*, a post-village and township of Wayne co., 18 m. E. of Rochester.

Walworth, in *Wisconsin*, a S.S.E. co., bordering on Illinois; *area*, 576 sq. m. It is drained by Honey, Sugar, Geneva, Turtle, and Whitewater creeks. Besides Lake Geneva, 8 m. long, there are 23 smaller lakes. *Surface*, undulating; *soil*, very fertile. *Cap.* Elkhorn.—A post-village and township of the above co., 53 m. S.E. of Madison.

Wamble, (*wōm'bl*), *v. n.* [Fries. *vommelen*; Dan. *vammel*.] To experience nauseous disturbance; as, the qualms of a *wambling* stomach. (*L'Estrange*). (Vulgar.) —To roll or move irregularly to and fro.

—*n.* Nauseous disturbance of the stomach.

Wam'mel, *v. n.* To move with awkwardness or irregularity; —an English provincialism, used chiefly with reference to the movements of machinery.

Wampee', *n.* (*Bot.*) The Chinese name for the fruit of *Cookia punctata*, highly esteemed in China and the Indian Archipelago.

Wampum, (*wōm'pum*), *n.* [Ind.] The American Indian name for beads made of shells, formerly used as money, or as a medium of commerce. They were also united to form a broad belt, which was worn as an ornament, and was called *wampumpaque*, or *wampeaque*.

Wamps'ville, in *New York*, a post-village of Madison co., 23 m. E. of Syracuse.

Wanamin'go, in *Minnesota*, a post-village and township of Goodhue co., 20 m. E. of Faribault.

Wan, (*wōn*), *a.* [A. S. *wana*, *wona*, deficient, lacking.] Deficient in, or lacking color; pale; sickly of hue or complexion; languid of look or aspect; as, a countenance thin and *wan*.

—*n.* Pallor; wanness. (R.)

Wand, (*wōnd*), *n.* [Dan. *vaand*; Icel. *vōndr*, a twig.] A flexible rod; a small stick, twig, or sapling; as, "A skilful shepherd peel'd me certain *wands*." (*Shaks.*)

—Hence, specifically, a staff of office or authority; as, a chamberlain's *wand*. —Also, a rod used by conjurors or necromancers; as, a long divining *wand*.

Wander, (*wōn'der*), *v. n.* [A. S. *wandrian*.] To stray; to rove; to range about; to ramble here and there without any certain course or object in view; as, to *wander* about the country. —To deviate; to roam; to go astray; to depart; to migrate; to depart from the right or true path; to depart from the subject under discussion; as, to *wander* from home, *wandering* thoughts or fancies. —To be delirious; not to be under the guidance and control of reason; as, the mind *wanders*.

—*v. a.* To traverse; to stroll through, or travel over, without a definite course; as, "Wand'ring that wat'ry desert." —*Milton*.

Wanderer, *n.* One who wanders; a rover; a roamer; a rambler; one who deviates from duty or rectitude.

Wandering, (*wōn'-*) *n.* Peregrination; a travelling without a settled course. —Aberation; mistaken way; deviation from duty or rectitude. —Uncertainty: want of being fixed; a roving of the mind or thoughts from the point or business in which one ought to be engaged. —The roving of the mind in a dream or in delirium.

Wanderingly, (*wōn'-*) *adv.* In a wandering manner.

Wanderoo', *n.* (*Zoöl.*) A species of Macaque, *Macacus silenus*.

Wand'y, *a.* Long and flexible, like a wand or switch.

Wane, *v. n.* [A. S. *wanian*, *gewanian*.] To be decreased or diminished; as, the *waning* moon. —To fall away; to decline; to sink; to be deficient; as, *waning* health, *waning* favor.

—*n.* Decrease of the illuminated part of the moon's disc. —Diminution; decrease: decline; failure; declension; as, his power is in its *wane*.

Wang, *n.* [A. S. *wange*, the cheek, jaw; Icel. *vāngr*.] The jaw or cheek-bone. (Vulgar.) —A slap; a blow; a cuff; as, to hit one a *wang* on the ear.

Wan'gan, *n.* [Ind.] A kind of boat, used chiefly by lumber-men for transporting provisions, tools, and the like; —so called in Maine.

Wanghee', **Whanghee'**, *n.* [Chin. *wang*, yellow, and *hee*, a root.] A species of tough, flexible cane, imported from the E. Indies, said to be the root of the narrow-leaved bamboo, and used for walking-sticks. It has a pale, hard bark, and pliable stem, with internodes of about an inch and a half or two inches, and a number of little holes at the knots.

Wan'go, *n.* A name sometimes given to the Boomerang, *q. v.*

Wan'ly, *adv.* In a wan manner; palely.

Wan'ness, *n.* State of being wan; paleness; a sallow, dead, pale hue or complexion.

Wan'nish, *a.* Somewhat wan; palish; as, *wannish* features.

Wanpon'see, in *Illinois*, a township of Grundy county.

Wan'ship, in *Utah*, a post-village, former cap. of Summit co., about 50 m. E. of Salt Lake City.

Want, (*wawnl*), *n.* [Either from *waniōd*, pp. of A. S. *wanian*, to wane, decrease, or by contraction from O. Ger. *unan ist*, it is wanting.] Deficiency; destitution; lack or absence of that which is necessary or useful; scarcity or deprivation of what is needed or desired; as, he exhibits a *want* of common sense; they are in *want* of supplies, &c. —Generally, poverty; penury; indigence; destitution; as, "Habitual superfluities become actual *wants*." —*Paley*.

—*v. a.* To be deficient of or in; to lack; to be without; to be destitute of; as, to *want* ideas, judgment, sense, learning; to *want* the necessities of life; —employed impersonally; as, it *wants* a day of the appointed time.

—To need; to have occasion for, as useful, proper, or requisite; to require; as, in winter we *want* warm clothing; he *wants* help to carry on business. —To desire; to crave; to wish for; to feel a longing for, or need of; as, what a rational man *wants* in a wife are good looks, good sense, and good temper. —To be defective in; to fall short of; not to contain or have; to be lacking in respect of, or to the amount of; as, there *wants* one more than eleven to make up a dozen.

—*v. n.* To fall short; to be deficient or lacking; to fail; not to be sufficient. —To be missed; not to be present; as, the party was complete, *wanting* one. —To fail; to omit; to neglect; as, he *wanted* not in the keeping his appointment.

Wa'n't. A vulgar contraction of *was nol*. (Used colloq.)

Want'age, *n.* Deficiency; lack; that which is wanting.

Want'age, in *New Jersey*, a township of Sussex co. *Pop.* (1897) 3,460.

Want'ing, *p. a.* Absent; deficient; not at hand or forthcoming; as, one of the set is *wanting*. —Slack; remiss; lax; as, I shall not be found *wanting* in zeal.

Wanton, (*wōn'tun*), *a.* [W. *chwantu*, to lust.] Gay; sportive; airy; frolicsome; quick and irregular of motion; moving or flying loosely or buoyantly; as, "Her tresses . . . in *wanton* ringlets wav'd." (*Milton*). —Loose; unrestrained; as, a *wanton* tongue. —Luxuriant; overgrown; superfluous; as, the *wanton* growth of tropical vegetation. —Not regular; turned fortuitously. —Deviating from moral rectitude; licentious; sensual; dissolute. —Hence, lustful; lascivious; libidinous; infringing the laws of chastity; as, *wanton* pleasures.

—*n.* A trifler; an insignificant flatterer; as, "A beardless boy, a silken *wanton*." (*Shaks.*) —A pet; —a term of slight endearment; as, "Peace, my *wantons*." (*Ben Jonson*). —A lascivious person; a lewd man or woman, more particularly the latter.

—*v. n.* To revel; to play loosely or unrestrainedly; to frolic; to move nimbly and irregularly. —To play lasciviously; to indulge in lewd sports.

Wan'tonly, *adv.* Lasciviously; loosely; without regularity or restraint; sportively; frolicsomenly; playfully.

Wau'tonness, *n.* Gayety; frolicsomeness; waggery; sportiveness. —Negligence of restraint; licentiousness; as, acts of popular *wantonness*. —Lasciviousness; lewdness; lechery; as, the *wantonness* of a goat.

Wau'y, *a.* Wanting or diminished in some parts; not of uniform size throughout; —said especially of sawed boards or timber when tapering or uneven, from being cut too near the outside of the log.

Wap, *v. a.* and *n.* Same as *WHOP*, *q. v.*

Wapakonet'ta, in *Ohio*, a post-village, cap. of Auglaize co., 95 m. W.N.W. of Columbus.

Wapan'see, in *Illinois*, a former township of Grundy county.

Wapet'ta, in *Illinois*, a post-village and township of De Witt co., 18 m. S. of Bloomington.

Wapello, in *Iowa*, a post-village and township, cap. of Lonsa co., 42 m. S.S.E. of Iowa City.

Wapentake, (*wōp'en-tāk*, sometimes *-tāk*), *n.* [A. S. *wapentac*.] In England, one of the territorial subdivisions into which the county of York is divided; they are the same as the *hundreds* of other counties.

Wapiuschaw, (*wōp'in-shaw*), *n.* Same as *WEAPON-SHAW*, *q. v.*

Wap'iti, *n.* [Iroquois Ind.] (*Zoöl.*) See *DEER*.

Wapp, *n.* (*Naut.*) On shipboard, the rope which serves to set tant the shrouds in wall-knots.

Wappatoo', **WAPPATO**, *n.* The name given by the Indians of Oregon to the edible bulb of *Sagittaria variabilis*, eaten by them as food.

Wap'pe, *n.* A yelping cur.

Wap'per, *n.* A name given to some of the smaller species of the river gudgeon.

Wapping, *n.* The yelping of a dog. (R.)

Wappinger's Creek, in *New York*, falls into the Hudson River from Dutchess co.

Wapsin'onoc, in *Iowa*, a township of Muscatine county.

Wapsipin'con River, in *Iowa*, rises in Howard co., and flows into the Mississippi, 25 m. N.E. of Daveuport, after a S.E. course of 200 m.

Wap'wallopen Creek, in *Pennsylvania*, flows into the Susquehanna from Luzerne co.

War, *n.* [Fr. *guerre*; It. and Sp. *guerra*.] State of opposition or contention; act of opposition or hostility; disposition to enmity, or inimical action. —A hostile contest between nations or states, carried on by force, either for resisting aggression or invasion, or for revengeful insults and redressing injuries, for the extension of commerce or acquisition of territory, or for gaining and establishing the superiority and prestige or the dominion of one over the other; declared hostilities; open appeal to, and arbitrament by, arms. —Instruments, munitions, and appliances of war; as, "His complement of stores, and total *war*." (*Prior*). —Poetically, army; forces. —Art of war; profession of arms. See *ARMY*, *ARTILLERY*, *BATTLE*, *CAVALRY*, *FORTIFICATION*, *INFANTRY*, *MARTIAL LAW*, *NAVY*, &c.

Civil war, an internecine war or conflict between different sections or parties of the same nation or country. —*Holy war*. See *CRUSADE*. —*Public war*, a contest by force between independent sovereign states. —*War-department*, *war-office*, that branch of the civil service of government which has charge of, and supervision over, all matters having reference to war.

—*v. n.* To fight; to contend; to strive violently; to be in opposition; as, ideas which common sense *wars* against. —To make war; to attack or invade a nation or state with force of arms; to carry on hostilities, or to be in a state of contention by violence; as, "Our countrymen were *warring* on that day." —*Byron*.

War, *v. a.* To meet in hostile action; to make war upon.—To carry on, as a strife or contest; as, "He teacheth my hands to war."—2 Sam. xxii.

Waraju' River, in *Minnesota*, rises in Murray co., and flows into the Minnesota river, W. of Marrah Tan-kah Lake, after an E. course of 80 m.

Waras'din, a fortified town of Austrian Croatia, on the Drave, 114 m. from Viena. *Manuf.* Silk-spinning. *Pop.* 9,500.

War-beat, War-beaten, *a.* Same as WAR-WORN, *q. v.*

War'beck, PERKIN, or PETERKIN, a pretender to the English throne, who assumed the character and title of Richard, Duke of York, one of the princes supposed to have been murdered in the Tower. Being defeated in arms, he was executed in the reign of Henry VII., 1499. Some obscurity still remains about his history.

Warble, (*wôr'bl*), *v. a.* [Ger. *wirbeln*, to warble.] To sing or utter musically with a quick and varied voice, or with vibrations; to trill; to modulate with turns or variations; as, the lark warbles his song.—To carol; to utter melodiously; to modulate; as, to warble a lay or tune.—To cause to quaver, trill, or vibrate; as, the warbled string.

—*v. n.* To sing with a varied voice, or with trillings or variations, as a bird.—To be uttered melodiously; to be quavered or modulated.

—*n.* Act of warbling; also, a song; a quavering or trilling modulation of the voice.

War'bler, *n.* A singer; a songster; one who, or that which, warbles;—commonly applied to birds; as, the feathered warblers.

(*Zoöl.*) See SYLVICOLA, and SYLVICOLIDÆ.

War'bling, *a.* Making, or giving forth, melodious notes.

—*n.* Singing; act of shaking or modulating notes.

War'blingly, *adv.* In a warbling or melodious manner.

War'burton, ELIOT, an English author and traveler, born in 1810, was educated at Cambridge, and lost in the steamer "Amazon," June 4, 1852, while en route to America. His principal works are, *The Crescent and the Cross*, which, in 1859, had reached its 15th edition; *Mochelaga, or the New World*; *Darien*; *Prince Rupert and the Cavaliers*.

Ward, *a.* [A. S. *weard*; O. Sax. and O. Fries. *ward*.] An affix indicating tendency or direction to, or motion toward, &c., employed in the construction of a large class of words; as in upward, downward, skyward, &c.

Ward, *v. a.* [A. S. *weardian*, to guard; *weard* = Ger. *würten*.] To guard; to keep in safety; to watch over; as, to ward the gates of a city.—To defend; to protect; as, to ward a person from danger.—To repel; to turn aside, as anything injurious or mischievous that approaches; to fend off;—generally preceding *off*; as, to ward off a blow; to ward off a thrust in fencing; to ward off an objection.

—*v. n.* To stand on the defensive with a weapon.

—*n.* Act of guarding; watch; vigilance; as, to keep watch and ward.—One who is appointed to guard, watch, and defend; a warden.—Custody; durance; confinement under guard; state of a minor under guardianship; as, he was placed in ward.—A garrison; defence; protection; fortification; one who, or that which, guards or defends; as, "the castle's ward." (*Spenser*).—Hence, guard made by a weapon in fencing; as, "Thou know'st my old ward." (*Shaks*).—A certain district, division, or quarter of a town or city; as, he belongs to the Fourth Ward.—A minor or person under the care of a guardian or guardians; as, a ward in chancery.—A tract or division of a forest.—One of the apartments into which an hospital is divided; as, a fever ward.—A part of a lock which corresponds to its proper key, and prevents any other key from opening the lock.

Ward, EDWARD MATTHEW, (*wawrd*), R. A., an English artist, b. in London, 1816. He became a student of the Royal Academy in 1834, repaired to Rome two years afterwards, resided there till 1839, and, on his homeward journey, visited Munich, where he made a brief sojourn, for the purpose of acquiring from Cornelius, the great German painter, instruction in fresco. In 1840 he exhibited at the Royal Academy his *King Lear*. His first success was obtained in 1843, by his painting called *Dr. Johnson perusing the Manuscript of the Vicar of Wakefield*. After this time, his works attracted the attention of art-patrons and the public; and he continued to increase in skill and power as an artist with every fresh effort. His best productions may be cited as being: *Scene in Lord Chesterfield's Ante-room in 1748*; *The Royal Family of France in the Prison of the Temple*; *The Last Sleep of Argyle*; and *Charlotte Corday going to Execution*. D. 1879.

Ward, in *Indiana*, a twp. of Randolph co.

Ward, in *Iowa*, a twp. of Clarke co.

Ward, in *New York*, a township of Alleghany co., 4 m. E. of Belmont.

Ward, in *Ohio*, a twp. of Hocking co.

Ward, in *Penna.*, a twp. of Tioga co.

Warden, (*wôrd'n*), *n.* [O. Eng. *warden*.] A guardian; a keeper; a custodian.—An officer who keeps and guards; as, the warden of a prison.—A large, hard pear adapted for baking and stewing.

Warden of a college, the president, master, or chief dignitary.—*Warden pie*, a pie made of warden pears.—*Lord Warden of the Cinque Ports*. (Eng.) See CINQUE PORTS.

Ward'enry, Ward'enship, *n.* Office or jurisdiction of a warden.

Ward'er, *n.* [From *ward*.] One who wards; a keeper; a guard; a custodian.—A staff or truncheon, which, when thrown down by the judge of a tournament, stayed further proceedings.

Ward'ian Case, *n.* [From W. B. Ward, the inventor.] A close glass case placed upon a trough containing soil,

and accurately fitted to it, intended for the growth of plants in the windows of apartments.

Ward'robe, *n.* [Ward and robe; Fr. *garderobe*.] A room or apartment where clothing or wearing apparel is kept; or, more generally, a portable closet or piece of furniture for hanging up wearing apparel.—Hence, wearing apparel in general; articles of dress and decoration; as, a sumptuous wardrobe.

Ward-room, *n.* (Nav.) In large ships of war, the cabin set apart for the accommodation of officers ranking as lieutenants. Small vessels of war have no ward-room.

Wardsborough, in *Vermont*, a post-township of Windham co., 93 m. S.W. of Montpelier.

Ward'ship, *n.* Guardianship; care and protection of a ward; right of jurisdiction over a ward.—Pupilage; state of being under a guardian; minority.

Wards'man, *n.* One who keeps watch or ward.

Ware, (*wér*), *n.*; *pl.* WARES. [A. S.; D. *waar*; Dan. *vare*; Icel. *vára*.] (Chiefly used in the plural.) Merchandise; goods; commodities; fabrics;—this term, although originally and rightfully a collective noun, may be used plurally, when articles of traffic or merchandise of different kinds are in question; it is also very frequently employed in composition; as, earthenware, hardware, glassware, tinware, chinaware, &c.

Ware, a town of England, in Hertfordshire, on the Lea, abt. 3 m. from Hertford. *Pop.* 5,500.

Ware, in *Georgia*, a S.E. co., bordering on Florida; area, 800 sq. miles. *Rivers*. Santilla; also, Little Hurricane Creek. *Surface*, flat, and in great part occupied by swamps, the largest of which is the Okefonokee, 30 m. long, and 17 broad; soil, sandy and fertile. *Cap.* Waycross. *Pop.* (1897) 10,350.

Ware, in *Massachusetts*, a river which rises in Worcester co., and falls into the Connecticut River in Hampden co.—A post-village and township of Hampshire co., 80 m. S.W. of Boston. It contains numerous cotton and woolen mills, and manufactories of straw goods, and iron, copper, and tin-ware.

War Eagle, in *Arkansas*, a township of Madison county.

Ware Creek, in *Virginia*, a township of New Kent co.

Wareham, (*wair'häm*), a town of England, in Dorsetshire, near the mouth of the river Frome, 9 miles from Poole. Its chief traffic consists in exporting pipe-clay. *Pop.* 8,000.

Ware'ham, in *Massachusetts*, a post-village and township of Plymouth county, 40 miles south-southeast of Boston.

Ware'house, *n.*; *pl.* WAREHOUSES. [Ware and house.] A storehouse for wares or goods; a magazine; a depot; a factory.—*Bonded warehouse*, a building in which dutiable and excisable articles can be stored during the period which intervenes between their importation or production and their consumption.—See WAREHOUSING SYSTEM.

—*v. a.* To deposit or place for safety in a warehouse, as merchandise, &c.—To deposit in the government warehouse or custom-house stores, to be kept until duties are paid, as certain ratable or excisable goods or commodities.

Ware'houseman, *n.* A person who receives goods and merchandise to be stored in his warehouse for hire. (*Law*.) A W. is bound to use ordinary care in preserving goods and merchandise stored in his warehouse, and his neglect to do so will render him liable to the owner. The W.'s liability commences so soon as the goods arrive, and the crane of the warehouse is applied to raise them into the warehouse.

Ware'housing, (*-houz'ing*) *n.* Act of depositing goods, &c., in a warehouse, or in a custom-house store.

Warehousing system. (*Com.*) A plan for storing dutiable and excisable articles during the intervening period between their importation and their consumption. The charge paid for storage of such commodities is as low as possible; and, as a rule, if they are re-exported, or if, being produced at home, they are consigned to foreign countries, no duty at all is paid. The object of such an arrangement is that the tax levied indirectly on consumption may be as light as possible, because the period between the payment of the duty and the consumption of the article is as short as possible. The warehousing system was established in the U. S. by act of Congress of Aug. 6, 1846, called the *Warehousing Act*.

Ware'house Point, in *Connecticut*, a post-village of Hartford co., 13 m. N.E. of Hartford.

Wa'rendorf, a town of Prussian Westphalia, on the Ems, 16 m. from Munster. *Pop.* 5,000.

Wares, *n. pl.* See WARE.

Ware town, of WAERTOWN, in *New Jersey*, a village of Ocean co., 12 m. S.E. of Tom's River.

War'fare, *n.* [War and fare=A. S. *faran*, to go.] Contest; strife; struggle; as, literary or journalistic warfare.—Specifically, military life; active service in the field; hostilities; war.—Contest with spiritual enemies; as, Christian warfare.

War'farer, *n.* One who engages in warfare.

War'fordsburg, in *Pennsylvania*, a post-village of Fulton co., 85 m. S.W. of Harrisburg.

War'horse, *n.* The horse of a cavalry soldier; a charger.

Warily, (*wä'-*), *adv.* In a wary or cautious manner; with circumspection; with timorous prudence or wise foresight.

Wariness, (*wä'-*), *n.* Quality or state of being wary; wise or prudent care to foresee and take precautions against harm or evil; circumspection.

Wark'worth, a village of England, of Northumberland, on the Coquet, 5½ m. from Alnwick. At its S. end stands Warkworth Castle, a seat of the Duke of Northumberland, celebrated for its magnificence.

War'like, *a.* Having the nature or appearance of

war; pertaining or relating to war or military service; martial; as, warlike preparations.—Fit for war; disposed for war; possessing military instincts; soldierly; as, a warlike race.

Warm, (*worm*), *a.* [A. S. *wearm*.] Having a moderate degree of heat; not cold; as, warm blood, warm water.—Liable to heat; having prevalence of heat, or little or no winter; tropical; as, a warm climate.—Hence, zealous; ardent; fiery; impetuous; habitually excitable or passionate; irritable; easily excited or provoked; not cool, phlegmatic, lukewarm, or indifferent; as, his wife has an unpleasantly warm temper of her own; you have my warmest wishes.—Characterized by violence, fury, vehemence, or heat of action; as, there will be a pretty warm struggle for the senatorship.—Rich; comfortably placed, as regards property or means; beforehand with the world; as, a man worth a million is a warm man indeed.

(*Paint.*) Noting such colors as have yellow or yellowish-red for their basis;—in distinction from cold colors, which latter mainly consist of blues and their compounds; as, the warm tints of a picture by Turner.

—*v. a.* To make warm; to communicate a moderate degree of heat to; to apply or supply heat to; as, a wood-fire warms an apartment.—To make engaged or earnest; to interest; to excite ardor or zeal in; to engage; as, "The soul, with great and manly feelings warmed." *Chil.*

—*v. n.* To grow warm; to become moderately heated.—To become ardent, animated, or zealous.

Warm'er, *n.* The person who, or thing which, warms.

Warm'ful, *a.* Giving warmth; serving to warm.

Warm-hearted, *a.* Cordial; sincere; hearty; generous; feeling lively interest or affection; as, a warm-hearted man.

Warm'ing-pan, *n.* A long-handled, covered pan, to contain lighted coals for warming a bed.

War'minster, a town of England, in Wiltshire, 18 m. from Salisbury; *pop.* 5,500.

War'minster, in *Pennsylvania*, a post-township of Bucks co.

Warm'ly, *adv.* In a warm manner; with gentle heat.—Eagerly; ardently; earnestly; passionately; zealously; as, he warmly expressed his sympathy.

Warm'ness, *n.* Warmth. (R.)

Warm Springs, in *Georgia*, a post-village of Meriwether co., 36 m. N.N.E. of Columbus. The mineral spring at this place has a temperature of 90°, and discharges 1,400 gallons per minute.

Warm Springs, in *N. Carolina*, a post-village of Buncombe co., 290 m. W. of Raleigh.

Warm Springs, in *Virginia*, a township of Bath county.

Warm Springs, or BATH COURT-HOUSE, in *Virginia*, a post-village, cap. of Bath co., 170 m. W.N.W. of Richmond. It is noted for its mineral springs, situated in a narrow valley between two mountain ridges. The largest spring is 40 feet in diameter, and its temperature is 98° Fahr., winter and summer. The water holds in solution muriate, sulphate, and carbonate of lime, and sulphate of magnesia. There are a number of large buildings for the accommodation of visitors.

Warmth, *n.* State or quality of being warm; moderate heat; as, vital warmth.—Ardor; fervor; zeal; state of active or lively interest; as, warmth of affection.—Animation; earnestness; eagerness; enthusiasm; passion; as, warmth of temper, warmth of expression, spiritual warmth, &c.

(*Paint.*) A tone of color arising from the use of pigments expressive of heat; or the so-called hotter colors, as reds, deep-yellows, russet-browns, &c.

Warn, (*worn*), *v. a.* [A. S. *wyrnan*, to forbid; Ger. *warnen*.] To admonish of any duty; to give notice to; to inform previously; to notify by authority; to summon; as, to warn a special committee.—To give notice to of approaching harm, danger, or evil, that it may be avoided; to caution against anything that may prove injurious or injurious; to admonish against evil practices; as, to warn one against intended treachery.

Warn'er, *n.* One who warns or admonishes.

War'ner, in *New Hampshire*, a post-vill. and twp. of Merrimack co., 16 m. N.W. of Concord.

War'ner's Land'ing, in *Wisconsin*, a post-village of Vernon co., abt. 18 m. S. of La Crosse.

War'ner's Ranch, in *California*, a township of San Diego co.

Warneton, (*warn'tawng*), a town of Belgium, in West Flanders, on the Lys, 10 m. from Ypres. *Manuf.* Chocolate and starch. *Pop.* 6,842.

Warning, *n.* Admonition; caution; notification against risk or danger, or against such evil practices or pursuits as are suggestive of, or liable to, danger.—Previous notice or intimation; as, to discharge a servant without warning.

Warn'ingly, *adv.* In a warning or admonitory manner.

War'-office, *n.* The office of the war department of a kingdom or state; or the place in which the military affairs of a country are superintended and managed.

Warp, (*worp*), *v. n.* [A. S. *weorpan*, *warpan*; Ger. *werfen*.] To turn or incline from a straight, true, or proper course; to swerve; to deviate; as, "Methinks my favor here begins to warp." (*Shaks*).—To turn, twist, or be twisted out of a straight direction, or as by shrinking; as, green timber will warp.—To wind yarn off bobbins to form the warp of a web.—To turn and wave, or fly with an undulatory motion, like a flock of birds or swarm of insects.—To slink; to drop the young prematurely;—said of domestic animals.

—*v. a.* To turn or twist out of shape, or out of a straight direction, as by shrinking or otherwise, as boards, &c.—To cause to bend or incline; to turn aside from the true direction; to pervert; as, his mind is warped by

prejudice.—To slink, or cast prematurely, as the young of cattle, sheep, and the like.

(*Naut.*) To tow or move with a line or warp attached to buoys, to anchors, or to other ships, &c., by which means a ship is drawn usually in a bending course, or with various turns.

(*Rope-making.*) To run off the reel into hauls, to be tarred.

(*Agric.*) To fertilize by letting the tide upon, for the deposition of slimy matter, as laud.

Warped surface. (*Geom.*) A surface which may be generated by a straight line moving so that no two of its consecutive positions shall be in the same plane.

Warp, n. (*Weaving.*) The longitudinal threads of a woven fabric; they are crossed by the transverse threads, or *woof*.

(*Naut.*) A rope employed in drawing, towing, or moving a ship or boat; a tow-line; a hawser.—A premature dropping of young; —said of certain domestic animals.

(*Agric.*) The deposit of muddy waters artificially introduced into low lands.—State of being warped, shrunk, or twisted; as, the warp of a plank.

Warp'age. (*-aj*), *n.* A charge per ton made on shipping in some harbors.

War-paint, n. Paint of various colors, with which American Indians and other savages streak or tattoo their skin, preparatory to going on a warlike expedition.

War-path, n. The route taken by a party of Indians proceeding on a hostile expedition.

Warper, n. One who, or that which, warps, twists, or contracts.

(*Weaving.*) One who prepares the warp of webs.

Warp'ing, n. Act of one who warps, or that which warps.—Art, process, or business of preparing the warp of webs for the weaver.

(*Agric.*) A mode of increasing the fertility of tillage lands on the banks of rivers liable to be overflowed by their waters.

Warp'ing-bank, n. A bank of earth raised round a field to retain water let in for the purpose of enriching land.

War-proof, n. Courage or valor that has undergone the test of war.

Warp-thread, n. (*Weaving.*) One of the threads which compose the warp.

Warrant, (wôr'-'r), v. a. [*Fr. garantir*; *It. garantire*; from *A. S. warian, werian*.] To give a guaranty to; to authorize; to give power or authority to, as to do or forbear anything, by which the person authorized is secured or held harmless from any loss, damage, or detriment by such act; as, these thoughts cannot *warrant* you from suspicion in others.—To declare with assurance or confident anticipation; as, I *warrant* he who is born to be hanged will never be drowned.—To justify; to maintain, support, or verify by authority, proof, or evidence; as, one is *warranted* in assuming this to be a fact.

(*Law.*) To assure; to secure to, as a grant to a guarantee.—To secure, as the valid title of goods to a purchaser; or, to provide indemnification in the event of loss.—To guarantee to a purchaser the quality or quantity of goods or articles sold, as being equal to that which they are represented to be; as, *warranted* Sheffield cutlery.

—*n.* An act, instrument, or obligation, by which one person authorizes another to do some thing which he has not otherwise a right to do; an act or commission investing one with a certain right, power, or authority, and thus securing him from loss, damage, or detriment; anything which warrants, authorizes, or justifies the doing of; as, the breaking of rules by others is no *warrant* for our doing so likewise.—That which serves as guaranty, security, or assurance for anything; as, his word alone is sufficient *warrant*.—A voucher; that supplies proof or attestation; as, a pretender to piety backs his imposture by Scriptural *warrant*.—A writing or document which empowers a person to receive money, goods, or other thing or things; as, a *warrant* for the transfer of bonded spirits.

(*Crim. Law.*) The authority issued by a justice of the peace for the apprehension of some one. The *W.* should be under hand and seal of the justice; should set forth the time and place of making it, and the cause for which it is made; and should name the person against whom it is granted. It is good for the county in which it is issued, but cannot be enforced in another without being backed by a justice of that county. The officer is justified in apprehending the party at any time, and even in breaking open the doors of a house in pursuit of him.

(*Mil.*) A certificate of rank issued to commissioned officers.

Dock-warrant. (*Com.*) A custom-house license or permit. (*England.*)

Warrant of attorney. (*Law.*) A power given by a client to his attorney to appear and plead for him, or to suffer judgment to pass against him by confession. It authorizes a creditor to enter up judgment and levy execution, and is frequently granted as a security for a debt.—**Warrant-officer.** (*Army and Navy.*) A non-commissioned officer, as sergeant-major, sergeant and corporal in the army; or gunner, boatswain, and carpenter in the navy.

War'rantable, a. That may be warranted or authorized by commission, rescript, or right; justifiable.

War'rantableness, n. Quality of being warrantable.

War'rantably, adv. In a manner that may be warranted, justified, or defended.

Warrantee, n. One to whom a warranty is made.

War'ranter, n. One who warrants.

War'rantor, n. (*Law.*) One who makes a warranty.

War'ranty, n. Warranty; security; guaranty.

(*Law.*) As regards things personal, it is the general rule that a purchaser of goods and chattels may have a satisfaction from the seller, if he sells them as his own and the title proves deficient, without any express warranty for that purpose; but that with regard to the goodness of the things so purchased, the vendor is not bound to answer, unless he has expressly warranted them to be good, or unless he has in any way misrepresented them; but a warranty is implied in certain cases by the custom of trade or the nature of the contract.

(*Insurance.*) A stipulation or agreement on the part of the insured party, in the nature of a condition.—An *express W.* is a particular stipulation introduced into the written contract by the agreement of the parties. An *implied W.* is an agreement which necessarily results from the nature of the contract: as that the ship shall be sea-worthy when she sails on the voyage insured.—An *express W.* usually appears in the form of a condition, expressed or directly implied in the phraseology of the policy, stipulating that certain facts are or shall be true, or certain acts are or shall be done by the assured, who by accepting the insurance ratifies the stipulation. Where the stipulation relates wholly to the future, it is a promissory condition or *W.* An *express W.* must be strictly complied with; and the assured is not permitted to allege, in excuse for non-compliance, that the risk was not thereby affected, since the parties have agreed that the stipulated fact or act shall be the basis of the contract, unless compliance is rendered illegal by a subsequent statute. The doctrine of the *W.*, and conditions in the different species of insurance, has been the subject of a great mass of jurisprudence.

—*v. a.* To guarantee; to warrant; to vouch for.

Warren, (wôr'-'ren), n. [*Fr. garenne*; *L. Lat. warennia*.] A piece of ground appropriated to the propagation and preservation of rabbits.—A weir or place for taking fish in a river.

Warren, JOSEPH, an American patriot, b. in Roxbury, Mass., 1741. He graduated at Harvard College in 1759, studied medicine, and settled in Boston, where he soon acquired an extensive practice. He warmly embraced the cause of the colonies in the controversy with the British government, and, in 1772, was made a member of the committee of correspondence formed for the purpose of communication with the several towns in Massachusetts. In 1774, he was elected a delegate to the Massachusetts congress, of which he was made president, and also chairman of the committee of public safety. On June 14, 1775, he received a commission as major-general; and when a majority of the council of war determined to fortify Bunker Hill, he insisted on having a share in the action that would take place. As he was warned by Elbridge Gerry against the hazard of exposing his person: "I know that I may fall," was the answer of *W.*; "but where is the man who does not think it glorious and delightful to die for his country?" His glorious death, June 17, 1775, has been noticed under *BUNKER HILL, q. v.* His statue, by Henry Dexter, was inaugurated on Bunker Hill, June 17, 1857.

Warren, in Arkansas, a post-village and township, cap. of Bradley co., abt. 100 m. S.E. of Little Rock.

Warren, in Connecticut, a post-village and township of Litchfield co., 40 m. W. of Hartford.

Warren, in Georgia, a N.E. central co.; area, 264 sq. m. *Rivers.* Ogeechee; also Rocky Comfort creek. *Surface*, diversified; *soil*, moderately fertile. *Min.* Granite and soapstone. *Cap.* Warrenton. *Pop.* (1897) 11,680.

Warren, in Idaho, a post-village of Idaho co.

Warren, in Illinois, a W. co.; area, 540 sq. m. *Rivers.* Henderson; also Ellison's and Swan creeks. *Surface*, level; *soil*, fertile. *Min.* Stone-coal and limestone. *Cap.* Monmouth. *Pop.* (1897) 22,810.—A post-village of Jo Daviess co., 145 m. W.N.W. of Chicago.

—A township of Lake co.

Warren, in Indiana, a W. co., bordering on Illinois; area, 360 sq. m. It is bounded on the S.E. by the Wabash river. *Surface*, undulating; *soil*, fertile. *Cap.* Williamsport. *Pop.* (1897) 11,350.

—A township of Clinton co.

—A post-vill. of Huntington co., 85 m. N.E. of Indianapolis.

—A township of Marion co.

—A township of Putnam co.

—A township of St. Joseph co.

—A township of Warren co.

Warren, in Iowa, a S. central co.; area, 576 sq. m. *Rivers.* South and Prairie; also Squaw and Otter creeks. *Surface*, generally level; *soil*, productive. *Min.* Stone-coal. *Cap.* Indianola. *Pop.* (1895) 18,506.

—A township of Bremer co.

—A township of Keokuk co.

—A township of Lucas co.

—A township of Poweshiek co.

Warren, in Kentucky, a S.S.W. co.; area, 530 sq. m. It is traversed by Big Barren river. *Surface*, undulating; *soil*, fertile. *Cap.* Bowling Green. *Pop.* (1897) 31,480.

Warren, in Maine, a post-village and township of Knox co., 40 m. E.S.E. of Augusta.

Warren, in Maryland, a post-village of Baltimore co., 48 m. N. of Annapolis.

Warren, in Massachusetts, a river which rises in Bristol co., and falls into Narragansett Bay in Rhode Island.

—A post-village and township of Worcester co., 73 miles S.W. of Boston.

Warren, in Michigan, a post-township of Macomb co.

Warren, in Mississippi, a W. co., bordering on Louisiana; area, 590 sq. m. *Rivers.* Mississippi, Big Black, and Yazoo. *Surface*, low and flat, except in the W.; *soil*, very fertile. *Cap.* Vicksburg. *Pop.* (1897) 34,900.

Warren, in Missouri, an E. co.; area, 435 sq. m. *Rivers.*

Missouri; also Bear, Charette, Massies, Peruque, and Smith creeks. *Surface*, undulating; *soil*, fertile. *Cap.* Warrenton. *Pop.* (1897) 10,460.—A township of Camdeu co.—A post-village and township of Marion co., 95 m. N.N.E. of Jefferson City.

Warren, in New Hampshire, a post-township of Grafton county.

Warren, in New Jersey, a N.W. co., bordering on Pennsylvania; area, 360 sq. m. *Rivers.* Delaware, Mnsconetung, Paulinskill, and Pequest. *Surface*, mountainous; *soil*, fertile in the valleys. *Min.* Magnetic and bog iron, brown hematite, zinc, manganese, marble, soapstone, and roofing-slate. *Cap.* Belvidere. *Pop.* (1895) 37,283.

—A township of Somerset co.

Warren, in New York, an E.N.E. co., bordering on Lake George; area, 940 sq. m. *Rivers.* Hudson and Schroon. *Surface*, hilly; *soil*, inferior. *Min.* Iron, black-lead, limestone, and marl. *Cap.* Caldwell. *Pop.* (1897) 28,600.

—A post-township of Herkimer county, 70 m. S.W. of Albany.

Warren, in North Carolina, a river which forms the boundary between Granville and Warren cos., and enters the Roanoke river on the border of Virginia.

—A N. co., bordering on Virginia; area, 454 sq. m. *Rivers.* Roanoke and Warren; also Fishing creek. *Surface*, undulating; *soil*, fertile. *Cap.* Warrenton. *Pop.* (1897) 21,200.

Warren, in Ohio, a S.W. co.; area, 428 sq. m. *Rivers.* Great Miami and Little Miami; also Caesar's, Todd's, and Clear creeks. *Surface*, undulating; *soil*, very fertile. *Cap.* Lebanon. *Pop.* (1897) 26,650.—A township of Belmont co.—A township of Jefferson co.—A fine city and township, capital of Trumbull co., 160 m. N.E. of the city of Columbus.

—A township of Tuscarawas co.

—A township of Washington co.

Warren, in Pennsylvania, a N.N.W. co., bordering on New York; area, 855 sq. m. *Rivers.* Allegheny; also Broken Straw, Conewanga, Teonesta, and Kenjua creeks. *Surface*, hilly; *soil*, generally fertile. *Cap.* Warren. *Pop.* (1897) 39,300.—A township of Bradford co.

—A township of Franklin co.

—A post-borough, capital of Warren co., 120 m. N.N.E. of Pittsburgh.

Warren, in Rhode Island, a post-village and township of Bristol co., 10 m. S.E. of Providence.

Warren, in South Carolina, a township of Colleton co.

Warren, in Tennessee, a S.E. county; area, 450 sq. m. *Rivers.* Collins, and the Caney Fork of Cumberland River. *Surface*, hilly; *soil*, generally fertile. *Cap.* McMinnville.

Warren, in Vermont, a post-township of Washington co., 16 m. S.S.W. of Montpelier.

Warren, in Virginia, a N. co.; area, 250 sq. m. *Rivers.* The Shenandoah and its N. Fork. *Surface*, hilly; *soil*, generally fertile. *Min.* Copper, iron, limestone, and manganese. *Cap.* Front Royal.

Warren, in Wisconsin, a township of Waushara county.

Warren Creek, in Utah, a township of San Pete county.

Warrenham, in Pennsylvania, a post-village of Bradford co., abt. 14 m. S.E. of Oswego, N. Y.

Warrensburg, in Missouri, a fine city and township, cap. of Johnson co., 98 m. N.W. of Jefferson City. *Pop.* (1897) 5,250.

Warrensburg, in New York, a post-village and township of Warren co., 65 m. N. of Albany.

Warren's Store, in Alabama, a township of Hale co.

Warrensville, in Illinois, a post-village of Du Page co., 30 m. S.W. of Chicago.

Warrensville, in Ohio, a post-village and township of Cuyahoga county, 154 miles north-northeast of Columbus.

Warrensville, in Pennsylvania, a post-village of Lycoming co., abt. 7 m. N.N.E. of Williamsport.

Warrenton, in Alabama, a township of Dallas co.—A post-village, former cap. of Marshall co., 135 m. N.E. of Tuscaloosa.

Warrenton, in Mississippi, a post-vill. of Warren co., on the Mississippi, 8 m. S. of Vicksburg.

Warrenton, in Missouri, a post-village, cap. of Warren co., 75 m. E.N.E. of Jefferson city.

Warrenton, in N. Carolina, a post-village and township, capital of Warren county, 63 miles N.N.E. of Raleigh.

Warrenton, in Ohio, a post-village of Jefferson co., on the Ohio River, 11 m. S. of Steubenville.

Warrenton, in Virginia, a post-town, cap. of Fauquier co., 100 m. N.W. of Richmond.

Warrentown, in Pennsylvania, a village of Armstrong co., 47 m. E.N.E. of Pittsburgh.

Warriek, in Indiana, a S.W. co., bordering on the Ohio River; area, 336 square miles. It is traversed by Big Pigeon and Little Pigeon creeks. *Surface*, undulating; *soil*, fertile. *Min.* Coal. *Capital*, Boonville.

War'rington, a town of England, in Lancashire, on the Mersey, 5 m. from Newton. *Manuf.* Fustians, corduroys, glass-ware, hardware, soaps, pins, files, &c. *Pop.* 28,000.

Warrington, in Pennsylvania, a post-township of Bucks co., 6 m. N.W. of Doylestown.—A township of York co.

Warrior, (wôr'-'ri-ur), n. A person engaged in war or military life; emphatically, a brave man; a veteran soldier; a man of approved military skill and valor.

Warrior, in the State of Alabama, a post-village of Jefferson co.

Warrior's Mark, in Pennsylvania, a post-village

and township of Huntingdon co., 105 m. W.N.W. of Harrisburg.

Warsaw, (*waw'saw*), a city of Russian Poland, and formerly the capital of the Polish kingdom, situated on the Vistula, being connected with Praga, its fortified suburb, by a floating bridge; lat. $52^{\circ} 13' N.$, lon. $21^{\circ} 2' E.$ Warsaw consists of an old and new town, independent of its suburbs; the place is one of great antiquity, though possessing few attractions in its streets and older buildings to support its claim as a capital, being, with the exception of a few buildings, wretchedly built. The chief edifices are the council house, a collegiate church, the barracks, Tamek or palace of the ancient kings, now the residence of the Russian viceroy, and containing the diet hall, and all the national archives; the Marieville Bazaar, or a square surrounded with arcades; several statues, some private palaces of the nobility, with the castle and an equestrian statue of Sobieski.—*Manuf.* Woollen stuffs, soap, tobacco, gold and silver wire, hats, hosiery, paper, chemicals, carriages, harness, and, to a small extent, carpeting. It is the centre of industry, commerce, and literary activity of the kingdom, and the great entrepot of commerce in Poland. The university, suppressed by the Emperor Nicholas after the insurrection of 1830, has been reestablished within recent years through the influence of the Grand-Duke Constantine. In 1566 *W.* succeeded Cracow as the capital of Poland. In 1793 Kosciuszko retreated on Warsaw, and defended it with success against the Prussians, during the summer of 1794; but, on the arrival of Suwarow and the Russians, Praga was taken by assault, and delivered to pillage. Since 1815, Warsaw has been the residence of a viceroy representing the Emperor of Russia; it was also the place of meeting of the Polish parliament. In 1830 the Russians were driven from it by the Poles; but it was, in the following year, retaken. Pop. (1897) 484,460.

Warsaw, in Alabama, a post-township of Sumter county.

Warsaw, in Illinois, a town and river port of Hancock county, on the Mississippi, about 3 miles S. of Keokuk.

Warsaw, in Indiana, a city, cap. of Kosciusko co., 40 m. W.N.W. of Fort Wayne. Pop. (1897) 4,050.

Warsaw (formerly *Fredericksburg*), in Kentucky, a post-village, cap. of Gallatin co., on the Ohio, 50 m. below Cincinnati.

Warsaw, in Minnesota, a township of Goodhue county.

Warsaw, in Missouri, a post-town, cap. of Benton co., 80 m. W.S.W. of Jefferson City.

Warsaw, in N. Y., a p.-v. and twp., cap. Wyoming co., 45 m. S.E. of Buffalo. *W.* is the head-quarters of the extensive Salt industry of the co.

Warsaw, in O., a p.-v. of Coshocton co.

Warsaw, in Pennsylvania, a township of Forest co.—A post-village and township of Jefferson co., 7 m. N.E. of Brookville.

Warsaw, in Virginia, a post-village, cap. of Richmond co., 70 m. N.E. of Richmond.

War-soug, *n.* A song inciting men to deeds of war;—especially, among the N. American Indians and other savage nations, a song accompanying the war-dance, full of incentive allusions to the past prowess of the tribe, and prophesying deeds of prospective valor.

Wart, (*waw't*), *n.* [*A.S. weart.*] (*Med.*) A hard unsightly excrescence or tumor that forms on the cuticle or outer skin, usually of the hand or some other conspicuous place. They are of slow growth, small, insensible, and generally conical in form. The best application for their removal is some caustic or escharotic, as nitrate of silver, caustic potash, or strong acetic acid.

(*Bot.*) A hardened protuberance found on some plants.

Warta, or *WARTHA*, a river of Poland, rising 35 m. from Cracow, and, after a course of 450 m., joining the Oder at Castrin, or Kustrin, in the prov. of Brandenburg.

Wart-hog, *n.* (*Zool.*) A name given to the African swine of the genus *Phacochoerus* (*P. Cuv.*), from the large warty protuberances on each cheek.

Warty, *a.* Having warts; full of, or overgrown with, warts; as, a warty skin, a warty leaf.—Of the nature or character of warts.

War-whoop, (*-huhōōp*), *n.* [*war* and *whoop*.] The whooping cry or shout uttered by Indians when in conflict with an enemy.

Warwick, RICHARD NEVILLE, EARL OF, "the King-maker," was b. about 1428. He was the eldest son of Richard Neville, Earl of Salisbury, and having by marriage become possessor of the immense estates of the Beauchamp family, was created Earl of Warwick, when about the age of twenty-one. His personal character and great abilities, his enormous wealth and lavish expenditure, and his extended and important family connections, made him at once the mightiest English noble of his time, and the favorite of the people. The story of his life would be also that of the *Wars of the Roses*, in which he is the most prominent figure. A family alliance with Richard, Duke of York, father of Edward IV., led him to take the side of the house of York, and his dashing courage at the battle of St. Alban's in 1455, when he led the van, chiefly decided the victory of the Duke of York. In 1460, *W.*, who was then governor of Calais, landed in Kent with an army, was joined by large numbers, marched on London, and on July 10, defeated the Lancastrians at Northampton, and took Henry VI. prisoner. Queen Margaret escaped, and raised an army, with which she defeated the Duke of York at Wakefield in December, and the Earl of Warwick at St. Alban's in February, 1461. But these victories were fruitless, for *W.*, joined by Edward, now Duke of York, compelled the royal army to retire to the north, and oc-

cupied London, where Edward was at once proclaimed king. *W.*, at first loaded with honors, did not long retain the favor of the king. Edward, growing uneasy under the dominion of the haughty earl, married Elizabeth Woodville in 1464, and raised to his favor persons adverse to *W.*, who, in turn, made alliance with Queen Margaret, 1470, and married his younger daughter to Prince Edward, son of Henry VI. *W.* then invaded England with a fresh force, proclaimed and restored Henry VI., and with the Duke of Clarence, Edward's brother, entered London in triumph. But once more the tide turned; Edward, landing in Yorkshire in March, 1471, won the decisive victory of Barnet, April 14, at which the King-maker and his brother, Lord Montagu, were killed.

Warwick, (*wor'tik*), a town of England, cap. of co. of same name, 20 m. from Birmingham. It is of great antiquity, and justly celebrated for its castle, the principal

Fig. 2596. — WARWICK CASTLE.

residence of the earls of Warwick (Fig. 2596), beautifully situated on a rocky elevation, on the banks of the Avon. Of this edifice, Guy's Tower, 128 feet high, was built in 1394; and Caesar's Tower, still more ancient, is 147 feet high. Pop. 10,570. In 1871 the castle was partly destroyed by fire, but was rebuilt almost immediately by public contribution.

Warwick, in Md., a p.-vill. of Cecil co.—In Mass., a p.-twp. of Franklin co., 72 m. W.N.W. of Boston.

Warwick, in New York, a post-village and township of Orange co., 110 m. S.W. of Albany.

Warwick, in Ohio, a township of Tuscarawas county.

Warwick, in Pennsylvania, a township of Bucks county.—A post-township of Chester county.—A village and township of Lancaster county, 9 m. N.E. of Lancaster.

Warwick, in Rhode Island, a post-township of Kent co., 10 m. S.W. of Providence.

Warwick, in Virginia, a S.E. co., bordering on James river; area, 165 sq. m. Surface, diversified; soil, fertile. Cap. Newport News. Pop. (1897) 10,250.

—A village, former cap. of the above co.

Warwick Neck, in Rhode Island, a point of land in Kent co., projecting into Narraganset Bay, near the S. extremity of which, at the entrance to E. Greenwich Harbor, is a light-house with a fixed light; lat. $41^{\circ} 34' 12'' N.$, lon. $71^{\circ} 27' W.$

Warwickite, *n.* (*Min.*) Native borotitanate of magnesia and iron, met with in dark-brown to black crystals, in granular limestone, near Edenville, New York.

War-worn, *War-beaten*, (*-bē'n*), *a.* Worn with military service, or long and hard campaigning; as, a war-worn veteran, a war-worn uniform.

Wary, *a.* Circumspect; heedful of danger; cautiously watching and guarding against deception, artifices, and dangers of whatsoever kind; timorously prudent; scrupulous; as, a wary leader, a wary diplomatist.—Guarded; careful; mindful.

Was, (*wōz*). The past tense of the substantive verb *to be*; as, I was, he was, she was.

Was'co, in Oregon, a N. co., bordering on Washington. Rivers. Columbia, John Day, and Des Chutes, or Fall river. Surface, mountainous on the W., where Mount Hood, a peak of the Cascade Range, attains an elevation of 14,000 feet; soil, generally unfertile. Cap. The Dalles. Pop. (1897) 10,100.

Wase'ca, in Minnesota, a S. co.; area, 430 sq. m. It is drained by Le Sueur river. Surface, undulating; soil, fertile. Cap. Waseca. Pop. (1895) 14,713.

Wash, (*wōsh*), *v. a.* [*A. S. wascan, wascan*; Du. *waschen*; Ger. *waschen*; Dan. *vaske*.] To cleanse by ablution or lavatory operation; to purify by dipping or rubbing in water; to apply water or liquid to for the purpose of cleansing; as, to wash the hands or face, to wash linen, to wash sheep, to wash a floor or pavement, and the like.—To wet, by covering with water;—hence, to overflow or dash against; as, waves wash the base of a cliff.—To separate extraneous matter from; to abrade or disintegrate by the force of moving water; as, the inundations washed away the levee.—To remove from, or take away by the action of water; to draw or drag off;—used in conjunction with *off*, *out*, or *away*; as, the colors are washed out, he was washed off his feet, &c.—To rub over or coat thinly with some liquid substance; as, to wash a picture with a glaze of varnish.—To overlay with a thin surface of metal; as, glass washed with quicksilver.

To wash gold, or other ores, to apply water to crushed ores, in order to separate the metallic particles through their superior gravity.

To wash a ship. (*Naut.*) To wash and scrape a ship by careening her over.

v. n. To cleanse one's self by the use of water; to perform the customary act of ablution.—To perform the operation of cleansing clothes, linen, &c., in water; as, to hire a woman to wash.—To bear without detriment the operation of washing; as, will this cloth wash?—To be abraded or worn away by the action of water, as by a torrent or inundation, or by the dashing of the sea.

n. Act of washing or ablution; lavatory operation; a washing or wetting with water; a dipping or steeping in water—hence, the quantity of linen belonging to a person or family washed at one time; as, to send one's things to the wash.—A bog; a marsh; a fen; the shallow part of a river or arm of the sea; or, a tract of land sometimes covered with water and at other times left dry.—Matter collected by water; alluvion, or substances collected and deposited by water; as, the wash of a sewer.—Waste liquor and kitchen refuse; as, hog wash.—In distilling, the fermentable liquor produced by dissolving the proper subjects for fermentation and distillation in common water.—That with which anything is wetted, washed, coated, &c., upon the surface; as, (1.) A color spread or floated thinly over broad masses or spaces of a picture to make it appear the more natural. (2.) A thin coat of metal, or other substance, laid on boards or other work for beauty or preservation. (3.) A cosmetic for the complexion; as, a face-wash; also, a preparation for improving the hair; as, a hair-wash. (4.) A lotion; a medical preparation in a liquid form, to be applied externally; as, a black wash.—In England, the quantity of ten strikes of oysters.

(*Naut.*) The blade of an oar, or the broad, thin part which cleaves the water.

Wash'able, *a.* That may be washed or cleansed.

Wash'a, a lake of Louisiana, 12 m. long, abt. 12 m. S.W. of New Orleans, and connected by several bayous with the Gulf of Mexico.

Wash'-ball, *n.* A ball of soap used in ablutions.

Wash'-board, *n.* A board with a ribbed or fluted surface on which linen, &c. is rubbed in course of being washed.—The mop-board of a room.

(*Naut.*) A movable piece of board placed above the gunwale of a boat, or elsewhere, to prevent the water from washing over.

Wash'burn, in Arkansas, a township of Logan co.

—A township of Sebastian co.

Washburn, in Illinois, a post-village of Woodford co., on the Chicago & Alton R.R. Pop. (1897) 710.

Washburn, in Maine, a post-town of Arrostook co., on the Arrostook river. Pop. (1897) 1,120.

Washburn, in Wisconsin, a village of Grant co., about 16 m. E. of Lancaster.

Washer, (*wōsh'ūr*), *n.* One who, or that which, washes.

—An iron ring between the nave of a wheel and the linch-pin.—A piece of iron, leather, &c., in the form of a flattened ring, interposed between the surface of wood, &c., and the head or nut of a bolt, to protect the surface from being damaged during the process of screwing up; it is also used to render screen and other junctions air-tight.

Wash'er-man, *n.* A man employed in laundry-work.

Wash'er-woman, *n.* A laundress.

Wash'-gilding, *n.* Same as *WATER-GILDING*.

Wash'-house, *n.* An apartment, usually in an out-building, for washing linen, &c.: a laundry.

Wash'iness, *n.* State or quality of being washy.

Washing, (*wōsh'ing*), *n.* Ablution; act of one who washes or cleanses with water.—A wash, or the quantity of clothes, linen, &c., washed at one time; as, he owes for a month's washing.

Wash'ing-machine, (*-ma-sheen'*), *n.* A machine used in laundries.

Wash'ing-stuff, *n.* Among gold miners, any deposit of earth containing gold enough to pay for working and washing it.

Wash'ington, GEORGE, the leader of the American revolution, and first President of the United States, b. in Westmoreland co., Va., February 22, 1732; son of Augustine W., and his second wife, Mary Ball; a descendant of John W., who emigrated to Virginia from England about 1657, whose family has been satisfactorily traced in England to the 12th century, and to the co. of Durham. Augustine W. died in 1743, when George was in his 12th year. He left a large landed property to his widow and 5 children. To his eldest son Lawrence he gave an estate on the Potomac, afterwards so famous as Mount Vernon; George inherited that on the Rappahannock occupied by the father at the time of his death; a plantation of 600 to 700 acres was bequeathed to each of the other children; while the income of the whole property was given to the mother till the sons respectively should come to age. The education of George, obtained at an ordinary school, comprised little more than reading, writing, and arithmetic; but between his 14th and 16th years he studied geometry and surveying, in which he made considerable progress. Though it has been questioned if he knew any language but English, it is understood that he studied French after the responsibilities of command had fallen on him, for the purpose of holding communication with the auxiliaries sent from France to join the army of independence. On the other hand, his practical acquirements were precociously developed. When but sixteen years old he was employed in surveying the vast wilderness owned by his connection, Lord Fairfax, in the district of the Alleghany Mountains. He pursued the profession of a surveyor, which, in a country then full of estates, utterly unknown in character and extent to their owners, was a lucrative one; and he is said to have thus obtained an unconscious training for his subsequent warlike operations by acquiring a minute acquaintance with some parts of the country, and a knowledge of the general characteristics

George Washington

1732-1799

of the whole. Before he was twenty years old he received an important command as adjutant-general of one of the military districts into which Virginia was divided to resist the Indians, and his genius raised him to a more important command in the American war with France in 1754. In a mission across the frontiers to ascertain the objects of the French, he discovered through his extraordinary sagacity the plans of aggrandizement which led ultimately to the destruction of French power in America. He distinguished himself in the war which then broke out, and as all this occurred before he was twenty-three years old, his history decidedly supports the theory that the faculty of the military commander is generally developed early in life. In 1759, W. married Mrs. Martha Custis, a widow. She brought considerable property to add to W.'s large estates, and for some years his hands were as full of business, in the management of private property and attendance on the provincial legislature, as they ever afterwards were when he was at the head of the Union. It was one of his peculiarities that he carried out small matters with the same articulate organization as large. He slurred over nothing, and his household books, of which facsimiles have been extensively circulated, would have stamped him as a pedantic trifler, had they not exemplified the same rigid adherence to system and accuracy of detail with which he subsequently organized the government of a great nation. He took an unnoticeable

Fig. 2597. — GEORGE WASHINGTON.

but active part in his own province, in the preparations for the assertion of independence. He was appointed one of the delegates from Virginia to the first general congress in 1774, and had the command of the independent companies of the State. Still, his position had never been brilliant or even conspicuous, and it is perhaps the most remarkable instance of that common sense which characterized the revolution, that the supreme command of the army of independence should have fallen into his hands. He became commander-in-chief on the 15th of June, 1775. The history of W., from this period, is the history of the revolutionary war, to be found in other parts of this work. Suffice it to say that he created the American army; fought the English generals, Howe, Clinton, Burgoyne, and Cornwallis, with various results; till, finally, he surrounded Cornwallis at Yorktown, and compelled him to capitulate. To his intrepidity, prudence, and moderation, this country is almost wholly indebted for the independence which was secured to it by the treaty of peace concluded in 1783. Soon after this event, W. resigned his commission to Congress, and in his address on that occasion, the magnanimity of the hero was blended with the wisdom of the philosopher. He returned to his seat at Mount Vernon (*q. v.*), and, like Cincinnatus of old, he returned to his former and favorite pursuits of agriculture. The federation of the States having failed to afford an efficient government, Washington proposed conventions for commercial purposes, which led to the Convention of 1787, of which he was a member, which founded the present federal Constitution, considered by him as the only security against anarchy and civil war. Under this Constitution he was chosen President, and inaugurated at New York, April 30, 1789. His government was marked by that well-tempered prudence which distinguished all his conduct. Having been reelected as President, he held office till 1797, when he again retired to his estate at Mount Vernon. In 1797, when there arose a difficulty with France, threatening hostilities, he was appointed lieutenant-general and commander-in-chief, a post which he accepted with extreme reluctance, but with that spirit of obedience to the call of duty which had been the governing rule of his life. On the 12th of December, 1799, he was exposed in the saddle, for several hours, to cold and snow, and attacked with acute laryngitis, for which he was repeatedly and largely bled, but sank rapidly, and died, Dec. 14. W. was childless, but most happy in his domestic relations. He was mourned even by his enemies, and deserved the record: "First in peace, first in war, and first in the hearts of his countrymen." The following estimate of the character and intellect of the great American patriot is from President Jefferson:—"His mind was great and powerful, without being of the very first order; his penetration strong, though not so acute as that of a Newton, Bacon, or Locke; and, as far as he saw, no judgment was ever sounder. It was slow

in operation, being little aided by invention or imagination, but sure in conclusion. Hence the common remark of his officers of the advantages he derived from councils of war, where, hearing all suggestions, he selected whatever was best; and certainly no general ever planned his battles more judiciously; but, if deranged during the course of action, if any member of his plan was disarranged by sudden circumstances, he was slow in readjustment. The consequence was, that he often failed in the field, but rarely against an enemy in station, as at Boston and York. He was incapable of fear, meeting personal danger with the calmest unconcern. Perhaps the strongest feature in his character was prudence, never acting until every circumstance, every consideration, was maturely weighed; refraining, if he saw a doubt; but, when once decided, going through with his purpose, whatever obstacles opposed. His integrity was the most pure, his justice the most inflexible, I have ever known; no motives of interest or consanguinity, of friendship or hatred, being able to bias his decision. He was, indeed, in every sense of the word, a wise, a good, and a great man. His temper was naturally irritable and high-toned; but reflection and resolution had obtained a firm and habitual ascendancy over it. . . . His person was fine, his stature exactly what one could wish. Although in the circle of his friends, where he might be unreserved with safety, he took a free share in conversation, his colloquial talents were not above mediocrity, possessing neither copiousness of ideas nor fluency of words. In public, when called on for a sudden opinion, he was unready, short, and embarrassed. Yet he wrote readily, rather diffusely, in an easy and correct style. He read little, and that only on subjects of agriculture and English history."

Washington, the capital of the United States of America, is situated in the District of Columbia, on the E. bank of the Potomac river, 160 m. from its mouth, 39 m. S.W. of Baltimore, 136 m. from Philadelphia, 226 m. from New York, 432 from Boston, 497 m. E. from Cincinnati, 700 m. from Chicago, 856 m. from St. Louis, 2,000 m. from San Francisco, and 1,033 m. N.E. from New Orleans; Lat. (taken from the Capitol) 38° 52' 20" N., Lon. 77° 0' 15" W. The natural situation of W. is pleasant and salubrious, and it is laid out on a plan which renders it one of the handsomest and most commodious cities in the world. The city covers an area of 110 sq. miles, or, including Georgetown (now West Washington) and the country sections of the district, 70 sq. miles. Of the area of the city proper, more than half is occupied by streets, parks, &c., there being 235 miles of streets, mostly paved with asphalt, and planted with shade trees, of which there are in all over 85,000. The city possesses numerous small parks and other reserved spaces, and possesses besides a zoölogical park of 140 acres, 600 acres of improved park and forest at the National Soldiers' Home, two miles from the city, and the Rock Creek Park of over 1,500 acres, purchased in 1892, which extends for miles along a picturesque stream and through forest land. The architecture of the newer portions of the city is of great beauty and attractiveness, being rendered strikingly so by its many imposing public buildings. Chief among these is the Capitol, in which the sessions of the National Congress are held and the Supreme Court holds its sittings. This edifice (Fig. 2551), conspicuously placed on an eminence, is a noble example of classic architecture, 751 feet long and 285 to the top of its dome, its total cost being about \$14,000,000. The Senate Chamber, 112 by 82 feet, has galleries for 1,000 spectators. The Hall of Representatives is 139 by 93 feet, with galleries for 1,500. The rotunda under the dome contains national paintings by Trumbull, Weir, Vanderlyn, Powell, Chapman, &c., while the interior of the building is highly ornamented by rich marbles, frescoes, groups of statuary, and other adornments. The other more prominent public edifices of the city include the Treasury Department building, a granite Ionic edifice, built at a cost of \$7,000,000; the Doric structure of the Department of the Interior, containing the Patent Office; the Corinthian marble edifice of the Post-office Department; the Renaissance granite structure of the State, War, and Navy departments, and the newly constructed Congressional Library building, of white granite, in Italian Renaissance style, built at a cost of \$6,000,000. The Presidential mansion, known as the "White House," is a plain freestone edifice, which may soon be replaced with a building of more striking architecture. There may be named, in addition, the buildings of the Agricultural Department, the Department of Justice, the Pension Office, the National Museum, the Army Medical Museum, the Smithsonian Institution, &c. One of the most striking erections in the city is the Washington Monument, a towering white marble obelisk, 555 feet in height. The public institutions of the city are numerous, including various asylums, hospitals, homes, &c., free public museums, libraries and art galleries, and various educational institutions, embracing Georgetown College (1789), Columbian University (1814), the Catholic University of America (1887), the American University, the National Deaf Mute College, &c. The city is adorned with an abundance of statuary, many of the heroes and statesmen of the Republic being reproduced in bronze. W. has numerous clubs and an abundance of literary and scientific societies, including the Anthropological, Philosophical, and Biological and other scientific societies, the Columbia Historical, and a number of literary and patriotic societies. It is also a center for conventions of a great variety of character, Convention Hall accommodating an audience of 10,000 people. Two of its institutions have a world-wide fame in the world of

science, the Smithsonian Institution and the National Museum, each possessing great collections and being the center of a vast amount of valuable scientific work.—*Hist.* W. was founded in 1790, and became the seat of government of the U. S. in 1800. Its capitol and other public buildings were burned by the British army in 1814, and the navy yard by the Americans. These have all been rebuilt on a greater scale, though W. made no great progress until after the Civil War. Since then its development has been rapid, and it has grown into perhaps the most beautiful capital city in the world. Pop. (1860) 61,122; (1890) 230,392; (1897) 295,250.

Washington, one of the States of the American Union, the 42d in order of admission, and, with the exception of Alaska, the most N.W. section of the U. S. It is bounded N. by British Columbia, S. by Oregon, E. by Idaho, and W. by the Pacific Ocean, and lies between Lat. 45° 30' and 49° N., and Lon. 117° and 125° W. Maximum length E. to W. 345 m., breadth N. to S. 230 m., area 69,180 sq. m., or 44,275,200 acres.—*Gen. Desc.* W. has a coast line of about 250 m. in length. In the N. the State is separated from Vancouver's Island by the Strait of Juan de Fuca, which forms part of the inland sea known as Puget Sound. The Sierra Nevada mountains of California take the name of the Cascades, or Cascade Range, in Oregon and Washington, traversing the latter in a nearly N. and S. course, at an average distance from the coast of 100 m. This range separates the State into unequal divisions, the E. and W., which differ from each other in climate, soil, geological character, and natural productions. The loftiest peaks in this range are Mt. Rainier (14,444 ft.) and Mt. Baker (10,827 ft.). The Coast Range does not traverse the entire breadth of the country, but is located between Hood's Canal and the ocean, in the N.W. portion of the State. Mt. Olympia, the highest peak in this range, attains an altitude of 8,200 feet, being visible at sea many miles from the coast. Around and from the base of this main sierra the mountains descend to spurs foot-hills, which abruptly terminate at the Pacific coast. The division of the State west of the Cascade Range embraces the Puget Sound Basin, the Coast Range district, the valley of the Chehalis, and the region drained by the Lower Columbia and its N. tributaries. Puget Sound is the general name popularly given to the vast ramification of waters known geographically by the various names of Strait of Juan de Fuca, Puget Sound, Admiralty Inlet, and Hood's Canal, together with a great number of bays, inlets, and harbors, each having a separate name. This great maze of waters constitutes one of the finest bodies of inland water in the world. Nothing can exceed the beauty of these waters and their safety. Not a shoal exists within the Strait of Juan de Fuca, Admiralty Inlet, or Hood's Canal, that can interrupt their navigation by the largest vessels. These waters cover in all an area of about 2,000 sq. m. The Strait of Juan de Fuca is 95 m. long and 11 m. in average width. It connects by Puget Sound with Admiralty Inlet, which extends from 60 to 70 m. into the State, and with Hood's Canal and the multitude of smaller inlets and bays. The shores of all these inlets are bold and the adjoining waters usually deep, so much so that in many places a large vessel can moor directly against the shore without need of wharfage. The country surrounding these waters is remarkably salubrious, and presents every advantage for the development of a vast commercial and naval marine, with conveniences for docks, and many suitable locations for mercantile cities. No part of the world affords finer inland sounds or a greater number of harbors suitable for vessels of the largest class than may be found within the Strait of Juan de Fuca. These waters extend from 47° to 49° N. Lat., covering an area of 1,500 sq. m., and with a total shore line of 1,594 m. The Columbia river, traversing the whole breadth of the State from N. to S. and forming a large section of its southern boundary, constitutes a main artery for travel and transportation of merchandise and produce from the interior to the Pacific, forming a highly important channel of communication between the sections of country separated by the Cascade Mountain range. The principal affluents of this noble stream are Lewis Fork, and Clarke and Spokane rivers.—*Soil and Products.* The soil in the western valleys is very generally fertile, while between the Cascades and the eastern boundary of the State the plain of the Columbia presents a sterile, barren region, nearly destitute of wood and water. The valleys of the Puyallup and Stock rivers, emptying into Puget Sound, afford a large quantity of good tillable land. The soil in the river bottoms is thinly timbered with maple, ash, elm, balsam, and willow. These lands yield heavy crops of cereals, while vegetables reach an enormous size. The highlands are generally of a rolling character, and well adapted to cultivation. In the valley of the Skagit river, rising in the Cascade Range, and of other streams also embouching into Puget Sound, are found large tracts of cleared lands possessing highly fertile soil. In the valley of the Skokomish river, which takes its rise in the Coast Range and empties into Hood's Canal, some 30 m. N.E. of Olympia, the soil is equal to the best bottom land in the W. States. The average yield of potatoes to the acre is 60 bushels; wheat, 40; peas, 60; timothy grass, 5 tons, and oats, 70 bushels. Into Hood's Canal, at different points from 5 to 30 m. below the mouth of the Skokomish, several smaller streams emerge, the valleys of which are marked by the same general features as that of Skokomish. The Chehalis river, rising in the Cascades not far north of the Columbia, and navigable for light-draught steamers a distance of 60 m. from Gray's Harbor, into which it

falls, borders a valley which is the richest and most extensive body of tillable land in the W. section, and well deserves the title accorded to it—that of the garden of W. This valley varies in breadth from 15 to 50 m. Cowlitz Valley, bordering on the Columbia, has fine agricultural land, both prairie and bottom. The field, orchard, and garden products of the section W. of the Cascade Range are similar to those of the Willamette Valley, in Oregon. The crops of wheat, barley, and oats are equal to those of any other part of the continent. In fruits, the apple, pear, cherry, and plum are abundant, and of excellent quality. The coolness of the nights is unfavorable to the maturing of Indian corn, peaches, and grapes, yet in well-sheltered nooks in the valleys these are successfully cultivated. In the central portion of the State, situated between the Cascades and the Columbia river, with the exception of certain valleys, the soil is generally thin, sterile, stony, and dry. On the tributaries of the Yakima river, however, particularly toward its upper waters, the land is highly fertile and well adapted to most crops. The same is true of Yakima Valley itself. Timber of large growth is scarce in this section of W., with the exception of that found in the country along the N. feeders of the Yakima, where good building pine is abundant. Eastern W. differs in almost every respect from the western section of the State. Much of it is essentially a prairie country, its surface composed of disintegrated lava, coming from the immense lava flow that at one time covered this whole region. This forms a soil unsurpassed for its elements of fertility, but over much of its area the rainfall is insufficient for agriculture, and irrigation is necessary to the profitable tillage of the fields. The mountainous region N. of Spokane river, forming the N.E. section of the State, is mostly occupied by Indian reservations, though the Colville Valley, which is open to settlement, contains much good land and valuable timber. The Walla-Walla Valley, in the S.E. quarter of this region, between the Columbia river and the Blue Mountains, contains over a million acres of arable land. Large quantities of grain and produce are shipped from this region down the Columbia to a ready market. In the Columbia and Palouse valleys are immense tracts of land adapted to cereals, and in this locality, too, sheep-raising succeeds admirably. The forests from the Cascade Range to the Pacific form a dense mass of some of the finest timber growths in the world, affording many examples of trees 400 ft. high, and 14 ft. in diameter near the ground. The principal varieties are several kinds of fir, interspersed with spruce, hemlock, tamarac, white cedar, maple, ash, white oak, and, on some of the mountain slopes, white pine. Puget Sound is now the greatest timber mart of the Pacific seaboard, while the abundance of coal, water-power, and iron ore in the vicinity of navigable waters, together with fine harbors, large saw-mills, and natural facilities for manufacturing cordage, all clearly indicate that the Puget Sound country will at no distant day occupy a prominent position in ship-building. Vast quantities of lumber, besides wheat and fish are annually exported to Australia, Japan, China, the islands of the Pacific, and ports on the W. coast of South America.—*Climate.* The climatic characteristics of Eastern W. in winter correspond with those of Pennsylvania, while the summers are dry and hot. The annual rainfall is only about one-fourth as much as in the vicinity of Puget Sound. W. of the Cascade range, the meteorological conditions differ essentially from those of the E. section. It is not unusual for the winter months to be mild, without snow or ice. The agricultural productions of Eastern W. are principally wheat, oats, barley, hops, and hay. Hops are one of the most important crops, the yield of 1890, an unusually heavy one, being 42,476 bales. As much as 3,000 lbs. of hops to the acre are reported from the most prolific fields. Other crops are Indian corn, rye, flax, and garden vegetables generally. The State, like its sister State of Oregon, excels in fruits, including apples, pears, prunes, cherries, and the small berries. The lack of rain, as already stated, is being in a considerable measure replaced in the central region of the State by irrigation; where what was once a spread of sage-brush plains is being rapidly converted into a fertile region of farms. There were 48,000 acres of irrigated land under cultivation in 1890, and a considerably larger area has been since brought under water culture, millions of dollars having been invested in irrigating works. Alfalfa, hops, fruits, and vegetables form the principal crops of the irrigated section, while the Yakima Valley, which forms the center of this section, grows also large numbers of watermelons for export.—*Min.* Coal exists in abundance between Puget Sound and the Cascades, and is found throughout the district extending from Bellingham Bay to the Chehalis Valley, and also near the headwaters of the Yakima, the total coal-bearing area being thousands of square miles in extent. The coal is of the bituminous variety, and the mines have been developed to a considerable extent, yielding over a million tons yearly, much of which is shipped to San Francisco. There are large deposits of iron ore, though as yet they have been little worked. The other minerals include gold, silver, lead, copper, zinc, antimony, nickel, bismuth, and some other metals, while granite, sandstone, lime, marble, and valuable clays exist. The islands of Puget Sound, which are so numerous and of such size that two entire counties—Island and San Juan—are formed of them, supply most of the lime used in the State. Little has as yet been done to develop the mineral wealth of the State other than its coal. Two large smelters are in operation at Tacoma and Everett, but the wealth of

precious metals awaits active measures of development. The total product of gold up to date has been something over \$1,000,000 in value, that of silver only about \$20,000, but there will probably be a much larger yield in the future.—*Pol. Div.* W. is divided into 34 counties, as follows:

Adams,	Franklin,	Lincoln,	Spokane,
Asotin,	Garfield,	Mason,	Stevens,
Chehalis,	Island,	Okanogan,	Thurston,
Clallam,	Jefferson,	Pacific,	Wahkiakum,
Clarke,	King,	Pierce,	Walla-Walla,
Columbia,	Kitsap,	San Juan,	Whatcom,
Cowlitz,	Kittitas,	Skagit,	Whitman,
Douglas,	Klickitat,	Skamania,	Yakima,
	Lewis,	Snohomish,	

Prin. towns.—Olympia (the capital), Seattle, Tacoma, Spokane Falls, Walla-Walla, Port Townsend, &c.—*Manuf.* W. possesses considerable water-power, the falls of Spokane being estimated to yield 35,000 horse-power, which is being utilized by manufacturers. Large flour mills are located here and at other towns through the eastern section, while the principal manufactures in the western section are those of iron, lumber, bricks, and tiles. The capital employed in productive enterprises in 1890 aggregated \$34,369,735. Seattle and Tacoma were the principal manufacturing centers, while since that date the city of Everett has become active in production. There are numerous saw and shingle mills, sash and door factories, &c., the capital employed in these plants being about \$30,000,000.—*Fisheries.* The most productive salmon fisheries in the world are those of the Columbia river, though of late years they have become greatly depleted by over-fishing. In 1880, the catch was 40,000,000 lbs., of which 22,000,000 were canned. The greatest pack for any one year was in 1883, 629,000 cases. Since then there has been a large decrease, but fish culture promises to restore much of the former yield of the salmon. The sturgeon and oyster-fisheries are also valuable.—*Communication.* A transcontinental railroad, the Northern Pacific, entered Washington in 1885, since which several main lines or important branches of railway have been built in the State, the mileage being about 3,000, of which more than 1,200 miles belong to the Northern Pacific and its branches. Steamboating is active on the Columbia and Snake rivers, but Puget Sound is the principal seat of water transportation.—*Educ.* Provision has been made for public schools by setting aside section 16 or 36 of every township, the total being 2,484,480 acres, whose minimum price is fixed at \$10 an acre. In addition to the public schools, there are the University of Washington, several colleges and normal schools, an agricultural college, and numerous academies and private schools.—*Inhab.* The State contains many remnants of the aboriginal tribes, chiefly Indians of the Spokane, Chinook (or Flathead), Nez Percés, and Shoshone tribes. The Nez Percés and some of the Spokanes have attained agricultural habits, cultivating large fields of grain, while they live in cabins or lodges made of skins. It was the custom among some of the tribes to flatten their heads, a practice which gave them the popular title of Flatheads. This habit is now practically obsolete.—*Hist.* For the early history of this region, see OREGON. W. was a part of Oregon Territory until the admission of Oregon, in 1853, when this section was separately organized as Washington Territory. There was subsequently considerable trouble with the Indians. Immigration having set actively in that direction, it was admitted into the Union as a State, Nov. 11, 1889. Pop. (1880) 75,116; (1890) 319,390; (1897) 418,000.

Washington, in Connecticut, a post-village and township of Litchfield co., 33 m. S.W. of Hartford.

Washington, in Florida, a W. co., bordering on the Gulf of Mexico; area, 1,340 sq. m. Rivers, Choctawhatchee and Econfena. Surface, undulating; soil, moderately fertile. Cap. Vernon. Pop. (1897) 7,900.

Washington, in Georgia, an E. central co.; area, 688 sq. m. Rivers, Oconee, Ogeechee, and Ooloopee; also Buffalo creek. Surface, undulating; soil, generally fertile. Cap. Sandersville. Pop. (1897) 26,150.—A township of Banks co.—A post-village, cap. of Wilkes co., 53 m. W.N.W. of Augusta.

Washington, in Illinois, a S. co.; area, 540 sq. m. Rivers, Kaskaskia; also Beancoup, Crooked, and Elk creeks. Surface, undulating; soil, generally fertile. Cap. Nashville. Pop. (1897) 21,050.—A township of Carroll co.—A city of Tazewell co., 13 m. E. of Peoria. Cap. (1897) 1,520.—A township of Will co.

Washington, in Indiana, a S. co.; area, 500 sq. m. Rivers, Blue, Lost, Muscatuck, and the East Fork of White river. Surface, hilly on the E., elsewhere undulating; soil, fertile. Cap. Salem. Pop. (1897) 20,000.—A city, cap. of Davies co. Pop. (1897) 6,640.—Also the name of 44 townships in: Adams co.—Allen co.—Blackford co.—Boone co.—Brown co.—Carroll co.—Cass co.—Clarke co.—Clay co.—Clinton co.—Davies co.—106 m. S.W. of Indianapolis.—Dearborn co.—Decatur co.—Delaware co.—Elkhart co.—Gibson co.—Grant co.—Greene co.—Hamilton co.—Harrison co.—Hendricks co.—Jackson co.—Knox co.—Kosciusko co.—Marion co.—Miami co.—Monroe co.—Morgan co.—Newton co.—Noble co.—Owen co.—Parke co.—Pike co.—Porter co.—Putnam co.—Ripley co.—Rush co.—Shelby co.—Starke co.—Tippecanoe co.—Warren co.—Washington co.—Wayne co.—Whitley co.

Washington, in Iowa, a S.E. co.; area, 576 sq. m. Rivers, Iowa, Skunk, and English. Surface, undulating; soil, fertile. Cap. Washington. Pop. (1895) 18,845.—Also the name of 33 townships in: Adair co.—Adams co.—Appanoose co.—Black Hawk co.—Bremer co.—Buchanan co.—Chickasaw co.—Clarke co.—Clinton

co.—Dallas co.—Des Moines co.—Dubuque co.—Franklin co.—Greene co.—Iowa co.—Jackson co.—Jasper co.—Johnson co.—Jones co.—Keokuk co.—Lee co.—Linn co.—Lucas co.—Marion co.—Montgomery co.—Page co.—Poweshiek co.—Ringgold co.—Taylor co.—Van Buren co.—Wapello co.—Warren co.—Washington co., 40 m. W.S.W. of Muscatine. This township contains a city of same name, cap. of the co. Pop. (1897) 3,671.

Washington, in Kansas, a N. co., bordering on Nebraska; area, 900 sq. m. Rivers, Little Blue river and Snake creek. Surface, diversified; soil, fertile. Cap. Washington. Pop. (1895) 21,602.—A twp. of Anderson co.—A twp. of Crawford co.—A twp. of Doniphan co.—A city and twp. of Washington co.

Washington, in Kentucky, a central co.; area, 300 sq. m. It is traversed by Chaplain's Fork of Salt river. Surface, undulating; soil, fertile. Cap. Springfield. Pop. (1897) 14,230.—A post-village, former cap. of Mason co., 3 m. S.W. of Maysville.

Washington, in Louisiana, an E. parish, bordering on Mississippi; area, 660 sq. m. Rivers, Pearl and Bogne Chitto. Surface, undulating; soil, sandy. Cap. Franklinton. Pop. (1897) 7,600.—A post-town of St. Landry parish, 7 m. N. of Opelousas.

Washington, in Maine, a S.E. co., bordering on the Atlantic and New Brunswick; area, 2,480 sq. m. Rivers, St. Croix, Schoodic, and E. and W. Machias. Lakes, Bascanegun, Schoodic, and several others. Surface, undulating; soil, fertile. Caps. Machias and Calais. Pop. (1897) 45,540.—A post-township of Knox co.

Washington, in Maryland, a N. co., bordering on Pennsylvania; area, 435 sq. m. Rivers, Potomac; also Antietam, Conecocheague, and Licking creeks. Surface, hilly; soil, fertile. Min. Iron and limestone. Cap. Hagerstown. Pop. (1897) 45,380.

Washington, in Massachusetts, a post-town and township of Berkshire co., 138 m. N.W. of Boston.

Washington, in Michigan, a twp. of Gratiot co.—A post-township of McComb co.—A twp. of Sanilac co.

Washington, in Minnesota, an E. co., bordering on Wisconsin; area, 400 sq. m. Rivers, Mississippi and St. Croix. Surface, diversified; soil, fertile. Cap. Stillwater. Pop. (1895) 27,417.—A township of Le Sueur co.

Washington, in Mississippi, a W. co., bordering on Arkansas; area, 880 sq. m. Rivers, Mississippi and Sunflower; also Deer creek. Surface, level; soil, fertile. Cap. Greenville. Pop. (1897) 42,440.

Washington, in Missouri, an E.S.E. co.; area, 780 sq. m. Rivers, Maramba, Big, and Big Black. Surface, hilly; soil, generally fertile. Min. Iron, lead, silver, copper, plumbago, copperas, chalk, and limestone. On the S.E. border is the Iron Mountain, of magnetic iron ore, 300 ft. high, and measuring $1\frac{1}{2}$ m. across the summit. Cap. Potosi. Pop. (1897) 15,000.—A twp. of Buchanan co.—A twp. of Clarke co.—A twp. of Clay co.—A post-village of Franklin co., 55 m. W. of St. Louis.—A twp. of Jackson co.—A twp. of Laclede co.—A twp. of Monroe co.—A twp. of Osage co.

Washington, in Nebraska, an E. co., bordering on Iowa; area, 381 sq. m. Rivers, Missouri and Papillon; also Fish creek. Surface, undulating; soil, fertile. Cap. Blair. Pop. (1897) 13,250.—A township of Nemaha co.

Washington, in New Hampshire, a post-township of Sullivan co., 29 m. S.W. of Concord.

Washington, in New Jersey, a twp. of Bergen co.—A twp. of Burlington co.—A twp. of Gloucester co.—A twp. of Mercer co.—A village and twp. of Morris co.—A post-borough and twp. of Warren co., 48 m. N.W. of Trenton.

Washington, in New York, an E. co., bordering on Lake Champlain; area, 861 sq. m. Rivers, Hudson, Hoosick, Pawlet, and Poutuncy. Surface, mountains in the N., elsewhere undulating; soil, generally fertile. Min. Iron, lead, copper, marble, limestone, slate, and marl. Cap. Argyle. Pop. (1897) 46,950.—A village and township of Dutchess co., 70 m. S. of Albany.

Washington, in North Carolina, an E. co., bordering on Albemarle Sound; area, 360 sq. m. Surface, level, and mostly covered with swamps. Cap. Plymouth. Pop. (1897) 11,210.—A post-town, cap. of Beaufort co., 127 m. S.E. of Raleigh.—A township of Guilford co.

Washington, in Ohio, a S.E. co., bordering on W. Va.; area, 635 sq. m. Rivers, Ohio, Muskingum, Little Muskingum. Surface, diversified; soil, productive. Min. Bituminous coal and iron. Cap. Marietta. Pop. 44,830.—A city, cap. of Fayette co. Pop. (1897) 6,250.—Also the name of 43 townships in: Auglaize co.—Belmont co.—Brown co.—Carroll co.—Clermont co.—Clinton co.—Columbiana co.—Coshocton co.—Darke co.—Defiance co.—Franklin co.—Guersey co., 32 m. N.E. of Zanesville.—Hancock co.—Hardin co.—Harrison co.—Henry co.—Highland co.—Hocking co.—Holmes co.—Jackson co.—Lawrence co.—Licking co.—Logan co.—Lucas co., containing the city of Toledo.—Mercer co.—Miami co.—Monroe co.—Montgomery co.—Morrow co.—Muskingum co.—Pamlico co.—Pickaway co.—Preble co.—Richland co.—Sandusky co.—Scioto co.—Shelby co.—Stark co.—Tuscarawas co.—Union co.—Van Wert co.—Warren co.—Wood co.

Washington, in Oregon, a N.W. co.; area, 645 sq. m. It is traversed by the Tualatin river. Surface, mountains in the N.W., elsewhere diversified; soil, fertile. Cap. Hillsborough. Pop. (1897) 12,500.

Washington, in Pennsylvania, a W.S.W. co., bordering on W. Va.; area, 890 sq. m. Rivers, Monongahela; also Chartier's, Raccoon, Wheeling, and Ten Mile creeks. Surface, diversified; soil, fertile. Min. Bituminous coal and limestone. Cap. Washington. Pop. (1897) 80,280.—A post-borough, cap. of Washington co., 25 m. S.W. of Pittsburgh.—Also the name of 21 townships in: Armstrong co.—Berks co.—Butler co.—Cambria co.—

Martha Washington

1732-1802

Clarion county.—Dauphin county.—Erie county.—Fayette county.—Franklin county.—Greene county.—Indiana county.—Jefferson county.—Lawrence county.—Lehigh county.—Lycoming county.—Northumberland county.—Schuylkill county.—Snyder county.—Westmoreland county.—Wyoming county.—York county.

Washington, in *Rhode Island*, a S.E. co., bordering on the Atlantic Ocean; area, 340 sq. m. It is traversed by the Pawcatuck river. *Surface*, hilly; *soil*, fertile. *Cap.* Kingston. *Pop.* (1895) 24,736.

Washington, in *Tennessee*, a N.E. co.; area, 344 sq. m. *Rivers*, Nolichucky and Watango. *Surface*, mountainous; *soil*, fertile in the valleys. *Min. Iron.* *Cap.* Jonesborough. *Pop.* (1897) 20,360.

—A small village, formerly the cap. of Rhea co., 134 m. E.S.E. of Nashville.

Washington, in *Texas*, a S.E. central co.; area, 600 sq. m. *Rivers*, Brazos; also Yegua creek. *Surface*, undulating; *soil*, fertile. *Products*, Cotton, live-stock, &c. *Cap.* Brenham. *Pop.* (1897) 31,360.

—A post-village of the above co., 65 m. N.W. of Houston.

Washington, in *Utah*, a S.W. co., bordering on Arizona; area, 2,446 sq. m. *Rivers*, Rio Virgin. *Surface*, diversified; *soil*, generally fertile. *Cap.* St. George. *Pop.* (1895) 4,619.

—A post-village and township of the above co., 6 m. N.E. of St. George.

Washington, in *Vermont*, a N. central county; area, 703 sq. m. *Rivers*, Onion, Mad, and Winooski. *Surface*, diversified; *soil*, generally fertile. *Cap.* Montpelier. *Pop.* (1897) 30,660.

—A post-township of Orange co.

Washington, in *Virginia*, a S.S.W. co., bordering on Tennessee; area, 622 sq. m. *Rivers*, North, Middle, and South Forks of Holston river. *Surface*, mountainous; *soil*, moderately fertile. *Min. Iron*, stone-coal, limestone, gypsum, and salt. *Cap.* Abingdon. *Pop.* (1897) 31,330.

—A township of Alexandria co.

—A township of Norfolk co.

—A post-town, cap. of Rappahannock co., 120 m. N.W. of Richmond.

—A township of Richmond co.

—A township of Westmoreland co.

Washington, in *West Virginia*, a township of Boone co.

—A township of Calhoun co.

—A township of Ohio co.

Washington, in *Wisconsin*, an E.S.E. co.; area, 430 sq. m. *Rivers*, Milwaukee, Ossin, and Rubicon; also Cedar and Sauk creeks. *Surface*, undulating; *soil*, very fertile. *Min. Iron.* *Cap.* West Bend. *Pop.* (1895) 24,077.

Washington, a name given in 1854, by Dr. Kane, to a section of N.W. Greenland, which is crossed by the parallel of 80° N. Lat. The great Humboldt Glacier, 300 feet in vertical height, and over 40 m. long, the largest glacier yet discovered, occurs upon its coast.

Washington Court-house, in *Ohio*, cap. of Fayette co., situated in the center of a rich agricultural region. This beautiful and thriving town was visited by a cyclone in September, 1885, which destroyed several hundred houses. It lies in a rich farming and stock-raising district, while its manufactures include several large shoe factories, a vapor-stove works, flour mills, foundry and machine shops, &c. *Pop.* (1897) 6,260.

Washington Fort, in *Pennsylvania*, a post-village of Montgomery co., near the site of an old Revolutionary fort of that name.

Washington Hollow, in *New York*, a post-village of Dutchess co.

Washington Lake, in *California*, a lake of Yolo co., 3 m. long, and ½ m. wide.

—In *Minnesota*, a township of Sibley co.

Washingtonville, in *New York*, a village of Orange co., 12 m. S.W. of Newburgh.—A village of Oswego co.

Washingtonville, in *Ohio*, a village of Columbiana co., 162 m. N.E. of Columbus.

Washingtonville, in *Pennsylvania*, a post-borough of Montour co., 75 m. N.E. of Harrisburg.

Washingtonite, *n.* (*Min.*) A kind of titaniferous iron-ore, of a steel-gray color.

Washington, (*Mount*.) See MOUNT WASHINGTON.

Washita, or **OUACHITA**, (*wosh'-e-taw*.) a river of Arkansas and Louisiana, which rises in Polk co., Arkansas, and after receiving many small tributaries, takes a S.E. course to the Louisiana line, whence it flows S. till it enters the Red River 30 m. from its mouth, after a course of abt. 500 m. It is navigable for large steamers as far as Camden, 300 m. above its mouth, and for smaller steamers, in time of high water, to Arkadelphia and Buckport. After its junction with the Tensas, it is also called *Black River*.

Washita, in *Arkansas*, a S. central co., traversed by the above river. *Surface*, diversified; *soil*, sandy and fertile. *Cap.* Camden. See OUACHITA.

Washita, or **OUACHITA**, in *Louisiana*, a N. parish; area, 735 sq. m. *Rivers*, Washita; also Bartholomew and Boeuf Bayous. *Surface*, diversified; *soil*, moderately fertile. *Cap.* Monroe. See OUACHITA.

Washoe, in *Nevada*, a N.W. co., bordering on California; area, 5,620 sq. m. It is traversed by the Truckee river. *Surface*, mountainous. *Min.* Gold, silver, lead, iron, &c. —A post-village of the above co., located 14 m. N.N.W. of Carson City.

Wash'tenaw, in *Michigan*, a S.E. co.; area, 720 sq. m. *Rivers*, Huron, Macon, the N. branch of the Raisin, and the E. Branch of Grand river; also Saline and Stony creeks. *Surface*, diversified; *soil*, fertile. *Cap.* Ann Arbor. *Pop.* (1897) 44,300.

Wash'-leather, *n.* Split sheep-skin dressed with oil, in imitation of chamois, or shammy, and used for various household purposes, as for dusting, cleaning glass, or

plate, and the like;—also, alumed or buff leather for regimental belts.

Wash'-off, *a.* A term used in calico-printing, having the signification of permanent, durable, or able to bear washing, in respect to fugitive colors not fixed by steaming or other process.

Wash'-pot, *n.* A pot, pitcher, or vessel in which anything is washed.

Wash'-stand, *n.* An article of furniture to hold the requisite utensils employed in washing the person.

Wash'-tub, *n.* A tub used in laundries.

Washy, (*wosh'y*), *a.* [From *wash*.] Watery; damp; slushy; as, a "washy ooze." (*Milton*).—Weak; watery; thin; wanting strength or substance; as, *washy tea*, *washy grog*, a *washy* polish.—Liable to sweat profusely from laborious exertion; as, a *washy* horse. (*Local U.S.*)

Wasi'oja, in *Minnesota*, a post-village and township of Dodge co., 21 m. N.W. of Rochester.

Wasp, (*wosp*), *n.* [*A. S. weesp*.] (*Zoöl.*) See VESPALE.

Waspish, *a.* Having the qualities or form of a wasp; very slender-waisted, like a wasp.—Irritable; irascible; snappish; petulant; quick to take up a quarrel, or resent any petty affront; as, a *waspish* woman, a person of *waspish* temper.

Waspishly, *adv.* In a waspish, snappish, or peevish manner.

Waspishness, *n.* State or quality of being waspish; snappishness; petulance; irascibility; readiness to take offence; peevishness.

Wassa'ie, in *New York*, a post-village of Dutchess co., 85 m. N. of New York.

Wassail, (*woss'il*), *n.* See DRINKING USAGES.

—*v. n.* To hold a merry-making; to attend a wassail or drinking-bout; to carouse.

Wasselonne, (*vas'e-lone*), a town of France, dept. of Bas-Rhin, 14 m. W.N.W. of Strasburg. *Manf.* Woollen and cotton yarn, and hosiery. *Pop.* 5,500.

Wast, (*wöst*), *past* tense of the substantive verb *to be*, in the second person; as, *thou wast*.

Wastage, (*wäst'aj*), *n.* Waste; loss or diminution by use, decay, evaporation, &c.

Waste, (*wäst*), *v. a.* [*A. S. westan*; *D. verwoesten*; *Ger. verwüsten*.] To desolate; to destroy; to bring to ruin; to devastate; as, "Peace to corrupt, no less than war to waste." (*Milton*).—To diminish by gradual dissipation or loss; to spend; to consume; to wear out; to use up; to impair by gradual or constant deprivation; as, the patient is much *wasted* and enfeebled.—To cause to be lost; to destroy by scattering or by injury; to expend without use or necessity; to dissipate wantonly or luxuriously; to squander; to suffer to be lost unnecessarily or to throw away, or to cause to be lost through recklessness or negligence; to lavish vainly; to employ prodigally; as, to *waste* one's property in speculating; to *waste* one's time and means in the pursuit of a chimerical project; to *waste* drink or victuals.

—*v. n.* To dwindle; to be diminished; to be consumed by time or mortality; to lose bulk or substance by degrees; as, money *wastes* away unaccountably.—Specifically, to reduce in flesh by sweating:—said of a jockey in training for a horse-race.

—*a.* Devastated; destroyed; ruined; stripped; left bare; hence, dreary; dismal; desolate; as, the *waste*, howling wilderness. (*Deut.* xxxii. 10).—Uncultivated; untitled; unproductive; worthless; that which is rejected, or used only for mean purposes; that of which no account is taken, or of which no value is found; as, *waste* land, *waste* paper, and the like.—Superfluous; lost for want of occupiers; as, *waste* fertility.

Waste-land, any tract of surface not in a state of vegetation, and producing little or no useful herbage or wood.

Laid waste, ruined; desolated; as, a country *laid waste* by fire, sword, or pestilence.

—*n.* Act of squandering, dissipating, wasting, desolating, or expending without use or necessity; dissipation of property or means through wantonness, extravagance, luxury, negligence, or speculative ambition; consumption; loss; useless expense; wanton destruction; any loss or deprivation which is neither needful nor promotive of a good end; any loss for which there is no equivalent; as, time running to *waste*; *waste* of capital or resources; *waste* of talk in wrangling about trifles; *waste* in household affairs, &c.—That which is wasted, devastated, or desolate; a barren or uncultivated country or tract of ground; unoccupied or unemployed space; land untitled though capable of tillage; any dreary void or deserted region; as, the ocean's watery *waste*; the *waste* of the African Sahara.—That which is valueless; refuse; dregs; worthless remnant; dross; as, the *waste* of cotton and other fibrous substances; kitchen *waste*, &c.

(*Law*.) *Waste* is whatever tends to the destruction or depreciating the value of an inheritance. It may be either *voluntary* or a crime of commission, as the pulling down of a house; or *permissive*, by omission only, as by suffering it to fall, for want of necessary repairs. It is not waste if the loss arises from an act of Providence, as by tempest, lightning, or the like. The remedy for *Waste* is granted by a court of equity, which will issue an injunction to restrain the *Waste*, and for an account of the profits made. The remainder need not wait until waste has actually been committed before bringing his action; for if he ascertains that the tenant is about to commit any act which would operate as a permanent injury to the estate, or if he threatens or shows any intention to commit waste, the court will at once interfere and restrain him by injunction from doing so.

(*Mining*.) A vacant space left in the gobbing, on each side of which the refuse is piled up to support the roof.

Waste-book, *n.* (*Com.*) A book in which memo-

randas of business transactions are made, previous to their being posted in the journal.

Waste'ful, *a.* Full of waste; injurious or destructive to property; ruinous; as, *waste'ful* neglect, *waste'ful* expenditure.—Lavish; prodigal; expending money, property, or resources, without proper use or necessity; as, a *waste'ful* hand.

Waste'fully, *adv.* In a wasteful manner.

Waste'fulness, *n.* State or quality of being wasteful.

Waste'-gate, *n.* A sluice-gate.

Waste'-pipe, *n.* A pipe for carrying off waste water or other fluid.

Wast'er, *n.* One who, or that which, wastes, squanders, or dissipates prodigally; one who consumes extravagantly, or without use.—A thief in a candle.

Waste'-weir, *n.* A weir for the outlet of the superfluous waters of a canal or channel.

Wast'ing, *p. a.* Consuming by slow degrees.

—*n.* Consumption; decay; decline.

Wata'nga, a river of *N. Carolina*, rises at the base of the Blue Ridge, in Watauga co., and flowing W.N.W. enters the Holston River, 12 m. N. of Jonesborough, in Tennessee.—A N.W. co., bordering on Tennessee; area, 392 sq. m. It is traversed by the Watauga River. *Surface*, mountainous; *soil*, fertile in the valleys. *Cap.* Boone. *Pop.* (1897) 11,106.

Watch, (*wotch*), *n.* [*A. S. wæccan*, to awake, arise; *D. waken*; *Ger. wachen*.] Act of watching; a keeping awake; forbearance or deprivation of sleep; vigilance for keeping or protecting against danger; attendance without sleep; guard; close observation; preservative or preventive alertness of the attention; as, to be on the *watch*.—A guard; a sentry; a look-out; a vidette; one who watches, or those who watch; as, to summon the *watch*.—Post or office of a watchman; place where a guard is kept; as, an officer of the *watch* to take *watch* and ward.—Period of the night in which one person or a set of persons stand as sentinels, or, from the time from one relief of sentries to another; as, the morning *watch*, the midnight *watch*.

(*Horol.*) A small portable time-piece or chronometer, generally of a small size and round flat shape, for measuring time; a pocket time-keeper. A pocket-watch is very similar in principle to a good clock, except that the regulation of the former is by a balance and spring, and that of the latter by a pendulum. Until a time relatively recent, all the *W.* used in the U. States were of European manufacture. During the war of 1812, *W.* were made in Worcester, Mass., but the close of the war caused a resumption of English importation, and the home manufacture failed. It was only in the year 1850, that, a connected system of machinery being applied to the manufacture of the American *W.*, the first manufactory was erected at Roxbury, which, after several transformations, was finally established at Waltham, Massachusetts, and at Elgin, Illinois; these two factories alone turn out nearly 200,000 watches per annum. The utmost simplicity is introduced in the number and arrangement of the pieces of which the American *W.* is composed; they are in all 112, each of them, more or less, the total product of machinery. Every piece may be fitted indiscriminately with any of the others, the jewelled holes and pivots only excepted. These are recorded at the factory with the number of each watch, so that they can always be duplicated with certainty of perfect fit by sending the number and name of the piece to the factory. Several other watch manufactories now exist in the U. S., their product being so exact in movement and so low in price that the importation of foreign watches, once large, has now almost ceased.

(*Naut.*) On shipboard, that portion of the ship's crew on duty at one time. This is usually half; and the watches are called the *starboard* and *port* watches. Large crews are divided into three watches. The period of time called a *watch* is four hours, the reckoning beginning at noon or midnight. Between 4 and 8 p. m. the time is divided into two short or *dog* watches, in order to break the constant recurrence of the watches at the same hours.

Anchor watch. (*Naut.*) A watch of three or four men stationed at an anchor, when a vessel is riding, to see that all is right and ready for use. (*Totten*).—*To be on the watch*, to be on the qui-vive or look-out for some event.—*Watch and ward*. See **WARD**.—*Watch and watch*. (*Naut.*) On shipboard, an arrangement by which the watches are alternated every other four hours, in distinction from keeping all hands on deck during one or more watches. This is given in bad weather, and when the day's work cannot be carried on.

—*v. n.* To be or to keep awake; to be wakeful; to keep vigil; to be or continue without sleep.

"Watching care will not let a man slumber."—*Ecl.* xxxi. 2.

—*To be vigilant or attentive*; to look with heedfulness or steadiness; to keep guard; to stand sontry; to be on the look-out; to act as sentinel or vidette; as, to *watch* an enemy's movements.—*To look with expectancy*; to be insidiously attentive; to be vigilant or alert in preparation for an event or trial, the time of whose arrival is uncertain; to wait or seek opportunity; as, he *watches* his chance of revenge.—*To attend on the sick or bed-ridden during the night*; to act as wakeful nurse or attendant; as, to *watch* a delirious person.

(*Naut.*) To float on the surface of the water, as a buoy. *To watch over*, to be cautiously observant; to keep or guard from any ill or evil; as, he *watched* over his family with solicitude.

—*v. a.* To observe in order to detect or prevent, or for some particular purpose; to attend or give heed to; to keep in view; not to allow to escape observation; as, he was narrowly *watched* by spies.—*To guard*; to tend; to have under intelage or in keeping; as, a driver *watches* his team.

Watch-barrel, n. The brass box in a watch, which contains the main spring.

Watch-bell, n. (*Naut.*) On shipboard, a bell struck when the half-hour glass is run out.

Watch-bill, n. (*Naut.*) A list of the officers and crew of a ship, with their several stations on board.

Watch-case, n. The outside covering of a watch; also, a case in which a watch is deposited or kept.

Watch-dog, n. A dog kept to guard property.

Watch'er, n. One who watches.

Watch'ful, a. Wakeful; vigilant; heedful; attentive; cautious; careful to observe;—preceding *of* before the thing to be regulated; as, to be *watchful of* one's own interest; and *against* before the thing to be shunned or guarded against; as, to be *watchful against* an ambuscade.

Watch'fully, adv. In a watchful manner.

Watch'fulness, n. State or quality of being watchful; wakefulness; indisposition or inability to slumber; hence, heedfulness; vigilance; suspicious attention; careful and diligent heed and observation for the purpose of preventing or escaping danger, or of avoiding errors, mistakes, or misconduct.

Watch-glass, n. A concavo-convex disc of crystal for covering the dial or face of a watch or pocket-chronometer.

(*Naut.*) A half-hour glass, serving to measure the duration of watches on deck.

Watch-guard, (-gard,) n. A chain, cord, or ribbon by which a watch is secured to the person.

Watch Hill Point, n. in *Connecticut*, on the E. of the entrance of Fisher's Island Sound, 2 m. S. E. of Stonington, has a revolving light 50 ft. high; Lat. $41^{\circ} 18' 12''$ N., Lon. $71^{\circ} 52''$ W.

Watch-house, n. A sentry-box; a house in which a watch or guard is posted.—A lock-up; a place of temporary incarceration for offenders, principally of the drunk and disorderly class.

Watch'ing, n. Wakefulness; sleeplessness; vigil.

Watch-maker, n. An artisan whose business is the making and repairing of watches.

Watchman, n.; pl. WATCHMEN. A sentry or sentinel; a look-out; a person set to watch and guard.—One who patrols and guards the streets of a town, or the buildings thereof, by night; as, a storekeeper's private watchman.

Watchman's rattle, an instrument having attached to the handle a revolving arm, which, by the action of a strong spring upon cogs, gives forth, when swung round, a loud, harsh, strident, rattling noise;—formerly used by the public watchman of towns, &c.

Watch-tower, n. A tower on which a sentinel or watchman is posted, in order to give an alarm in case of danger.

Watch-word, n. A pass-word; a countersign given to sentries, videttes, or other persons mounting or stationed on guard; also, the rallying-cry or private signal of an affiliated brotherhood, political party, or secret society.

Watercoo, (wa'te-o,) n. an island in the S. Pacific, 6 m. long, and 4 m. broad; Lat. $20^{\circ} 1' S.$, Lon. $158^{\circ} 15' W.$ Surface, hilly; soil, fertile. It was discovered by Capt. Cook in 1777.

Wat'ensas, n. in the State of *Arkansas*, a twp. of Prairie county.

Water, (waw'tür,) n. [*A. S. water; D. water; Ger. wasser.*] A fluid composed of oxygen and hydrogen, transparent, and the most abundant and most necessary for living beings of any in nature, except air. (See below, *Chem.*) Any body or collection of water, great or small; the ocean; a sea; a lake; a river; any pond or stream; as, to travel by land and *water*.—A liquid substance or humor in animal bodies; urine; as, to pass *water*.—The color or lustre of a diamond, sometimes perhaps of other precious stones; as, a gem of the first *water*, that is, perfectly pure and transparent.—Hence, figuratively, *of the first water*, that is, of the highest quality or first excellence; as, an aristocrat *of the first water*.

(NOTE. Water is frequently employed in the formation of compounds having relationship with, or reference to water, in any manner; as, *water-borne, water-lashed, water-nymph, water-side, water-worn, &c.*)

To *hold water*, to be able to retain water without leaking or percolation; hence, to be sound or conclusive;—used often metaphorically; as, your argument will not *hold water*.

To *make water*, to urinate; also, in a nautical sense, to leak; as, the ship *makes water*.—*Water of crystallization*. See CRYSTALLIZATION.

(*Chem.*) Water is presented to us in nature in three forms, *solid, liquid, and gaseous*. Large masses of ice exist around the poles; and water holding in solution certain mineral and gaseous matters constitutes the seas, rivers, and lakes of the temperate and torrid zones. It also exists in large quantities in the air, either dissolved in invisible vapor, or deposited in the form of clouds. In temperate and warm climates, the surface of the earth, at least, is more or less damp; while the interior of the earth itself contains numberless springs, and the minerals which exist in it contain more or less water chemically combined with them. Besides this, it is essential to all vegetables and animals in a living condition, and constitutes nearly seven-eighths of the human body. Chemically speaking, water consists of hydrogen and oxygen, united in equal equivalents by weight, of eight parts of oxygen to one of hydrogen; or by measure, one part of oxygen to two of hydrogen. The most variously contrived investigations into the composition of water always give the same result,—88.889 per cent. of oxygen, and 11.111 per cent. of hydrogen.

Cavendish was the first to discover its real composition. The analysis of water is performed in a variety of ways, the simplest of which is by means of galvanic or voltaic batteries (Fig. 2599). The glass vessel A contains water,

Fig. 2599. — ELECTROLYSIS OF WATER.

to which a little sulphuric acid has been added to increase its power of conducting electricity, for pure water conducts so imperfectly that it is decomposed with great difficulty. B and C are platinum plates bent into a cylindrical form, and attached to stout platinum wires, which are passed through corks in the lateral necks of the vessel A, and are connected by binding screws with the copper wires D and E, which proceed from the galvanic battery G. H and O are glass cylinders with brass caps and stop-cocks, and are enlarged

Fig. 2600.

into a bell-shape at their lower ends for the collection of a considerable volume of gas. These cylinders are filled with the acidulated water, by sucking out the air through the opened stop-cocks; on closing these, the pressure of the air will of course sustain the column of water in the cylinders. G is a Grove's battery, consisting of five cells or earthenware vessels (A, Fig. 2600) filled with diluted sulphuric acid (one measure of oil of vitriol to four of water). In each of these cells is placed a bent plate of zinc (B), which has been amalgamated or rubbed with mercury (and diluted sulphuric acid) to protect it from corrosion by the acid when the battery is not in use. Within the curved portion of this plate rests a small flat vessel of unglazed earthenware (C), filled with strong nitric acid, in which is immersed a sheet of platinum foil (D). The platinum (D) of each cell is in contact, at its upper edge, with the zinc (B) in the adjoining cell (Fig. 2601), so that at one end (P, Fig. 2599) of the battery there is a free platinum plate, and at the other (Z) a free zinc plate. These plates are connected with the wires D and E by means of the copper plates L and K attached to the ends of the wooden trough in which the cells are arranged. The wire D (Fig. 2599), which is connected with the last zinc plate of the battery, is often called the *negative pole*; whilst E, in connection with the last platinum plate, is called the *positive pole*. When the connection is established by means of the wires D and E with the decomposing cell (A), the *galvanic current* is commonly said to pass along the wire E to the platinum plate C, through the acidulated water in the decomposing cell, to the platinum plate B, and thence along the wire D back to the battery. During the passage of the current, the water intervening between the plates B and C is decomposed, his hydrogen being attracted to the plate B (negative pole), and the oxygen to the plate C (positive pole). The gases can be seen adhering in minute bubbles to the surface of each plate, and as they increase in size they detach themselves, rising through the acidulated water in the tubes H and O, in which the two gases are collected. The proof of the composition of water has also been sought in synthesis, by exploding carefully-measured proportions of oxygen and hydrogen in a eudiometer. The circumstances under which oxygen and hydrogen unite with each other to form water are peculiar. At ordinary temperatures, unlike other gaseous mixtures, a mixture of the two gases undergoes no alteration even when exposed to direct sunlight. Sudden compression has been known to produce their combination, but this was doubtless

Fig. 2601.

caused by the heat produced, a greater degree of compression gradually exercised having had no effect. Many substances, however, apparently chemically unlike, have the property of causing the union of these two gases merely by their presence. For instance, on introducing spongy platinum, or platinum-black, into a mixture of oxygen and hydrogen, it is instantly exploded. Faraday has shown that a perfectly clear surface of platinum will have precisely the same effect. The efficiency of the metal in this instance seems directly proportionate to its amount of surface and to its temperature, which, when the mass is small, becomes rapidly augmented by the heat evolved by the constantly accelerated combination of the gases. If thin platinum-foil or wire is used, the combination takes place without noise. With platinum sponge the action is at first silent, but afterwards the heat evolved by it raises the temperature, and explosion takes place. At ordinary temperatures water is a transparent mobile liquid, tasteless, inodorous, and, except when in large masses, colorless. In nature, the waters of seas, rivers, and lakes, assume every shade of brown, yellow, green, &c., from the presence of contaminating substances; but the proper color of water in large masses appears to be blue. Water is a perfectly elastic fluid, but its range of elasticity is limited. According to Regnault, it undergoes a compression amounting to forty-seven millionths of its bulk for every pressure of an atmosphere. A cubic inch of water at $60^{\circ} F.$ weighs 252.456 grains. At its point of maximum density, it is 770 times heavier than air. The specific heat of water is very great; in order, therefore, to effect any elevation or diminution of its temperature, a large quantity of heat is necessary; hence large masses of water act as great equalizers of local temperature. At $32^{\circ} F.$ water solidifies into ice. It may, however, if kept perfectly still, be cooled down to several degrees below freezing-point without congelation taking place; but if it be agitated in the slightest degree, solidification at once takes place, the temperature rising to $32^{\circ} F.$ Although water may be cooled down to below $32^{\circ} F.$ without freezing, yet it cannot be heated above that point without melting. The freezing-point of water is lowered by the presence of saline matter and other substances in solution. When a saline solution is exposed to cold, pure water crystallizes out, while the salt remains dissolved in the mother liquor. This property is taken advantage of by Arctic navigators, who use melted ice as drinking-water. The temperatures of freezing and boiling water are taken as the two standards of the thermometer scale. The cooling of water is attended by a phenomenon which does not belong to any other liquid. As the temperature decreases, it contracts regularly until cooled down to $39.2^{\circ} F.$, but every decrease in temperature beyond this causes it to expand, and that to almost the same amount per degree as it had previously contracted. This singular phenomenon, although for a long time suspected, was only proved positively by Hope in 1804. This property of water has a very important effect in the economy of nature. When the cold weather sets in, water becomes chilled at the surface, and immediately descends, on account of its increased specific gravity, the warmer water at the bottom of the pond or river replacing it. This movement goes on until $39.2^{\circ} F.$ is reached, when the surface water, becoming lighter as it becomes colder, remains in its place until it is frozen. The ice thus increases slowly in thickness, as no heat can be abstracted from any portion of the water except that in immediate contact with the frozen layers. The water below, therefore, remains permanently at $39.2^{\circ} F.$, a temperature not destructive to the lives of the fish and other animals inhabiting it. Although water expands very gradually between $39.2^{\circ} F.$ and $32^{\circ} F.$, when it reaches the latter point, expansion takes place suddenly, and with a force sufficient to burst the strongest wrought-iron vessels. The specific gravity of ice in relation to water is variously stated at 0.9184 (Abel and Bloxam), and 0.94 (Miller and Odling), or, in other words, water in freezing expands from 1,000 volumes to 1,063. The action of freezing on the disintegration of rocks, the transference of masses of mineral matter from place to place, &c., constitutes it one of the most important forces at work in nature. (See ICE, ICEBERG, GLACIER.) At a temperature of $212^{\circ} F.$, with a barometer pressure of 29.92 inches, water boils and becomes converted into an invisible elastic vapor, occupying 1,696 times its space. The space occupied by the vapor entirely depends upon the temperature, or, in other words, superheated steam exerts additional force for every degree of temperature which it is raised. The converse of this is also true; any attempt to compress a certain bulk of vapor at its proper temperature simply results in the condensation of a sufficient bulk of the vapor to restore the proper tension. An example may render this fact clear. A cubic inch of water at $212^{\circ} F.$, when converted into steam at the ordinary pressure of the air, occupies a space of 1,696 inches. Were an attempt made to condense this amount of vapor into say half of its bulk, half of it would be condensed into water. The temperature being kept up, and the pressure being removed, vaporization would continue until the former bulk was filled. The specific gravity of water vapor is 0.622, air being 1.000. In common with all volatile liquids, water has its fixed vapor-tension for every degree of heat; therefore no increase of heat can possibly raise the temperature of a liquid beyond its boiling-point, provided the pressure is unaltered. Diminished pressure consequently decreases the boiling-point of water, which, in vacuo, will boil at about $70^{\circ} F.$ The contrary, of course, is also true: steam at $212^{\circ} F.$ exerting a force equal to an atmosphere (15 lbs. on the

square inch), whilst at 356° it exercises a pressure of ten atmospheres; and so on. Water vaporizes at all temperatures, even when in the state of ice. Hence the disappearance of small masses of ice during the winter, and the constant vaporization of water at all periods of the year. In the consideration of water vapor, it must not be confounded with the visible *vesicular vapor* seen in the clouds, and in masses of steam escaping into the air, which consists of minute vesicles of water floating in true aqueous vapor. The latent heat of steam is very great, the heat absorbed by the conversion of water at 212° F. into steam of the same temperature, being 966.6° F., or, in other words, the condensation of a pound of steam at 212°, by 5½ lbs. of water at 32°, will yield 6½ lbs. of water at 212°. It has been stated above that water boils at 212° F. This, of course, is only true of water in a state of perfect purity, and heated in a metallic vessel at the mean barometer pressure. If the vessel used is of glass, or is lined with shell-lac, a temperature of several degrees above 212° will be reached before ebullition takes place; the bubbles bursting from the sides of the vessel with such force as to break it very frequently, the introduction of a piece of platinum-wire will soon restore the normal temperature at which ebullition takes place. The presence of soluble salts in water raises the boiling-point. The presence of air in water has a great effect on its boiling-point. According to Donny, water deprived of air, and heated in an open glass vessel, acquired a temperature of 360° F., and then suddenly burst into vapor, shattering the vessel to pieces. It would be useless to enlarge upon or even detail the infinite uses of water in the economy of the world. Its value to the chemist, however, is not so apparent. As a solvent it is invaluable, being a perfectly neutral body, and by its decomposition in a thousand different ways he easily obtains the two gases oxygen and hydrogen in a nascent condition, without which it is almost impossible to take a single step in the laboratory or manufactory. Although perfectly neutral, it enters into combination with numberless bodies, both acid, neutral, and basic, at one time apparently playing the part of a base, at another that of an acid. Thus we find sulphuric acid and water uniting in every proportion. If, however, the dilute acid be heated to boiling-point, aqueous vapor gradually passes off until a certain point is reached, when the acid begins to evaporate also, the water and acid distilling over together. On analyzing the distillate, an equivalent of sulphuric acid will be found united to an equivalent of water. This equivalent of water is called *basic water*, and can only be separated by decomposition. In the same way water combines with the powerful bases potash and soda, and cannot be expelled by heat alone. Such compounds are known as hydrates; the water appears in some sort to play the part of an acid. With neutral salts water enters into combination in two ways.—as water of crystallization and water of constitution, the former of which is expelled with ease, the latter with difficulty. The water of constitution is generally formulated H_2O , while that of crystallization is symbolized by the contraction *Aq.* (See *SALTS*.) Water has the property of dissolving an immense number of substances, solid, liquid, and gaseous. The alcohols, most of the acids, and some other liquids, dissolve in water in indefinite proportions; others again, such as ether, carbonic acid, &c., in minute and determinate quantities; while others, like oil, seem perfectly insoluble. The solvent power of water in various solids is widely different. Water dissolves gas to a greater or lesser extent, varying from one-seventieth in the case of nitrogen to 783 times its bulk with ammonia. The solvent power of water for certain substances may be increased by pressure and heat. Water, as found in nature, is never pure, being always contaminated with foreign matter. Rain, which is the purest form of natural water, always contains carbonic acid and carbonate and nitrate of ammonia, and other constituents, depending on the locality in which it falls. That produced by melting fresh-water ice is free from every contamination except small traces of carbonic acid and ammonia. Pure water is alone obtained by distillation. River-water is very variable in its composition, according to the mineral constituents of the country through which it has flowed. Spring-water is subject to the same variations as river-water; the amount of saline matter is, however, much greater. Most waters obtained from natural sources contain soluble salts of lime, which on boiling incrust the sides of the vessels in which they have been heated. In the boilers of steam-engines these incrustations are attended with great danger to the safety of the boiler. (See *INCORUSTATION*.) Waters are generally divided into hard and soft. The former contain salts which form insoluble compounds with soap, and have to be neutralized before the detergent is available. *Sea-water* has a pretty uniform composition. It has a specific gravity of about 1.027, and contains on an average about 2,500 grains of dissolved matter to a gallon, of which about 1,900 grains are common salt, and 400 chloride of magnesium and sulphate of magnesium. The quantity of saline matter is continually, although imperceptibly, increasing; for pure water is always being drawn from it by the process of evaporation, and being returned to it by the rivers charged with saline matter. Thus the sea is the recipient of the whole of the soluble matter washed away from the crust of the earth. Up to 1784 water was supposed to be an element.

Water, *v. a.* To wet; to irrigate; to overflow or drench with water; as, to *water* the soil or plants growing therein.—To furnish with water for drink; as, to *water* horses and cattle.—To diversify with lines, or

give a wavy appearance to, by the process of calendering; as, to *water* silk.

—*v. n.* To shed or diffuse water or liquid matter; as, peeling raw onions causes the eyes to *water*.—To get or take in water; as, the ship put into St. Helena to *water*.

To make one's mouth water, to excite in one a craving desire for; to feel an irresistible longing for, at the sight of; as, the prospect of a good dinner is apt to make a hungry fellow's *mouth water*;—derived from the theory that the looking at food tends to increase the flow of saliva.

Water-alloc, *n.* (*Bot.*) The Water-soldier. See *STRATIOTES*.

Water-bearer, *n.* (*Astron.*) Same as *AQUARIUS*, *q. v.*

Water-beetle, *n.* (*Zoöl.*) See *HYDROPHILA*.

Water-bellows, (*-loz*), *n. sing. and pl.* (*Metall.*) Same as *TROMP*, *q. v.*

Water-bird, *n.* Any aquatic bird, or water-fowl.

Water-boatman, *n.* (*Zoöl.*) The Boat-fly. See *ESTRIDE*.

Waterborough, in *Maine*, a post-township of York co., 65 m. S.E. of Augusta.

Water-borough, in *New York*, a village of Chautauque co., 10 m. E.N.E. of Jamestown.

Water-brash, *n.* (*Med.*) An affection of the stomach; the result of a general functional debility of that organ, by which the vessels that should secrete the gastric juice throw out a clear, limpid water; hence its medical name of *pyrosis*. The symptoms of this disease usually commence when the stomach is empty, either in the morning or the afternoon, and begin with a sense of burning heat and constriction at the pit of the stomach, producing a sensation as if the organ was being drawn up to the spine. To relieve this sensation, the patient folds his arms over his chest, and bends the body forward; after a time, a quantity of gas collecting in the stomach leads to an eructation, the patient bringing up from two to four ounces of clear, limpid water; sometimes, though rarely, acid, but generally insipid. Two or three eructations, with a gush of water after each, concludes the paroxysm, and for the time the patient is relieved of his suffering. Females are more subject to this disease than men, and those who live on a milk or farinaceous diet more than those who partake of a good stimulating dietary. *W. B.* is an affection to which those of a sedentary habit, and who eat their meals hurriedly, without proper mastication, are liable.

Waterbury, in *Connecticut*, a flourishing city of New Haven co., 55 m. S.W. of Hartford. It contains numerous rolling-mills, and manufactories of copper, brass, and German silverware, photographic apparatus, buttons, pins, porcelainware, &c. *Pop.* (1897) 30,150.

Waterbury, in *Vermont*, a post-vill. and twp. of Washington co., 12 m. W.N.W. of Montpelier.

Water-butt, *n.* A large, open-headed cask, set up on end to contain water, particularly rain-water.

Water-caltrop, *n.* (*Bot.*) A name commonly given to plants of the genus *Trapa*.

Water-carriage, (*-kārrij*), *n.* Transportation, conveyance, or freightage by water, or the means of forwarding by water.

Water-cloek, *n.* Same as *CLEPSYDRA*, *q. v.*

Water-closet, (*-klōs'et*), *n.* A small closet for necessary purposes, supplied with water from a cistern for its cleansing; a privy.

Water-cock, *n.* A cock through which water is allowed to pass.—A street-plug to supply water from the mains in case of fire.

Water-color, (*-kūl'ur*), *n.* (Generally in the plural.) (*Paint.*) A pigment ground with water and gum, or size, which preserves its consistency in a solid cake when dried, and can easily be mixed with water, by rubbing it on a moistened palette when wanted. (The term is used in contradistinction to *oil-colors*, or *oils*.)

Water-colorist, *n.* A painter in water-colors.

Water-course, *n.* Any natural or artificial stream of water;—especially, a channel or canal cut for the irrigation of lands.

Water-craft, *n.* A generic term for all kinds of vessels and boats plying on water.

Water-crane, *n.* (*Hydraul.*) An apparatus for supplying water from an elevated tank to the tender of a locomotive engine.

Water-cress, *n.* (*Bot.*) See *NASTURTIUM*.

Water-crow, *n.* (*Zoöl.*) Same as *WATER-OUSEL*, *q. v.*

Water-eure, *n.* (*Med.*) Same as *HYDROPATHY*, *q. v.*

Water-doctor, *n.* (*Med.*) An *HYDROPATHIST*, *q. v.*

Water-dog, *n.* A dog accustomed to the water.—A small, floating cloud supposed to indicate rain.

—A cant colloquialism for a veteran sailor; an old salt; a tar.—A name given to various species of Salamanders. (*U. States*.)

Water-drop, *n.* Among jewellers, a rounded pebble of clear and limpid colorless topaz.

Water-dropwort, (*-wurt*), *n.* (*Bot.*) See *CEANTHE*.

Waterree, a river of *S. Carolina*. See *CATAWBA*.

Waterer, *n.* One who, or that which, waters.

Waterfall, *n.* A perpendicular, or nearly perpendicular descent of a body of water; a cascade; a cataract.—A collection of false curls depending from the back of a lady's coiffure.

Water-feather, *n.* (*Bot.*) See *HOTTONIA*.

Water-flee, *n.* (*Zoöl.*) See *GYRLIDE*.

Water-flood, *n.* An inundation; a flood of water.

Waterford, a city and seaport of Ireland, and the chief town of a co. of the same name in the province of Munster, on the river Suir, which joins the Barrow, and forms a bay called Waterford Harbor, 62 miles N.E. of Cork. Its principal public buildings are the cathedral, court-house, exchange, and custom-house; besides various literary and scientific institutions, a public library

and museum, &c. The harbor is deep and spacious, and has a fixed light on Hook Tower, 139 feet above the sea. *Manuf.* White glass, starch and blue; also, ship-building.

Waterford, in *Connecticut*, a post-village and township of New London co., 3 miles S.W. of New London.

Waterford, in *Illinois*, a village and twp. of Fulton co., 50 m. N.W. of Springfield.

Waterford, in the State of *Iowa*, a twp. of Clinton county.

Waterford, in *Maine*, a post-township of Oxford co., 54 m. S.W. of Augusta.

Waterford, in *Michigan*, a post-village and township of Oakland co.

Waterford, in *Minnesota*, a post-village and township of Dakota county, about 16 miles N.E. of Furbault.

Waterford, in *New Jersey*, a post-twp. of Camden county.

Waterford, in *New York*, a post-village and township of Saratoga co., on the Hudson, 10 miles above Albany.

Waterford, in *Ohio*, a p. t. of Washington co.

Waterford, in *Pa.*, a post-village and twp. of Erie co., 15 m. S.S.E. of Erie.—A v. of Juniata co., 60 m. W. of Harrisburg.—A v. of Westmoreland co., 55 m. S. E. of Pittsburgh.

—in *Vt.* a p. twp. of Caledonia co., 45 m. E.N.E. of Montpelier.

Waterfordville, in *N. J.*, a village of Camden co.

Water-fowl, *n.* An aquatic fowl.

Water-furrow, *n.* (*Agric.*) A drain cut in land for receiving and carrying off surplus water.

—*v. a.* To cut or open water furrows.

Water-gage, *n.* A side-wall or bank for restraining a current or stream of water.

Water-gall, *n.* A fissure made in the earth by a downfall of water.

Water-gas, illuminating gas, obtained by the decomposition of water. (See *SEC. II.*) Steam is passed over red-hot coke, the oxygen being thus absorbed. The remaining hydrogen and carbonic oxide are passed through a retort, in which carbonaceous matter is undergoing decomposition. Carbon is thereby absorbed, rendering the gas suitable for illumination. It is claimed by Prof. Lowe, who has great experience with this gas, that it can be produced to furnish to consumers at 30 cts. per 1,000 ft.

Water-gauge, *Water-gage*, (*-gāj*), *n.*, [*water* and *gauge*]. A contrivance for ascertaining the height of the water within a steam boiler.

Water-gavel, *n.* (*O. Law*.) A gavel or rent paid for the right of fishing in, or other use of, certain waters or rivers.

Water-germander, *n.* (*Bot.*) A labiate plant of the genus *TENERIUM*, *q. v.*

Water-gilder, *n.* One who gilds metallic surfaces by thinly coating them with an amalgam of gold, which volatilizes the mercury.

Water-gilding, *Wash'-gilding*, *n.* Act or process performed by a *WATER-GILDER*, *q. v.*

Water-gruel, *n.* A liquid panada for the sick, consisting of meal boiled in water to a thinish consistency.

Water-guard, *n.* One of a body of river or harbor police; a custom-house preventive-officer.

Water-hairgrass, *n.* (*Bot.*) A species of grass growing in moist places.

Water-hammer, *n.* A vessel partly filled with water, exhausted of air, and hermetically sealed. When reversed or shaken, the water, being unimpeded by air, strikes the side with a sound like that of a metal striking against glass.

Water-hemlock, *n.* (*Bot.*) See *CICUTA*.

Water-hen, *n.* (*Zoöl.*) See *RALLIDE*.

Water-horehound, *n.* (*Bot.*) See *LYCOPUS*.

Wateriness, *n.* State or quality of being watery;—state of abounding with water; moisture; humidity.

Watering, *n.* Act of supplying, or of sprinkling or overflowing, with water; act of furnishing with water for drink.—Act or process of irrigating land.—The process to which silk and other textile fabrics are subjected, in order to make them exhibit a wavy lustre and different plays of light.

Watering-place, *n.* A place where water may be obtained, as for a ship, for cattle, &c.—A sea-side resort; a spa; a place which people frequent for sea-bathing, the drinking of mineral waters, &c.

Waterish, *a.* [*A. S. waterisc*.] Thin; watery; resembling or having the qualities of water; as, *waterish* matter.—Moist; boggy; somewhat fenny; as, *waterish* land.

Waterishness, *n.* State or quality of being waterish.

Water-leaf, *n.* (*Bot.*) See *HYDROPHYLLACEE*.

Water-leg, *n.* In steam-boilers, a water space that forms the side of a fire-box.

Water-lemon, *n.* (*Bot.*) See *PASSIFLORA*.

Waterless, *a.* Destitute of water.

Water-level, *n.* The level formed by the surface of water in a quiescent state.—A levelling instrument in which water is employed instead of mercury or spirits of wine.

Water-lily, *n.* (*Bot.*) See *NYMPHÆA*.

Water-line, *n.* (*Shipbuilding*.) The boundary of any section of the bottom of a ship made by a plane parallel to the line of flotation. The uppermost one is called the *load water-line*; the lowest the *light water-line*.

Water-logged, (*-lōgd*), *a.* (*Naut.*) Noting the condition of a ship when a quantity of water having been received into the hold by leaking, &c., she has lost her buoyancy, and yields to the effect of every wave passing over the deck.

Waterloo, a village of Belgium, 10 m. from Brussels, near which was fought, June 18, 1815, a memorable bat-

tle between the allied English and German troops under the Duke of Wellington, and the French under Napoleon, resulting in the complete overthrow of the latter.

Waterloo, in *Illinois*, a city, cap. of Monroe co., 22 m. S. of St. Louis. Pop. (1897) 2,215.

Waterloo, in *Indiana*, a post-town of De Kalb co., 6 m. N.E. of Auburn.

—A village and township of Fayette co., 7 m. N.E. of Connerville.

Waterloo, in *Iowa*, a township of Allamakee co.

—A thriving city, cap. of Black Hawk co., 93 m. W. of Dubuque. Pop. (1895) 8,490.

Waterloo, in *Kansas*, a village and township of Lyon co., about 16 m. N.N.E. of Emporia.

Waterloo, in *Michigan*, a post-village and township of Jackson co., 17 m. E.N.E. of Jackson.

Waterloo, in *Missouri*, a village, former cap. of Clark co., 12 m. N.W. of Alexandria.

Waterloo, in *New York*, a post-village and township, cap. of Seneca co., 20 m. W. of Auburn.

Waterloo, in *Pennsylvania*, a vill. of Franklin co., 58 m. S.W. of Harrisburg.—A post-vill. of Juniata co., 69 m. W. of Harrisburg.—A vill. of Venango co.

Waterloo, in *S. Carolina*, a post-vill. and twp. of Laurens dist., 65 m. W.N.W. of Columbia.

Waterloo, in prov. of Ontario, a W. central co., traversed by Grand River; area, 513 sq. m. Cap. Berlin. Pop. 40,251.—A post-vill. of same co.

Waterloo, in *Ohio*, a twp. of Athens co.

Waterloo, in *Wisconsin*, a township of Grant county.

—A post-village and township of Jefferson county, 20 m. N.E. of Madison.

Waterman, *n.* A boatman; a ferryman; a man who manages water-craft, or one who plies for hire on rivers.

Water-mark, *n.* The mark or limit of the rise of water, indicating the height of a flood, or the tide.—The letter or ornament adopted by a paper-maker to distinguish his manufacture, which is thinner and more transparent than the rest of the sheet in the place where it occurs.

Water-melon, *n.* (*Bot.*) See CUCUMIS.

Water-meter, *n.* An apparatus for measuring the quantity of water which passes through a boiler.—A contrivance for measuring the supply of water to a house or other building, or to works, as from a street main.

Water-mill, *n.* A mill whose machinery is worked by water-power, and thus distinguished from a wind- or steam-mill.

Water-mole, *n.* (*Zoöl.*) The Shrew-mole. See MOLE.

Water-nymph, (*nimf*), *n.* A naiad.

Water-ousel, (*ōōzl*), *n.* (*Zoöl.*) The *Cinclus aquaticus*, a European bird of the Thrush family, generally of a dark-brown color, with throat and upper part of the breast pure white. It frequents clear, pebbly streams and lakes, feeding chiefly on molluscs, and on aquatic insects and their larvae, which it seeks even under water, diving with great facility, and moving about for a short time at the bottom of the river. It carries its rather short tail elevated after the manner of wrens, which it also resembles in its frequent becks, or dipping of the head, accompanied with an upward jerking of the tail.

Water-pepper, *n.* (*Bot.*) See ELATINACEÆ.

Water-pimpernel, *n.* (*Bot.*) See SAMOLUS.

Water-pitcher, *n.* (*Bot.*) See SARRACENIACEÆ.

Water-plantain, *n.* (*Bot.*) See ALISMA.

Water-power, *n.* Water employed as a motive power in machinery.—A source of power from water, as for the driving of machinery. See WATER-WHEEL.

Water-pox, *n.* (*Med.*) A variety of CHICKEN-POX, *q. v.*

Waterproof, *a.* Proof against, or impervious to, water; so firm and compact of texture as not to admit water. See INDIA-RUBBER.

Water-qualm, (*-kwawm*), *n.* (*Med.*) See WATER-BRASH.

Water-ram, *n.* Same as HYDRAULIC RAM, *q. v.*

Water-rat, *n.* (*Zoöl.*) The Musk-rat. See FIBER.—A river-pirate; a thief on the water;—sometimes, a wrecker.

Water-rate, *n.* A rate levied as payment for a supply of water.

Water-rice, *n.* (*Bot.*) See ZIZANIA.

Water-rot, *v. a.* To rot by steeping in water; as, to water-rot hemp.

Water-sail, *n.* (*Naut.*) A small sail spread occasionally under the lower studding-sail or driving-boom, during a fair wind and smooth sea.

Water-sapphire, (*-sāf'ir*), *n.* (*Min.*) A very pale-blue kind of Oriental sapphire.

Water-scape, *n.* A term sometimes, but rarely, used to denote a sea-view, in contradistinction to a landscape.

Water-screw, *n.* A screw-propeller. (*R.*)

Watershed, *n.* [*Ger. wasserscheide*, water-parting.] (*Phys. Geog.*) A range of high land intersecting the basins of two rivers, and emptying its waters into them on either side.

Water-shoot, *n.* A trough or wooden channel for discharging water.

Water-snake, *n.* (*Zoöl.*) See HYDROPHIDÆ.

Water-soldier, (*-söl'jer*), *n.* (*Bot.*) See STRATIOTES.

Water Street, in *New Jersey*, a village of Morris co., 45 m. N.N.E. of Trenton.

Water Street, in *Pennsylvania*, a post-village of Huntingdon co., 100 m. W.N.W. of Harrisburg.

Water-table, *n.* (*Arch.*) A projection or horizontal set-off in a wall, so placed as to throw off the water from the building.

—In steam-boilers, a thin space for water, connecting with the other water-chambers, and inclosed by stayed plates, to form a portion of the heating surface; otherwise known as *water-bridge*.

Water-tap, *n.* A tap or cock for drawing off water.

Water-tight, (*ūt*), *a.* So tight as to retain, or not to admit, water; not leaky; as, a *water-tight* compartment in a ship.

Waterspout, *n.* (*Meteorol.*) A phenomenon which, in its general appearance, may be described as follows: From a dense cloud, a conical pillar, which appears to

Fig. 2602. — A WATERSPOUT

consist of condensed vapor, is seen to descend, with the apex downward. When over the sea, there are usually two cones: one projecting from the cloud, and the other from the water below it. These sometimes unite, and the junction has been observed to be accompanied with a flash of lightning; but more frequently they disperse before the junction is effected. In calm weather, the column maintains its vertical position while carried along the surface; but when acted on by the wind, it becomes oblique to the horizon. The causes of this meteor are very imperfectly known. By some it is supposed to be formed by a whirlwind of extreme intensity, while others ascribe it to an electric origin. It occurs for the most part at sea, but sometimes also on shore, though generally in the neighborhood of water.

Water-thief, *n.* A pirate; a water-rat; a wrecker.

Watertown, in *Connecticut*, a post-village and township of Litchfield county, 30 miles west-south-west of Hartford.

Watertown, in *Massachusetts*, a post-township of Middlesex co., 8 m. N.W. of Boston.

Watertown, in *Michigan*, a twp. of Clinton co.—A post-twp. of Tuscola co.

Watertown, in *Minnesota*, a post-village and twp. of Carver co., abt. 32 m. W. of Minneapolis.

Watertown, in *New York*, a thriving city, cap. of Jefferson co., on the Black river, 86 m. N.W. of Utica, and 182 from Albany. It has an academy, and several newspaper offices and banks. There are, in the city, manufactures of cotton and woollen goods, flour, paper, iron castings, machinery, leather, agricultural implements, lead-pipe, sash and blinds, and furniture. An ice-cave, near Whittlesey's Point, extends under a part of the city. Pop. (1897) 17,150.

Watertown, in *Ohio*, a post-township of Washington co.

Watertown, in *Vermont*, a town of Caledonia county.

Watertown, in *Wisconsin*, a township of Jefferson co.—A city of Jefferson co., 40 m. N.E. of Madison. Pop. (1895) 9,922.

Water-trunk, *n.* A deal trough, or cistern lined with lead, to contain water.

Watervale, in *New York*, a post-village of Onondaga co., 13 m. S.E. of Syracuse.

Waterville, in *Kansas*, a township of Marshall county.

Waterville, in *Maine*, a thriving manufacturing city of Kennebec co., 18 m. N.E. of Augusta, on the right bank of the Kennebec river, at Ticonic Falls. Around the Falls are clustered saw-mills, plough, axe, hoe, and scythe factories, machine-shops, tanneries, &c. W. has a Baptist college, with a library of 15,500 vols., an academy, &c.

Waterville, in *Minnesota*, a post-village and township of Le Sueur co., 17 m. S.W. of Faribault.

Waterville, in *New York*, a post-village of Oneida co., 45 m. E.S.E. of Syracuse.

Waterville, in *Ohio*, a post-village and township of Lucas co.

Waterville, in *Pennsylvania*, a village of Delaware co., 4 m. S.E. of Media.

Waterville, in *Vermont*, a post-vill. and township of Lamoille co., 40 m. N.N.W. of Montpelier.

Waterville, in *Wisconsin*, a township of Pepin county.

Water-violet, *n.* (*Bot.*) The Water-feather. See HOTTONIA.

Waterviet, (*wa'ter-vle-et*), in *Michigan*, a post-township of Berrien co.

Waterviet, in *New York*, a post-township of Albany co., containing the city of Cohoes.

Waterways, *n. pl.* (*Ship-building*.) Strong pieces of planking which extend around a ship at the junction of the decks with the sides, to prevent the water entering between the edge of the deck and the ship's sides; and also to counteract any tendency in the beams to slip upwards.

Water-wings, *n. pl.* (*Arch.*) Walls erected on the banks of rivers, next to bridges, to secure the foundations from the action of the current.

Water-works, (*-wurks*), *n. pl.* Hydraulic works and machines erected or constructed for the purpose of raising, retaining, conducting, or distributing water; or

contrivances for obtaining motive power from falls or currents of water.

Water-wheel, *n.* (*Hydraul.*) When water is continuously flowing from a higher to a lower level, it may be used as a motive power. This is effected by means of *water-wheels*; that is, wheels provided with buckets or float-boards at the circumference, on which the water acts either by pressure or by impact.—Water-wheels turn in a vertical plane round an horizontal axis, and are of three principal kinds, *undershot*, *overshot*, and *breast*.—In *undershot* wheels (2, Fig. 2603) the float-boards are at right angles to the circumference of the wheel. The lowest float-boards are immersed in the water, which flows with a velocity depending on the height of the fall. Such wheels are applicable where the quantity of water is great, but the fall inconsiderable.—*Overshot* wheels (1, Fig. 2603) are used with a small quantity of water which has a high fall, as with small mountain streams. On the circumference of the wheel there are buckets of a peculiar shape. The water falls into the buckets on the upper part of the wheel, which is thus

Fig. 2603. — WATER-WHEELS.

moved by the weight of the water, and as each bucket arrives at the lowest point of revolution it discharges all the water, and ascends empty.—In *breast* wheels, (3, Fig. 2603,) water acts both by its weight and its momentum.—A turbine is an horizontal water-wheel with a vertical axis, receiving and discharging water in all directions round that axis. It is driven partly by the weight of water and partly by the impulse, and has a certain velocity of maximum effect, bearing a ratio to the fall of water which depends on the construction of the turbine, and which is, in general, about half the velocity at which the turbine would revolve if unloaded. Turbines have the advantage of being of small bulk for their power, and equally efficient for the highest and the lowest falls.

Watery, *a.* [*A. S. waterig*.] Resembling water; having tenuity or transparency, as a liquid.—Hence, full of tasteless fluid; insipid; spiritless; as, *watery* potatoes.—Wet; abounding with water; as, *watery* eyes.—Pertaining to, or consisting of water; as, Ocean's *watery* kingdom.

Watford, a town of England, co. of Herts, 15 m. N.W. of London. *Manuf.* Straw-plait, and matting. Pop. 7,418.

Watkinsville, in *Georgia*, a post-village, cap. of Clarke co., 64 m. N.W. of Milledgeville.—A village and township of Coffee co.

Watling's Island, in the British W. Indies, one of the Bahamas, 18 m. long, 50 m. E.S.E. of San Salvador; Lat. 23° 56' 7" N., Lon. 74° 28' W.

Watowwan, a river of *Minnesota*, rises in Cottonwood co., and flows into Blue Earth River, abt. Lat. 44° N., Lon., 94° 12' W., after an E. course of 80 m.—A S. co.; area, 432 sq. m. *Rivers.* Watowwan and Perek. *Surface*, undulating; soil, fertile. Cap. St. James. Pop. (1895) 10,262.—A village of Blue Earth co., 10 m. S.W. of Mankato.

Watseka, or **Wataska**, in *Illinois*, a city, the cap. of Iroquois co. Pop. (1897) 2,430.

Watson, in *Michigan*, a township of Allegan county.

Watson, in *New York*, a post-township of Lewis county.

Watson, in *Pennsylvania*, a township of Lycoming co.

Wat'sontown, in *Pa.*, a post-borough of Northumberland co., on the Susquehanna, 18 m. above Sunbury.

Wat'sonville, in *California*, a post-town of Santa Cruz co., 40 m. S. of San José.

Watt, JAMES, (*wol*), an eminent Scottish engineer, to whose great skill and original genius we owe the improvement of the steam-engine, b. at Greenock, 1736. Under his father he acquired a knowledge of mathematical instrument-making, and at the age of 19 he set out for London to acquire a further insight into his profession; here his progress was so rapid that he soon returned to Scotland, and, under the patronage of the university, settled at Glasgow, where, after twenty years of enlightened activity, he brought to perfection the discovery that has immortalized his name, (see STEAM-ENGINE.) D. 1819. Watt was a member of the Royal Societies of London and Edinburgh, a correspondent of the French Institute, and was enrolled among the associates of the Academy of Sciences at Paris. A statue to his memory was set up in Westminster Abbey in 1824. Statues to his honor have likewise been erected at Manchester, Glasgow, and Greenock.

Watteau, ANTOINE, (*wa-to'*), a French painter, b. at Valenciennes, 1684. He went to Paris as a journeyman house-painter, and rose to eminence by a painting known as *A Journey to Cytherea*. He left 563 works almost limited to the class of *fêtes champêtres*, representations of an

James Watt

1736-1819

ideal rural life. The fashion which he set long prevailed in French art. D. 1721.

Wattle, (*wô'tl*), *n.* [A. S. *watel*, a hurdle, a covering.] A twig; a wand; a flexible rod;—hence, a fence or hurdle made of such rods.—A rod fixed on a roof to support the thatch.—The barbs, or loose, red, fleshy excrescences, growing under the throat of a cock or turkey, or a like substance on a fish;—generally used in the plural; as, the *wattles* of a barbel.—The astringent bark of an Australian tree of the genus *Acacia* (or *Mimosa*), used by tanners,—called also *wattle-bark*; also, the tree from which it is obtained.

—*v. a.* To bind with twigs.—To twist, plat, or interweave, as twigs, one with another, thus forming a kind of network; as, a *wattled* hedge.—To form of twigs interlaced; as, a *wattled* sheep-pen.

Wattle-bird, *n.* (*Zool.*) See *ANTHOCHÆRA*.

Wattling, *n.* Act of interweaving or plating with twigs; also, the plating itself; as, a *wattling* of canes.

Watts, ISAAC, (*wôts*), an English dissenting divine, b. in Southampton, 1673, became tutor to the son of Sir John Hartopp, and two years later was chosen assistant minister to the Independent congregation in Mark Lane, London. His principal works were, *A Treatise on Logic*; an *Essay on the Improvement of the Mind*; *Introduction to Astronomy and Geography*; Hymns, and a poetical version of the Psalms, usually sung in dissenting congregations; besides Poems, chiefly religious. D. 1748.

Wattsburg, in *Pennsylvania*, a post-borough of Erie co., 18 m. S.E. of Erie.

Waukegan, in *Wisconsin*, a post-township of Pepin co., 12 m. N.E. of Pepin.

Waucht, *Waucht*, (*wawt*), *n.* [Scot.; A. S. *veaht*.] A deep draught or potation of liquor.

Waucon'da, in *Illinois*, a post-village and township of Lake co., abt. 42 m. N.W. of Chicago.

Wau'kan, in *Wisconsin*, a post-village of Winnebago co., 60 m. N.E. of Madison.

Wauke'hon, in *Wisconsin*, a township of Shawanaw co.

Wauke'gan (formerly *LITTLEFORT*), in *Illinois*, a city and township, cap. of Lake co., on Lake Michigan, 35 m. N.W. of Chicago. Pop. (1897) 8,515.

Wau'kesha, in *Wisconsin*, a S.E. co.; area, 576 sq. m. *Rivers*. Bark, and Pishitaka or Fox river. *Surface*, undulating; *soil*, fertile. *Cap.* Waukesha. Pop. (1895) 36,562.—A fine town and township, cap. of the above co., 60 m. E. of Madison. Pop. (1897) 7,600.

Wau'kon, or **Wau'kon**, in *Iowa*, a post-town, cap. of Allamakee co., 18 m. E. of Decorah. Pop. (1895) 2,916.

Waul, *v. u.* To miaul; to make a shrill cry, resembling that of a cat; as, a *wauling* infant.

Wau'nan'da, in *Wisconsin*, a post-township of Buffalo co., about 8 m. N.E. of Alton.

Wau'pae'a, a river of *Wisconsin*, enters Wolf river from Waupaca co.—A N.E. co.; area, 756 sq. m. *Rivers*. Wolf, Little Wolf, and Waupaca. Pop. (1895) 30,793.—A city and township, cap. of the above co., 50 m. N.N.W. of Fond du Lac. Pop. (1895) 2,823.

Wau'pon'see, in *Illinois*, a post-township of Grundy co.

Wau'pau, in *Wisconsin*, a city of Fond du Lac and Dodge cos., on C., M. & St. P. R.R., 19 m. S.W. of Fond du Lac. Pop. (1895) 3,216.

Wau'san, or **Wassaw**, in *Wisconsin*, a city, cap. of Marathon co., 175 m. N. of Madison. Pop. (1895) 11,013.

Wau'seon, in *Ohio*, a post-village, cap. of Fulton co., 30 m. S.W. of Toledo.

Wausha'ra, in *Wisconsin*, a central co.; area, 645 sq. m. *Rivers*. Pine and Mecan; also, Willow creek. *Surface*, diversified; *soil*, fertile. *Cap.* Wautoma. Pop. (1895) 15,355.

Wauto'ma, in *Wisconsin*, a post-vill. and twp., cap. of Wauwata co., 75 m. N. of Madison.

Wauwata'sa, in *Wisconsin*, a post-village and twp. of Milwaukee co., 5 m. W. of Milwaukee.

Wauze'ka, in *Wisconsin*, a post-vill. and twp. of Crawford co., 17 m. E. of Prairie du Chien.

Wave, *n.* [A. S. *wag*.] The alternate elevation and depression of parts of the surface of a liquid above and below the natural level. When the surface of a liquid is unequally pressed, the columns which sustain the greatest pressure are shortened, and sink below the original level; and the contiguous columns, being affected by the same pressure, will be lengthened and rise above that level. But as the elevation is not sustained by an hydraulic pressure, the lengthened columns again fall, and acquiring in the fall a velocity due to the height, descend below the original level, communicating in their turn a pressure to those which are adjacent to them. In this manner a reciprocating motion is produced, the particles to which the primitive impulse was communicated being alternately the lowest and the highest; the result is a series of ridges and hollows called *waves* or *undulations*. In passing from the columns which are shortened to those which are lengthened, and back again to those to which they originally belonged, the particles of the fluid acquire both a vertical and horizontal motion; but while the depth is sufficient to allow the oscillations to proceed unimpeded, no progressive motion takes place, each column being kept in its place by the pressure of the surrounding columns. If, however, free oscillation be prevented (as by the shelving of the shore, or by the interposition of a rock), the columns in the deep water are not balanced by those in the shallower, and thus they acquire a progressive motion towards the latter, or form *breakers*. For this reason, waves always break against the shore, whatever be the direction of the wind. See *TIDE*.

—*Unevenness*; inequality of surface; as, the *waves* of a prism. (*Newton*).—The line or streak of lustre on cloth watered and calendered.—Any undulating or waving motion; as, a *wave* of the hand.

Earth wave, an undulation of the earth during an earthquake.—*Waves of sound*, undulations propagated to the ear and producing sound.

Wave, *v. n.* [A. S. *wagian*.] To move as a wave, or to move to and fro, or up and down; to undulate; to float; as, a flag *waving* in the wind.—To be moved, as a signal; as, he *waves* his hand.—To be in an unsettled state; to fluctuate; to waver; to vacillate.

—*v. a.* To raise into waves, or inequalities of surface; to give an undulating form of surface to.—To brandish; to waft; to move one way and the other; as, "They *waved* on high their reeking swords." (*Chapman*).—To beckon; to signal or direct by a waft or waving motion.

Wave, *v. a.* Same as *WAIVE*, *q. v.*

Waved, *p. a.* Variegated in lustre; exhibiting a wave-like form or outline; undulating; as, a *waved* edge, a *waved* ribbon.

(*Her.*) Noting an indented outline representing honors originally acquired at sea.

(*Nat. Hist.*) Alternately convex and concave.

Waveless, *a.* Free from waves.

Wave'land, in *Indiana*, a post-town of Montgomery co., 15 m. S.W. of Crawfordsville.

Wave'line, *n.* (*Geol.*) The faint outline left by a wave or wavelet, where it dies out on a beach.

Wa'vellite, *n.* (*Min.*) A hydrated phosphate of alumina, found generally in small crystals forming hemispherical or globular concretions with a radiated structure.

Wave'loaf, *n.* A loaf of bread used as a wave-offering.

Wave-offering, *n.* In the Jewish ceremonial worship, an offering (generally a loaf of bread) made by waving it toward the four cardinal points.

Wa'ver, *v. n.* To wave; to play or move to and fro; to move one way and the other; hence, to reel; to totter; to be in danger of falling; as, a *wavering* gait.—To fluctuate; to vacillate; to be unsettled in opinion; to be undetermined; as, to *waver* in one's choice.

Wa'verer, *n.* One who wavers; one who is unsettled or undetermined in doctrine, will, or opinion.

Wa'veringly, *adv.* In a doubtful, fluctuating manner.

Wa'verley Novels, *n. pl.* (*Lit.*) The generic name given to the novels of Sir Walter Scott:—from *Waverley*, the title of the first of the collection.

Waverly, in *Indiana*, a post-vill. and twp. of Morgan co., about 18 m. S.S.W. of Indianapolis.

Waverly, in *Iowa*, a city, cap. of Bremer co., 115 m. W.N.W. of Dubuque. Pop. (1895) 2,916.

Waverly, in *Michigan*, a thriving township of Van Buren co.

Waverly, in *Missouri*, a post-town of Lafayette co.;—in *New York*, a post-village of Tioga co., 17 m. E.S.E. of Elmira;—in *Ohio*, a post-village, cap. of Pike co., 61 m. S. of Columbus;—in *Penn.*, a village of Bradford co.

The revised boundary line between the States of New York and Pennsylvania, completed in 1878, divided the village of W. unequally between these two States.—A post-borough of Lackawanna co.

Waverly, in *Tennessee*, a post-village, cap. of Humphreys co., 66 m. W. of Nashville.

Wa'ving, *n.* Act of moving or playing loosely, as a wave.

Wavre, (*vah'vr*), a town of Belgium, prov. of S. Brabant, 15 m. S.E. of Brussels. *Manuf.* Hats, leather, and cotton yarn. Pop. 5,830.

Wavy, *a.* Full of waves: rising or swelling in waves; as, Ocean's *wavy* breast. (*Dryden*).—Undulating; playing loosely to and fro; as, "Sheaves of rye grow *wavy* on the tilth."—*Philips*.

(*Bot.*) Waved; undulating on the surface or on the border.

Wawa'ka, in *Indiana*, a post-village of Noble co., 20 m. E.S.E. of Goshen.

Wa'warsing, in *New York*, a post-township of Ulster co.; pop. abt. 10,000.

Wax, (*wôks*), *n.* [A. S. *wæx*.] (*Chem.*) A name applied to several substances of very different composition and origin. Thus, we have the true vegetable wax or tallow from the *Stillingia sebifera*, the so-called Chinese vegetable wax, which is the secretion from an insect (a *coccus*), resembling spermaceti in appearance, and ordinary bees'-wax, a true animal secretion, formed by the common honey-bee. At one time it was supposed that the bee collected the wax ready formed from the plants on which it alighted; but the experiments of Dumas and others fully prove that it can secrete it when fed on sugar alone. Wax has been used as a candle material from the earliest ages. It is, when first collected, of a more or less deep yellow color; it consequently has to be bleached before use. This is effected by first melting the wax with a small portion of sulphuric acid, which facilitates the separation of certain of the impurities which subside in the acidulated water. So soon as by subsidence the wax is bright, it is cut up into ribbons and bleached by exposure to the sun and air for several days; after which it is once more melted, cut into ribbons, and exposed to the sun. Should it still have a yellow tinge, it is subjected to the same process again. The wax is not only whitened in the bleaching process but hardened. Although candle-making has reached such perfection, and we have every reason to be satisfied with the stearic and paraffin and spermaceti candles at present in use, none of them come up to the pure wax-candle in beauty, luminosity, hardness, and high fusing-point. Wax does not mould well; wax-candles are consequently made by dipping and rolling on a smooth marble slab. The true nature of wax was long unknown; but the investigations of Brodie have explained its composition in a most satisfactory manner. By solution in boiling alcohol, a substance known as *ungricin* separates; as the alcohol cools, *ceric* or *cerotic acid* crystallizes out, leaving *cerolein* in solution. Wax is a very

interesting material, from the number of valuable substances that may be formed from it. Yellow wax may be bleached by the action of chlorine, but it cannot be used for candles, in consequence of a chlorine compound being formed, which, on burning, gives off fumes of hydrochloric acid. It was in investigating this process that Gay-Lussac discovered the process of substitution. See *CEROPLASTIC*.

—A thick, sticky substance excreted by the ear. (See *CERAMEN*).—A tenacious substance used in sealing letters. (See *SEALING-WAX*).—A thick, resinous, wax-like substance used by shoemakers for rubbing their thread.

Mineral-wax. (*Min.*) See *OZOCERITE*.

—*v. a.* To smear or rub with wax; as, to *wax* a thread, to *wax* a mahogany table.

—*v. n.* [A. S. *waxan*.] To grow; to increase in size; to become larger or fuller;—antithetical to *wane*; as, the *waxing* and *waning* of the moon. (*Hakewill*).—To become; to pass from one state to another; as, to *wax* strong, to *wax* rich, to *wax* worse and worse, &c.

Waxing kernels. (*Med.*) Small tumors formed by the enlargement of the lymphatic glands, especially in the groins of children;—popularly so called, because supposed to be connected with the growth of the body.

Waxahach'ie, in *Texas*, a post-village and township, cap. of Ellis co., 190 m. N.E. of Austin.

Wax'-berry, *n.* (*Bot.*) See *MYRICACEÆ*.

Wax'-candle, *n.* See *CANDLE*.

Wax'-candler, *n.* A maker of wax-candles.

Wax'-cloth, **Wax'-ed-cloth**, *n.* Cloth covered with a coating of wax, commonly ornamented with some figured pattern, and used as covers to tables, pianos, side-boards, &c.

Wax'-ed-end, **Wax'-end**, *n.* A thread pointed with a bristle and covered with shoemaker's-wax, used in sewing leather, as for boots, shoes, and the like.

Waxen, (*wôks'n*), *a.* Made of wax; as, *waxen* wings.—Wax-like; having the characteristic quality of wax;—hence, soft; yielding; ductile; pliant.—Coated or covered with wax; as, a *waxen* thread.

Wax'-flower, **Clustered**. The Madagascar jasmine.

Wax'-iness, *n.* State or quality of being waxy.

Wax'-light, (*-lit*), *n.* A candle or taper of wax.

Wax'-modelling, *n.* Art of forming models and figures in wax.

Wax'-myrtle, (*-mér'tl*), *n.* See *MYRICACEÆ*.

Wax'-painting, *n.* (*Fine Arts*.) See *ENCAUSTIC*.

Wax'-palm, *n.* (*Bot.*) See *CEROXYLON*.

Wax'-paper, *n.* Paper prepared with a coating of white wax and other ingredients.

Wax'-wing, *n.* (*Zool.*) See *AMPELIDÆ*.

Wax'-work, (*-wûrk*), *n.* Preparations in wax of fruits, flowers, &c.; figures formed of wax in imitation of real beings; also, anatomical representations formed in wax. (*Bot.*) *Celastrus scandens*. See *CELASTRACEÆ*.

Wax'-worker, (*wûrk'ér*), *n.* A worker in wax; a modeller of waxen figures.—A bee that produces wax.

Waxy, *a.* Soft like wax; resembling wax; viscid; adhesive; hence, yielding; pliant; plastic.

Way, *n.* [A. S. *weg*; Lat. *via*, a way.] That along which anything is carried or conveyed; a highway, road, lane, or path of any kind; a street; any place for the passing of men, cattle, and other animals.—A moving; passage; transit; travel; journey; progression.

"Which way shall we go up?"—2 *Kings* iii. 8.

Length of space; distance; as, he has travelled a long way.—Direction of motion, or progression; course of travel; tendency of action or advance; as, I did not notice which way she took.—Manner or method of doing anything; means of accomplishment; scheme of management or execution; device; as, there are two ways of doing a thing—the right way and the wrong way.—Manner of thinking or behavior; style; mode; method; fashion; as, he has a quaint way of expressing himself.—Manner of practice; method or plan of life and conduct; process of things, good or bad; mode of dealing; regular plan or course of action; as, some men are odd and singular in their ways.—General scheme of action or conduct; determined course or tendency; as, he is resolved to have his own way.

(*Law*.) Either the right which one or more persons have passing over the land of another, or the space over which such right is exercisable. Ways are of various kinds; as a foot-way, for persons passing on foot only; a horse-way, for persons passing on horseback; a drift-way, for driving cattle; a carriage-way, for driving carriages and other vehicles. All these may be either public or private ways, the former open to all, the latter only to particular persons or classes of persons. A private right of way may be grounded on a special permission, as where the owner of the land grants to another the liberty of passing over his land; in which case it is confined to the grantee alone, and cannot be assigned or conveyed to another. It may also be to the grantee, his heirs and assigns, being owners of such a house or close; in which case the right passes with the ownership of such property. The grantor may also impose such restrictions upon his grant as he thinks proper. A private right of way may be also constituted by prescription, as where all the owners and occupiers of such a farm, or all the inhabitants of such a hamlet, have from time immemorial used to cross such ground, such usages supposing an original grant. Twenty years' occupation of land, adverse to a right of way and inconsistent therewith, bars the right.

(*Naut.*) The progress or motion of a vessel through the water;—as, the ship makes good way.

(*Arch.*) The side of a planer.

By the way, apropos; in passing; aside, as a thing dissociated from, but having a certain relevancy to, the main subject; as, a remark made by the way.—By way

of, as being; as for the purpose of; as, *by way of illustration*. — *Half-way*, so as to be half finished or arrived at; as, he met my advances *half-way*. — *In the family way*, with child; pregnant. (Colloq.) — *In the way*, so as to meet or fall in with, obstruct, check, hinder, retard, &c.; as, he had a rival *in the way*. — *Out of the way*.

(1.) So as not to fall in with, meet, obstruct, hinder, &c. — (2.) Aside; apart; out of the usual or proper course; odd; unusual; singular; wrong; as, an *out of the way* mode of doing business. — *To have way*, or *be under way*. (Naut.) A ship in progress is said to *have way* upon her, or *be under way*. See *HEADWAY*, *LEEWAY*, *STERNWAY*. — *To give way*, to yield; to concede in favor of another; to make room for; as, an obstinate man is the last to *give way*. — (Naut.) To ply the oars energetically; as, to *give way* with a will. — *To go, or come one's way*, to depart or come along; as, he *went his way* rejoicing. — *To go the way of all the earth*, to die; to yield up the breath. — *To make way*, to allow room to pass; also, to make a vacancy; as, he *resigned to make way* for an abler man. — *Ways and means*, resources; methods; facilities; in a legislative sense, when a parliamentary or congressional body goes into committee of the whole house for the purpose of considering the manner in which funds are to be raised for the public expenditure, it is said to go into committee of *ways and means*.

Way of the rounds. (Fortif.) A space left for the passage round between a rampart and the wall of a fortified place. (Crabb.) — *NOTE*. *Way* and *ways* are sometimes used in phraseology in the sense of the terminal syllable *wise*; as, he married a woman in no *ways* his equal.

Wayawan'da, or **WAYAYANDA**, in New York, a twp. of Orange co., 5 m. W. of Goshen.

Way'-baggage, (*bā'gaj*), *n*. The baggage of a passenger by railroad, &c.

Way'-bill, *n*. A list of passengers travelling by public conveyance, or of the baggage and freightage transported by it.

Way'farer, (*-fair*), *n*. A traveller; a passenger; usually, one who journeys on foot.

Way'faring, *n*. Travelling; passing; being on a journey; generally, a travel or journey on foot.

Way'faring-tree, *n*. (Bot.) See *VIBURNUM*.

Waygion, (*wa'gi-on*), an island of the Eastern Archipelago, 80 m. long, and abt. 25 m. broad, separated from New Guinea by Dampier's Strait; Lat. 0° 5' S., Lon. 130° 15' E.

Way'-going, *a*. Departing; pertaining or having reference to one who goes away.

Way-going crop. (Law.) In Pennsylvania, the right which, by the custom of the country, a tenant for a term certain possesses, after the expiration of his lease, of entering and taking away the crop of grain which he had put into the ground the preceding fall.

Way'land, FRANCIS, minister and educator, was born in the city of New York in 1796. He graduated at Union College in 1813, studied medicine, and was licensed as a practitioner. In 1816, however, he entered the theological seminary at Andover, and became, in 1821, pastor of the First Baptist Church in Boston, where he was ordained, and remained 5 years. One of his published sermons of this period on the *Moral Dignity of the Missionary Enterprise*, had an extraordinary success, passing through many editions in America and England. In 1826 he was chosen president of Brown University, Providence, R. I., and entered upon his duties in 1827. Dr. W. taught by lectures in place of the old text-books, and the public have participated in the benefits of his efforts within the college by the publication of his works on *Moral Science*, *Political Economy*, and *Intellectual Philosophy*. He proposed a change in the working system of the college, by which single studies might be followed and collegiate honors awarded for a partial course. In 1842, he stated his views on this subject in a work entitled *Thoughts upon the Collegiate System of the United States*, which led to much discussion. In 1850, Brown University was reorganized on his plan. He resigned the presidency of the university in 1855, and afterward devoted the most part of his time to religious and humane labors. Died in 1865.

Way'land, in Massachusetts, a post-village and twp. of Middlesex co., 16 m. N.W. of Boston.

Wayland, in Michigan, a post-village and twp. of Allegan co., abt. 25 m. S. of Grand Rapids; pop. abt. 1,200.

Way'land, in New York, a twp. of Steuben co., containing the post-vill. of Wayland dept.; pop. abt. 3,800.

Way'lay, *v. a.*, (*imp.* and *pp.* *WAYLAID*.) To lay one's self in the way of; to watch insidiously in the way, with a view to seize, rob, or slay; to lie in wait for; to beset in ambush; as, the party was *waylaid* by brigands.

Way'layer, *n*. One who waylays, or lies in ambush for another.

Way'less, *a*. Without a road or path; trackless.

Way'-mark, *n*. A land-mark; a guide-post.

Way'mart, in Pennsylvania, a post-borough of Wayne co., abt. 9 m. N.W. of Honesdale.

Wayne, in Georgia, a S.E. co.; area, 750 sq. m. *Rivers*. Altamaha and Santilla. *Surface*, undulating, and in part covered with forest; *soil*, sandy. *Cap.* Jesup. *Pop.* (1897) 8,150.

Wayne, in Illinois, a S.E. co.; area, 720 sq. m. *Rivers*. Little Wabash and Skillet Fork; also, Elm creek. *Surface*, level; *soil*, fertile. *Cap.* Fairfield. *Pop.* (1897) 25,460.

—A post-township of Du Page co., 35 miles northwest of Chicago.

Wayne, in Indiana, an eastern county, bordering on Ohio; area, 380 sq. m. *Rivers*. The Whitewater and several of its branches. *Surface*, undulating; *soil*, very fertile. *Cap.* Richmond. *Pop.* (1897) 39,330. Also the name of 16 townships, in:—Allen co.—Barthol-

omew county.—Fulton county.—Hamilton county.—Henry county.—Huntingdon county.—Jay county.—Kosciusko county.—Marion county.—Montgomery county.—Noble county.—Owen county.—Randolph county.—Stark county.—Tippecanoe county.—Wayne county.

Wayne, in Iowa, a S. county, bordering on Missouri; area, 525 sq. m. *Rivers*. The South Fork of Chariton river; also Medicine and Locust creeks. *Surface*, undulating, and diversified with prairies and groves of deciduous trees; *soil*, very fertile. *Products*. Indian corn, wheat, and oats. *Cap.* Corydon. *Pop.* (1895) 16,155.—A post-township of Henry co., abt. 3 m. S.W. of Muscatine.—A township of Jones co.—A township of Mitchell co.—A township of Monroe co.

Wayne, in Kansas, a township of Doniphan co.

Wayne, in Kentucky, a S. co., bordering on Tennessee; area, 590 sq. m. *Rivers*. South Fork of the Cumberland; also Beaver and Otter creeks. *Surface*, diversified; *soil*, fertile. *Min.* Coal and iron. *Cap.* Monticello. *Pop.* (1897) 14,200.

Wayne, in Maine, a post-township of Kennebec co., 12 m. W. of Augusta.

Wayne, in Michigan, a S.E. co., bordering on lakes Erie and St. Clair, and Upper Canada; area, 565 sq. m. *Rivers*. Detroit, Huron, and Rouge. *Surface*, level; *soil*, fertile. *Cap.* Detroit. *Pop.* (1894) 292,495. —A township of Cass co.

Wayne, in Mississippi, an E.S.E. co., bordering on Alabama; area, 775 sq. m. It is traversed by the Chickasawhay river. *Surface*, undulating; *soil*, sandy. *Cap.* Waynesboro. *Pop.* (1897) 10,250.

Wayne, in Missouri, a S.E. co.; area, 800 sq. m. *Rivers*. Big Black, Castor, and St. Francis. *Surface*, diversified; *soil*, generally fertile. *Cap.* Greenville. *Pop.* (1897) 12,540.

—A township of Buchanan co.

Wayne, in New Jersey, a township of Passaic co.

Wayne, in New York, a N.W. central co., bordering on Lake Ontario; area, 621 sq. m. *Rivers*. Clyde and Canandaigua Outlet. *Surface*, undulating; *soil*, fertile. *Min.* Iron, limestone, and gypsum; also sulphur springs. *Cap.* Lyons. *Pop.* (1897) 51,270.—A village and township of Steuben co., 12 m. N.E. of Bath.

Wayne, in North Carolina, an E. central co.; area, 615 sq. m. *Rivers*. Nense; also Contentny creek. *Surface*, undulating; *soil*, sandy. *Cap.* Goldsborough. *Pop.* (1897) 28,100.

Wayne, in Ohio, a N.E. central co.; area, 540 sq. m. *Rivers*. Chippewa and Muddy Fork; also Killbuck and Sugar creeks. *Surface*, undulating; *soil*, fertile. *Min.* Mines of bituminous coal have been opened in this county, which has also quarries of limestone. *Products*. Wheat, Indian corn, oats, hay, butter, cattle, wool, and pork are the staple products. In 1896 this county produced 1,210,281 bushels of wheat, 1,019,683 of oats, and 1,238,507 of Indian corn. *Cap.* Wooster. *Pop.* (1897) 41,200.—Also the name of 21 townships in: Adams county.—Ashtabula county.—Anglaize county.—Belmont county.—Butler county.—Champaign county.—Clermont county.—Clinton county.—Columbiana county.—Darke county.—Fayette county.—Jefferson county.—Knox county.—Monroe county.—Montgomery county.—Muskingum county.—Noble county.—Pickaway county.—Scioto county.—Tuscarawas county.—Warren county.

Wayne, in Pennsylvania, a N.E. co., bordering on New York; area, 738 sq. m. *Rivers*. The Delaware; also Lackawaxen, Dyberry, Starucca, and Equinunk creeks. *Surface*, hilly, and largely covered with forests. *Cap.* Honesdale. *Pop.* (1897) 32,050.—Also the name of 8 townships in: Armstrong county.—Clinton county.—Crawford county.—Erie county. 27 m. S.S.E. of Erie.—Greene county.—Lawrence county.—Mifflin county.—Schuylkill county.

Wayne, in Tennessee, a S.S.W. co., bordering on Alabama; area, 720 sq. m. *Rivers*. Tennessee; also Cypress and Reinses creeks. *Surface*, hilly; *soil*, fertile. *Min.* Iron. *Cap.* Waynesboro. *Pop.* (1897) 12,400.

Wayne, in Texas, a village of Cass co.

Wayne, in West Virginia, a S.W. co., bordering on Kentucky; area, 445 sq. m. *Rivers*. Ohio and Sandy; also Twelve-pole creek. *Surface*, hilly; *soil*, fertile. *Min.* Stone-coal. *Cap.* Wayne. *Pop.* (1890) 18,652.

Wayne, in Wisconsin, a township of Lafayette co.

—A township and post-village of Washington co.

Wayne, ANTHONY, an American general of the revolutionary war, b. at Waynesborough, Pennsylvania, 1745, was the grandson of Anthony Wayne, a native of Yorkshire, Eng., who commanded a squadron of dragoons under King William III. at the battle of the Boyne. W. was educated at the Philad. academy, and Franklin procured him the appointment as agent of a Philadelphia association, formed for the purchase and settlement of a large tract of land in Nova Scotia. In 1767, he married a daughter of Bartholomew Penrose, an eminent merchant of Philadelphia, and established himself on a farm in his native county. At the outbreak

of the revolutionary war, he raised a regiment of volunteers, of which he was appointed colonel, and sent to Canada, where he covered the retreat of the provincial forces at Three Rivers. He commanded at Ticonderoga until 1777, when he was made Brigadier-general, and joined Washington in New Jersey; commanded the rearguard in the retreat at Brandywine; led the attack at Germantown; captured supplies for the distressed army at Valley Forge; distinguished himself at Monmouth; was defeated at Paoli; but achieved one of the most brilliant victories of the war, in the storming of Stony Point, July 15, 1779. His courage and skill saved Lafayette in Virginia in 1780; and he aided in the siege of Yorktown, and commanded in Georgia. At the close of the war, rewarded by popular enthusiasm, and having by his dash and audacity acquired the sobriquet of "Mad Anthony," he retired to his farm at Waynesborough, and engaged in promoting the construction of roads and canals. In 1792 he commanded a successful expedition against the Indians of the north-western territories, where he remained until 1796, as U. S. Commissioner. D. Dec. 14, 1796, in the garrison at Presque Isle, (New Erie).

Wayne Court-House, in W. Virginia, a post-village, cap. of Wayne co., 275 m. W. of Richmond.

Waynesborough, in Georgia, a post-village, cap. of Burke co., 30 m. S. of Augusta.

Waynesborough, in Pennsylvania, a post-bor. of Franklin co., 57 m. S.W. of Harrisburg.

Waynesborough, in Tennessee, a post-village, cap. of Wayne co., 90 m. S.W. of Nashville.

Waynesborough, in Virginia, a post-town of Augusta co., 108 m. W.N.W. of Richmond.

Waynesburg, in Ohio, a post-village of Stark co., 12 m. S.E. of Canton.

Waynesburg, in Pennsylvania, a village of Chester co., 48 m. N.W. of Philadelphia.

—A post-borough, cap. of Greene co., 45 m. S.W. of Pittsburg.

—A village of Mifflin co.

Waynesfield, in Ohio, a township of Lucas co.

Waynesville, in Georgia, a post-village, former cap. of Wayne co., 176 m. S.E. of Milledgeville.

Waynesville, in Illinois, a post-village and township of De Witt co., 12 m. N.W. of Clinton.

Waynesville, in Indiana, a post-village of Bartholomew co., 5 m. S. of Columbus.

Waynesville, in Missouri, a post-village, cap. of Pulaski co., 80 m. S. of Jefferson City.

Waynesville, in N. Carolina, a post-village, cap. of Haywood co., 285 m. W. of Raleigh.

Waynesville, in Ohio, a post-village of Warren co., 37 m. N.N.E. of Cincinnati.

Wayne'town, in Indiana, a post-town of Montgomery co., 10 m. W.N.W. of Crawfordsville.

Way'-passenger, *n*. A passenger taken up at some way-side station or intermediate stopping-place.

Way'-side, *n*. The side of a public way, road, or path.

Way'-station, (*-stā'shun*), *n*. An intermediate station on a line of journey, particularly on a railroad.

Way'ward, *a*. Bent on having one's own way; liking one's own way; self-willed; froward; perverse; contrary; fuciful; humorsome; as, a *wayward* woman, a *wayward* mood.

Way'-warden, *n*. The warden, superintendent, or surveyor of a road.

Way'wardly, *adv*. In a wayward or wilful manner.

Way'wardness, *n*. State or quality of being wayward; frowardness; wilfulness; perversity.

Way'-wiser, (*-wīz'err*), *n*. An odometer or pedometer.

Way'wode, *vai'vode*. Same as *WAYWODE*, *q. v*.

Way'worn, *a*. Worn or fagged by travelling.

We, *pron.*; *pl.* of *I*. (*poss.* OUR or OURS; *obj.* US.) [A. S.] *I* and others;—denoting the person speaking and another, or others, with him or her. The word is frequently employed individually, as by authors, editors, &c., when speaking of themselves, in order to avoid the appearance of egotism in the too frequent repetition of the personal pronoun *I*. The plural style is also characteristic of the utterances of kings and other sovereign rulers.

Wea, in Indiana, a village and township of Tippecanoe co., 3 m. S. of Lafayette.

Wea, in Kansas, a post-town of Miami co.

Weak, *a*. (*comp.* WEAKER; *superl.* WEAKEST.) [A. S. *wac*, *waac*; Dan. *svag*; Icel. *vakr*; Ger. *schwach*.] Wanting in or without physical strength; as: (1.) Feeble; infirm; lacking in vigor or strength of body; frail; sickly; not healthy; as, a *weak* constitution.—(2.) Not able to bear a great weight; as, a house built on a *weak* foundation; a *weak* spar; a *weak* rope, &c.—(3.) Not compact, or firmly united or adhering; not with the parts strongly put together; easily broken or fractured; as, a *weak* ship; a *weak* scaffolding.—(4.) Soft; pliant; flexible; not stiff or sturdy; as, the *weak* stem of a plant.—(5.) Not able to resist a violent or forcible attack or onslaught; easily passed, overpowered, or overcome; as, a *weak* barrier; a *weak* fence; a *weak* place in a line of fortifications, and the like.—(6.) Low; feeble; small; thin; wanting force of utterance or vocal development; as, "A voice *weak*, piping, and womanish." (*Ascham*).—(7.) Not thoroughly or sufficiently impregnated with ingredients, or with parts that excite action, or with stimulating and nourishing substances; not of the customary or necessary strength; as, *weak* tea; *weak* grog; a *weak* solution of any fluid.—(8.) Lacking power or ability for the discharge of an appropriate function or duty; as, a stomach too *weak* for the digestion of ordinary food.—Not possessing, or exhibiting, moral, intellectual, or political strength or vigor; as: (1.) Lacking spirit; feeble of mind or understanding;

Fig. 2604. — GEN. WAYNE.

deficient in foresight or discernment; as, a *weak* mind and a capacious temper are usually found together.—(2.) Consequent upon, or indicative of, lack of judgment, discernment, or mental force; injudicious; unwise; foolish; as, he is *weak* enough to be ruled by his wife.—(3.) Not possessing full confidence or conviction; undecided; unconfirmed; as, a person *weak* in faith.—(4.) Unfortified; accessible; impressible; vulnerable; not having the power to withstand temptation, importunity, inducement, and the like; as, *weak* resolutions; also, wanting in binding force or authority; infirmity; as, all of us have our *weak* side.—(5.) Not having moral force or power to convince; not well supported or fortified by truth or reason; unsustained; wanting in demonstrative efficacy; as, a *weak* argument.—(6.) Lacking in force, terseness, or aptitude of expression; wanting in point or applicability; as, a *weak* literary style.—(7.) Feeble; ineffective; inoperative; as, *weak* excuses.—(8.) Not politically powerful; not having force of authority or energy; lacking in administrative means or resources; as, a *weak* government; a *weak* state among nations.

(NOTE. *Weak* is frequently employed in the construction of certain self-explanatory compounds; as, *weak-eyed*, *weak-handed*, *weak-minded*, *weak-spirited*, &c.)

Weaken, (*wēk'n*), *v. a.* [A. S. *wæccan*.] To cause to become weak, languid, or enfeebled; to lessen or impair the vigor of, or to deprive of strength; to enervate; to debilitate; as, to *weaken* the mind or body; to *weaken* the power of a government; to *weaken* the force of an objection, &c.—To lower or reduce in strength, body, or spirit; as, to *weaken* any liquid solution or decoction; to *weaken* over-proof alcohol, &c.

Weakener, *n.* One who, or that which, weakens.

Weak'ening, *a.* Having the quality or property of reducing strength.

Weak'hearted, *a.* Of weak or feeble spirit; wanting in courage; timorous; easily dispirited.

Weak'ish, *a.* Somewhat weak.

Weak'ishness, *n.* Quality of being weakish or deficient in strength.

Weak'ling, *n.* A creature lacking in strength, vigor, or energy; a feeble person.

Weak'ley, in *Tennessee*, a N.W. co., bordering on Kentucky; area, 620 sq. m. *Rivers*. The North, Middle, and South Forks of the Obion river. *Surface*, level; *soil*, fertile. *Products*. Corn, wheat, oats, hay, considerable dairy produce, live stock, &c. *Cap. Dresden*. *Pop.* (1897) 30,020.

Weak'ly, *adv.* In a weak manner; feebly; listlessly; with little physical strength; faintly; not forcibly; with little courage or fortitude; as, a place *weakly* defended.—With want of power or efficacy; as, words *weakly* sustained by actions.—With feebleness of mental or intellectual application; injudiciously; indiscreetly; timorously.

—*a.* Infirm; feeble of constitution; not strong physically; as, a *weakly* child.

Weak'ness, *n.* State or quality of being weak; lack of physical strength; deficiency of natural force or vigor; debility; infirmity; feebleness; as, the *weakness* of a person's constitution; the *weakness* of the foundation of a building; the *weakness* of a rope, &c.—Want of sprightliness or activity; as, soft without *weakness*. (*Pope*).—Lack of resolution; want of steadiness; as, the *weakness* of impotent anger.—Want of mental force or efficacy; lack of cogency; as, the *weakness* of hearsay testimony.—Deficiency or absence of judgment or the reasoning faculty; feebleness of mind or intellect; ill-timed or foolish act; weak trait or characteristic; as, a woman's excuse is *weakness*.—Defect; failing; fault; as, women and wine have been the *weaknesses* of the world's greatest heroes.

Weal, *n.* [From the root of *WELL*, *q. v.*] Happiness; prosperity; well-being; a sound, healthy, prosperous person or thing;—opposed to *woe*; as, the public *weal*.

Weal, *n.* and *v. a.* Same as *WALE*, *q. v.*

Weald, *n.* [A. S.] A wood or forest. (*O.*)

Weald'elay, *n.* (*Geol.*) The uppermost series of the Wealden formation.

Wealden Formation, *n.* (*Geol.*) The name given to certain deposits occurring in England in the Weald or Wolds (wooded portions) of Kent, and hence to other contemporaneous rocks elsewhere. The Wealden deposits occur between the oolitic and cretaceous series. In England they are almost entirely of fresh-water origin, and include clays, sandstones, and limestones.

Wealth, (*wēlth*), *n.* [A. S. *wælg*, rich, with the termination *te* or *de*, forming Eng. *wealth*.] Riches; large possessions of money, goods, or land; that abundance of worldly estate which exceeds the estate of the greater part of the community; affluence; opulence; property; the means of obtaining the products of labor.

Wealth'ily, *adv.* Characterized by wealth; richly.

Wealth'iness, *n.* State of being wealthy; richness.

Wealth'y, *a.* (*comp.* *WEALTHIER*; *superl.* *WEALTHIEST*.) Rich; possessing wealth; having worldly means in abundance; with larger possessions in lands, goods, money, or securities, or larger than the generality of men; affluent; opulent; as, a *wealthy* miser; a *wealthy* nation.

Wean, (*wēn*), *v. a.* [A. S. *wēnan*; Ger. *entwöhnen*, to disuse, to wean.] To separate from the breast or udder, or from the mother's milk; to accustom to want or be without, as nourishment derived from the mother; as, to *wean* an infant.—Hence, to reconcile to the want or deprivation of anything; to detach or alienate, as the affections, from an object of attraction or desire; as, to *wean* a youth from vicious company.

—*n.* A weanling; a young or newly weaned child.

Wean'ing, *n.* (*Med.*) The act of taking an infant from the breast, and subjecting him to an artificial diet. The

exact time when this change should take place must always be an open question, depending on the strength or weakness of the child, and the health and capability of the mother for the duty of a wet-nurse. When mother and child are both in a fair condition of health, the general time of weaning the infant is between the ninth and twelfth month; should the child, however, be very backward with its teeth, and have only cut one or two by the latter period, the time of weaning should be postponed for a few weeks or months. As a general rule, when nature has placed a sufficient number of teeth in the infant's mouth to enable it to mumble the soft aliment on which it is fed, the time has arrived to make it independent of its nurse. All prudent mothers, however, will gradually accustom their infants to the change by beginning to feed them once, twice, and finally three times a day for some few weeks before absolute weaning, at the same time *reducing* the number of times of daily *suckling*; by this means the process is made easy and gradual, and the children are in a great measure spared the distress consequent on an abrupt change.

Wean'ing-brash, *n.* (*Med.*) A severe form of diarrhoea, which supervenes, at times, on weaning.

Wean'ling, *n.* A child or animal newly weaned from its mother or dam.

—*a.* Freshly weaned; as, a *weanling* kid.

Weapon, (*wēp'n*), *n.* [A. S. *wæpen*; Du. *wapen*; Dan. *vaaben*; Icel. *vopn*.] That which kills or is used in offensive action; any instrument of destruction, or of offence or defence; that which is used to fight with; anything used, or designed to be used, in destroying or annoying an enemy; as, *weapons* of war.—Hence, that which serves to attack or defend in any contest; as, an angry woman's deadliest *weapon* is her tongue.

Weaponed, (*wēp'nd*), *a.* Equipped or furnished with weapons.

Weaponless, *a.* Unarmed; without a weapon.

Weaponry, *n.* Weapons considered collectively. (*R.*)

Wear, (*wēr*), *v. a.* (*imp.* *WORE*; *pp.* *WORN*.) [Icel. *vergan*, a rendering worse; O. Ger. and O. Sax. *werran*.] To make worse, impair, or waste by use, by time, or gradual diminution; to consume gradually; to affect by degrees; as, to *wear* time in slothful idleness; to *wear* a coat until it becomes seedy; to *wear* one's patience by arguing with a woman.—To use up by carrying or having upon one;—hence, to consume by use or application; as, to *wear* clothes rapidly.—To cause by friction or attrition; as, to *wear* a hole in one's stocking.

—*v. n.* To be impaired, wasted, or diminished; to be wasted by time or use;—often followed by a particle, as *out*, *off*, or *away*; as, he *wears out* many pairs of boots; the nap is *worn off*; this pencil is *worn away* to the stump.—To be tediously spent; to be consumed by small degrees; as, this diffidence will soon *wear off*; to *wear out* miserable days.—To become exhausted; to tire; to be spent; to be overcome by wasted strength and weakened energies; as, a *worn out* veteran soldier.

—*n.* Act of wearing, or state of being worn: diminution by attrition or friction; state of being worn; as, the *wear* of a hat.—Thing worn; style of costume; mode; fashion; as, knickerbockers have come into *wear*.

Wear and tear, loss or injury sustained by wear or use; damage or deprivation by accident; as, the *wear and tear* of a ship's tackling.

Wear, *v. a.* [A. S. *wearian*, to wear, to put on; O. Ger. *werjan*, *gewerjan*, to put on, to clothe.] To carry or bear upon the person; to carry appendant to the body, as clothes or weapons; to have on; as, to *wear* a cocked hat and sword; to *wear* crinolines.—To bear; to have or exhibit an appearance of; as, he *wears* an ugly scowl on his face.

(*Naut.*) To put a ship on the other tack, by bringing her round with her stern to the wind.—To *wear the breeches*. See *BREECHES*.

Wear, *n.* Same as *WEIR*, *q. v.*

Wear'able, *a.* That may be worn.

Weare, (*wair*), in *Michigan*, a post-township of Oceana co.

Weare, in *New Hampshire*, a post-township of Hillsborough co., 14 m. S.W. of Concord.

Wearer, *n.* One who wears or carries as appendant to the body; as, the *wearer* of a scarlet uniform.—That which impairs, wastes, or diminishes.

Weariless, *a.* Proof against weariness.

Wear'ily, *adv.* In a weary or tiresome manner.

Wear'iness, *n.* State of being weary or tired; that lassitude or exhaustion of strength which is induced by labor too long protracted; fatigue; also, uneasiness proceeding from continued waiting, disappointed expectation, or exhausted patience, or from other cause.

Wear'ing, *p. a.* Denoting what is worn, or is adapted for wear; as, *wearing* apparel.

—*n.* Manner in which anything wears; consumption; use; as, English broadcloth makes good *wearing*.

Wear'isome, (*-sum*), *a.* Causing weariness; tedious; tiresome; irksome; tatinguing; as, a *wearisome* journey; a *wearisome* book.

Wear'isomely, *adv.* In a wearisome manner.

Wear'isomeness, *n.* Quality or state of being wearisome; quality of exhausting strength or patience; tiresomeness; irksomeness; tediousness; as, the *wearisomeness* of a bore's platitudes.

Wear'month, (*Bishop's*), a town of England. See *SUNDERLAND*.

Wear'month, (*Monk*), a town of England. See *SUNDERLAND*.

Wear'y, *a.* (*comp.* *WEARIER*; *superl.* *WEARIEST*.) [A. S. *wearig*.] Fatigued or subdued by protracted or continued toil; having the strength much exhausted by labor or violent exertion; tired; fatigued; tagged; worn out; as, a *weary* traveller.—Having the patience exhausted, or

the mind yielding to discouragement; causing weariness; tiresome; boring;—often preceding *of*; as, one is soon *weary of* a dull, monotonous life.

—*v. a.* To make weary; to reduce or exhaust, as the physical strength of the body, by continued or protracted toil; to overtask the bodily energies; to tire; to fatigue; as, to *weary* one's self with incessant brain-work.—To make impatient of prolongation or continuance; as, she *wearies* one with her voluble inanities.—To tease, harass, or worry by anything irksome or invidious; as, I *wearyed* of his importunity.

To *weary out*, to subdue or exhaust by fatigue; as, book-making *wearies out* both mind and body.

Weasand, (*wē'zand*), *n.* [A. S. *wæsend*.] The windpipe or trachea; the throttle.

Weasel, in *New Jersey*, a village of Essex co., 60 m. N.E. of Trenton.

Weasel, (*wē'zl*), *n.* [A. S. *wesle*.] (*Zool.*) The general name of the carnivorous mammals of the family *Mustelidae* (*q. v.*), including many genera approaching the cats in the bloodthirstiness of their disposition. The genus *Putorius*, comprising the true weasels, is characterized by a very slender body, long tail, and thirty-

four teeth, the dental formula being: incisors $\frac{3-3}{3-3}$, canines $\frac{1-1}{1-1}$, premolars $\frac{3-3}{3-3}$, molars $\frac{1-1}{2-2}$. The lower sec-

torial tooth is without an inner tubercle. The *Minx*, *q. v.*, is the type of this genus.

Weasel-faced, (*fāst*), *a.* Lank-jawed or hatchet-faced, like a weasel.

Weather, (*wēth'r*), *n.* [A. S. *weder*, *wader*; Ger. *wetter*.] The state or condition of the atmosphere, with respect to heat, cold, dryness, moisture, wind, rain, snow, fogs, &c. The various causes which determine the state of the atmosphere, and produce those changes which are incessantly taking place in its condition, and which are popularly called the *weather*, form the subjects of METEOROLOGY and CLIMATE. See also ATMOSPHERE; BAROMETER; CLOUD; DEW; HAIL; HYGROMETRY; RAIN; WIND, &c.

Stress of weather, tempestuous force of winds and waves; as, the ship put back through *stress of weather*.—*Weather of a wind-mill sail*, the angle which the sail makes with its plane of revolution.

—*v. a.* To air; to season by exposure to the air or atmosphere.—To sustain or endure the trying effect of, without harm or detriment; as, to *weather* the storm of popular prejudice.

(*Naut.*) To pass or sail to the windward of; as, to *weather* a cape.—To *weather a point*. (*Naut.*) To gain a point nearer the wind, as a ship; hence, to gain an end, or accomplish an object, in the face of obstacles or opposition.—To *weather out*, to encounter and pass through safely, though not easily; as, to *weather out* a gale at sea.

—*v. n.* To undergo atmospheric action or influence;—sometimes, to wear away or suffer change by force of meteorological influences.

—*a.* (*Naut.*) On the windward side, or that side which is nearest the quarter whence the wind blows from:—opposed to *lee*, and often used in the composition of sea-terms; as, to have the *weather-gage*.

To *carry a weather* or *weatherly helm*. (*Naut.*) To tend to come up into the wind, as a ship, so as to require the helm to be put up constantly.

Weather-beaten, *a.* Beaten or harassed by the action of the weather; worn by exposure to severe weather; as, a *weather-beaten* sailor.

Weather-bit, or **-bitt**, *n.* (*Naut.*) A turn of the cable about the end of the windlass, without the bitts.

—*v. a.* (*Naut.*) To take another turn with; as, to *weather-bit* a cable around a windlass.

Weather-bitten, (*-bit'tn*), *a.* Nipped, defaced, or worn by exposure to the weather.

Weather-board, *n.* (*Naut.*) The windward, or weather side of a ship.—Also, a piece of plark placed in the ports of a ship, when laid up in ordinary, and serving as a protection from bad weather.

(*Arch.*) A leather-edged boarding nailed upright, the boards overlapping each other.

—*v. a.* (*Arch.*) To fasten boards by overlapping and nailing them together, to keep out water and the like.

Weather-board'ing, *n.* Act of securing boards by nailing them together while in an overlapped position; also, the boards themselves, when so nailed and secured.

Weather-bound, *a.* Prevented from proceeding by stress of weather.

Weather-breed'er, *n.* A fine day which is supposed to be the precursor of bad weather.

Weather-cock, *n.* A weather-vane. See *VANE*.—Hence, a fickle, inconstant, changeable person; one who is not to be depended upon.

Weathered, (*wēth'rd*), *a.* (*Arch.*) Constructed in a sloping form, so as to throw off water;—said of windowsills, cornices, &c.

(*Geol.*) Having the surface altered in color, texture, or composition, or the edges rounded off by exposure to the elements.

Weatherford, in *Texas*, a city, cap. of Parker co., about 180 m. N. of Austin. *Pop.* (1897) 4,050.

Weather-gage, (*-gāj*), *n.* The position of a ship when lying or sailing to windward of another.—Hence, a position of advantage or superiority; as, a client rarely gets the *weather-gage* of his lawyer.

Weather-helm, *n.* (*Naut.*) A tendency, in steering, to come up into the wind, rendering it necessary to put the helm up.

Weather-house, *n.* A mechanical contrivance, in the form of a toy-house, to indicate changes of the weather.

Weather'ing, *n.* Exposure to the weather.

(*Geol.*) The destruction or change of form produced on rocks by the action of the weather.

Weath'erly, *a.* (*Naut.*) Making good way to windward; as, a *weath'ly* ship.

Weath'erly, in *Pennsylvania*, a post-borough of Carbon co.

Weath'ermost, *a.* Being farthest to the windward; as, the *weath'rm* ship of a squadron.

Weath'er-mould'ing, *n.* (*Arch.*) A label, canopy, or drip-stone, over a door or window, intended to keep off water from the parts beneath.

Weath'er-proof, *a.* Proof against wind and water.

Weath'er-roll, *n.* (*Naut.*) The roll of a ship to windward; — in contradistinction to *lee-lurch*.

Weath'ersfield, in *Vermont*, a post-township of Windsor co., 65 m. S.E. of Montpelier.

Weath'er-shore, *n.* (*Naut.*) The shore lying to windward of a ship; opposed to *lee-shore*.

Weath'er-side, *n.* (*Naut.*) That side of a vessel under sail, upon which the wind blows, or which is to windward; — opposed to *lee-side*.

Weath'er-tide, *n.* [*Weather and tide.*] (*Naut.*) The tide which sets against the lee side of a ship, impelling her to the windward.

Weath'er-wise, *a.* Skilled in prognosticating the changes of the weather.

Weave, *v. a.* (*imp.* WOVE; *pp.* WOVEN, WOVE.) [*A. S. wefan.*] To unite, as threads of any kind, in such a manner as to form a texture; to form into a web; to unite, as anything flexible; to cause to cohere by intermixture or close connection; to interpose; to insert; as, to *weave* cloth; words *woven* into song; thoughts *woven* into language, &c.

—*v. n.* To work with a loom; to practise weaving.—To become woven or intertwined.

Weav'er, *n.* One who weaves; one who makes weaving his business.

(*Zoöl.*) See PLOCEUS.

Weaver's Mill, in *Alabama*, a township of Morgan co.

Weaver'sville, in *Pennsylvania*, a post-village of Northampton co., 100 m. E.N.E. of Harrisburg.

Weaverville, in *California*, a post-vill., cap. of Trinity co., 180 m. N.N.W. of Sacramento.

Weaving, *n.* (*Manuf.*) The act, art, or operation of producing cloth by the combination of flexible fibres, performed upon a frame called a *loom*, the invention of which is ascribed to the Egyptians. Among all barbarous nations, *W.* consists of warping and crossing grasses, and such simple materials as are most easily attainable, and is purely darning. The long threads, running from end to end of the piece, are called the *warp*; the cross ones, interlacing from side to side, the *weft*. In the method of *W.* by darning, every alternate thread of the warp must be lifted by itself to put in the weft-shot, and that process is therefore very tedious; but when a method is employed for lifting up a certain portion of the warp at once, which is called *shedding the web*, to receive the weft-shot, this effects a great saving of time, and is *W.* in its second stage. *W.* in this state has existed from time immemorial among the Egyptians, Hindoos, Chinese, and others. Plain *W.*, where the weft-threads pass alternately over and under those of the warp, is performed at a loom, of which the essential parts are: 1st, an arrangement for stretching the warp; 2d, a contrivance for raising every alternate thread, or half the threads of the warp, and depressing the other half, so as to open a space or shed for the shuttle which carries the weft; 3d, a contrivance for striking each weft-thread close up to the one previously thrown. In *W.* with the common loom, the warp is wound upon a cylindrical beam or roller. From this the thread passes through a harness composed of movable parts, called the *heddles*, of which there are two or more, consisting of a series of vertical strings, connected to frames, and having loops through which the warp passes. Each of these heddles receives its portion of the alternate threads of the warp, so that when they are moved reciprocally up and down, the relative position of the alternate threads of the warp is reversed. Each time that the warp is opened by the separating of its alternate threads, a shuttle containing the woof is thrown across it, and the thread of woof is immediately driven into its place by a frame called a *lay*, furnished with thin reeds or wires, placed among the warp like the teeth of a comb. About the latter portion of the 18th century, a loom to go by machinery was eagerly sought after, and was supposed to be an impossibility. Several were constructed and failed, and the cause of their failure, although apparently a trifling one, was, in reality, very important in *W.* by power. It was the want of a means to prevent the breakage of the yarn by the accidental stoppage of the shuttle in the shed. A Mr. Miller, however, at length invented a means, called a *protector*, by which this difficulty is obviated; and the power-loom is now enabled to perform all the motions of *W.* uninterrupted by accidents of this sort. *Figure-weaving* requires considerable preparation in mounting the loom, and differs from plain-weaving in the number and arrangement of the heddles, and the method of moving them. As the number of heddles was in general too great to be moved by the feet of the weaver, an apparatus called the *draw-loom* was in general use until the introduction of the *Jacquard Loom*, *q. v.* In 1857, Mr. N. B. Carney, of New York, patented a method of weaving fabrics within, and upon, a circular frame or loom, the shuttle being carried in a circle round the frame with a continuous movement, the warps, shuttles, and filling being placed at the top of the loom, and a reciprocating movement being continuously given to heddles lying horizontally about the loom, so as to produce the shed properly in front of the shuttle. In the same year,

Mr. E. B. Bigelow, of Boston, patented a method of weaving pile fabrics double, by means of transverse intersecting pile wires woven between the two fabrics so as to keep them properly apart, with movement at the same time of two shuttles, and an arrangement connecting each shuttle with the shipper, or disconnecting lever of the loom, so that, when the filling fails in either shuttle, the loom is thrown out of gear. Other American inventions in connection with the improvement of the power-loom have been very numerous, but comparatively few changes of a radical character have been introduced.

(*Fur.*) A peculiar and incessant motion of a horse's head, neck, and body, from side to side, like the shuttle of a weaver passing through the web.

Weazen, (*wē'zn*), *a.* Thin; sharp; angular; as, a *weazen* visage.

Web, *n.* [*A. S. webb.*] That which is woven; texture of threads; a sort of tissue or texture formed of threads interwoven with each other; textile fabric; hence, locally, a piece of cloth; as, to spin a *web*.—The filiferous texture spun by a spider. See *COWEB*.—A dusky film, or suffusion, that forms over the eye and hinders the sight.—Among block-makers, the thin partition on the inside of the rim and between the spokes of a sheave.

(*Zoöl.*) The membrane which connects the toes of many water-fowls.

(*Mach.*) A thin, vertical, metallic plate connecting an upper and lower table of a girder.—The thin, sharp part of a colter.

—*v. a.* To envelop; to entangle; to insnare or surround with a web, or as if with a web.

Webb, in *Texas*, a S. co., bordering on the Rio Grande, which separates it from Mexico; *area*, 680 sq. m. *Surface*, level; *soil*, fertile. *Cap.* Laredo. *Pop.* (1897) 16,564.

Webbed, (*wēbd*), *a.* [From *web*.] With the toes united by a web or membrane, as birds of the order *Natatores*.

Webbing, *n.* A strong hempen fabric, some two or three inches wide, made for upholding the seats of stuffed chairs, sofas, &c.

Webb's Mill, in *Alabama*, a township of Clarke county.

Webby, *a.* Pertaining, or having reference, to a web or webs; consisting of, filled, or covered with webs.

Weber, CARL MARIA VON, (*vai'bair*), a celebrated German musical composer, was b. at Eulín, in Holstein, in 1786. His father was a musician, and had him carefully educated. He learnt for a time painting and engraving, but music was his passion, and he began to compose at the age of twelve. He made various musical tours with his father, and about 1803 visited Vienna, where he became acquainted with the celebrated Haydn and the Abbe Vogler, from whom he received valuable help in his studies. He had now become widely known, and filled successively the offices of Chapel-master at Breslau and Carlsruhe, and director of the opera at Prague, making in the mean time other professional journeys in Germany. At the close of 1816 he settled at Dresden, where he was the founder and director of German Opera. In 1822 he went to Berlin, to bring out his *Der Freischütz*, the most celebrated of his compositions, and which at once gave him rank with the great masters of his art. In 1826 *W.* visited London to superintend the production of his *Oberon*, which he had composed for Covent Garden Theatre, and was brought out, conducted by Weber himself, on the 12th of April, 1826. Soon after, unmistakable symptoms of pulmonary disease presented themselves, and the health of the great composer sank rapidly, and his illustrious career closed on the 5th of June, 1826, when he was found lifeless in his bed. Of his other compositions may be named the operas of *Das Waldmädchen*, recast under the titles of *Sylvana*, *Rübezahl*, and *Euryanthe*.

Web-eye, *n.* (*Med.*) Obscurity of vision, depending on a speck in the cornea.

Weber, in *Utah*, a river which rises in Summit co., and flowing W., falls into the Great Salt Lake.

—A N. co., bordering on the Great Salt Lake; *area*, 650 sq. m. *Rivers*, Ogden and Weber. *Surface*, mountainous in the center; *soil*, generally fertile. *Cap.* Ogden City. *Pop.* (1895) 25,015.

—A village of Morgan co.

Web-foot, *n.*; *pl.* WEBFEET. A foot the toes of which are united by a membrane.

Web-footed, *a.* [From *web* and *foot*.] Palmiped; having the toes connected by a membrane, as the birds of the order *Natatores*.

Webster, DANIEL, one of the greatest statesmen and orators of the United States, b. at Salisbury, in New Hampshire, 1782. He was a child of the wilderness, and but for our system of education, which, even then, pushed the means of instruction into remote solitudes, he would never have been enabled to bring his great faculties to bear in public life. Daniel was the second son of Ebenezer Webster, a small farmer and justice of the county court. He entered Dartmouth College in 1797, and taught school in winter to pay his expenses. He graduated in 1801, and commenced to study law, but was induced, by an offer of a salary of \$350 a year, to become preceptor of an academy at Freeburg, Maine, paying his board by copying deeds. In 1804, he went to Boston, and entered the law office of Mr. Gore. In 1805, he was admitted to the Boston bar, passed one year in the practice of his profession at Boscawon, and, on the death of his father, established himself at Portsmouth, N. H., and married in 1808. Having engaged in politics as a member of the Federalist party, he was elected to Congress, where he immediately took rank with the foremost men of the country. He took his seat in the special session of May, 1813, and on June 10, delivered his maiden speech on the repeal of the Ber-

lin and Milan decrees. This, and his mastery of the question of currency and finance, secured him a high position. At the close of the session, however, *W.* removed to Boston, where, during a period of 7 years, he devoted himself exclusively to the practice of his profession, and occupied a position as a counsellor and an advocate, above which no one has ever risen in this country. In 1822, he was a member of the Massachusetts Constitutional Convention; and on Dec. 22, 1822, he pronounced at Plymouth, on the anniversary of the landing of the Pilgrims, the first of that remarkable series of discourses,

Fig. 2605. — DANIEL WEBSTER.

or orations, which put him in the first rank among American orators. In 1825, he delivered an oration at the laying of the corner-stone of the Bunker Hill Monument; in 1843, one on its completion. In 1826, he pronounced the eulogy of John Adams and Thomas Jefferson, two fathers and Presidents of the American Republic, who died on the same semi-centenary anniversary of the Declaration of Independence; and in 1851, a patriotic discourse on the laying of the corner-stone for the extension of the Capitol at Washington. In 1822, he was elected to Congress from Boston, and distinguished himself by his speeches on the Holy Alliance, and the Greek revolution, and his labors in the revision of the criminal laws of the United States. In 1826, he was chosen senator; and in 1830, rose to the height of his forensic renown, in a speech of two days, in the debate with Mr. Hayne, of South Carolina, on the right of "nullification." *W.* and Clay were the leaders of the opposition during the administration of Jackson and Van Buren.

Fig. 2606. — BIRTH-PLACE OF DANIEL WEBSTER.

In 1841, he became Secretary of State under President Harrison; remained in the administration of President Tyler until 1843; and was a third time Secretary of State in 1850, in the cabinet of Mr. Fillmore. On various occasions *W.* had been an unsuccessful candidate for the presidency. He aspired again to that position in 1852, but his advocacy of compromises on the slavery question had given offence to the Abolitionists, and the choice of the convention assembled at Baltimore fell upon Gen. Scott. The great orator died a few months after, Oct. 24, 1852. *W.*'s figure was commanding; his countenance was remarkable even in repose, but when animated by the excitement of debate it "spoke no less audibly than his words." His gestures were vehement, without being undignified; and his voice was unrivalled in power, in clearness, and in modulated variety of tone. The most complete edition of his works is that published in 1851, in 6 vols. 8vo.

Webster, NOAH, an eminent American lexicographer, b. 1758, in that part of Hartford, Conn., which now forms the town of West Hartford. His ancestor, John Webster, was one of the earliest English settlers in Hartford, and was subsequently governor of Connecticut. Noah, with his father, and 2 other Websters, were in the army on the occasion of Burgoyne's expedition to Canada. Restored to more peaceful pursuits, he continued his studies, and in 1781 was called to the bar. He abandoned the law, however, became a schoolmaster and author, and published the *First Part of a Grammatical Institute*, *Sketches of American Policy*, and other works, and also established and conducted a daily paper in New York. But the work on which his reputation is founded is his elaborate *American Dictionary of the English Language*, a monument of vast ability, industry, and

Daniel Webster

1782-1852

learning, which was published in 1828. This dictionary, revised after Dr. Webster's death, by his son-in-law, Prof. Chauncey A. Goodrich, has been several times since republished in one large 4to volume. Died in 1843.

Webster, in *California*, a village of Sacramento co., about 20 m. S. of Sacramento City.

Webster, in *Georgia*, a W.S.W. co.; area, 225 sq. m. It is traversed by the Kickapoo river. *Surface*, level; *soil*, fertile. *Cap.* Preston. *Pop.* (1897) 6,150.

Webster, in *Illinois*, a post-village of Hancock co., about 10 m. N.E. of Carthage.

Webster, in *Indiana*, a township of Harrison co. —A village of Kosciusko co., about 11 miles N.E. of Warsaw.

Webster, in *Iowa*, a N.W. central co.; area, 720 sq. m. *Rivers*, Des Moines, Boone, and Lizard. *Surface*, undulating; *soil*, fertile. *Cap.* Fort Dodge. *Pop.* (1895) 26,945.

—Or **WEBSTER CITY**, a city, cap. of Hamilton co., on the Illinois Central and Chicago & Northwestern R.Rs., 20 m. E. of Fort Dodge. Has mineral springs and coal mines. *Pop.* (1895) 5,095.

Webster, in *Kansas*, a village of Pottawatomie co., on the Kansas river, opposite Wabawnee.

Webster, in *Kentucky*, a W. co.; area, 340 sq. m. *Rivers*, Green river, and Deep creek. *Surface*, diversified; *soil*, fertile. *Cap.* Dixon. *Pop.* (1897) 17,960.

Webster, in *Maine*, a post-township of Androscoggin co., 20 m. S.W. of Augusta.

Webster, in *Massachusetts*, a post-township of Worcester co., 55 m. W.S.W. of Boston.

Webster, in *Michigan*, a post-township of Washtenaw county.

Webster, in *Minnesota*, a post-township of Rice co.

Webster, in *Missouri*, a S.W. co.; area, 630 sq. m. *Rivers*, Niangua, the Osage Fork of the Gasconade, and the James Fork of White river. *Surface*, diversified; *soil*, generally fertile. *Min.* Lead and iron. *Cap.* Marshfield. *Pop.* (1897) 16,010.

—A village of Washington co., 75 m. S.W. of St. Louis.

Webster, in *New Hampshire*, a township of Merrimack county.

Webster, in *New York*, a post-township of Monroe county.

Webster, in *N. Carolina*, a post-village, cap. of Jackson co., about 50 m. W.S.W. of Nashville.

Webster, in *Ohio*, a post-vill. of Darke co., abt. 37 m. N.N.W. of Dayton. —A twp. of Wood co.

Webster, in *Pennsylvania*, a post-village of Westmoreland co.; 20 m. S.W. of Greensburg.

Webster, in *W. Virginia*, an E. central co.; area, 400 sq. m. *Rivers*, Elk and Gauley. *Surface*, hilly; *soil*, generally fertile. *Cap.* Addison. *Pop.* (1897) 4,950.

—A post-township of Taylor co.

Webster, in *Wisconsin*, atwp. of Vernonco.

Websterite, *n.* (*Min.*) The native subsulphate of alumina, which occurs in several countries in white, or yellowish-white, reniform masses and botryoidal concretions.

Webster's Mills, in *Penna.*, a post-vill. of Fulton co.

Wed, *v. a.* [*A. S. weddian*; *Du. wedden*; *Swed. Goth. widdja*, to pledge.] To marry; to take for husband or for wife; to espouse; as, the lucky fellow *wedded* a woman worth a pot of money.—To join or unite in wedlock; to give in marriage.—To attach or connect firmly or indissolubly; to unite or intertwine closely in sympathy or affection; as, a patriotic citizen is *wedded* to the interests of his country.

—*v. n.* To marry; to enter into the state of matrimony.

Wed'ded, *a.* Pertaining, or having reference to wedlock or matrimony; as, *wedded* happiness (or misery).

Wed'ding, *n.* Marriage; nuptials; matrimonial rite or ceremony; bridal festivities.

(NOTE. *Wedding* is frequently used in combination with other words, constructing compounds sufficiently self-explaining, as denoting that which belongs to, or is used at, a wedding or weddings; as, *wedding-cake*, *wedding-cards*, *wedding-day*, *wedding-ring*, &c.)

Wedding favor, a knot of white ribbon, &c., worn at weddings.

Wedge, (*wēj*), *n.* [*A. S. wæcg*, *wecg*; *Du. wig*; *Dan. wægge*; *Ger. weck*.] (*Mech.*) A body, as of wood or metal, thick at one end and sloping to a thin edge at the other, used in splitting timber, rocks, &c.;—it is one of the five simple engines or mechanical powers, and, as such, performs its office sometimes in raising heavy bodies, but more frequently in dividing or cleaving them;—hence, all those instruments which are used in separating the parts of bodies, such as axes, adzes, knives, swords, colters, chisels, planes, saws, files, spades, &c., are only different modifications that fall under the general denomination of the *wedge*.

—A solid in the form of a triangle prism, of which the two ends or bases are equal and similar plane triangles, and the three sides rectangular parallelograms; and it is called *rectangular*, *isosceles*, or *scalene*, according as its equal and similar bases are composed of right angles, isosceles, or scalene triangles.

—Anything in the form of a wedge; as, a *wedge* of silver.—Any thing or body drawn up in wedge-like form, as a division of troops.—In Cambridge University, Eng., a cant term given to the graduate whose name figures the last on the list of the classical tripos.

Spherical wedge. (*Geom.*) The portion of a spherical body included between two planes which intersect a diameter.

—*v. a.* To cleave, rive, or separate with a wedge, or wedges.—To drive as a wedge is driven; to squeeze up closely.

“A crowd where a finger could not be *wedg'd* in more.”—*Shaks.*

—To force in, after the manner of a wedge.—To fix in the manner of a wedge; as, a ship *wedged* between rocks.—To fasten with a wedge, or with wedges; as, to *wedge*

in a rail.—In potting, to cut, as clay, into wedge-like masses, and worked by dabbing together, to expel air-bubbles, &c.

Wedge-shaped, *a.* Conneiform.

(*Bot.*) Broad and truncate at the summit, and tapering down to the base; as, a *wedge-shaped* leaf.

Wedge-wise, *adv.* In the manner of a wedge.

Wedgwood, (*wēj'wūd*), JOSIAH, the inventor of the well-known ceramic ware that bears his name, b. at Burslem, Eng., 1730. After becoming established in business in 1759, he evinced great skill and taste in the production of altogether new kinds of porcelain and earthenware, and made both reputation and fortune by the fabrication of that beautiful kind of fictile composition known as *Queen's-* or *Wedgwood-ware*. After engaging Flaxman as his designer, W. eventually made himself a name throughout Europe for the beautiful works of art which he produced; embracing cameos, medallions, miniature statuary, vases, imitations of majolica, &c., and in 1790, his greatest triumph, a fine imitation of the Portland (Barberini) vase. D. 1795.

Wedlock, *n.* [*A. S. wedlac*, a pledge.] State of being bound or joined in marriage; matrimony.

Wednesday, (*wēnz'dī*), *n.* [*A. S. Wodnesdæg*—*dæg*, the day, *Wodnes*, of Woden, the Odin of the Scandinavians, and god of war adored by the Goths, Germans, and Anglo-Saxons.] The fourth day of the week; the day intervening between Tuesday and Thursday.

Wednesbury, (*wēnz'ber-e*), a town of England, co. of Stafford, on the Tame, 8 m. N.W. of Birmingham. *Manuf.* Guns, coach-harness, hardware, &c. *Pop.* 14,300.

Wee, *a.* [*Allied to Ger. wenig*.] Little; very small; sometimes, dwarfed; elfin; as, a *wee* body. (*A. Scotticism.*)

Weed, *n.* [*A. S. weod*.] The general name of any plant that is useless, noxious, or troublesome; as, a garden choked with *weeds*.—Hence, anything which is troublesome, unprofitable, or offensive.—Tobacco; as, he is fond of the *weed*; will you try a *weed* (i. e. a cigar)? (*Vulg.*)

[*A. S. wad*; *Icel. rad*.] A garment; especially, an upper or outer robe;—generally in the plural; as, in *palmer's weeds*. (*Milton*).—Plurally, the mourning garb or apparel of a female; as, a widow's *weeds*.—*v. a.* [*A. S. weodian*.] To free from weeds or noxious plants; as, to *weed* a garden.—To take away, as noxious plants, to remove, as that which is baneful; as, to *weed* out envy from the mind.—To root out; to free from anything hurtful or offensive.

Weeder, *n.* One who, or that which, weeds.

Weed-hook, *n.* A hook used for extirpating weeds.

Weed-ing-chisel, (*-chiz'l*), *n.* A tool with a divided chisel point, for cutting the roots of large weeds within the ground.

Weed-ing-foreeps, **Weed-ing-tongs**, *n.* An implement for taking up some sorts of plants in weeding.

Weed-ing-fork, **Weed-ing-iron**, *n.* A strong, three-pronged fork, used in clearing ground of weeds.

Weeds'port, in *New York*, a post-village of Cayuga co., 24 m. W. of Syracuse.

Weedy, *a.* (*comp. WEEDIER*; *superl. WEEDIEST*.) Consisting of, or having reference to, weeds; as, *weedy* trophies. (*Shaks.*)—Abounding with weeds; as, a *weedy* flower-bed.

Weedy, *a.* Dressed in weeds or mourning habiliments; as, a *weedy* woman.

Weedy, *a.* Lank; raw-boned; ill-conditioned; as, a *weedy* horse.

Week, *n.* [*A. S. weoc*; *Dan. week*; *Ger. woche*; *Icel. vika*; *Scot. owk*.] A separate or distinct portion of time, being one-fourth of the lunar month, or a cycle of time consisting of 7 days; the space or period of 7 days, usually reckoned from one Sunday to the next.

Week-day, *n.* Any day of the week other than the Sabbath or Sunday; a working-day.

Weekly, *a.* Pertaining or relating to a week, or to week-days.—Hebdomadary; coming, happening, or performed once a week; as, a *weekly* settlement of accounts, *weekly* wages, a *weekly* newspaper, &c.

Weekly tenant, a tenant paying rent by the week.

—*n.* A serial publication appearing once in a week, or issued once in seven days; as, “*Harper's Weekly*.”

—*adv.* Once a week; by hebdomadal periods; as, he pays his men *weekly*.

Ween, *v. n.* [*A. S. wean*.] To think; to imagine; to conceive; to fancy; as, “*Well may I ween your grief is wondrous great*.”—*Spenser*. (Principally used in poetry.)

Weep, *v. n.* (*imp.* and *pp. WEEP*.) To cry aloud in anguish, grief, or sorrow; to manifest or express grief by outcry or by shedding tears; to shed or drop tears from sorrow or joy; to cry.—To lament; to complain. (*Num. xi. 13.*)—To flow or run in drops; as, gums *weep* from certain trees.—To drip; to be soaked or very wet; as, *weeping* thatch.—To drop; to be pendent; to have the branches hanging, as if in sorrow; as, a *weeping* ash, a *weeping* willow.

—*v. a.* To bewail; to bemoan; to lament; as, “*We . . . weep each other's woe*.” (*Pope*).—To shed or drop, as tears, or other moisture; as, to *weep* tears of joy.

Weeper, *n.* One who weeps; a shedder of tears; a mourner.—A sort of white linen cuff on a mourning dress worn as a badge of sorrow.

(*Zool.*) A popular name of the genus *Cebus*, comprising Sapajous-Monkeys, so called from their plaintive cry. They are mild in disposition, quick in their movements, and easily tamed. This genus is the richest of all in species, and is most fully represented in Guiana and Brazil. The name *Capuchin* is also given to some species, but most especially to *Cebus capuchinus*, a brownish species, with head, feet, and hands generally black, and front, shoulders, and cheeks whitish.

Weeping, *n.* Act of one who weeps; tearful lamentation.

Weep-ing-ash, *n.* (*Bot.*) See *FRAZINUS*.

Weep-ing-birch, *n.* (*Bot.*) A tree or shrub of the genus *Betula*, with drooping branches.

Weep-ing-rock, *n.* A porous rock from which water trickles.

Weep-ing-spring, *n.* A spring from which water issues by degrees.

Weeping Water, in *Nebraska*, a city of Cass co. *Pop.* (1897) 1,650.

Weep-ing-wil-low, *n.* (*Bot.*) A well-known species of ornamental trees,

Salix Babylonica, of which the variety *Salix crispata* (Fig. 2607) is the most beautiful, and is in universal cultivation. It has leaves lanceolate, acuminate, serrated, curled or twisted, glabrous, and glaucous beneath; and its long slender branches hang downwards.

Weert, (*wairt*), a town of Holland, prov. of Limburg, on the Brey, 10 m. W.N.W. of Roermonde; *pop.* 6,930.

Wee'saw, in *Michigan*, a post-township of Berrien county, about 12 miles west of Niles.

Wee-ver, *n.* (*Zool.*) Fig. 2607.—**WEEPING-WILLOW**.

The common name of

Trachinus, a genus of acanthopterygious fishes, of which one species, the Great W., or Sting-bull (Fig. 2608), about 12 inches long, is common in the Atlantic. Their most distin-

guished characteristic is the power they have of inflicting wounds by means of their spinous fins; and fishermen almost invariably cut off the first dorsal fin, and both opercular spines, before they bring them to shore.

Weevil, (*wē'vl*), *n.* [*A. S. wifel*; *Ger. wiebel*.] (*Zool.*) See *CURCULIO*.

Weft, *n.* [*From weave*.] The woof of cloth; the threads that cross the warp. See *WARP*.—A web; something woven.

Wegotism, (*-izm*), **We'ism**, *n.* Excessive use of the pronoun *we*. (*Colloq. or cant.*)

Wehawken, or **WEEHAWKEN**, in *New Jersey*, a post-vill. of Hudson co., 2 m. above Hoboken.

Wehlau, (*vai'lou*), a town of E. Prussia, at the junction of the Alle and the Pregel, 25 m. E. of Königsberg. It contains numerous steam-engine works and tanneries. *Pop.* 5,400.

Weichselburg, (*vike'sel-boorg*), a town of Austrian Illyria, in Carniola, 9 m. S.E. of Laybach. *Manuf.* Woollen goods. *Pop.* 4,450.

Weigh, (*wā*), *v. a.* [*A. S. wæge*, *wæge*; *Ger. wage*.] To raise; to lift; to swing up; as, to *weigh* anchor.—To ascertain the heaviness of by a pair of scales; to compare in a pair of scales with some fixed standard of weight; to examine by the balance; as, to *weigh* gold, to *weigh* meat.—To be equivalent in weight; to counterbalance the heaviness of; as, a load of coals *weighing* five tons.—To pay, allot, or take by weight; as, “*They weighed for my price thirty pieces of silver*.” (*Zech. xi. 12*).—To ponder in the mind; to consider or examine for the purpose of balancing facts or ideas to the forming of an opinion or coming to a conclusion; to estimate with mature thought and by deliberate method; as, to *weigh* the advantages of a proposition.—To regard; to consider as worthy of notice or estimation; as, “*You do not weigh me*; that is, you care not for me.”—*Shaks.*

To *weigh down*, to overbalance;—also, in a moral sense, to depress; to overburden; as, a mind *weighed down* with remorse.

—*v. n.* To be heavy; to have weight; as, this package *weighs* lighter than the other one.—Hence, to be looked upon as important; to have weight or ponderance in the intellectual balance; as, the same argument which *weighs* with him has *weighed* with thousands before him.—To hear heavily; to press hard; as, crime *weighs* upon the conscience.—To judge; to estimate. (*R.*)

To *weigh down*, to sink by its own gravity.

—*n.* See *WEX*, the more usual orthography.

Weighable, (*wā'a-bl*), *a.* That may be weighed.

Weighage, (*wā'ej*), *n.* A duty or toll paid for weighing merchandise, &c.

Weigh-bridge, (*wā-brīj*), *n.* A platform scales; a weighing-machine for loaded wagons, &c.

Weigher, (*wā'er*), *n.* One who weighs.

Weighing, (*wā'*), *n.* Act of ascertaining weight; also, act of balancing or pondering in the mind.

Weighing-machine, (*wā'ing-ma-sheen*), *n.* Any large machine or apparatus for weighing; particularly,

platform-scales, adapted for the weighing of heavy bodies, as loaded wagons, and the like.

Weight, (*wáit*), *n.* [Ger. *gewicht*; A. S. *wíht*, *gewíht*.] Gravity; ponderance; that property of bodies in virtue of which they tend towards the earth's centre of gravity; quality of being heavy. — The heaviness of a body ascertained by the balance; the measure of the force by which any body, or a given quantity of any substance, gravitates to the earth; quantity of matter expressed numerically with reference to some standard unit; as, a mass of ore having the *weight* of a ton and a half. — Hence, pressure; burden; importance; efficacy; influence; power; impressiveness; consequence; moment; as, he sinks beneath the *weight* of age; the *weight* of business; a man of *weight* in political affairs. — A scale or graduated standard of heaviness; a mode of arriving at the determination of weight; as, *avoirdupois weight*. — Any heavy or ponderous mass; as, to carry *weights* in one's hands. — A definite mass of metal, to be used for ascertaining the weight of other bodies; as, a pound *weight*. See WEIGHTS AND MEASURES.

(*Med.*) A sensation of heaviness or pressure over the whole body, or over a part of it.

(*Mech.*) The resistance to be overcome by a machine or mechanical apparatus, whether in raising, sustaining, or moving any heavy body. The force applied to the machine for this purpose is called the *moving power*; and when equilibrium subsists, the ratio of the weight to the moving power is termed the *mechanical advantage* of the machine. See MOMENTUM.

Weight of observation. (*Astron. and Phys.*) A number indicating the most probable relative value of each observation in demonstrating the result of a series of observations of the same kind.

—*v. a.* To load or incumber with a weight, or weights; to supply deficiency of gravity by attaching weights to; as, to *weight* a horse for a handicap; to *weight* a whip-handle; to *weight* a sash-cord; to *weight* a ship with ballast, &c.

Weights and Measures. By *measure*, in an absolute sense, is understood the unit or standard by which we measure extension. We have, therefore, measures of length, of superficies, and of volume or capacity; but as the two latter may be deduced in all cases from the former, it is only necessary to establish a unit, or standard of length. *Weight* is the measure of the force by which any body, or a given portion of any substance, gravitates to the earth. The process by which this measure is obtained is called *weighing*; and when required, as in many philosophical experiments, to be performed with great accuracy, is a tedious and delicate operation. (See BALANCE.) The determination of weight, like that of extension, consists in the comparison of the thing to be measured with some conventional standard; and as there is a constant ratio between the values and weights of the same substances when placed in the same physical circumstances, it is obvious that standards of weight may be derived from those of measure. For example, a cubic foot or a cubic inch of distilled water, at the same temperature, and under the same atmospheric pressure, will always have the same weight. Advantage has been taken of this property in bodies to connect weights with measures in the English, as in the other systems of weights and measures.

English system of lineal measures. The unit of measure is the yard. The yard is divided into three feet, and the foot subdivided into 12 inches. The multiples of the yard are the pole or perch, the furlong, and the mile; five and a half yards being a pole, forty poles a furlong, and eight furlongs a mile. But the pole and furlong are now scarcely ever used, itinerary distances being reckoned in miles and yards. The relations of these different denominations are exhibited in the following table:

In.	Feet.	Yards.	Poles.	Furlongs.	Miles.
1	0.083	0.028	0.00500	0.00012626	0.0000157828
12	1	0.333	0.06060	0.00151515	0.00018939
36	3	1	0.1818	0.004545	0.00056818
198	16.5	5.5	1	0.025	0.003125
7920	660	220	40	1	0.125
63360	5280	1760	320	8	1

Measures of superficies.—In square measure the yard is subdivided, as in general measure, into feet and inches; 144 square inches being equal to a square foot, and nine square feet to a square yard. For land measure the multiples of the yard are the pole, the rood, and the acre; thirty and a quarter (the square of five and a half) square yards being a pole, forty poles a rood, and four roods an acre. Very large surfaces, as of whole countries, are expressed in square miles. The following are the relations of square measure:

Sq. Feet.	Sq. Yards.	Poles.	Roods.	Acres.
1	0.1111	0.00367309	0.000091827	0.000022957
9	1	0.0330579	0.000826448	0.000206612
272.25	30.25	1	0.025	0.00625
10890	1210	40	1	0.25
43560	4840	160	4	1

Measures of volume.—Solids are measured by cubic yards, feet, and inches; 1,728 cubic inches making a cubic foot, and 27 cubic feet a cubic yard. For all sorts of liquids, corn, and other dry goods, the standard measure is declared by the Act of 1824 to be the *imperial gallon*, the capacity of which is determined immediately by weight, and remotely by the standard of length, in the following manner: According to the Act,

the imperial standard gallon contains ten pounds avoirdupois weight of distilled water, weighed in air at the temperature of 62° Fahrenheit's thermometer, the barometer being at thirty inches. The pound avoirdupois contains 7,000 troy grains; and it is declared that a cubic inch of distilled water (temperature 62°, barometer thirty inches) weighs 252.458 grains. Hence the contents of the imperial standard gallon are 277.274 cubic inches. The parts of the gallon are *quarts* and *pints*; two pints being a quart, and four quarts a gallon. Its multiples are the *peck*, the *bushel*, and the *quarter*; the peck being two gallons, the bushel four pecks, and the quarter eight bushels. The following are the relations:

Piuts.	Quarts.	Gallons.	Pecks.	Bushels.	Quarters.
1	0.5	0.125	0.0625	0.015625	0.001953125
2	1	0.25	0.125	0.03125	0.00390625
8	4	1	0.5	0.125	0.015625
16	8	2	1	0.25	0.03125
64	32	8	4	1	0.125
512	256	64	32	8	1

The gallon of the U. States is the standard or Winchester wine gallon. (See GALLON.)—*English weights.* The avoirdupois pound of 7,000 grains is the standard weight from which the troy pound has been constructed. For philosophical purposes and in delicate weighing, troy weight only is used, and the weight is usually reckoned in grains. By this means fractional numbers are avoided, and no ambiguity can arise, as there are no other grains than troy grains. Dr. Kelly, in his *Universal Cambist*, an elaborate and useful work, states that the drachm avoirdupois, like the drachm of the apothecaries, has sometimes been divided into 3 scruples and 60 grains; but as no such weight as an avoirdupois grain ever existed, the use of the expression is an instance of the confusion inseparable from having different systems of weights, in which the same names are applied to things totally distinct.

TABLES OF BRITISH WEIGHTS.

1. *Imperial troy weight.*—Standard: One cubic inch of distilled water, at 62° Fahrenheit's thermometer, the barometer being 30 inches, weighs 252.458 troy grains.

grs.	dwts.	oz.	lb.
24	1	—	—
480	20	1	—
5760	240	12	1

Troy weight is used in weighing gold, silver, jewels, &c., and in philosophical experiments.

2. *Apothecaries' weight.*—Standard: The same as in troy weight, with the ounce divided into 8 drachms and 24 scruples.

grs.	scrs.	dr.	oz.	lb.
(9)	(3)	(3)	(16)	(16)
20	1	—	—	—
60	3	1	—	—
480	24	8	1	—
5760	288	96	12	1

Medicines are compounded by this weight; but drugs are usually bought and sold by avoirdupois weight.

3. *Imperial avoirdupois weight.*—Standard: The same as in troy weight; and one avoirdupois pound = 7,000 troy grains.

dr.	oz.	lbs.	qrs.	cwts.	ton.
16	1	—	—	—	—
256	16	1	—	—	—
7,168	448	28	1	—	—
28,672	1,792	112	4	1	—
573,440	35,840	2,240	80	20	1

This weight is used for the general purposes of commerce. See METRIC SYSTEM.

Weightily, *adv.* In a weighty manner; heavily; ponderously. — With mental force or impressiveness; with moral power or influence.

Weightiness, (*wáit'-*) *n.* State or quality of being weighty; heaviness; ponderousness; gravity; as, the *weightiness* of a load. — Solidity; force; importance; impressiveness; power of influencing or convincing; as, the *weightiness* of an argument.

Weightless, *adv.* Wanting weight; light; imponderable; lacking in force or impressiveness.

Weighty, (*wáit'e*), *a.* (*comp.* WEIGHTIER; *superl.* WEIGHTIEST.) [Ger. *wichtig*.] Having weight or ponderosity; heavy; as, a *weighty* body. — Important; momentous; forcible; adapted to convince or to turn the mental balance; as, *weighty* arguments or reasons. — Severe; rigorous; as, "Our *weightier* judgment." — *Shaks.*

Weimar, (*ví-mar*), a city of Germany, cap. of the Grand-duchy of Saxe-Weimar, on the Ilm, 52 m. from Leipzig. *W.* has long held the same rank in Germany for literature as Dresden for the fine arts. Some of the best writers of the last and present age have either been educated or residents here. Its opera-house is celebrated, and the theatre was once under the superintendence of Goethe and Schiller. Wieland and Herder resided here, and Goethe and Schiller are buried in the new cemetery. It has a classical school, a seminary for schoolmasters, and an academy for drawing, painting, and sculpture. *Manuf.* Metallic goods, gloves, woven fabrics, and cards.

Weinheim, (*vín'hí-ne*) a town of Baden, on the Weschnitz, 10 m. N. of Heidelberg. *Manuf.* Woollens. *Pop.* 5,940.

Weir, (*weér*), *n.* [A. S. *weer*, an inclosure, a fish-pond; Ger. *wehr*, a dam, dike, sluice.] A dam in a river, sometimes formed by driving in rows of piles and weaving wattles between them, filling up the interstices between the rows with stones. — A fence of stakes or twigs set in a stream for taking fish; as, a salmon *weir*.

Weis'esburg, in Maryland, a post-village of Baltimore co., 50 m. N.W. of Annapolis.

Weism, (*-izm*), *n.* See WEGOTISM.

Weissenburg, (*víse'sen-boorg*), a town of Bavaria, circle of Middle Franconia, 51 m. W. of Ratisbon. *Manuf.* Woollens. *Pop.* 4,620.

Weissenfels, (*víse'sen-fels*), a town of Prussian Saxony, on the Saale, 20 m. W. of Leipsic; *pop.* 4,350.

Weiss'port, in Pennsylvania, a post-borough of Carbon co., about 4 m. S. of Manch Chunk.

We'laka, in Florida, a post-village of Putnam county.

Weich, in Missouri, a township of Cape Girardeau co.

Welch's Creek, in N. Carolina, a township of Columbus co.

Welcome, (*wíll-kum*), *a.* [A. S. *wil-cuma* — *wil*, well, good, *cuma*, a comer.] Received with gladness, as a good comer; admitted willingly to the habitation, entertainment, and company; as, a *welcome* visitor. — Grateful; pleasing; infusing joy or gladness by its reception or introduction; as, a *welcome* gift; a *welcome* time; *welcome* tidings. — Free to use or enjoy at will gratuitously; as, he is *welcome* to what assistance I can render.

(*NOTE.* *Welcome* is employed elliptically for *you are welcome*; as, "Welcome, welcome, home!")

To *bid welcome*, to admit or receive with professions of hospitality or good-will.

—*n.* Salutation, as of a new and good comer. — Kind or hospitable reception accorded to a guest or new comer; as, "Life's warmest *welcome*'s at an inn." — *Shenstone.*

—*v. a.* To receive, as a new comer, with kindness; or, to receive and entertain hospitably, gratuitously, and cheerfully.

Welcomeness, *n.* State or quality of being welcome.

Welcomer, *n.* One who welcomes.

Weld, *n.* (*Bot.*) The Dyer's Weed. See RESEDA.

—The coloring principle of Dyer's Weed. See LUTEOLINE.

Weld, *v. a.* [Dn. and Ger. *wellen*.] To unite or hammer into firm union, as two pieces of iron when heated almost to fusion.

—*n.* State of being welded; also, the joint made by welding.

Weld, in Colorado, a N.E. co., bordering on Nebraska; area, 4,075 sq. m. *Rivers.* The South Fork of Platte river, and Beaver, Bijou, Pawnee, and Crow creeks. *Cap.* Greeley. *Pop.* (1897) 12,680.

Weld, in Maine, a post-township of Franklin co., 44 m. N.W. of Augusta.

Weld'able, *a.* That may be welded.

Weld'er, *n.* One who welds or unites by welding.

Weld'ing, *n.* (*Metal.*) Act or process of uniting together two or more pieces of iron, or iron and steel, when heated to whiteness, by means of pressure or hammering. Platinum is also frequently welded to a white heat; and it is in this way that that valuable metal, when in the granular or pulverulent state, is worked into bars.

Weld'ing-heat, *n.* The degree of heat necessary for welding iron bars.

Weld'on, in N. Carolina, a post-village of Halifax co., 95 m. N.E. of Raleigh.

Welfare, (*-fair*), *n.* [Well, and fare, a good going; Du. *welvaart*; Ger. *wohlfahrt*.] The enjoyment of health and the common blessings of life; exemption from misfortune, sickness, calamity, or evil; happiness; enjoyment of peace and prosperity, or the ordinary blessings of society and civil government; well-being; well-doing.

Wel'kin, *n.* [A. S. *wolcen*, *wolcen*; Ger. *wolke*.] The vault of heaven; the visible regions of the air or atmosphere; — used chiefly in poetry.

Well, *n.* [A. S.; Dan. *væld*, a spring; Ger. *quelle*.] A spring; a fountain; a source of water issuing from the earth; as, a holy *well*. — Hence, a spring, source, or origin. — A pit or cylindrical hole sunk perpendicularly into the earth to such a depth as to reach a supply of water. — The lower part of a smelting furnace into which the molten metal falls.

(*Ship-building.*) A partition to enclose a ship's pumps, from the bottom to the lower decks, to render them accessible, and also prevent their getting damaged. — In a fishing-smack, a water-tight compartment for the transportation of live fish to market. — In steamers, a vertical passage in the stern, into which an auxiliary screw-propeller may be drawn up out of water.

(*Mil.*) In sapping and mining, an excavation in the earth from which run branches or galleries.

(*Arch.*) See WELL-HOLE. — *Artesian well.* See ARTESIAN WELL.

—*v. n.* [A. S. *wellen*.] To boil, bubble, or spring up, as water from the earth; to flow; to issue forth, as water from a spring.

—*v. a.* To pour forth, as from a well.

Well, *a.* [A. S. *wel*; Ger. *wohl*.] Being in a condition to be wished for, desired, or chosen, either in a natural or moral sense; fortunate; happy; convenient; advantageous; as, everything goes *well*. — Being in health; having a sound body, with a regular performance of the natural and proper functions of all the organs; not ailing, diseased, sick, or infirm; as, all your friends are *well*. — Being in favor; under good auspices; acceptable; as, he stands *well* with the government.

(*Naut.*) Safe; as, the ship was reported *well* at St. Helena on the 14th of March.

—*adv.* In a choice or desirable manner; to a degree that gives pleasure; favorably; conveniently; suitably; advantageously; so as one could wish; as, every one speaks *well* of him. — In a just and proper manner; rightly; not illy or wickedly; as, to act *well* one's part in life. — To a sufficient degree; perfectly; thoroughly; fully; adequately; abundantly; suitably to one's need,

or the occasion, or to a proposed end and application; as, this land is *well* cultivated; he is a person *well* worth your knowing.—Far; considerably; not a little; as, he is a man *well* advanced in years.

(NOTE. *Well*, as a prefix to many adjective and participial phrases, forms a kind of loose compound with them, indicating what is right, fit, suitable, relevant, or not defective, and usually sufficiently self-explanatory in their senses; as, for instance, *well*-designed, *well*-formed, *well*-meant, *well*-ordered, *well*-seasoned, &c. The term *well* is also of frequent occurrence in an elliptical form, for *it is well*; also, as expressing content with what has been said or done; and again, it sometimes indicates concession, or is simply expletive; as, *well*, you have come at last; *well*, off with you; *well*, *well*, and it has come to this.)

As *well* as, together with; not less than.—*Well* enough, *well*, good, or satisfying in a moderate degree; tolerably; as, this will do *well* enough for my purpose.—*Well* off, *well* to do, in a prosperous state as regards worldly means or circumstances; thriving; in good condition; as, *well* to do people; a man with an income of half a million may consider himself *well* off.

Well-a-day, *interj.* Alas! alack!

Well-appointed, *a.* Fully appointed, furnished, or equipped; as, a *well-appointed* dinner-table.

Well-being, *n.* State or condition of being well; prosperity; happiness; welfare.

Well-boat, *n.* (*Naut.*) A fishing-smack with a tank or well in the hold to keep fish in, in order to transport them alive to market.

Well-borer, *n.* One who bores wells.

Well-born, *a.* Born of a noble or good family; of respectable descent; not of mean or ignoble ancestry; not of servile or parvenu extraction.

Well-bred, *a.* Polite; urbane; cultivated; refined; bred to genteel deportment and polished manners; not gauche, vulgar, or pretentious; as, a *well-bred* man.

Well-doer, *n.* One who does well, either to himself or to another; a benefactor.

Well-doing, *n.* A doing well; performance of duties and obligations; also, worldly prosperity.

Well-drain, *n.* A drain for discharging the water of wet land; it is built somewhat in the form of a well.—Also, a drain conducting to a well.

Weller, in *Illinois*, a twp. of Henry co.

Weller, in *Ohio*, a twp. of Richland co.

Wellersburg, in *Pennsylvania*, a post-borough of Somerset co., 128 m. W.S.W. of Harrisburg.

Well-favored, *a.* Pleasing in form or feature; attractive to the eye; handsome; as, a *well-favored* lass.

Wellfleet, in *Massachusetts*, a post-village and twp. of Barnstable co., 70 m. S.E. of Boston.

Well-hole, *n.* A cavity which receives a counterbalancing weight in certain mechanical contrivances, and also for other purposes.

(*Arch.*) The well or open space in the middle of the staircase of a building, beyond the ends of the stairs.

Well-informed, *a.* Provided with copious or correct information about matters in general; well-supplied with authentic knowledge; intelligent.

Wellingtonborough, a town of England, co. of Northampton, 11 m. E.N.E. of Northampton. *Manuf.* Boots, shoes, and hobbin-lace. *Pop.* 5,830.

Wellington, ARTHUR WELLESLEY, DUKE OF, the 3d son of the 1st Earl of Mornington, b. in Ireland, 1769, was educated at Eton College, and ultimately sent to the military seminary of Angers, France, to be instructed in the art of war, for which he had already evinced a strong predilection. At 17 years of age he was gazetted ensign in the 33d regt. of infantry ("Duke of Wellington's Own"), and in 1793 served in the Flanders campaign under Lord Moira. In 1797, *W.*, now lieut.-col., was sent with his regiment to India, in which country he arrived at a time of crisis for the British power. War had just been declared against Tippoo Saib, Sultan of Mysore, and an army of 80,000 men, British and native troops, was sent out against him. In the siege and capture of Seringapatam, the Sultan's capital, Col. Wellesley led the storming party, and carried off the honors of the occasion. He next engaged in the war which broke out in 1803, between the East India Company and the Marhattas, and, after carrying by storm the strong fortress of Ahmednuggur, Gen. Wellesley, in command of 4,500 men (of whom only 1,700 were British), came up with the Marhatta forces, 30,000 strong, at Assaye, when, after a desperate struggle, in which he himself charged a Marhatta battery at the head of the 74th regt., the enemy were totally defeated, and all their artillery (97 guns) taken. This great victory broke the Marhatta power, and brought about a durable peace. For his services in India, *W.* was made a Knight of the Bath, and returning to England in 1805, was sent in the following year with the expedition to Copenhagen, in command of a division. In the ensuing hostilities, Sir Arthur, at the head of 7,000 British troops, totally defeated a Danish force, 12,000 strong, on the island of Zealand. In 1806, on his return home, *W.* entered Parliament, and, in 1807, was appointed Secretary of State for Ireland, and declared a member of the Privy Council. In 1808 he was created lieutenant-general and sent to Portugal, where he defeated Junot at Vimiera, and obliged him to sign the convention of Cintra, by which the French agreed to evacuate Portugal. He then returned to England, and, Jan., 1809, resumed his seat in Parliament. He had returned but a few months to civil life, when the government, to the intense displeasure of the Whig party, appointed him commander-in-chief of the armies in the Peninsula, and, in April, 1809, he proceeded to Lisbon. The famous passage of the Douro, and the defeat of Marshal Soult which ensued, are among the most

masterly exploits of this campaign. On the 28th of July, in the same year, he defeated at Talavera the French troops commanded by Victor and Sebastiani. The slaughter on both sides was terrible; and the English were not only unable to follow their victory, but were compelled soon after to fall back upon Badajoz. For the victory of Talavera, the English government raised *W.* to the peerage as Lord Wellington, besides voting him a pension of \$10,000 per annum. In May, 1810, at Busaco, he repulsed with great slaughter two attacks of the French, and retreated to Torres Vedras, to the occupation of which strong line of defence the ultimate success of the Peninsular war may be chiefly attributed. On July 21, 1812, he defeated Marshal Marmont at Salamanca, and entered Madrid a few days after, Aug. 12, 1812. In October of the same year, *W.* failed to take Burgos, and, knowing that King Joseph had been joined by Soult, and was marching towards the Tagus, he had no choice but to retreat into Portugal. In 1813, Napoleon, owing to his disasters in Russia, had been compelled to recall Soult from Spain, together with a part of the army. There were thus left to oppose *W.* about 70,000 men; but there were about 100,000 in different parts of Spain, under Suchet and other commanders. The French emperor could no longer spare large bodies of troops to pour into the Peninsula through the Pyrenees. *W.* being aware of this, resumed the offensive, and, marching rapidly into Spain, completely defeated at Vittoria, Jan. 21, the French commanded by King Joseph and Marshal Jourdan. On hearing of this battle, Napoleon hastily sent Soult to turn the tide of events in the Peninsula. Soult made a desperate effort to drive back the English and their Spanish and Portuguese allies; but after a series of sanguinary conflicts, known as the battles of the Pyrenees, he was forced to retreat into French territory. In November, 1813, *W.* descended into France, pursuing his conquering course to Toulouse, from which, after some desperate fighting, Soult was driven. With this engagement the Peninsular war may be said to have ended; for Soult, being made aware of the fall of Napoleon, gave in his allegiance to the Bourbons. In 1814, after an absence of five years, *W.* landed

Fig. 2609. — WALMER CASTLE.

in England, where his reception was unprecedentedly brilliant. The victorious general, who had been created field-marshal after the battle of Vittoria, received the highest honors of the peerage as DUKE OF WELLINGTON, in addition to the order of the Garter, and a parliamentary grant of \$2,500,000. The Duke was next dispatched to the Congress of Vienna, where he aided in conducting the negotiations entered into for the adjustment of the affairs of Europe; and, on the return of Napoleon from Elba in March, 1815, was appointed to the chief command of the British forces on the continent of Europe, and from Vienna joined the army at Brussels. It appeared probable that Napoleon would make a bold advance into Belgium, and its defence was therefore assigned to an Anglo-allied army under *W.*, and a Prussian force under Blücher. The battles of Ligny and Quatre-bras were succeeded by the great victory of Waterloo, June 18, 1815, which consummated the overthrow of Napoleon; Paris surrendered to the Allies, and Louis XVIII. was at last restored to his throne and capital. The Allies having determined to occupy the frontier fortresses of France with an army of 150,000 men during 5 years, the command of the whole was conferred upon the Duke. This high and onerous position he held for the next three years, during the whole of which time he discharged its arduous duties with the most consummate wisdom, justice, and discretion. Not only did he retain the entire confidence of the allied sovereigns and respect of their soldiers under his command, but he interposed in so efficacious a manner to lighten the enormous burdens laid by the treaty of Paris on the French people, as to earn the gratitude and receive the thanks of all well-informed persons in that country. Mainly owing to his powerful intercession, the period of occupation of the fortresses was shortened from 5 to 3 years, and the amount of contributions paid for its support of course proportionally lessened. After the news of the victory of Waterloo had reached England, Parliament voted an additional grant of \$1,000,000 to purchase a mansion and estate for the Duke, who was also created *Prince of Waterloo* by the King of the Netherlands. Resigning his command in France, in 1818, the Duke returned home, and was appointed commander-in-chief of the army, a post which he held—with some brief interruptions—until his death. His after career was devoted to state affairs. In 1827 he became Prime-Minister, a post he held until 1830. During the latter portion of his career his counsels, whether at the head or out

of the cabinet, were uniformly directed to one object—the preservation of the peace of Europe, which, mainly owing to his exertions, was preserved unbroken, save by domestic dissensions, for forty years after his victory at Waterloo. Dying, Sept. 18, 1852, at Walmer Castle, Kent, he was honored with the grandest public obsequies ever witnessed in England, and buried in St. Paul's Cathedral, London, by the side of Nelson.—The leading feature of Wellington's intellect was wisdom and sagacity; of his moral character, a conscientious discharge of duty; clearness of discernment, correctness of judgment, and rapidity in execution, were the principal elements of his achievements in war. He was not gifted with oratorical power, and had considerable difficulty in expressing his opinions; but such was the solidity of his judgment, and the strength of his understanding, that what he said never failed to command attention, and, for the last 25 years of his life, he exercised an undisputed ascendancy in the House of Lords. In private life he was simplicity itself; his habits were regular, his life abstemious.

Wellington, in *Maine*, a post-township of Piscataquis co., 50 m. N.E. of Augusta.

Wellington, in *Ohio*, a post-village and township of Lorain co., 36 m. S.W. of Cleveland.

Wellington, in pr. of Ontario, a W. central co.; area, 1,237 sq. m. It is drained by Grand River. *Cap.* Guelph.

—A post-vill. of Prince Edward co., Ont.

Wellington, in *Wisconsin*, a township of Monroe co., abt. 40 m. E. of La Crosse.

Wellington, a seaport-town and cap. of New Zealand, in a province of same name, Ulster or North Island, on Cook's Strait and to the W. of Port Nicholson. It is beautifully situated, and is rapidly increasing in importance. *Pop.* estimated at 25,000.

Well-mannered, *a.* Possessing suave or graceful manners; polite; complaisant; well-bred; urbane; affable.

Well-meaning, *a.* Having a good intention.

Well-meant, (*-ment*), *a.* Rightly meant; friendly.

Well-minded, *a.* Having a good mind or right disposition.

Well-natured, *a.* Good-natured; kind; generous; friendly.

Well-nigh, (*-nī*), *adv.* Nearly; almost; not quite.

Well-read, (*-rēd*), *a.* Of extensive reading; erudite.

Wells, HORACE, an American dentist, practised in Boston and Hartford, one of the claimants to the discovery of *anæsthesia*. B. in Vermont, 1815, he commenced the use of nitrous oxide gas as an anæsthetic in 1840-4. In 1847 he published a history of his discovery. A report upon his claim, by Senator Truman Smith, was issued in 1859. *W.*, worn by controversy, committed suicide in 1848. A monument was erected to his memory in Hartford.

Wells, in England, a city of the county of Somerset, 18 m. S.W. of Bath; *pop.* 5,500.—A seaport-town of Norfolk co., 29 m. N.W. of Norwich; *pop.* 4,000.

Wells, in *Indiana*, an E.N.E. co.; area, 357 sq. m. It is drained by the Wabash River. *Surface*, undulating; soil, fertile. *Cap.* Bluffton. *Pop.* (1897) 22,160.—In *Maine*, a post-township of York co., 28 m. W.S.W. of Portland.

—In *Minnesota*, a township of Rice co., about 3 m. W. of Faribault.—In *New York*, a post-township of Hamilton co., 84 m. N.N.W. of Albany.—In *Ohio*, a township of Jefferson co.—In *Penn.*, a post-village and township of Bradford co.; a township of Fulton co.—In *Vermont*, a post-township of Rutland co., 68 m. S.S.W. of Montpelier.

Wellsborough, in *Pennsylvania*, a post-bor., cap. of Tioga co., 145 miles N.W. of Harrisburg.

Wellsburg, in *N. Y.*, a p.-vill. of Chemung co., 7 m. S.E. of Elmira; in *Penn.*, a vill. of Erie co., 26 m. S. W. of Erie; in *W. Virginia*, a city, cap. of Brooke co., on the Ohio, 16 m. N. of Wheeling. *Pop.* (1897) 2,680.

Well-set, *a.* Well knit together; having just symmetry or proportion of parts; as, a *well-set* figure.

Well-sinking, *n.* Act or process of sinking or digging a well, or wells.

Well-spoken, (*-spōkn*), *a.* Expressing one's self with ease, fitness, and grace, or speaking kindly and appropriately; as, a *well-spoken* individual.—Uttered with congruity or propriety; as, *well-spoken* words.

Well-spring, *n.* Fountain; source; origin.

Well-staircase, *n.* (*Arch.*) A winding staircase.

Wellsville, in *Michigan*, a post-village of Lenawee co., 6 m. E. of Adrian.

Wellsville, in *Missouri*, a post-village of Montgomery co., 89 m. W.N.W. of St. Louis.

Wellsville, in *New York*, a post-village and township of Alleghany co. The village is situated on Genesee River, 1,480 feet above the sea, 76 m. S. of Rochester. It was incorporated in 1857, possesses two newspaper offices, and is noted for its extensive lumber trade, rapid growth, and also for the enterprise of its inhabitants.

Wellsville, in *Ohio*, a city of Columbiana co., 102 m. S.E. of Cleveland. *Pop.* (1897) 6,150.

Wellsville, in *Pennsylvania*, a post-village of York co., abt. 20 m. S. of Harrisburg.

Wellville, in *Utah*, a twp. of Cache co.

Wellville, in *Virginia*, a post-village of Nottoway co., 31 m. W. of Petersburg.

Wels, a town of Upper Austria, on the Traun, 16 m. S. W. of Linz. *Manuf.* Cotton goods; and it has also copper-foundries. *Pop.* 4,950.

Welsh, (sometimes inadequately written *Welch*), *a.* [A. S. *wentlisc*, from *weath*, a foreigner; Ger. *wiltsch*, foreign, hence *Welsh*.] (*Geog.*) Pertaining or having reference to Wales, or its inhabitants.

Welsh flannel, the finest kind of flannel, made from the fleeces of the flocks of the Welsh mountains, and chiefly manufactured by hand. (*Sinmonds*).—*Welsh*

mutton, a choise and delicate kind of mutton obtained from a small breed of sheep peculiar to N. Wales.

Welsh rabbit, (properly *rare-bit*.) (*Cookery*.) Cheese toasted, and laid over slices of bread previously toasted and well buttered;—when mixed with ale, the viand is termed *swig*.

Welsh wig, a worsted cap.

—*n. sing. or pl. (sing.)* The language of Wales, or of the Welsh nationality.—*pl. (Geog.)* The natives or inhabitants of the principality of Wales; the Cymri or Cymry.

Welsh pool, a town of England, in Wales, Montgomery co., 19 m. W.S.W. of Shrewsbury. *Manuf.* Flannels. *Pop.* 7,150.

Welt, *n.* [A. S. *wæltan*; Ger. *wiltzen*.] A fold or doubling of cloth or leather, as on a garment or piece of cloth, or on a shoe.—A hem, border, fringe, or edging.

(*Mach.*) In steam-boilers, a buttou riveted over the seam between two plates.

—*v. a.* To fit with a welt; to sew a welt on, as on a shoe or garment.

Welter, *v. n.* [A. S. *wæltan*; Ger. *wiltzen*.] To roll or wallow in mire or some foul matter, as is the practice of certain animals.—To roll and tumble over, as billows; as, a *weltering* sea.

—*n.* That in which one welters or wallows; mire; slough.

Welter-weight, *n.* In horse-racing, a light-weight jockey who rides in a handicap.

Welton, in *West Virginia*, a township of Mineral county.

Wem, a town of England, co. of Salop, 10 m. N.N.E. of Shrewsbury. *Manuf.* Leather. *Pop.* 4,400.

Wen, *n.* [A. S. *wenn*; D. *wen*.] (*Med.*) An encysted tumor varying exceedingly in size and character, and commonly situated immediately under the skin; but occurring also in some of the internal viscera. The causes of their formation are unknown, but a strongly marked tendency to such swellings exists in particular individuals, leading to the belief in constitutional causes. At its commencement it is always exceedingly small and perfectly indolent, and it is often many years before it attains any considerable size. It is comprised in a membrane called a cyst, and its contents sometimes resemble fat or suet, at other times it contains serum, or a thin fetid brown or black fluid. Sometimes the cysts become very bad from the deposition of cartilaginous or even osseous matter. Frequently the cyst, especially when small, may be punctured, and its contents pressed out; but sometimes this gives rise to very severe inflammatory action. The other and safer mode of treatment is to dissect them out with the knife wherever their position will admit of it, care being taken to remove the whole of the cyst.

Wenceslaus, or WENZEL, (*went'sel*.) Emperor of Germany and King of Bohemia, b. 1361, was the son of Charles IV., whom he succeeded in 1378. He was a dissolute and cruel prince. He favored the Hussites, but was unable to save the life of Huss. D. 1409.

Wench, *n.* [A. S. *cwēne*, *cwyne*; Goth. *qrens*, *qveins*, a wife.] A vulgar or humorous term for a young woman; as, "Excellent *wench*, . . . I love thee." (*Shaks.*)—A low, coarse, young woman of dubious reputation; a strumpet; as, a rollicking *wench*.—In the U. States, a negro; a colored female domestic:—as opposed to *boy*, or the term formerly applied to colored males.

—*v. n.* To go after wenches; to frequent the society of women of ill fame.

Wench'er, *n.* One who seeks the company of lewd women; a rake.

Wend, *v. n.* [A. S. *wendan*; Ger. *wenden*, to change, to turn.] To go; to pass; to proceed; to betake one's self; as, he *wended* homeward.

—*v. a.* To direct; to betake:—generally used reflexively, or in the phrase, to *wend one's way*.

Wen'dell, in *Massachusetts*, a post-village of Franklin co., 40 m. N.E. of Springfield.

Wen'dell's Depot, in *Massachusetts*, a post-village of Franklin co., 40 m. N.W. of Fitchburg.

Wener, a lake of Sweden, Lat. between 58° 22' and 59° 25' N., Lon. 12° 20' and 14° 12' E. *Ext.* 95 m. long, and from 15 to 50 wide; *area*, 2,120 sq. m. It receives about 30 rivers, and its surplus waters are discharged by the Göta into the Cattegat. It is connected by a canal with Lake Wetter.

Wenewoc, or WONEWOC, in *Wisconsin*, a post-township of Juneau co.

Wen'ham, in *Massachusetts*, a post-village and township of Essex co., 20 m. N.E. of Boston.

Wen'lock, in *Vermont*, a township of Essex co.

Wen'na, in *Illinois*, a prosperous city of Marshall co. *Pop.* (1897) 1,280.

Went, *imp. of WEND*;—by modern usage adopted as the preterite of *go*, although it does not connect in origin with it.

Went'le-trap, *n.* (*Conch.*) See SCALARIA.

Went'worth, in *Illinois*, a post-village of Lake co., 40 m. N.N.W. of Chicago.

Wentworth, in *New Hampshire*, a post-township of Grafton co., 50 m. N.N.W. of Concord.

Wentworth, in *N. Carolina*, a post-village, cap. of Rockingham co., 106 m. N.W. of Raleigh.

Went'worth's Location, in *New Hampshire*, a post-office of Coos co.

Wentzville, in *Missouri*, a post-village of St. Charles co., 42 m. W.N.W. of St. Louis.

Wept, *imp. and pp. of WEEP*, *q. v.*

Wer'dau, a town of Saxony, on the Plesse, 6 m. W.N.W. of Zwickau. *Manuf.* Woollens and cottons. *Pop.* 6,930.

Wer'den, a town of Rhenish Prussia, on the Ruhr, 15 m. N.E. of Düsseldorf. *Manuf.* Woollen and linen fabrics, leather, and machinery. *Pop.* 4,840.

Were, (*wair*), *v. n.* [A. S. *wære*; Ger. *war*.] The plural

in all persons of the indicative imperfect of the verb *to be*, and all the persons of the subjunctive imperfect except the second sing., which is *wert*.

Were'gild, *n.* [A. S. *wergild*.] (*O. Eng. Law.*) Among the Anglo-Saxons, and many of the Celtic tribes, the compensation paid by a delinquent to the party injured, or to his relations, for offences committed against the person.

Were'wolf, *n.* [A. S. *wer-wulf*.] A man-wolf. See LYCANTHROPY.

Werner, ABRAHAM GOTTLIEB, (*wair'ner*.) a distinguished mineralogist and geologist, b. at Wehlau, in Upper Lusatia, 1750. He was educated in the school of mines at Freyberg in Saxony, and eventually became professor of mineralogy and inspector of the mineralogical cabinet there. He has conferred great benefit on the science of mineralogy by introducing a precise, methodical language, well adapted for the description of minerals, and has rendered much the same service to it as Linnæus did by his Terminology to botany. As a geologist, he is the father of the Neptunian theory, and however liable he may be to the charge of very grave errors, he has done vast good to the science by causing it to be studied more systematically than it ever had been before. Few naturalists who have written so little as Werner have enjoyed a higher reputation. D. 1817.

Wernerite, *n.* (*Min.*) A silicate of alumina, lime, and oxide of iron, found in Norway and Switzerland.

Wernigro'de, a town of Prussian Saxony, 43 m. S.W. of Magdeburg. *Manuf.* Woollens, paper, leather, and chieory. *Pop.* 6,600.

Wer'ra, a river of Germany, rises in the Thuringian forest, and joins the Fulda to form the Weser, after a N.W. course of 150 m.

Werst, *n.* Same as VERST, *q. v.*

Wert, The second person sing. of the subjunctive imperfect tense of the verb *to be*. See WERE.

We'saw, in *Michigan*, a township of Berrien county.

Wesel, (*wai'sel*), a fortified town of Rhenish Prussia, at the confluence of the Rhine and Lippe, 30 m. N.N.W. of Düsseldorf. *Manuf.* Cotton and woollen stuffs, leather, and tobacco.

We'ser, a river of Germany, formed by the junction of the Werra and Fulda at Windeu, in Hanover. After joining the Jahde, it falls into the North Sea by an estuary 24 m. wide at its entrance. It has a N. course of abt. 260 m., and is navigable for boats nearly to its source, but for large vessels only a few miles from its mouth.

Wes'ley, JOHN, an English divine, who, with Whitefield, founded Methodism, was b. at Epworth, 1703. In 1730, while at Oxford University, he and his brother, with a few other students, formed themselves into a society for the purpose of mutual edification in religious exercises. So singular an association excited considerable notice, and, among other names bestowed upon the members, that of *Methodists* was applied to them. W., with some others, chiefly Moravians, came to Georgia in 1735, but the strictness of discipline which he attempted to introduce proved very distasteful to the colonists, and his refusal to admit a certain lady to communion involved him in a suit for defamation, which, however, was never brought to an issue. After a residence of less than two years in America, he returned to England, "shaking the dust off his feet," to use his own expression, and commenced preaching to open-air meetings, and gathered many followers. The churches being shut against him, he built spacious meeting-houses in London, Bristol, and other places. For some time he was united with George Whitefield; but, differences arising on account of the doctrine of election, which was zealously espoused and preached by the latter, they separated, and the Methodists were denominated according to their respective leaders. W. was indefatigable in his labors, and was almost continually engaged in travelling over England, Wales, Scotland, and Ireland. No man ever labored more zealously or continuously in the cause which he had undertaken. Every moment of his life was devoted to the organization of the great sect of Methodists, and he preserved his influence over it to the last. He published hymns, sermons, political tracts, and controversial pieces against the Calvinists and Moravians; but the complete list of the writings of this extraordinary man is too voluminous to be inserted. Two collected editions of his works have been published, the first in 32 vols., and the second in 16 vols. The best biographies of him are those of Coke and Moore, and that of Southey. His preaching was extemporaneous, but not vehement. He dwelt much upon practical religion, though he taught his followers to seek inspiration of the Holy Spirit, and to aspire to a state of sinless perfection. D. in London 1791. See METHODISTS.

Wes'ley, in *Illinois*, a twp. of Will co.

Wesley, in *Ohio*, a post-village and township of Washington co., 16 m. W. of Marietta.

Wesley, in *Pennsylvania*, a post-village of Venango co., 60 m. N. of Pittsburgh.

Wes'leyanism, (*-izm*), *n.* (*Ecol.*) The system of doctrines and church polity inculcated by John Wesley; Methodism.

Wes'leyville, in *Pa.*, p.-v. of Erie co., 5 m. E. of Erie.

Wesobul'ga, in *Ala.*, a twp. of Clay co.

Wes'sex. See HEPTARCHY; EGBERT; and GREAT BRITAIN.

Wes'sel Islands, a group off N. Australia, lying to the N.W. of the Gulf of Carpentaria, the principal of which is 30 m. long, and abt. 7 m. wide; Lat. of Cape Wessel, 10° 58' S., Lon. 130° 40' E.

West, *n.* [A. S., D., and Ger.; Fr. *ouest*.] That point of the horizon where the sun sets at the equinox, and midway between the N. and S. points; the point, quarter, direction, or region opposed to *east*.—A country situated

in a region toward the smsetting with respect to another, or to the westward of another.

West, *a.* Pertaining or relating to the west; being in a line toward the point where the sun sets when in the equator; lying in the direction of the smsetting; as, the *west* limit of a territory.—Coming or moving from the west or western region; as, a *west* wind.

West End, the name given to the fashionable part of London, the English metropolis, extending from Charing Cross to Kensington, E. to W.; and from Pimlico to St. John's Wood, S. to N.

—*adv.* To, or at, the westward side; more westward; as, St. Louis lies *west* of Cincinnati.

—*v. n.* To turn, move, or veer toward the west.

West, BENJAMIN, a celebrated American painter, b. 1738, near Springfield, in Pennsylvania, of Quaker parents. After exercising his pencil in different parts of America, he went to Italy in 1760, and proceeded to England in 1763, where he took his permanent residence. One of his earliest friends was Dr. Drummond, Archbishop of York, who introduced him to George III., by whose order he executed his picture of *The Departure of Regulus from Rome*, and whose patronage he enjoyed for about 40 years. On the death of Sir Joshua Reynolds, in 1792, W., who had been a member of the Royal Academy from its foundation, was elected president; which chair he enjoyed, with the exception of a short interval, till his death, in 1820. His *Death of General Wolfe* was among the first of his productions that attracted public notice, especially for the rational innovation on which he had ventured in it, of painting historical personages in a modern dress. And, among his last and largest works, were *Death on the Pale Horse*, and *Christ Healing the Sick*. There is in the Pennsylvania Hospital, in Philadelphia, a copy (with some alterations) of *Christ Healing the Sick*, which was presented to it by West. Like the other works of this celebrated artist, it is only remarkable for its academic correctness of design—a quality much appreciated by the age in which he lived.

West, in *Ind.*, a twp. of Marshall co.

West, in *Ohio*, a twp. of Columbiana co.

West, in *Pennsylvania*, a township of Huntingdon co., 8 m. N. of Huntingdon.

West Acton, in *Massachusetts*, a post-village of Middlesex co., 27 m. N.W. of Boston.

West Ad'dison, in *New York*, a village of Steuben co., 230 m. S.W. of Albany.

West Ed'meston, in *New York*, a post-village of Otsego co., 28 m. S. of Utica.

West Eliz'abeth, in *Pennsylvania*, a post-borough of Allegheny co., 20 m. S. of Pittsburgh.

West'erloo, in *New York*, a post-township of Albany co., 20 m. S.W. of Albany.

West'erly, *a.* Tending or being toward the west; situated in the western region. — Moving or coming from the westward; as, a *western* wind.

—*adv.* Tending, going, or moving toward the west.

West'erly, in *Rhode Island*, a post-village and township of Washington county, 45 miles south-west of Providence.

West'ern, *a.* [West, and A. S. *ærn*, place.] Being in the west, or in the region nearly in the direction of west; situated in that quarter where the sun sets; as, the *western* coast of the U. States. — Moving or tending toward the west; as, to sail a *western* course. — Coming from the west; as, a *western* breeze.

Western, in *Illinois*, a twp. of Henry co.; *pop.* abt. 1,400.

Western, in *N. York*, a twp. of Oneida co.

Western Australia, a British colony in the W. of Australia, between Lat. 28° 15' and 35° 10' S., Lon. 114° 45' and 119° 35' E. *Length*, from N.E. to S.W., 1,370 m., and average breadth 650 m. *Area*, 978,000 sq. m. *Surface*, diversified, but traversed in the interior from N. to S. by a mountain range, the principal peak of which, Mulanop, is 5,000 feet high; *soil*, suitable for grazing. *Rivers*. Swan River is the principal. *Min.* Iron, coal, lead, copper, and zinc. *Climate*, dry, but healthy. *Prod.* Wheat, barley, oats, grapes, figs, olives, &c.; but the raising of sheep is the principal occupation of the inhabitants. *Cap.* Perth.

West'ern Branch, in *Virginia*, a township of Norfolk co.

West'ern Port, in *Maryland*, a post-village of Allegheny co., on the Potomac, 24 m. S.W. of Cumberland.

West'ern Empire, *n.* (*Hist.*) The name given by historians to the western division of the Roman empire, when divided, by the will of Theodosius the Great, between his sons Honorius and Arcadius, A. D. 395.

West'erner, *n.* A native or inhabitant of the west.

West'ernmost, *Westmost*, *a.* Furthest to the west.

West'ern Port, an inlet of S. Australia, in Victoria, 20 m. long and the same in breadth, separated from Port Philip by the peninsula of Arthur's Seat. It is almost filled by the Grant and French islands.

West'ern Saratoga, in *Illinois*, a post-village of Union co., 142 m. S. of Springfield.

West'ernville, in *New York*, a post-village of Oneida co., 8 m. N.N.E. of Rome.

West'erville, in *Ohio*, a post-village of Franklin co., 14 m. N.E. of Columbus.

West'erwyk, a seaport-town of Sweden, province of Smaland, on the Baltic, 75 m. N. of Calmar; *pop.* 4,000.

West Fair'field, in *Pennsylvania*, a post-village of Westmoreland co., 125 m. W. of Harrisburg.

West Fair'lee, in *Vermont*, a post-township of Orange co., 29 m. S.E. of Montpelier.

West Fall, in *Pennsylvania*, a township of Pike co., 68 m. N.E. of Wilkesbarre.

West Fal'lowfield, in *Pennsylvania*, a township of Chester county. — A township of Crawford county.

West Fal'mouth, in *Massachusetts*, a post-township of Barnstable co., 62 m. S.S.E. of Boston.

West Farms, in *New York*, a post-village and township of Westchester county, 11 m. N.N.E. of New York. Now part of New York city.

West Felic'iana, in *Louisiana*, a S.E. parish, bordering on the Mississippi River; *area*, 365 sq. m. It is drained by the Bayou Sarah. *Surface*, undulating; *soil*, fertile. *Cap.* St. Francisville. *Pop.* (1897) 15,620.

West'field, in *Illinois*, a post-twp. of Clark co., abt. 22 miles south-east of Mattoon. — A township of Burcan county.

Westfield, in *Indiana*, a post-village and township of Hamilton co., 6 m. W. of Noblesville.

Westfield, in *Iowa*, a township of Fayette county.

Westfield, in *Massachusetts*, a river formed in Hampden county by the junction of the North, Middle, and West branches. It falls into the Connecticut near Springfield. — A post-village and township of Hampden county, 10 miles W.N.W. of Springfield.

Westfield, in *New Jersey*, a post-village and township of Union co., 36 m. N.N.E. of Trenton.

Westfield, in *New York*, a post-village and township of Chautauqua co., 57 m. W. of Buffalo. — A township of Richmond co.

Westfield, in *Ohio*, a twp. of Medina co. — A post-twp. of Morrow co.

Westfield, in *Pennsylvania*, a post-township of Tioga co., 16 m. N.W. of Wellsborough.

Westfield, in *Vermont*, a post-township of Orleans co., 44 m. N. of Montpelier.

Westfield, in *Wisconsin*, a post-village and township

of Marquette county, abt. 58 m. W. of Fond du Lac. — A village and township of Sauk county, abt. 45 m. W. N.W. of Madison.

West Find'ley, in *Pennsylvania*, a post-township of Washington co.

West Fitch'burg, in *Massachusetts*, a post-village of Worcester co., 43 m. W.N.W. of Boston.

West'ford, in *Connecticut*, a post-village of Windham co., 30 m. E.N.E. of Hartford.

Westford, in *Massachusetts*, a post-vill. and twp. of Middlesex co., 27 m. W.N.W. of Boston.

Westford, in *New York*, a post-township of Otsego co., 8 m. S.E. of Cooperstown.

Westford, in *Vermont*, a post-township of Chittenden co., 31 m. N.W. of Montpelier.

Westford, in *Wisconsin*, a township of Dodge county. — A township of Richland co.

West Fork, in *Arkansas*, a township of Washington co.

West Fox'borough, in *Massachusetts*, a post-village of Norfolk co., 25 m. S.S.W. of Boston.

West Frank'lin, in *Pennsylvania*, a post-village of Bradford co., abt. 44 m. N.N.E. of Williamsport.

West Gale'na, in *Illinois*, a township of Jo Daviess co., on the Mississippi River.

West Gar'diner, in *Maine*, a post-township of Kennebec co.

West Genesee', in *Michigan*, a township of Genesee co.

West Girard', in *Pennsylvania*, a village of Erie co., 17 m. S.W. of Erie.

West Glouce'ster, in *Rhode Island*, a post-village of Providence co., 22 m. N.W. of Providence.

West Go'shen, in *Pennsylvania*, a township of Chester co.

West Goulds'borough, in *Maine*, a post-village of Hancock co., 95 m. E. of Augusta.

West Gran'by, in *Connecticut*, a post-village of Hartford co., 20 m. N.N.W. of Hartford.

West Gran'ville, in *Massachusetts*, a post-village of Hampden co., 110 m. W.S.W. of Boston.

West Green'field, in *New York*, a post-village of Saratoga co., 36 m. N.W. of Albany.

West Green'wich, in *Rhode Island*, a post-township of Kent co., 22 m. W.N.W. of Newport.

West Gro'ton, in *Massachusetts*, a post-village of Middlesex co., 39 m. W.N.W. of Boston.

West Groton, in *New York*, a post-village of Tompkins co., 55 m. W. of Albany.

West Hamp'ton, in *Massachusetts*, a post-township of Hampshire co., 95 m. W. of Boston.

Westhampt'on, in *New Jersey*, a township of Burlington co.

West Man'over, in *Pennsylvania*, a post-township of Dauphin co., 11 m. N.E. of Harrisburg.

West Hart'ford, in *Connecticut*, a post-vill. and twp. of Hartford co., 5 m. W. of Hartford.

West Hartford, in *Vermont*, a post-village of Windsor co., 56 m. S.E. of Montpelier.

West Hart'land, in *Connecticut*, a post-village of Hartford co., 25 m. N.W. of Hartford.

West Har'wich, in *Massachusetts*, a post-village of Barnstable co., 75 m. S.E. of Boston.

West Ha'ven, in *Connecticut*, a post-village of New Haven co., 5 m. S.W. of New Haven.

West Haven, in *Vermont*, a post-township of Rutland co., 60 m. S.S.W. of Montpelier.

West Hem'lock, in *Pennsylvania*, a township of Montour co.

West Henip'field, in *Pennsylvania*, a township of Lancaster co.

West Hen'nepin, in *Illinois*, a village of Bureau co., on the Illinois, opposite Hennepin.

West Ho'boken, in *New Jersey*, a suburb of Jersey City, in Hudson co. *Pop.* (1895) 18,296.

West In'dies, the most usual denomination for the vast archipelago of about 850 islands (or 1,000 if we give this name to mere rocky and uninhabitable projections from the sea), lying between N. and S. America, and extending in two irregular lines, which unite at Hayti, from the peninsulas of Yucatan and Florida to the mouth of the Orinoco. They lie between Lat. 10° and 28° N., and Lon. 57° and 85° W., enclosing the Caribbean Sea, which they divide from the Gulf of Mexico and from the Atlantic Ocean. They are divided into two principal groups: the *BAHAMAS* (*q. v.*), and the *ANTILLES* (*q. v.*). In our article *AMERICA* (*q. v.*), the larger of the *W. I.* islands are grouped under the names of the nations to which they belong, and are, besides, elsewhere described under their particular names.

West'ing, *n.* Distance toward the west; as, the *west-ing* and southing of a ship.

(*Navig.*) The distance, reckoned toward the west, between the two meridians passing through the extremities of a course, or portion of a ship's path; the departure of a course which lies to the west of north.

West'ing, *n.* A westerner; one who belongs to a western country. (*n.*)

West Isles, a group of islands in the Atlantic Ocean, belonging to New Brunswick, and situated on the N.E. of Eastport, Maine. They are noted for their fisheries.

West Jefferson, in *Ohio*, a post-village of Madison co., 15 m. W. of Columbus.

West Jer'sey, in *Illinois*, a post-township of Stark co., abt. 28 m. N.W. of Peoria.

West'kill, in *New York*, a post-village of Greene co., 60 m. S.W. of Albany.

West Kil'lingly, in *Connecticut*, a village of Windham co. Now called DANIELSONVILLE.

West Lackawan'nock, in *Pennsylvania*, a former township of Mercer co.

West Kin'derhook, in *Indiana*, a village of Tip-ton co.

West Lafayette', in *Ohio*, a post-village of Coshoc-ton co., 6 m. E. of Coshocton.

West Lampe'ter, in *Pennsylvania*, a township of Lancaster co.

West land, in *Ohio*, a township of Guernsey co.

West Ian'rens, in *New York*, a post-village of Otsego co., 84 m. W. of Albany.

West Leb'anon, in *Indiana*, a post-town of Warren co., 29 m. W.S.W. of Lafayette.

West Lebanon, in *New Hampshire*, a post-village of Grafton co., 69 m. N.W. of Concord.

West Lebanon, in *Ohio*, a post-village of Wayne co., abt. 11 m. S.W. of Massillon.

West Lebanon, in *Pennsylvania*, a post-village of Indiana co., 35 m. N.E. of Pittsburg.

West Levant', in *Maine*, a post-village of Penobscot co., abt. 36 m. N. of Belfast.

West Ley'den, in *New York*, a post-village of Lewis co., 35 m. N.W. of Utica.

West Lib'erty, in *Indiana*, a village of Jay co., abt. 7 m. N. of Portland.

West Liberty, in *Kentucky*, a post-vill. and twp., cap. of Morgan co., 107 m. S.E. of Frankfort.

West Liberty, in *Ohio*, a post-village of Logan co., 48 m. N.N.E. of Dayton.

West Lin'coln, in *Illinois*, a township of Logan county.

West Low'ville, in *New York*, a post-village of Lewis co., 140 m. N.W. of Albany.

West Mal'o'ning, in *Pennsylvania*, a township of Indiana co.

West Man'chester, in *Pennsylvania*, a township of York co.

West Man'heim, in *Pennsylvania*, a township of York co., abt. 24 m. S.S.W. of York.

West Marl'borough, in *Pennsylvania*, a twp. of Chester co., 11 m. S.W. of West Chester.

West Mar'tinsburg, in *New York*, a post-village of Lewis co., 60 m. E.N.E. of Oswego.

West meath, a co. of Ireland, prov. of Leinster, having N. Cavan, E. Meath, S. King's co., and W. Roscommon; area, 708 sq. m. *Surface*, undulating, and interspersed with woods, lakes, and bogs; *soil*, fertile. *Rivers*, Shannon, Inny, and Brosna. *Prod.* Oats, wheat, and potatoes; but grazing and dairy farming are the principal occupations. *Cap.* Mullingar.

West Med'ford, in *Massachusetts*, a post-village of Middlesex co., 5 m. N.N.W. of Boston.

West Med'way, in *Massachusetts*, a post-village of Norfolk co., 28 m. W.S.W. of Boston.

West Men'don, in *New York*, a village of Monroe co., 15 m. S. of Rochester.

West Mer'edith, in *New York*, a post-village of Delaware co., 75 m. S.W. of Albany.

West Mer'iden, in *Connecticut*, a post-village of New Haven co., 17 m. N.E. of New Haven. Now MERIDEN.

West Mid'dletown, in *Pennsylvania*, a post-borough of Washington co., 13 m. N.W. of Washington.

West Mil'ford, in *New Jersey*, a post-township of Pas-saic co., 40 m. N.W. of Jersey City.

West Mil'ton, in *New York*, a post-village of Saratoga co., 31 m. N. of Albany.

West Milton, or MILTON, in *Ohio*, a post-village of Miami co., 78 m. W. of Columbus.

West Milton, in *Pennsylvania*, a post-vill. of Union co.

West Milton, in *Vermont*, a post-vill. of Chittenden co.

West Min'ot, in *Maine*, a post-village of Androscoggin co., 40 m. N. of Portland.

Westminster, a city and borough of England, co. Middlesex, forming the W. portion of London, the British metropolis. It is bounded E. by the city of London proper, N. by Marylebone, W. by Kensington and Bays-water, and S. by the river Thames, dividing it from the co. of Surrey. Its limits comprise the fashionable dis-tricts of Belgravia, Mayfair, Tyburnia, &c., otherwise called the *West End*. Westminster Abbey (see SECTION II.), Hyde, St. James', and Green parks, the Houses of Parliament, and government offices, &c., are also situated within its liberties. *Pop.* Included in that of LONDON, *q.v.*

Westminster, in *Connecticut*, a post-village of Wind-ham co., 40 m. S.W. of Hartford.

Westminster, in *Maryland*, a post-village, cap. of Carroll co., 58 m. N.N.W. of Annapolis.

Westminster, in *Massachusetts*, a post-vill. and twp. of Worcester co., 48 m. N.W. of Boston.

Westminster, in *Vermont*, a post-vill. and twp. of Windham co., 82 m. S.E. of Montpelier.

Westminster West, in *Vermont*, a post-village of Windham co., 95 m. S.E. of Montpelier.

West Monroe', in *New York*, a post-twp. of Oswego co., 20 m. N.E. of Syracuse.

West more, in *Vermont*, a township of Orleans co., 40 m. N.E. of Montpelier.

West moreland, a co. of England, having N. the cos. of Durham and Cumberland, E. York and Durham, S. Lancaster and York, and W. Cumberland and Lancaster; area, 763 sq. m. Much of the land is mountainous, in some places attaining a height of 3,000 ft.; and though the rivers are small, the lakes are the most beautiful in England; of these the most noted are Windermere and Ullswater. *Min.* Copper, lead, coal, and slate. *Cap.* Appleby.

Westmoreland, in *New Hampshire*, a post-twp. of Cheshire co., 52 m. W.S.W. of Concord.

Westmoreland, in *New York*, a post-twp. of Oneida co., 12 m. W. of Utica.

Westmoreland, in *Pennsylvania*, a S.W. co.; area, 1,000 sq. m. *Rivers*, Alleghany and Yonghiogheny. *Surface*, hilly, and mountainous in the E.; *soil*, gener-

ally fertile. *Min.* Stone-coal, iron, limestone, and slate. *Cap.* Greensburg. *Pop.* (1897) 121,980.

Westmoreland, in *Virginia*, an E. co., bordering on Maryland; area, 170 sq. m. *Rivers*, Potomac, and the Rappahannock; also Pope's and Monroe creeks, and Nomini Bay. *Surface*, diversified; *soil*, generally fertile. *Cap.* Montross. *Pop.* (1897) 8,860.

—A post-village, cap. of the above co.

West Nautineal, (-naut'mill.) in *Pennsylvania*, a twp. of Chester co.

West Need'ham, in *Massachusetts*, a post-village of Norfolk co., 15 m. W.S.W. of Boston.

West New'bury, in *Massachusetts*, a post-township of Essex co., 34 m. N.E. of Boston.

West New'ton, in *Massachusetts*, a post-village of Middlesex co., 9 m. W. of Boston.

West Newton, in *Minnesota*, a post-twp. of Nicollet co.

West Newton, in *Pennsylvania*, a post-bor. of West-moreland co., 32 m. S.E. of Pittsburg.

West Nor'folk, in *Connecticut*, a post-village of Litch-field co., 35 m. W.N.W. of Hartford.

West Not'tingham, in *Pennsylvania*, a township of Chester co.

West-on-super-Mare, a seaport-town of England, co. of Somerset, 9 m. N.W. of Axbridge; *pop.* 4,510.

West Or'ange, in *New Jersey*, a township of Essex county.

West Ossipee', in *New Hampshire*, a post-village of Carroll co., 42 m. N.E. of Concord.

West Ox'eter, in *New York*, a post-village of Otsego co., abt. 25 m. S. of Utica.

Wes'ton, in *Connecticut*, a post-vill. and twp. of Fairfield co., 55 m. S.W. of Hartford.

Weston, in *Maine*, a post-township of Aroostook co., 135 m. N.E. of Augusta.

Weston, in *Massachusetts*, a post-village and township of Middlesex co., 13 m. W. of Boston.

Weston, in *Missouri*, a post-town and river-port of Platte co., on the Missouri, 200 m. W.N.W. of Jefferson City.

Weston, in *Nebraska*, a post-village of Saunders co.

Weston, in *New Jersey*, a post-village of Somerset co., 22 m. N.N.E. of Trenton.

Weston, in *Ohio*, a post-village and township of Wood co., 26 m. S.S.W. of Toledo.

Weston, in *Vermont*, a post-village and township of Windsor co., 68 m. S. of Montpelier.

Weston, in *West Virginia*, a post-town, cap. of Lewis co., on the Monongahela river and the West Virginia & Pittsburg R.R., 88 m. S. of Wheeling; seat of State Hospital for the Insane. *Pop.* (1897) 2,650.

Weston, in *Wisconsin*, a township of Marathon co.

West Penn, in *Pennsylvania*, a post-township of Schuyl-kill co.

West Penns'borough, in *Pennsylvania*, a post-town of Cumberland co.

West Per'ry, in *Pennsylvania*, a township of Snyder co.

Westpha'lia, a prov. of Prussia, comprising the N.W. portion of its territory N. of Rhenish Prussia, E. of the Netherlands, S. of Hanover, and W. of the Weser; area, 7,820 sq. m. *Surface*, hilly in the S.W., elsewhere level; *soil*, generally fertile. *Rivers*, Ems, Lippe, Weser, and Werra. *Prod.* Corn, flax, tobacco, and hops; horses, cattle, sheep, and swine are numerous. *Min.* Iron, lead, copper, coal, and salt. *Manuf.* Cottons, hardware, paper, spirits, tobacco, cutlery, flax-spinning. *Cap.* Münster. *Pop.* (1897) 2,543,250.—The ancient duchy of Westphalia was separated from western Saxony by Frederick I. in 1180. In 1613 Prussia obtained possession of part of the country, and in 1801 it was ceded to the Duke of Hesse-Darmstadt. Napoleon I. erected Westphalia into a king-dom, under his brother Jerome, Aug. 18, 1806. Brunswick-Wolfenbüttel, Hesse-Cassel, and Magdeburg were annexed by the treaty of Tilsit, July 9, 1807; and Han-over, March 16, 1810. This kingdom came to an end after the battle of Leipsic, Oct. 16, 18, and 19, 1813; and the different provinces were restored to their former possessors in 1813-14.—The name *Peace of Westphalia* was given to two treaties terminating the Thirty Years' War; the first between the Emperor and Sweden, signed at Osnaburg, Aug. 6, 1648; and the second between the Emperor and France, signed at Münster, Oct. 24, 1648. The negotiations for this peace commenced at Münster, where the Congress held its first meeting in July, 1643, and settled the preliminaries in Jan., 1647. France was confirmed in the possession of Alsace, and other terri-tory. Sweden obtained Pomerania, Rügen, Bremen, and Verden; and the independence of the United Provinces and of Switzerland was recognized. Spain continued the war against France, until it was brought to a close by the *Peace of the Pyrenæes*, Nov. 7, 1659.

Westpha'lia, in *Michigan*, a post-township of Clinton co.

West Pike'land, in *Pennsylvania*, a twp. of Chester co.

West Pike Rnn, in *Pennsylvania*, a township of Washington co.

West Pitts'burg, in *Pennsylvania*, a village of Alle-g'hany co.

West Pitts'field, in *Massachusetts*, a post-village of Berkshire co., 50 m. N.W. of Springfield.

West Pitts'ton, in *Pennsylvania*, a post-borough of Luzerne co.

West Plains, in *Missouri*, a city, cap. of Howell co., 90 m. S. of Rolla. *Pop.* (1897) 2,500.

West Plym'outh, in *New Hampshire*, a post-village of Grafton co., 40 m. N.W. of Concord.

West Point, in *California*, a post-town of Calaveras co., 17 m. N.E. of Mokelumne Hill.

West Point, in *Georgia*, a city of Troup co., 87 m. S.W. of Atlanta. *Pop.* (1897) 1,620.

West Point, in *Illinois*, a village and twp. of Ste-phenson co., 135 m. W.N.W. of Chicago.

West Point, in *Indiana*, a post-village of Tippecanoe county, 10 miles S.W. of Lafayette.—A township of White co.

West Point, in *Iowa*, a township of Butler county.

—A post-village of Lee county, 24 miles north of Keo-kuk.

West Point, in *Mississippi*, a post-town of Lowndes co., about 17 m. N.W. of Columbus.

West Point, in *New York*, the site of the U. States Military Academy, in Orange co., on the Hudson, 52 m. N. of New York city. Owing to its natural strength, it was selected in the early days of the Revolution as a fortress, and Fort Putnam was erected 598 feet above the river, commanding an extensive and picturesque view. It is inclosed on the N.W., W., and S.W. by mountains ranging from 600 to 1,600 feet high, while the approach

Fig. 2610. — VIEW ON THE HUDSON — WEST POINT.

from the river on the E. is interrupted by a perpendicu-lar bank or wall (Fig. 2610). The Academy, established in 1794, is built on a plateau 188 feet above the river. It has an area of 1 m. in circuit, with ample conveniences for military evolutions and the practice of gunnery. See WEST POINT, in SECTION II.

West Point, in *Virginia*, a post-village of King Wil-liam co., 30 m. E. of Richmond.

West Point, in *Wisconsin*, a post-twp. of Columbia co., abt. 22 m. N.W. of Madison.

Westport, a town of Ireland, co. of Mayo, 10 m. S.W. of Castlebar; *pop.* 5,200.

Westport, in *Connecticut*, a post-vill. and township of Fairfield co., 28 m. S.W. of New Haven.

Westport, in *Maine*, a post-township of Lincoln co., 28 m. S.E. of Augusta.

Westport, in *Massachusetts*, a river which flows into the Atlantic from Bristol co., a short distance E. of the boundary of Rhode Island.—A post-village and town-ship of Bristol co., 55 m. S. of Boston.

Westport, in *Missouri*, a post-town and twp. of Jack-son co., 175 m. N.W. of Jefferson City.

Westport, in *New York*, a post-village and township of Essex co., 110 m. N.E. of Albany.

Westport, in *Pennsylvania*, a post-village of Clinton co., abt. 34 m. N.W. of Lock Haven.

Westport, in *Wisconsin*, a post-township of Dane co., abt. 4 m. N. of Madison.

West Providence, in *Pennsylvania*, a township of Bedford co.

West Quod'dy Head, in *Maine*, a headland at the W. entrance of Passamaquoddy Bay.

Westra'lia, in *Kansas*, a former village and township of Montgomery co.

West River, in *Indiana*, a township of Randolph co.

West Rox'bury, in *Massachusetts*, a former post-village and township of Norfolk co.; now a suburb of Boston.

West Rnn'ney, in *New Hampshire*, a post-village of Grafton co., 59 m. W.N.W. of Concord.

West Rnsh, in *New York*, a post-village of Monroe co., 31 m. E. of Batavia.

West Rnsh'ville, in *Ohio*, a post-village of Fairfield co., 142 m. E.N.E. of Cincinnati.

West Rut'land, in *Massachusetts*, a post-village of Worcester co., 50 m. W. of Boston.

West Rut'land, in *Vermont*, a post-town of Rutland co., 4 m. W.N.W. of Rutland.

West St. Paul, in *Minnesota*, a city and township of Dakota co., on the Mississippi, opposite the city of St. Paul. *Pop.* (1895) 1,763.

West Sa'lem, in *Pennsylvania*, a township of Mercer county.

West Sand Lake, in *New York*, a post-village of Rensselaer co., 10 m. E. of Albany.

West Sand'wich, in *Massachusetts*, a village of Barn-stable co., 55 m. S.E. of Boston.

West Seit'nate, in *Massachusetts*, a village of Ply-mouth co., 22 m. S.E. of Boston.

West Sen'eca, in *New York*, a post-township of Erie co., abt. 3 m. S.E. of Buffalo.

West Spar'ta, in *New York*, a township of Livingston co., abt. 12 m. S. of Genesee.

West Spring'field, in *Massachusetts*, a post-village and township of Hampden county, 100 miles south-west of Boston.

West Springfield, in *Pennsylvania*, a post-village of Erie co., 26 m. S.W. of Erie.

West Staf'ford, in *Connecticut*, a post-village of Tol-land co., 25 m. N.E. of Hartford.

West Stockbridge, in *Massachusetts*, a post-village and township of Berkshire county, 160 miles west of Boston.

West Stockholm, in *New York*, a post-village of St. Lawrence co., 30 m. E. of Ogdensburg.

West Sutton, in *Massachusetts*, a post-village of Worcester co., 45 m. W.S.W. of Boston.

West town, in *New York*, a post-village of Orange co., 60 m. N.W. of New York.

West town, in *Pennsylvania*, a township of Chester co., 23 m. W. of Philadelphia.

West Townsend, in *Massachusetts*, a post-village of Middlesex co., 47 m. N.W. of Boston.

West Troy, in *New York*, a post-village of Albany co. See Troy.

West Tr'in, in *New York*, a township of Lewis co.; pop. abt. 3,500.

West Union, in *Iowa*, a city and township, cap. of Fayette co., 85 m. N.W. of Dubuque. Pop. (1895) 1,801.

West Union, in *Minnesota*, a post-township of Todd co.

West Union, in *New York*, a post-town of Steuben co., abt. 50 m. W. of Elmira.

West Union, in *Ohio*, a post-village, cap. of Adams co., 84 m. S.S.W. of Columbus.

West Union, in *Virginia*, a post-village, cap. of Doddridge co., 54 m. E. of Parkersburg.

West Van Buren, in *Indiana*, a township of La Grange co.

Westville, in *Alabama*, a post-village of Dale county.

Westville, in *Connecticut*, a post-vill. of New Haven co., abt. 2 m. N.W. of New Haven.

Westville, in *Mississippi*, a post-village, cap. of Simpson co., 40 m. S.S.E. of Jackson.

Westville, in *New Jersey*, a post-vill. of Gloucester co.

Westville, in *New York*, a twp. of Franklin co.—A post-vill. of Otsego co., 65 m. W. of Albany.

Westville, in *Ohio*, a post-village of Champaign co., 51 m. W.N.W. of Columbus.

Westville, in *Virginia*, a township of Mathews county.

West Vin'cent, in *Pennsylvania*, a township of Chester co., 12 m. N. of West Chester.

West Virginia, a State of the American Union, situated between N. Lat. 37° 36' and 40° 38', and W. Lon. 77° 45' and 82° 30' from Greenwich, is bounded N. by Pennsylvania and Ohio, N.W. by the latter State, S.W. by Kentucky, S. and E. by Virginia, and N.E. by Maryland. Area, 24,780 sq. miles, or 15,859,200 acres. *Gen. Desc.* With the exception of the cos. of Hardy, Hampshire, Morgan, Berkeley, Jefferson, and Pendleton, which are drained by the Potomac river and branches, the whole of W. Virginia geographically belongs to the Great Mississippi Valley—the greater number of her streams being tributaries of the Ohio river, which forms the W. boundary of the State to an extent of 300 m. Through these channels W. V. is placed in direct communication with the markets of the far West and the Gulf of Mexico, and, in fact, with the trade of the whole Mississippi Valley. The Alleghany ridge forms in this State the watershed between the Atlantic Ocean and the Mississippi Valley. The principal rivers are the Sandy, the Guyandotte, and the Great and Little Kanawha, all affluents of the Ohio; and the Monongahela with its tributaries, the Youghiogheny and Cheat. W. of the Alleghany range and that of the Shenandoah on the E., and the Greenbrier and Laurel mountains on the W., are numerous short parallel ridges, of which the most considerable are Potts's or Middle, Warm Spring, and Jackson's River mountains. The westernmost of these continuous chains is the Laurel ridge, with its prolongations, the Greenbrier and Flat Top mountains. Near the line of Randolph co., the Greenbrier Mountains throw off a spur E. to the Alleghany range, and from this run half-a-dozen parallel ridges, following the usual course of the mountain chains of the State, and known as Rich, Middle, Shaver's, Cheat, and Valley Mountains. The Great Flat Top Mountains, as the S.W. portion of this fourth ridge is called, also throws out spurs N. and N.W., called the White Oak Mountain and Barker's ridge.—*Soil.* The prevailing ingredients of the soils are silica, alumina, or pure clay, marl, lime, magnesia, and iron, which the very unevenness of the surface tends to amalgamate to the greatest practical advantage. Thus, the alluvial or bottomlands, composed of the diluvium from adjacent and distant hills, combine mechanically and chemically every kind of mineral and vegetable decomposition in the country. This soil, which varies in depth from 2 to 30 or 40 ft., produces the largest timber and the heaviest crops, and resting upon a substantial basis of dark loam and fertile clay, exceeds in reliability and endurance the black, rich, but thirsty and chaffy soils of the western prairies. These second bottom is generally representative of the rocks prevailing upon this level, with a strong admixture of the strata above, brought down by the gradual land-slips and the wash

Fig. 2611.—SEAL OF THE STATE.

of rains, and accumulated probably to a great extent before the present vegetation took possession of the surface. On ascending, the soil is found gradually less mixed in substance and color; the timber is less varied, and on steeper planes less thrifty. When the top of the ridge is sharp and narrow, the bare rock is found but a few inches below, and not seldom protruding above the surface; but when flat or but gently inclined, as in a majority of cases, there is found a deep, arable soil, heavily coated with humus, and producing, with few exceptions, the identical kinds of timber and crops found in the alluvial valley below. Some of the most comfortable rural homesteads, surrounded by orchards, gardens, and meadows, and supplied with never-failing springs, are found upon the tops of hills some 150 to 300 feet above the valleys. In those regions of the State where table-lands are exceptionally met with, the surface presents undulating plains,—which, but for their majestic timber, would recall to mind an Illinois prairie,—reaching along the mountain summits for miles in length and breadth, with scarcely a swell here and there sufficiently bold to divide the waters. W. V. is richly invested with timber, comprising many varieties of the oak and fir, the hemlock, cedar, laurel, tulip-tree, the black and white walnuts, hickory, beech, sycamore, elm, maple, birch, white and mountain ash, besides the wild-fruit and berry-bearing varieties peculiar to the surrounding States. It has been estimated that 11,300,000 acres, or nearly $\frac{3}{4}$ of the superficial area of the State, are as yet unimproved, and of these a considerable proportion are still in the vigor and juvenescence of original growth. *Min. &c.* The coal measures are known to embrace the entire State, with the exception of the Lower Potomac cos.; and the strata, with few exceptions, running nearly horizontally, or with but slight undulations, through the whole of this territory, there is scarcely a county within its bounds that does not contain one or more seams, at some distance above or below the water-level. W. V., in fact, contains 1-13th of the coal area of the whole U. States, by surface measure only, no account being taken of her greater aggregate thickness of workable seams. In Ritchie co., 14 m. S. of Cairo Station, is found a vein of asphaltum, or solidified petroleum, which, from its geological position, and probable origin, constitutes one of the wonders of the State. The asphaltum produces upwards of 150 galls. per ton of superior oil, 30° gravity, and large returns are anticipated from this remarkable deposit. Salt is another mineral in large yield, salt springs being found in the valleys of the Kanawha and the Ohio. These formerly produced largely, but their yield has been retarded by Michigan competition. The mineral of industrial value next abundant in the State is iron, which is almost coextensive with coal, though not present in seams quite as thick or as numerous. Iron ore is so generally prevalent in various forms throughout W. V., that it would be probably more difficult to surmise where it is not than where it may be found. Petroleum occurs in great quantities in many parts of the State, but is chiefly obtained in a belt from 1 to 2 m. wide, extending from the Little Kanawha to the Ohio River. Perhaps no State in the Union is richer in mineral wealth than West Virginia, although, as yet, the development has not been as rapid as in its sister State of Pennsylvania. The remaining mineral deposits known to exist are antimony, alum, limestone, and fire and plastic clays, of superior quality. The mineral waters located within the limits of the State are many and well-known, particularly the Sulphur Springs, occurring under different names. *Clim.* Alike free from extremes of cold and heat, of rain and drought, and at an elevation inaccessible to malaria, W. V. enjoys, on the whole, a climate unsurpassed by that of any other State. The distribution of rain throughout the whole State is remarkably favorable to seasonable vegetation. Total failure of crops from excess or insufficiency of humidity are unknown; and droughts are out of the question under so genial an atmosphere.—*Agric.* Of the cereal crops Indian corn stands first, there being in 1895 688,545 acres devoted to its growth, with a yield of 16,662,789 bushels. The wheat crop was 2,969,608, and that of oats 3,533,320 bushels. The other important crops are those of rye, buckwheat, potatoes, and tobacco. Garden vegetables and fruit are also of some importance, while the raising of live-stock on farms is a leading agricultural interest, cattle being kept in large numbers, and horses, sheep, and swine in considerable abundance. The value of live stock on farms in the census year 1890 was \$23,964,610, while the value of farm products was estimated at \$20,439,500.—*Mining.* The mining interests of the State are largely in the production of coal, the total yield of this valuable product in 1895 being 11,424,863 short tons, a yield only surpassed by those of Pennsylvania, Illinois, and Ohio. In coke production it was second in rank. No less than 16,000 sq. miles, or two-thirds the entire area of the State, are underlaid by workable beds of coal, the supply being almost inexhaustible, and the coal of every variety except anthracite, and excellently adapted for steam and gas purposes and for domestic fuel.—*Manuf.* The manufactures of W. V. are not extensive, and are concentrated principally at Wheeling, the largest city. The production of pig-iron and steel is on the increase, and the State has attained a high rank in the manufacture of iron and steel rails. The other important articles of manufacture are glass, lumber, leather, and flour and grist mill products. The value of the total product in 1890 was \$38,702,125. There were, in 1897, about 2,450 industrial establishments, having a combined capital of over \$30,000,000, and employing 22,300 operators, whose wages aggregated about

\$9,000,000. The manufacture of cut-nails was reported as decreasing, and that of wire nails increasing.—*Polit. Div.* The State is divided into 54 counties, as follows:

Barbour,	Hancock,	Mercer,	Randolph,
Berkeley,	Hardy,	Mineral,	Ritchie,
Boone,	Harrison,	Monongalia,	Roane,
Braxton,	Jackson,	Monroe,	Taylor,
Brooke,	Jefferson,	Morgan,	Tucker,
Cabell,	Kanawha,	Nicholas,	Tyler,
Calhoun,	Lewis,	Ohio,	Upshur,
Clay,	Lincoln,	Pendleton,	Wayne,
Doddridge,	Logan,	Pleasant,	Webster,
Fayette,	McDowell,	Pocahontas,	Weizel,
Gilmer,	Marion,	Prestou,	Wirt,
Grant,	Marshall,	Putnam,	Wood,
Greenbrier,	Mason,	Raleigh,	Wyoming.
Hampshire,	Summers		

Cities. Wheeling (Fig. 2612), Charleston (State cap.), Parkersburg, Huntington, Martinsburg, Grafton, &c.—*Govt.* The executive department consists of a Governor, Secretary of State, Superintendent of Public Schools, Auditor, Treasurer, and Attorney-general, all elected by the people for four years. The Legislature, which meets biennially, consists of senators and delegates, the former elected for four years, the latter for two years. The judiciary is vested in a Supreme Court of Appeals, consisting of four judges, elected by the people for twelve years; in Circuit Courts, Corporation Courts, and justices of the peace, all elected by the people. A State Constitution was adopted March 26, 1863, and a new one in 1872. Wheeling was substituted for Charleston as capital of the State in 1875, but in 1885 the State capital was again removed to Charleston. The latest apportionment gives W. V. 4 representatives in the U. S. Congress and 6 votes in the college of electors.—*Finances.* The assessed valuation of real and personal property in W. V. for the year 1880 was \$146,991,688; for 1890, \$186,964,770, or \$245.11 per capita. The growth of population and continued development

Fig. 2612.—WHEELING IN 1860.

of the natural sources of wealth have considerably increased the wealth of the State since the latter date. The total net indebtedness of the State and its divisions was, in 1890, \$2,532,460, of which the proportion credited to the State was only \$184,511, so that it is virtually free from debt, though it holds itself accountable for a portion of the State debt of Virginia, as yet undetermined. The county debt was \$1,197,462; city debt, \$1,132,188; school district debt, \$18,299. The State is well supplied with railroads, it being crossed by the Baltimore and Ohio line, while numerous branch lines and local roads traverse it, railroad construction having been very active.—*Educ.* W. V. possesses an efficient system of free public and normal schools, a liberal system of public education being adopted early in its history. The system is that known as the township or district system, the control of the school interests of each district being in the hands of a board of education elected by the people, while each county has its superintendent and there is a general State superintendent. Of the approximately 300,000 children of school age in the State about 230,000 are enrolled in the public schools, while the remainder are largely absorbed in the numerous private schools and institutes of higher education. Chief among the latter is the West Virginia State University, at Morgantown. This has a productive endowment of \$114,750, and receives annual appropriations from the State. It has a library of 14,500 volumes, 30 instructors, and about 400 pupils, and possesses a museum, and mineralogical, geological and conchological cabinets, chemical laboratory, &c. The State possesses several other collegiate institutions. The other State institutions include a hospital for the insane at Weston and a branch asylum at Spencer, a deaf-mute and blind asylum at Romney and a penitentiary at Moundsville. A high-license system prevails, under whose operation and in virtue of local sentiment the sale of liquor is virtually prohibited in many counties of the State.—*Hist.* The history of the State prior to 1861 is identified with that of Virginia proper, of which State it formed an integral part until after the outbreak of the Civil War. The Alleghany Mountains, however, formed a natural line of demarcation between the two sections of this State, and conditions favoring separation had long existed. These reached a climax on the passage by Virginia of an ordinance of secession, the popular vote in the section west of the mountains being strongly opposed to it. A convention of loyalists met at Wheeling in June, 1861, and in Aug. adopted an ordinance providing for the for-

mation of a new State to be called Kanawha. In November a Constitution was adopted and the name West Virginia chosen. This Constitution was adopted by the people by a very large majority in April, 1862. In May the legislature of the "reorganized government" of Virginia passed a bill to authorize the formation of the new State, and it was formally admitted to the Union by Act of Congress and the approval of President Lincoln, June 19, 1863. At that time it was sparsely populated, and its great resources undeveloped, but great and encouraging progress has since been made. *Pop.* (1870) 442,074; (1880) 618,457; (1890) 762,794; (1897) estimated, 892,675.

West Wheeling, in *Ohio*, a post-town of Belmont co., on the Ohio, opposite Wheeling, Virginia.

West White Land, in *Pennsylvania*, a post-township of Chester co., 5 m. N. of West Chester.

West Windham, in *Pennsylvania*, a village of Bradford co., 152 m. N.E. of Harrisburg.

West Windsor, in *New Jersey*, a township of Mercer county.

West Windsor, in *Vermont*, a township of Windsor county.

West Winfield, in *New York*, a post-village of Herkimer co., 15 m. S.E. of Utica.

West Winsted, in *Connecticut*, a post-village of Litchfield co., 30 m. N. of Waterbury.

West Yarmouth, in *Massachusetts*, a post-village of Barnstable co., 60 m. S.E. of Boston.

Wet, *a.* (comp. *WETTER*; *superl. WETTEST*.) [*A. S. wet*; Lat. *ados*, akin to Gr. *húctos*, rain.] Containing water; surcharged with moisture; as, a *wet* napkin. — Having water or other liquid upon the surface; as, a *wet* pavement. — Rainy; very damp or humid; as, a *wet* season, a *wet* day.

Wet blanket, figuratively and colloquially, that which has the effect of damping or checking ardor or aspirations; as, a lady's "No" throws a *wet blanket* over a wooer.

—*n.* [*A. S. wata*.] Water or wetness; moisture, humidity, or dampness in considerable degree. — Rainy, foggy, or humid weather; as, it has been very *wet* of late. — A cant term for alcohol drink; as, he is fond of his *wet*; heavy *wet*; i. e., spirituous liquors.

—*v. a.* (*imp. and pp. WET*; sometimes, but rarely, *WETTED*.) [*A. S. wetan*.] To fill or moisten with water or other liquid; to sprinkle; to damp; to cause to have water or other fluid adherent to the surface; to dip or soak in liquor; as, to *wet* one's feet; to *wet* cloth, &c.

To *wet one's whistle*, to indulge in comforting drink; to rinse the dust from one's mouth with something moist and cordial; as, "Old wine is good stuff to *wet one's whistle* with." — *Dickens*.

Wether, *n.* [*A. S. wædder*; Ger. *widder*.] A castrated ram. — *Wether mutton*, a choice kind of mutton, obtained from a well-kept wether sheep.

Wetherfield Springs, in *New York*, a post-village of Wyoming co., 250 m. W. of Albany.

Wethersfield, in *Connecticut*, a post-village and township of Hartford co., on the Connecticut River, abt. 3 m. S. of Hartford.

Wethersfield, in *New York*, a post-township of Wyoming co., 8 m. S.W. of Warsaw.

Wetness, *n.* State of being wet; moisture; humidity; dampness; as, the *wetness* of marshy land; the *wetness* of a dish-cloth. — A state of being rainy, foggy, or misty; as, the *wetness* of the weather.

Wet-nurse, *n.* A woman who suckles the child of another woman; — as distinguished from *dry-nurse*.

Wet-shod, *a.* Having the feet wet with the shoes or boots on.

Wet'ta, an island of the Eastern Archipelago, 30 m. N. of Timor, 60 m. long and 30 broad; Lat. 5° 5' S., Lon. 126° 12' E.

Wet'ter, a lake of Sweden, between Lat. 57° 50' and 58° 55' N., Lon. 14° and 15° E., 25 m. S.E. of Lake Wener, with which it is connected by a canal. *Ext.* 80 m. long and 10 broad.

Wet'teren, a town of Belgium, prov. of E. Flanders, on the Scheldt, 7 m. E.S.E. of Ghent. *Manuf.* Woollens and cottons. *Pop.* 9,350.

Wet'terhorn, ("the peak of tempests") one of the Alpine mountains of the Bernese Oberland, Switzerland, 12,162 ft. above the sea.

Wet'tish, *a.* Somewhat wet, moist, damp, or humid.

Wetumpka, in *Alabama*, a post-town and township, cap. of Elmore co., on the Coosa River, 14 m. N. of Montgomery.

Wet'zel, in *W. Virginia*, a N. co., bordering on Pennsylvania; area, 550 sq. m. *Rivers.* The Ohio river and Fishing creek. *Surface*, hilly; *soil*, generally fertile. *Min.* Stone-coal. *Cap.* New Martinsville. *Pop.* (1897) 18,410.

Wetzlar (*wetzlar*), a town of Rhenish Prussia, on the Lahn, 40 m. E.N.E. of Coblenz. *Pop.* 6,050.

Wevelghem (*wewel-gaim*), a town of Belgium, province of W. Flanders, 2 m. E.N.E. of Menin. *Pop.* 4,500.

We'vertown, in *Maryland*, a post-village of Frederick co., on the Potomac, 80 m. W. of Baltimore.

We'vil, *n.* Same as WEEVIL (*q. v.*).

Wex'ford, a seaport town of Ireland, cap. of a co. of same name, at the mouth of the river Staney in St. George's Channel, 25 m. N.N.E. of Waterford. It is irregularly built, with narrow streets, but contains some handsome buildings. *Manuf.* Woollens.

Wexford, in *Michigan*, a N.W. co.; area, 580 sq. m. It is drained by the Manistee river. *Surface*, level; *soil*, fertile. *Cap.* Cadillac. *Pop.* (1894) 14,047.

Wey, *n.* In England, a measure of weight, being, variously, of wool, 6½ tods of 28 lbs.; of wheat, a load or 5 quarters; of salt, 40 bushels of 56 lbs. each; of cheese,

32 cloves of 8 lbs. each; of oats and barley, 48 bushels; of butter, from 2 to 3 cwt.

Weyanwe'go, in *Wisconsin*, a post-village and twp. of Waupaca co., 35 m. N.W. of Oshkosh.

Wey'bridge, in *Vermont*, a post-township of Addison co., 35 m. W.S.W. of Montpelier.

Weymouth with Melcombe-Regis, a seaport and market-town of England, in Dorsetshire, comprising the town and chapelry of Weymouth and the town and parish of Melcombe, the former on the S. and the latter on the N. side of the Wey, 8 miles from Dorchester. Weymouth is old and ill-built. It communicates with Melcombe, to which it is united by a handsome bridge. It became a place of fashionable resort, in consequence of its being frequented by George III., and is now greatly enlarged by the addition of many new and elegant buildings; Lat. 50° 36' 6" N., Lon. 2° 26' W. *Pop.* of Weymouth 4,000; of Melcombe, 7,000.

Wey'mouth, in *Massachusetts*, a post-township of Norfolk co., 12 m. S.S.E. of Boston.

Weymouth, in *New Jersey*, a post-village and township of Atlantic co., 55 m. S. of Trenton.

Weymouth, in *Nova Scotia*, a seaport-town of Digby co., at the entrance of Sissiboo River in St. Mary's Bay.

Whack, (*hwák*), *v. a.* [From *thwack*.] To beat; to strike; to cuff; to thrash; to give a smart blow or blows to. (*Colloq.*)

—*v. n.* To strike anything with a smart, heavy blow or blows. — *To whack away*, to keep hitting with a succession of heavy blows; as, to *whack away* at a mule. (*Col.*) — *n.* A smart, heavy resounding blow. (*Vulgar.*)

Whale, (*hwál*), *n.* [*A. S. hwal*, *hwæl*; Lat. *balæna*; Gr. *phalaina*.] (*Zool.*) A name common to all the species comprising the family *Balænidæ*, *q. v.*, but more especially applied to the genus *Balæna*, comprising the Right Whale, which is the object of this article. The respiratory apparatus of the *W.* is peculiar in the extreme; the larynx has the form of a cone, and when the creature is breathing, projects into the cavity of the posterior nares, where it is met and embraced by the muscles of the palate, and thus a free passage is opened through the nostrils from the lungs direct to the external air, although at the same time the whole head and mouth may be under water. In order to get rid of the water which is taken into the mouth, the *W.* performs the act of deglutition, but at the same time closes the pharynx to prevent the passage of the water beyond the necessary point. By these means it is forced up the nasal passages, and by a sudden contraction of the muscles abt. these parts, is finally expelled in a jet of water, which rises to some height. The head of the *W.* is disproportionately large in comparison with the size of the body, generally being one-third, and often one-half, the size of the latter. The skull is generally unsymmetrical. The arrangement of the baleen or whalebone in most of the Greenland *W.* (*Balæna mysticetus*) (Fig. 2614) is very peculiar. A strong bony keel (Fig. 2613) runs along the centre of the palate, on each side of which is a very broad depression, along which the plates of baleen are attached. These are long and flat, and are attached to the palate by their bases hanging down into the mouth. From these being placed transversely, their sides are parallel and at a very small distance from each other, the base of each, as well as the outer edge, being composed of solid whalebone, while the inner edge terminates in a filament of fibres which fill up the whole interior of the mouth like a curtain across it. The object of this is entirely owing to the arrangement of the stomach of the *W.*, which is so small in comparison with his great bulk that his food consists only of the smallest of the swimming mollusca, a herring being the largest fish he can swallow. To procure his prey he is thus obliged to engulf a whole shoal in his mouth at once, where they become entangled in the fibres of the baleen. The water is then strained off, and poured through the blowholes, while the animal can pass his diminutive prey into the oesophagus as he requires. It may be thus seen that the baleen serves the purpose of a sort of sieve, and separates the food which the *W.* feeds on from the water which he cannot but take in at the same time that he seizes his prey. The baleen plates are generally from eight to ten feet long, and number about 600. The subject of which they are composed is a well-known and valuable article of commerce, termed *whalebone*, and the produce from a single *W.* often sells for from between \$1,000 and \$1,500. The Greenland *W.* is one of the best-known species, and is a native of the northern seas. It is about 60 feet in length and 40 in circumference, and its average weight has been estimated to be about 500,000 pounds. The back and sides are covered with fat, of an exceedingly mucous character, termed *blubber*; and so oily is this substance, that 100 barrels of blubber will produce nearly 96 barrels of oil; so that the refuse and waste is but very slight. The whole body of a *W.* of this species, of the full size, will yield from 50 to 60 puncheons of oil, each puncheon containing 74 gallons; the whole value of such a fish is therefore about \$5,000. The young ones produce about 50 barrels of oil when they are only a year old; but at that time they are particularly fat. The female produces her young alive,

Fig. 2613. SKULL OF WHALE, WITH THE BALEEN.

after a gestation of about nine or ten months, and is even more attached than the generality of animals to her young, many instances of her being known to sacrifice her life rather than leave them. The Right *W.* is confined to the frigid regions, and is common to the N. Atlantic and N. Pacific; but it is specially hunted by American and English whalers about Baffin's Bay, where the vessels arrive about the end of April, and continually keep a sharp lookout. *B. australis* is a species confined to the Antarctic regions, and is smaller than

Fig. 2614.—COMMON WHALE (*Balæna mysticetus*).

the Arctic species. The *W. fishery* is twofold; that of the northern seas, in which the common *W.* is hunted; and that of the southern, in which the chief object of pursuit is the Spermaceti *W.* or CACHALOT (*q. v.*). The *W.*, while belonging to the class of mammalia, has become completely adapted to a marine life. There are numerous other species in addition to those named, and the order of *Cetacea* comprises several forms not known as whales, as the dolphin and porpoise. These, with the cachalot, possess teeth—in which the Right *W.* is deficient—and live on the larger ocean animals. The Narwhal is remarkable for its enormous single tusk. Whales have grown scarce from persistent fishing, and the fishery has been largely abandoned.

Whale, *v. a.* [See *WALE*.] To walo; to weal; to mark with stripes, as by a lash. (*Vulgar.*)

Whalebone, *n.* See *WHALE*.

Whale-fin, *n.* A commercial term for whalebone.

Whale-fishery, *n.* See *WHALE*.

Whale-man, *n.* A man employed in the whale-fishery.

Whaler, *n.* A person or ship employed in the whale-fishery.

Whaling, *a.* Pertaining or having reference to the taking of whales; as, a *whaling* voyage.

—*n.* The business of taking whales.

Whale's Back, an island of *New Hampshire*, on the E. of the entrance to Portsmouth harbor, contains a lighthouse 68 ft. high, with two fixed lights, one 10 ft. above the other; Lat. 43° 2' 30" N., Lon. 70° 42' 45" W.

Whap, Whop, (*hwóp*), *v. n.* To throw one's self quickly or abruptly; to turn suddenly. (*Vulgar.*)

—*n.* [*A. S. hweop*, a whip.] A blow; a quick, heavy stroke; a lash or cut, as with a whip. (*Vulgar.*)

Whapper, Whopper, (*hwóp'per*), *n.* A lie of gigantic dimensions; or, in other words, a lie as broad as it is long. (*Colloq. and vulgar.*)

Whapping, Whop'ping, *a.* Very large; monstrous; almost incredible; as, a *whapping* story. (*Colloq. and vulgar.*)

Wharf, (*hworf*), *n.*; *pl.* *WHARVES*, and frequently *WHARFS*. [*A. S. hwarf*, *hweorf*, from *hweorfan*, to turn, to depart.] A sort of quay on the margins of a dock, harbor, river, canal, &c., alongside which ships or barges are brought for the purpose of being loaded or lightened; or, a level surface, terrace, or causeway, formed on a river or canal bank, or sea-coast, to facilitate the landing and embarkation of passengers and goods, and protected by an artificial frontage or structure of masonry or other materials.

—*v. a.* To furnish with a wharf or wharves; to secure by means of a wharf or river-wall of masonry, &c. — To place on, or bring to, a wharf; as, to *wharf* merchandise.

Wharfage, (*hworf'aj*), *n.* Fees or duties paid for the privilege of using a wharf for loading or discharging goods and other contents of ships' cargoes.

Wharf-boat, *n.* In the U. States, a kind of boat moored at the side of a river, &c., and used for a wharf, in places where the height of the water is so variable that a fixed wharf would be useless.

Wharfing, *n.* Wharfs considered collectively.

Wharfinger, (*-jer*), *n.* One who has charge of a wharf.

Whar'ton, in *Pennsylvania*, a township of Fayette co.; — A post-township of Potter co., 40 m. N.W. of Lock Haven.

Whar'ton, in *Texas*, a S.E. co.; area, 1080 sq. m. *Rivers.* Colorado and San Bernard; also, Mustang and Sandy creeks. — A post-village, cap. of the above co., 50 m. N. of Matagorda.

Whar'tonsburg, in *Ohio*, a post-village of Wyandott co., 40 m. S.W. of Sandusky.

Whate'ly, in *Massachusetts*, a post-township of Franklin co., 88 m. N.W. of Boston.

What, (*hwót*), *pron.* [*A. S. hwaet*, *nom. neut. of hwát* who.] A pronoun used interrogatively in relation to things, inanimate objects, or creatures other than man; employed both substantively and adjectively; — as, *what* did you say? *what* is that? — Hence, in an ejaculatory sense, tantamount to *how great*; *how wonderful*; as, *what* patience! *what* bravery! — Sometimes attached as an adverbial prefix to adjectives, as nearly approaching in equivalence to *how*; as, *what* a lucky fellow! i. e., *how* lucky a fellow! — also, with a general independent sig-

nification, pointing to the singularity or strangeness of a person or thing; as, "What partial judges are our love and hate?" (*Dryden*).—A compound relative, equivalent, in force and substance, to *that which*; adjectively, to *the cause which*; the class or order of thing *which*; and infrequently to *the ship on or at which*; having application also in a corresponding adverbial sense; as, "What time the morn mysterious visions brings." (*Pope*).—Whatever; what thing soever;—employed indefinitely; as, whether it was his wish or his obligation, or what it was.—Partly; in part;—used adverbially, with a following proposition, as *by or with*, and with reiteration; as, *what with this, what with that*, I have more than I can properly attend to.

(NOTE. In the phrase *I tell you what*, *what* forms an elliptical equivalent for *how it is*; *what it is*, &c.; *what not* is an expression frequently employed as an abbreviated clause ending an enumeration of several or sundry things or particulars, the verb of which, being either the same as that of the principal, or a general word, is omitted; as, "Humbly, botes, and what not;"—hence, the words are commonly understood as having the force of a substantive, equivalent to *any thing you please, etcetera*, &c.—*What hol* an ejaculation of hailing or calling; as, "What hol thou genius of the clime, what hol!" (*Dryden*).—*What if*, what will happen or come to pass if; as, "What if I should strike you?"—*What though*, even supposing or allowing that it be so; as, "What though none live my innocence to tell? I know it." (*Dryden*).—*What's what*, the real or identical thing;—used colloquially and vulgarly; as, leave him to judge for himself, he knows *what's what*.)

Whatever, *pron.* Being this or that; being of one nature or another; being one thing or another; anything that may be; all that; the whole that; all particulars that; as, in *whatever* manner you choose.

What-not, *n.* See ERAGRE.

Whatsoever, *a.* Whatever. (*n.*)

Wheat, (*hwēt*), *n.* [*A. S. hwēte*, putrefied flesh.] A weal; a wale; a mark raised by a stroke, as of a whip.

Wheat, (*hwēt*), *n.* [*A. S. hwæti*; *Ger. weizen*.] (*Agric.*) A well-known species of grass (*Triticum sativum* and its varieties), belonging to the genus *Triticum*. It is, after Indian corn, the most important of our farm crops. It may be raised on all sorts of soils, but heavy, stiff lands are the most suitable for it. The varieties of wheat are perpetually changing, in consequence of variations of culture, climate, and soil, those most in use being distinguished by different local terms. They may be divided into the two great classes of *red* and *white*—the latter being superior as respects quality and produce, and the former as respects productiveness and hardness. As this grain is frequently cultivated on very inferior soils, and after very imperfect preparation, the produce per acre varies materially in different counties and districts. It is also very liable to injury from bad seed time, a wet winter, or a blight during the period of its flowering (which last is the most common cause of the failure or deficiency of the wheat crops); so that its produce varies as much in different seasons on the same farms, and under the same management, as it does during the same season on different farms. The lowest quantity of produce, except where an absolute deficiency from blight occurs, may, perhaps, be rated at from 10 to 12 bushels an acre, and the highest at from 48 to 56 or 64 bushels. The mean product for all the U. States is about 24 bushels per acre. The geographical range over which wheat can be grown is peculiar. It is not produced in tropical climates. Here its place is taken by rice. There is a northern limit to its growth, beyond which oats can be cultivated. Here, however, wheat is not seen, only because there is not sufficient heat to ripen it. It is, on the whole, the hardiest of the cereals, and it is said that its quality is always best when it grows on that margin beyond which it will not ripen at all. Wheat is the most costly of the cereals. The seed sown on any given area is not more than half the amount which can be sown of other kinds of corn. The crop is scantier, and as it sends its principal roots deeply into the earth, it is more exhausting to the soil; but the meal or flour of wheat is better adapted to sustain the various vital functions than that of any other kind of grain. The wheat product of the U. S. increased from 100,485,800 bushels in 1850 to 260,146,900 in 1870; 459,479,505 in 1880; 490,000,000 in 1889, and 467,102,947 in 1895. The chief wheat-growing States, were in 1895, in order of yield, Minnesota, North Dakota, California, Ohio, South Dakota, Kansas, Pennsylvania, Indiana, Illinois, Missouri and Nebraska. The acreage devoted to wheat-growing in the U. S. exceeds that of any other country in the world. The exports of wheat in the fiscal year of 1895 were 60,650,080 bushels; wheat flour, 14,620,864 barrels. In 1897, owing to failure of crops elsewhere, they were still higher.

Wheat-ear, *n.* (*Zoöl.*) The *Saxicola ananthe*, a European bird, about 5½ inches long, belonging to the family *Sylviolidae*, q. v.

Wheaten, (*hwētn*), *a.* [*A. S. hwæten*.] Made of wheat.

Wheatfield, in Michigan, a flourishing township of Ingham co.

Wheatfield, in New York, a township of Niagara co., 12 m. N. of Buffalo.

Wheatfield, in Pennsylvania, a township of Perry co., 6 m. E. of Bloomfield.

Wheat-fly, *n.* (*Zoöl.*) See CECIDOMYA.

Wheat-grass, *n.* (*Bot.*) Another name of the Dog's Cough-grass. See TRITICUM.

Wheatland, in Illinois, a township of Bureau co.

—A township of Fayette co.—A township of Macon co.

—A township of Will co.

Wheatland, in Iowa, a post-town of Clinton co.

Wheatland, in Michigan, a post-township of Hillsdale co.

Wheatland, in Minnesota, a post-village and township of Rice co., about 20 m. N.W. of Faribault.

Wheatland, in New York, a township of Monroe co., 15 m. W.S.W. of Rochester.

Wheatland, in Pennsylvania, a post-borough in the S.W. part of Mercer co. It contains blast furnaces, rolling-mill, and graduated schools.

Wheatland, in Wisconsin, a post-village and twp. of Kenosha co., 70 m. S.E. of Madison.—A township of Vernon co.

Wheat-moth, or ANGOUMOIS GRAIN-MOTH, *n.* (*Zoöl.*)

The *Anacampsis cerealella*, a moth of the family *Tineidae*, which expands half an inch, and is pale cinnamon-brown above, with a satin lustre; hind wings lead color; the antennae are thread-like, and consist of numerous beaded joints, and two tapering feelers are turned over the head. It lays from 60 to 90 eggs in clusters of about 20 on a single kernel of grain. In 4 to 6 days these eggs produce little worm-like caterpillars not thicker than a hair. Each burrows in a single kernel, and devours the mealy substance, and the work of destruction goes on so unseen, that it is only detected by the softness of the grain or the loss of its weight. When fully grown, the Angoumois caterpillar is not more than one-fifth of an inch long, white, with brownish head, six small jointed legs, and ten extremely small prop-legs. It goes into the chrysalis state within the kernel. Before this it has gnawed a hole nearly through by which to escape when it has finished its transformations. The insects of the summer brood come to the full larva growth in about 3 weeks, remain for a time in the chrysalis state, and in autumn they appear in the winged form, and may be found in the evening in great numbers laying their eggs upon stored grain. The moth-worms of the second brood remain in the grain through the winter, change into winged moths in the summer, and lay their eggs on the ears of the growing grain.

Wheaton, HENRY, a distinguished American publicist and diplomatist, was b. in Rhode Island in 1785. He studied at Brown University, adopted the profession of the law, and was called to the bar. After a visit to Europe he settled at New York, where he became, in 1815, a judge in the Marine Court, and soon after reporter to the Supreme Court of the United States. In addition to his heavy professional duties he found time also for much miscellaneous literary labor, contributing to several periodical publications, and lecturing before several learned societies. After being employed for some years in the revision of the constitution and laws of the State of New York, he was sent, in 1827, as a chargé d'affaires to Copenhagen. He held a similar post at Berlin from 1834 to 1837, when he was named minister plenipotentiary. In this important position he remained till 1846, enjoying the highest esteem and confidence not only of his countrymen, but of the governments and statesmen of Europe. W.'s great work, *The Elements of International Law*, appeared in 1836, has passed through several editions, and is generally regarded as an authority. Among his other works are, a *History of the Law of the Nations in Europe and America from the Earliest Times of the Treaty of Washington*; *Reports of Cases argued and determined in the Supreme Court of the U. S.*; *History of the Northmen*, &c. D. 1848.

Wheaton, in Illinois, a post-village, cap. of Du Page co., 25 m. W. of Chicago.

Wheaton, in Wisconsin, a township of Chippewa county.

Wheatstone, CHARLES, F.R.S., an eminent English natural philosopher, b. at Gloucester, 1802, chiefly known as having introduced and given a practical application to the electric telegraph in England, and the discoverer of the electro-magnetic alarm.

Wheedle, (*hwēdl*), *v. a.* [*A. S. adwelian*, to seduce.] To beguile; to flatter; to entice by soft words; to coax; to cajole; to get the better of by gentle and soothing ways; as, a *wheeling* woman.

—*v. n.* To coax; to flatter; to blarney.

Wheeler, *n.* One who wheedles.

Wheedling, *n.* Act of flattering, enticing, coaxing, or cajoling.

Wheel, (*hwēl*), *n.* [*A. S. hweohl*, *hweol*.] (*Mech.*) A contrivance by means of which the intermittent and limited action of the lever is extended to any distance, and made to act continuously and uniformly. Wheels are either of the kind known as *carriage-W.*, *friction-W.*, or *toothed-W.*; including, under the second division, *band-W.*, and under the third the various kinds of *cog*, *trundle*, *spur*, *crown*, and *bevelled W.* The efficiency of a carriage-W. consists in the length of the lever it offers (or, in other words, upon its diameter); upon the direction in which the power is applied to it; and upon the small extent of surface producing friction, provided that the surface be sufficient to prevent the load from forcing the W. into the material on which they run. *Friction-W.* are introduced into mill-work for the purpose of facilitating the horizontal or vertical movement of traversing beds, of guide-rods, &c.; and the conditions they are required to fulfil are, that they should revolve freely on their own axles, and present smooth surfaces (able to retain a lubricating fluid) to the bodies moving over them, or over which they may move. *Driving-band-W.*, on the contrary, are fixed on their bearing-shafts, and have their surfaces formed in such a manner as to cause the bands, or straps, to adhere to them by their mere friction upon the asperities, and thus to produce motion in the secondary band-W. of the machinery to which they are applied by the rotation of the first W. In *toothed-W.*, a series of projections, or teeth, are formed on the outer rim of one W., which work into corre-

sponding projections upon the outer rim of the W. connected with it, in such a manner as to allow the former to communicate their motion by the sliding or rubbing of their surfaces upon the surfaces of the teeth of the second W. *Cog-W.* are those in which the teeth are made of a different material to the W. itself; but the cogs are nevertheless of the same outline in principle as ordinary teeth. See PADDLE-WHEEL, SPINNING-WHEEL, WATER-WHEEL, &c.

(*Naut.*) See STEERING-WHEEL.

(*Pottery.*) A round, wooden disc revolving horizontally at the top of a vertical shaft or spindle, on which the clay is shaped by the potter's hand.

(*Pyro.*) A revolving fire-work; as, a Catherine-wheel.—An apparatus by which criminals in some countries were formerly tortured.—A rolling or revolving body; a disc; an orb.—Rotation; compass; revolution.

Measuring-wheel, (*Mech.*) A PEDOMETER, q. v.—**Wheel and axle**, (*Mech.*) One of the simple mechanical powers, or machines, consisting of a wheel having a cylindrical axis passing through its centre, resting on pivots at its extremities, or supported in gudgeons, and capable of revolving. The power is applied to the circumference of the wheel, and the weight or force to be overcome to the circumference of the axle; equilibrium takes place when the power and weight are to each other inversely as the radii of the circles to which they are applied.

—*v. a.* To convey on wheels, or in a wheelbarrow; as, to *wheel* a load of bricks.—To whirl; to cause to gyrate, turn, or revolve; to put into a rotary motion; as, a bird *wheels* in the air.

—*v. n.* To move, as on wheels; to have a rotary motion; to turn on an axis, or as on an axis; to move about.—To turn; to move round or change direction, as if revolving upon a pivot; as, troops *wheeling* to the left.—To fetch a compass; to describe a circuit; as, "Wheeling down the steep . . . he flies." (*Pope*).—To roll forward; as, a chair *wheeled* on castors.

Wheel-animalcule, *n.* (*Zoöl.*) See ROTIFERA.

Wheel-barometer, *n.* See BAROMETER.

Wheelbarrow, *n.* A light wooden frame-work with a cavity for conveying articles, having two shafts or handles and one wheel, and rolled or trundled by a single person.

Wheeled, *a.* Having wheels;—used in composition; as, a four-wheeled drag.

Wheeler, *n.* One who, or that which, wheels, turns, or gyrates.—A wheel-horse, or one of those which are next the wheels of a carriage;—as opposed to the *leaders*, or forward horses.

Wheeler, in Indiana, a post-village of Porter co., 37 m. S.E. of Chicago.

Wheeler, in New York, a post-township of Steuben co., 5 m. N. of Bath.

Wheetersburg, in Ohio, a post-village of Scioto co., 9 m. E. of Portsmouth.

Wheeling, in Illinois, a post-village and township of Cook co., abt. 25 m. N.W. of Chicago.

Wheeling, in Minnesota, a township of Rice co., 5 m. E. of Faribault.

Wheeling, in Ohio, a township of Belmont county.—A township of Guernsey county.

Wheeling, in W. Va., a city and port of entry, former cap. of the State and of Ohio co., on the Ohio River, 92 m. below Pittsburg; Lat. 40° 7' N., Lon. 80° 42' W. It is one of the most important places on the Ohio, which is here crossed by a wire suspension bridge, the span of which measures 1,010 ft.; and the towers 153 ft. above low-water mark, and 60 ft. above the abutments. It is the terminus of the Baltimore and Ohio, the Hempfield, and the Cleveland and Pittsburg railroads, and contains numerous iron-foundries, forges, manufactories of nails, glassware, woollen, cotton, and silk goods, paper, leather, steam-engines, &c. Pop. (1897) 38,350.

Wheeling Creek, in Pennsylvania, rises by two branches, the N. and S. Forks, in Washington and Greene cos., and flowing W. enters the Ohio River at Wheeling, W. Virginia.

Wheel-house, *n.* (*Naut.*) A small house or covered apartment on deck which contains the steering-wheel; also, one of the paddle-boxes of a steamer.

Wheeling, *n.* Act of conveying or transporting on wheels; especially, the act of conveying materials, as earth, stones, &c., on a wheelbarrow.—Convenience for transit on wheels; as, the roads are in bad *wheeling*.—A turning, rotary, or circular movement; as, the *wheeling* of a column of infantry.

Wheel-lock, in Vermont, a post-township of Caledonia co., 29 m. N.E. of Montpelier.

Wheel-ore, *n.* (*Min.*) Same as BOURNONITE.

Wheel Purchase, *n.* A simple contrivance for moving a wheeled carriage with increased power. It is formed by hooking a drag-rope to the tire of a wheel as near the ground as possible, carrying the running end up over the tire, and stretching it out so as to form a tangent to the wheel; when the rope is hauled on, the carriage advances. The power gained is in proportion to the diameter of the wheel.

Wheel-plough, (*-plow*), *n.* (*Agric.*) A plough with a wheel or wheels added to it, for the purpose of regulating the depth of the furrow, and rendering the implement more steady to hold.

Wheel-race, *n.* The place in which a water-wheel is fixed.

Wheel-shaped, (*-shāpt*), *a.* Having the form of a wheel. (*Bot.*) Enlarging into a flat border at top, with but little tube; as, a *wheel-shaped* corolla.

Wheel-work, (*-wŭrk*), *n.* (*Mach.*) A combination of wheels imparting motion to one another.

Wheelwright, (*-rit*), *n.* One whose occupation is

to make wheels and wheeled carriages, especially carts, wagons, &c.

Wheeze, (*hweez*), *v. n.* [A. S. *hweosan*; formed from the sound, and allied to *whiz*.] To breathe hard and with an audible sound, as asthmatic persons.

Wheezy, *n.* A noisy respiration, produced by obstruction of the air-passages.

Wheez'y, *a.* Wheezing; breathing with difficulty and with a noisy sound; as, *wheez'y* lungs.

Whelk, *n.* (*Zoöl.*) The common name of the genus *Buccinum*, containing gasteropods which have the shell notched in front, or the canal abruptly reflected. There are about 1,000 living, and 350 fossil species. They are marine and carnivorous.

Whelm, (*hwelm*), *v. a.* [A. S. *ahwylfan*—*a*, intensive, *hweulfan*, to cover.] To overwhelm; to cover with water or by immersion in something that envelops on all sides; as, the *whelming* billow. (*Gay*).—To overburden; to immerse deeply; as, to *whelm* one in pain.

Whelp, (*hwelp*), *n.* [A. S. *hwelp*.] A cub; a puppy; the young of the canine species, and also of beasts of prey; as, a lion's *whelps*.—A youth; a young man;—used in contempt; as, that *whelp*, that unlicked cub of a vulgar breed.

—*v. n.* To bring forth whelps, as the females of the canine species, and some other beasts of prey.

—*v. a.* To give birth to, as cubs or young; as, a foul mind *whelps* foul ideas.

When, (*hwén*), *adv.* [A. S. *hwænne*, *hwenne*; Ger. *wann*; Lat. *quando*; from the pronominal root *hva*.] At what time;—employed in an interrogative sense; as, *when*, and where, did you see him?—At that time; at or just after the moment that;—used relatively; you may do it *when* and how you like.—Which time; after the time that;—elliptically and unauthoritatively employed as a substantive; as, on Tuesday last I met him, since *when* I have not seen him.—While; whereas;—used with a conjunctive application to introduce an adversative clause, and tantamount to *though at the same time*; as, he persisted in marrying her *when* he might have done better.

Whence, (*hwenz*), *adv.* [A. S. *hwanen*.] From what place, source, premises, principles, facts, antecedents, and the like; how;—in an interrogative sense; as, *whence* come you? *whence* got you your information?—By what way or means: in general, from which person, cause, place, principle, or circumstance;—in a relative sense; as, we have stated *whence* our knowledge is derived. (NOTE All the words of this class, as *whence*, *where*, *whether*, &c., are occasionally employed pronominally by a harsh and inelegant construction; as, from *whence* did you sail?)

Whencesoever, *rel. adv.* From what place, cause, or source soever.

Whenever, *rel. adv.* At whatever time; as, *whenever* you like to go.

Whensover, *rel. adv.* [when, so, and ever.] Whenever; at whatever time; at what time soever.

Where, (*hwair*), *adv.* [A. S. *hwær*.] At or in what place; in what position, situation, or circumstances;—employed interrogatively; as, *where* have you been?—At which place or places; at the place in which;—used relatively; as, the country *where* I was born.—Whither; to what or which place;—applied both interrogatively and relatively; as, *where* are you going?

Whereabout, *adv.* Near what or which place; about where;—employed interrogatively and relatively, and generally in the form *whereabouts*; as, *whereabouts* do you reside?—Concerning or having reference to which; as, the thing *whereabout* we are perplexed. (NOTE *Whereabout*, or *whereabouts*, is very frequently used colloquially as a substantive; as, I had a difficulty in finding his *whereabouts*.)

Whereas, (*hwær-az*), *conj.* Considering that things are so; the thing being so that; since;—employed in the introduction of a preamble.

—When in fact or truth:—implying opposition to something gone before; or, implying an admission of facts, sometimes preceding a different statement or version, and sometimes by inferential or consequential issues; as, "The aliment of plants is nearly one uniform juice; *whereas*, animals live upon very different sorts of substances."—*Arbuthnot*.

Whereat, *adv.* At what;—of relative application; as, *whereat* he despaired of success.—At what:—employed interrogatively; as, *whereat* have you taken offence?

Whereby, *adv.* By which; by means of which:—applied relatively.

"Prevent those evils *whereby* the souls of men are lost." *Hooker*.

—By what:—used interrogatively; as, *whereby* shall I know that he is the man?

Wherefore, *adv.* For which reason;—employed relatively.

"*Wherefore* by their fruits ye shall know them."—*Matt. vii. 20.*

—For what reason; why;—used interrogatively; as, *wherefore* did you disappoint me?

Wherein, *adv.* In which; in which thing, time, respect, circumstance, &c.;—used relatively; as, Shakspeare was the book *wherein* I found the passage.—In what:—employed interrogatively; as, *wherein* has he been concerned?

Whereof, (*hwær-ôf*, or *hwær-ôv*), *adv.* Of which:—employed relatively; as, a matter *whereof* you have reaped advantage.—Of what:—used indefinitely; as, intelligence when and *whereof* derived.—Of what:—in the sense of interrogation; as, *whereof* was the pie made?

Whereon, *adv.* On which;—employed relatively; as, the ground *whereon* we tread.

Wheresoever, *adv.* In what place soever; in what-

ever place, or in any place indefinitely;—*wherever* is preferably used.

Whereto, *adv.* To which:—employed in a relative sense; as, that age *whereto* you have arrived.—To what; to what end;—used interrogatively; as, *whereto* this expense?

Wherenpon, *adv.* Upon which; following which.

Where'er, *adv.* At whatever place.

Wherewith, *adv.* With which:—used in a relative sense; as, the gifts *wherewith* a person is endued.—With what:—employed interrogatively; as, *wherewith* shall I do it?

Wherewithal, *n.* The means wherewith to carry out any object. (Colloq.)

Wherry, (*hwær-ry*), *n.* [A corruption of *ferry*.] A boat with bow and stern nearly alike, and both making a very large angle with the keel; a flat-boat; a kind of barge; also, a decked fishing-smack.—A kind of cider made from crab-apples. (Prov. Eng.)

Whet, (*hwét*), *v. a.* (*imp.* and *pp.* WHETTED or WHET.) [A. S. *hwettan*; Ger. *welzen*.] To rub for the purpose of sharpening, as an edge-tool; to sharpen, or give an edge to, by attrition; as, to *whet* a scythe or sword-blade.—To excite; to stimulate; to spur; to make keen, quick, sharp, or eager; as, olives *whet* the palate for the deglutition of claret.—To provoke; to enrage; to make angry or acrimonious; as, jealousy *whets* the worst feelings of man's nature.

To *whet on*, or *whet forward*, to instigate; to bestir; to urge on.

—*a.* Act of sharpening by attrition or friction.—A thing which serves to stimulate and stir the appetite.

Whether, *conj.* [A. S. *hwæthre*—*hwa*, and *æthre*, either, each.] Which of two alternatives expressed by a sentence, or the clause of a sentence;—often preceding *or*; as, *whether* you feel disposed to go or not.

Wheth'ring, *n.* The retention of the after-birth in cows.

Whet-slate, *n.* (*Min.*) Same as NOVACULITE.

Whetstone, *n.* A smooth flat stone used for sharpening edged instruments by friction; a hone.

Whetstone, in *Ohio*, a township of Crawford county.

Whet'ter, *n.* One who, or that which, wets or sharpens.

Whew, (*hwü*), *interj.* A sound like that of a half-formed whistle, expressing amazement, derision, or antipathy.

Whewell, WILLIAM, (*hew'el*), an English philosopher, B. at Lancaster, 1795, was the son of a carpenter, and was himself intended for the same trade; but having distinguished himself while a scholar of the free grammar school of Lancaster, the head-master of that establishment procured him the means of proceeding to the University of Cambridge, where he was nominated, in succession, fellow, professor of mineralogy, professor of moral theology, vice-chancellor, and, in 1841, master of Trinity College. A man of multifarious knowledge and powerful intellect, he contributed greatly to the advancement of science. His principal works were—*History of the Inductive Sciences*; *The Elements of Morality, including Polity*; and *The Philosophy of the Inductive Sciences*. A remarkable work upon *The Plurality of Worlds* was likewise attributed to him. D. 1866.

Whewellite, (*hw'el-üt*), *n.* (*Min.*) A native oxalate of lime from Hungary.

Whey, (*hwä*), *n.* [A. S. *hwæg*.] The watery part or serum of milk; that portion which remains after making curds, chiefly consisting of water holding between 3 or 4 per cent. of sugar of milk in solution. As a diluent and beverage, both in sickness and in health, whey forms one of the best and most wholesome drinks that can be taken.

Which, *pron.* [A. S. *hwylc*; Goth. *hwileiks*—*hwa*, who, what, and *leiks*, like.] A relative, employed generally in a substantive sense, but sometimes adjectively, in all numbers and genders, with respect to things, excluding persons; as, that *which* you have done.—An interrogative, of both substantive and adjective application, in the asking for an individual person or thing among a series of such, being more expressive than *who* or *what*,—in this use conveying the sense of *who*, or *what* one of a number, species, sort, &c.; as, *which* is the man? *which* is the house?—That which; those which;—a compound relative; as, you may take *which* you like.

Whichever, *pron.* Which; whether one or the other; as, *whichever* way looked at, it comes to the same thing.

Whiff, (*hwif*), *n.* [W. *chwiff*, a whiff or puff, a hiss; formed from the sound.] A puff; a sudden expulsion of air from the mouth; a slight gust of air; as, a *whiff* of tobacco-smoke.—View or look. (Prov. Eng.)

—*v. a.* To puff; to throw out in whiffs or slight gusts; to consume in whiffs; as, to *whiff* a cigarette.—To blow away; to carry off by a puff.

—*v. n.* To puff; to smoke.

Whiffing, *n.* Act of one who, or that which, whiffs.—A mode of hand-line fishing for mackerel, pollack, and the like.

Whiffle, (*whif'fl*), *v. n.* [A. S. *waefle*.] To abandon one set of opinions suddenly and groundlessly for another; to be fickle and unsteady in mind or actions; to prevaricate; to use evasions; to start, shift, and turn; as, a *whiffing* politician; a *whiffing* breeze.

Whiff'er, *n.* A smoker of tobacco.—Hence, a person of no consequence; a trifler; an idler; a dangler; as, a *whiff'er* in a laced coat.

Whiffler, *n.* [A. S. *waeflore*.] One who whiffles, or frequently changes his opinion or course; a prevaricator; one who uses shifts or evasions in argument; one of a slippery turn of mind.—Formerly, a fifer going before a public procession.

Whiffle-tree, *Whipple-tree*, *n.* The bar to which the traces of a carriage are attached.

Whiffling, *n.* Prevarication; evasion.

Whig, (*hwig*), *n.* [Etymol. doubtful; probably from Scot. *whig*; A. S. *whag*, whey, a mixed drink, composed of water and sour milk, which the Scots Covenanters drank in their wanderings; or, from the initial letters of the motto "We hope in God;" assumed by a political party in Scotland, 1648, opposed to the court faction.] (*Eng. Hist.*) The designation of a well-known political party, first assumed by that body of public men who brought about the Revolution of 1688, and the establishment of William III. on the English throne. Since that time the name has been borne by successive generations of men of liberal political principles, in contradistinction to Tory, *q. v.*

(*Amer. Hist.*) An upholder of American liberties during the revolutionary war;—opposed to *royalist*, *loyalist*, and *tory*.—Again, one of a political party in the U. States, flourishing 1829–1853;—opposed to the so-called *democrats* of that period. Henry Clay (*q. v.*) was for a long time the recognized leader of the Whigs.

—*a.* Pertaining or relating to the Whigs; composed of Whigs; Whiggish; as, a *Whig* administration; the *Whig* party.

Whiggery, *Whig'gism*, (*-gizm*), *n.* The principles of the Whigs.

While, (*hwil*), *n.* [A. S. *hwile*.] Time; space of time, or continued duration; as, one *while* I thought him a good fellow.

Worth *while*, worth the time and pains; hence, worth the expense; as, it is not *worth while* wrangling about such a trifle.

—*adv.* During the time that; at the same time that; as long as;—write me *while* you are away.—Hence, in which case; though; under such circumstances.

—*v. a.* To spend to little use or advantage, as time; to cause to pass away without irksomeness;—generally before *away*; as, to *while away* an hour or two.

Whim, (*hwim*), *n.* [Icel. *hrim*, a quick motion; W. *churiniare*, to move round briskly.] A sudden and light turn of the fancy; an irregular and evanescent desire; a freak; a fancy; a humor; a capricious notion; as, an idle *whim*.

(*Mining*.) A large capstan or machine used for raising ores, &c., worked by horses, steam, or water;—called also *whim-gin* and *whimsey*.

—*v. n.* To be whimsical, capricious, or fanciful; to be subject to whims.

Whimbrel, *n.* (*Zoöl.*) The *Numenius phaeopus*, a species of European bird, family *Scolopacidae*, closely allied to the curlew, but considerably smaller in size, being not above 18 inches long.

Whim'ling, *n.* One given to whims; a weak, childish person.

Whim'ny, *a.* Full of whims; fanciful; humorsome.

Whimper, *v. n.* [A. S. *gemmerian*.] To snivel; to express grief with a low, whining, broken voice; as, a *whimpering* child.

—*v. a.* To utter in a low, whining, broken tone of voice.

Whim'perer, *n.* One who whimpers, whines, or snivels.

Whim'pering, *n.* Act of whining; a low muttering cry of lamentation.

Whimple, (*hwim'pl*), *v. a.* Same as WIMPLE, the preferable spelling.

Whimsey, (*hwim'zzy*), *n.* A whim; a freak; a humor; a caprice, as notion.

(*Mining*.) See WHIM.

Whim'shaft, *n.* (*Min.*) The shaft by which the stuff is drawn out of the mine by the horse or steam whim.

Whimsical, (*hwim'zi-käl*), *a.* Full of whims; freakish; capricious; fanciful; having odd notions; as, a *whimsical* man.—Hence, fantastic; odd; curious; singular; as, a *whimsical* piece of carving.

Whimsicality, *Whimsicalness*, *n.* State or quality of being whimsical.

Whimsically, *adv.* In a whimsical manner.

Whim'wham, *n.* [From *whim* reduplicated.] A gimcrack; a trifle; an article of bric-a-brac; any curious or whimsical thing.—A whim or whimsey; a caprice; a humorsome trick.

Whin, *n.* (*Bot.*) See ULEX.

Whin'chat, *n.* (*Zoöl.*) A species of Stonechat (*Saxicola rubetra*), distinguished from other birds of the same genus by its small size. See STONECHAT.

Whine, (*hwün*) *v. n.* [A. S. *cwianian*.] To express grief, whether real or affected, by a plaintive drawling cry; to moan with a puerile noise; to murmur meanly; to whimper; to snivel; as, to speak with a *whining* accent.

—*v. a.* To complain of in a drawling and undignified way; as, to *whine* at a grievance.

—*n.* A drawling plaintive tone of voice meant to express grief, whether real or assumed; the nasal puerile utterance of mean or unmanly complaint; as, the sniffling *whine* of a psalm-singing raunter.

Whin'er, *n.* One who whines.

Whin'ny, *v. n.* [Lat. *hinnio*, from the root of *whine*.] To neigh; to utter the sound of a horse; to hinnie.

—*a.* A gentle neigh uttered by a horse.

Whin'ny, *a.* Abounding in whins.

Whin'ock, *n.* [From Scot. *quhene*, a small number.] The smallest pig of a litter. (Local Amer.)

Whin'stone, *n.* (*Geol.*) See TRAP.

Whip, (*hwip*), *v. a.* (*imp.* and *pp.* WHIPPED, (*hwipt*). To strike with a lash, thong, or sweeping cord, or with anything tough and flexible; to switch; to beat; as, to *whip* a horse.—To cause to rotate by lashing with a cord or thong; as, to *whip* a top.—To flog; to punish with beating; to correct with lashes; as, to *whip* a boy, to *whip* a hardened criminal.—To lash, as with banter, sarcasm,

scornful words, &c.; as, he is one easily *whipped* by ridicule.—To strike; to thrash; to beat out by belaboring; as, to *whip* grain.—To form into gathers by overcasting a rolled edge and drawing up the thread: to baste; as, to *whip* a muslin frill.—To beat into a froth; as, to *whip* eggs, or cream.

—To wrap or inwrap; to overlay, as a rope, cord, &c., with other cords lashed round and round it;—frequently with *about*, *around*, *over*; as, to *whip* a fish-hook.—To jerk; to snatch; to take, move, or lift by a sudden or impetuous movement;—with *into*, *out*, *up*, &c.; as, he *whipped up* his hat, and away he went; to *whip out* a revolver.

(Naut.) To hoist a purchase by means of a whip; to secure the end of from untwisting by overcasting it with yarn.—Totten.

To *whip a stream*, in fly-fishing, to angle along its course by throwing the fly and hook over and into the water at frequent intervals; as, to *whip a stream* for trout.

To *whip in*, to bring into a collected body, as hounds in a fox-hunt;—hence, to bring together, or keep from scattering, as members of a legislative body, political party, &c.; as, to *whip in* for a division of the house.

To *whip the cut*, to practise extreme stinginess. (Prov. Eng.)

Whip, *v. n.* To move nimbly; to start suddenly and run; or, to turn and run; as, a boy *whips up* a tree; he *whipped round* the corner, out of sight.

—*n.* [A.S. *hweop*; W. *chwip*, a sudden turn or start.] An instrument for flagellation or correction, or for driving horses, &c., consisting of two parts—the *lash*, or striking part, usually formed of plaited leather; and the *handle*, commonly made of whalebone or elastic wood;—as, a riding- or hunting-whip; a driving-whip.—A coachman; one who drives a carriage; as, Sir Henry Peyton was the best *whip* of his day.—One who collects the members of a party together; as, a government *whip*;—an abbreviation of *whipper-in*, *q. v.*

(Mach.) One of the four sail-arms of a wind-mill; also, the length of such arm reckoned from the shaft.

(Naut.) A small single tackle used for hoisting light bodies.

Whip and spur, post-haste; with express speed; as, to ride *whip and spur*.

Whip-cord, *n.* Cord of which the end of whip-lashes are made.

Whip-graft, *v. a.* See GRAFTING.

Whip-hand, *n.* The hand that holds the whip in driving;—hence, advantage; superiority of position; as, a wife has the *whip-hand* of a husband who is uxorious.

Whip-lash, *n.* The lash, thong, or striking part of a whip, usually of twisted cords, leather, or raw-hide.

Whip'pany, or **Whip'pony**, *n.* In *New Jersey*, a post-vill. of Morris co., 52 m. N.E. of Trenton.

Whipper, *n.* One who whips or flagellates; particularly, one who inflicts the legal penalty of the lash.—One who raises coal with a tackle from a ship's hold; a coal-whipper.

(Spinning.) A simple kind of willy.

Whip'per-in, *n.* In fox-hunting, one who keeps the hounds from wandering, and *whips* them in, if necessary, to the line of scent. (Eng.)—One who enforces party discipline among the supporters of the government or opposition, and urges their attendance in the event of any question of importance being likely to come under discussion, and the house divided thereupon; one who compels to obedience or order; one who subjects to the principles or measures of a party.

Whip'per-snapper, *n.* A mean-looking, diminutive, contemptible person. (Colloq.)

Whip'ple-tree, *n.* Same as WHIFFLE-TREE, *q. v.*

Whip'poorwill, *n.* (Zool.) See GOAT-SUCKER.

Whip-saw, *n.* A frame-saw for cutting through timber lengthwise, and generally worked by two persons.

Whip-shaped, *a.* (Bot.) Same as FLAGELLIFORM.

Whip-staff, *n.* (Naut.) An old name for TILLER, *q. v.*

Whip-stalk, **Whip-stock**, **Whip-stick**, *n.* The rod, staff, stock, or handle, to which a whip-lash is fastened.

Whip'ster, *n.* An agile little fellow.

Whip'stitch, (-stich), *n.* A contemptuous nickname for a tailor.—Anything hastily or slovenly put together.

Whipt, *imp.* and *pp.* of *WHIP*, for *whipped*.

Whir, (*hwér*), *v. n.* [Formed from the sound.] To whirl round with noise; to whiz; to hurry away; to fly off with such a noise as is made by a partridge or woodcock when it springs from the ground.

—*a.* A buzzing or whizzing sound produced by the rapid or whirling motion of anything; as, the *whir* of a ptarmigan; the *whir* of a spinning-jenny.

Whirl, (*hwérl*), *v. a.* [A.S. *hwyrfan*, *hweorfan*, to turn round quickly.] To turn round rapidly, or with velocity; to cause to rotate with swift motion; as, to *whirl* a top round.—To snatch; to move quickly with a rotary motion; as, *whirled up* by wheels.

—*v. n.* To gyrate; to be turned round rapidly; to revolve or rotate with velocity; as, *whirling* wheels.—To move hastily; as, to be *whirled away*.

—*n.* [Dan. *hoirel*; Ger. *wirbel*.] A turning with rapidity or velocity; rapid rotation or circumvolution; quick gyration; as, the *whirl* of a top.—Anything that moves or is turned with velocity, particularly on an axis or pivot, or as if on an axis or pivot; as, the *whirl* of a waltz.—In rope-making, the revolving hooked spindle of a twisting machine.

(Bot. and Conch.) Same as WHORL, *q. v.*

Whirl-about, *n.* A whirligig; a teetotum.

Whirl-bone, *n.* The patella or knee-pan.

Whirler, *n.* The person who, or thing which, whirls.

Whirligig, *n.* [From *whirl* and *gig*.] A children's

toy to spin round on a pivot after the manner of a top; a teetotum.

(Zool.) See GYRINIDÆ.

—*a.* Fickle; giddy; inconstant; capricious; mutable; as, *whirligig* humors.

Whirlpool, *n.* (Meteor.) When two opposite currents of almost equal force meet, they sometimes, especially in narrow channels, turn upon a centre and assume a spiral form, giving rise to eddies or *W*. The most celebrated

Fig. 2615. — WHIRLPOOL.

W. are the Euripus, near the island of Eubœa, in the Grecian Archipelago; Charybdis, in Italy, on the Strait of Messina; and the Mælstrom, off the coast of Norway.

Whirlwind, *n.* (Meteor.) A revolving column or mass of air, supposed with most probability to be produced by the meeting of two currents of air blowing in opposite directions. It is analogous to the *whirlpool*. When the opposite currents have the same velocity, the circulation will be maintained at the same spot; but if the motion of one of them is more rapid than that of the other, it will transport the whirling motion with its excess of celerity, and a progressive and rotatory motion are thus maintained at the same time. Whirlwinds generally occur in summer, and are most violent in tropical countries, where they frequently produce most destructive effects.

Whisk, (*hwisk*), *n.* [Icel. *risk*; Ger. and Du. *wisch*, a wisp.] Act of whisking; a quick violent motion, as of wind.—A small bunch or wisp of grass, straw, hair, or the like, used for a brush;—hence, a brush or small besom.—A bundle of peeled twigs used by cooks, for rapidly agitating or whisking certain articles, as cream, eggs, &c.—A kind of tippet, forming part of female dress.—A kind of plane used by coopers.

—*v. a.* To sweep, brush, or agitate with a light, quick motion; as, to *whisk* the dust from a piece of furniture.

—To sweep along; to move nimbly over the ground; as, she *whisked out* of the room in a huff.

—*v. n.* To move with speed and agility.

Whisk'er, *n.* The person who, or the thing which whisks, or moves with a rapid, sweeping motion.—That portion of the human beard which grows upon the sides of the face (generally in the plural);—as distinguished from the *moustache*, *imperial*, *goatee*, and *beard proper*.—Hence, the bristly hairs on the upper lip of a cat.

Whisk'ered, *a.* Furnished with whiskers.

Whisk'et, *n.* A wicker-basket in which provender is served to cattle.

Whisk'ey, **Whisk'y**, *n.* [Of same etymology as USQUEBAUGH, *q. v.*] An ardent spirit distilled from barley, corn, wheat, rye, molasses, &c. It is the cheapest and most common form of intoxicating liquor made in the U. States, where its production is very large. The *W* of Pennsylvania and Kentucky, and the better qualities of that manufactured in N. York, are largely distilled from rye; most of that produced in Ohio, Indiana, Illinois, Missouri, &c., is from Indian corn, which contains a large quantity of fusel-oil. The best quality of rye *W*. from Pennsylvania, known as *Monongahela*, and from Bourbon co., Ky., brings a high price. In England the *W*. is distilled from barley.

—A kind of light one-horse chaise;—sometimes called *tim-whiskey*.

Whisk'ey Run, in Indiana, a township of Crawford co.

Whis'per, *v. n.* [A.S. *hwisprian*; Ger. *wispern*.] To speak softly in the ear; to utter words in a murmuring or slightly sibilant tone of voice; to speak under the breath; to articulate words with a low, hissing sound; as, *whispered* confidences.—To make a low, sibilant noise or sound; as, *whispering* trees.—To speak suspiciously or with timorous circumspection.—To undermine; to devise mischief privily; to practise underhand treachery;—preceding *against*.

“All that hate me *whisper* together against me.”—Psalms xiv. 7.

—*v. a.* To speak in the ear of in a low, murmuring tone; to address under the breath; as, to *whisper* a secret.—To address in a low voice; as, they might buzz and *whisper* it one to another.

—*n.* A low, soft, sibilant voice, spoken in the ear; a sibilant or faint utterance; as, it was told him in a *whisper*.—A cautious or timorously circumspect speech or address.

Whis'perer, *n.* One who whispers.—A tattler; a busybody; a teller of secrets;—hence, a backbiter; a secret slanderer or mischief-maker.

Whis'pering, *n.* Act of speaking in the ear with a low sibilant voice; also, the telling of tales, and exciting of suspicions;—hence, backbiting; slandering in secret.

Whis'peringly, *adv.* In a low sibilant voice.

Whist, (*hwist*), *a.* [*Hist* and *hush* are the same word, with a little variation in sound.] Silent; mute; still; speechless; not making any sound or noise; as the wind is *whist*.

—*interj.* Hush! be silent! peace!—properly the imperative action of the verb.

(Gamers.) [So called from *whist*, *be silent*, as requiring close attention.] A game at cards played by four persons, in a double combination, two of them being *partners* against a partnership of the other two. A full pack of fifty-two cards is used, and they rank in their natural order, except that the ace of each suit, instead of being the lowest, is made the highest. The cards are dealt round, thirteen to each player, the last or bottom one, belonging to the dealer, being *turned up* or shown; the suit to which this belongs is called the *trump* suit, and takes precedence of all the others.—The player to the left of the dealer then plays a card, to which the other players in succession must *follow suit*, i. e. play cards of the same suit, if they have them. These four cards constitute a *trick*, which is won by the person who plays the highest card, and is picked up by the winner or his partner. The winner of this then *leads*, or commences, a new trick, and so on till the whole thirteen are played.—When a player cannot follow suit, i. e. has no card of the suit left, he may either play a trump which wins the trick by the precedence of the suit, or may *discard* a card of some other suit.—The score is made in two ways, by *tricks* and *honors*.—The partners who, together, gain the majority of tricks in the hand, score one for every trick made above six.—The ace, king, queen, and knave of the trump suit are called *honors*, and score one each for whoever holds them. Thus, if one partnership hold two between them, the other partnership also holding two, they cancel each other, and no one scores. If one partnership hold three honors, and the other one, the former score the difference—two, and are said to count *two by honors*. If all four honors are in the hands of one partnership, they count *four by honors*.—The points thus scored by tricks and honors are called *game points*. In the old-fashioned or *long whist*, ten of these make a game; in the modern or *short whist*, the number has been reduced to five.—Two games, won by the same party, constitute a *rubber*, and the games have different values, depending on the state of the score of the losing party. These details, as well as other laws affecting the conduct of the game, may be found in books on the subject.—Although, as will be seen, the construction of the game is so exceedingly simple that a child may learn it in an hour, yet the option which each player has as to the card he shall play, leaves so much scope for voluntary action as to give whist an exceedingly high character in an intellectual point of view. A good player must, in the first place, be master of a somewhat recondite and elaborate *system* of play, which has been deduced by a long series of observations and reasonings as the best to be followed; he must then *observe* and *remember* very carefully the cards played, which furnish the data on which he proceeds; from these data he must next draw rapid *inferences*, as to the distribution in the various hands of the cards yet unseen; and finally he must act on the whole of the information thus gained, with judgment and skill, for which there is the widest possible scope. To do all this well requires not only very high mental and intellectual power, but considerable study and long practice. Hence this fine game has always commanded the attention of men of the first order of mind.

Whistle, (*hwis'sl*), *v. n.* [A.S. *hwistlan*; Swed. *hwissla*; Lat. *fistula*, a whistle.] To emit a kind of musical sound, by pressing or drawing the breath through a small orifice formed by a contraction of the lips; as, “He *whistled* as he went for want of thought.” (Dryden.)—To make a shrill, acute sound with a small wind instrument resembling a fife.—To sound shrill, or like a pipe or fife; as, the wild winds *whistle*.

—*v. a.* To form, intone, or modulate by whistling; as, to *whistle* a tune.—To call by whistling or a whistle; as, to *whistle* a dog.—To *whistle off*, originally, in hawking, to allow to depart by a whistle;—hence, to let loose; to discard.

—*n.* [A.S. *hwistle*.] A shrill, acute sound made by expelling or drawing the breath through the orifice made by a contraction of the lips, or through a wind-instrument which, blown through, yields a like sound; as, the *whistle* of a boatman's call, i. e. a small pipe used by a boatman to summon the sailors to their duty; the shrill note of a bird; as, the *whistle* of a blackbird; the shrill sound made by the passage of winds among trees or through crevices, &c.; as, the gale's rising *whistle*; also, the sharp, piercing sound occasioned by the escape of steam or gas through a particular vent, and frequently used as a signal; as, the *whistle* of a railroad-train.—An instrument producing, when blown through with the breath, a sound resembling that made by the passage of breath through the contracted or compressed lips; as, a steam *whistle*, a sportsman's *whistle*.—The mouth, as the organ engaged in whistling; as, to wet the *whistle*. (Vulgar.)

Whistler, (*hwis'lér*), *n.* One who whistles; also, that which produces a whistling sound.

(Zool.) A familiar name given to the green plover.

Whist'ler, in Alabama, a post-village of Mobile co.

Whis'tlingly, *adv.* Shrilly; in a whistling manner.

Whit, (*hwit*), *n.* [A.S. *whit*, a creature, animal, thing.] A jot; a bit; an iota; a little; the smallest part or particle imaginable;—employed adverbially, and generally in a sentence expressing negation; as, he is not a *whit* better than the other.

Whit'by, a seaport and market-town of England, in the North Riding of Yorkshire, on the river Esk, which forms the harbor, and is crossed by a swing iron bridge, 16 m. from Scarborough. It has dock-yards for the building of ships, and commodious dry docks. Jet is collected here. *Manuf.* Sail-cloth and cordage.

Whitby, in *Virginia*, a village of Mecklenburg co., abt. 60 m. S.W. of Petersburg.

White, (*hwit*), *a.* (*comp.* **WHITER**; *superl.* **WHITEST**.) [*A. S. hwit, hwite.*] Bright; being without color, or, in a popular sense, being of the color of pure snow, or of light; not tinted with any of the proper colors or their compounds; not dark; as, a *white* skin, a *white* hat. — Pale; destitute of color in the cheeks, or of the tinge of blood color; pallid; as, she was *white* with fear; he turned *white* with rage. — Hence, pure; clean; free from spot, stain, or blemish; presenting the hue of immaculateness; as, "No *whiter* page than Addison's remains." (*Pope*). — Gray or colorless from the effect of age, disease, or sorrow; as, the *white* hair of venerable years. — Sanctified; purified from sin and grossness; as, a *white* soul. — Indicating exemption from debasing or disturbing influences; hence, happy; fortunate; prosperous; favorable; as, a *white* day in one's calendar of life. — *n.* The color of pure snow; a negative color, whose opposite is *black*, produced by the combination of all the prismatic colors mixed in the same proportions as they exist in the solar rays; whiteness; absence of all stain or superficial obscurity; as, a person dressed in *white*. — That which reflects to the sight the rays of light unseparated. — Specifically, the centre of an archery butt, or other mark, at which a missile is aimed and sent; as, her arrow hit the *white*. — One of the white or Caucasian race of mankind.

White of a seed. (*Bot.*) Same as **ALBUMEN**, *q. v.*

White of an egg. See **ALBUMEN**. — *White of the eye.* (*Anat.*) That part of the eye-ball which surrounds the iris. — *v. a.* To whiten; to make white; to whitewash; as, *whitened* sepulchres.

White, in *Arkansas*, a N.E. central co.; area, 1,137 sq. m. *Rivers*. White, Little Red river, and Bayou des Arcs. *Surface*, diversified; *soil*, generally fertile. *Cap.* Searcy. *Pop.* (1897) 23,460.

—A township of Newton co.

—A township of Polk co.

White, in *Georgia*, a N. co.; area, 170 sq. m. *Rivers*. Chatahoochee and Chastatee. *Surface*, mountainous in the N., elsewhere undulating; *soil*, generally fertile. *Cap.* Cleveland. *Pop.* (1897) 6,860.

White, in *Illinois*, a S.E. co., bordering on Indiana; area, 500 sq. m. *Rivers*. Wabash, Little Wabash, and Skillet Fork. *Surface*, level; *soil*, productive. *Cap.* Carmi. *Pop.* (1897) 27,550.

White, in *Indiana*, a N.W. co.; area, 500 sq. m. It is drained by Tippecanoe river. *Surface*, undulating; *soil*, fertile. *Cap.* Monticello. *Pop.* (1897) 17,160.

White, in *Missouri*, a township of Benton co.

White, in *Pennsylvania*, a township of Cambria co.

—A township of Indiana co.

White, in *Tennessee*, an E. central co.; area, 390 sq. m. *Rivers*. The Caney Fork of Cumberland river, and Falling Water creek. *Surface*, undulating; *soil*, fertile. *Cap.* Sparta. *Pop.* (1897) 13,430.

White Ant, *n.* (*Zool.*) See **TERMITIDÆ**.

White Arsenic, *n.* (*Min.*) Oxide of arsenic, or arsenious acid.

White-bait, *n.* (*Zool.*) The name of a small and delicate fish of the genus *Clupea* (*C. alba*), highly esteemed by epicures.

White Bear, in *Minnesota*, a post-township of Ramsey co.

White-blaze, *n.* Same as **WHITE-FACE**, *q. v.*

White-boy, *n.* One of a secret band of levellers or insurgents who created alarm in the S. of Ireland, during the close of the last, and the beginning of the present, century; — so named from the color of their garments; otherwise called *Peep-o'-day Boys*.

White Brethren, *n. pl.* (*Eccles. Hist.*) A sect of the 15th century, whose members were arrayed in white, and carried around large crucifixes from which a bloody sweat appeared to issue. The *W. B.* originated in the Italian Alps, and were headed by a priest who gave himself for the prophet Elias, and claimed that it was his mission to announce the speedy destruction of the world by an earthquake. He entered Genoa at the head of 5,000 followers, but his success was soon stopped by the discovery of the imposture. Boniface IX. put an end to the movement of the sect, by ordering the leader to be apprehended and burned, 1349.

White Brant, *n.* (*Zool.*) See **ANSERINÆ**.

White Campion, *n.* (*Bot.*) See **SILENE**.

White Cedar, *n.* (*Bot.*) See **CUPRESSUS**.

White-clay Creek, in *Penn.*, rises in Chester co., and joins Christina Creek 6 m. W. of Wilmington, Del.

White Cloud, in *Iowa*, a post-village and township of Mills co., abt. 14 m. E.S.E. of Glenwood.

White Cloud, in *Kansas*, a post-village of Doniphan county, on the Missonri River, 35 miles above St. Joseph.

White Clover, *n.* (*Bot.*) See **TRIFOLIUM**.

White Copper, *n.* (*Chem.*) Same as **GERMAN SILVER**.

White Copperas, *n.* (*Min.*) Same as **COQUIMBITE**, *q. v.*

White Creek, in *N. York*, a post-vill. and twp. of Washington co., 33 m. N.N.E. of Albany.

White Creek, in *Wisconsin*, a township of Adams co.

White Crops, *n. pl.* (*Agric.*) Grain and seed crops, as distinguished from green crops, or those cultivated for their roots or herbage.

White-deer, in *Pennsylvania*, a former post-village of Lycoming co., 78 m. N. of Harrisburg. —A post-township of Union co.

White Earth River, in *North Dakota*, a small stream flowing into the Missouri, 60 m. E. of the mouth of the Yellowstone.

White Eyes, in *Ohio*, a flourishing township of Coshocton co.

White-face, **White-blaze**, *n.* A white mark, or blaze, on the forehead of a horse.

White-film, *n.* Among sheep, an eye-disease productive of blindness.

Whitefield, GEORGE, the founder of the Calvinistic Methodists, b. at Gloucester, England, where his father kept the Bell Inn. White at Pembroke College, Oxford, he joined the Wesleys and their associates, and on being ordained deacon, he soon became a popular preacher. In 1738 he went to the American settlement of Georgia, where his conduct gave great satisfaction to the colonists, and he returned to England to procure subscriptions for building an orphan house in the settlement. On obtaining priest's orders, and repairing to London, the churches in which he preached were incapable of holding the assembled crowds; he therefore adopted the plan of preaching in the open air, which he did to vast assemblages of people, who came from all parts to hear him. In 1739 he set out on another visit to America, and made a tour through several of the provinces, where he preached to immense audiences, and returned to England in 1741. About this time, the difference of view between Whitefield and Wesley respecting the doctrine of election appeared, and it led to their separation without utterly destroying their friendship. In 1748 Whitefield was introduced to the celebrated Countess of Huntingdon, and was appointed her chaplain. Like his friend Wesley he married a widow, and his married life is said to have been unhappy. After visiting many parts of England, Wales, Scotland, and Ireland, and displaying a degree of intrepidity and zeal that overcame all difficulties, he made a seventh voyage to America, and died at Newburyport, Mass., 1770. The journeys and voyages of this indefatigable minister amount to a number almost incredible. He has stated in his memorandum book, that "from the time of his ordination to a period embracing 34 years, he preached upwards of 18,000 sermons, crossed the Atlantic 7 times, travelled thousands of miles both in Britain and America;" and when his strength was failing, he put himself on what he termed "short allowance," viz., preaching only once in every day of the week, and three times on the Sabbath. Whitefield was no common preacher. Parties of the most opposite character and principles, such as Franklin, Hume, and John Newton, have united in bearing testimony to the beauty and effectiveness of Whitefield's pulpit oratory.

Whitefield, in *Illinois*, a township of Marshall co., abt. 7 m. N. of Lacon.

Whitefield, in *Maine*, a village and township of Lincoln co., 12 m. S.E. of Augusta.

Whitefield, in *New Hampshire*, a post-township of Coos co., 88 m. N. of Concord.

White-fish, *n.* (*Zool.*) A fish of the family *Salmonidae* (*Coregonus albus*), which inhabits the lakes and large rivers of N. America. It is from 15 to 20 inches long, bluish-gray above and white below.

White-foot, *n.* (*Fur.*) A white blaze on a horse's foot, between the coffin and the fetlock.

Whiteford, in *Michigan*, a post-township of Monroe co.

White Grampus, *n.* (*Zool.*) See **DELPHINIDÆ**.

White Gourd, *n.* (*Bot.*) See **CUCURBITA**.

White Gum, *n.* (*Med.*) A rash of small white pimples, to which very young and teething infants are liable.

White-hall, in *Illinois*, a city of Greene co., 24 m. S.S.W. of Jacksonville. *Pop.* (1897) 2,250.

Whitehall, in *New York*, a post-vill. and twp. of Washington co., 77 m. N.E. of Albany.

Whitehall, in *Pennsylvania*, a post-village of Bucks co., abt. 4 m. W. of Doylestown. —A vill. of Columbia co.

—A vill. of Lancaster co. —A post-vill. of Mouton co., 12 m. N. of Danville.

Whitehaven, a seaport-town of England, co. of Cumberland, on the Irish Sea, and near the Solway Frith, 35 m. S.W. of Carlisle. It is regularly laid out and its harbor is commodious. *Manuf.* Sail-cloth, cordage, tobacco-pipes, and soap; besides, extensive iron and brass foundries.

White Haven, in *Pennsylvania*, a post-borough of Luzerne co., 25 m. N. of Manch Chunk.

White-head, in *Maine*, an island on the S.W. of the W. entrance to Penobscot Bay, has a fixed light 58 feet high, with a bell attached weighing 1,000 pounds, which is rung in foggy weather; Lat. 42° 52' N., Lon. 69° 2' W.

White Heat, *n.* (*Physics*.) The temperature which gives incandescence to bodies, and at which they emit a bright light.

White Hellebore, *n.* (*Bot.*) See **VERATRUM**.

White Herring, *n.* A fresh, uncrud herring, in distinction from a red or dried herring.

White Hill, in *New Jersey*, a village of Burlington co.

White House, in *New Jersey*, a post-village of Hunterdon co., 30 m. N.E. of Trenton.

White House, in *Virginia*, a village of Kent co., 24 m. E. of Richmond.

White Iron, *n.* (*Metal.*) Tinned iron plate.

White Iron Pyrite, *n.* (*Min.*) Same as **MARCASITE**.

White Lake, in *Michigan*, a post-vill. and twp. of Oakland co., abt. 11 m. W. of Pontiac.

White-land, *n.* (*Agric.*) In England, the term applied to a tough, clayey soil, whitish in look when dry, but blackish after rain.

White-ley, in *Pennsylvania*, a post-vill. and twp. of Greene co., 7 m. S.E. of Waynesburg.

White Lead, *n.* (*Chem.*) See **LEAD** (**CARBONATE OF**).

White Lead Ore, *n.* (*Min.*) Native carbonate of lead.

White Leaf, *n.* Leaf metal made of tin.

White Leather, *n.* Buff or alumed leather.

White-light, *n.* (*Physics*.) Sun-light non-decomposed by prismatic refraction.

White-limed, *a.* Whitewashed with lime.

White-livered, *a.* Having a pallid look; feeble; — hence, cowardly; craven; dastardly; as, a *white-livered* traitor.

White Marsh, in *Pennsylvania*, a post-township of Montgomery co., 6 m. S.E. of Norristown.

White-meat, *n.* Spoon-meat. — Young or delicate flesh or food, as veal, poultry, rabbits, and the like.

White Money, *n.* Coin made of silver or nickel, or a compound of both.

White Mulberry, *n.* (*Bot.*) See **MORACEÆ**.

White Mountains, a mountain-chain of New England, U. S., regarded as an outlier of the Appalachian Range, commences at the headwaters of the Androscoggin River, in Maine, where its first summit is Mount Katahdin, and extends in a broad plateau, from 1,600 to 1,800 feet high, W. by S. nearly across New Hampshire, where it has 20 bold peaks, with deep, narrow gorges, wild valleys, beautiful lakes, lofty cascades and torrents, forming the "Switzerland of America," and a favorite resort of summer tourists. Mount Washington, the highest summit in New England, 6,285 feet, has a rail-and-carriage-road and a small hotel on its summit; Mount Pleasant, the second of the group, is 4,712 feet; the lesser are named Franklin, Monroe, Jefferson, Adams, Madison. In the Franconia group are Lafayette, 5,500 feet, and Moosehillock, 4,636. These mountains furnish the chief sources of the Connecticut, Merrimack, and Androscoggin rivers. The rocks are ancient metamorphic, with naked granite and gneiss. The Ammonoosuck River falls 5,000 feet in 30 m., the Androscoggin 200 in a m. Five narrow and precipitous notches seem to have been rent in the mountains, and give passage to as many rivers.

Whiten, (*hwit'n*), *v. a.* To make white; to bleach; to blanch; as, to *whiten* linen.

—*v. n.* To grow, turn, or become white; as, the face *whitens* with fear; spring vegetation *whitens* with blossoms.

Whitener, *n.* One who, or that which, bleaches or blanches.

Whiteness, *n.* State or quality of being white; white hue or color, or absence of any darkness or obscurity on the surface; as, the *whiteness* of paper. — Pallor; destitution of a sanguineous tinge; as the *whiteness* of complexion superinduced by terror or disease. — Purity; cleanness; freedom from stain, blot, or blemish; as, the *whiteness* of a good conscience.

Whitening, *n.* Same as **WHITING**, *q. v.*

Whitening-stone, *n.* A sharpening and polishing stone used by cutlers; — applied also to a finishing grindstone of finer texture than those commonly employed.

White Oak, *n.* (*Bot.*) See **QUERCUS**.

White Oak, in *Arkansas*, a township of Franklin county.

White Oak, in *Arkansas*, a township of Van Buren county.

White Oak, in *California*, a township of El Dorado county.

White Oak, in *Iowa*, a post-township of Mahaska co. —A township of Warren co.

White Oak, in *Michigan*, a post-twp. of Ingham county.

White Oak, in *Missouri*, a township of Henry co.

White Oak, in *North Carolina*, a township of Carteret county. —A village of Polk county. —A township of Wake county.

White Oak, in *Ohio*, a creek which rises in Highland county, and flows into the Ohio river in Browne county, 8 miles W. of Ripley. —A township of Highland county.

White Oak Springs, in *Wisconsin*, a township of Lafayette co.

White Pigeon, in *Michigan*, a post-village and township of St. Joseph co., 120 m. E. of Chicago.

White Pine, in *Nevada*, an E. co.; area, 7,892 sq. m. *Cap.* Hamilton. *Pop.* (1897) 1,960.

White Plains, in *New York*, a post-vill. and twp., cap. of West Chester co., 26 m. N.N.E. of New York. It was the scene of several important events during the revolutionary war, the most prominent of which was the action usually known as the *battle of White Plains*, though it actually occurred in the town of Greenburg, on the opposite side of the Broux river, Oct. 28, 1776. After a warm contest, the commanding eminence of Chatterton Hill, on which the Americans under Washington were intrenched, was carried by the British under Gen. Howe, the Americans retreating in good order and without being pursued. The loss on each side was abt. 300 killed, wounded, and prisoners.

White Plains, in *N. Carolina*, a vill. of Anderson dist. —A twp. of Spartanburg dist.

White Poplar, *n.* (*Bot.*) See **LIRIODENDRON**.

White Poppy, *n.* See **PAPAVER**.

White Post, in the State of *Indiana*, a twp. of Pulaski county.

White-pot, *n.* A kind of baked butter-pudding.

White Precipitate, *n.* (*Chem.*) The white powder which falls in adding ammonia to a solution of corrosive sublimate; it is a compound of peroxide and bichloride of mercury with ammonia; it is virulently poisonous, and is chiefly used in ointments and for killing vermin. It has been regarded as an *amido-chloride* of mercury, and represented as $HgN_2H_2Cl_2$.

White River, in *Arkansas* and *Missouri*, a river formed by 3 branches which rise in the Ozark Mountains, Madison co., and unite near Fayetteville in Washington co. It flows N.E. into Missouri, then S.E., and enters the Mississippi 15 m. N. of the mouth of the Arkansas, after a course of 800 m., of which it is navigable for steamboats 350 m. to the mouth of the Black

Eli Whitney

1765-1825

John G. Whittier

1807-1892

River, at all stages of water, and to Batesville 50 m. higher, during two-thirds of the year.

White River, in the State of *Arkansas*, a township of Benton county.—A township of Marion county.—A township of Prairie county.—A township of Washington county.

White River, in *Indiana*, a river formed by the junction of the E. and W. Forks, in Daviess co., 5 m. N.E. of Petersburg. It falls into the Wabash in Gibson co., opposite Mount Carmel, Illinois, after a S.W. course of abt. 50 m. The W. Fork rises in Randolph co., and has a S.W. course of 300 m. The E. Fork rises in Henry co., and has a S.W. course of 250 m.—A twp. of Gibson county.—A township of Hamilton county.—A township of Johnson county.—A township of Randolph county.

White River, in *Michigan*, rises in Newaygo co., and flows S.W. into Lake Michigan from Oceana co.

White River, in *Michigan*, a village and township of Muskegon co., about 15 m. N.W. of Muskegon.

White River, in *Missouri*, a township of Barry county.

White River, in *Vermont*, rises in Addison co., and flowing S.E. enters the Connecticut river in Windsor co., about 5 m. S. of Norwich.

White Rock, in *Arkansas*, a post-township of Franklin co. Pop. (1897) 750.

White Rock, in *Illinois*, a post-vill. and twp. of Ogle co., abt. 15 m. S. of Rockford.

White Rock, in *Michigan*, a post-village and twp. of Huron co., abt. 36 m. N. of Lexington.

Whites, *n. pl.* (*Med.*) Same as FLUOR-ALBUS, *q. v.*

—The finest brand of flour made from white wheat.

Whites, in *Alabama*, a township of Blount county.—A township of Tuscaloosa county.

Whites, in *North Carolina*, a township of Bertie county.

Whitesborough, in *New York*, a post-village of Oneida co., 4 m. N.W. of Utica.

Whitesburg, in *Alabama*, a vill. and township of Madison co., 11 m. S. of Huntsville.

Whitesburg, in *Kentucky*, a post-village, cap. of Letcher co., 130 m. S.E. of Frankfort.

White School-House, in *Alabama*, a village of Lee co.

White Sea, (*Russ.* *Beloi-More*.) A large gulf or branch of the Arctic Ocean, which, between Cape Kanin on the Kaninskaia Peninsula, and Cape Svatoi on the Kola Peninsula, penetrates the Russian government of Archangel southwards to Lat. 64° N. At its entrance between Capes Kanin and Svatoi it is 100 m. broad; after penetrating the land 150 m. in a S.E. direction, it narrows to a width of 35 m.; but, after sweeping south for 200 m., it again considerably widens, forming on the N.W. the Gulf of Kandalak, and in the S. and S.E. the great Gulfs of Onega, and Archangel or Dwina. The White Sea covers an area estimated at 47,000 sq. m., and the length of its coast line is over 1,000 m. The coasts in the N. and E. are mountainous, in other places they are mostly low, and abound in lakes, which communicate with the sea by rivers. The greatest depth of the White Sea is 1,133 feet. From the middle of August ice forms on the coasts sometimes to the width of 30 m., and is not melted till the following July.

White'sides, in *Illinois*, a W.N.W. co.; area, 700 sq. m. Rivers, Mississippi and Rock; also, Elkhorn and Rock creeks. Surface, level; soil, very fertile. Cap. Morrison.

White-smith, *n.* A worker in tinned iron. — A finisher or polisher of iron-work, as distinguished from a forge-man.

White-stone, *n.* The name given by lapidaries to limpid colorless rock-crystal when cut for jewelry.

Whites'town, in *New York*, a post-township of Oneida co., 4 m. N.W. of Utica.

Whitestown, in *Wisconsin*, a township of Vernon county.

White Sulphur, in *Kentucky*, a twp. of Bath co.—A twp. of Scott co.

White Sulphur Springs, in *Georgia*, a post-vill. of Meriwether co., 118 m. S.W. of Milledgeville.

White Sulphur Springs, in *Louisiana*, a post-vill. of Catahoula parish, 200 m. N.W. of Baton Rouge.

White Sulphur Springs, in *W. Virginia*, a post-village of Greenbrier co., 205 m. W. of Richmond. It is much resorted to as a watering-place, and has hotel accommodation for 1,500 guests. The spring is in the lowest part of a beautiful valley, and is covered by a dome supported by 12 Ionic columns, and surmounted by a statue of Hygieia; it is 2,000 feet above tide-water; yields 30 gallons per minute of lime, soda, magnesia, carbonate of lime, chlorides of calcium and sodium, iron, iodine, sulphur, carbonic acid, sulphuretted hydrogen, oxygen, nitrogen. It is considered efficacious in dyspepsia, liver diseases, gout, rheumatism, and diseases of the skin and kidneys.—The Red, Salt, and Blue Sulphur Springs, at a distance of 22 to 24 m. from the above, are also much resorted to.

Whitesville, in *Florida*, a village of Duval co., 155 m. E.S.E. of Tallahassee.

Whitesville, in *Georgia*, a village of Effingham co., 30 m. N.W. of Savannah.—A post-village of Harris co., 27 m. N. of Columbus.

Whitesville, in *New York*, a post-village of Alleghany co., 25 m. S.S.E. of Angelica.

Whitesville, in *N. Carolina*, a post-vill. and twp., cap. of Columbus co., 100 m. S.W. of Raleigh.

White Swelling, *n.* (*Surg.*) A disease of the joints, so called from being unattended by any discoloration of the skin; and it occurs most frequently in scrofulous constitutions. The knee-joint is the one most subject to

its attack. It is the result of chronic inflammation in the legs, cartilages, or membranes constituting the joint, and is always attended with swelling, the part being sometimes hard, at other times soft and yielding. In some cases there is little or no pain, and the motions of the joints are but little impeded; in others the pain is considerable, and motion entirely destroyed. After a time the joint becomes of very great size, while the skin appears of a pale shining color, with a number of large veins running over it. The limb, above and below the knee, is much wasted, and the general health impaired, but not seriously. At length collections of matter form round the joint, and gradually make their way outwards by various openings. The constitution is now seriously disturbed; the health fails, the appetite and sleep are bad, the pulse small and frequent, with obstinate diarrhoea and profuse night sweats, till, unless speedy relief is obtained, the patient is carried off. In the treatment of this disease, counter irritants and leeches should be applied to the joint, and splints placed behind it so as to prevent all motion. Particular attention should be paid to the state of the stomach and bowels, the patient being allowed a generous diet and a free use of good air. These measures, however, are chiefly useful in the inflammatory stage of the disease; when it has reached an advanced stage, there is nothing left for it but amputation.

White-thorn, *n.* (*Bot.*) See CRATEGUS.

White-throat, *n.* (*Zoöl.*) The common name of *Currucina cinerea* and *Currucina sylvicola*, two European birds of the family *Sylviidae*. The whole length is 5 to 6 inches, and their plumage is brown, of various shades. *C. cinerea* is very lively and amusing as a cage-bird, and easily tamed.

White-vitriol, *n.* (*Chem.*) The old name of sulphate of zinc. See ZINC.

Whiteville, in *Arkansas*, a township of Jefferson county.

White wash, (*hwit'wôsh*.) *n.* A cosmetic for whitening the skin. — A composition of lime and water, or of whiting, size, and water, used for whitening the plaster of walls, ceilings, &c.

—*v. a.* To cover with a white liquid composition, as with lime, water, &c.; as, to whitewash a wall. — To make white; to give a fair external appearance to; — hence, to clear an insolvent or bankrupt of the debts he owes by a judicial process.

White-washer, *n.* One who whitewashes.

White-water, *n.* An ovine disease of a dangerous character.

White-water, in *Georgia*, a creek which flows into Flint River from Pike county.—A township of Oconee county.

Whitewater, in *Indiana*, a river formed by the junction of the E. and W. Forks at Brookville, in Franklin co. It flows into the Miami River, in Ohio, 6 m. from its mouth, after a S.E. course of 100 m., including the longest branch.—A twp. of Franklin co.

Whitewater, in *Michigan*, a post-township of Grand Traverse co.

White Water, in *Minnesota*, a post-township of Winona co.

Whitewater, in *Missouri*, rises in Cape Girardeau co., and flowing S.E., and then S., divides into two branches called E. and W. Whitewater; then mingling with the waters of Lake St. Mary, it receives the Castor River, and is the outlet of Lake Pemisco, and falls into Big Lake, communicating with the St. Francis River by Little river. Length, 250 m.

—A post-township of Cape Girardeau co.

Whitewater, in *Wisconsin*, an important city and trade center, and township of Walworth co., 50 m. W. S. W. of Milwaukee. Pop. (1895) 3,799.

White Water Falls, in *Minnesota*, a post-village of Winona co., abt. 22 m. N.W. of Winona.

White-weed, *n.* (*Bot.*) See LEUCANTHEMUM.

White Whale, *n.* (*Zoöl.*) See DELPHINIDE.

White Wine, *n.* Any wine of a clear transparent, whitish color; as, Madeira, Sherry, Hock, Constantia, &c., as distinguished from red wine, such as Port, Burgundy, &c.

White-wood, *n.* See LIRIODENDRON, and TILIA.

Whitfield, or WHITEFIELD, in *Georgia*, a N.W. co., drained by Conasauga River. Surface, mountainous; soil, fertile in the valleys. Cap. Dalton.

Whitford, in *Michigan*, a township of Muroq co.; pop. abt. 1,500.

Whither, (*hwith'er*.) *adv.* [*A. S.* *hwyder*; Goth. *hvaðre*.] To what place; — used interrogatively; as, *whither* are you bound? — To what place; — employed absolutely; as, I strayed I know not *whither*. (*Milton*.) — To which place; — having relative application; as, he went to New York, *whither* I joined him. — To what point or degree.

"*Whither* at length wilt thou abuse our patience?" — *Ben Jonson*. (NOTE. This term has to a great extent become superseded by *where*, except in poetry, or in compositions of a grave and stately character.)

Whithersoever, *adv.* To whatever place.

Whitherward, *adv.* In what course or direction; toward what place.

Whit'ing, *n.* [*From white*.] (*Zoöl.*) See MERLUCIUS. (*Paint.*) Chalk cleared of all impurities, ground with water, made into cakes, and dried. It is used for wall-painting, and as a ground for gilding, distemper, and scene-painting, &c.

Whiting, in *Vermont*, a post-township of Addison co., 44 m. S.W. of Montpelier.

Whiting, in *Maine*, a post-township of Washington co., 130 m. N.E. of Augusta.

Whitingham, in *Vermont*, a post-township of Windham co., 112 m. S.W. of Montpelier.

Whit'insville, in *Massachusetts*, a post-village of Worcester co., 40 m. W. of Boston.

Whit'ish, *a.* [*From white*.] Somewhat white; white in a moderate degree.

(*Bot.*) Having a dingy-white color; also, coated with an opaque-white powder.

Whit'ishness, *n.* Quality of being somewhat white.

Whiteleather, (*hwit'lether*.) *n.* Alumed or salted leather, dressed to a marked degree of pliancy and toughness. — A strong, stiff cartilage running along the sides of a large quadruped to the middle of the back, as in an ox or horse, and apparently aiding in supporting the head in an horizontal position.

Whit'ley, in *Indiana*, a N.E. co.; area, 326 sq. m. It is drained by Eel River. Surface, undulating; soil, sandy and fertile. Cap. Columbia.

Whitley, in *Kentucky*, a S.E. co., bordering on Tennessee; area, 500 sq. m. It is drained by the Cumberland River. Surface, hilly; soil, generally fertile. Min. Coal and iron. Cap. Williamsburg.

Whit'low, *n.* [*A. S.* *hwit*, white; *low*, a flame.] (*Med.*)

A very painful inflammation of one of the fingers, or sometimes, though very rarely, of the toes, and usually proceeding to suppuration. It is divided into four kinds, according to the depth of the inflammation, the most superficial taking place immediately under the skin, the deepest lying underneath the periosteum. In the more superficial cases the application of leeches and warm fomentations to the part will in general give relief, and sometimes cause the resolution of the inflammation. Where any matter is formed, as is generally the case, it requires to be discharged with the point of the lancet, when the disease usually subsides. When seated in the sheath of the tendons, the symptoms are much more urgent, and the pain most excruciating, and of a throbbing character, extending up the arm even to the shoulders. It is much aggravated by the finger being in a dependent position, and usually there is a considerable degree of fever, and the patient suffers from want of rest. With all this pain there is but little redness or swelling, and even when matter is formed, it may not be perceptible from being deep-seated. Leeches, warm fomentations, and poultices should be used in the early stages; but should this prove ineffectual, a free incision should be made down through the sheaths of the tendons, which usually affords relief, a small quantity of pus being discharged, and the disease subsiding in a few days by the use of warm fomentations and poultices. Sometimes the inflammation will extend into the palm of the hand and fore-arm, forming abscesses and sloughing, in which case free incisions will require to be made into the different inflamed parts to give exit to the matter and sloughs, and poultices afterwards applied. Occasionally the use of the forearm and hand may be lost, and not infrequently amputation may be required. The remarks also apply to those cases in which the periosteum, or membrane covering the bone, is affected. Frequently, as the disease advances, the bone itself becomes affected with caries, and early and deep incisions are required quite down to the bone.

Whit'low-grass, *n.* (*Bot.*) See DRABA.

Whit'more, in *Illinois*, a township of Macon county.

Whit'ney, ELI, B. at Westborough, Mass., 1765, is the inventor of the cotton gin, for which see COTTON. He went to Connecticut in 1793, and formed a partnership with one Miller, for the fabrication of his machine, but the lawsuits in defence of his rights took all his profits and the \$50,000 voted him by the State of S. Carolina. Finally, in 1798, he got a government contract for the manufacture of fire-arms, and was the first to effect the division of labor, by which each part was made separately. He made a fortune by this manufacture, carried out with ingenious machinery at Whitneyville, Conn.; while he had but barren honor from the gin, one of the most important of the whole series of inventions connected with the cotton manufacture. D. 1825.

Whitney's Valley, in *New York*, a village of Alleghany co., 78 m. E.S.E. of Buffalo.

Whitneyville, in *Connecticut*, a village of New Haven co., 3 m. N. of New Haven.

Whitneyville, in *Maine*, a post-township of Washington co.

Whit'paine, in *Pennsylvania*, a township of Montgomery co., 5 m. E.N.E. of Norristown.

Whit'sun, *a.* Pertaining or relating to, or observed at, Whitsuntide; as, *Whitsun* ale; a *Whitsun* feast.

Whit-Sunday, *n.* (*Ecdl.*) See PENTECOST.

Whit'suntide, *n.* [*A corruption of White-Sunday-tide*.] (*Ecdl.*) The English name of the season of Pentecost, *q. v.*, so called from the white garments anciently worn by the newly-baptized catechumens, to whom that sacrament was usually administered on the vigil of Pentecost. The name *Whitsunday* comprehends the entire octave or the week which follows Pentecost Sunday; but the word is more strictly applied to the Sunday, Monday, and Tuesday of that week.

Whit'sunday Island, a coral island in the South Pacific Ocean; Lat. 19° 24' S., Lon. 138° 36' W.

Whit'more, in *Iowa*, a post-village and township of Kossuth co.

Whit'ten, in *Arkansas*, a prosperous township of Mississippi co. A considerable quantity of cotton is produced in the township, besides other staple crops.

Whit'tockville, in *New York*, a village of Westchester county, 44 miles north-north-east of New York.

Whit'tier, JOHN GREENLEAF, an American writer, b. at Haverhill, Mass., 1807. He worked on a farm and at shoemaking in his boyhood, but at the age of 18, having a strong desire for learning, he studied for two years at

a local academy. In 1830 he became editor of the *New England Review* at Hartford, Conn., where he wrote a *Life of Brainerd*, and *Legends of New England*. The subjects of these legends he afterwards worked out in his poems, as *Mogg Megone*, *Bridal of Pennacook*, *Cassandra Southwick*, and *Mary Garvin*. Returning from his literary labors to his farm, he was, in 1835, elected to the Massachusetts legislature; and, in 1836, became editor of the *Pennsylvania Freeman* in Philadelphia, published in the interest of the Anti-Slavery Society, again removing to Amesbury, Mass., in 1840. He wrote during this period many poems that were afterward collected and published, in 1849 under the title, *Voices of Freedom*. During the Civil War he continued to write poems breathing the same liberty-loving spirit, the terrific arraignment of slavery gradually growing into a song of thanksgiving after the issue of the emancipation proclamation. His later poems were chiefly poems of the heart and home memories, the longest and most popular one being *Snow Bound*. Successive editions of his works have been issued since 1869. His *Life and Letters*, edited by S. T. Pickard, appeared in 1895. Died Sept. 7, 1892.

Whittle, (*hwit'l*), *n.* [A. S. *hwitel*, *hwitl*, from *hwetan*, to sharpen, and *tol*, a tool.] A pocket, sheath, or clasp-knife. — In the W. of England, a kind of coarse blanket, worn by fish-women after the manner of a shawl.

—*v. a.* To pare, dress, or cut off, as the surface of wood, with a clasp-knife; to cut, hack, or shape into form, as a stick or piece of wood held in the hand, with a pocket-knife.

—*v. n.* To cut or shape into form, as a piece of wood with a clasp-knife; as, "Americans must and will whittle," Willis.

Whittle-shawl, *n.* A kind of fine, fringed kersey-mere shawl.

Whitworth Rifle and Gun. [So called from their inventor, Joseph W., an English engineer, *n.* in 1803, *d.* in 1887. (*Mil.*) The W. Rifle has a hexagonal bore, with the corners rounded, and the bullet may be made of the same shape, just fitting the bore, in which case it may be of any hard metal, even of steel, or a cylindrical bullet of lead may be employed, which, by expanding, will immediately fill out the corners of the hexagon. The hold upon the bullet is so strong in this form, that a much greater obliquity can be given to the twist, and that adopted is a full turn in 20 inches. This, by causing a more rapid revolution of the projectile, admits its being made much longer, without risk of turning over after it leaves the barrel. Its length is $1\frac{3}{8}$ in. The length of the barrel is 39 in.; the smaller diameter of the bore is 0.45 in., and the larger diameter half an inch. By using projectiles of a hard alloy, as of 9 parts of lead and 1 part of tin, or of still harder material, a remarkable power of penetration is developed, as was shown by sending the bullet through 33 half-inch elm boards and into solid timber behind with the ordinary English service charge of powder. The effective range of the W. rifle is given at 2,000 yards or about 1 1-7 miles, a distance more than equal to the ordinary capacity of the eye to distinguish objects no larger than the body of a man. The W. gun is formed on the same principle as his smaller arm already described.

Whity-brown, *a.* Of a dirty or brownish-white; as, whity-brown paper.

Whiz, (*hwiz*), *v. n.* [Allied to *hiss*.] To make a humming or sibilant sound, like an arrow or ball hurling through the air.

—*n.* A hissing or humming sound; as, the whiz of a boomerang.

Whizzingly, *adv.* With a whizzing or humming sound.

Who, (*hō*), *pron.* (*poss. whose; obj. whom.*) [A. S. *hwa*; Goth. *hwa*; Lat. *qui*.] A pronoun relative, always referring to persons, and used substantively, whether as singular or plural.—Which of two or of many;—used interrogatively, and also indefinitely. The possessive *whose* is also the possessive case of *which*, as a relative pronoun.—As *who should say*, an elliptical form of *as one who should say*.

(NOTE. *Who* and *whom*, as relative pronouns, apply to persons only, in consonance to *which*, as used in reference to things.—*Who*, *whose*, *whom*, relatives in a compound sense, are also employed with respect to persons only, and indicate the one that; the person, or persons, that; as, you speak of one *who* is a stranger to me, and *whose* acquaintance I care not to make.)

Whoa, (*hwō*), *interj.* See *Ho*.

Whoever, *pron.* He or she who; any one without exception; any person whatever; as, *whoever* told you so, spoke falsely.

Whole, (*hōl*), *a.* [A. S. *hāl*; Gr. *holos*, whole, entire.] All; total; undivided; without diminution or deficiency; containing the entire amount, sum, number, quantity, &c.; as, the *whole* world, the *whole* nation.—Integral; entire; complete; not imperfect or defective; as, a *whole* loaf of bread.—Sound; unbroken; uninjured; unimpaired; as, he escaped with his body *whole* for a wonder.—Well; in good health; not unsound, sick, or ailing.

"They that are *whole* need not a physician."—Matt. ix. 12.

Whole blood. (*Law.*) See *Blood*.—**Whole note**. (*Mus.*) Same as *SEMI-BREVE*, *q. v.*

—*n.* The all; the entire or total assemblage of parts; totality.

—A system, or regular combination of parts; as, to form a *whole*.

Upon the *whole*, considering all things; taking everything into view or question; under all the circumstances; as, he is a good fellow, *upon the whole*.

Whole-hoofed. (*hōōft*), *a.* Having the hoof entire, and not cloven or divided.

Whole-length, *a.* Same as *FULL-LENGTH*, *q. v.*

—*n.* A portrait or statue representing the entire figure.

Wholeness, (*hōl'nes*), *n.* State of being whole, sound, complete, or entire; totality.

Whole-sale, *n.* Sale of goods by the piece, parcel, or large quantity, as distinguished from retail.

By the *wholesale*, in the mass or lump; without distinction or selection; as, his criticism cut up the book by the *wholesale*.

—*a.* Buying and selling by the piece, parcel, or large quantity; as, a *wholesale* grocer.—Pertaining, or having reference to, the traffic by the piece, parcel, or quantity; as, you shall have this article at the *wholesale* price.

Wholesome, (*hōl'sum*), *a.* (*comp. WHOLESOMER; superl. WHOLESOMEST.*) [Ger. *heilsam*.] Tending to promote health and a sanitary condition of body; salubrious; as, *wholesome* food; *wholesome* air.—Sound; salutary; conducing to the moral and mental health, happiness, and prosperity; contributing to public happiness, virtue, or peace; useful or favorable to the well-being of society; kindly; pleasing; propitious; as, *wholesome* counsel; *wholesome* regulations; *wholesome* doctrines, &c.

Wholesomely, *adv.* In a wholesome or salutary manner; soundly; salubriously.

Wholesomeness, *n.* Quality of conducing to health or bodily well-being; salubrity; as, the *wholesomeness* of regular habits of life.—Conducingness to the health and welfare of the mind or of the body politic; salutariness; as, the *wholesomeness* of wise laws justly administered.

Wholly, (*hōl'y*), *adv.* Entirely; completely; perfectly; in a whole or thorough manner; as, you are *wholly* mistaken; I am *wholly* exhausted.—To the setting aside or exclusion of other things; absorbingly; as, he is *wholly* devoted to business.

Whom, (*hōm*), *pron. sing. and pl.* The objective case of *who*, *q. v.*

Whomsoever, *pron.* The objective case of *WHOSOEVER*, *q. v.*

Whoop, (*hōp*), *n.* [A. S. *wepan*, to lament, to bewail; Fries. *wop*, a cry, a shout.] A shout of chase or of war; a cry or yell of defiance; a cry of enthusiasm or of satisfaction; a halloo; a hoot. See *WAR-WHOOP*.

(*Zoöl.*) Same as *HOOPPEE*, *q. v.*

—*v. n.* To utter a loud cry, as of enthusiasm, alacrity, enjoyment, and the like; to shout; to halloo; to hoot, as an owl; as, *whooping* school-boys.

—*v. a.* To pursue with derisive shouts; to insult with yells of defiance.

Whooping-cough, (*hōp'ing-kawf*), *n.* (*Med.*) Another, and, perhaps, the more correct orthography of *HOOPING-COUGH*, *q. v.*

Whoop'ing-crane, *n.* (*Zoöl.*) See *GRUIDE*.

Whore, (*hōr*), *n.* [A. S. and Ger. *hure*.] A woman who prostitutes herself for hire; a harlot; a strumpet; in polite society, a demirep.

—*v. n.* To practise prostitution or harlotry.

Whoredom, (*hōr'dum*), *n.* Fornication; lewdness; practice of unlawful connection with the other sex;—applied to either sex, and to any kind of illicit commerce.

(*Script.*) Idolatry; heathenism.

Whore-master, **Whore'monger**, *n.* A lecher; a patron of prostitution.—A pimp.

Whoreson, (*hōr'sūn*), *n.* A bastard;—used in contempt.

Whorish, (*hōr'ē*), *a.* Lewd; unchaste; incontinent; addicted to unlawful venery.

Whor'ishly, *adv.* In a lewd or lecherous manner.

Whor'ishness, *n.* Quality of being lewd or whorish; practice of illicit venery.

Whorl, (*hwort*), *n.* [Allied to *whirl*.] (*Bot.*) Any set of organs or appendages, as leaves, arranged in a circle round an axis, and in a plane perpendicular to it, or very nearly so.

(*Conchol.*) A wreath, convolution, or turn of the spire of a univalve.

Whorled, *a.* Furnished with whorls.

Whorler, (*hwur'ler*), *n.* A potter's wheel.

Whort, (*hwurt*), *n.* The fruit and shrub of the whortleberry.

Whortle, (*hwur'tl*), *n.* A whortleberry.

Whortleberry, (*hwur'tl*), *n.* [From A. S. *wyrt*, root, herb, and *berry*.] (*Bot.*) See *VACCINIUM*.

Whose, (*hōz*), *pron.* The possessive or genitive case of *who* or *which*, *q. v.*

Whosoever, (*hōz'so-ēv'r*), *pron.* The possessive of *WHOEVER*, *q. v.*

Whoso, (*hōōsō*), *pron.* Whosoever. (*o.*)

Whosoever, *pron.* Any one; any person whatever.

Whur, (*hwur*), *v. a.* To make a rough or growling sound, like that caused by the rattling of the letter *r*.

—*n.* Same as *WHIR*, *q. v.*

Why, (*hwī*), *adv.* [A. S. and Swed. Goth. *hwī*.] On what ground or account; for what cause, reason, or purpose; wherefore;—employed interrogatively; as, you say you are aggrieved; *why?*—For which or what cause or reason; for what; on account of what or which; used in a relative sense; as, he could not tell *why* he did it.—That on account of which; reason, cause, or ground for which;—used as a compound relative; as, I know not *why* they should shun me.

(NOTE. *Why* is sometimes applied by way of emphasis or expletive; as, You have not been there then? *Why*, no.)

For *why*, why; for what cause or reason;—used as a colloquialism;—as, for *why* does he refuse me?

Whydah, (*whi'da*), a seaport-town of W. Africa, cap. of a prov. of Dahomey, on the Atlantic, 100 m. W. of Lagos; Lat. $6^{\circ} 18' 9''$ N., Lon. $2^{\circ} 5' E.$ W. is the princi-

pal port of the kingdom, and has a trade in palm-oil, ivory, and gold-dust. Pop. estimated at 15,000.

Whydah-bird.

or **WIDOW-BIRD**, *n.*

(*Zoöl.*) The com-

mon name of the

genus *Vidua*, fam-

ily *Icteridæ*, com-

prising beautiful

birds, inhabiting

W. Africa, and par-

ticularly abundant

in the country of

Whydah, whence

their name, of

which *widow* is a

mere corruption.

The body of the W.

is generally about

the size of a canary

bird, but the male is remarkable for an astonishing de-

velopment of plumage during the breeding season, after

which its splendid tail drops off, and the sexes are then

barely distinguishable. There are several species, one of

which, *Vidua paradisæa* (Fig. 2616), will be sufficient to

describe. The upper part of the plumage is of a faded or

deep brownish-black; but this color becomes of a paler

hue on the wings and lateral tail-feathers. The head,

chin, and throat are of this faded black, which extends

downwards, narrowing as it descends, to the middle of

the breast. A broad, rich, orange, rufous color proceeds

from the upper part of the back of the neck, and unites

with a tinge of the same color on the sides of the neck

and breast; this last line passes into the pale buff of the

body, but leaves the under tail-coverts black, like the

upper ones.

Why-not, *n.* A sudden and absolute course of conduct

without any assigned cause or reason; as, "And snapped

their canons with a *why-not*."—Hudibras.

Wiburg, or **WIBORG**, a seaport of Finland, cap. of a

dist. of the same name, on the Gulf of Finland, 75 m.

N.W. of St. Petersburg; pop. 4,426.

Wich, **Wick**, *n.* [A. S. *wic*.] An old English termi-

nation of certain proper names, signifying a street, a

hamlet, a village, and sometimes a castle; as, *Greew-*

wich, *Berwick*.

Wick, *n.* [A. S. *weoc*; Swed. *veke*; Ir. *buaic*.] A num-

ber of threads of cotton or other spongy substance

loosely twisted into a string, plaited or parallel, which

by capillary action draws up the oil in lumps, or the

melted tallow or wax in candles, in small successive

portions, to be burned.

Wick, a seaport-town and borough of Scotland, cap. of

the co. of Caithness, at the mouth of the Wick, 20 m.

E.S.E. of Thurso. It has two suburbs—*Loisburg* on

the N., and *Pulteneytown* on the S.,—and two harbors,

which have been for nearly half a century the headquar-

ters of the herring fishery of Scotland.

Wicked, *a.* [A. S. *werig*, *weerg*, wicked.] Deviating

from, or repugnant to morality; evil in principle or prac-

tice; contrary to the divine law; addicted to vicious or

immoral courses; sinful;—expressed of persons and

things; as, a *wicked* man, *wicked* actions.—Addicted to

sportive mischief; roguish;—colloquially used; as, that

girl has *wicked* eyes.

The *wicked*. (*Script.*) Sinful or ungodly people.

Wickedly, *adv.* In a manner, or with motives and

designs contrary to the tenor of the moral and divine

law; viciously; evilly; corruptly; as, to act *wickedly*.

Wickedness, *n.* State or quality of being wicked;

divergence or departure from the tenor or rules of the

divine law; evil principles or practices; immorality;

sinfulness; corrupt disposition or manners.—A wicked

thing or deed; sin; iniquity; crime.—Sportive mis-

chief; roguishness, in a make-believe sense;—used col-

loquially or ludicrously; as, what *wickedness* are you

up to now?

Wick'en, **Wick'en-tree**, *n.* (*Bot.*) The Rowan

tree. See *PYRUS*.

Wick'er, *n.* [Sw. Goth. *wika*, to bend.] Made of twigs

or osiers, or covered with the same; as, a *wicker* basket.

—*n.* A small, quick-grown, pliable twig or osier.

Wickered, (*wik'erd*), *a.* Made of, covered or secured

with, wickers, twigs, or osier-work; as, a *wickered* jar.

Wicket, *n.* [Fr. *guichet*; W. *gwiced*, a little door.] A

small door or gate within a larger one; also, a hole in a

door, through which to communicate without opening

the door, or through which to view what passes outside.

—A small gate or sluice by which the chamber of canal-

locks is emptied.—A sort of light framework resembling

a gate, set up to be bowled at in the game of cricket; as,

to play single *wicket*.—In some parts of the U. States, a

place of shelter made of the boughs of trees, &c., for the

use of lumbermen, &c.—*Wicket-keeper*, in the game of

cricket, the player who protects the wicket from the

ball with his bat.

Wick'ing, *n.* The material used in the making of wicks.
